**KUMIS**, the Arabic transcription of the Latin *cumis*, a title which in al-Anulaus denoted the person responsible to the state for the *dhâdâd* (g.v.) or Scripturaries, or at least, for the Christian Mozarabs (g.v.). According to A. Fattal, "les représentants religieux des *dhâdâd* sont autorisés par le pouvoir, moyennant *wasiyya*, a exercer leur autorité. Il semble bien que les Arabes de la conquête respectent tant l’organisation administrative que judiciaire, que religieuse des populations soumises". Certain episcopalian documents (*âkâd, *sulh*) g.v. expressly affirm this: "They shall not be forbidden the exercise of their religious cult and shall keep their own laws". This was the case in al-Anulaus, as reflected in clauses 3-9 of the "treaty of Tudmir" (g.v.).

The first known cases was Arabi b. Afdâl al-Anulaus as-ṣaṣi‘a ʿAbd al-Dhimma wa-mustakhrifo *dhîrâštîn li-mawd* al-mustâlîn (Ibn al-ʿAtibb, *Hāfif*, 110), who advised the governor Abu l-Khâṣṣâ to grant to the Syrian fiefs of income (Chalosta, Concessions territoriales, in Cuadernos de Historia Hispánica, iv, 1975). According to Ibn al-Kiṭiyûa, *Iṣṭâd*, 39, "he was the first to exercise *bîrâs* in Muslim Spain". We have therefore here a concentration in the person of the protector or defender of extremely wide powers, embracing administrative, judicial and probably—to a certain degree—religious ones. At least, this is what one can deduce from the treatment as *serssissino hominum catholicae summo* which Alvaro of Cordova accords to the Count Romuans (Corpus, 211), as does Ibn Khâlidân from Asbâb b. Ṭabd Allâh. In this context, it would probably be correct to see in the confiscation of Ardubas’s properties not only a repossession of former crown domains (*ṣâfâd al-mushâd*) but also an extraordinary impost (not paid in cash) of the same type as we find in the East (Fattal, Le statut légal, 220-4) or as that which probably cost the Count Hâmir his life. The *bîmâs* was equally responsible, as *mustâbîrîf*, which could be translated by the Latin *exceper*—for the collecting of taxes on his co-religionists. As such, he had to levy not only the *khâdîjâd* and *gâyâs*, but also all extraordinary imposts (*mâsâfân, naszîdrîm*). This gave him a certain expertise and "occupation" as a professional tax-collector, and it explains the fact that we find under al-Hakâm I a *bîmâs* Rabîl in charge of all taxes, on *dhîmîs* and Muslims equally (Ibn al-ʿAtibb, *Aḥad*, 15).

The cases was, then, a Christian, appointed by the state, but we do not know whether he was official responsible to the crown or nominated after proposal and election of his co-religionists. As an official, he had his subordinates. His powers made him the supreme judicial authority over his flock, by virtue of his role as *ṣâfî* or head of the community. He was therefore by virtue of his office also *ḥâdî al-dhâdâd* or *ḥâdî al-nasdrâd*, whether in person, or by delegating his powers. Consequently, the meager list of our "counts" should be completed by adding the list of censors or *induxes* (a hypothesis put forward, but not followed up by Simonet, *Historia de los morosabes*, 112).

The names of some *bîmâs* have come down to us. After Asbâb, one should doubtless place a certain Allonzo, since the genealogy of *ʿUmar b. ʿAbas* given by Ibn Khâlidân (*Iṣâr*, iv, 134), and Ibn ʿIdhârî (*Bayân*, ii, 108), quoting Ibn Ḥââyân, gives him as the sixth descendant after a *bîmâs* Aftâmûn. Rabîl b. Thäoddell, *mawṣûlîwâlî al-muʾâṣîdîn mi al-nasdrâd* was not only the hated chief tax collector over the Cordovans, but also commander of the foreign palace guards of al-Hakâm I, and ended up by being crucified (Ibn Ḥââyân, *Djamharah*, 96). He was probably followed by the count (and physician) Romuans cited by Alvarus (Corpus, 211). St. Eulogius mentions one Isaac, a noble Cordovan who, before retiring to the monastery of Tahunos, had been *bîsâc* lingua arabica, *exceptores rei publicae officio functioner* (Corpus, 102). Kûmûs b. Antûnyûn, who served in Ṭabd Allâh’s administration and was *kâdî* to the amîr Muhammad, and who is stigmatized by Alvaro and St. Eulogius as a hateful persecutor, *Eclaresse publicanes... publicae rei... exceptors, should be included amongst the *comes* (and not amongst the "Gomes", as according to Simonet), because of (a) his function as *mustâbîrîf*, and (b) the fact that he seems to have been the official intermediary (much more than Recared, metropolitan of Seville) between the state and the Mozarabs. With this authority, he transmitted the amîr’s commands, and consigned members of his flock to jail, when necessary, not as a state official, but as the leader and one responsible for the Christians under his jurisdiction. He presided over the council at Cordova in 852 which forbade the Mozarabs to seek voluntary martyrdom. The course of events shows that he had not only the bucking of the whole state apparatus but also that of the majority of his community. The upper classes were unable to agree, and he reached the point of fearing for his life (Khurshâm, *Kaddî, 130-1; Ibn Ḥââyân, *Masâhâs*, ii, 136, 142), but things did not go as far as his assassination, as frequently happened in the East (Fattal, op. cit., 220-3). He must have been followed by the *comes* Servandus, who held power in ca. 853, according to Alvarus (Corpus, *Ibn Antun*, 21, 54, 554, 560, 586), Ibn Ḥââyân’s son, also the amîr’s *kâdî*, disappeared in 387/997 (*Bayân*, ii, 133). The Archpriest Cyprianus wrote in ca. 860 his *Epigrâphes* for the *comes* Adulus, and he also mentions a *comes* Guifridus (Corpus, 583-8). Ibn al-Kiṭiyûa (*Iṣṭâd*, 5) cites his contemporary Abû Saʿîd al-bîmâs, as well as the *ḥâdî al-ʿAdjam* Ḥâsî b. Albar, both of them descendants of Artobas. Ibn ʿIdhârî (*Bayân*, ii, 142) records under the year 293/955 that *Ḥaṣâm al-bîmâs* was imprisoned; he was tortured and underwent the torture of the iron boot until he died". It is likely that the *ḥâdî al-nasdrâd* of Cordova in 332/ 942, who acted as interpreter for Ordoñez IV, was also the "comes of the Mozarabs". This was doubtless also the case with Asbâb b. Ṭabd Allâh, who was commissioned, In the name of the *Amûtî* Abû al-ʿAdjam, to arbitrate in the dispute over the tutelage of Alfonso V between the two counts, Sancho García of Castile and Menendo Gonzalez of Léon. Asbâb must have been the successor of Muʿâwîya b. Lubb, who was *bîmâs* in 361/972. According to Ibn Bashkiwala (Sîna, No. 443), there was in the time of the caliphate a little market in Cordova called the *munasbat al-bîmâs*.

The fact that, in the course of the 4th/5th century, one finds more references to judges than to counts,
KÜMIS

in contexts where one would expect the reverse, must indicate a lowering of the latter's status, who by then had lost many of his duties. It is hard to believe that Ibn Zaydūn, appointed by Abu 'l-Walid Ibn Dha'far to "enquire into certain affairs of the ãšnisml" (Ibn al-Ābbār, Ḳīdāb al-kutub, 2:112-13), can have had the title of ãšnisml. Indeed, if he had really fulfilled this role, it would have been indicative of a profound change, since Christians would have become subject to a Muslim and not to one of their co-religionists. It is very possible that Ibn al-Kalās, kābīr al-muṣṭa′laqm of Gūnāda in 1123-6, at the time of Alfonso the Warrior's Andalusian expedition, was one of the Mozarabs (Ibn al-ʿAmīd, 113, 110). The disorders of the period of ð̣aða [q.v.], conducive to rebellions, the immigration of native Christians to the kingdoms of the north, and the severities of the Almoravids and Almohads, explain the silence of our sources for the later periods.

The term ãšnisml was applied not only to the head of the Christian kingdoms. Ibn Hayyān (Muḥtabas, v) says that Ordūnā II ruled for warfare all his counts at the siege of Evora in 308/913. He gives this title to the counts of Alaba and Djlākiyya, to the Banū Gūmis and Banū Anṣārū, and cites by specific name Sandjo b. Ḥārsiyā (Banbadulā), Fardhiland b. Glūndishālb (Khāfiyya), Barmund b. Nauf (Ṣhallānāqā), Abu 'l-Mundhir (Gūrnām), Fortūn b. Ḥārsiyā known as Abū Ḥārsīs, Rādwān b. Ḥānsīs (al-Dāmāk Tātā, the counts Manyūra and Faḥūn, and above all, al-Kūmis âšnisml Djlākiyya. At the time of al-Baḥām II (Muḥtabas, vi), the same author gives this title to Ibn Ṣafy, Ṣundishālb b. Muyno, Eximeno b. Ḥārsiyā and Ashrakā b. Úmār b. Dāwd. Ibn Khālūn, in his chapter in the Kīlmār on the Christian kings of Spain, speaks of Fernan González and García Fernández ãšnisml Abū wa-l-Kīlmā in Menendo González ãšnisml Ghāziyya, Henry of Burgundy, and the Banū Gūmis and Banū Fardhiland, as well as Alvar Ṣafy. Ibn Bāṣam spoke in ca. 1010 of the ãšnisml Raymund, lord of Barcelona. Speaking of events from the beginning of the 6th/12th century, Ibn Khādīn uses ãšnisml for Raymond of Burgundy, Don Nauf (González de Lorp, and Henry of Trastamara. The Vocabularist attributed to R. Martí gives this title, ãšnisml, as the equivalent of come. P. de Alcalá has condé o condens = cónsd, anasul; whilst the Fragmentes. . . . revs. uarztensis published by Miller and re-edited by Busotmi-Quirós (Larache 1940) translates "count" by kumlīt.

KÜMIS, a small province of medieval Islamic Persia, lying to the south of the Alburz chain watershed and extending into the northern fringes of the Dasht-i Kavir. Its western boundaries lay almost in the eastern rural districts of Ray, whilst on the east it marched with Khurāsān, with which it was indeed at times linked. It was bisected by the great Ray-Khurāsān highway, along which were situated the chief towns of Kūmis, from west to east Khūwār or Khwār (classical Χξξξξξ, modern Arādūn), Simān [q.v., Dāmān [q.v.], and Bishām [q.v.], whilst at its south-eastern extremity, out in the Great Desert, was the small town of Bīyār [q.v. in Suppl.], modern Bīyārī umand. The administrative capital of Kūmis was Dāmān, which is often accordingly called in the sources Madīnat Kūmis or Shahr-i Kūmis, according to a well-known toponomastic process (cf. the town of Bardsaṣ/Kirmān). The name Kūmis is obsolete today, and the lands making up the mediaeval province are included administratively in the faqrāndī-yi kūn or governorate of Simān and the astān or province of Mazandārān. The present-day town of Shahrīrd, just to the south-west of Bīyār, does not seem to have been in existence as such in mediaeval times.

The province was one of considerable importance in pre-Islamic times. In Greek sources it appears as Kβμις, and in Armenian writers like Sebeos and Moses of Khoren as Kōmē. H. W. Bailey, in JRAS (1917), 61-3, has suggested that the name derives from an Old Ir. root bā-, kā-, conveying the idea of "hollowness", plus a passive or agental suffix, whence Kōmē "opened up, excavated place". Seleucus Nicator seized the satrapy of Parthia between 332 and 331 B.C., and it was allegedly he who founded the "city of a hundred gates", Hecatompylos, although it almost certainly existed before then; a legend related in the 9th/15th century A.D. Middle Persian catalogue of the towns of Iran says that Kūmis "the five-towered" (fānd-gūr) was built by the successor Aššur Dānak, whilst from later Islamic times, Hamd Allah Mustawfi, Nāhhā, ii, 157, attributes the building of Dāmghān to the hero Hāshāb. Such classical authors as Strabo, Pliny, Ptolomy, etc. mention Hecatompylos as the royal city of the Parthians, and some of these sources give the distance of the city from the Caspian Gates (e.g. Strabo, 1360 stadia, and Pliny, 132 mili­us passum; the consensus of modern opinion tends to identify the Caspian Gates with the Sar-Darrah defile through the Kūn-i Namak spur of the Alburz). But the site was never properly identified with any reasonable certainty, although it was thought that it probably lay somewhere between the towns of Dāmghān and Shahrīrd, until recently, however, Haustman and Stronach have examined and excavated the site of the modern spot called Shahr-i Kūmis, near Kōrh to the south-west of Dāmghān on the Simnān road. It seems that this very extensive site could well be the ancient Parthian capital, apparently largely abandoned around the middle of the 1st century B.C. when the Arsacid moved their winter capital to Ctesiphon. See A. D. Mordtmann, Hecatompylos, in SD Bayer, Akad. der Wiss., Phil. Hist. Cl. (1869), 497-536; Pauly-Wissowa, col. 2790-9, s.v. (Kiesling); Mark wart-Messina, SD Bayer. A Mad. der Via, in NS Bayer, 11, col. 142-55; S. Matheson, JRAS (1968), 111-19; ibid., in A. S. Santarén repository at Shahr-i Qumis, in ibid., 142-55; S. Matheson, Persia; an archaeological guide, London 1972, 101-2. In Sāzandān times, there seems to have been a refounding of Kōmē, perhaps by Vasaŋgird (399-421) as a defensive post against the Turks and Hephthalites [see Havātīl] who were threatening the north-eastern frontiers of his kingdom. The region
retained its old connection with the Parthians through its being the home of the noble Parthian family of Mhrât, to whom belonged the Spahpat (Islamic form: Isphahâbâd, [q.v.]) Pahlav, killed by Horniz IV (579-90); in the next reign, Kûmis was the residence of the Spahpat of Khurân, Kâran of Niâwând [see Kûmis for the subsequent history of this family]. There was there a highly-venerated fire-temple, described in Middle Persian sources of the early Islamic period as burning perpetually without fuel (whence, presumably, its N. Pers. name Khurân < M. Pers. pâstân "without fuel"), obviously a fire fed from some volcanic source or else from a natural seepage of petroleum.

Towards the end of the Sâsânid period, however, the administrative centre of the province seems to have been transferred to the apparently new foundation of Dâmhân, which thereafter acquired in early Islamic times the name of [Madnât] Kûmis. It may have been that the old Kûmis of middle Sâsânid times had never more been than a frontier post, since no Sâsânid coins are known to have been minted there. See Marqûart, Erânshahr, 71-2; Markwart-Messina, A catalogue of the provincial capitals of Erânshahr, 35-7; Hanmann, The problems of Qûmîn, 156-61.

At the time of the Arab conquest of Persia, the men of Kûmis fought in the Sâsânid army at Niâwând and at the defence of Ray, but the province offered no resistance to the Arabs thereafter. According to al-Bal'âdhurî, Futûk, 318, Sulaymân b. 'Umar al-Dabîl sent troops into Kûmis, but according to al-Tabari, i, 2650-7, the caliph 'Umar sent an army under Suwâyd b. Mukarrân in 284/696-7, and Kûmis was thereafter used as a base for attacks on Gurgân and the Caspian region. As with Dâmhân and Ray, it was Arab warriors from Kûfâ who garrisoned the chief town of Dâmhân. Al-Tabari further records, i, 2839, that the more northerly highway to Khûrsân was less used in these early decades than the one via Fars and Kûsur, since Kûmis was vulnerable to attacks by Daylamî and other mountain peoples of the Alburz; it was, so he says, the governor Kutâmya b. Mustûlî [q.v.] who first regularly used the Kûmis route to Khûrsân and Transoxania (cf. C. E. Bosworth, Strata under the Arabs, from the Islamic conquest to the rise of the Safârîds (70-250/651-864), Rome 1968, 20). In fact, the governor 'Abd Allâh b. 'Amîr b. Kurayz [q.v.] had used that route in 31/652, according to al-Tabari, i, 192.

The region had meanwhile been disturbed by Khurjî sectaries, including the appearance there of the Azafrât leader 'Abîdâ b. Hûlî al-Yâghzûbî in 77/696 with the remnants of 'Abîrî b. al-Fugâ'î's forces fleeing before the pursuing Umayyad army [see Kûrisa and Kûrisa b. al-Fugâ'î]. Also, soon after 137/754-5, Kûmis, together with much of northern Persia, was occupied by the 'Alî pretender 'Abd Allâh b. Mu'âvîyâ [q.v.] (al-Tabari, ii, 386, 1976). Reform type dirhams were minted under the name Kûmis from 917/10 onwards, but these do not seem to have been any Arab-Sâsânid coins minted there (cf. J. Walker, A catalogue of the Muhammadan coins in the British Museum. i. Arab-Sassanid coins, London 1941, pp. cxxxviii-cxxxviii). Administratively, Kûmis was mostly linked during this period with Damghan and in the article, see Le Strange, The lands of the eastern Caliphate, 364-8, and Schwarz, Iran im Mittelalter, repr. Hildesheim 1969, 809 ff. (C. E. Bosworth)

Kûmiya, one of the most important tribes of the Maghrib in the Middle Ages; they were at one time called Safûra and were descended through Fàtûn from Mâdghs al-Abtar. Tradition says that the brothers of Kûmiya, the eponymous ancestor of the tribe, were Lêmâyà and Matîghara from whom were descended numerous families, some of whom still exist at the present day. The most important representatives of the Kûmiya, who live in the north-
west of Algeria between Tlemcen and Aregakhâl (Râghumun) are the B. 4 Abîd, from whom was descended the first caliph of the Almohad dynasty, 4 Abîd al-Mu'âmin [590], born at Tadjiya between Humayr and Nedaama; the Nedaama who gave their name to an important town; the Saghâra, now represented by the Mäfia, the Banû Hul, of whom a section the Mäfia still exist. The Kümânya showed themselves devoted to 4 Abîd al-Mu'âmin, who was one of them. They formed the second qanûn in the Almohad army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to bharâd by the Zanâta, some of them joined another group, the Chiya and formed the powerful confederation of Târkah in the north-west of Algeria.

Bibliography: R. Basset, Nîromâmû bi ihtâr a'âm, Paris 1901, and the works there quoted. (R. Basset)

KUM(MI). Kâdi Ahmad ibnâbi 'Usaynî, Persian chronicler and chancery clerk (masnûd), was born on 17 Rabî' I 595/15 May 1166 in Koom, the son of the masnûd Shârûf al-Din Humayn al-'Usaynî. In 964/555-67 he went with his father to Mashhad at the court of the art-loving prince 'Abd al-Mírâb b. Bahram Mirzâ b. Ismâ'îl, where he was trained by well-known calligraphers. In 973/1566 he was a muqâta at the court of Shâh Tahnâhî, together with his father. At the instigation of Shâh Ismâ'îl I, he started composing in 984-85/1576-7 his chronicle Khulsâs al-ta'âmîrâb (or Tadhkîrât al-shurûq yi hâdây). For 994-98/1586-96 he was employed at the chancellery of the highest authority. In 997/1589 he was at the residence of Shâh 'Abbas I to whom he dedicated in 999/1591 his chronicle Khulsâs al-ta'âmîrâb. About his further life nothing is known; so far his works are the only sources for his life (see Minorsky, 1-2, Müller 3-7).

Koom(ni) composed at least three works: 1. Madâjîn (or Tadhkîrât) al shurûq-yi 'Abbâsî. The work has not been preserved but the author refers to it several times in his later works. According to these references the work must have been an anthology of at least seven volumes in which among other things information was given about the lives of great scholars, scientists and poets.

2. Khulsâs al-ta'âmîrâb, a chârida in five volumes, of which the fifth volume only has been preserved. It describes at full length the history of the Sâfawîs from their origin to the first years of the reign of Shâh 'Abbas I and was probably composed between 995/1587 and 1000/1592. It exists in five manuscripts. The first part of this volume, dealing with the early Sâfawîs, has been published, translated into German and annotated by E. Glusen, and the last part, in which the first years of Shâh 'Abbas I are treated, by H. Müller. This chronicle is one of the most important sources of Sâfawî history. Although the first part is highly dependent upon other known and unknown sources, the sections dealing with later times, witnessed by the author himself, give truly independent information. Together with Isâqîdan Beg Minûgî's 'Uladâm-yi 'Abbâsî, it may be considered as one of the two most important sources for the period of Shâh 'Abbas I.

3. Qânûnun bi ihtâr, a treatise on calligraphers and painters, composed ca. 1005/1597, exists in several incomplete manuscripts; it has been edited by A. S. Khânsârî, translated into Russian by B. N. Zâl'hdor and into English by V. Minorsky. The contents of this work, classified according to the various kinds of writing, are mainly based on earlier sources. There are however many important observations by the author himself on contemporary calligraphers, whom he had plenty opportunity to meet at the court of Shâhâbî Mírâb at that time a flourishing centre for calligraphy.

For other works, possibly written by Koom(ni) (Munkâkâh al-wusârâb and Majmû' al-bâyâbî), see Müller, 8-10.

(H. MÜLLER)

KUMR, the Arabic name for the Comoro Is., a group of four islands in the Indian Ocean at the northern exit of the Mozambique Channel, halfway between East Africa and northern Madagascar. The largest island of the archipelago is Grande Comoro (in the local language: Hangazidja, Langazigja, al-Mangidja, Kum[u]), with 1128 sq. km and 32,000 inhabitants (1966); followed by Anjouan (Nawari, Hangazidja; in older Portuguese and English sources Johan), with 424 sq. km and 8,500 inhabitants; Mayotte (Mayawta, Mangata), with 374 sq. km and ca. 12,000 inhabitants (1966); and Mohelî (Mwalli; in older European sources Molay, Molla), with 290 sq. km and ca. 10,000 inhabitants. The capital of the islands is Moroni on Grande Comoro. The islands are of volcanic origin (still active is the volcano Karthala, 2561 m on Grande Comoro) and consist mainly of basalt and tuff. The climate is tropical-maritime with the heaviest rainfalls from November to April. The natural vegetation is a dense rain-forest with rare varieties of wood, which, however, for the most part have been rooted out and replaced by plantations and savannas. Agricultural products of importance for export are coco palms, vanilla, coffee, pepper, aromatic plants (ylang-ylang), sisal and sugar-cane. Cattle-breeding and fishery are scarcely developed.

The population, which suffers from a very high birthrate (outside the islands, in Madagascar and...
East Africa, there already live about 300,000 Comorians, cf. Guy, Islam comorien, 149), has developed from three different ethnic elements: (a) Bantu's from East Africa, (b) Malayo-Indonesians who came via Madagascar, and (c) Arabs who immigrated directly from South Arabia (especially Makran) or from Arab settlements in East Africa. The Comorian language is divided into two main dialects, the Shi'NEgali and the Shi'-Nawadi, and, at least from the phonetic point of view, seems to be related more to the Venda, a Bantu language spoken on the middle-Limpopo river, than to Swahili (Heepe, Die Komoren-dialekte, 45). Like Swahili, which is well understood by most of the Comorians, it has incorporated many Arabic loanwords. While Arabic seems to have been used as the written language still in the last century, most of the recent chronicles and correspondences are written in the local language with Arabic letters. Arabic is taught in Kur'an-schools but is understood only by a small minority. The Comorians are Sunni Muslims of the Shafi'i rite, but many African animistic conceptions and magic practices have survived in popular belief (cf. Robineau, Societe, 51, with further references). Al-Nawawis Minhaj al-ahbab is widely used and still serves as the theoretical basis for Civil Law. The Shafi'i law was widely respected by the French administration, but in many fields it is supplemented by the customary law (adat) which shows many matriarchal characteristics (e.g. law of succession). The Shi'N brothers of the Shi'i religion, Tidaliyana, Fadiiyana, and 'Aliyana play a very important part in religious life (cf. Guy, Islam comorien, 149 ff.).

Local legendary tradition, as well as false identifications of place-names, have led some former historians (Gevrey, Grandichard, etc.) to fantastic speculations about the early relations between the Comoro Is. and the ancient Mediterranean world. Until now there seems to be only one hint which deserves some attention and which might establish such relations. Pliny gives as the name for an island, the location of which would fit well with one of the Comoro Is., Damnia, and Von Wissmann (art. Zangenae, in Pauly Realecyclopedia, Suppl.-Bd. xi [1968], 1390) may be right in identifying Damnia with Domoni, an old settlement on Anjouan and formerly used as name for the whole island. Arab geographers, including the pilots of the 15th and 16th century like Pliny, used the name Kumr for Madagascar exclusively and cited, if they did not all, each of the islands by its proper name (cf. Tibbets, Arab navigation in the Indian Ocean, London 1974, 429). Local tradition starts the history of the islands with the legendary report (unknown on the Swahili coast) of the immigration of two families from the Arabian peninsula some years after the death of Solomon (see also Ibn al-Maherr, the name Kumr for Madagascar and the mouth of the Limpopo River. This fits with the above-mentioned linguistic facts. At least on Anjouan these Africans were not the first inhabitants, but merged with an older population, now generally called Antalacta, of Malayo-Indonesian race, which might have immigrated in the course of the first millennium (cf. Robineau, Societe, 34) via Madagascar (former European sources often call them wrongly Bushmen, cf. Reipacht, Sultanat, 50).

The local tradition of Grande Comore and Anjouan has preserved the names of the ruling houses before the coming of the Shirazi (13th century). On Grande Comore the ma-fey (or ma-fe 'chiefs', cf. Swahili ju and juma) are said to have established and ruled the first eleven villages, before they were defeated by the ma-beja (cf. Swahili wa-beja) (Harries, Swahili chronicles, 12, 71). On Anjouan the beja are regarded as the oldest ruling class, which was replaced by chiefs who bore the title fanji (Fauree, L'archipel, 33). Although we must take for granted that at that time, i.e. in the first half of this millennium, Arab or Swahilised-Arab merchants were in contact with the islands, and some of them might have settled there, it is difficult to say, whether Grande Comoro was already widespread. It is noteworthy, however, that the last fanji-rulers on Anjouan bore Arab names like 'Ali and 'Isa.

The decisive turn in Comorian history was the arrival of the Shirazi in the second half of the 15th or the beginning of the 16th century, who by fighting and intermarriage seized power on all four islands (the coming of the Shirazi clan with their ancestor Muhammad b. 'Isa is described through the legend of the Seven Brothers which is also well-known in East Africa, cf. among others, Cittuck, Shirazi colonization, 276; Triningham, Islam in East Africa, 10 ff.) and became the real founders of Islamic culture on the islands (the first mosques were built by them at Teuweni on Grande Comoro, at Sima and Domoni on Anjouan, and at Chingoni on Mayotte, all in the middle of the 15th century). In the following three centuries the political situation was marked by (i) very complicated internal dynastic struggles, (ii) the invasions of the Malagasy tribes, Sakalava and Betsimbaraka, and (iii) the growing political influence of the French and British in the area.

(i) Grande Comoro was divided into eleven more or less independent territories (Bajini, La Dombé, Bambao, Hambu, Itps dtra, Hammanyu, Mtsamuhu, Mbude, Mbaku, Washili, Hamahame) ruled by sultans who only seldom jointly recognised the supremacy (ulde) of one of them. Sultan Ahmad b. Miwiny (Mkau) (1793-1879), the son of Sayyid Ngome from Fute in northern Swahili country, and of Mwana Mbu, half-sister of a sultana of Grande Comoro, (women rulers) who had the beja blood, was the most powerful one of them, and the external line was often accorded higher prestige on all four islands) was the last really great personality who, at least for some years, managed to unify the islands, before he was defeated by Māsū Funu. The rivalry between Sultan Ahmad's grandson Sayyid 'Ali, the favourite of the French, and Māsū Funu (d. 1833 in prison), who was supported by the British and the Sultan of Zanzibar, marked the last years of independence. Against the will of most of the other sultans 'Ali signed in 1886 a treaty of protectorate with France.—On Anjouan the political situation was characterised by the bipolarisation of the two main towns Domoni, which was made the capital by the Shirazi after Sima, and Mutsamudu, which became the political and commercial centre of the
end of the 18th century onwards when power shifted from the clan (habila) of Al Madwa to the clan of Al Masfa (both names show their Hadramawt origin, cf. B. G. Martin, *Migrations from the Hadramawt to East Africa, in Centre of Arabic Documentation, Research Bulletin, Ibadan 1973*). Continuous succession struggles in the first half of the 19th century were only ended by Sultan Salim (1842-53), whose son Sultan Abd Allah III (1853-1890) put his island under French protection. Neither was century was only ended by SultAn Salim (1842-1973). Continuous

mountaineers using Kumuk as their primary language.

The Kumuk inhabit eight districts of the Dagestan ASSR: Rabbi-Yurt, Khavasav-Yurt and Kiril-Yurt on the northern plains, and Buyanaks and Karga-Budak, the eastern coastal plains. The "Southern Kumuk" (Kumuk of Kayakent) live in the Kayankent district and in the villages of Malal, Yangikent and Tumenler in the Kayntu district. The Kumuk are also found in six settlements in the vicinity of Malakha, and in the cities of Malakha, Khavasav-Yurt, Buyanaks, Iabet and Dergehsee. A number of Kumuk live outside Dagestan on the Noghay steps in the Groznyi region, north of the Terek River, as well as in North Ossetia.

The ethnic origin of the Kumuk is complex and difficult to determine. They are probably a mixture of the indigenous Ibero-Caucasian tribes and various nomadic Turkic groups (Kumon-Polovtsi, Khazar, Kipchaks, etc.) who were pushed into the lowlands from the North Caucasian steps in the 13th-14th centuries, imposing their language on the inhabitants.

The formation of the Kumuk people began in the 7th century when the Khazar [q.v.] overran the plains of southern Russia and populated them with Turkic-speaking peoples. The indigenous Ibero-Caucasian population mixed with these Turkic peoples, especially the Kipchaks [q.v.], and adopted their language. The Kumuk "nationality" appeared in the 13th century on the steps of northern Dagestan when successive waves of the Golden Horde pushed these Turkic-speaking peoples southwards. Their Islamisation began immediately, under the influence of the Golden Horde from the north and the Laks from the south, and was completed by the 14th century when the Golden Horde annexed northern Dagestan. Prior to this, the people had been Christians, Jews and animists.

The first political organisation of the Kumuk was the feudal Shamkhalat, which united all the Kumuk as well as other northern and eastern Dagestani peoples. The Shamkhal originally resided in the mountains of the Lak (Kari-Kumuk) region. When Shamkhal Coban died in 585/1578, the Laks took control of the country, and his son Shams-But, and the centre of government was shifted to Buyanaks. After 595/1650, Tariq was the capital of the Shamkhalat. In the 16th century the Shamkhal ruled most of northern Dagestan. The semi-independent states of Endirey, Aksay, Kostekho, Banniatuluk, Buyanaks, etc. were all headed by representatives of the Shamkhal of Tariq's family.

The Shamkhalams acknowledged Persian sovereignty throughout their existence, in spite of their strong diplomatic ties with Russia in the late 16th century when Russia was attempting expansion into Dagestan. The power of the Shamkhal began to decline with the wars against the Kabardines and Georgians. It lost control of the area between the Terek and Gudauta. In 1596, 1599 and 1604 were defeated by a joint Kumuk and Ottoman effort. Although the Shamkhalams were formally vassals to the Moscow state, they remained close allies of the Ottomans from the late 15th until the late 18th centuries. In 1725 the Russians ended independent Shamkhal rule and the decline of the Kumuk was completed with the creation of the Mehtulin and Bammatuh Khanates. By 1756 the Shamkhalat was reduced to a 2,500 km² strip of land along the Caspian Sea.

Imam Mansur attempted to rally the feudal nobility of the Caucasus (especially among the Kumukis and Kabardins) against the Russians in the late 18th century, but failed. The Treaty of Gulistan (1813) formally ceded Dagestan to Russia, but the Kumukis continued to be governed by the Shamkhalams. After the Russians subdued the Murid insurrection (1834-59) led by the Imam Shamil [q.v.], the Kumukis and the other Dagestani peoples were incorporated into the Russian Empire. Native rule was supplanted by a Tsarist military administration.

A small Kumuk intelligentsia emerged in the early 20th century. They had been educated in the Didiad [q.v.] schools on the borders of Dagestan, and were among the first to be impregnated with liberal ideas. This small group was destined to provide the leadership for the national liberal movement (which was doomed to failure) during and after the Russian Revolution.

In 1917 the Kumuk played an important role in the North Caucasian peoples’ move for independence. Motivated by their own political traditions and Turkic cultural influences, they favoured a “Turkic” consolidation of Dagestan (as opposed to the “Islamic” consolidation favoured by conservative Dagestanis), with linguistic unification based on Kumuk or Azeri. They sought to become part of the great Pan-Turkic movement centred on Baku, Kazan and the Crimea. Following a power struggle between the religious and conservative elements led by Shadrak Uzan Haji and Imam Gotshinski and the socialists, the Soviet regime was established in the principal cities on the plain in April 1918. By September 1918, General Bifierahov’s “White” army, equipped in Persia by the English, had crushed the Soviet forces. Soviet power was not re-established in Dagestan until 1920 when the Eleventh Red Army defeated Demikin’s White Army and drove the partisans of Imam Gotshinski back into the mountains.

The Kumuk had one of the most powerful, complete and complex feudal structures in Dagestan before the Revolution. The ruling class consisted of the Shamkhal, lords, high nobility (tankha), middle nobles (sala-udzen), and religious leaders. The freemen (udzen), free serfs (tagar, organised into various groups (dinii)), serfs bound to the land (under the yoke and working the land), and house slaves (kiis, a very small group) comprised the lower classes. The merchant class grew rapidly with the rise of industry and capitalism in the late 19th century, but the working class was never large, since most industry was domestically oriented.

The Kumuk language belongs to the Kipchak-Oghuz subgroup of the Kipchak group of Turkic languages, to which the Noghay and Karay-Balkar languages also belong. Kumuk has three dialects: Khayduk is strongly influenced by the Ibero-Caucasian languages and is used by the Meridional Kumukis; Buyanaks, and Khavassav-yurt (or Aksay), which forms the basis of the literary language, developed with the Arabic script in the late 19th century. In 1927 a Latin alphabet replaced the Arabic, and Cyrillic script was adopted in 1938. Kumuk was the lingua franca of the Dagestani peoples. The first Dagestani Communists accepted this rôle for Kumuk in the 1920s, but Russian was later adopted as the official language. Although Avar has replaced Kumuk as an inter-tribal language, Kumuk remains the second or third language of certain Ibero-Caucasian peoples in north and central Dagestan (Andi-Dido-Avar, Darghin, Lak). Article 78 of the Constitution of the ASSR of Dagestan
names Kumuk as one of the nine official literary languages of Dagestan.

The Kumiks are the only Dagestan people having a true national literature which dates back to the early 19th century. These early works were generally local versions of heroic epics or adventure novels, and were often consigned to small pamphlets destined for public readings. Turkic-language publications from Kazar, Adjarbaysjdn, the Crimean and Turkey satisfied the desire for other literature. Christian missionary publications of the early 19th century satisfied the desire for other literature. Christian missionary publications of the early 19th century were instrumental in the development of a literary language. Written in a composite language of various Caucasian peoples, they were among the first written literature of the area. 

Kumuk literature came under the influence of the Turkic modernist movement centred on Kazar and Baghchisaray in the second half of the 19th century, resulting in the nationalistic poetry of Yusuf from Yakhay and Ayjuba from Dungotay. In 1833 the Kumuk Osmaik Muhammad (b. 1843) published an anthology of Kumuk and Noglay folklore and literature. He, St. Petersburg University (b. 1925), was a member of the Faculty of Oriental Languages at the Academy of Sciences. The collection includes a letter in verse, dated 1873, from the revolutionary Kumuk poet Yirii Kazak (1830-80), inviting Muhammad Efendi, then a student at St. Petersburg, to return home. This letter is one of the oldest literary vestiges of the Kumuk language, and Yirii Kazak is thus considered the founder of Kumuk literature.

Muhammad Mirza Malayyarayev established a printing shop utilising Arabic script at Temir Khyan-Shura at the beginning of the 20th century. By 1912 he had printed translations from Arabic and Kazar Tatar and the poetry of Abu Sufyan in Kumuk. Noglay Batirkurumayev (1860-1919) wrote the first modern narrative works inspired by Kumuk contemporary life in 1906-7. His son Zainalabid (1897-1919) was the first Kumuk Bolshevik writer. Together they founded the political-literary society Ta’l colpan (“The morning star”) at Khasav-Yurt in 1916 to promote the development of modern Kumuk literature. With the assistance of poet and dramatist Temik Bulat Beybulatov and other Kumuk, Tat and Russian writers (including S. S. Kazbekov and H. O. Bulat), this organisation sponsored a nationalist, progressive review of the same name, first published at Temir Khyan-Shura in August 1917. The Khasav-yurt dialect of Kumuk was adopted as their literary language. Ta’l colpan was instrumental in reviving the Kumuk national consciousness. In actuality a radical nationalist organ, it professed to be political and declined to choose between the socialist and nationalist positions. However, as a result of the short-lived Soviet occupation of Dagestan beginning in April 1918, Ta’l colpan adopted a pro-Bolshevik position. Publication ceased in July 1918. Ta’l colpan was not the first Kumuk journal to appear. In 1913 the liberal nationalist Mirza Muhammad Mavarsev of Temir Khyan-Shura requested authorisation for a Kumuk journal entitled Kumuk gazâli (“The Kumuk journal”). This demand was rejected by the authorities, and the classical Arabic publication Dzjarid Dagestan (published in 1915) notwithstanding, the first Kumuk publications did not appear until after the Revolution of February 1917. The journal Musavat (“Equality”) was the first Kumuk periodical, published at Temir Khyan-Shura in June 1917, under the editorship of Mavarsev.

This first period of Soviet domination witnessed the publication of a third Kumuk journal, Iggî gëhâ (“The working people”); it was edited by Zainalabid Battirmuzayev and adhered to a Bolshevik position. The journal Yoldash also supported the development of a national Kumuk literature. The Kumuk press is currently represented by one republican organ published at Maghachala, and several district organs (at Khasav-Yurt, Baba-Yurt, etc.).

The Kumiks possess a very rich Soviet literature. Abd Allah Muhammadoglu Magaronoev (1869-1937) is considered the national poet of Dagestan by the Soviets as a result of his pro-Communist writings in the post-Revolutionary years. The most celebrated Kumuk prose writer is Yatuf Gegeyev, whose satirical style was influenced by the Adjarbaysjdn poet Sabur. Other literary figures of note include poet, dramatist and author of children’s books Aliapa Salavatoglu (1901-43), poets A. Beshirov and Kalyan, poet-novelist Abdul-Wahab Salaymangolu (b. 1909), playwrights Hanif Rustamov and Anir Kurbanov (b. 1909), and novelist Arvag Agiev (b. 1913). The Kumuk poetess G. I. Gadjieva is the most renowned female Dagestani writer. In addition, many Russian authors have been translated into Kumuk (e.g. Tolstoy, Lermontov, etc.).

The Kumiks participate actively in the political life of Dagestan. In 1924, Kumiks comprised 5.7% of the profsoyu of the Dagestan ASSR, and in 1927 there were 696 Kumiks in the Dagestani Communist Party.

The Kumuk educational system is less developed than that of the Avars; in 1949 there were eight Kumuk secondary schools (compared to 12 Avai); Karabudakhkent, Kayakent, Isberbash, Maghachala, Buyukbas, Khasav-Yurt, Baba-Yurt and Kizil-Yurt. Islam seems to remain a strong force among the Kumiks up to the present time.

Modernisation is changing the character of the traditional Kumuk economy. Agriculture and animal husbandry remain the basis of the rural activity, but mechanisation and collectivisation have made the large-scale production of cereals and cotton possible. The fishing and canning industries, as well as oil (at Kayakent), hydroelectric plants and other factories are evidence of advanced industrialisation in certain sectors. Nonetheless, traditional crafts are still pursued: woven woolen goods and carpets (villages of Kumtorkol, Kayakent, Upper and Lower Kazaniche), gold work (Inmei, Kafir-Kumukh, Sultan-Yaht-Yurt, etc.), wrought iron work (Verkidneye, Nighneye, Kazaniche, Anderey-anu), and pottery (Vernignye, Kazaniche).

The Kumiks, along with the Avars, Darghins, Lakes and Lezgez, appear to be points of consolidation among the Dagestani peoples, especially in certain small groups (although certainly not all). Of the nine official languages of Dagestan, newspapers are only published in the languages of these five groups.

They may inherit in each other’s balance; God has wisely calculated their weights so that they keep together without conflict. However, they also penetrate each other’s balance, which is now reinforced. For the same reason the snake does not die from its own venom; here the venom is balanced by the right proportion of antidotes. When water freezes, this means that not only the cold which is latent in it has been enforced by outside, but also its “hidden” dryness; for ice is not only cold, but also dry. When it melts again, this process is thus not merely produced by heat, but also by humidity which was added from outside. When something wet becomes dry, it does not only lose humidity, but also weight; this shows that humidity contains “latent” weight, whereas heat does not.

The “elements” (fire, water, etc.) are thus not simple themselves, but composed of heat and luminosity. In a broad sense, as “all actions depending on man’s will” were “bodies” inherent in other bodies: fire is not hot and luminous, but is composed of heat and luminosity. As such, fire may itself be considered an ingredient of wood where it is “latent” until the wood is burnt. When it becomes manifest, other ingredients do so too: ashes, which consist of taste, colour, and dryness; smoke, which consists of taste, colour and smell; and water, which consists of humidity and a certain sound, i.e. the cracking produced in burning. In consequence of his “corpuscularism”, al-Najazān thus treated the qualities of an object and its constituent parts alike. It is possible that he differentiated between them insofar as the qualities form the ingredients of the primary elements which then make up for the more complex bodies; but we are not yet able to ascertain whether his theory implied such a hierarchy.

KUMÜN — KUNÄ

Dirär b. ‘Amir [q.v. in Suppl.], but also from apparently al-Aṣṣūn [q.v. in Suppl.], who, in spite of denying the accidents, did not think of qualities as "bodies". The critique used mainly three arguments: (a) nothing can take place in something smaller than itself (and fire is bigger than wood); (b) several things cannot be simultaneously in the same place (which would be the case if several qualities were "hidden" in one substance); and (c) if fire were hidden in wood, we should feel it when we touch the wood, or we should find it when we cleave it. Arguments (a) and (b) were already brought forth against the Stoics (e.g. by Alexander of Aphrodisias in his Πρὸς τοὺς πάντες, ch. 5 ff.); (c) is found in Indian philosophy (e.g. W. Ruben in AO, xiii (1935), 147). The discussion turned especially around (c); al-Nazzām objected that coldness balances the fire hidden in the wood; when the fire comes forth in burning, the coldness also leaves the wood immediately and enters the cold substances in its environment, i.e. water and earth, in a leap (ταχυώνη), without getting into contact with the things in between. This is why the ashes are not cold, in spite of the fact that the fire has left; the warmth found in it is not the warmth of the fire, but the warmth which was "hidden" in it and was activated by the fire. As the "accidentalists" recurred to Aristotelian tradition (visible in (a) and (b)), al-Nazzām also criticised Aristotle's model of physics.

KUN, Arabic orthography Kūn, a Turkish tribe of Inner Asia known in the pre-Mongol period, but only in a shadowy fashion. The earliest mention of the Kun is in Biruni's K. al-Taftam (420/1030), ed. R. R. Wright, London 1934, 145, and he places them in the Sixth Cline, in the territory of the eastern Turks between the Kay and the Kuirids (see خي, خيرات). The tribe is not, however, mentioned in Biruni's K. al-Kuwn al-Kūn (ed. Pellenard, Dictionnaire des Comans, in JAS. Ser. 11, Vol. xv (1920), 134-5). Nor are they given in Kašghar (who does however deal with the other two tribes mentioned in the Taftam as their neighbours), but there is an important section on them in Marwazī's Taftam al-ḥayānīn (early 6th/11th century), see Minoskés, Sharaf al-Dīn Taft Marwazī on China, the Turks and India, London 1942, text ii, tr. 25 ff., comments 93-100. This was adapted a century later by Sayyīd in his Dīsāmī al-khiṣaut, section on the Turks, printed and tr. by Marquart in his ʿAlā dawrul-Viktumul-Kumān, in Bangi Marquart, Osttürkische Dialektstudien, in Abh. G. W. Göt., Phil.-Hist. Kl. N.F. xii/1 (Berlin 1914), 40-2, and used by him as the basis of a complex and convoluted commentary on the Kun, ibid., 42-77.

It seems that the Kun were amongst the easternmost of the Turkish peoples, with their original homeland in eastern Mongolia and the fringes of Manchuria. It may be that the Kun were the epigoni of the Tu-yi-hun to the north of the great northwards bend of the Huang-Ho or Yellow River; the resemblance of the name Kun to that of the proto-Hun, the Hsiung-nu, etc., had already been noted by Marquart, op. cit., 64-5, cf. also Sir Gerard Clauson, Turkish and Mongol Studies, London 1962, 12. According to Marwazī, the tribe had been converted in their homeland to Nestorian Christianity (by missionaries from the Ordos region?), but had been impelled to migrate far westwards by pressure on their pasture grounds from the Kayi. The Kun then moved into the land of the Sāhir/Sāhir (whose name Barthold, in Markwalt, World and Arabs, Leiden 1936, 144, connected with the Turkish word sart "yellow" and the Kipcha/Comans, the Russian Følt ski "pallid, yellowish ones"; possibly, however, they should be linked rather with the Sart Uyghur of Kana [p.71], and eventually ended up in the General-Sea-Kipcha Steppe area. Arguments must have been set off after Biruni's time, i.e. in the middle or later years of the 11th century, Minorsky was at first inclined to identify the Kun with the Kœrl/Kœr (mentioned in the ʿAbd al-ʿAzīz, § 14, tr. 97, cf. comm. 283-6, 312-13, a savage and bestial tribe living to the east of the Kipčak (i.e. apparently to the east and south of Lake Baikal, their name surviving in the present-day Khari tribe of the Buryats), but subsequently abandoned this equation when he found the clear orthography ƶun in Marwazī. Earlier, Marquart had attempted to connect the Kun with the later Comans (in Magyar, Kun) of the South Russian-Western Siberian steppes (see Kipčak), and this was later affirmed by J. Német: that Kun and Kunan/Koman both stem from a Turkish adjective uesto "yellowish, pale" (Die Volkssnamen quanan und quan, in KCSA, iii [1947-9], 95-109).

At all events, the Kun have left very little mark on the Islamic history of Central Asia; we do not know whether they were substantially Islamised before losing their identity in some larger steppe confederation, such as that of the Kipčak or the later Golden Horde. The only member of the Kun to achieve mention in Islamic sources is the slave commander of the Saldıkki Ekbād b. Kočkar [q.v. in Suppl.], who was appointed governor of Khurāzn (490/1097); Minorsky plausibly surmised that he may have been Marwazī's informant for his section on the Kun. KUNÄ, Qena, a town in Upper Egypt, on the east bank of the Nile (population 40,000). It is the
The town, situated at the point where the Nile comes nearest to the Red Sea, had become the point of departure for caravans in the direction of Kusayr. This route took the place of the one used in the Middle Ages between Kusayr and Abyad, which in turn succeeded the ancient Copto-Berainica road. The continual intercourse between Egypt and Arabia and India gave these roads great value; it is by this route that many of the Muslims of North Africa go to Mecca, and even during the Crusades, it was the only pilgrim road. In 1831-3 Muhammad 'Ali had the whole area inspected on the Kunbi-Kusayr road; some were deepened so that they would provide water at all seasons (cf. L’Egypte moderne, collection L’Univers, 186-6; Barron and Hurne, Topography and geology of the East Desert of Egypt, Central Portion, Cairo 1902).

The saint who is the object of Muslim veneration, 'Abd al-Rahim b. Ahmad b. Haddan, twelfth descendant of Djar al-Salih, was born in the envirors of Coute in Morocco. After a journey to Mecca where he spent seven years, he settled in Kunbi and died there on 9 Safar 392/23 January 1196. Honoured during his life for his reputation for sanctity and asceticism, he has become one of the principal saints of Egypt, along with Ahmad Badawi, Ibrahim Daflad, and Abu I Haddad; Al-Jahiz. At one time a pious formula used to be handed down which, if recited beside the tomb, hastened the realisation of a desire or brought about a cure. According to some travellers, the pilgrims who came to Kunbi made circuits (jandaf) of the tomb of 'Abd al-Rahim similar to those made by the pilgrims at the Ka'ba (Adawfi, Tādž-āwīd, no. 231; Goldziher, Mun. Studien, ii, 315, Eng. tr. ii, 187; RHR, ii, 28; Gaudroy-Demombynes, Le pèlerinage à la Mekke, 224). There were descendants of 'Abd al-Rahim living in Egypt for two centuries; they were, in particular, jurists and professors (Adawfi, nos. 29, 127, 129, 304, 402, 476, 533; al-Makriri, Kāmil, ii, 423).

KUNBI SALIH, an important cluster of ruins of mediaeval date, situated in lat. 26° 59’ N and long. 19° 24’ W in Hodh ( southern Mauritania), 330 km. N of Bamako, 93 km. WNW of Kara and 70 km. NE of Timbuktu. Most modern writers agree that it was the capital of the Sarakoli kingdom of Ghana [57], which dominated the southern part of the Western Sahara and the North Sudan from around the 6th century until ca. 1076. The ruins are situated on a schistose plateau which is covered with thorn-bushes, and they stand between two seasonal pools. They extend for about 1,200 m. north to south and 800 m. east to west, but this does not include the scattered outbuildings and two extensive burial grounds. The one in the north-west covers an area 1,600 m. by 800 m. and contains a columned tomb with six chambers. The other is in the south-east at Soubi measures 700 m. by 400 m.

There are many mediaeval references in Arabic to Ghana, from al-Fazari (before 1214/800) to Ibn Khaldūn, but local oral traditions do not mention this place name. In fact, it is not until the 17th century that the name Kunbi appears in the Tarīkh al-Fatāliyyah, which says: “The name [of the empire of Kayamaga] was Kunbi, and this Kunbi was a great city.” The Tarīkh al-Salāhīn specifically states that the capital of Kayamaga was Ghana, but all the Sarakoli traditions about the Wagadu speak of Kunbi (Ch. Montefi, Métamorphoses ethnologiques, 390; A. Bathily, L. IFAN (1957), 77; W. Kamissoko, 1976, unpublished) as the residence of the serpent Bida. The persistence of the Sarakoli and Moorish tradition is best illustrated by the fact that in 1974...
Bonnel de Mézières was driven directly from Walata to Kunbi when he expressed a desire to the marabout to see the site of the capital of Ghana.

Although the ruins of Kunbi were well known to Africans, Bonnel de Mézières in 1914 was the first European to see them. He then undertook some excavations there, and the results were published in 1920, but unfortunately none of the material which was brought back from the expedition can now be located; it cannot be found in the Musée de l'Homme, the Académie des Inscriptions et Belles Lettres or anywhere else. Later excavations have been made by M. Lazartigues (1930), P. Thomasscy (1949-50) and R. Mauny and G. Szumowski (1951); the most recent excavations have been by J. Devissé, D. and S. Robert and their team (1972, 1975, 1976), but as yet these are not published. These excavations have revealed many schist-built houses with beautiful Arab-Berber architecture, which predates the Hispano-Moorish style. They contain carefully-made paving stones, wall-niches, stairways and stone beds. An imposing columned mosque is slowly being revealed on the Main Avenue which crosses the ruins from east to west. It has superimposed mithqals showing that at least two sanctuaries have stood on the same site. Material remains include stones with painted inscriptions of the skhoda, countless pieces of coarse pottery with some slip-decorated ware and even some glazed (Mediterranean) ware, tools and weapons in iron, objects in copper and glass and glass and heads in stone and glass.

The north-east necropolis comprises a series of chambers for multiple Muslim burials; they are collective tombs for families or for people from the same Maghribi town or the same tribe. The most elaborate "columned tomb" is surrounded by six successive chambers, the last of which has a perimeter of 860 m.

The ruins show that this was an urban settlement with a high population density. The estimated population for the town at its peak was 15,000 to 20,000, which is an enormous figure for a Saharan town with a limited water supply (R. Mauny, Tableau geogr., 1982). Walls have been found a depth of 15 m showing occupation levels over several centuries after the 8th century. The dates provided by carbon 14 analysis are: 828 ± 115 A.D.; 933 ± 71 A.D.; 691 ± 114 A.D.; 1210 ± 121 A.D. This confirms what is already known of the history of the capital of Ghana with which these ruins are to be identified, in the present writer's opinion, despite the hesitations of Ch. and V. Montell (1952, 442-52; 1964, 58-62; 1968, 109-12), who are more inclined to follow al-Idrisi (4). In situating Ghana "on the two banks of the river [Senegal]". However, their identification must be challenged, for al-Idrisi made enormous errors in his work and, furthermore, no ruin of this importance has ever been found on the banks of the middle Senegal river. The evidence of oral traditions and what is written in the Tarikh all points to Kunbi as the correct site.

The irritating question remains to be resolved about the two places called Ghana which al-Bakri (460/1069-8) describes. The one was populated by Muslim merchants and had twelve mosques; the other was six miles away and was reserved for the king and his court. The present writer holds that Kunbi Sâlîb should be identified with the town of the rich Arab-Berber merchants described by al-Bakri. If this is so, where was the royal capital? New ideas about this problem have been suggested at a recent conference on the history of Mali, held at Banako in February 1976. Traditions show that the royal residence was apparently at Kalaka (Karka, 23 km. south of Kunbi) and the royal stockyard at Kunbi Duff, a modern village 20 km. SSE of Kunbi Sâlîb, which was in fact the merchants' town. The existence of a double or triple town can be understood because of the natural desire of the aminate kings to live apart from the Muslims and also because of the scarcity of water in the area. This is a potentially new field for archaeological investigation. Kunbi Sâlîb is the most important ruined site in West Africa—with Tagadoust (Awleaghoust) running it a close second—and because of this, fresh excavations ought to be undertaken there.

The Great Saljûqs, Tughlî Beg, Alp Arslan and Malikshâh, were served by two waṣīrs: Kundurî, waṣīr of Tughlî Beg, and the more famous Nizâm al-Mulk, waṣīr of Alp Arslan and Malikshâh. The main ambition of these two waṣīrs was to manipulate power and influence through the sultans whom they served. Nizâm al-Mulk did this with consummate skill for three full decades, outmanoeuvring his
Tughril was setting out to fight one of his rivals in Tughril's generals, as sultanate, and money was distributed among the would only serve to strengthen Islam's forces and do so, but was convinced by Kunduri that their Minhän, faced by the superior forces of Ibrahim and Kunduri to come to his aid. Kunduri wanted to arrange for Anushirwan to make a bid for the sultanate, and money was distributed among the troops for their allegiance (baya). Kunduri, Khâtun and Anushirwan contributed, as well as the caliph, the merchants and the high functionaries of Baghdad. But Kunduri's plan met with opposition from two of Tughril's generals, 'Umar and Jâhânšíh, who refused to recognize Anushirwan. Then when Tughril asked the caliph to proclaim Anushirwan as sultan, he was told to defer the matter, and to see that the city was not deprived of troops to defend it against the menace of Basâshîl. Khâtun changed her mind and went to reinjoin her husband. The sources are not expansive in their reports regarding this plot, but we later see both Kunduri and Anushirwan in the service of Tughril Beg. They later fought against Basâshîl and negotiated the latter's delivery at the hands of the Manyâzâdî Dâvûs b. Sadaka, and their success here regained for them the confidence of the sultan.

After Tughril's death in 455/1063, Kunduri once again saw his opportunity to serve under a sultan whom he could manipulate. Tughril, before his death, had designated Sulaymân, son of his brother, Čaghrî Beg and brother of Alp Arslân. This choice may have been suggested by Kunduri. In any case, the succession to the sultanate had to be secured by eliminating all other pretenders. Alp Arslân was ready to oppose Tughril, and here he had to deal with Kunduri. From the beginning, Kunduri had the upper hand, telling him to be content with the possession of Khurúsân. Alp Arslân marched in Rayy in the name of Alp Arslân. Arriving at the palace of the sultanate in Rayy, Alp Arslân did not make known his true feelings towards Kunduri, and insisted on Kunduri remaining with him in the palace when the latter wanted to move, saying "My joy consists in having you beside me, how can you entertain the thought of going away from us?". This was the beginning of a cat-and-mouse game played with relish by Alp Arslân, who kept Kunduri until he had recovered all the wealth amassed by the wars, before finally putting him to death, having taxed him with crass ignorance for imagining that he could stand against three Saljûq pretenders to the sultanate, meaning himself, Kâwûr [q.v.] and Kutlamûsh.

Kunduri's ambition had been to hold de facto power under a docile and malleable sultan, but his plans failed disastrously. He did, however, succeed in arranging the marriage between Tughril Beg and the daughter of the caliph al-Kâ'im, the negotiations for which lasted for a period of three years (452-4/1060-3). Tughril had hoped to see a Saljûq descendant assuming the 'Abbasid caliphate, but the marriage ended with his death and without issue. Kunduri's success in arranging the marriage, against the caliph's will, earned for him the enmity of al-Kâ'im who, on making the khâli in Alp Arslân's name in Bagdad (Râh II 456/March-April 1064) asked Alp Arslân to eliminate Kunduri.

Where Kunduri had failed, Nikân al-Mulk succeeded. The difference between these two waizars consisted in the political acumen and consummate administrative skill of the latter as compared with the former's lack of perception and discrimination. Kunduri supported the Mutawalli movement, and was instrumental in having al-Âshâfî cured from the pulpit of Khurúsân by the order of Tughril Beg. In Baghdad, he earned the hatred of the Sunnis by supporting the Shâfs. By contrast, Nikân al-Mulk supported the Ashâfîs, but was not averse to supporting 'ala'and of other movements wherever these last had a strong following. Also, his establishing anâkûd for the 'ulama' in the form of madrasas, masjîds and ribâh, secured the support of the masses among their followers. Not the least among Kunduri's mistakes was his personal engagement in battle, whereas Nikân al-Mulk remained a man who manipulated the pen, leaving the sword for those better suited to the battle field.

KUNDUZ, the name of a river, a town and a modern province of Afghanistan.

1. The river is one of the two main left bank affluents in Afghanistan of the Oxus. It rises in the central region of the Hindu Kush [q.v.], with Bâmiyân in its catchment area, and flows for some 300 miles/480 km. until it reaches the Oxus just below where it receives its right bank affluent the Wahshêh River. The different stretches of the river have varying names; thus the middle course, within which are situated the towns of Bagdân and Pâlî Khûrûn, is called the Surjchâb or "Red River".

2. The town is situated in lat. 36°35' N. and long. 68°30' E. at an altitude of 1,100 feet/300 m. in a region which has the general name of Khotân. The surrounding countryside, centred on ancient Kunduz and the nearby modern town of Khânâbâd, is now fertile agricultural land (rice, fruits, etc.) and pastures, but was until very recently notoriously malaria and unhealthy. The town of Kunduz (presumably Pers. kukan-dz "fortress") is not mentioned under this name by the mediaeval Islamic geographers, but it
fall within the province of Takharistan [q.e.], and is
very probably identical with, or situated close to, the
important early Islamic town of damalik or
Damalik, originally a centre of the Khattabites
[see HAYATA] in their struggles with the invading
Arabs in the 1st-2nd/7th-8th centuries, and thus an
administrative centre and mint town for northern
Afghanistan until Saljuk times (cf. Hudud al-Salam,
comm. 340, and Lo Strange, The lands of the Eastern
Caliphate, 428); today, there are many ruins in
the vicinity of Kunduz.

In the Timurid period, Kunduz is frequently
mentioned under this name. It figures in the cam-
paigns of Husayn Bayqara [see HUSAYN NIZA], e.g.
in 1390/1499-5, being until this time ruled by the rival
Timurid prince Muhammad Nizād b. Aḥbāb b. D. 1459
[see Earlhow, Four studies on the history of
Central Asia, iii, Aḥ-Ṣār, Leliaa 1662, 53, 62-3]. It then passed for some years into the hands of
Bābur, who during the years 1516-21/1522-4 used it as
a base for his unsuccessful attempts to conquer
territory north of the Oxus in Ḥūzūr and Waldhūk
(Bahār-nāme, tr. Bārāvāde, 45-6, 376, 345, 352 ff.,
and parev).

Northern Afghānistān was by now becoming
increasingly Turkicised by Oezbeğ and Turkmen groups,
and in the period of the Safavid-Oezbeğ rivalry, petty
Oezbeğ principalities were established in towns like
Balkh, Khulm and Kunduz. These submitted in
1524/1571 to Ahmad Shāh Durrānī [q.e.], but in the
early 19th century Mountstuart Elphinstone again
found Kunduz under an independent Oezbeğ chieftain
Khalil Shāh Khaun], who had 15,000 men under his
command (An account of the kingdom of Cabūb, London 1839, ii, 200). A few decades later, in the
years 1840-9, the Oezbeğ principalities of Bālīk,
Khulm, Kunduz, Maymana, Aṣkā, etc. came into
the orbit of Dost Muhammad [q.e.] of Kābul. Kunduz
was visited by John Wood in the 1830s, who found it
a miserable settlement of 500 to 600 mud huts of
nomads plus reed huts and black tents of Oezbeğ
nomads (A journey to the source of the River Oxus,
London 1835, 274-8).

The present population of the Kunduz district is
highly mixed, but includes a large proportion of
Oezbeğs, Turkmenos and Kazakhs, plus some Pathanos
settled there in the present century by the Afghan
government, and some Arabic-speaking groups have
been reported from the region (see G. Jarring, On the
distribution of Turk tribes in Afghanistan, an adoraptat
at a preliminary classification, in Lundes Universitas
Aarehett, N.F. Aved, i, Bd. 35, Nr. 5 (1939), 17-20).
There is now an important amount of seasonal immi-
gration from the Hindu Kush mountain regions,
the workers being attracted by the higher wages which
can be earned in agricultural work.

Since the 1962 administrative reorganisation,
Kunduz town has been the capital of a province
of the same name, having been previously in the
province of Kakāhān; the population of the town
has been estimated (1969) at 40,000, and of the
province at 415,000. It is now a centre for agricultural
development schemes in the Oxus lowlands, and the
local Turkish population also carries on carpet-
weaving; moreover, it has an airfield, with regular
flights connecting the town with Kābul.

KUNFUZ. Kumaq (A., fem. kunfużī, pl. kunfużā),
a race, now preserved in all the Arabic
dialects (Maghībī, benfudī, Middle East, benfudī) which denotes, like its Hebrew counterpart,
hippod (see Isaiah, xix, 23, xxxiv, 11, and Zophaniah,
i, 14), both the hedgehog and the porcupine.
These two small excavating mammals, externally
fairly similar through the sharp, hairy spines covering
their backs and flanks and through their nocturnal
habits, are nevertheless quite different zoologically
in their respective species, dimensions and food
habits. But all the ancient authors, Greek and
oriental, systematically included them in the same
family, although the first is insectivorous and the second a rodent.

I. The hedgehog (Pers. ẖar petch, Hebr. kirbah),
of the Erinaceidae family, comprises, in the Old World,
some fifteen species which spread from the Atlantic coasts
of Manchuria and from the 6th parallel north to
South Africa, with the exception of Madagascar,
where it is not present. Thus in the Arab lands is
found, at the side of the universal Erinaceus eu-
pus, the race E. algericus in the Maghībī (nomencl.
in Algeria al-ḥadidāt Ahmad, Berber innives, pl.
invesinvisaun), E. dorus in the Saharan (Tamalaq,
Hoggar chemislaytinsia, pl. chemislaytinsaya, at
Qāht kinwīn, in Air lsbaṇisht), E. albiventris in
Egypt and the Sudan, E. aethopicus in Abyssinia,
and E. sylvicus and murinus in Ḫūṣīs Ḫuṣīs, Lebanon,
Palestine and Arabia. This unobtrusive, nocturnal
traveller, with its rapid and jerky movements like
a mechanical toy, is endowed with, as well as the
generic names kunfużī and anbah (this latter one
shared with the tortoise), various bynames evoking
its nocturnal habits, as expressed in the old, assonautal and metathesising
adage, involving its curling up into a ball like a
chestnut-bur, cause it to have such names as
`khulmar, hārmah, ḥātīs, kātās, and its spines
takān, ḥusāt, ḥusāt, ḥusāt, ḥusāt, ḥusāt, the roof of its
defensive attitude, involving its curling up like a
mechanical toy. is endowed with, as well as the
other bynames evoking its nocturnal habits, as expressed in the old, assonautal and metathesising
adage, involving its curling up into a ball like a
chestnut-bur, cause it to have such names as
`khulmar, hārmah, ḥātīs, kātās, and its spines
which denote, like its Hebrew counterpart,
imreis (imreis, insi), a masc. noun preserved in all the Arabic
language, which denotes even to every gentle hedgehog”. The cry of the male hedgehog is
a short sighing noise, whence its name hinama
“whining, grizzling one”. The hedgehog is considered
as one of the most inoffensive and feeble of animals,
as expressed in the old, assonautal and metathesising
adage, māk lam naḥṣi al-talunna aḥḥab kātās-
laṭunna “when one does not do what is required, one
becomes subject even to every gentle hedgehog”.

2. The porcupine (Pers. tisjād, Tishā jāb, ḥarbash kārbī)
in the Maghībī dorrīb through confusion with the
classical parshānparshān denoting the zoril, Berber arus,
Tamamaq, in Air and Adriq, emwyemwyemery, pl.
emwyemwyemery (emwyemwyemery) is from the family of Hystri-
idae which comprises five genera and some fifteen
species. It is present, with two geographical races
which are the most universal (Hystrix cristata and
H. leucura), in all Africa, the Near East, Iran,
and from the East Indies to China; but in Arabia, it is
present only in the southern half of the peninsula.
It is three or four times larger than the hedgehog
and always considered to be its big cousin, but this
vegetarian is nevertheless distinguished from the
former by al-Dībāzī (Hayyūnīn, vi, 461-2) under the

KUNDUZ — KUNFUZ
names duduludululul, skhuyamhiyyin and nays (this last preserved as nayy in the Near East). This careful observer adds, in good faith, that the porcupine is to the hedgehog as the ox is to the buffalo (see al-Damghi, Hayydi al-hayyin al-kubbd, i, 337-8, ii, 57, 267-9, and in the same edition, al-Kazwlni, *Abbâd ibn-makkhatûd, ii, 337-61) relates that the porcupine, when it has young, climbs up the vine-stems by night, pulls off the bunches of grapes and lets them fall, then comes down and rolls among its harvest and carries it off transfixed on its spines to its home territory, thus providing an ample diet of succulent grapes for its children.

Whether it is a case of the hedgehog or of the porcupine considered as a large hedgehog—and both of these are taken by the medieval Arab naturalists, together with the thorn-tail lizard (see pane) and the jerdon (yārūn [see pane in Suppl.]), as "creeping beasts" (asbūn as-rā'ī, ḍhāyār al-ard [Hayyânîn, v, 28])—the *burjûf, through its nocturnal life and its innate distrustfulness, has given rise to such comparisons as *asru min kunjudh "travelling more often by night than a hedgehog" and *asmd min kunjudh... min dudulul "having sharper ears than a hedgehog... porcupine"; whereas a night raked by insomnia may be described as *layl al-kunjudh, *layl al-anbâd "hedgehog's night". The mysteriousness of the gloom enveloping its journeys summoned up in the fertile imagination of the Bedouin the image of the *Beduqin al-ard, hashardt al-arâb (tfawûn, b) as a "hunter of the land", has remained undecided on the question and depended on the decisions of local authorities, basing themselves on the customs and usages of the region; thus amongst the Berbers in the Maghrib, no objection is met with against making the *kunjudh an article of diet.

The various anatomical parts of the *kunjudh possessed, in the ancient therapeutic inventory, numerous specific qualities, notably that of the right eye which, boiled in sesame oil and mixed with collyrium, caused nyctophilia or day-blindness; this formula was, it seems, used by rogues and nocturnal prowlers in order to facilitate their nefarious activities. Salted hedgehog flesh was beneficial for children suffering from urinary incontinence. At the present day, according to what the Touareg say, a porcupine-needle stuck in a camel's saddle prevents fatigue in the loins for the camelriders of the Sahara. Of a more practical kind is usage of a hedgehog skin, with its spines, as a muzzle for kids too inclined inconsiderately to suck their mothers' milk. The porcupine's quills are also used, moreover, for making little instruments and tools like needles for sewing, sticks for applying kohl, etc.

For some time past, the hedgehog, which is very easily domesticated, has been the domestic pet in numerous dwellings of the Saharan oases in order to rid them of cockroaches and other undesirable insects; here we have a modest rehabilitation of the *kunjudh burbâh, 'hedgehog of the stone ground', a byname given metaphorically to an individual with unattractive features but where there is still a possibility of finding someone even less attractive. From a similarity of appearance, the terms *kunjudh al-bâbî or *ghayyam habîr "sea hedgehog" denote the edible sea-urchin (*Echinus esculentus), whilst in al-Damghi and al-Kazwlni, op. cit., the term *kunjudh habîr is applied to the beaver.
A port on the Red Sea coast of the Tihama or lowland of the southern Hijâda, situated in lat. 19°6' N. and long. 41°0' E. and at the mouth of the Wadi Kanâwnâ. It lies 36 km south of Rihdājâ or Djiudâa (q.v.) and 45 miles north of Hâly.

The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where is the bazaar with its one-storied warehouses in an irregular line, and the chief mosque and smaller mosques with low minarets. On a little island about a quarter of a mile away is a small castle which used to be the residence of the representatives of the Sharif of Mecca. The town was estimated in 1850 to have a population of 10,000, but S. Langer in 1882 put it at only 2,000.

The harbour, which is enclosed by a number of sandy islets and is only accessible to Arab vessels of medium size, has great disadvantages, notably that the boats cannot land there; until recent times, however, a certain number of pilgrims on the hajj have landed there and at al-Lîth to the north by sailing craft. Trade and commerce are moderate: It exports gold, for which this region was celebrated in antiquity, is still found here; the Al Khat Şris still get myrrh collected in 'Asîr [p.r.] and also hides and honey; the harbour used to be frequented by slave-dealers who brought their Abyssinian slaves for sale here, but Britain's sharp control made slave-smuggling practically impossible by the early 20th century. Trade with the interior is limited to the exchange of provisions and everyday necessities and is confined to modest bounds. The much more important harbour of Kuwayyâ further south has long since attracted almost all the trade. The poverty of the inhabitants is revealed by the primitive huts, built of poles and thatch with gable roofs, which are typical of the whole coast plain. Of agricultural products, cotton and maïs are grown in the district.

Al-Kunjûfâ is perhaps a very old settlement; in any case it is a district of great interest to classical students, the land of the Debea, Pliny's regio Canauâ has been identified by A. Sprenger and B. Moritz with the Kanâwnâ mentioned by al-Ḥamdânî, but this town lies at the mouth of the Wâddî of the same name. Gold, for which this region was celebrated in antiquity, is still found here; the Al Khat Şris still get gold from the streams. Al-Kunjûfâ, however, seems to have been the northern limit of this ancient gold area. The name appears to be comparatively modern. The Portuguese knew it in the form Condotâ. Niebuhr calls al-Kunjûfâ a large but badly-built town. In his day (1766) it derived a certain importance from the trade in coffee, because all the ships carrying coffee from Yemen to Dijûdâ had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the İrām of Saût. It passed to the Sharif, together with the land of the Dcbae. Pliny's regio Canea still gets a mention of the trade in coffee, because all the ships carrying coffee from Yemen to Dijûdâ had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the İrām of Saût. It passed to the Sharif, together with the land of the Dcbae. Pliny's regio Canea still gets a mention of the trade in coffee, because all the ships carrying coffee from Yemen to Dijûdâ had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the İrām of Saût. It passed to the Sharif, together with the land of the Dcbae. Pliny's regio Canea still gets a mention of the trade in coffee, because all the ships carrying coffee from Yemen to Dijûdâ had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the İrām of Saût. It passed to the Sharif, together with the land of the Dcbae. Pliny's regio Canea still gets a mention of the trade in coffee, because all the ships carrying coffee from Yemen to Dijûdâ had to pay toll here to the Sharif of Mecca, although the town was within
KUNGRAT—KONKA

region to the south of the Aral Sea (M. A. Czaplicka, The Turks of Central Asia in history and at the present day, London 1918, 38, 40). In the 18th century the Osbog Kungrat played a dominant role in the Khankan of Kiwra. When the Arabshahid line of Khans of Kiwra became extinct at the end of the 17th century, real power was exercised in the Khankan by Kungrat military chiefs who held the title of inay [q.v. in Suppl.]. In the early 19th century, these inays came to themselves to assume the title of Khan and ruled in Kiwra until the period of the Russian protectorate [see 289969]. The tribal name was given to a settlement in the delta or "island" area of the Oxus mouth, on the road between Khodja-ili and the Aral Sea shores; during the later 18th century, until 1226/1815 and the time of Muhammad Rakhim Khan of Kiwra (1222-41/1860-69), this district centred on Kungrat was in effect an independent principality [see Bartholom, Turkestan down to the Mongol invasion, 151, and Idem, Histoire des Turcs d'Asie Centrale, 192].

In 1586 a Russian military steamer sailed up the Oxus delta, alarming the inhabitants of Kungrat, and the town was an important strategic point in the Russian expeditions of 1837 under General Kaufmann and directed against Kiwra; it formed the concentration-point for the naval force from the Aral Sea and the land forces from Orenburg and from Manghlekh (see E. Schuyler, Turkestan, notes of a journey in Russian Turkestan, Khokand, Bukhara, and Kuldja, London 1876, i, 107, ii, 331, 336, 346-50). Kungrat is now a town in the Kara Kalpak ASSR; see on it BSE, xxiv, 53.

(C. E. Bosworth)

KANKA, variant forms KENKA, KENKA, KANKA, KUNKA, KUNGA, the Arabic name for the modern town of Cuenca, administrative centre of the province of the same name in Castile, Spain, situated near the confluence of the Jucar and Huécar Rivers at an altitude of 925 m. at the point where the Mancha becomes a mountain chain. According to al-Idrīsī, Kungra was "a small, ancient town, surrounded by a wall and moat". Al-Idrīsī mentions it among the 20 stages of the routes connecting Cordova and Saragossa. Al-Idrīsī mentions Cuenca in his division of al-Andalus into 26 idāb, but gives it the title of a ḥira. Al-Umair makes it the eleventh province of Spain, comprising the towns of "Orihuela, Cuenca, Elche and Denia, as well as numerous strongholds". Yāḥyā makes it part of the amal of Santaver, and Ibn al-Ashbah al-Salāṭ, who was there in 567/1172, has left a description of it.

During the period of the multāk al-andalūs, various political and economic factors reinforced the strategic importance of Cuenca. Previously, from 1317/66 to 1607/777, it had been part of the region shaken by the rebellion of Shāhīyāt al-Fātimi. It had then passed to the Dhu 'l-Nūnids [q.v.], and in 939/938 it had been divided among the three sons of Mūsā, who were these strongholds of the frontier zone, were virtually independent of the central government. At the beginning of the 9th/15th century, Cuenca belonged to Isrā'īl b. Dhu 'l-Nūn, who proclaimed his independence in the 8th/14th century. Later, we find Ibn al-Farağ, who distinguished himself in military campaigns, as nāl of Cuenca for the Dhu 'l-Nūnids. Whilst al-Mutawakkil b. al-Āṭās temporarily occupied Toledo (472/1081), Al-Kādir took refuge in Cuenca. In the following year, Sancho Ramirez and Ahmad b. Hūd besieged the town, which bought them off with a sum of money. After Alfonso VI's capture of Toledo (476/1085), Cuenca passed under Castilian rule and was included in the famous "dot de la mora Zaida". Alfonso probably kept the Muslim structure of the town, requiring a tribute, according to the homilies of the Mozarab Count Simancas. In 490/1097, whilst Cuenca was being protected by Alvar Fabe's army, the Almoravids led by Muhammad b. ʿAbd al-Salāṭ raided the district, and after the victory of Úcles (501/1010) occupied the town; but in 531/1137 the populace rose against the Almoravids and burnt the strongholds of Cuenca.

In 567/1172, has left a description of it.

The period from the mid-10th/16th century, when Ahmad al-Bakkar’s son Sidi ‘Umar al-Shaykh is said to have died, until the early 12th/18th century seems to mark the emergence of the Kunta as a distinct and relatively large tribe, their numbers no doubt being augmented by the acquisition and eventual integration of tributaries and slaves. They appear to have roamed over a wide area from the Hodh (al-Chad) in the south to al-Sakiya al-Hamra’ in the north and Tuwai in the east. Some members settled in Walata and in a village in Tuwai known as Zawiyat Kunta where Sidi ‘Umar’s son, Sidi al-Mukhtar al-Shaykh, is said to have been buried.

In the early 12th/18th century a rift occurred. The clans descended from Sidi Muhammad al-Saghir b. Ahmad al-Bakkar’s hived off to roam the western Sahara from the banks of the River Senegal to al-Sakiya al-Hamra’ (the Kunta al-Kibla), while those descended from Sidi ‘Umar al-Shaykh combined pastoralism with commerce, establishing a network of camps and trading posts from the Wadi Daria through Tuwai and the Azaqad region north of the Middle Niger to Timbuktu in the west and Katsina in the east.

Among the latter, the Awlad Sidi al-Wali established a position of pre-eminence in the second half of the 12th/18th century, due to the role of their leader Sidi al-Mukhtar al-Kabir b. Ahmad b. Abi Bakr (1142/1240-1226/1729-1811), who combined qualities of sanctity with political astuteness and commercial acumen. In ca. 167/1753-4 he established his camp at al-HiHa in Azaqad, which rapidly became a centre of study and of the propagation of the Kadiiriyya Order. It is from the sub-order which he established, the Mukhtariyya, that most of the Kadiiriyya
groups in West Africa derive their affiliation, Sidi al-Mukhtar's role as a Sufi leader and his prestige as a scholar enabled him to mediate between warring Arab and Tuareg tribes in the area and to heal the rift between the eastern and western Kunta. His far-ranging missionary tours (siyāsā, wārid) included a multiplicity of regenerators in different spheres of endeavour such as politics (mudā'add al-siyāsā), the view of the 13th century historian al-Hallāmī, and his zayāfī at al-Hillā, which received disciples from distant areas, were supported by income from participation in the salt trade from Taroudant to the Niger and the trade in tobacco from Timbuktu to Tinnuitu.

His teachings, born of his Sīfa outlook as well as the position of his clan as a zayāfī group, emphasised leniency, the looking over of faults and the winning of hearts through "gishād of the tongue" rather than "gishād of the sword", though when Uthmān b. Faddā [q.v.] initiated a militant gishād in 1225/180-5, he expressed his approval of it. He proclaimed himself the sole "regenerator" (mudā'add al-siyāsā) of the 13th century, expressing his approval of it. He proclaimed himself as the sole "regenerator" (mudā'add al-siyāsā) of the 13th century al-Hallāmī, whose continued challenge to French authority remained a menace in the first two decades of the 20th century; and Sidi Bāy b. Sidi Umar (b. 1865), a scholar and man of saintly repute who took up residence in the Adrar-n-Ifoghas and encouraged both the Iḥghas and Ahqgar Thangr to avoid conflict with the French. Several copies of his Nāsik, as yet untried, are preserved in the Institut des Sciences Humaines, Naimay, Rép. du Niger.

The spiritual influence of the Kunta in the 12th-13th/18th-19th centuries was far-reaching. The two major Fulbe leaders, Shaykh Uthmān b. Faddā and Shaykh Ahmadu Lobi, both received and propagated the word of the Mūtankiriya, though in both Hausaland and Māsinā the Tijānīyya gained ground rapidly from the mid-19th century. A list of the main groups of West African Muslims attached to the Order or branching from it may be found in P. Marty, Études, i, 140-2 (see Bibl.).

J. O. Huvvoren

KUNÄT [a.], a technical term of Islamic religion, with various meanings, regarding the fundamental signification of which there is no unanimity among the lexicographers. "Refaining from speaking", "prayer during the salāt", "humility and recognition that one's relation to Allah is that of a creature to its creator", "standing"—these are the usual dictionary definitions which are also found in the commentaries on different verses of the Kurān where kunāt or derivatives from the root k-n-t occur. There is hardly one of them for which the context provides a rigid definition of the meaning (see ii 176, 330; ill, 15, 36; iv, 38; vi, 121; XXX, 255; XXXIII, 31, 32; XXXIX, 12; LXVI, 5, 12).

The kundt gives more definite contexts. "The best salāt is a long kunāt" (e.g. Muslim, salāti al¬
mundūjīn, trad. 164, 165, bāb nūf al-salāt fīl al¬
‘awrūd; al-Tirmidhī, Salāt, bāb 168). Here, in the context of Allah giving all the commands (see al¬
Nawāwī in the passage), kunāt means "standing". In the well-known kundah, "allike to the fighter on the path of Allah is he who stands, who kunāt bi-‘ayāl Allāh" (Muslim, 1mdōra, trad. 110), kunāt has obviously the meaning of "to recite standing" (cf. Abu Dāwūd, Qāhir Ramādān, bāb 5; "And he who recites two verses of the Kurān standing is enrolled among the kundtīn". Kunāt, however, usually seems to be connected in meaning with du’ā', e.g. in the oft-quoted tradition which tells how Muhammad in the salāt al-suffah appealed to Allāh for a month against the tribes of Rīf and Dhakwān, as they had slain the kundt at Bīb Mā’tūna (Witr, bāb 7); in this case the meaning is certain from the explanation yu’dī salāt (al-Bukhārī, Witr, bāb 7; Dhahād, dh 164). In the parallel tradition, when Maghāzī, bāb 28, trad. 3, there is added "and till then we were wont to perform the kunāt". Some sources (see Goldziher, Zauberelemente, 323) add that this was in the month of Ramādān.

The rite also appears in parallel traditions in a more precise form; it is said that the kunāt took place in the salāt al-faṣr (al-Bukhārī, Daʿwātī, bāb 59) after the ruhk (i.e., Witr, bāb 7). It is still more precisely defined in a kundh in al-Nasā’ī, Taḥbīl, bāb 32: "... that he heard how the Prophet when he raised his head after the first ruhk at the salāt al¬
suffah, said: "O Allāh, curse this and that man (i.e., some of the munkātīn); these upon Allāh revealed: "It does not concern thee whether He turns to them with favour or punishes them" (III, 123). The following is another example of kunāt: "When the Messenger of Allāh passed after the last salāt at the salāt al-suffah, he said: "O Allāh, save Wādīb b. Abī Wādi’ and Salīma b. Higham and ‘Ayyāsh b. Abī Rabā’a and the weak ones in Mecca. O Allāh, tread heavily on Mudar and send them years of famine, like the years of Joseph" (al-Nasā’ī, Taḥbīl, bāb 28). According to another tradition, which also goes back to Abū Hurayra (al-Bukhārī, Al-Thānī, bāb 120), the kunāt consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the kunāt was regularly performed at the morning and evening salāt (sunnah and maghrib; al-Tirmidhī, Salāt, bāb 177; al-Nasā’ī, Taḥbīl, bāb 30). Al-Tirmidhī gives the following note on this tradition: "The learned differ in their views about the kunāt at the salāt al-faṣr. Some of the scholars of the Sahābas and later generations advocate this kunāt, such as Mālik and al-Shafi‘ī". Ahmad b. Hanbal and Iṣāq declared: "There is no kunāt ut¬
tered at the salāt al-faṣr except in case of a calamity, which affects the Muslims as a whole". In such a case "The Imām has no prayer except for him who understands, and ‘Umar and ‘Uthmān and All and that none of these uttered the kunāt prayer. He adds "It is therefore also a bi’d’ī, my son" (al-Nasā’ī, Taḥbīl, bāb 33).

Nevertheless, it continued to be known as the name of the prayer (da’āt) at the salāt. In the books of tradition a formula is given for the kunāt al-muṣīr (it occurs often and in different forms, though it is not always called kunāt but is given names like du’ā', etc.): "O Allāh, lead me amongst those whom Thou guidest, and care for me among those for whom Thou carest. Thou art blessed and exalted, O our Lord" (al-Tirmidhī, Witr, bāb 10). The same formula is found as an element in the salāt in al-Nawāwī, Musāhāt, ed. van den Berg, i. 83, 456-5; cf. Lane, Lexicon, s.v. k-n-t, who gives another formula.

(A. J. Wensinck)

KUNYA [a.], patronymic, an onomatopoeic element composed of Abū (ma.) "father" or Umm (f.) "mother" plus a name. We have here a metonymic designation corresponding to a general tendency among primitive peoples to consider an individual's name as taboo and not to pronounce it unless excep¬
tively (see J. G. Frazer, The golden bough, ch. xxiv). The kunya was therefore accorded the name which should be used, but in historical times, the original intention here was forgotten, and al-Bukhārī (see J.A. 1957, 70, 82), far from seeing here any
connection with sympathetic magic, counts the kunya amongst the claims to glory of the Arabs and, seeing only one aspect of the reality, stresses the honour attaching to it. Nevertheless, it is certain that the use of the kunya was not wholly honourific, since it gave the possibility of citing a person whose name, for various reasons, including certain rather humiliating ones (e.g. in regard to an enemy), one did not wish to pronounce. In any case, usage was such that the kunya sometimes came to predominate over the name (q.v.) or name proper, to such an extent that the sets of certain personalities cannot be established with certainty, has been forgotten or may even never have existed (see e.g. Abu Ta[b, Ab[ Lahab, etc.).

In principle, Ab[ or Umm is followed by the eldest son's name, and this usage is based on the value which Semitic peoples placed upon their children, and above all their sons. This again points to the importance placed on the punctilious performance of funeral rites, a duty that was incumbent upon the eldest son in particular. There is negative evidence of the connection between the kunya and funeral rites from the facts that slaves, as a rule, had no kin name and that, unless they had been received into the familia, they were buried without ceremonies.

However, the kunya can be composed of the name of a younger son or even of a daughter, but again, this was not necessarily expressed in reality, and since it is given to a child, the latter might well have no issue of its own throughout his life. The giving of a kunya can in effect act as an expression of the hope that its nearer will have a son and will give him a determined name. Several kunyas are traditionally attached to certain names (the v. 33) by custom or in order to show respect for a predecessor; an Ibrahim is often called Ab[ Ish[ or Ab[ Ya[k, and a [Um[ Ab[ Ha[s, Contrastwise, in principle it is forbidden to take Muhammad's kunya, Abu l^- d Kin, in conformity with the b[ d[ but not by his name or the name that the tribe would appeal to its champion for help (see Kays b. al-[hat[im, D[d[in, ed. Kowalski, fragman 4, v, 36). In official relationships, the caliph sometimes marked out one of his courtiers for special favour by publicly addressing him by his kunya and not by his name or isma, but after the 5[th/6th century, protocol forbade such familiarity (Mez, The renaissance of Islam, Eng. tr. 136-7). Similarly, in correspondence emanating from the chancery, the kunya of the addressee was used when the sender wished to honour him (see al-Kalkagand[, Subh, v, 439-7).

At the present day, the usage of the kunya has disappeared, and the term is sometimes used, in official contexts, together with the isma (q.v.), to denote a family name; but one should remark that a number of patronymics adopted after the setting-up of a civil government in Arabic-speaking countries stem from former kunyas and that the norm de-guerre of several Palestinian fighters is precisely a kunya.

KUR, the largest river in the Caucasus (according to Hamd Allah Mustawfl KazwinI, 200 farkalb[ is nearly 600 miles in length). (A. J. Wensinck*)
KURA, the sphere.

1. The sphere itself. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodosius. They also dealt with certain principles of spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (shabâl al-kahfa), the principle of the four magnitudes (al-shâbî al-mugham) and the principle of the shadow, i.e. of the tangent (al-shâbî al-nilâb) following Menelaus and Ptolemy. (On the translations cf. M. Steinschneider in ZDMG, i [1896], 104 ff.; the mathematical principles are discussed by H. Bürger and K. Kohl, Axel Bjernbo Thødbits Werke über den Mathematik, etc., part 2, 1-50. references are given there to the earlier literature also).

2. Al-Kura dhâl al-turs (the globe mounted on a stand) is used in two senses:

(a) The globe of the heavens (instead of al-kura we also find al-hayyâ, the egg, in this sense, e.g. in Majâtsh al-'ulâm, 235, in al-Battanî, Opus astronomicon, ed. C. A. Nallino, 1923, i, 138; cf. E. Wiedemann, Beitr. iii, in SBPMS Erg., xxvii, [1905], 239 ff.). The constellations are painted on a globe. It is placed in a ring which stands on 3 or 4 legs. Such globes have been prepared and described, perhaps as early as by Hipparchus, at any rate by Ptolemy. Ptolemy's description is given in the Arabic translations of the Almagest and in separate treatises. One such globe, erroneously ascribed to Ptolemy, was seen in Cairo in 1435/1434 by Ibn al-Sandbadî (cf. Ibn al-Khîfî, 440). The globes were made of wood covered with paper or with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. 'Alam al-Dîn Kaygâr al-Tâfsîl used a gilt wooden globe (Abu 'l-Fidâ', Annales, ed. Reiske, iv, 497; H. Suter, Mathematischer, no. 358). The making of such globes and the errors that occur in them are fully discussed by al-Birûnî (Beiträge zur Gesch. der Mathematik, etc., in Abhandl. zur Gesch. der Naturwiss. und Medizin, part 4, 1922, 79-93; cf. also H. Schnell, ibid., in a later part). The astronomical instrument prepared by al-Fîrâsî for King Roger of Sicily was apparently an armillary sphere.

(b) Al-Kura dhâl al-kursî is also an arrangement by which one follows the movements of the heavens. The horizontal ring is directed to the horizon; it is notched at right angles in two opposite points, a meridian ring is placed in the notches and allowed to go to its lowest position in a groove. The globe itself turns round an axis which is placed in round holes at two opposite points on the horizontal ring. Divisions are marked on the horizon and on the meridian ring. By turning the meridian ring in its grooves, the axis of the globe can be inclined at will to the horizon and the instrument can thus be used for all latitudes. A quadrant with divisions which can be placed on the globe enables many kinds of measurements to be taken. With this globe, the magnitudes of importance in astronomy, al-fâsh, al-matâsh, the prop of the earth etc., can be obtained.

The oldest Arabic work on the subject is by Rûsî b. Lôkî [q.v.] and exists in Arabic in several editions, e.g. that of al-Marrâkûshî; it may go back to classical originals, as is probable in view of the author's relation to the Greeks. It was also translated into Latin, and into Spanish by Alfonso of Castile (Libros del Saber, i).

If the globe is left out and a series of other rings is added to the horizon and meridian rings, which correspond to the parallels and meridian circles in the armillary sphere (diât dhât al-balâh), the instrument with the rings with which the ancients, the Arabs and notably Alfonso of Castro, occupied themselves a great deal.

3. Al-Kura muharrîka, the burning-glass (lit. the strongly-burning globe). Even the ancients knew the property possessed by rock crystal and glass globes of concentrating sunlight falling upon them on one point and setting alight an inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Hayyâm and Kamâl al-Dîn al-Fârîsî [q.v.] investigated this theory very brilliantly. Ibn al-Hayyâm starts from the values, given in a table of Ptolemy's and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling on a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe at different distances from the axis drawn between the sun and the centre of the ball. It is proved that after refraction they all meet on the opposite surface of the globe in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority, however, meet at a point distant less than half the radius of the ball, and this is the burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon it, and this is looked at through the front of the ball, remarkable figures are seen; these were also studied very fully by Ibn al-Hayyâm and Kamâl al-Dîn; they were able even then to reach the same results as Schellbach at a later date.

Kûra, a term designating, in some geographers and in official documents, an administrative unit within a province. It was felt as being a loan
word, certain authors giving it an Iranian origin, although a Greek origin (from ydvo) seems more likely. The exact definition of a kura varies according to authors. Thus Ibn Khuradhdhibh enumerates, in the same region, that of Ḥims in Syria, kuras and iblims at the same time, so that in this case, the two terms seem to be equivalent [see ita'a]. But most of the geographers reserve the term iblim for a region or province, call the districts kuras, and distinguish within these districts cantons called sayassé or ruštaké; this is distinguished in particular by Ibn al-Fahhāb (passim, and tr. Massé, Abedél, index) and al-Mukaddası (passim and tr. Miquel, index). Usually, the kura has a chief-levy which is often called a ṣura.

According to Ya'qūb, the kura is the equivalent of the Persian ištān, with the istān comprising several ruštaké, the ruštaké several sayassé, and the sayassé several villages; thus Na'īn is a sayassé belonging to the ruštaké of Zayd, which comes within the istān of Istakhr, in the province of Fars (W. Juwaideh, The introductory chapter of Ya'qūb's Mu'amal al-Buldun, Leiden 1959, 56-8).

In mediaeval documents relating to Syria, acts of sale or waqf, the following classification is found: a kura like that forming the Gūta of Damascus comprises cantons (iblim) which themselves contain villages (kur'a) (see J. Sourdel-Thomine and J. Sourdel, Trots actes de vente damascins du début du IVe siècle, in JESHO, viii [1965], esp. 269 and n. 4, and also Riens foussers constitués en Syrie féodale, in JESHO, xv [1972], 289-91). This usage of the term iblim is apparently peculiar to Syria and Upper Mesopotamia, according to Amr al-Iṣfahānī and Ya'qūb (Juwaideh, op. cit., 199-41). It is further used thus in al-Andalus, which is explicable by the influence of Syrian practices in that country.

In al-Andalus, a simple province of the original Islamic empire, there existed, as elsewhere, administrative divisions called kuras, of which certain ones were, in origin, "militarised zones", i.e. they held contingents of soldiers who were maintained on the revenues of land grants; these divisions were therefore termed kura mughammada (Lévi-Provençal, Hist. Esp. Mus., iii, 47-53).

Bibliography: given in the article.

(D. SOURDEL)

KURA (a.), in a technical sense designates rhapsodomancy. It is an Islamic divinatory procedure, analogous to bibliomancy; but in current use the term refers to the drawing of lots, whatever form this may take, and this has been used following the Kur'anic prohibition of istihâdān [3:1] and of masyîr [2:4], the two principal cleromantic techniques of pagan Arabia.

I. In the usual sense of "the drawing of lots", the term kura, originally applied to "a wineskin with broad base and narrow neck" (TA, γ, 453, i. 23) which probably served as a receptacle for the shaking of the lots, is still used in the present day in the sense of choosing and electing by lot or by vote. Monks choose among the novices those to whom they propose to give the habit, by ṣura (the lots used being grains of wheat for "yes" and grains of barley for "no"). The polling station for legislative elections (istihâdāh) is called mutah al-istirâās. In Ottoman Turkish circles, kura was practised in the recruitment of constables, whence comes the expression kura'a girneh signifying "to reach the age of military service". A. Musil notes that in Arabia Petraea, the term kura refers to a ball serving the function of a lottery ticket, made out of strips of paper bearing the names of the parties which are rolled in a ball of clay or wax and which are drawn out by persons who were not present during the inscription of the names or the rolling of the balls (Arabia Petraea, iii, 294).

The permanence of this usage is attested by the fact that the Prophet used to "draw lots" (kura'a) in order to decide which of his wives could accompany him in his travels (al-Tabarî, i, 1391), a procedure that he also used for the distribution of loot taken in raids (Ibn Sa'd, ii, 78, 82, 83), and also by the fact that a chieftain chosen by the drawing of the lots was called mašrâ (TA, loc. cit., i, 5).

The legitimacy of recourse to kura was acknowledged at a very early stage through imitation of the Prophet. Haddî describes a number of cases where the latter resorted to kura for a solution to questions of distribution (ed. al-Bukhâri, Sahih; al-Katrizâ, iv, 416 f.).

In certain cases, where any decision is liable to appear unjust to one party or the other, the judge may resort to kura (cf. al-Marginînî, Hudayya, Calcutta 1318, 813-14; tr. Hamilton, and ed. London 1870, 565-6). Of the eleven cases of kura listed in the Minhâjad al-falîdîm (ed. Van den Berg, i, 119-20, 324; ii, 328, 404-5; iii, 99-100, 401-2) only two are considered impermissible.

II. In this list there is confusion between the drawing of lots and rhapsodomancy. On the latter, opinions vary as to its legitimacy. While al-Katrizâ, in his commentary on al-Bukhâri, considers its legitimacy, following the Ṣanhill Ibn Ratta (d. 397/997), other authors like Abû Bakr Muhammâd b. al-'Arâdh (d. 543/1148), in Ashkâr al-Kur'dn, Abû Bakr Muhammâd al-Turâfîâdî (d. 520/1126-31) and Shihâb al-Dîn Abu 'l-'Abbâs al-Karâfî (d. 684/1480), quoted by al-Damîrî, Hayâlî al-khaydâmî (ed. Bûlîkî, 1893, ed.), i, 119, oppose the use of the kura in jâl[f. But even the latter resorted to Auz'a for a solution to questions of distribution (ed. al-Bukhâri, Minhâjad al-falîdîm, xvi, 401-2). Ibn al-Hâdî (d. 737/1336) expands on this chapter in a treatise entitled Korâhal akhdât al-falîdî mawṣûfî (cf. Ma'dkhalî, i, 878).

Or what does Islamic rhapsodomancy consist? Like bibliomancy, it is a divinatory practice involving the interpretation of verses or parts of verses or prophetic words encountered by chance on opening the Kur'an or the Sahîh of al-Bukhâri. This practice is attested as early as the Umayyad period and the beginning of the 'Abbâsid period (cf. accounts relating to the end of the Umayyad caliph al-Walîd II, d. 126/744, and to that of Abû Dîfâr al-Mansûr, d. 153/775, in al-Damîrî, ii, 119; Fahd, Divination, 215).

This consulting of the two most venerated books in Islam takes place in various forms, as the rhapsodomantic writings that are available to us bear witness:

1. Kur'âl al-'Imâm Dîfâr b. Abî Tâlib or Dîfârîyya (ms. Aya Soya 1999, fol. 218b, 21.2 x 16 cm., a fine illuminated msÎhîî text dating from 907/1501), containing rhapsodomantic interpretations of Kur'anic verses. Patronage of this art, propagated by the Shi'â, is attributed to Dîfâr, the Prophet's cousin, killed at the battle of Muta', in 8/629, because at the time of departure, one of his companions, Abî Allâ'û ibn Dîfâr, had rhapsodomantically concluded from a Kur'anic verse relating to Hell (Kur'an, XIX, 71) enunciated by the Prophet, and had foreseen the death of Dîfâr.

2. Al-Kura al-Maw'mîyya, attributed to Ya'kûb b. Isâkî al-Kindî (d. after 256/870), containing, in the form of tables, 144 questions, followed by 144 chapters, each comprising 12 answers; cf. ms. Aya Soya 1999, 3, fol. 59-138a: al-Kura al-mubâraka
al-Ma'muniyya, a copy dating from 706/1306-1. The same ms (fol. 295a-v) contains an opusculum entitled Al-Kura al-Da'shan-hamadi (= ma'rifat al-bur'a) by an anonymous author, but an essay bearing an analogous title (K. al-hur'a hamadi) in the Library of the University of Istanbul (A 6262, 79 fols., 19 × 13 cm., a poor naskhi text from 1129/1719), carries the name of al-Khendi.

Two other works of hur'a are attributed to al-Ma'mun (d. 218/833); al-Daicazdhamradi f al-Kurma (— tna rma'nii'a (fols. rga-jSa) contains an opuscule of sodomantic poems attributed to various authors. (Cairo ms. 7613). These differ from the above and contain at the end some rhismatic poems attributed to various authors.

(3) al-Kura al-Dinaharriyya (ms. Saray, Ahmet, III 1600, 1, fols. 1a-23b, 36 × 18 cm., naskhi, n.d.) marks a perceptible evolution in the practice of rhapsody. In fact, the use of Kur'anic verses interpreted according to the method of tanwi' or allegorical exegesis, is supplemented by arithmowsmic procedures (nashd al-dinahar or harsh al-uri'a), which play a part in dafir [and], and in 'im al-kur'iy (al-na'ta wa l-asma'. This consists, in the event, of combining the four consonants of the word jychat dijw, dijah, dijir, dhir, etc.). Each paragraph contains a precise interpretation of the combination, followed by another in verse, introduced by the formula kala al-raddif.

In the Kura bi'urri al-mad'jam (ms. Köprüli Fazil P. 194, fols. 57a-63b, 18 × 14 cm., naskhi, n.d.), the letters are arranged according to the alphabets, on three horizontal lines: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 0.

The inscriber selects one of these letters at random and is referred to the paragraph where the meaning of this letter is explained in verse (cf. the examples in Flügel, Loosbcher, 59-70).

In the Kura bi'Daniyya, it is numbers, exomulated in two phrases, which serve as the hur'a. These phrases are arranged in the following manner:

Kura yaa ahad Kura yaa anka
Kura yaa islama Kura yaa alka
Kura yaa iga'ash Kura yaa alka
Kura yaa iga'ash Kura yaa alka
Kura yaa anka ahad Kura yaa anka.

The meaning of these formulae is explained, as in the essay discussed above, in the form of verses introduced by kala al-raddif (cf. ms. AS 523, fols. 95a-103a, 26 × 17 cm., naskhi from 840/1436-7). In the Fishdar, 314, a similar essay is attributed to Daniel, to Iskandar Dhii 'l-Kurnayn (with arrows), to Pythagoras (cf. E. Tananay, Notices sur des fragments d'onomalotnne arithmétique, in Notices et Extraits, xxxii 1886), 331-60 = Mémoires scientifiques, ix, 17-50, to Ibn al-Murtabi and to the Christians.

The greatest degree of complexity attained by this type of hur'a appears in three works which al-Biruni (d. 440/1049) claims that he translated (from Hindustani?) bearing the following titles: al-Kura al-unmamshama bi'l 'uwasakh ("The hur'a which gives clear indications of consequences"), al-Kura al-wulmahmahana li'shikat al-dama'ir al-wulmahmahana ("The eightfold hur'a for the discovery of inner thoughts in the mind") and Sharh masakir al-'ur al-wulmahmahana ("Commentary of the reeds of the eightfold hur'a") (cf. al-Biruni, Chronologie orientalischer Volker, ed. Sachau, Leipzig 1876, introd., p. xiv).

(4) Too complicated for popular usage, these hur'a have yielded place to a series of much simpler hur'a, based essentially on the drawing of lots, such as hur'a al-shahyad, consisting of looking for the answer to the question that one poses in the name of the Prophet (on whom the finger falls; kur'a hur'a to be taken here in the broad sense of "fortune", good or bad) which draws a conclusion from every omen presenting itself at the moment of consultation, including the flight of birds; hur'a maymuna ("The hur'a crowned with success"), etc. (cf. ref. in Divination, 218, n. 4). Thus the term hur'a acquires a generic sense and serves to designate various forms of divination by lot (such as "Kura al-damari, Kur'a hi'ilhadi al-fa' wia l-damari, etc.").

KURAMA, according to Radloff (Versuch eines Westerbuches der Türk-Dialekte, St. Petersburg 1803, ii, 924) "a Turkish tribe in Turkistan"; the same authority gives the Kirgiz (i.e. Kazak) word hurama from (hura, "to sew together pieces of cloth") with the meaning "a blanket made of pieces of cloth sewn together". In another passage (A. Asiripir, Leipzig 1895, i, 225) Radloff himself says that the Kurama are "a mixed people of Ozbegs and Kirgiz" and their name comes from the fact, asserted by the Kirgiz, that "they are made up of patches from many tribes" (Kura to "patch together"). He further says that the Kurama are "a settled tribe" between Tashkent and Khokand, to be more accurate, on the river Angren (a corruption of Ahugerun) south of Tashkent. In Russian sources we find it stated as early as 1875 that the Kurama first arose in the 18th century. But as early as 1845-1855 in the description of the wars between the Kazak and Ozbegs on the Angrea we found the "leaders of the Kurama" (sar-darand n Kurama) mentioned (Maimu'd v. Wail, Bulu al-asair, India Office ms. 575, i. 1748).

Under the rule of the Khans of Khokand in the 15th century, the word Kurama is used not only as an ethnographic but also as a geographical term and the name of an administrative division. The road from Khokand to Tashkent over the Kurdor-Dusan pass was called the Kurama road (Kura-i Kurnama, e.g. in the Ta'rikh-i Shihbuhki, ed. Pantusov, Kazan 1885, 238). The Kurama were ruled by a Beg who lived in the fortress of Kercuri (in the written language Kirwśi; on Russian maps also Kelyaud). This use of the word Kurama was retained for some time under Imperial Russian rule. In the division of the territory (oblast) of Sirdarya into districts (wets), what later (after 1880) became known as the "district of Tashkent" was called the "district of Kurama" (Kuramenskii wets). The centre of government of the district was intended to be the little town of Toy-Tube founded in the reign of Madali Khan (1822-47; cf. Khojand); but the district headman (uverniki natal'snik) actually lived at Kuylik on the Chirik. Under Russian as under Khokand rule, the district of Kurama was of considerable economic importance as a centre of rice-growing. Russian
ethnographers put the Kurama in a class by themselves as descendants of nomads (Kirgiz, i.e. Kazak) who have become agriculturists (Sarts, g.w.). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

This could still be seen in the early 20th century. Unlike the Sarts, the Kurama lived, like the Kazak, in yurts: their wives, as with the Kazak, were unveiled. In other respects, however, the Kurama had advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time, Kadoroff and other observers could still distinguish among them the division into families. According to Kadoroff there were five of these Djalayr, Tekan (this name is still borne by a village inhabited by the Kurama), Tama, Djigalbajy and Taradil. This division is now quite lost; whereas traces of it still exist, marriages between members of one family are no longer—as among the Kazak—considered illegal. The fact that the Kurama are a mixed people can still be recognised; besides the ethnic (Kirgiz-Kurama, Sart-Kurama). The number of Kurama in the district of Tashkent (formerly Khokand, Bukhara, and Khudzand. The word with the meaning of "mixed people" is also found in the area where Turkoman languages are spoken, but these Kurama have no connection with those on the Angren.

### 1. ETYMOLOGY AND SYNONYMS

1. **Derivation and Kur'ānic usage.** The earliest attested usage of the term 'Kur'ān' is in the Kur'ān itself, where it occurs about 70 times with a variety of meanings. Most Western scholars have now accepted the view developed by F. Schwally (Gesch. des Qor., i, 33 f.) and others that kurān is derived from the Syriac kerydn, "scripture reading, lesson", as used in Christian liturgy (see for example the 6th century Syriac ms., Brit. Museum, Add. 24, 432, e.g. "scripture reading, lesson, or sermon") for which the term was a characteristic of Meccan speech and early Kifite Kur'ānic script, and that the term kurān is closely related to the verb kara'a, "he read" or "he recited". Both views find some support in the Kur'ān, where the verb kara'a does occur, but not as frequently as the usual term for reading or reciting, tala'. In early Kifite manuscripts we find kara'hu without the hamza, causing some authorities such as S. al-Abdi and Abû Ubydaya to derive it from kara', "he put together" or "he bound together" (see Gesch. des Qor., i, 33 f.). Against this view it should be noted that the omission of the hamza was a characteristic of Meccan speech and early Kifite Kur'ānic script, and that the term kurān is closely related to the verb kara'a in Kur'ānic usage. The soundest conclusion seems to be that the term kurān originated in the Kur'ān itself to represent the Syriac kerydn, but was based on an Arabic masdar form (kur'dn) from kara'ah.

The verb kara'a occurs in the Kur'ān 17 times, usually meaning "recite", but occasionally "read ( aloud?)". Where it clearly means "recite", it is always the Kur'ān that is recited, usually by Muhammad (XVI, 98, XVII, 43, 106, etc.). But in one of the earliest contexts it is God who recited the revelation to Muhammad: "When we recite it, follow its recitation" (LXXV, 18), and in one of the latest contexts (LXXIII, 20) it is the believers (see below).

Kara'a means "read" in five or five verses, always with "book" (kitab), (see below). In XVII, 93, Muhammad is challenged by some unbelievers to ascend to heaven and bring down a book they can read for themselves. Three passages (XVII, 47, and LXIX, 19) refer to the record books to be read at the Last Judgment, and one (X, 94) refers to some of Muhammad's contemporaries—probably Jews and Christians—as "those who have been reciting or reading the Book" before him. Rudi Paret (Übersetzung, ad loca) is no doubt correct in seeing in the Kur'ān different nuances in the meaning of kara'a, which he translates as lesen, verlesen, restrichen, and notragen. But there may not be as much variation in the Kur'ānic usage of this verb as these terms suggest, since where it
means "recite" it could be interpreted "recite (the Kūr'ān) from written notes", and where it means "read aloud" it could be interpreted "revelation".

Most occurrences of the term būrān in the Muslim scripture date from a period of about ten years beginning when Muhammad began to perform the salāt publicly and ending around the time of the battle of Badr in 624. It is impossible to date the contexts precisely or determine their exact chronological order, but the general development of the Kūr'ānic usage of būrān is fairly clear. (Unless otherwise indicated, all statements on dating in this article are the present writer's own conclusions. In most cases these analyses tend to support the conclusions reached by Richard Bell, who also dated individual pericopes rather than entire sūras—see section 5 below.)

(1) Among the earliest meanings of būrān is "act of reciting", seen in two passages where God addresses Muhammad: "Ours is it to put it together and [Ours is] its būrān. When We recite it follow its būrān" (LXXV, 17 f.), and "Observe the salāt at the sinking of the sun until the darkening of the night, and [observe] the būrān at the dawn; surely the būrān at the dawn is well attested" (XVII, 78). This last verse provides useful insight into the relationship between the salāt and the būrān at the time when both were just being instituted. (2) In some verses būrān means "an individual passage recited [by Muhammad]." In LXXI, 1 f. the Prophet is informed that "a number of the jinn listened, and said: 'Verily, we have heard a būrān, a wonder, which guides to recite, so we have believed in it.'" See also X, 61, XIII, 31, and cf. X, 19. (3) In a large majority of contexts, dating mostly from the late Meccan and very early Medinan years, būrān, usually with the definite article, has a complex meaning involving several elements. It is the "revelation" (thawâlîd) sent down by God upon Muhammad (XX, 2 f., LXXIV, 23, etc.). It is sent down at intervals (XVII, 106, XXV, 32), and in some contexts it appears to be something in God's possession that is larger than what has so far been "sent down": "What We send down of the Book is a healing and mercy to the believers" (XVII, 82). In other contexts al-būrān refers to a collection of revelations in Muhammad's possession which were commanded to recite (XVII, 71 f.; cf. XVI, 98, XVII, 49, XXIV, 32). The expression is seen in a number of passages, such as VII, 204: "So when al-būrān is recited [by Muhammad], listen to it and keep silent" and LXXIV, 20 f.: "Then what ails them, that they believe not, and when al-būrān is recited to them they do not bow?" Specific references to other Muslims reciting parts of al-būrān occur only in one or two Medinan passages, such as LXXXIII, 29, where the believers are told to recite during the night vigil only as much of al-būrān as is convenient or easy (ma ṭayyasar) for them.

(4) In a number of contexts that appear to be early Medinan, dating from before LXXXIII, 29, the būrān (sometimes without the definite article) is said to be an Arabic version of "the Book" (al-kitāb). By the clear Book. Behold We have made it an Arabic būrān (XLIII, 2 f.; see also XII, 1 f., XLII, 2 f., and other verses quoted below). The closest the Kūrān comes to using the term al-būrān with its present meaning as the name of the Muslim scripture is where it is mentioned with the Torah and the Gospel in IX, 111, in a construction that suggests three parallel scriptures. But it must be remembered that the revelation was not yet complete, and the final scripture was not compiled until after Muhammad's death.

Encyclopaedia of Islam, V
later commentators. By far the most frequent usage of *kitab* in the Kur'ân is in reference to God's revelation to Muhammad and to certain religious communities that existed before and during his time, especially the Jews and Christians, who are called "the people of the Book" (ahl al-kitab). This complex series of ideas involving the Kur'ân, the Book, Muhammad, and the People of the Book is discussed in more detail in section 2 below.

The term *sura*, occurring in the Kur'ân nine times in the singular and once in the plural (suras), seems to be derived from the Syriac *sûrâ*, *sûrâh*, "scripture, scripture reading" (Gesch. der Qor., i, 31; Foreign vocab., 180-2). In the Kur'ân *sura* refers to a unit of revelation and could be translated "scripture" or "revelation". Several verses mention a *sura* being "sent down" (IX, 61, 86, 124, 137, XLVII, 50, etc.), in contexts that are similar to some Kur'ânic usages of *dyâ, kitâb, and kitâb*. And Muhammad's opponents, who are dissatisfied with what he has been reciting, are challenged to "produce a *sura* like it" (II, 23, X, 38) or "ten *suras* like it" (XI, 13). Cf. XXXVIII, 49, where the challenge is to produce a *kitâb* from God. The Kur'ân gives no indication as to how long these units of revelation were. They were most likely only parts of the present *suras*.

The Kur'ânic usages of *kur'ân*, *dyâ*, *kitâb*, and *sura* converge at the following points: (1) *kur'ân*, *dyâ*, and *sura* are each used sometimes for the basic unit of revelation, a pericope consisting most likely of several verses (e.g. X, 61, II, 106, and X, 36, respectively), and *kitâb* may have the same meaning in XXVIII, 49, and a few other places. (2) *kur'ân* (e.g. XXXIV, 31) and *kitâb* (e.g. II, 89, VI, 92, 155, VII, 115) are used in places where *kur*âb* may have the same meaning in XXVIII, 2. (3) Occasionally *kur'ân* and *kitâb* are used for the revelation of God as a whole, only part of which has been sent down, e.g. XVII, 82, quoted above, and XXXVI, 32: "And what We have revealed to you [Muhammad] of the *kur'ân* is the truth, confirming what was before it". (4) Usually, however, there is a distinction. *Kitâb*, when referring to the revelation, usually means the "Book of God", the revelation as a whole, while *kur'ân* usually means that part of the revelation that has been sent down to Muhammad, e.g. X, 37: "This *kur'ân* is ... a distinct setting forth of the *kitâb* in which there is no doubt" and XI, 1:1. "These are the *dyâ* of the clear *kitâb*. Verily We have sent it down as an Arabic *kur'ân*.

Other technical terms used in the Kur'ân for the revelation being sent down to Muhammad include the following: (1) Three nouns from the verb *dhukara*, "to remember, to mention", are used for the revelation in the sense of a reminder or warning: *tadkhirâ* in LXXIII, 25, LXXVII, 29, etc.; *dikhr* in VI, 90, XI, 120, etc.; and *dikhr* is the formula, "It is nothing but a *dikhr* to the worlds", at the end of the *suras* XXXVIII, LXXVIII, LXXXI, etc., in the introductory formula to XXXVIII where it is connected with al-*kur'ân*, and in VII, 63, 69, etc. (2) The term *ma'îthâ* has puzzled Muslim commentators and given rise to several theories among Western interpreters of the Kur'ân. Even if it is a derivative of the Hebrew *ma'îthâ* (Koran. Untersuchungen, 38-9) or the Syriac or Aramaic *ma'îthâ* (Gesch. der Qor., 1, 114-16), the term *ma'îthâ* may have a meaning in a scripture*, and *sura* may have the same meaning in XXVIII, 2. (3) Occasionally *kur'ân* and *kitâb* are used for the revelation of God as a whole, only part of which has been sent down, e.g. XVII, 82, quoted above, and XXXVI, 32: "And what We have revealed to you [Muhammad] of the *kur'ân* is the truth, confirming what was before it". (4) Usually, however, there is a distinction. *Kitâb*, when referring to the revelation, usually means the "Book of God", the revelation as a whole, while *kur'ân* usually means that part of the revelation that has been sent down to Muhammad, e.g. X, 37: "This *kur'ân* is ... a distinct setting forth of the *kitâb* in which there is no doubt" and XI, 1:1. "These are the *dyâ* of the clear *kitâb*. Verily We have sent it down as an Arabic *kur'ân*.

Other technical terms used in the Kur'ân for the revelation being sent down to Muhammad include the following: (1) Three nouns from the verb *dhukara*, "to remember, to mention", are used for the revelation in the sense of a reminder or warning: *tadkhirâ* in LXXIII, 25, LXXVII, 29, etc.; *dikhr* in VI, 90, XI, 120, etc.; and *dikhr* is the formula, "It is nothing but a *dikhr* to the worlds", at the end of the *suras* XXXVIII, LXXVIII, LXXXI, etc., in the introductory formula to XXXVIII where it is connected with al-*kur'ân*, and in VII, 63, 69, etc. (2) The term *ma'îthâ* has puzzled Muslim commentators and given rise to several theories among Western interpreters of the Kur'ân. Even if it is a derivative of the Hebrew *ma'îthâ* (Koran. Untersuchungen, 38-9) or the Syriac or Aramaic *ma'îthâ* (Gesch. der Qor., 1, 114-16), the term *ma'îthâ* may have a meaning in a scripture*, and *sura* may have the same meaning in XXVIII, 2. (3) Occasionally *kur'ân* and *kitâb* are used for the revelation of God as a whole, only part of which has been sent down, e.g. XVII, 82, quoted above, and XXXVI, 32: "And what We have revealed to you [Muhammad] of the *kur'ân* is the truth, confirming what was before it". (4) Usually, however, there is a distinction. *Kitâb*, when referring to the revelation, usually means the "Book of God", the revelation as a whole, while *kur'ân* usually means that part of the revelation that has been sent down to Muhammad, e.g. X, 37: "This *kur'ân* is ... a distinct setting forth of the *kitâb* in which there is no doubt" and XI, 1:1. "These are the *dyâ* of the clear *kitâb*. Verily We have sent it down as an Arabic *kur'ân*.

The Muslim scripture and Muhammad's prophetic experience are so closely linked that one cannot be fully understood without the other. The orthodox view of the dramatic form of the Kur'ân is that God in the speaker throughout. Muhammad is the recipient, and Gabriel is the intermediary in the act of revelation—regardless of who may appear to be the speaker and addressee. An analysis of the text shows that the situation is considerably more complex than this. In what appears to be the oldest parts of the Kur'ân, the speaker and the source of the revelation are not indicated. In some passages (XCI, 1-10, CI, CII, CIII, etc.) there is not even any indication that the message is from a deity (cf. Muiy, Moham med, 35 ff.), and in some (LXXXI, 13-21, LXXXIV, 16-19, XCII, 14-22, etc.) Muhammad seems to be the speaker. In the earliest passages that mention Muhammad's God, he is not named but is spoken of in the third person, usually as "My Lord", "your Lord", etc. (LI, 1-23, LI, 1-16, LXXIV, 1-20, LXXXI, 1-24, LXXXVII, 1-25, LXCVIII, 1-8, LXCV, 1-8, etc.). From LI, 10, LXXXI, 3, and other verses it is clear that Muhammad had visions of God, and at least in the Meccan years it was the voice of God himself, and not some intermediary, that Muhammad heard. In the earliest passages to indicate the source of the revelation, God is the speaker and the direct source, e.g., "We shall cast upon thee [Muhammad] a mighty word" (LXXXIII, 3) and "We shall cause thee to recite without forgetting" (LXXXVII, 6). And a number of late Meccan and early Medinan passages speak of God relating the *dyâ, the kur'ân, and the kitâb* to Muhammad (II, 252, III, 108, XIV, 6, etc.).

But during the same period a series of passages have the effect of elevating God from direct revelation. This too is important. The message is said to be brought down by certain intermediaries, and it is connected in some way with "the Book" (al-*kitâb*). Both of these concepts occur in XLII, 51 ff., where it is explicitly denied that God speaks directly to Muhammad: "It is not fitting that God should
speak to any mortal except by inspiration (rahū), or
from behind a veil, or by sending a messenger to
inspire whatever He wills . . . . Thus have We inspired
you [Muhammad] with a spirit of Our bidding (rākib-
min umaqīd); you did not know [before] what the
Book and faith were'. The role of this spirit as the
agent of revelation is seen more clearly in XXVI,
192 f.: "Surely it is the revelation of the Lord of all
beings, brought down by the faithful spirit [al-nubūs
from behind a veil, or by sending a messenger to
the Book of God", since it is synonymous with the
Kūrānic expressions allardırkina tīt 'i-khād, "those
who have been given the Book"), in II, 101, 144, 145,
III, 19 f., IV, 131, etc., and alədīdkina 'ayyārānu-
i-tākhād, "those to whom We have given the Book",
in II, 121, VI, 20, 174, XIII, 36, etc. The oftendiscussed term ummīyīyn (II, 75, III, 20, 75, LXII,
3) seems to be the antithesis of these three expressions,
thus meaning "those who have not been given the
Book previously". And this is almost certainly the
sense of the singular, ummi, which is applied to
Muhammad in VII, 157 f. That is, instead of sending
to the Arabs and the world a missionary from among
them, God chose to send a prophet, Muhammad,
from among those who previously had not been
given the Book (al-nubūs 'al-ummi). There is no basis
in the Kūrānic for the traditional view that ummi
means "iliterate" (see ummīyīn; Gesch. der Qor. 4, 14-17;
Bell-Watt, 33 f.; and Elachère, Intro., 6-12). After
the so-called "break with the Jews" in Medina
around the time of the battle of Badr, the Book came
to be distinguished from the Torah and the Gospel
(III, 48, V, 110, etc.) and identified more closely
with the revelation being sent down to Muhammad
(see, e.g., the Medinan formulas, XII, 1 f., XLI, 3,
XLII, 1 f., etc.). And the expression "those who
have been given the Book" became "those who have
been given a portion (nārūd) of the Book". In III, 23,
IV, 64, 51, etc.). About the same time the plural
"scriptures" (nārūd) was introduced in two credal
statements in I, 285 and IV, 136 (cf. LXVI, 12,
XCVIII, 3).

In late Meccan and early Medinan passages
Muhammad is said to have been challenged to
produce a book the people could read for themselves
(e.g. XVII, 93), and his followers complained that
they did not have a scripture like those of the Jews
and Christians (VI, 153 f.). The establishment of an
independent, Muslim community in Medina, distinct
from the aləkhiyīn, was marked by the granting of
a separate Islamic scripture that was to serve as a
criterion (cf. farīdah) for confirming the truth of
previous scriptures (III, 3, IV, 105, V, 43, etc.). The
evidence seems to indicate that Muhammad began
to compile a written scripture some time in the early
Medinan years, but that the responsibilities of leading
the rapidly growing Muslim community forced him
to leave the task unfinished (see Bell-Watt, 141-4).
That Muhammad participated in and directed the
task of preparing a written scripture seems certain.
This is to some extent supported by the rashād, where
we are told that he dictated to scribes and instructed
them on how to arrange the revelations, sometimes
inserting a new passage into an older one [al-Buhārī,
Fadil al-Kūrān, bāb 2 f., Abū Dāwūd, Salīh bāb 2,
Ibn Sa'd, ḫabb 49]. The Prophet most likely did
do the actual writing and editing himself, especially in
Medina where he had scribes to perform menial
tasks (Gesch. der Qor. 4, 461). But it is not unlikely
that Muhammad did occasionally write out the
revelations himself (see e.g. XXV, 4-6, quoted in part
above, and Bell-Watt, 36, on this passage). The task

This raises the question of the relationship between
the Kūrān and the scriptures of the Jews and
Christians. Meccan and very early Medinan parts of
the Kūrān speak of a single revelation or Book,
sometimes called the Book of God (al-kudus), and
specify those to whom it had been "given" (al-kudis)
previously: the prophets (II, 213), the seed of Abraham
(XXIX, 37, LVII, 23 f., etc.), the Children of Israel (XI, 53,
XLV, 16), Moses (II, 53, 57, VI, 54, etc.), John the
Baptist (XIX, 12) and Jesus (XIX, 30, etc.). In II, 101
and III, 23 (cf. III, 93) the ikhād Allāh is specifically
identified with the scriptures of the aləkhiyīn
"people of the Book". This expression, which occurs
over thirty times (II, 105, 109, III, 64 f., IV, 123,
153, etc.—all Medinan), is often interpreted as "the
people who have a scripture". But it more likely
clearly means "the people who (previously) have been
given the Book of God", since it is synonymous with
the Kūrānic expressions alədīdkina tīt 'i-khād, "those
who have been given the Book", in II, 101, 144, 145,
III, 19 f., IV, 131, etc., and alədīdkina 'ayyārānu-
i-tākhād, "those to whom We have given the Book",
in II, 121, VI, 20, 174, XIII, 36, etc. The oftendiscussed term ummīyīyn (II, 75, III, 20, 75, LXII,
3) seems to be the antithesis of these three expressions,
thus meaning "those who have not been given the

specify those to whom it had been "given" (al-kudis)
previously: the prophets (II, 213), the seed of Abraham
(XXIX, 37, LVII, 23 f., etc.), the Children of Israel (XI, 53,
of preparing the written scripture included some revision and alteration of earlier revelations (see Bell-Watt, 80-101). The Kur’ān itself acknowledges that changes were made in the revelation: “For whatever ḥiyyā We abrogate or cause [you, i.e. Muhammad] to forget, We bring [another that is] better or like it” (11, 106), and “When We substitute one ḥiyyā for another—and God knows best what He is sending down—they say: ‘You [Muhammad] are a mere forger’” (XVI, 101).

A similar verse, XXII, 52, gives another explanation for changes in the revelation: “We have never sent any messenger or prophet before you [Muhammad], but Satan cast [something] into his thoughts when he was yearning [for a message from God]. But God abrogated what he cast as a test, and then God abjures his ḥiyyā.” These verses seem to be responses to complaints or accusations about changes in the revelation. The Kur’ān views any changes of law or revelation as responses to events and concerns of the time and place. The abrogation or changing of earlier verse is not seen as a rejection of earlier verses, but rather as a way to adapt to the changing needs and conditions of the community.

In his commentary on XXII, 52, and in his Anmāles (1, 1924), al-Ṭabari records several versions of a curious story in which Muhammad is said to have received two set of verses. These are the earliest verses that were made in the revelation: “For whatever ḥiyyā We abrogate or cause [you, i.e. Muhammad] to forget, We bring [another that is] better or like it” (II, 106). The abrogation of earlier verses was not accepted as historical by most Western writers who had to arrange for protection before re-entering Mecca. The story the Arabian goddesses, al-Lat, al-Uzza, and Manāt [g.v.], the Qur’ān was recited the two short verses, “These are the exalted flying cranes”, and were made in the revelation: “For whatever ḥiyyā We abrogate or cause [you, i.e. Muhammad] to forget, We bring [another that is] better or like it” (II, 106). The term ḥiyyā in these passages came to be interpreted as “verse”, but the Kur’ān gives no indication as to the length of these units of revelation that were withdrawn and replaced by others.

3. HISTORY OF THE KUR’ĀN AFTER 632

The history of the text and the recitation of the Kur’ān after the death of Muhammad in 632 is still far from clear. The development of the canon involved three main stages, each of which is difficult to reconstruct and date: the collection and arrangement of the text from oral and written sources, the establishment of the final consonantal text, and the process by which several readings, i.e., different ways of vocalising the text, came to be accepted as canonical or “revealed”. According to the orthodox view, the Kur’ān was perfectly preserved in oral form from the beginning and was written down during Muhammad’s lifetime or shortly thereafter when it was “collected” and arranged for the first time by his Companions. The complete consonantal text is believed to have been established during the reign of the third caliph, ‘Uthman (644-56), and the final vocalised text in the early 4th/10th century. Most Western scholars have accepted the main points of almost traditional view. But there are problems here. In addition to the usual difficulties of examining Muslim sources that were regulated by the science of hadith, the task of reconstructing the history of the Kur’ān is further complicated by the fact that the classical literature records thousands of textual variants, which, however, are not found in any extant manuscripts known to Western scholars. Several valuable works on the history of the Kur’ān were written during the 4th/10th century (see below), but later Muslim scholars, with just a few exceptions, have shown little interest in the problem of reconstructing the history of the canon. The basic European works continue to be the second edition of Th. Noldeke’s Geschichle des Koräns, especially Part II, Die Geschichtle des Qorans (1913), ed. and revised by F. Schwalley, and Part III, Die Geschichte des Koräntexts (1938), by G. Bergsträsser and O. Pettel, and A. Jeffery’s Materials for the history of the text of the Qur‘ān (1937).

The collection and arrangement of the text from oral and written sources, the establishment of the final consonantal text, and the process by which several readings, i.e., different ways of vocalising the text, came to be accepted as canonical or “revealed”. According to the orthodox view, the Kur’ān was perfectly preserved in oral form from the beginning and was written down during Muhammad’s lifetime or shortly thereafter when it was “collected” and arranged for the first time by his Companions. The complete consonantal text is believed to have been established during the reign of the third caliph, ‘Uthman (644-56), and the final vocalised text in the early 4th/10th century. official recension, authorised by the first caliph, was also the first complete collection, etc. Muslim tradition came to accept this story as a historical account, and these points as facts. But there are serious problems with this account. For one thing, most of the key points in this story are contradicted by alternative accounts in the canonical hadith collections and other early Muslim sources (see Wenstine, Handbook, 137; Gesch. des Qor., ii, 15-18; Burton, Collection, 220-8). According to one hadith, `Umar once asked about a verse and was told that it had been in the possession of someone who was killed at Yamama, so he gave the command and the Qur’an was collected, and “`Umar was the first to collect the Qur’an” (Musahhat; 10; IbHân, i, 58). Other accounts say that Abû Bakr began the collection and `Umar completed it, or that Abû Bakr was the first to collect the Qur’an on sheets (musahhat), while `Umar was the first to collect the Qur’an into a single volume (musahhat). Others say `Umar ordered the compilation, but died before it was completed (Ibn Sa’d, ii/2, 212).

In fact, each of the first four caliphs is reported to have been the first person to collect the Qur’an (Musahhat; 10; IbHân, i, 57-9). And several alternative accounts state explicitly that no official collection of the Qur’an existed prior to `Ughâm’s. Caetani (Annuari, ii, 731) and Schwally (Gesch. des Qor., ii, 20) have questioned the significance of the al-Yamama battles as an occasion for an official collection of the Qur’an, pointing out that very few men distinguished for their knowledge of the Qur’an are mentioned in the lists of those who died there (Schwally found two). Even more significant is the fact that there is no evidence that the alleged collection under Abû Bakr was ever accepted as authoritative. Finally, this story fails to acknowledge the role of written copies of parts of the Qur’an left by Muhammad. These important documents for the history of the Qur’an, alluded to in the statement that Zayd “used to write down the revelations for the Prophet”, must have played a significant role in the preparation of an official text. There are thus sufficient grounds for rejecting the historicity of this story, the most likely purposes of which were to obscure Muhammad’s role in the preparation of a written Qur’an, to reduce `Ughâm’s role in establishing an official text, and to attempt to establish the priority of the `Ughâmic text over those of the (pre-`Ughâmic) Companion codices. All three purposes would be accomplished by establishing the belief that the first official collection of the Qur’an was prepared during the short reign of Abû Bakr and served as the basis for `Ughâm’s recension. See Gesch. des Qor., ii, 11-27; Bell-Watt, 40-2; Blachere, Introdt., 27-34; also Burton, Collection, 177-37 (on Burton’s view, see below).

The accounts of the collection of the Qur’an under `Ughâm assert that the final consonantal text was established during the last half of his reign, or about twenty years after Muhammad’s death. According to the dominant version (al-Bukhârî, loc. cit.; Masâhif, 28 f.; IbHân, i, 58 f.; Fath al-bûrî, ix, 14 f.; Gesch. des Qor., ii, 47-50), the occasion for the final collection of the Qur’an was a dispute between Muslim forces from Irâd and Syria over the correct way of reciting it during communal prayers while on an expedition to Armenia and Ăšharbâyjân. The general, Hudayla b. al-Yaman, reported this problem to the caliph and asked him to establish a unified text. `Ughâm obtained the “sheets” from Hafsa and appointed a commission consisting of Zayd b. Thäbit and three prominent Meccans, and instructed them to copy the sheets into several volumes following the dialect of Kuryaya, the main tribe of Mecca. When the task was finished `Ughâm kept one copy in Medina and sent others to Kûfâ, Bayra, Damascus, and, according to some accounts, Mecca (Gesch. des Qor., ii, 17 f.), with an order that all other copies of the Qur’an were to be destroyed. This was done everywhere except in Kûfa, where Ibn Mas‘ûd and his followers refused. The details differ in various versions of this story (ibid., 50-4), mainly on the number and identity of the commissioners and the cities that received official copies.

This second collection story stands up to critical analysis no better than the first. Western scholars now accept the view argued by Schwally (ibid., 57-65) and others that the Qur’an is not in the dialect of the Kuryaya (see 6.4 below). If this is so, one of the two main points of the story is discreditied, and it is difficult to see what role the commission might have played. Schwally also showed (54-7) that those named in the various accounts are unlikely candidates for such a commission appointed by `Ughâm, and he gave good reasons for doubting that the caliph would have ordered all extant copies of the Qur’an to be destroyed. It also seems unlikely that differences in the way the Qur’an was recited during the daily prayers would have caused serious dissension among Muslim forces involved in the initial conquests. These parts of the story all hint of a later historical setting.

The Hafsa element seems to be simply a device for tying the two collection stories together, while establishing an authoritative chain of custody for an official text going back almost to the time of the death of the Prophet, and explaining why this official text was not generally known (see Bell-Watt, 41 f.). For several alternative accounts that give completely different reasons and circumstances for `Ughâm’s order for an authorised text, see Burton, Collection, 136-59.

We thus have before us another story whose particulars cannot be accepted. But this does not mean necessarily that the story has no historical basis at all. The unanimity with which an official text is attributed to `Ughâm, in the face of a lack of convincing evidence to the contrary, leads most Western scholars to accept one central point of this story: that the Qur’an we have today, at least in terms of the number and arrangement of the suras and the basic structure of the consonantal text, goes back to the time of `Ughâm, under whose authority the official text was produced. This was, however, certainly not a textus receptus ne variatur, even in terms of its consonantal form (see below).

Most Western scholars also accept one other element of the story: that Zayd played some role in establishing the `Ughâmic text. Just what that role might have been is difficult to say; alternative accounts give several possibilities (see Burton, Collection, 117-26, 143-5, 150, 169-7, etc.). Burton contends that both collection stories are completely fictitious and that Zayd’s prominence in the various accounts is due solely to the fact that he had been a young secretary to the Prophet and an early Qur’an specialist who happened also to be one of the latest surviving Companions, dying ca. 436/655 (Collection, 120-4, 226, etc.). Burton has raised serious doubts about the role of Zayd in establishing the official text, and he has shown that the sciences of hadith and fiqh influenced the proliferation of Qur’an collection stories; but he has not demonstrated the likelihood of his main contention, that the collection stories were fabricated by later jurists to provide support for their abrogation theories by hiding the fact that the final text of the
Kur'an was produced, not by Uthman, but by the Prophet himself.

b. Variant readings and Companion codices. The Uthmanic text tradition was only one of several that existed during the first four centuries A.H. The general view is that Uthman canonised the Medinan text tradition and that this one was most likely the closest to the original revelation. Other text traditions, attributed to several Companions of the Prophet, are said to have flourished in Kufa, Basra and Syria. The sources speak sometimes of various readings (kita'ah, sing. kita'), i.e. different ways of reading or reciting the text, sometimes of 'codices' (masā'ahīf, sing. masā'ahīf). On the usage of these two terms, see Materials, 13 f. A number of works on the 'disagreement of Ibn Mas'ud' (khitbīy al-madīnī) are said to have been written by Muslim scholars of the first four centuries. Ibn al-Nadlm lists eleven such works (Fihrist, 16, tr. Dodge, 79), which is incomplete, including the K. Hitbīlī Masā'ahīf al-Shām wa l-Îdīlīs wa l-Tahlīs by Ibn Āmir al-Yabūbī (d. 112/326), K. Hitbīlī Masā'ahīf al-Madīnī al-Kūfī al-Bāsrahī wa l-Miṣrī al-Qūfī al-Basrahī by al-Kīsā (d. 185/800), K. Hitbīlī Masā'ahīf al-Kūfī wa l-Basrahī wa l-Shām fi l-Masā'ahīf by Abū Zakariyya al-Farā' (d. 207/822), K. Hitbīlī Masā'ahīf wa l-Dārītī al-Madīnī 'l-Mādīnīn (ca. 231/845), and three works each called simply K. Masā'ahīf by Ibn Abī Dāwūd (d. 316/928), Ibn an-Ămarī (d. 345/959), and Ibn Ashtā al-Iṣkhānī (d. 366/976). Of these works, most of which have not survived, the last two seem to have been the most complete and the most highly regarded by later scholars. The shorter and somewhat earlier work by Ibn Abī Dāwūd, so-called the famous traditionist, was edited by A. Jeffery and published with his Materials, which lists several thousand variants taken from over thirty 'main sources' (see 17 f.), including the classical commentaries by al-Tabāri, al-Zamakhsharī, al-Baydawī, and al-Rāzī, and various works on kita'ah, shayrādāqī, gharīb al-Kūfī, grammar, etc., including the Mādīnī by al-Farā' (d. 207/822), the Mādīnī by Ibn KU-Mawāyih (d. 370/980), and the Medīnī by Ibn Dīnār (d. 392/1002) (see Fihrist). The commentaries made by al-Tabārī (d. 311/922) on variants (e.g. on XXIII, 206) show that the text of the Qur'an was not fixed he variat in his day.

Most often mentioned in the sources are the 'readings' or 'codices' of Ibn Mas'ud, Ubayy, and al-Masūdī, said to have been dominant in Kufa, Syria and Basra respectively. All three codices are discussed in more detail below, Jeffery classifying as 'primary' the codices attributed to twelve other Companions of the Prophet: the second and fourth caliphs, 'Umar and 'Alī; three of Muhammad's widows, 'A'isha bint 'Umar, 'Ā'isha bint Abī Bakr, and Umm Salama; four whose readings seem to have been varied in the Medinan text tradition, Zayd b. Thābit, 'Abd Allāh b. 'Abbās, 'Abd Allāh b. al-Zubayr; and three others, 'Umm Ṣalāmī, the Client of Abī Ḥudhayfah, 'Ali b. Abī Talib and 'Ā'ishah bint Abī Talib (see Materials, LXVIII, LXIXI, LXVIII, LXXIII, etc.) and having given up his codex to be burned when 'Uthman's text was made official. 'Abd Allāh b. 'Abbās (see Materials, LXVIII, LXVIII, LXXIII, etc.) and having given up his codex to be burned when 'Uthman's text was made official. It is reported to have included in his codex the two extra sūras of Ubayy's text (see below), and several later scholars are said to have taken their readings from him. 'Umm Ṣalāmī b. Mu'rīb (d. 10/633), sometimes called Ṣalāmī b. Ma'kīl (Gesch. des Qur., II, 20, etc.), one of the Qur'an reciters killed in the battle of Yammān, was one of four to whom the Prophet is reported to have raised his followers to turn for guidance concerning the Qur'an. Ubayy b. Umayr (d. 74/693) was an early Qur'an reciter in Mecca; his codex may have been the basis for the Meccan text tradition, which seems not to have been as strong as those Kufa, Basra and Damascus (or Syria). Compared with the large number of variants attributed to Ibn Mas'ud
and Ubayy, relatively few are mentioned in the literature for these other codices. Jeffery also collected variants attributed to a number of Muslims of the second generation: al-Awad b. Yazid, 'Alkama, Hatim b. Sa'id b. Dhuwayr, Tabita, 'Ikrima, Mundhab, 'Atha b. Rabab, al-.tabit b. al-Khuwaym, al-Mash, Dinar al-Qadi, Safih b. Rasyan, and al-Harib b. Suwayd. More variants are attributed to some of these "secondary codices" than to most of the "primary" ones. In some cases, Jeffery was able to determine the primary codex from which a secondary one was derived.

Ibn Mas'ud's codex is said to have differed from the "Uthmanic text in several important respects. The sources are fairly consistent in saying it did not contain the Fatihah and the two charms that became suras I, CXXIII, and CXXIV of the Uthmanic text (see 4.4 below). Variants in the Fatihah are, however, attributed to Ibn Mas'ud (Materials, 25), and Ibn al-Nadim reported in 377/897 that he saw a number of Ibn Mas'ud Kuran manuscripts and that one that was about 200 years old included the Fatihah (Fihrist, 26; Dodge tr., 57 f.). Of the many variants attributed to Ibn Mas'ud (see Gesch. des Qur., iii, 60-83; Materials, 25-113), some involve only different vowels with the same consonantal text, and some are purely orthographic, e.g. Ibn Mas'ud is said to have written hidala mat as two words rather than one in a number of places. But the vast majority of variants listed by Bergstrasser and Jeffery for Ibn Mas'ud involve differences in the consonantal text that would also show up in recitation. Of these, many may be regarded as explanatory glosses on the "Uthmanic text, but in some cases it is the "Uthmanic text that seems to contain an "expansion" or "improvement", sometimes apparently for theological reasons (see Materials, 17).

Among the most questionable of the variants attributed to Ibn Mas'ud are the "Sim'a readings", e.g. in V, 67, XXIV, 35, XXVI, 215, XXXIII, 25, 33, 56, XLII, 23, XXVI, 29, LIX, 10, LIX, 7, LX, 5, LXXV, 17-19 (see ibid., 40, 65, 68, etc.). More difficult to evaluate are the numerous "synonym variants", as for example the following found in Sura XXV, where, instead of the "Uthmanic terms given in parentheses, Ibn Mas'ud is reported to have read gudala, "makes, brings about", in verse 46; and he is it, "He who sends" (araqal), the winds; li-man-shira, "gives life", in 49: "That we may give life (li-nahyaya) thereby to a dead land"; bugar, "castles", in 61: "Blessed is He Who has placed in the heavens constellations (buruid)"; yasa'abahara, "ponder, consider", in 62: "For him who desires to remember (yagidkabahara)"; and al-ghana, "the Garden, Paradise", in 75: "They will be awarded the high place (al-ghrefa) inasmuch as they were steadfast". Just as frequent are cases where an entire phrase is different, e.g. Ibn Mas'ud's reading in III, 39: "Then Gabriel called to him, 'O Zachariah'", instead of the "Uthmanic reading, "Then the angels called to him as he stood praying in the sanctuary". Some variants may have significance for the early history of Islam, or the history of the Kur'an, e.g. Ibn Mas'ud's well-known reading al-haqqiyaya, "the way of the Hanifa" (4.6) instead of al-islamia in 1, 120, "Believe, the (true) religion (din) of God is Islam", and the fact that he is said to have included the basmala at the beginning of Sura IX (see 4.4 below).

Also, the order of the suras in Ibn Mas'ud's codex is said to have differed considerably from that of the "Uthmanic text. Two slightly different, incomplete lists are recorded, the earlier one by Ibn al-Nadim (Fihrist, 26; Dodge tr., 55-7) and a later one by al-Suyuti (Iltibā', l, 54). The missing suras in each list are included in the other, and it is possible to reconstruct a single list. The principle of arranging the suras in order of descending length is followed more closely than in the "Uthmanic text, but there is still considerable variation from this criterion (see Bauer, Anordnung der Suras, Table IV). Following the assumption that the longer suras were not put together until the "Uthmanic text was compiled, some scholars have concluded that the Ibn Mas'ud lists are "post-Uthmanic" and have little validity (e.g. Materials, 25 f.). But if most of the suras were written down and put into approximately their final form during Uthman's lifetime, then there would be no strong reason for rejecting the validity of these reports outright.

Ubayy's codex seems according to the extant evidence to have been less important than Ibn Mas'ud's. It appears not to have been the source of any secondary codices, and very few unique variants are attributed to it. Most variants attributed to Ubayy are attributed also to either Ibn Mas'ud or Ibn 'Abbás. Probably the best known feature of Ubayy's codex is that it is said to have included two short suras not in the "Uthmanic and Ibn Mas'ud texts, Sūrat al-Khažf, with three verses, and Sūrat al-Hādīf, with six (see Materials, 180 f.). The order of suras in Ubayy's codex is said to have differed from that of Uthman's and Ibn Mas'ud's, and again we have two slightly different lists (Fihrist, 27; Dodge tr., 58-61; and Ibn 'Abbás, i, 64). These lists are, however, less complete and less reliable than those given for Ibn Mas'ud, and some suras are difficult to identify. Dodge (60) is probably correct in identifying al-nabi as Sūra LXVI, and Jeffery (Materials, 175) has no doubt mistaken in saying it is Sūra LXV. But Dodge is certainly wrong in reading al-din (one of the titles for Sūra CVII—see Paret, Kommentar, 554) as al-din (the title of Sūra XCIV), and in failing to recognize Ubayy's two famous extra suras mentioned above. Ibn al-Nadim states at the end of his list in the Fihrist that Ubayy's codex contained 116 suras, and he reports that his source of information, al-Fadl b. Shāhba', saw a copy of an Ubayy codex in a village near Basra in the middle of the 3rd century A.H.

Western scholarship has not reached a consensus on what value this mass of allegedly pre-Uthmanic variants has for our knowledge of the history of the Kur'an. Confidence in the variants declined during the 1930s as they were being collected and analysed. Bergsässer (Gesch. des Qur., ii, 77-83, 92-0) still gave a fairly positive appraisal, but Jeffery (Materials, 16) wrote: "With the increase of material one feels less inclined to venture on such a judgment of value", a view that came to be shared by O. Pretzl. Then after the project to prepare a critical edition of the Kur'an came to a halt, A. Fischer (Ist., xxviii [1948], 3) concluded that most of the allegedly pre-Uthmanic variants were later attempts by philologists to emend the "Uthmanic text. Recently J. Burton (Collection, 199-212, etc.) and J. Wansbrough (Qur'anic studies, 44, 5, 202, 7, etc.) have concluded that, not just some, but all of the accounts about Companion codices, metropolitan codices, and individual variants are fabricated by later Muslim jurists and philologists; but they reach opposite conclusions on the reason for this hoax. Burton argues that the Companion codices were invented in order to provide a setting for the "Uthman collection story, which in turn was invented to hide the fact that Muhammad himself had already collected and edited the final edition of the Kur'an (211 f., 239 f.). Wansbrough, on the other
hand, asserts that the collection stories and the accounts of the Companion codices arose in order to give ancient authority for a text that was not even compiled until the 3rd/9th century or later. He claims, without providing any convincing evidence, that the text of the Qur’ān was so fluid that the multiple accounts (e.g. of the punishment-stories) represent “variant traditions” of different metropolitan centres (Kīfa, Basra, Medina, etc.). Each writer has stressed a valid point, i.e., that Muhammad played a larger role in compiling and editing the Qur’ān than is admitted by the traditional accounts (Burton), and that as late as the 3rd/9th century a consonantal textus receptus ne varietur had still not been achieved (Wansbrough). But both writers seem to have overstated their cases. Neither has given convincing reasons for his own hypothesis, or for the shared assertion that the Muslim accounts should be rejected altogether.

6. Establishment of the canonical text and readings. Historically, it is better to speak of the Uthminic text and the oral tradition that accompanied it as evolving gradually over a period of about three centuries. The process by which this text came to prevail over its rivals and then became the foundation for several sets of accepted or “canonical” readings is far from clear, and the issues involved are complex. They include the difficult task of reconstructing the stages in the development of Qur’ānic orthography, the relationship between the written text and the oral tradition, and the tension between a critical evaluation of the historical evidence and the orthodoxy views on the Qur’ān.

From the beginning there were variations in the copies of the Qur’ānic text. Even the official copies of the Medina standard codex (al-imdām) sent to the main centres are said not to have been identical. Bergsträsser (Gesch. der Qur., iii, 6-19) lists and discusses a number of variations in the Medina, Damascus, Basra, Kīfa and Mecca copies of the Qur’ānic text, reported in the Muḫaḥāb of Abū ʿAmr al-Dabāʾī (d. 444/1052) and in other works. E.g. the Damascus copy is said to have had ʿaw-bi ʿimrūr and ʿaw-bi ʿbīd instead of ʿaw t-iāmar and ʿaw t-īdāb in iii, 184, and minhum instead of minhum in XL, 21; and the Kīfa copy is said to have had ʿaw y instead of ʿaw iini in LX, 35, and ʿaw an (which occurs in the Egyptian standard edition) instead of ʿaw an in XL, 26. These differences are of course minor, but they do involve changes in the consonantal forms. Such variations can best be explained as resulting from carelessness on the part of the scribes or lack of concern for exact uniformity among the authorities.

Deficiencies in the Arabic script used in the earliest copies of the Qur’ān led to further differences, in the oral tradition as well as the text tradition. During the first Islamic century, Arabic was written in a so-called scriptio defectiva in which only the consonants were given, and in several instances the same form was used for two or more consonants, e.g. ʾ and ʾl, ʾ and hā, and even very different phonemes such as r and s, and in some positions ʾ, h, ʾl, n, a, y. Since no diacritical points or vowel signs were included, the vocalisation was moreover left to the reader. This meant that even when there was agreement on the consonants, some verbs could be read as active or passive, some nouns could be read with different case endings, and some forms could be read as either nouns or verbs. The lists compiled by Jeffery in his Materials contain many examples of canonical and non-canonical variants based on forms that are indistinguishable in the scriptio defectiva of early Qur’ān manuscripts. In most cases the meaning is affected very little, as for example whether ḥālẓīr ʿalāhīr is read in II, 219 (the latter was read by Ibn Masʿūd and two of the Seven, ʿAmma and al-Kisāʾī—see below), or ḥālẓ, “mount” or ḥadāl, “tomb”, is read in XXI, 96 (the latter was read by Ibn Masʿūd and others). In some instances the alteration of a case ending or some other slight change in the vocalisation does significantly affect the meaning (see Kṛatt and Zwettler, Oral tradition, 12–21.).

During the Umayyad period (42-150/661-750) the Qur’ānic text tradition became more and more diverse, and new readings arose combining elements of the Uthminic and Companion oral and text traditions, especially those of Ibn Masʿūd and Ubayy. By early ‘Abbāsid times there was such a confusion of readings that it became impossible to distinguish Uthminic from non-Uthminic ones, or to recover with confidence the “original” Qur’ānic text. Some order was brought to this confusion by the establishment of a scriptio plena, a fully vowelled and pointed text. Muslim accounts of the introduction of this improved script are unreliable because they vary so much and are not consistent with palaeographical evidence (Blachère, Introd., 78-90). A popular view is that al-Ḥadījidāḥ was responsible for introducing vowel signs and dots for the consonants when he was governor of Ṭrāk (74-258/661-774). But Qur’ān manuscripts from the first three or four Islamic centuries show that a scriptio plena came to be accepted very slowly. Dots of different colours or in different positions (above, below, and beside the consonants) were used to indicate the three short vowels in some fairly early manuscripts, and in some, but not all, later ones. Strokes or dots for distinguishing consonants, as well as other signs for doubled consonants, pauses, and even the finer points of recitation, were introduced later (see Kṛatt, Gesch. der Qur., iii, 19-37 and N. Abbott, Rise of the North Arabic script, 17-44; on the difficulty of dating these early manuscripts, see A. Grohmann, The problem of dating early Qur’āns, in Isl., xxviii (1958), 213-32).

By the early 4th/10th century the previously unpointed Uthminic script was widely, although not universally, accepted. One result of the general use of the more precise script was that the differences in the texts became more pronounced, and this caused heated disputes as to which reading was the correct one. Another result was that it became possible for the authorities to enforce a greater measure of uniformity. The central figure in what became the most important Qur’ān reform since the time of Uthman was Abū Bakr b. Muṣjdīdī (d. 344/958). His aim was to restrict the number of acceptable readings, accept only those based on a fairly uniform consonantal text, renounce the attempts of some scholars to achieve absolute uniformity (something which he realised was impossible), and at least ameliorate if not bring to an end the rivalry among scholars, each of whom claimed to possess the one correct reading. With a stroke of genius he chose seven well-known Qur’ān teachers of the 2nd/8th century and declared that their readings all had divine authority, which the others lacked. He based this on the popular hadīth in which the Prophet says the Qur’ān was revealed to him in “seven alhirf” (al-Bukhārī, Fadilat al-Qur’ān, bāb 4; Muslim, Sabaʿi as-sūfīfī, trads. 270-4, etc.). The meaning of this expression in the hadīth is uncertain, the term alhirf being the plural of harf, “letter” (see Gesch. der Qur., i, 45-51, iii, 106 f.). Ibn Muṣjdīdī interpreted the ex-
pansion to mean 'seven readings'. His view, worked
out in a book called al-Kir'at al-sab'a, "The Seven
Readings", came at just the right time. It was adopt-
ed by the famous Ibn Mulkha and All b. Issa [q.v.] and
made official in the year 322/934 when the scholar
Ibn Miskam was forced to retract his view that the
consonantal text could be read in any manner that
was grammatically correct. The following year
another Kur'an scholar, Ibn Shamsah [q.v.], was
similarly condemned and forced to renounce his view
that it was permissible to use the readings of Ibn
Mas'ud and Ubayy.

Selecting several rival systems and declaring them
equally authoritative was of course the same method
used elsewhere by Muslims to avert endless disputes,
e.g. the four Sunni legal schools. But Ibn Mujahid's
system of seven readings was not completely arbi-
trary. Strong Kur'an traditions existed in Kufa,
Bagh, Medina and Damascus; and Mecca also had
its own tradition. Kufa stood out above the others
as the leading centre for Kur'an studies and the seat
of several rival traditions. So Ibn Mujahid selected
one reading each for Medina, Mecca, Basra and
Damascus—those of Na'fi' (d. 169/785), Ibn Kathir
(d. 129/773), Abu 'Amr (d. 129/770), and Ibn 'Amir
(d. 118/746), respectively—and three for Kufa, those
of 'Asim (d. 127/744), Hanza (d. 136/752), and al-
Kisht (d. 189/804). His attempt to limit the number
of canonical readings to seven was not acceptable to
all, and there was strong support for alternative
readings in most of the five cities. Eventually
scholars began to speak of the Ten readings, and even
the Fourteen. The most widely accepted of these, the
so-called "three after the seven" are the readings of
Abu Ja'far (d. 130/745), Ya'qub al-Hadrami (d. 205/
820) and Khalaf (mentioned above). Among the
"four after the ten", two deserve special notice, the
readings of the famous al-Hasan al-Baṣrī (d. 110/728) and al-
Amash (d. 142/759), of Basra and Kufa respectively.
For each of the Ten, two slightly different "versions" (sing. riwaya) came to be accepted according to
scholars of a generation or two later, e.g. the "ver-
sions" of Warsh (d. 197/812) and Khalaf (d. 220/835)
for the reading (d. 197/812) of 'Asim, those of Hafiz
(d. 196/810) and Shu'ba (d. 194/809) for 'Asim, and
those of Khalaf (mentioned above) and Khalilid
(d. 220/835) for Hanza. For complete lists and discus-
sions of this development, see Gesch. des Qor., Ill, 169-
90, and Elachrière, Introd., 116-33.

During the fifth-sixth century the exclusive author-
ity of the Seven began to prevail, and several works
were written on them, e.g. the K. al-Tafsir by al-
Dāni (d. 444/1053) (see Bibli), which replaced Ibn
Mujahid's work. The Seven came to be followed exclu-
sively in public readings, while the others contin-
ued to be used in Kur'an commentary and works
on phonology, grammar, etc. The Kur'an readers
(kharrat), who maintained a literary tradition,
continued at least a scholarly interest in the "three
after the seven", and further refinements were made
in all of the Ten readings. Two "ways" (furūd, sing.
furād) of reciting each "version" (riwaya) came to be
accepted, and then two more "ways" for each
furād, making altogether eighty "ways" of reciting ten
"readings". See Labib as-Said, The recited Koran,
Princeton 1975, including a complete list of the eighty,
127-30; on the readings, see xirāt, and on
methods of commentaries, see xirāt.
At the present, only two "versions" are in general
use, that of Hafiz al-'Asim, which for centuries has
been followed in most regions and in 1934 was given
a kind of official sanction by being adopted in the
Egyptian standard edition of the Kur'an, and that of
Warsh 'an Na'fi', followed in parts of Africa other
than Egypt. The latter was used by the Yemen-
ite scholar al-Shawkānī (d. 1450/1834), in the manu-
script of his Kur'an commentary (see Bibli), but
in the printed edition that of Na'fi' as-'Asim reading
was substituted. The Egyptian standard edition is
now regarded as the best of the Kur'an so far avail-
able, although it was based on oral tradition and late
khuṭ'āt literature and is not always consistent with
the oldest and best sources (see G. Bergsträsser,
Konferenz in Cairo, in Ifit., xx [1932], and O. Pretzel,
"Anmerkungen" to Ortagraphie und Punktionierung des
Korans, 1932).

The history of the text of the Kur'an is yet to be
written. One aspect of this task is a thorough analysis
of the relationship between the Seven or the Ten
and all the other readings, including the Companion
codices. Until such an analysis is undertaken it will
not be possible to give a final evaluation of the
sources. The variants found in the "four after the
ten" often involve a consonantal text that differs
from that of the majority among the Ten (i.e., the
"Uthmanic text"), and they sometimes have
completely different words—see, e.g., the references
to the readings of al-Hasan al-Baṣrī and al-A'mash
in Materials, especially in the listings for Ibn Mas'ud
and Ubayy. A rough survey of Jeffery's lists shows
that Ibn Mas'ud's variants agree fairly frequently
with those of two of the Seven from Kufa, Hanza
and al-Kisht, as is to be expected, and even more
frequently with those of al-Hasan and al-A'mash
(the latter was also a Kufan reader). Ubayy's variants
agree fairly frequently with those of two others
among the Seven, Ibn Kathir and Abu 'Amr (from
Mecca and Basra, respectively), and somewhat surpris-
ingly with those of Ibn 'Amir, the only reader from Damascus among the Fourteen. This important aspect of the
history of the Kur'an deserves a thorough scientific
study, preferably with the use of a computer. On the
question of the completeness and authenticity of the
Kur'an, see Bell-Watti, 50-6; for a clear statement
and defence of the modern orthodoxy position, Labib
as-Said, op. cit., 19-41.

4. Structure

a. The sūras and their names. The Kur'an consists of
114 sections of widely varying length and
form called sūras, which are divided into a number
of verses (dā'ī), ranging from three to 286 or 287.
As shown above, the terms sūra and dā'ī both occur
within the text of the Kur'an, but it is not certain
that either has its present meaning there, i.e., refers
to the present sūras and verses. Sūra is sometimes
translated "chapter", but this is misleading. The first
sūra, al-Fāitilha, "The Opening" [q.v.], is a prayer,
and the last two known as al-mu'awwāqūtulāti, the
two [sūras] of taking refuge", are charms or incanta-
tions. These three serve as a kind of introduction and
two-part conclusion to the Kur'an. Except for a few
other very short sūras near the end (e.g. CXX, CXI,
CXXII), very few treat a single topic (XII, on
the story of Joseph, and LXXI, on Noah, are notable
exceptions) or otherwise appear to be structured
entities (e.g. XXVI and LV). Most of the sūras
consist of several segments or pericopes that are
only loosely connected, often with little or no apparent
connection of thought. Some, such as the CXXI,
CXXII, CVIII) seem to be isolated fragments; and it is not
unlikely that some of the present sūras or parts of
them were once joined with others. For instance,
The Egyptian standard edition has had a considerable impact in establishing uniform names, as would normally be expected of a title. Most of these are based on verbs that do occur, usually near the beginning of the sura that designates the single theme: Joseph (XII) and Noah (LXXI). Twelve are named for a key term that designates one of several themes or stories: Family of 'Imran (III), Women (IV), Jonah (X), Hadj (XI), Abraham (XIV), Mary (XXI), Pilgrimage (XXXII), Confederates (XXXIII), Sheba (XXXIV), and three listed above—Hajj, Cave, and Lukman. Seven are named for other striking terms that occur also in other suras: Cattle (VI), Thunder (XIII), Light (LXVI), Veiling (LXXXI), Splitting (LXXXII), Congregation (LXII), Divorce (LXV). In 16 of these this is the only occurrence of the term in the Koran (given here without the definite article): Cow in II, 67-71; Table, V, 112-14; Heights, VII, 46-8; Hijj, XV, 89; Bee, XVI, 68; Cave, XVIII, 9; Poets, XXIV, 224; Ant, XXVII, 18; Spiders, XXIX, 41; Luqmaan, XXXI, 12; Troops, XXXIX, 71-7; Counsel, XLIII, 38; Hobbling, XLV, 28; Sand-dunes, XLVI, 21; Apartments, XLIX, 4; and Mutual Fraud, LXV, 9 (some first-word and first rhyme-word names listed above are also only occurrences). Only two of the narrative suras are named for a key term in the sura itself: The Cow (XXI) and Unity (of God) (CXII). The two terms with asterisks occur elsewhere in the Koran. Most of these names are based on verbs that do occur, usually near the beginning of the sura. Two other suras: Cattle (VI), Thunder (XIII), Light (LXVI), Veiling (LXXXI), Splitting (LXXXII), Congregation (LXII), Divorce (LXV), Prohibition (LXVII), Veiling (LXXXIII), Spleiting (LXXXII), Rending (LXXIX), and Expanding (XCIV). The names of the other three were chosen to indicate the function of the sura, The Opening (I), or the main theme, Prophets (XXI) and Unity (of God) (CXII). Only the two terms with asterisks occur elsewhere in the Koran. On the names and abbreviations used for the suras, see Pare, Kommentar, 545-50.

b. The verses. Like the suras, the verses vary considerably in length and style. In some suras, which tend to be short and early, the verses are short and often choral. Sometimes there even seems to be an element of metre (LXXIV, 1-7, CXI, 1-10; cf. CXIV, CIIV), but this is caused by the repetition of certain grammatical forms and not by genuine rhyme or carry with them the rhythmic significance of either syllables or stresses. These short, rhythmic verses are often also difficult to translate or interpret because of their use of rare terms, symbolism, metaphor, and other “poetic” features. Most longer suras, and some short Medinan ones (e.g. LX, LXV), have longer, more prosaic verses, often with short statements or formulas attached to the ends in order to provide the rhyme. The one feature that all the verses have in common is that they begin with a key word or catchword that occurs elsewhere in the sura. In 16 of these this is the only occurrence of the term in the Koran (given here without the definite article): Cow in II, 67-71; Table, V, 112-14; Heights, VII, 46-8; Hijj, XV, 89; Bee, XVI, 68; Cave, XVIII, 9; Poets, XXIV, 224; Ant, XXVII, 18; Spiders, XXIX, 41; Luqmaan, XXXI, 12; Troops, XXXIX, 71-7; Counsel, XLIII, 38; Hobbling, XLV, 28; Sand-dunes, XLVI, 21; Apartments, XLIX, 4; and Mutual Fraud, LXV, 9 (some first-word and first rhyme-word names listed above are also only occurrences). Only two of the narrative suras are named for a key term in the sura itself: the Cow (XXI) and Unity (of God) (CXII). The two terms with asterisks occur elsewhere in the Koran. Most of these names are based on verbs that do occur, usually near the beginning of the sura. Two other suras: Cattle (VI), Thunder (XIII), Light (LXVI), Veiling (LXXXI), Splitting (LXXXII), Rending (LXXIX), and Expanding (XCIV).
common is that they end in an irregular rhyme or assonance (discussed in 6.6 below). Because of the rhyme the verses form the most natural divisions of the text, and yet we cannot be certain where some verses originally ended. Verse divisions are not indicated in the oldest manuscripts, and they vary somewhat when they are marked, possibly reflecting differences in the early oral tradition that go back to revisions made in the text during the Prophet's lifetime. There is clear evidence that the rhyme and the verse divisions were altered in some sūras, where passages originally in one rhyme were inserted into passages in another rhyme (see Bell-Watt, 80 ff.).

But the main reason for the variation in the verse divisions is that the rhyme or assonance is usually formed by certain grammatical forms and endings that occur frequently in Arabic, and thus within many of the longer verses.

Several different systems of verse division and numbering arose within the Muslim community. In his English translation M. Pickthall followed an Indian text tradition in which VI, 73 of the Egyptian standard text is divided into two verses, so that 72-165 become 72-166, XVIII, 78 is divided so that 79-110 become 20-111, and XXXVI, 34 and 35 are combined so that 36-83 become 33-82. The editors of the 1976 Festival edition (see Ribl.) combined so that 36-83 become 35-82. The editors of the 1976 Festival edition (see Ribl.) adopted the Egyptian verse divisions and numbering throughout.

Even where the verse divisions are the same, there are variations in the numbering in various Muslim editions of the Arabic text and translations, depending on whether or not the basmāla and the mysterious letters are counted. The Egyptian standard edition counts the basmāla (see below) as verse 1 only in the Fāṭihah, and is inconsistent in counting the mysterious letters, counting them as a separate verse (verse 1) in sūras II, III, VII, XIX, XX, XXVI, XXVIII, XXX, XXXI, XXXII, XXXVI and XI-XLVI, except that in XII 66 and 188 are counted as two verses. In all other cases the mysterious letters are regarded as the beginning of verse 1. Pickthall counted these letters as a separate verse in the same sūras, but not in sūras III, XII and XXXVI, where the edited text counts them with the following verse.

Some Indo-Pakistani Arabic texts and translations of the Kūr'ān, e.g., those of Sir Salahuddin, M. Zafarulla Khan and M. G. Farid, always count the basmāla as verse 1.

The Arabic text of the Kūr'ān most widely used in the West until recently is that of Gustav Flügel (1854), which does not follow any one Oriental text tradition. In an effort to establish an improved text, Flügel made many changes in the verse divisions, altering the numbering in slightly over half the sūras. The verse divisions and numbering are the same in the Egyptian and Flügel editions only in sūras XV, XLVII-XIX, I-III, IV, LI, LX-LXV, LXVIII-LXIX, LXVI, LXVII-XLXVI, XXVII, XXIX, C, CII-CIII and CVII-CXII. The Flügel text never counts the basmāla as a verse, and never counts the mysterious letters as a separate verse, but always as the beginning of verse 1. The English translations by R. Bell and A. J. Arberry follow the Flügel numbering. The Italian translation by A. Bausani and the English by A. H. Siddiqi follow the Egyptian numbering, as does Yusuf Ali, usually but not always. The German translation by R. Pareit and the French by R. Blachère give both numberings, Pareit giving the Egyptian first, Blachère the Flügel first. For a complete list of the differences in these two numbering systems and a table for converting the Flügel numbers to Egyptian, see Bell-Watt, 262 f.

The standard work on the various Islamic numbering systems is A. Spitsier, Die Zählung des Koran nach islamischer Überlieferung, Munich 1915.

c. The basmāla. At the beginning of each sūra except IX stands the basmāla, the formula, basmī 'Ishāḥī 'I-rāḥmāndī 'I-rāhiṃ, which can be interpreted or translated at least three ways: "In the name of God, the Merciful, the Compassionate" (e.g., Bell, Arberry); "In the name of God, the compassionate Merciful (One)" (cf. Blachère); or "In the name of the merciful and compassionate God" (cf. Pareit). This formula occurs one other time in the Kūr'ān, in XXVII, 30, as the opening of Solomon's letter to the queen of Sheba. The elements of the basmāla also occur separately: basmī 'Ishāh (without the ašāf in basmī, as in the basmāla) occurs once, in XI, 41, and the twin attributes, al-rāḥmān al-rāhiṃ, occur together four more times, in I, 3, II, 165, XLI, 2 and LIX, 22. It may be significant that whenever these attributes appear together, including in I, 1 and XXVII, 30, al-rāḥmān always serves as a rhymeword. Al-rāḥmān, always with the definite article, occurs within the text 57 times altogether—i.e. counting 1, 1, but not the other occurrences of the basmāla at the head of the sūra. Al-rāhiṃ occurs 33 times with the definite article, and frequently without. The fact that the last two terms of the basmāla occur together elsewhere in the Kūr'ān following the same pattern as many other pairs of divine attributes (see 6.6 below) suggests that the first of these interpretations given above is the best (cf. Jomier, Le nom divin "al-rāḥmān" dans le Coran [see Bibl.]).

On the origin of the basmāla and its placement at the head of the sūras there is difference of opinion. Some Muslims believe that this formula was part of the revelation and was included at the head of the sūras from the beginning. Textual evidence within the Kūr'ān, supported by other early historical evidence, suggests that this is not the case. "Allah" in the basmāla is clearly the preferred name for God, and al-rāḥmān and al-rāhiṃ, according to their Kūr'ānic usage, are either names or epithets for God. Yet these names are conspicuously absent in earlier parts of the Kūr'ān, within the sūras.

In the editio princeps al-rāḥmān occurs elsewhere in the Kūr'ān following the same pattern as many other pairs of divine attributes (see 6.6 below) suggests that the first of these interpretations given above is the best (cf. Jomier, Le nom divin "al-rāḥmān" dans le Coran [see Bibl.]).

use in Arabic as a proper name for God before and during the time of Muhammad, see Gesch. des Qor., 1, 172 f.; Horovitz, Jewish proper names, 57-9; Foreign vocab., 140 f.; and BASMALA.

The evidence seems to indicate that the basmala came into use as a result of this controversy over divine names, probably a short time after the revelation of XVII, 110. It is possible that the basmala was formed from existing Koranic expressions, i.e. bismi 'llah in XI, al and al-rahmân al-rahîm in what is now L, 3; but it seems much more likely that the Fâtiha and all Koranic occurrences of these twin attributes date from after XVII, 110. It also seems likely that the basmala was not originally part of the Fâtiha; note that the Korân scholars of Medina, Bağra, and Syria did not count it as a verse in the Fâtiha, and that this sûra without the basmala is often referred to as al-basm, which may have been its original title [see BASMALA]. As soon as the basmala came into use, Muhammad no doubt used it to introduce each recitation of a portion of the Korân. Since many sūras begin with the basmala, one must back up this period (see 5.4 below), Muhammad must have recited the basmala before many segments that are now in the middle of the sūras. Only when the sūras reached their final, written form, in some cases after Muhammad’s death, was the basmala placed at the beginning of each sûra as we have it today.

d. The mysterious letters. At the beginning of 29 sūras just after the basmala stands a letter or group of letters called in Arabic jamâib al-sutrar, “the openers of the sūras”; 43 al-basm, “the beginnings of the sūras”; al-basm al-mubâhâsâl, “the disconnected letters”, etc., but generally referred to in European languages as “the mysterious letters”. They are recited as letters of the alphabet, and for 14 centuries they have intrigued and baffled Muslim scholars. Some saw them as abbreviations, e.g. alr for al-rahmân, alm for al-rahîm, hmr for al-rahîmin, s for sîdî yâ muhammad, zr for yâ sayyid al-muâlînîn, etc. Kirmia and others relate from Ibn ‘Abbâs the view that alr, hmr, and s r, together stand for al-rahmân (lit. R. M., ii, 9). Others concluded that the letters are not abbreviations, but offered a variety of alternative explanations, that they are sounds meant to arouse the attention of the Prophet or to captivate his audience so they would be more attentive, mystical signs with symbolic meaning based on the numerical value of the Arabic letters, (written) signs of separation (fâwîdî) between the sūras, simply Arabic letters attesting that the revelation is in the familiar language of the people, etc. Al-Suyûtî (ibid., 10) mentions, for instance, a tradition related by Ibn Isâk on the authority of Ibn ‘Abbâs in which a group of Jews tell Muhammad that the numerical value of the letters would indicate the number of years his community would last. At first they heard him recite alm (1 + 30 + 40 = 71), and said it would last 71 years. Then they heard alm (1 + 30 + 40 + 60) suggesting 131 years, then alr (1 + 30 + 200) or 231 years, and then alm or 271 years. In the end they concluded that the matter was ambiguous. Al-Suyûtî discusses these and many other possibilities (ibid., 5-13) and concludes that the fâwîdî are simply mysterious letters or symbols known fully only to God. Later Muslim scholars have tended to accept this view, although the abbreviation theory has remained popular. Al-Munhy, for instance, has put forward new variations of medioeval suggestions, e.g. Hashim Amir Ali (see Bibl.) argues that all of the groups of letters, not just some of them, are vocatives addressed to the Prophet, and “All Nâṣub al-Tâhir (see Bibl.) proposes that the numerical value of the letters represents the number of verses in the “original” (in most cases, Meccan) versions of the sūras or groups of sūras concerned. Citing the same examples as al-Suyûtî (but not always the same values), al-Tâhir says, for instance, that Sūra VII, which has 50 verses and begins with alm (1 + 30 + 40 + 30 + 10), originally consisted of only the first 162 verses. In other cases he has to combine various groups of sūras in order to obtain the required number of verses. Thus, adding the 112 verses of XII and the “120 Meccan verses” of XI gives him 231, the value of the letters alr which occur at the beginning of these two sūras (and also X, XIV, and XV, which he does not mention). Sūra XIII, with alm (1 + 30 + 40 + 200 = 271), he argues has 40 Meccan verse which when added to the 231 of XI and XII gives the required 271. In response, it is sufficient to note that no sûra with the letters now has the same number of verses as the value of the letters, and in no case does al-Tâhir’s suggested number of original or “original” verses correspond with any of the Egyptian standard editions, much less a critical view of the chronology of the sūras involved. This theory is a prime example of the way arbitrary speculation has been applied to these letters.

A number of Western scholars have taken up the challenge to explain these letters since the publication of Th. Noldeke’s Geschichte des Qorân in 1860. Noldeke suggested (215 f.) that they are the initials or monograms of the owners of the manuscripts used by Zayd when he first compiled the Korân, e.g. abr for al-Zubayr, alm for al-Mughîrah and hmr for ‘Abd al-Rajîmân. These monograms, he said, got into the text by accident when later Muslims no longer knew their meaning. This view was widely accepted for a while in Europe and was taken up in “late Meccan and early Medinan sūras” when Muhammad was “drawing near to Judaism”, and in some cases the beginning verses contain an allusion to the letters (i.e. “these are the signs (fâwîdî) of the Book”). He concluded that the letters are Cabalistic symbols standing for certain key words and phrases in the sūras before which they stand. Loth’s arguments were sufficient to cause Noldeke to abandon his earlier view and conclude that the letters are part of the revelation, having however no special meaning other than as mystical allusions to the heavenly Book (Orientalische Skizzen, 1892, 50 f., also stated in Enzy. Brit., 9th ed., xvi, 597 f.). F. Schwally, in a perceptive survey of the literature up to 1910 (Gesch. des Qor., i, 68-78), wisely rejected Loth’s abbreviation suggestions as being too arbitrary (73), although recommending him on his main argument (77). Schwally could not, however, accept Noldeke’s later view, calling it “doubtful” and insisting that “the symbols are still somehow connected with the redaction of the sūras” (76). Leaving open the
posibility that the letters are part of the revelatory
Schwally made the following important statement: 
"If Muhammad was indeed the originator of the
ciphered sūras. This would indeed contradict
earlier prevailing views, but would agree with our
earlier statements that the Prophet relied on secret
oracles, or in any case on the visions of the
mystics, who dictated the revelation, that
already his object was to produce a special book of
revelation, and that the manner in which pieces from
various periods but of similar content are
strung together in certain sūras produces the
impression that this editing originates from the Prophet,
himself" (77). Schwally was thus a harbinger of the
work of Bell in the 1930s.

In the meanwhile, two more attempts were made
to follow up on Loth's version of the abbreviation
theory. In 1921 Hans Bauer (Amordnng der Suren)
provided statistical evidence for Schwally's first
point, that the letters are connected with the redac
tion of the sūras, but failed to follow up on the
second. Instead, he offered an alternative
hypothesis, that the opening formula of the
sūras are said to be old abbreviations: ys for yā, "be he ruler", in
XXXVI, 20; f for ḥaqqnāt, "chargers", in XXXVIII,
31; b for karbīnū, "he who is at his side", in L, 23
and 27, etc. For the groups of sūras with the same
letters he sought some kind of "inner or outer connection
among the sūras", and suggested that ḥ(m) in XXVII-
VIII stood for fār sīnīn, "Mount Sinai", and Moses,
and that ḥ(m) stood for al-mātkhūn (see ibd above).
Independently E. Goossens proposed a similar view
in a 1923 folio article (see Bibl), that the letters are abbreviations for
discarded sura titles: ḥ(m) for ḥurūn, or for mīr, "the fish", of ḥum, one of Jonah's
titles, etc. The alīr, sūra, now named after individual
messengers, he said once formed a sura-group called
al-rūsl, "the messengers", and the ḥ(m) for√r., formed a
similar group called al-najālīl, "the parables". His
most innovative suggestion was that some letters are
remnants of titles that were discarded or abbreviated
when some sūras were rearranged, e.g. ẓ (XXVI)
is the remnant of al-ẓār or al-ṣārūn (two names for Elias
in XXXVII, 173, 170), the title of an earlier
sūra consisting of XXVII + XXVIII, 12-72, and
for the title of what is now XXVIII, the title of an
earlier sūra consisting of XXVIII, 1-11 +
XXVIII. Bauer and Goossens inspired another
abbreviation theory, that of Morris Scale
(see Bibl) who suggested that the letters served as mnemonics of
the contents of the sūras involved. Scale accepted
Bauer's Mount Sinai and Moses for ẓ(m) and Goossens'
al-rūsl for ḥ(m), but preferred al-mānīn, "admonition",
for alīn and ḥum (Jonah) for ẓs. The diversity of
these proposals and the fact that several alternative
suggestions are often equally plausible demonstrate
the futility of this approach, which also fails to
respond to some of the textual evidence. In the end,
what Schwally said of Loth's abbreviation suggestions
applies also to those of Bauer, Goossens, and Scale.

James A. Bellamy in a 1973 JAOS article (see
Bibl) has proposed an abbreviation theory that
attempts to avoid the arbitrariness of the others.
Starting with the views recorded by the classical
commentators that alr, alr, aml, bmr, and n (letters that
occur at the beginning of all but ten of the
affected sūras) are abbreviations for al-rāfin or
al-rāfin or both. Bellamy proposes that these letters
stand for these terms in the bmsl, and that all the
other mysterious letters are also abbreviations for
this formula. In order to accomplish this he suggests
a number of emendations, so that ẓ and b > ba, g,
and ẓ > m, ẓ > b, and ẓ > bs or s. Thus with the
change of only one letter, ẓ(m), b(m), ḥ(m), and ḥ,
become bsm, bas, bah, bs, alm, m, and m, all
suitable abbreviations for the bmsl. This leaves
only ḥ(m) and ḭ(m) which with two and four
changes respectively become ḥ(m) and ḥ(m).
Bellamy suggests that when the bmsl was first
introduced (in the "middle and late Meccan" sūras) it
was abbreviated variously by the Prophet's scribes
at the beginning of these sūras, and that the later
compilers, failing to recognise these abbreviations,
gave them a permanent place in the text by writing the
bmsl out in full just before them. Most of
Bellamy's suggested emendations are indeed plausible,
but his theory as a whole is not consistent with
some of the textual evidence (e.g. the letters are
almost certainly not Meccan, but Medinan), does not
answer some crucial questions (e.g. the relationship
of the letters to their immediate contexts), and is
based on several very unlikely assumptions (e.g. that
a new formula was introduced ad hoc in one
particular way by unknown scribes in Mecca who died without
revealing their meaning, that the well-known scribes
in Medina knew nothing about the abbreviations,
etc.).
have been distinguished as an Arabic Kur'ân.

42 (52) hâmâ
So reveals to thee and to those before thee, God, the Almighty

43 (37) lâm
By the clear Book. Behold, We have made it an Arabic Kur'ân

44 (55) lâm
By the clear Book. We have sent it down in a blessed night

45 (47) lâm
The sending down of the Book is from God, the Almighty

46 (42) bûn
The sending down of the Book is from God, the Almighty

30 (52) bûn
By the glorious Kur'ân

65 (62) n
By the Pen and what they inscribe

Two points, stressed by Schwally, Bauer, Loth and others but largely disregarded by all the abbreviation theories, stand out in this list: the mysterious letters influenced the final arrangement of the Kur'ân, and they are closely related to the introductory formulas and to the Book. Groups of sûras with the same letters but with widely varying lengths have been kept together even though this violates the principle of arranging the sûras according to length. This suggests that separate collections of sûras with the same letters existed at the time of the compilation of the Kur'ân and that the redactors were hesitant to break them up. The most likely reason for this hesitancy is that they regarded the letters as part of the revelation, and the groups of sûras as going back to the Prophet. In nearly every case the letters are followed immediately by a reference to some form of the revelation, usually a distinctive revelation formula or oath that mentions the Book or the Kur'ân.

In III this formula occurs in verse 2, which Schwally (Gesch. des Qor., III, 75) says was probably the original beginning of the sûra. In XIX a Book formula, “Mention in the Book Mary (Abraham, etc.)”, introduces five other accounts (verses 16, 41, 57, etc.), but what appears to be an older formula is retained at the beginning of the first (verse 2). The close connection between the mysterious letters and the Book is proved by the fact that, although many sûras begin with formulas or oaths, only one other sûra opens with the same type of revelation formula, namely, XXXIX, which belongs with the hû sûras. It begins exactly the same as the three preceding them (XL, XLV and XLVI), it shares the same themes, and it is placed with them despite its length (see Bauer, Table II).

Usayy and others are in fact said to have read ism at the beginning of this sûra (Materials, 160). Revelation is mentioned in a few other sûra introductions, but they are different, e.g. XVIII and XXV begin with praise formulas (al-hamdû l li‘âdî and tabâhâna, XVII with a ma-mâ addâhkû formula (see 72 below) and LV mentions al-kur'ân in verse 2, but is in a completely different style. There is also some correlation between specific formulas and groups of sûras with the same mysterious letters, e.g. the ism sûras have the same formula, three of the lâm sûras have the same formula, and four with unique letters (Î, Ï, Ð, and Î) begin with oaths.

Whether or not Loth is correct in saying that several of the introductory formulas contain allusions to the mysterious letters, there is other evidence that these letters are part of the revelation and were recited as separate letters from the beginning. For one thing, most of the groups of letters when recited as letters of the alphabet, introduce the rhyme of their respective sûras. The 17 sûras with groups of letters ending in ism, lâm, or Ïm (i.e. six with Ïl lâm Ïm, six with Ïh lâm Ïm, two with Ïl lâm Ïm, and one each with Ïl Ïm, Ïl Ïm, and Ïm) all have this rhyme, with one partial exception. Sûra XX, on the other hand, with Ïl Ïh, has the Ïh rhyme (verses 1-24); XXXVIII, with Ïlô, has the rhyme Ïh, Ïh, etc.; XL, with Ïl lâm râh, has Ïr, Ïlô in verses 1-5 and XLII, with Ïl lâm râh, and XLII, with Ïh lâm Ïm, Ïyân sin hâf, both have Ïm in verses 1-5, and then change to Ïb, Ïr and Ïl, Ïr, respectively. The correspondence is not exact, and there are exceptions, but this close relationship between the letters and the rhyme or assonance of the sûras must be more than a coincidence.

Another striking fact that must be more than coincidental is that the mysterious letters represent every consonantal form in Arabic, while no form occurs for more than one letter. Thus we have Ïb, Ïh, Ïy, Ïl; Ïh, Ïh, Ïb; Ïh, Ïh; Ïb, Ïlô; Ïb, Ïh, Ïlô; and Ïb, Ïh, Ïlô, Ïh, Ïh, Ïlô—along with each of the forms that represent only one letter, Ï, Î, Ï, Ï, Ï, and Ï (note that in Kûfic Arabic Ï was written like Ï and Ï, and Ï and Ï were written like Ï, except that letters were not attached to the ends of Ï, Ï, and Ïh). The most reasonable explanation of the fact that these 14 letters, and no others, occur is that they were intended to represent the Arabic alphabet. If this is so, then the statements in the introductory formulas saying that the revelation was being sent down as a “clear Book” (hâlîb mubîn) in Arabic take on new significance; other passages (XVI, 103, XXVI, 195) speak of the revelation being in “plain Arabic speech” (lâmîn ‘arabî mubîn). The fact that the literature on variant readings does not record differences in the way the 14 consonantal forms were recited seems to indicate that there was a strong oral tradition supporting the mysterious letters.

A number of questions still remain, but the evidence seems to support Loth, the later Nöldeke, Schwally, Bell, and Alan Jones (see Bibl.) in regarding the mysterious letters as part of the revelation. Moreover, Bell seems to have been correct in seeing the letters and the introductory formulas as part of the early Median revisions adapting the sûras for inclusion in the written scripture Muhammad was preparing. It is not unlikely that the sûras with the letters are the ones Muhammad prepared for the Book. The letters are significant for understanding the history of the text, and the chronology of the text is important for understanding the letters.

5. CHRONOLOGY OF THE TEXT

The Kur'ân responds constantly and often explicitly to Muhammad's historical situation, giving encouragement in times of persecution, answering questions from his followers and opponents, commenting on current events, etc. Major doctrines and regulations for the Muslim community, which are never stated systematically in the Kur'ân, are introduced gradually and in stages that are not always clear. There are apparent contradictions and inconsistencies in the presentation of both the beliefs and the regulations, and the latter are sometimes altered to fit new situations. Thus it is essential to keep the approximate dates of historical events, both internal and external, in mind when reading the seventeenth sura. Major doctrines and regulations are introduced gradually and in stages that are not always clear. There are apparent contradictions and inconsistencies in the presentation of both the beliefs and the regulations, and the latter are sometimes altered to fit new situations. Thus it is essential to keep the approximate dates of historical events, both internal and external, in mind when reading the seventh sura.
Western scholars, who have not however been able to reach a consensus on a dating system, or even on the possibility of establishing one.

a. Historical references and allusions in the Qur'an. The Qur'an mentions specifically or alludes to a number of historical events in the life of Muhammad and his contemporaries, but it gives no dates or other indications as to exactly when these events occurred. In most cases, the specific occasions alluded to and the dates of the passages involved cannot be determined. This is especially true for the period before the Hijira in 622, for which there are only a few references to dateable historical events, and even if the events could be identified with certainty this would be of little help in dating the passages that refer to them, e.g. XXX, 2-5, mentions a military defeat of the Byzantines, presumably their loss of Jerusalem to the Persians in 614 (cf. also CV, believed to refer to a military expedition against Mecca in the middle years of the 6th century). There are many allusions to Muhammad's personal situation in Mecca (e.g. the persecution he suffered, accusations made by his opponents, his early life and orphanhood) and to specific practices of the Meccans, but the passages that contain these allusions cannot be dated with any precision. It is only in the Medinan period that we have a number of passages that can be dated fairly precisely on the basis of references or allusions to specific historical events that can be dated from other sources. For instance, the battle of Badr (spring 624) and the battle of Hunayn (early 630) are mentioned by name in III, 123, and IX, 25, respectively. The change of the hijri [i.e. direction one faces when performing the ritual prayer] from Jerusalem to Mecca in late 623 or early 624 is discussed in II, 152-50. The adoption of the ancient pilgrimage rituals about the time of the battle of Badr is discussed in II, 158, 198, V, 95 ff., etc., where the Ka'ba, al-Safa and al-Marwa (two holy places in Mecca), Mount Arafat, and al-Masjid al-Haram (the sanctuary in Mezahifla) are all mentioned by name. Muhammad's adopted son Usayd (b. Haricha), is mentioned by name in XXXIII, 121, in connection with an episode that occurred in the spring of 627. And many other events are alluded to, although not by name: the battle of Uhud (625) in III, 153-74; the expedition of the Jewish tribe of al-Nadir (625) in LXIX, 2-3; the Day of the Trench (627) in XXXIII, 7-9; the expedition to Tabuk (630) in IX, 29-35, etc. All Qur'anic dating systems, Muslim and non-Muslim, take these historical references and allusions in Medinan contexts as their starting-point.

b. Traditional Muslim dating. During the early Islamic centuries a number of passages in the Qur'an came to be connected with stories that arose in the attempts to reconstruct the life of the Prophet, especially for the period in Mecca before the Hijira: LIII, 1-18, and LXXIV, 17-20, came to be interpreted as Muhammad's call visions; while XCIV came to be associated with a story about the miraculous opening of his breast and purification of his heart, XCVI and LXXIV with his call to public prophethood, XVII, 1, with his Night Journey, etc. (see, e.g., al-Jahili and al-Zamakhshari, ad loc.; for the European literature, Faret, Kommentar, 460 f., 573-75, 493 and 295 f.). Other passages came to be connected with certain events in the life of the Muslim community: XIX is said to have been recited to the Negus of Abyssinia by Muhammad's followers who were forced to emigrate from Mecca to escape persecution around 615; and a written copy of XX is said to have been involved in the conversion of 'Umar at about the same time. Early Qur'an scholars also attempted to identify and explain vague allusions in the Qur'an, e.g. they explained that the blind man alluded to in LXXV was a certain 'Abd Allah b. Umm Makdim, and that the man involved in a divorce dispute in LVIII was Aws b. al-Simiti. And episodes related to IX, 40, XXIV, 12-29, XXXIII, 17-40, LXVII, 3-5, CXI, 1-5, and many others were similarly explained. From these stories and explanations there arose a separate genre of Islamic literature called as-sab' al-mustil, "the occasions of the revelation", the prime example being a work of the same title by al-Wahidi (d. 468/1075-6). This literature does not attempt to provide a complete system for dating the various parts of the Qur'an, and only a small proportion of the text is treated. Also, there are a number of inconsistencies, e.g. whether XCVI or LXXIV was the "first revelation" (see Ibani, i, 81 f.). Some of the stories and other explanations found in this literature and in the Qur'an commentaries are obviously legendary, and in some cases the process by which these accounts came to be attached to Qur'anic passages can be reconstructed (see, e.g., II, Birkeland, The legend of the opening of Muhammad's breast, Oslo 1935, and The Legend of the Prophet, Oslo 1936, 38-53). Others probably have some historical validity, but there is often good reason to suspect elaborate embellishment. These accounts—historical, semi-historical, and legendary—came to be accepted, often without discrimination, as the basis for the traditional Muslim dating of the Qur'an. The adoption of the Qur'an as a primary source for Islamic law played an important role in the establishment of a chronological order for the text. Rather than attempting to explain away the inconsistencies in passages giving regulations for the Muslim community, Qur'an scholars and jurists came to acknowledge the differences, while arguing that the latest verse on any subject "abrogated" all earlier verses that contradicted it. A classic example involves the Qur'anic teaching or regulation on drinking wine, where V, 90, which has a strong statement against the practice, came to be interpreted as a prohibition, abrogating II, 219, and IV, 43, which appear to allow it. This theory or doctrine of abrogation (nasib) has only limited support in the Qur'an itself, since the verses on which it is based, especially II, 216, involve passages that are no longer in the Qur'an. But a number of treatises on the subject influenced the development of the traditional dating of the Qur'an by establishing a widespread belief in the chronological order of certain groups of isolated verses. Eventually, long lists of "abrogating and abrogated [verses]" (al-nasabi wa-la-nasabi) were drawn up, as jurists and others, in efforts to support their own views, sought out all possible inconsistencies and claimed that the "earlier" verses involved had been abrogated. See NASEEB and TAFAH; IBAN, ii, 20-7; Bell-Watt, 86-9; Burton, Collection, 46-76.

The lack of dating parts of the Qur'an and determining its chronological order was further complicated by the assumption that the present sūras were the original units of revelation, i.e. that except for a few verses in some sūras, each sūra was revealed all at once or during a short period of time before the next sūra was begun. This assumption led to the practice of designating each sūra as "Meccan" or "Medinan" (i.e. revealed before or after the Hijira) and to attempts to determine the exact chronological order of all the sūras as wholes—rather than dealing with
...Med.), XXXV, XIX (58, 71 Med.), XX (130 f. Med.), UV (54-6 Med.), XXXVIII, VII (163-70 f., 20 Med.), LXXIV, I, CXI, LXXXI, ...accrued, and with a few changes was adopted by the editors of the Egyptian standard edition of the Kur'an (1822-1824), who indicated in the heading to each sura the sura revealed just before it and any verses that belong to a different period. Thus the heading for XIV reads: "Sura of Abraham, Meccan, except verses 28 and 29 which are Medinan; it has 32 verses; it was revealed after Suras of Noah." ...the chronological order attributed to Ibn 'Abbas (d. ca. 660) was widely accepted, and with a few changes was adopted by the editors of the Egyptian standard edition of the Kur'an (1822-1824), who indicated in the heading to each sura the sura revealed just before it and any verses that belong to a different period. Thus the heading for XIV reads: "Sura of Abraham, Meccan, except verses 28 and 29 which are Medinan; it has 32 verses; it was revealed after Suras of Noah." The Egyptian standard edition gives the following chronological order of the suras, with the verses said to date from a different period given in parentheses: XLI, XLI (23-5 Med.), XIX (58-6 Med.), XXXVIII, VII (163-70 f., 20 Med.), LXXIV, I, CXI, LXXXI, ...the language is said to be full of "poetic imagery and power". Assuming a progressive deterioration of style, Well placed in the First Period the suras he felt have the most exalted poetic style, along with others that share the same themes and general style. The chronological order of the suras of the First Period according to the three versions is as follows: Well: 96, 74, 73, 106, 111, 53, 51, 68, 87, 92, 89, 93, 94, 103, 100, 108, 102, 107, 109, 113, 114, 112, 80, 97, 91, 85, 90, 95, 101, 75, 104, 77, 61, 78, 79, 82, 84, 36, 88, 52, 69, 83, 99. Nödeke: 96, 74, 71, 106, 101, 104, 107, 102, 105, 92, 90, 94, 93, 97, 85, 96, 86, 88, 97, 95, 90, 85, 73, 101, 99, 82, 53, 84, 100, 79, 77, 88, 89, 82, 75, 83, 59, 51, 59, 56, 70, 55, 112, 109, 113, 114, 1. Blachère: 96-98, 74-76, 105, 93, 94, 103, 91, 107, 86, 95, 99, 101, 100, 92, 91, 87, 84, 101, 78, 89, 78, 55, 59, 57, 77, 78, 35, 53, 97, 53, 102, 96-98, 73, 70, 76, 83, 74. The suras of the Second or Middle Meccan Period are longer and more "formalistic", but still with "poetic" qualities. In style they are felt to form a transition between the suras of the First and Third Periods. The signs of God in nature and the divine attributes such as mercy (raḥmah) are emphasized, and God is often called the Merciful One (al-raḥmān). There are vivid descriptions of paradise and the hereafter, and here too the punishment-stories are introduced. The suras of the Second Period are:...
Nöldeke and Blachère: (51), 54, (68), 37, 71, 75, 44, 50, 20, 26, 15, 19, 38, 36, 43, 73, 67, 23, 61, 25, 77, 27, 18.

The sūras of the Third or Late Meccan Period are even longer and "more prosaic", and Weil says the "poetic passage" has "most altogether". The revelation often takes the form of sermons or speeches and the prophet stories and punishment-stories are stated in more and more detail. Nöldeke emphasises changes in vocabulary, but similarity of form, in Late Meccan and Medinan sūras. The sūras of the Third Period are:

Weil: 7, 72, 35, 27, 28, 17, 10, 11, 12, 6, 21, 34, 39, 40, 32, 42, 45, 46, 18, 16, 14, 41, 30, 29, 13, 64.
Nöldeke and Blachère: 32, 47, 45, 17, 16, 30, 11, 14, 12, 46, 28, 29, 39, 34, 42, 10, 34, 35, 7, 46, 5, 13.

The Medinan sūras and their chronological order are determined by the subject matter of these revelations that reflect Muhammad's growing political power and the general development of events in Medina after the Hijra. New themes and key terms are said to help distinguish these sūras from certain Late Meccan ones. The Medinan sūras are:

Weil: 2, 98, 62, 63, 25, 4, 8, 47, 57, 3, 59, 24, 93, 33, 48, 170, 67, 50, 58, 49, 69, 9, 5.
Nöldeke and Blachère: 2, 68, 64, 62, 8, 47, 3, 61, 57, 4, 55, 59, 33, 65, 24, 38, 28, 48, 66, 60, 110, 49, 9, 5.

Here we see a combination of excessive dependence on traditional Muslim dating and on matters of form and style, e.g. in Weil's First Period the first 34 sūras, with just a few exceptions, are in almost exactly the same order as in the traditional Muslim dating (cf. the Egyptian list above). Then well closed this period with eleven sūras that have the same "poetic style", but are dated considerably later by Muslims (note the exact order of LX-XLXXXIV). Nöldeke then accepted all of Weil's First Period sūras, and added three more (I, LI, LV), and Blachère accepted all of Nöldeke's except for two (LI, LXVIII), and added one (LXVI)—these differences involve mainly the dividing points between the periods. Also, the traditional stories involving certain sūras—Muhammad's call (XCVI, LXXIV), an incident involving Muhammad's uncle, 'Abd al-Ui'zāz (CXI), the emigration to Abyssinia (XIX, XX), etc.—seem to have been accepted as historical. But the Tradition, especially on the Meccan period, is not this trustworthy. Weil, Nöldeke, and Blachère have accepted the three assumptions of the traditional Muslim dating stated above; their four-period system is essentially little more than a European variation of the traditional dating. On the question of style, it is true that there were changes through the years; but there is no reason to assume that all sūras with the same style belong to the same period. The Four-Period School have not demonstrated the validity of the historical framework or the development of ideas and key terms assumed by their system, which has been widely accepted in the West with much more confidence than is justified. It should be emphasised, however, that this system is often used by others in a rigid way not intended by its founders (Weil and Nöldeke), e.g. giving the exact chronological order of several verses, or the exact number of occurrences of a term in each period. Schwally in particular emphasised that the order proposed by Nöldeke was only approximate.

Three other dating systems were proposed by Europeans within a span of ten years around the turn of the 20th century. That of H. Grimm, presented in his Muḥammad (1892-5), ii, 25 ff., was basically a variation of Nöldeke's, with more emphasis on stages in the development of doctrinal themes. Grimm's analysis of groups of ideas that occur together in the Kur'ān was useful, but his view of the overall sequence of ideas (monotheism, resurrection, the Last Day, etc.) was not widely accepted, and has since been largely abandoned. In 1896, Sir William Muir published his The Qur'an: its composition and teaching (1896), 43-7, offered an arrangement of the sūras in six periods (five Meccan and one Medinan). His most significant and innovative suggestion was that the first period in the composition of the Kur'ān comprised eighteen short sūras, which he called "chapsodies", dating from before Muhammad's call: CIII, C, XCI, XCI, CVI, I, CI, XCV, CII, CIV, LXXXII, XCI, CV, LXXXIX, XC, XCI, XCVII, XCVI and XCVIII. Muir pointed out that none of these is in the form of a message from a deity. His second period has four sūras (XCVI, CXIII, LXXIV, CXI) treating "the opening of Muhammad's ministry", presumably ca. 610. The other dividing points are the beginning of Muhammad's public ministry (ca. 613), the Abyssinian emigration (ca. 615), the Year of Sores (ca. 619), and the Hījra. Muir is not doubt certain in dating some sūras before XCVI and LXXIV, but I and others he lists are almost certainly later. In general, the criticisms stated above of the four-period system apply also to Muir's. In 1902 H. Hirschfeld, in his New researches (see Bibli.), proposed a chronological arrangement of the Kur'ān based on the character or function of individual passages. After the "first proclamation", XCVI, 1-3, Hirschfeld's arrangement also has six periods, in which the revelations are classified as "confirmatory" (LXXCVII, LXXXI, 1-33, CXII, LXIX, 40-52, etc.), "declaratory" (LXXI, LXXXI, LXXIV, etc.), "narrative" (LXXXVIII, 34-52, LI, LXVI, 3-220, Lv, etc.), "descriptive" (LXXIX, 37, 45, 53), etc., "legislative" (VI, 7-23, CXII, 9-11, XV, 65), etc., and Medinan, grouped together but discussed separately as they essay to the battle of Badr, political speeches, revelations on Muhammad's domestic affairs, and preparations for the Pilgrimage to Mecca. This system has a number of obvious flaws, but Hirschfeld's work was valuable for its preliminary analysis of Kur'ānī literary types and its recognition of the fact that in dating parts of the Kur'ān we must deal with individual pericopes rather than entire sūras.

This insight became a guiding principle in the most elaborate attempt so far to identify and date the original units of revelation, Richard Bell's The Qur'ān, translated, with a critical re-arrangement of the suras, 2 vols. (1937-9). Over a decade earlier he became convinced that Nöldeke's dating was inadequate (tibid., 689 f.). Bell's verse by verse analysis of the entire Kur'ān led him to conclude that the sūras are far more complex than is assumed by the traditional Muslim and European dating, that the revelations underwent considerable revision, including expansion, replacement of older passages with new material, changes in the rhyme, etc., that this revision involved written documents and was done during Muhammad's lifetime under his supervision, and that the material for most of the sūras was compiled, but not put into its final form, under Muhammad's supervision. Bell did not present a rigid dating system, but concluded "provocatively" (vi.f.) that the composition of the Kur'ān fell into three main periods: an early one from which only some sign-passages and exhortations to worship God survive; a Kur'ān period", covering the latter part of the Meccan period and the first two or three...
corporated into the liturgical and in Medina
earliest recitation) and dates of later editing and
CIX and CXI he gave no opinion. He regarded as
1 seem to be Medinan; I. XCIV, C
other short suras, some of which he regarded as
XCV-XCVI, XCIX. CIV and CXIII, all of which are
suras as being probably completely Meccan; L, LIU,
"Meccan, with Medinan additions", and very often "Meccan" and "late Meccan or early Medimian". A
survey of Bell's provisional dating of the individual passages shows that he regarded fewer than twenty
suras as being probably completely Meccan: L, LII,
LV, LXI, LXXIV, LXXXI, LXXXII, LXXXVI, LXXXVIII-LXXIX, LCI-XCI, LXV, LXCVI, LXCVI, LXCV,
CIV and CXI, all of which are said to have material from different dates. Of the other short
suras, some of which he regarded as possible unities, Bell said CII, CX, CXII and CXV-CVIII
seem to be Medimian; I, XCV, CII and CVI-CVIII
could be either Meccan or Medinan; and on C, CI,
CIX and CXI he gave no opinion. He regarded as
completely Medinan the same 24 suras said to be
Medinan by Nnldesek, but saw them as having significant amounts of material from several different
dates, thus making it impossible to put the suras as
wholes in chronological order. This leaves exactly half of the suras (57) which Bell regarded as having
significant amounts of material from both before and
after the Hijra: 33 said to be mostly Meccan, with
Meccan revisions and additions—VI, VII, XII,
XII, XIV, XV, XVII, XX, XXIII, XXXIV, XXXIV,
XXXV, XXXVI-XXXVII, XXXVIII, XL, XLII, LV,
LVII, LXVIII, LXX-LXXIV, LXXVI-LXXVIII, LXX,
LXXIII, LXXVII, XXIV and XX; and 24 said to be mostly Medinan, with some Meccan
passages, or based on Meccan material—X, XI, XIV,
XVI, XIX, XX, XXII, XXVI, XXVIII, XXX, XXXV,
XXXVII, XL, XLII-XLI, XLIV, XLV, LX, LXXVIII,
LXXIX, LXXX and LXCVII. He thus distinguished between dates of original revelation (or earliest recitation) and dates of later editing and composition during Muhammad's lifetime. The fact
that he indicated breaks in the text and identified older components, e.g. Meccan passages in suras that
were completed in Medina, does not mean he failed to
recognise that some longer suras (e.g. XII, XIX,
XXVI) and many shorter ones (e.g. LXXVII, CXI) are
carefully composed, unified works in their final
form.
Bell's analysis of the Kur'an has often been mis-
understood or ignored by later writers, partly because
the extensive notes to his translation, giving the
arguments for his reconstructions, were never
published. Nor has any thorough study and critique
published. Nor has any thorough study and critique
of Bell's work yet appeared. The review articles by
J. E. Merill and W. M. Watt (see Bibli.) and Watt's
remarks in Bell-Watt (113 f., 101-7, 137-44, etc.) are
useful introductions. Watt has expressed reservations
about Bell's hypothesis on the disjointedness of the
Kur'an. Bell suggested that when some passages were
being revised Muhammad instructed the scribes to
write the new versions on the backs of the sheets on
which the verses being replaced were written, and
that the later editors, not wanting to discard
any of the revelation, inserted the old verses just
before or after the new ones. E.g. II, 185, was written
on the back of 184, 186 (on fasting), II, 196, on
the back of 197-9 (on the Pilgrimage), XXI, 2-9, on
the back of 10-18 (on formation), and XVIII, 9-9
(a new introduction to the story of the Seven
Sleepers), on the back of 10-11, which was replaced
by a longer version of the story in 51-11. In other
cases the scribes simply used the backs of sheets on
which older, discarded material was written, e.g. IV,
11-14, on the back of 12-10, IV, 19-21, on the back of
15-18, and VII, 3-5, on the back of 5. 9. This hypothe-
sis provides a feasible explanation and solution to
textual problems in some cases, but not in others.
It now seems that Bell was sometimes too quick to
designate a passage as "discarded" material or a "scrap" that got into the Kur'an by mistake; and he
seems to have failed to recognise some literary forms, e.g. the wa-ma'adrika formula (see 7.4 below).
But it must be remembered that Bell was a pioneer
in this field, and that he attempted to locate all possible breaks in the text, acknowledging that many
of his suggestions were uncertain or tentative and
that some would be proved untenable by later
research. Or the whole, his datations and reconstructions have been supported by later studies, e.g. K. Wagten-
donk, Fasting in the Koran (Leiden 1968), 48-71; on
II, 183 ff.: see also Welch, Ali's and other supernatural beings (see Bibli.) on the emergence of the doctrine
of jinn, and idem, in W. VI. Watt and A. T. Welch,
Der Islam, 1 (Stuttgart 1980), 264-71, 300-3, on
the origin and early development of the salat and zakat.
Careful studies of a number of passages and topics
are needed before a final judgment of Bell's work can
be made.
There is room for disagreement on specifics, but
there can now be little doubt that Schwall was
correct in concluding that passages from different
dates were put together to form the present suras,
that written documents were involved, and that this
revision was done under Muhammad's supervision
(Gesch. des Qor., 1, 45 ff., 11, 1 f., 77, etc.). Furthermore,
Bell seems to have been right in his main conclusions,
which went beyond Schwall's position. Most suras
have significant amounts of material from different
dates, and nearly all of the longer suras with Meccan
material were revised or expanded in Medina, so
that we can no longer speak of "middle Meccan" or
"late Meccan" suras. We can speak with more
confidence of "early Meccan" suras, although we
cannot be certain as to which ones belong to this
group. And we can speak of "Medinan suras", i.e.
those that are made up completely of Medinan
material (of various dates). It is not possible to put
the suras as wholes in chronological order, or to
determine the exact order of the passages on any
major teaching—the creation, God and other super-
natural beings, the nature and destiny of man, etc.
This does not mean that nothing can be said on the
development of ideas in the Kur'an. On the major
teachings and other subjects on which the Kur'an has
much to say, it is possible to reconstruct the sequence of the main stages of development, and sometimes
the approximate dates of these stages. It now seems
certain that the most important single turning point
in the development of the Muslim scripture was not
the Hijra, dividing the Kur'an into "Meccan" and
"Medinan" suras, but a series of events surrounding
the battle of Badr and Muhammad's so-called "break
with the Jews". Late Meccan and very early Medinan
material is difficult to distinguish; there are many
passages that could just as well date from Muham-

Medina, during which Muhammad's task was to
produce a kur'an, a collection of lessons for liturgical
use; and a "Book period", beginning about the end
of the year 2 A.H., during which Muhammad began to
produce a written scripture. According, to Bell, the
process by which the Kur'an is not to be divided into these three
periods, since certain groups of passages were in-
cluded into the liturgical books, and in Medina
this collection of oral materials was revised to form
part of the Book. Bell attempted to date some
Medinan passages fairly precisely—"early Medinan,
revised after Badr", "shortly after Ubud", "year
VII", etc. But for most passages he gave very general
and often tentative suggestions, especially for the
Meccan material, e.g. "early, revised in Mecca (?),
"Meccan, with Medinan additions", and very often "Meccan" and "late Meccan or early Medinan". A
in the Kur'anic usage of 'Arabi and its cognate forms to support the suggestion of J. Fiek ('Arabia, Berlin 1950, 2-5) that 'Arabi in the expression "clear Arabic speech" refers to the 'arabiyya, the literary language of the Bedouins.

b. Foreign vocabulary. The earliest assertions recognized and discussed are by a large number of non-Arabic words in the Kur'ân, and Tradition credits Ibn 'Abbâs and his school with having a special interest in seeking their origin and meaning. Then when the dogma of the eternity and perfection of the Kur'ân was elaborated (see 8. below) some jurists and theologians, such as al-Shâhi (d. 265/880), came to believe that it was in pure Arabic and thus denied that any of its vocabulary was borrowed from other languages. But prominent philologists such as Abu Ubâydis (d. 224/838) continued to argue that the Kur'ân contained foreign words. Al-Tabarî (d. 311/923) and others, attempting to reconcile the two views, asserted that the alleged foreign elements in the Kur'ân were simply words that Arabic and other languages had in common. 'Abî al-Râbi who rejects the "clear Arabic" poetry of Muhammad's day. It was assumed that the Kur'ân and the classical poets retained the pure language of the Bedouins (al-'arabiyya). Support for this view, more a theological doctrine than a linguistic theory, was found in the Kur'ân in the statements that the revelation was in "clear Arabic speech" (lîsân 'arabiyya) (XVI, 103, XVÎ, 193; cf. XLI, 44), which came to be interpreted as "pure Arabic." This Kur'ânic dialect theory was attacked by Karl Völlers in a series of well-documented articles beginning in 1894 and culminating in his classic Volksprache und Schriftsprache im alten Arabien (1906), in which he argues that the Kur'ân was first recited by Muhammad in a colloquial Arabic without case-endings (pâbâ) (thus distinguishing it from the classical Arabic of the poets), that the language of the Kur'ân as we now have it was a fabrication of later philologists who attempted to put the revelations into Classical Arabic, and that the original language of the Kur'ân survives only in a few archiographic peculiarities (e.g. the omission of the aâlîf in some words) and in the non-canonical readings. Völlers' theory gave rise to much discussion of the language of the Kur'ân, but it found little support outside of Germany, except for several articles by Paul Kahle (e.g. The Arabic readers of the Koran, in JNES, viii [1949], 63-72), who presented evidence to show that at least during the 2nd century the Kur'ân was indeed recited without pâbâ, a characteristic of colloquial Arabic. Kahle's arguments also failed to convince others, and the earlier refutations of Völlers' thesis given in a lengthy review by K. Heyder (Göttinger gelehrte Anzeigen, clxxi [1959], 45-56) and by Nöldeke (Neue Beiträge, 1-5) have been generally accepted (on the views of Völlers, Kahle, Geyer, and Nöldeke, see Zwettler, Oral tradition, 112-30). Nöldeke (loc. cit.) and Schwally (Gesch. des Qor., ii, 56) argued that the language of the Kur'ân was not the spoken language of any tribe, but was a somewhat artificial Hochsprache that was understood throughout the Hijâz. On the other side, it has come to be generally agreed that the Classical Arabic of the poetry of Muhammad's time was not the spoken language of the poets or the dialect of any one tribe, but a literary language that was understood by all the tribes. This language has come to be called the "poetic koine" or the 'arabiyya. In the late 1490s three European writers, H. Fieschi, R. Blachère, and C. Rabin, reached the conclusion, apparently independently, that the language of the Kur'ân, far from being the spoken dialect of the Kur'ân or a Hochsprache of the entire Hijâz, was simply the "poetic koine" of the Classical Arabic poetry, with some adaptation to the Meechan speech, e.g. the omission of the hamza for references and discussion, see C. Rabin, The beginnings of Classical Arabic, in Stud. Ist., iv [1953], 19-37, and Zwettler, Oral tradition, 130-72). This view has been accepted by most Western Arabists. One notable exception is J. Wansbrough (Qur'anic studies, 83-118) who rejects the koine or 'arabiyya concept, without offering any clear alternative. He asserts that very little can be known about the text of the Kur'ân or about Classical Arabic prior to the "literary stabilization" of both in the 3rd/4th century. There is nothing
except for the last verse with -ad, the four verses of CXII end in -at, except for the last verse with -at, and the 55 verses of LXX, 15, 19, 24, 28, 34, 37, 40, 45, 47 and 49. In both of these cases the refrain has little connection with the meaning of the other verses, and it is difficult to tell whether the latter should be read as an introduction (see Bell, Trans., 627 f.) or a conclusion (e.g., Arberry trans., ii, 378 f.) to the ten segments ranging in length from two to five verses. Each of the seven punishment-stories in XXVI ends with the two verses, “Lo, in that is a sign, but most of them have not believed” and “But, lo, thy Lord is the Sublime, the Compassionate,” which appear to be separate refrains, the latter being later. Four punishment-stories in LIV end with “We have made the Kur’an as the Reminder (tad), but is there anyone who takes heed?” and the first refrain seems to have appeared as an earlier refrain, “Of what nature, then, was My punishment and My warning?” Similar refrains occur frequently in the Kur’an, but usually not as refrains. On internal rhymes and the possibility that there are strophes within the Kur’an, see Bell-Watt, 70 f.

d. Schematic form and multiple accounts. The last two examples of refrains occur in stories that also share another characteristic of Kur’ānic style, schematic form, i.e. the repetition of certain verses, or formulas that are woven into the narrative in a regular pattern in different stories presented together as a group. A good example of one type of schematic form occurs in XXVI, where five punishment-stories have the same five-verse introduction, as well as the refrains mentioned above and other repeated verses. The introduction of the first story reads: “The people of Noah denied the envoys. / When their brother Noah said to them: ‘Will you not show piety? / Lo, I am to you a faithful messenger. / So show piety towards God, and obey me. / I ask you for no reward for it; my reward rests only upon the Lord of the worlds’. The only difference in the five-verse introductions of the other four accounts is the name of the people (the tribes of Ad, Thamūd, etc.) and the prophet (Hūd, Śālih, Lot, etc.). Another type of schematic form occurs in the Sura VII versions of the same five-punishment-stories, where about two-thirds of the Noah story is repeated in the Hūd story (a smaller percentage is repeated in the others), but the repeated parts are interspersed with statements, phrases, and individual words that are distinctive to each story. To show the first stage in the development of this group of schematic accounts, the Noah story is given here with the elements that also occur in the Hūd story put in italics: “We sent Noah to his people, and he said ‘O my people, serve God. There is no god for you other than He. Verily I fear for you the punishment of a mighty day’. Said the nobility of his people: ‘Verily we think you are in manifest error’. He said ‘O my people, there is no error in me; I am but a messenger from the Lord of the worlds. I deliver to you the messages of my Lord, and give you sincere advice; I have knowledge from

etc.; “God sees the things you do”, in ii, 328, 332, 365, etc.; “God has knowledge of everything”, in 29, 231, 282; and “God is powerful over everything”, in 20, 105, 250 and 284, etc. A special type of rhyme-formula that occurs in a number of suras is the refrain, i.e. an entire verse or more repeated verbatim at more or less regular intervals. The most striking example is the rhetorical question, “Then: which of the benefits of your Lord will you two deny?” which occurs as LIV, 13, 16, 18 and 27 and then almost every other verse to the end of the sura in verse 78. A similar refrain, “Woe is that day to those who deny it!” occurs in LXXVII, 15, 19, 24, 25, 34, 37, 40, 45, 47 and 49. In both of these cases the refrain has little connection with the meaning of the other verses, and it is difficult to tell whether the latter should be read as an introduction (see Bell, Trans., 627 f.) to the ten segments ranging in length from two to five verses. Each of the seven punishment-stories in XXVI ends with the two verses, “Lo, in that is a sign, but most of them have not believed” and “But, lo, thy Lord is the Sublime, the Compassionate,” which appear to be separate refrains, the latter being later. Four punishment-stories in LIV end with “We have made the Kur’an as the Reminder (tad), but is there anyone who takes heed?” and the first refrain seems to have appeared as an earlier refrain, “Of what nature, then, was My punishment and My warning?” Similar refrains occur frequently in the Kur’an, but usually not as refrains. On internal rhymes and the possibility that there are strophes within the Kur’an, see Bell-Watt, 70 f.

c. Rhymes and refrains. A distinctive feature of Kur’ānic style, closely related to its oral nature and liturgical function, is that it is all rhymed or assonanconcerted. There is no attempt to produce the strict rhyme of Arabic poetry (see Zwetttler, Oral tradition, 103 f.). Some short sāras, and segments of longer sāras, do have a fairly consistent rhyme if the short inflectional vowels at the ends of the verses are disregarded. For instance, the three verses of CXV end in -at, the four verses of CXII end in -ad, CXI has -a except for the last verse with -ad, CXI has -a except for the last verse with -at, and the 55 verses of LIV end in r (or r) preceded by a short vowel. But in most sāras there is a loose rhyme or assonance formed by common grammatical endings and word forms. By far the most frequent occurrence in the Kur’an is -an (considered interchangeable), which is formed by the plural endings of nouns and verbs. And even this form, which occurs frequently in Arabic, is often varied with words ending with one of these vowels but a different consonant. The feminine singular endings -at and -ah occur in CIX, XLVII, XCI and XCIX; the dual ending -an occurs in LV; the accusative ending -an occurs in XVII, LXII, and C; and the form -al, a long a followed by a variable consonant, occurs in parts of longer sāras such as II, III, XIV, XXXVIII and XL. On the various rhyme forms in the Kur’an (technically known as jū'āl, jū'āl at, jū'āl at, jū'āl at, etc.), see Thāt, ii, 68-105, and F. R. Müller, Untersuchungen zur Keimprosa im Koran (Bonn 1969), who presents a systematic compilation of the evidence that peculiarities in Kur’ānic style and vocabulary were brought about by the imposition of rhyme.

The whole of the Kur’an is often said to be in sajdi, the rhythmic, rhymed utterance of the kāthā (sourcethayer) [q.v.], which, like the Kur’an, does not have a fixed metre or proper rhyme and is thus distinct from both poetry and prose. But those who have insisted that the Kur’an is not in sajdi seem on the whole to be on a misconceived ground (see Grass, das Qur’ān, i, 156 f.; Blachere, Litt., arz 22). The Kur’an is formed by divine epithets, aphorisms, and other words that are integral to a context and its meaning, and in the Kur’an, see Bell-Watt, 70 f. The last two examples of refrains occur in stories that also share another characteristic of Kur’ānic style, schematic form, i.e. the repetition of certain verses, or formulas that are woven into the narrative in a regular pattern in different stories presented together as a group. A good example of one type of schematic form occurs in XXVI, where five punishment-stories have the same five-verse introduction, as well as the refrains mentioned above and other repeated verses. The introduction of the first story reads: “The people of Noah denied the envoys. / When their brother Noah said to them: ‘Will you not show piety? / Lo, I am to you a faithful messenger. / So show piety towards God, and obey me. / I ask you for no reward for it; my reward rests only upon the Lord of the worlds’. The only difference in the five-verse introductions of the other four accounts is the name of the people (the tribes of Ad, Thamūd, etc.) and the prophet (Hūd, Śālih, Lot, etc.). Another type of schematic form occurs in the Sura VII versions of the same five punishment-stories, where about two-thirds of the Noah story is repeated in the Hūd story (a smaller percentage is repeated in the others), but the repeated parts are interspersed with statements, phrases, and individual words that are distinctive to each story. To show the first stage in the development of this group of schematic accounts, the Noah story is given here with the elements that also occur in the Hūd story put in italics: “We sent Noah to his people, and he said ‘O my people, serve God. There is no god for you other than He. Verily I fear for you the punishment of a mighty day’. Said the nobility of his people: ‘Verily we think you are in manifest error’. He said ‘O my people, there is no error in me; I am but a messenger from the Lord of the worlds. I deliver to you the messages of my Lord, and give you sincere advice; I have knowledge from

in Kopf, Studies in Arabic and Hebrew lexicography, Jerusalem 1970) and other works cited by him.
God which you have not. Does it astonish you that a reminder from your Lord should come to you upon a man from among yourselves, in order that he may warn you and that you may show piety? Perhaps mercy will be shown you. But they denied him; so We rescued him and those with him in the ark, and We drowned those who denied Our signs. Verily they were a blind people." Part of the Noah story and other parts of the Hûd story are then repeated in the Sâlih, Lot, and Shu’âyb stories. Other groups of parallel accounts in the Qur’ân have one of these two types of schematic form. The extent of the repetition in these parallel accounts has important implications for understanding their nature and purpose, e.g. they are not intended as historical accounts.

These groups of punishment-stories also illustrate another feature of the Qur’ân: the complex development of its multiple accounts and their changing relationships with other accounts. Many stories are repeated in different versions in two or more sûras, and these multiple accounts of the same story differ not only in length and details, but also in their purpose and relationship to other stories. For instance, different versions of the punishment-stories or brief references to them occur in 16 different sûras. Longer versions of the Noah, Hûd, Sâlih, and Lot stories occur in LIV, XXVI, VII and XI; the first three also occur in XXV, LI and LIII; they are referred to in IX, XIV and XXIX; and they occur separately in still other sûras. There are two different Lot punishment-stories: the first occurs in LIV, XXVI and VII (mentioned above) and also in XXVII and XXXVII; the second, involving the visit of celestial messengers, occurs in XI and XV. Then in XXIX both appear together separated by a brief version of an Abraham story, which also occurs in earlier, longer versions in EI, XV and XI. On the punishment-stories, see 7. below, Bell-Watt, 127-35, and bibliography given there. A similar development can be seen in the creation stories: the story of (the fallen angel)? Iblîs occurs as a complete, independent story in XV and XXXVIII and is repeated in shorter versions in XVII and XVIII; then it occurs with an account of the temptation and fall of Adam in VII, XX, and finally I. In the last two the Iblîs story is reduced to a single verse, and in I these two story segments are preceded by the only Qur’ânic version of a third creation story, about God consulting the angels before creating man. A third example, of a somewhat different type, involves the two parallel accounts of the miraculous births and childhood of John (the Baptist) and Jesus in XIX, 2-34 and III, 46-51. In XIX the stories of John and Jesus are the first two in a series of separate accounts; in III they are woven together as part of a longer account that begins with the birth and early life of Mary. Among the significant patterns seen in the development of these and other multiple accounts in the Qur’ân is that the earlier groups of stories tend to be ahistorical in their arrangement, e.g. in XXVI we have Moses, Abraham, Noah, Hûd, Sâlih, Lot, and then Shu’âyb (who came to be identified with Jethro, the father-in-law of Moses), while the later versions are put in "historical order," e.g. in XI we have Noah, Hûd, Sâlih, Abraham, Lot, Shu’âyb, and Moses. The ahistorical groups are typical of what Bell calls the Qur’ân period, while the "historical" ones reflect the Bûk period, where we see stories combined to form longer multi-episodic narratives that constitute the beginning of a Muslim sacred history going back to the creation.

7. Literary forms and Major Themes

The nature and arrangement of the Qur’ân make it difficult to classify its literary forms or systematise its main themes. Any attempt to classify the parts of the Qur’ân according to the standard literary types—myth, legend, saga, short story, parable, etc.—very soon founders. A few examples can be given for each of these types, but altogether they comprise a very small percentage of the text. Also, they have been adapted so much to conform to the style and message of the Qur’ân that they have little significance as distinct types. Bell has argued that since the Qur’ân disclaims that Muhammad was a poet and since his function as a prophet was to convey messages from God to his contemporaries, we should seek "didactic rather than poetic or artistic forms" (Bell-Watt, 75). This is true, except that only parts of the Qur’ân can be described as "didactic" in purpose. Other parts are hortatory, rhetorical, legislative, etc., and some parts addressed to Muhammad and his family can only be described as personal (Bell questioned whether some of these, e.g. CXI and parts of LXVI, were "intended for publication"). Thus it seems best to discuss the literary forms of the Qur’ân in terms of its own distinctive types of material. What follows is not a complete, systematic classification, but brief descriptions of the main literary forms found in the Qur’ân, which at the same time provide summaries of some of its major themes.

a. Oaths and related forms. An interesting variety of oaths and related forms occur in the shorter sûras, usually at the beginning. The assumption that most (but certainly not all) of these oaths are among the earliest parts of the Qur’ân seems to be justified. Some oaths that are cryptic and difficult to interpret or translate are generally given in earlier, longer versions in I, XV and XI. On the punishment-stories, see 7. below, Bell-Watt, 127-35, and bibliography given there. A similar development can be seen in the creation stories: the story of (the fallen angel)? Iblîs occurs as a complete, independent story in XV and XXXVIII and is repeated in shorter versions in XVII and XVIII; then it occurs with an account of the temptation and fall of Adam in VII, XX, and finally I. In the last two the Iblîs story is reduced to a single verse, and in I these two story segments are preceded by the only Qur’ânic version of a third creation story, about God consulting the angels before creating man. A third example, of a somewhat different type, involves the two parallel accounts of the miraculous births and childhood of John (the Baptist) and Jesus in XIX, 2-34 and III, 46-51. In XIX the stories of John and Jesus are the first two in a series of separate accounts; in III they are woven together as part of a longer account that begins with the birth and early life of Mary. Among the significant patterns seen in the development of these and other multiple accounts in the Qur’ân is that the earlier groups of stories tend to be ahistorical in their arrangement, e.g. in XXVI we have Moses, Abraham, Noah, Hûd, Sâlih, Lot, and then Shu’âyb (who came to be identified with Jethro, the father-in-law of Moses), while the later versions are put in "historical order," e.g. in XI we have Noah, Hûd, Sâlih, Abraham, Lot, Shu’âyb, and Moses. The ahistorical groups are typical of what Bell calls the Qur’ân period, while the "historical" ones reflect the Bûk period, where we see stories combined to form longer multi-episodic narratives that constitute the beginning of a Muslim sacred history going back to the creation.

b. Oaths and related forms. An interesting variety of oaths and related forms occur in the shorter sûras, usually at the beginning. The assumption that most (but certainly not all) of these oaths are among the earliest parts of the Qur’ân seems to be justified. Some oaths that are cryptic and difficult to interpret or translate are generally given in earlier, longer versions in I, XV and XI. On the punishment-stories, see 7. below, Bell-Watt, 127-35, and bibliography given there. A similar development can be seen in the creation stories: the story of (the fallen angel)? Iblîs occurs as a complete, independent story in XV and XXXVIII and is repeated in shorter versions in XVII and XVIII; then it occurs with an account of the temptation and fall of Adam in VII, XX, and finally I. In the last two the Iblîs story is reduced to a single verse, and in I these two story segments are preceded by the only Qur’ânic version of a third creation story, about God consulting the angels before creating man. A third example, of a somewhat different type, involves the two parallel accounts of the miraculous births and childhood of John (the Baptist) and Jesus in XIX, 2-34 and III, 46-51. In XIX the stories of John and Jesus are the first two in a series of separate accounts; in III they are woven together as part of a longer account that begins with the birth and early life of Mary. Among the significant patterns seen in the development of these and other multiple accounts in the Qur’ân is that the earlier groups of stories tend to be ahistorical in their arrangement, e.g. in XXVI we have Moses, Abraham, Noah, Hûd, Sâlih, Lot, and then Shu’âyb (who came to be identified with Jethro, the father-in-law of Moses), while the later versions are put in "historical order," e.g. in XI we have Noah, Hûd, Sâlih, Abraham, Lot, Shu’âyb, and Moses. The ahistorical groups are typical of what Bell calls the Qur’ân period, while the "historical" ones reflect the Bûk period, where we see stories combined to form longer multi-episodic narratives that constitute the beginning of a Muslim sacred history going back to the creation.
of the Qur'an are also of this type, with wa, wa, wa, wa, wa, wa, wa, fe, hid, wa-had (the wa before the asseverative particles in these examples is the conjunction "and"). Other types of oaths also occur in the Qur'an, e.g. the stronger la shahada bi—"I swear by"—oath, at the beginning of LXXV. "I swear by the Day of Resurreciion", also in LXXV, 2, XC, 1, and within other asras.

Related to the Qur'anic oaths are several other formulaic usages that are typical of soothsayer or prophetic utterances. One is the idgh, "When", passage, which has the same force, if not the same meaning, as an oath. A good example occurs at the beginning of LXXIII: "When the heaven shall be rent, / When the stars shall be scattered, / When the seas shall be made to boil up, / When the graves shall be ransacked, / A soul shall know what it has sent forward, and what kept back" (Bell). The longest "when" passage is LXXVI, 1-14, culminating in "A soul shall know what it has presented". See also LVI, r ff., LXXIV, r ff., XCIX, etc. Other passages, especially at the beginning of some of the other shorter sign-passages, such as "Have you seen him who denies the Judgment?" (CIV, r ff.; cf. XCIV, CV) or a modified type of curse or threat, such as "Woe to every malingerer, scoff'er, / Who gathers wealth and counts it over ..." (CIV, r ff.; cf. LXXIII, r ff., LXXIV, 4 ff., etc. and a different type in CXI). This last example of a "Woe" (wayl) passage continues with another distinctive Qur'anic form, consisting of at least three verses the second of which is the rhetorical question wa-nah adhara wa—"Is it?"; "And what has let you know what is?"; see CXVII, r ff.; Cf. 1 ff., CIV, 4 ff., and LXXXVI, 1 ff., which begins with an oath.

The fact that the Qur'an itself affirms that Muhammad was accused of being a soothsayer (kha matière) suggests that his contemporaries saw a similarity between what he recited and what they heard from the soothsayers. Bell identified five passages in the Qur'an as having "kha matière"-form: XXXVII, r-4, L, r-6, and C, r-6, mentioned above, and also LXXVII, r-7, and LXXIX, 1-14. But most of the Qur'anic oaths and related forms are more in the nature of prophetic than soothsayer utterances.

b. Say-passages. Meccan and early Medinan parts of the Qur'an often speak of certain phenomena of nature and human life as "signs" (ayyâl) of God's omnipotence and benevolence towards man, calling for gratitude and worship of Him alone. Most often mentioned are the creation of the heavens and the earth, the creation or propagation of man, the shining of the sun, moon, and stars, the alteration of day and night, the sending of the rain, and the permanence and stability of nature. Thunder, lightning, fire, and other natural phenomena are also mentioned, as are human understanding and relationships, the variety of languages and colours, hearing, sight, etc. The "sign-passages" treating these themes have no distinctive form, but are recognised by their content. An example of an early sign-passage is seen in LXXVII, 14-32: "Let man look at his food; / Lo, We have poured out water in showers, / Then have broken up the earth in cracks, / And have caused to sprout up in it grain, / And grapes and green shoots, / And olives and palms, / And orchards luxuriant, / And fruits and herbage —— / A provision for you and for your flocks" (Bell). See also XXXII, 17-24, 76-80, LXXVIII, 6-16. An example of a late, more structured sign-passage is XIX, 20-30, which begins: "And of His signs is that He created you of dust; then, lo, you are mortals, all scattered abroad. / And of His signs is that He created for you of your own species spouses that you may dwell with them, and has set love and mercy between you. Surely in that are signs (ayyâl) for those who consider. / And of His signs is the creation of the heavens and the earth and the variety of the species spouses that you may dwell with them, and all manner of fruit. / Surelv in that is a sign (âya) for those who reflect. / And a similar form closes the next two verses. These last two examples are typical of most sign-passages in consisting of separate sign-verses grouped together in no particular order, but they are somewhat unusual in having set introductory signs and concluding formulas (cf. VI, 97-9, XIII, 2-4, XVI, 55, 56, 69, 79, XXXVI, 33, 37, XL, 37, 39, XLV, 3-3). The singular, âya, is used occasionally in sign-passages, either with one verse treating one sign (as in XVI, 21, quoted above; also XVI, 23, 55, 67, etc.), or with two or more verses treating a single sign (XVI, 20 f., 68 f., etc.). The plural, ayyâl, occurs much more often, usually with two or more signs mentioned in a single verse (as in XXX, 20-2, quoted above; also X, 6, 67, XIII, 3 f., XXX, 23 f., etc.). This analysis provides no clue as to how âya came to mean "verse". In many sign-passages that are otherwise like those cited above the term "sign" does not occur (e.g. VI, 241 f., XIII, 12-15, XVI, 3-8, 50 f., XXX, 48-52, XXXII, 4-9). On the other hand, the term "sign" occurs many times in contexts that are not "sign-passages". See r b above and Bell-Watt, 121-7.

c. Say-passages. Scattered throughout the Qur'an are a number of passages in which the main element is a short statement or question introduced by the imperative verb, "Say", usually the singular, bal, but occasionally the plural, balâh. Most say-passages, i.e. the immediate contexts in which the say-statements occur, have two main parts: (1) a statement or question indicating the setting, and (2) the say-statement, which is sometimes followed by a comment or two on 1 or 2. The setting statement occasionally involves Muhammad's followers, but usually is a report of something said or done by the unbelievers. One frequently occurring form is "They say... Say...", e.g. X, 20: "They say: 'If only a sign had been sent down to him from his Lord'. Say: 'The unseen belongs to God'" (see also II, 60, 91, 93, 111, 135, etc.). Sometimes the setting statement has two or more parts, and the say-statement either has two or more parts or is followed by one or more comments. A good example of this more complex form is seen in X, 18: "They serve apart from God what neither injures them nor profits them, and they say: 'These are our intercessors with God'. Say: 'Will you inform God of what He knows not either in the heavens or in the earth? Glory be to Him, and exalted be He far from what they associate with Him'." Here the setting statement has two parts, involving something the unbelievers do and something they say; and the say-statement, a rhetorical question, is followed by a praise formula (cf. II, 26-30). In X, 68 f. a praise formula, "Glory be to Him", and
a comment on the setting statement come between the "They say" and "Say" elements. Another common form is "They will ask you [Muhammad] . . ."; this will be classified with narratives about the Prophet. Sometimes one *bih* introduces a question, and a second one gives an answer, e.g. VI, 122: "Say: 'To whom belongs what is in the heavens and the earth?'" (also VI, 69 f., 71, etc.). Some say-statements are formulas that can be classified as maxims or slogans, e.g. "To God belongs the East and the West" (II, 122), "The guidance of God is the guidance" (II, 126, III, 75, VI, 71), "God guides to the truth" (X, 35), "Those who invent falsehood about God will not prosper" (X, 69), and "Intercession belongs to God alone" (XXXIX, 44), and some of these (e.g. the first two mentioned here) occur elsewhere in the Kur'an. On maxims and slogans, see Bell-Watt, 75-7. Others are creedal statements, e.g. II, 136: "Say (bahi): 'We believe in God and what has been revealed to us and what was revealed to Abraham . . . and what Moses and Jesus received . . . and to Him we have surrendered'" (cf. XXIX, 46). Still others are prayers, e.g. III, 261: "Say (bih): 'O God, owner of sovereignty, Thou givest sovereignty to whom Thou wilt, and seizest sovereignty from whom Thou wilt . . . Thou bringest forth the living from the dead, and the dead from the living; Thou providest for whom Thou wilt without reckoning'." This last example is unlike the say-passages described above, since it is not preceded by a setting statement. Thus it is best classified with a second group of say-statements, some of which are In the first person singular and seem to be spoken by Muhammad, e.g. a group of four in LXXII, 30-8, beginning: "Say: 'I call only upon my Lord, and I do not associate with Him anyone! / Say: 'Surely I possess no power over you, either for hurt or for rectitude'" (Arberry); see also XXXIV, 36, 39, 40-50, CIX, etc. Other isolated say-statements occur in LXXII, 23 f., 28-30, CXII-XIV, etc., the first of these being two short say-statements in the form of the sign-passages. Say-passages and separate say-statements are often grouped together, e.g. VI, 11-10, 36-8, 63-6, 107-4, and the groups mentioned above.

d. Narratives. If the term "narrative" is taken in the broader sense to include any story or description of actual or fictional events, then many parts of the Kur'an can be classified as narratives. There are virtually no historical narrative, even though as mentioned above (see 5.4) there are many references and allusions to historical events. Most Kur'anic narratives are versions of traditional stories found in other Near Eastern cultures, which have been adapted to conform to the world-view and teachings of the Kur'an. Several versions of ancient Near Eastern myths and many mythic motifs occur. The creation of the world in six days and the Throne from which the universe is controlled are mentioned several times, as in VII, 54: "Verify your Lord is God, who created the heavens and the earth in six days, then seated Himself upon the Throne causing the night to cover the day" and the well-known "Throne verse", II, 255: "God, there is no god but He; the Living, the Eternal. Slumber overtakes Him not and sleep. His Throne extends over the heavens and the earth, and He is never weary of preserving them" (cf. X, 3, XXV, 59, XXXII, 4, and on the Throne, IX, 129, XIII, 3, XX, 5, XXXII, 22, etc.). But there is no six-day creation story, and no account of what was created on each day (a partial explanation is given in XLI, 9-12; see Faret, Kommentar, 433). The seven heavens are mentioned (XVII, 44, XXIII, 86, etc.), as is the Trumpet that signals the Last Day (VI, 73, XVIII, 99, XX, 102, etc.), but there are no stories or complete descriptions of the Inferno or Paradise, the seven layers of Hell, or the angels. There are numerous references to the fall of Iblis (Lucifer?), the fall of man, and the naming of the animals (not so specified) do occur (II, 30-9, VII, 11-25, XX, 28-44, XVII, 61-5, XX, 114-26, etc.). There are several versions of the ancient Near Eastern shooting-star myth (XV, 16-18, XXXVII, 5-10, etc.), and several accounts of Noah and the Flood (XII, 46-48, XXV, 37, XXIX, 14 f., LIV, 9-17), which however is not a world-wide deluge.

The prophet stories, some of which are also punishment-stories, make up the largest category of Kur'anic narratives. The longest single story, which could be classified as a "short story", is that of Joseph, taking up nearly all 111 verses of Sura XII. It follows the Biblical account more closely than do most Kur'anic stories, and it shows evidence of revision, including what appear to be two introductions. There are two parallel accounts of the births of John (the Baptist) and Jesus, III, 33-51 and XIX, 1-36, which have some significant differences in details, reflecting the development of ideas in the Kur'an. Both accounts have elements from apocryphal Christian writings and oral tradition, e.g. Mary's stay in a convent or temple until the time of the conception of Jesus, and his miracles of speaking from the cradle and forming a bird out of clay that became alive when he breathed on it. Abraham, Moses, and Solomon have major roles in Kur'anic narrative in that there are several different stories about each, as well as several versions of some stories. Also, there are non-Biblical stories about each of these three: Abraham destroying the idols of his people (XXI, 51-72, etc.) and building the Ka'aba in Mecca (II, 129-9, etc.), Moses and his servant on a journey (XVIII, 60-82), and Solomon building the Temple with the jinn and demons (XXXIV, 12-14, XXXVIII, 30-46) and dealing with his army of jinn, men, and birds (XXVII, 13-21). There are also stories about Adam and Noah (mentioned above) and Lot, Ishmael, David, Elijah, Jonah, and Job; and several others are mentioned, including Isaac, Jacob, Elisha, Aaron (in some Moses stories), Saul, Ezra, and Hannan, who however is an associate of the Haranah. The heroes of these stories are generally referred to as "messengers" (rasul, sing. rasul) or "envoys" (musul, sing. musul) or "prophets" (nabiyyin, sing. nabi). The latter seems to occur only in Medina passages and is applied specifically only to Muhammad throughout XXXIII. This no doubt explains why rasul occurs in the credal statements in II, 285 and IY, 136, which require belief in "His angels, His books, and His messengers (rasulun)", while al-nabiyyin occurs in I, 77, which requires belief in "the angels, the Book, and the prophets'.

Among the non-Biblical characters, the most prominent are Hud, Salih, and Shu'ayb (see below), but there are also stories about Luthairn, an Arabian saxe (XIII, 11-29, and Dhu 't-Karnayn, generally regarded as Alexander the Great (XVIII, 83-98), and brief references to Dhu 't-Kifl and Idris (XIX, 56, XXI, 85, XXXVIII, 48), sometimes said to be Elijah and Enoch. The story of the Men of the Cave (XVIII, 92-102),
have been sent down to Muhammad by God, and the "

circuit of them" (II, 158).

"$afa and Marwa are among the manifestations of  

almsgiving (notada), or pious observance" (II, 296);  

"Fulfil the pilgrimage (hadidil) and obey the  

Prayer (hala), Prayers and lend to God a good loan" (LXXII, 20); "verily  

the Prayer has become for the believers a thing  

prescribed for stated times" (IV, 203). On almsgiving  

(zabdi, sadaka): "If you give alms (sadaka) publicly it is well, but if you conceal it and give to  

the poor and the destitute, for the agents employed  

therein, for those whose hearts are to be won over,  

for the ransom of slaves, for the relief of debtors, for  

expenditure in the way of God, and for the follower of  

the way—an ordinance (jari'at) from God" (IX, 60). On fasting (syaam, sawm): "O believers, fasting is prescribed for you (kutiba 'alaykum) as it was for those before you ... during the month of Ramadan ... It is allowable for you on the night of the fast to go in to your wives ... and eat and drink until so  

much of the dawn appears that a white thread may  

be distinguished from a black; then keep the fast  

completely until night. ... If anyone of  

them (the unbelieving town) of His guidance  

... If anyone makes the  

"purity", Passages that are late Meccan or early  

Medinan, but is required only of Muslims only in Medinan passages dating from around  

the time of the battle of Badr or later. The salat is  

mentioned in Meccan or early Medinan passages, but  

is required only of Muhammad, with the imperative  

verb in the singular, at-ta'mil (the Pilgrimage), and the slave with several masters in XXXIX, 29  

(see Bell-Watt, 81). These parables have no standard  

form; some are introduced by the statement addressed  

to Muhammad: "And coin for them a parable"  

(sez 'riq lahum mathalah), e.g. XVIII, 32, 45,  

XXXVI, 13, others by the statement: "God has  

called a parable" (dunaha fikiru mahalah), e.g. XIV,  

24, XVI, 75, 76, 112, XXXIX, 25, LXVI, 16.  

Regard the Kur'an, besides detailed regulations on some aspects of the conduct of the Muslim  

community, and general instructions on others. No complete code of conduct or list of required  

duties is presented; each issue is treated separately, usually in several different places. The main  

religious duties are introduced in stages, and there are inconsistencies in some of the requirements. What  

follows are some examples that illustrate the nature and form of the various Kur'anic regulations, beginning  

with four that later became Pillars of Islam.

On the prayer ritual (salat): "Observe thou [Muhammad] the Prayer (asbati 'l-salat) at the two  

eround of the day and the neighbouring parts of the night" (XI, 114, 125, XVII, 75 f.); "Remember the Prayers  

(paladil), including the middle Prayer, and  

stand [in worship] to God reverently" (II, 238); "so recite what is convenient of it [the Kur'an], and  

observe the Prayer (ulim 'l-salat), and pay the Zakat, and lead to God a good loan" (LXXXII, 20); "verify  

the Prayer has become for the believers a thing prescribed for stated times" (IV, 203). On almsgiving  

(zabdi, sadaka): "If you give alms (sadaka) publicly it is well, but if you conceal it and give to  

the poor and the destitute, for the agents employed  

therein, for those whose hearts are to be won over,  

for the ransom of slaves, for the relief of debtors, for  

expenditure in the way of God, and for the follower of  

the way—an ordinance (jari'at) from God" (IX, 60). On fasting (syaam, sawm): "O believers, fasting is prescribed for you (kutiba 'alaykum) as it was for those before you ... during the month of Ramadan ... It is allowable for you on the night of the fast to go in to your wives ... and eat and drink until so  

much of the dawn appears that a white thread may  

be distinguished from a black; then keep the fast  

completely until night. ... If anyone of  

them (the unbelieving town) of His guidance  

... If anyone makes the  

"purity", Passages that are late Meccan or early  

Medinan, but is required only of Muslims only in Medinan passages dating from around  

the time of the battle of Badr or later. The salat is  

mentioned in Meccan or early Medinan passages, but  

is required only of Muhammad, with the imperative  

verb in the singular, asbati 'l-salat (XI, 114, XVII,  

75, XXIX, 45, XXXI, 31, etc.). The term salati in  

Meccan passages (XVIII, 8, XIX, 13) means  

"purity", Passages that are late Meccan or early  

Medinan say that earlier prophets instituted the
Thou art our patron; so help us against the people of unbelievers" (Bell). Some prayers are also included in which God is the speaker, but others also occur, especially in the middle Medinan years, after the completion of the suras that begin with revelation formulas and the mysterious letters (see 4.4 above). The liturgical setting of the sabbaha li 'Ilha suras is suggested by their introductions and conclusions. One might conjecture that the Friday prayer service was the occasion for the first recitation of these suras (see LXI, 9-11), and possibly also those with the revelation formulas. Other praise formulas, which may or may not have specifically liturgical functions within the Qur'an, include: the tahlad, i.e. al-hamdu li 'ilaha, "Praise be to God," at the beginning of I, VI, XVIII, XXXIV and XXXV, and in VII, 43, X, 10, XVII, 110, etc., the tasbih, i.e. sabbaha li 'llah, "Glory be to God," occurring with variations in XVII, 1, 93, 128, XXVIII, 63, XXXVI, 36, XXXVIII, 180-2, XLIII, 82, and; and inbarkaha 'Ilha, "Blessed be God", occurring with variations in VII, 54, XXIII, 24, XXV, 1, 10, 61, XL, 54, XLIII, 85, LV, 78 and LXVII, 4.

8. THE KUR'AN IN MUSLIM LIFE AND THOUGHT

For Muslims the Kur'an is much more than scripture or sacred literature in the usual Western sense. Its primary significance for the vast majority through the centuries has been in its oral form, the form in which God is praised in the third person, occur more frequently; the best known of these is the "Throne verse," II, 255, mentioned in 7.6 above for its mystic motif. The divine epithets mentioned in 6.6 above as rhyme phrases are also a type of praise formula, which however do not give the impression of being liturgical. Praise forms that do seem to have a liturgical purpose occur at the beginning of several Medinan suras. A sabbaha li 'Ilha formula, "Magnifies God (sabbaha li 'Ilha) all that is in the heavens and the earth," occurs at the beginning of LVII, LXI, LXI, LXII and LXIV, three of which contain with "He is the Almighty, the All-wise." These five suras date mainly from the middle Medinan years, after the completion of the suras that begin with revelation formulas and the mysterious letters (see 4.4 above). The liturgical setting of the sabbaha li 'Ilha suras is suggested by their introductions and conclusions. One might conjecture that the Friday prayer service was the occasion for the first recitation of these suras (see LXI, 9-11), and possibly also those with the revelation formulas. Other praise formulas, which may or may not have specifically liturgical functions within the Qur'an, include: the tahlad, i.e. al-hamdu li 'ilaha, "Praise be to God," at the beginning of I, VI, XVIII, XXXIV and XXXV, and in VII, 43, X, 10, XVII, 110, etc., the tasbih, i.e. sabbaha li 'llah, "Glory be to God," occurring with variations in XVII, 1, 93, 128, XXVIII, 63, XXXVI, 36, XXXVIII, 180-2, XLIII, 82, and; and inbarkaha 'Ilha, "Blessed be God", occurring with variations in VII, 54, XXIII, 24, XXV, 1, 10, 61, XL, 54, XLIII, 85, LV, 78 and LXVII, 4.

Others: The Qur'an contains other distinctive literary forms and themes that can be mentioned only briefly here. Especially important in Meccan parts of the Qur'an are a large number of dramatic scenes, usually involving death, the Last Judgment, the pleasures of paradise (al-^atma = the garden), and the tortures of the hellfire (see the O'Shaughnessy arts. Dramatic scenes constitute the main Qur'anic form for treating these subjects, which are nowhere fully or systematically explained, and they also occur frequently in narratives, reflecting the oral qualities of these Meccan parts of the Qur'an (see Bell-Watt, 80 f.). There are also many addresses on a variety of topics. Most Meccan ones treat theological topics—the signs of God, messages of earlier prophets, etc.—and thus can be classified as sermons. Early Medinan ones are often addressed to the Jews, either as the Children of Israel or the People of the Book. Later Medinan ones, usually addressed "O believers", but sometimes "O children of Adam", "O people", treat specific legal, political, and military matters as well as general religious, moral, and social themes. Another special type of material found in both Meccan and Medinan parts of the Qur'an involves Muhammad's personal situation. Many Meccan passages addressed to Muhammad bring comfort and encouragement in times of persecution, instructions on religious practices, etc. Some Medinan ones, addressed "O Prophet", give special marriage and divorce regulations. Others are addressed to Muhammad's wives or otherwise treat his family problems (see suras XXIV, XXXIII, LXVI).
which it first appeared, as the "recitation" (kurṣūn) chartered by Muhammad to his followers over a period of about twenty years (on its liturgical function during Muhammad's lifetime, see VII, 203-6, LXXIII, 20, LXXXIV, 20 f., etc.). The revelations were memorised by some of Muhammad's followers during his lifetime, and the oral tradition that was thus established has had a continuous history ever since, in some ways independent of, and superior to, the written Qurʾān. During the early centuries when the written Qurʾān was limited to the original scriptural text, the oral tradition established itself as the standard by which the written text was to be judged. Even when the Egyptian "standard edition" was prepared in the early 12th century, it was the oral tradition and its supporting kufi litertature (rather than the Qurʾān manuscript) that served as the authority for determining the written text. Through the centuries the oral tradition of the entire Qurʾān has been maintained by the professional reciters (kaddim) on the Qurʾān reciters in Egypt, see M. Berger, *Islam in Egypt today, Cambridge* 1929, 11-13, 32-43; and for the oral tradition in general, Labib al-Said, *The recited Koran*, see *Bibliothek der Völker*, while all Muslims memorise parts of the Qurʾān for use in the daily prayers. Until recently, the significance of the recited Qurʾān has seldom been fully appreciated in the West.

The Qurʾān also had a central role in the theological debates of the early centuries, and it has continued to be one of the most controversial issues in Islamic theology. Since the Qurʾān was held to consist of messages brought from God to Muhammad by Gabriel, and since God is the "speaker" in these messages, it was natural for Muslims to think of it as God's speech (kaddim). About the time of Hārūn ar-Rashīd, theologians began to discuss whether or not the Qurʾān was created. Among those who maintained that it was created were the Muʿtazila, including some who had positions at the court of al-Maʾmūn. Convinced by their arguments, and also thinking that adoption of this doctrine would be politically beneficial, al-Maʾmūn in 218/831 established the doctrine of the mīkāna (q.v.) or "inseparability", in which most teaching officials were obliged to profess publicly that the Qurʾān was created. Nearly all submitted but a few refused, notably Ahmad b. Hanbal (d. 241/855) (q.v.). In 234/848, shortly after the accession of al-Mutawakkil, the mīkāna was abandoned, probably because its political results were disappointing. Up through the time of the mīkāna the issue seems to have been whether the Qurʾān was produced by direct inspiration of the Prophet. It should be noted, still had not received its final form at this time, and that the Qurʾān was Muhammad's; the term idrf was it should be noted, still had not received its technical meaning as late as the time of Ahmad b. Hanbal (see T. Andrae, *Die Person Muhammad in Lehr und Glaube*, Uppsala 1917, 217). Early discussion of the idrf of the Qurʾān concerned the concept of taḥaddirt and "challenge", largely based on several verses of the Qurʾān (II, 23, X, 38, XI, 53, XVII, 85, etc.). The failure of Muhammad's contemporaries to take up the challenge to produce even one sura like those he recited was taken as proof that it was impossible. This argument was then supplemented by the concept of sura (lit. "turning away"), meaning that God prevented the Qurʾān from taking up the challenge. In one of the earliest treatises devoted solely to yf, All b. Ḥakim al-Ramunni (d. 384/994) mentioned both of these arguments along with several others, involving the eloquence of the Qurʾān, its prophetic character, and the future events of the Qurʾān, its prophetic character, and the future events, its establishment of new literary forms and style that surpassed all others, etc. Hanbali Muhammad al-Kaṭṭābī (d. 388/998) in his *al-Bayān fi 'idfāt al-Kurʾān* (see Bibliothek der Völker) stressed the rhetorical eloquence of the Qurʾān, and al-Bākili (d. 409/1012) in the most famous work on the subject (see Bibliothek der Völker) rejected the sūra argument and compiled what he regarded as empirical evidence of the Qurʾān's superior style. He also argued that since Muhammad was illiterate, he could not have read other scriptures or written down stories told by human informants, and thus Qurʾānic reports of past events and prophecies of future events are further proof of the miracle of the Qurʾān and its divine source. For summaries of the development of these views see J. Bouman, "Les doctrines de l'actualité de l'Alcoran en-vertet en orientalisme", in *Verbum*, Utrecht 1964, 65-66; H. Steiger, "Die Glaubenslehren des Islam", Munich 1965, 75-83. For an outline of the views of the various schools on the Qurʾān as the hālām Allāh, see *Kalam*.

Parallel to the development of the doctrine of the eternity of the Qurʾān there also arose the dogma of its inimitability (idrf) (q.v.). From the beginning, the Qurʾān had been seen as a "sign" (yaṣīr) or "proof" (mā'īn) of Muhammad's prophethood. This belief took on a more precise form in the teaching that each prophet was given a verifying miracle (muṣājja), and that the Qurʾān was Muhammad's; the term idrf it should be noted, still had not received its technical meaning as late as the time of Ahmad b. Hanbal (see T. Andrae, *Die Person Muhammad in Lehr und Glaube*, Uppsala 1917, 217). Early discussion of the idrf of the Qurʾān concerned the concept of taḥaddirt or "challenge", largely based on several verses of the Qurʾān (II, 23, X, 38, XI, 53, XVII, 85, etc.). The failure of Muhammad's contemporaries to take up the challenge to produce even one sura like those he recited was taken as proof that it was impossible. This argument was then supplemented by the concept of sura (lit. "turning away"), meaning that God prevented the Qurʾān from taking up the challenge. In one of the earliest treatises devoted solely to yf, All b. Ḥakim al-Ramunni (d. 384/994) mentioned both of these arguments along with several others, involving the eloquence of the Qurʾān, its prophetic character, and the future events, its establishment of new literary forms and style that surpassed all others, etc. Hanbali Muhammad al-Kaṭṭābī (d. 388/998) in his *al-Bayān fi 'idfāt al-Kurʾān* (see Bibliothek der Völker) stressed the rhetorical eloquence of the Qurʾān, and al-Bākili (d. 409/1012) in the most famous work on the subject (see Bibliothek der Völker) rejected the sūra argument and compiled what he regarded as empirical evidence of the Qurʾān's superior style. He also argued that since Muhammad was illiterate, he could not have read other scriptures or written down stories told by human informants, and thus Qurʾānic reports of past events and prophecies of future events are further proof of the miracle of the Qurʾān and its divine source. For summaries of the development of these views see J. Bouman, "Les doctrines de l'actualité de l'Alcoran en-vertet en orientalisme", in *Verbum*, Utrecht 1964, 65-66; H. Steiger, "Die Glaubenslehren des Islam", Munich 1965, 75-83. For an outline of the views of the various schools on the Qurʾān as the hālām Allāh, see *Kalam*.

The doctrines of the eternity and perfection or inimitability of the Qurʾān contributed to its extensive influence throughout Islamic life and culture.
It became the first "source" (as) of Islamic law, the Sharī'ah, which also came to be regarded as eternal (cf. the Torah in Jewish belief). Its grammar became standard for later Arabic, which replaced other languages across the Near East and North Africa (among Christians and Jews as well as Muslims), and its script came to be adopted in Persian, Turkish, Urdu, and other languages. Verses of the Qur'an became a subject of Islamic calligraphy and one of the main decorative motifs of Islamic art and architecture, as a substitute for statues and pictorial representation. At the same time, these two doctrines have been the strongest factor working against the acceptance of critical studies of the Qur'an within the modern Muslim community. In the early centuries, Muslim scholars studied the Qur'an as literature and as a historical source, analyzing its grammar, style, poetic imagery, etc., and attempting to determine its chronology, development of ideas, and historical settings. But the widespread acceptance of belief in the eternity and the Qur'an has made modern Muslims loath to accept methods of historical and literary criticism that have proved so fruitful in the study of other scriptures. To a certain extent this is understandable to Christians, since the development of the doctrines of the eternity and the Qur'an is parallel to the development of the doctrine of the Trinity, and the closest analogue in Christian belief to the role of the Qur'an in Islam belief is not the Bible, but Christ. Thus the difficulty Muslims have in adopting a critical approach to the Qur'an is comparable to the difficulty many Christians have in accepting a critical view of the life of Jesus (e.g. regarding his virgin birth and resurrection). But this should not prevent critical analyses of the Qur'an, which is after all still a literary work of supreme importance and an invaluable historical document.

9. TRANSLATION OF THE KUR'ÂN

a. The orthodox doctrine concerning translation. In the time of Muhammad it is certain that nobody had considered the possibility that the Qur'ân might be translated either as a whole or in part into a foreign language. It was revealed expressly as an "Arabic Qur'ân" (Sûra XII, 2; XX, 123; XXXIX, 28; XLII, 7; XLII, 7; XLII, 3), in "Arabic language" (XVI, 163; XXVI, 135; cf. XVII, 121), that the Prophet through it might "warn the capital (i.e., Mecca) and the people in its surroundings" (VI, 92; XLII, 7). It was not originally intended for non-Arabs. It was only as a result of the spread of the Arabic-Islamic conquests that the sphere of influence of the Qur'ân was extended to territories outside the Arabic-speaking world. The Persians and other non-Arabs who embraced Islam were obliged, in the same way as their genuinely Arab fellow-believers, to recite in the ritual prayer the Fâtiha and several other texts from the Qur'ân. The question thus arose whether they should be permitted to recite the texts in question in their native language instead of in Arabic. In so far as Muslims from the non-Arabic-speaking territories were interested in getting to know not only the texts used in the prayers, but also other parts of the Qur'ân, or the whole of the Qur'ân, there arose the further question whether this might be accomplished with the help of a translation.

The theologians and jurists who had to decide on this matter in general adopted a rigorous attitude. With regard to the recitation of the Fâtiha in the ritual prayer, the Malikis, Şâfi'is and Hanbalis insisted that the text must be spoken in Arabic. In a case where the person praying could not recite the Fâtiha in Arabic, he must substitute for it another passage from the Qur'ân, or observe a silent pause, or repeat the name of God for the same length of time. On the other hand it is reported that Abu Hanifa had originally declared that the recital of the Fâtiha in Persian was permitted without reservation; he later restricted this concession to those worshipers who were unable to speak Arabic. This then became the general rule for the Hanafi school. In similar circumstances other non-Arabic languages besides Persian might be employed.

As for the production and use of translations of the whole of the Qur'ân, the attitude of the scholars was that a "translation" of the Qur'ân in the true sense of the word was not possible. They based their attitude mainly on the argument that the wording of the Qur'ân is a miracle (ma'âjîma) incapable of imitation by man. This characteristic would be invalidated in a translation into a foreign language, since this would be made by man. Furthermore, the theologians maintained that a translation of the Qur'ân which was both literal and at the same time true to the meaning was not possible. They conceded, however, that a so-called translation (tarjama) in the sense of a commentary (tafsîr) might be used, on the assumption that the text of the original was not superseded by this. Thus manuscripts of the Qur'ân might be provided with an interlinear (quasi-)translation. In more recent times this was extended to the printing of the translation (as a commentary) beside the Arabic text. This is the practice which remains usual for translations made by Muslims.

The question whether in the ritual prayer texts from the Qur'ân may be recited in a non-Arabic language and whether the production and use of translations of the Qur'ân should be permitted became once again acute when in Turkey in the nineteen-twenties the authorities proceeded to "nationalise" the ritual prayers and to publish Turkish translations of the Qur'ân not accompanied by the Arabic original. Authoritative theologians found themselves induced once again to explain and to justify the orthodox standpoint by reference to earlier authorities.

The first statements were mainly of a polemical and negative nature. In the course of time, however, there prevailed a more criterial judgement on the matter. Thus the Hanafi scholar of Al-Ashr, Muhammad Mustafa al-Marâkî, in a thorough investigation first published in 1932, adopted the attitude that for a Muslim without a knowledge of Arabic the recital of the Qur'ânic texts prescribed for the prayer in an appropriate translation was absolutely obligatory (wa'dâhî). The important thing in the prayer is the meaning of the text, not the character of the āâdâh. The true sense is, however, transmitted through a translation. Furthermore, it is not realistic to require the great mass of Muslims from the non-Arabic-speaking territories to learn Arabic on account of the Qur'ân. It is much more desirable and indispensable (according to Mahmûd Shârif) even obligatory (wa'dâhî) for them to use translations, quite apart from their use in the prayer. The thesis that the Qur'ân in translation ceases to be the Word of God (kalâm Allâh) is, according to Marâkî, valid only with reservations. The translation does not simply represent human speech (kalâm al-nâdî), for although it does not contain the Word of God literally, yet its content consists of the meaning of God's Word.

J. J. G. Jansen, The translation of the Qur'an into Persian, decreed that this should be done in the time of the Orthodox Caliphs by Sâlim ibn al-'Ifrîsî, in Moscyskaya literatura, Moscow 1972.) records several MSS. are mentioned by Storey, the earliest, at 12/7/1445 and in the Dravidian languages, Malayalam, Tamil and Telegu. In the other Indo-Aryan and Dravidian languages, there are versions in Assamese, Bengali (innumerable; a 1908 version by Rev. Wm. Goldsack of 1908 is illustrated in MW, v (1915), 254-5); Gujarati, Hindi, Kashmiri, Marathi, Oriya, Panjabi (often combined with a Persian version and the Arabic text); Punjabi, Sanskrit (Chauvin, vi), Sindhi (surveyed by A. M. Schimmel in Orient, xvi (1962), 224-42), Sinhalese; and in the Dravidian languages, Malayalam, Tamil and Telugu.

2. Indo-Pakistani languages. Of the many Urdu versions, the earliest said to have been made by Shah 'Abî al-Kâdir [and Shah Râfi' al-Din], each of them an uncle of the celebrated preacher and scholar Muhammad Ismâyîl Shahî (see Ismâyîl Shâhi). The British Museum Hindustani catalogue lists innumerable examples, including versions made by Christians and printed in Roman characters. Details may also be found in the bibliographies of the Andijanî-i tarâkî-yi Urdu Pakistanî (i, Karachi 1961) and of Abû al-Sattâr Chaudhuri (1974).

In the other Indo-Aryan and Dravidian languages, there are versions in Assamese, Bengali (innumerable; a 1908 version by Rev. Wm. Goldsack of 1908 is illustrated in MW, v (1915), 254-5); Gujarati, Hindi, Kashmiri, Marathi, Oriya, Panjabi (often combined with a Persian version and the Arabic text); Punjabi, Sanskrit (Chauvin, vi), Sindhi (surveyed by A. M. Schimmel in Orient, xvi (1962), 224-42), Sinhalese; and in the Dravidian languages, Malayalam, Tamil and Telegu.

3. South-East Asian. There are many translations into Malay and Indonesian mentioned in the catalogues and bibliographies, and into other Indone-

sian languages (Sundanese, Javanese, Maccanese and Buginese). A Burmese version with the Arabic text, by one Hâdîjî Nûr al-Dîn known as Hâdîjî Úlî, published in 1536, may be found in the British Library (5M. Arab. cat., suppl.), while Tinker mentions that a project to translate the Kur'an into
that language was initiated by U Nu while Prime Minister in 1953. Two translations into Thai (one with Arabic text) of 1968 and 1971 are in the Wason Collection in the Bodleian Library.

4. Far Eastern (Chinese and Japanese). Several 19th and 20th century works contain selections in Chinese, sometimes with commentary. A MS., believed to date from about 1800 in the School of Oriental and African Studies, London University, gives "pieces from the Koran and prayers transcribed from the Arabic original in Chinese sounds". Translation into Chinese was recommended by Sakuma, a Japanese businessman and convert to Islam who, in 1856, founded the progressive but short-lived newspaper Ma k'iang. Another source says that in that same year a complete translation was under consideration by the International Muslim Association. The British Museum has a Kuo-yu ku-tan ching, with commentary translated from English versions by Sáhn T'ai-chou and others (Taipei 1958).

Japanese versions by Toshitoko Iatsumi and Tamaka Shiro were published in several editions in the nineteen-fifties, sixties and seventies.

5. Near Eastern Languages. Three manuscripts of Hebrew translations exist (in Oxford, Cambridge and the Library of Congress), the first two made from the Italian of Arrivabene, the third from the Dutch of Glazemaker. All of these predate the translation of Hermann (Hayyim) Rekendorf, Leipzig 1857, made direct from the Arabic. Two further translations have since appeared; by Joseph Joel Rivlin (Tel Aviv 1936-41, 1963*) and by Aharon Ben-Shemesh (Ramath Gan 197*).

Quotations from the Qur'an, in Syriac, appear in a polemical work against Jews, Nestorians and Muslims by the West Syrian writer Barsallbl (d. 1171), which exists in a manuscript now in the John Rylands Library at Manchester, and in another in the Harvard University Semitic Museum. It is doubtful if a complete Syriac translation ever existed.

In the Bhopal State Library is to be found a Koran in Arabic, published in 2547. Though its author claims that it is a translation or paraphrase of Robert of Ketton's text as "always liable to heighten or exaggerate a harmless text to give it a nasty or licentious sting, or to prefer an improbable but unpleasant interpretation of the meaning to a likely but normal and decent one" (N. Daniel, Islam and the West, the making of an image, Edinburgh 1960, see Index, s.v. Ketton), the work of Robert formed the basis for several mediæval versions, but was apparently unknown to another early translator, Marc of Toledo. It was recopied in the 17th century by Dominicus Germain, whose work exists in Montpellier, the Escorial and elsewhere, and was published in the Cujianic corpus, together with various other works of Christian propaganda, by Theodor Bihlbaier (Buchmann) in three editions at Basel in 1543, and one at Zürich in 1550 containing a preface by Martin Luther.

The first translation in a modern European language was the Italian version of Andrea Arrivabene, published in 1547. Though its author claims that it is made directly from the Arabic, it is really a translation or paraphrase of Robert of Ketton's text as published by Bihlbaier. Arrivabene's version was used for the first German translation made by Solomon Schweiggert, preacher at the Frauenkirche in Nürnberg, which in turn formed the basis of the first Dutch translation, made anonymously and issued in 1641.

The first French version by André du Ryer, "Sieur de la Garde Malezais", came out in a great many editions between 1647 and 1775. All editions contain a "summary of the religion of the Turks" and other documents. This gave rise to the first Koran in English by Alexander Ross, and also fathered versions in Dutch (by Glazemaker), German (Lange) and Russian (Postnikov and Veryovkin).

The second Latin version was made directly from the Arabic text by Ludovico Marraci (or Marrao), published first in 1698 and secondly, with additions and annotations, by Reinsch in 1721. It was translated into German by Herreiter.
The 18th century brought translations made directly from an Arabic original by Sale into English (first published in 1734), Savary (French, 1751) and Boysen (German, 1773). Sale’s version was in vogue in the English-speaking world for nearly two centuries: his renowned preliminary discourse, based, according to Nambo, on Marracci and Edward Poecocke senior, was translated into several European languages. It was even translated into Arabic by Protestant missionaries in Egypt.

Savary’s version was, according to Chatvin, evidently made from the Latin of Marracci; it bears the distinction of having been published in Mecca in A.H. 1165 (or so the title-page of one edition states!). Kasimirski, whose translation has also had a long run, and indeed like that of Savary, is still being republished in our own time, was requested by Pauthier to revise Savary. He preferred, however, to make a new translation directly from the Arabic while consulting the works of Marracci and Sale.

Throughout the 19th century, the translations were normally made without remove from the Arabic. In the 20th century, the first English versions made by Muslims appear, and the Abmadiyya movement began to issue the Kurān text with translations into European and even African languages. In recent times translations have been made by many of the most prominent Arabists and Islamic scholars into all the main languages of Europe, undeterred by the diemum of A. Fischer that only second or third-grade scholars dared to undertake this task.

**Conspectus of European Language Versions:**

**AL-KURĀN—AL-KORĀN**
attributed to al-Kurtubî, and with Shaykh 'Abd al-Rahman Shihabî al-Yaman the Tayyabî al-nâṣir fi l-huwd al-'âmil of al-Dzâjarî up to Sûra IV, 41. The former was two of which have been published, sc. Lum al-Anam h-ikd; al-hitnam a al-saniya from forty-two (Brockelmann.s.v.) to over a hundred, 3 of 4 of the so-called "Satanic verses" allegedly interpolated into Kur'ân, UII, 21. The heresiographical sources are agreed that 'Abû Karîb denied the death of Muhammad b. al-Hanafiyya, the Imâm and Mahdi of the Kaysâniyya. It is thus evident that he was active immediately after the death of Ibn al-Hanafiyya in 87/700 and probably played a major role in promoting Messianic ideas about him among the Kaysâniyya. The sources disagree, however, in regard to other points of his teaching. The Mu'tazilî and Sunni sources attribute to him the belief that Muhammad b. al-Hanafiyya was alive hidden in the mountains of Râdîw near Medina, guarded by a lion on his right and a leopard on his left and provided with food in the morning and the evening, until the time of his reappearance. Some of 'Abû Karîb's followers held that Ibn al-Hanafiyya was punished by God with confinement in the Sâbil of Râdîw because of his voluntary submission to the caliph 'Abd al-Malik. In the account of these sources, 'Abû Karîb appears as the founder of what became the mainstream of the Kaysâniyya expecting the return of Muhammad b. al-Hanafiyya, and whose views were later expressed in the poetry of Rukhâyîr (q.v.) and al-Sayyid al-Himârî (q.v.). According to the Shi'i sources, on the other hand, 'Abû Karîb and his followers asserted that the place where Muhammad b. al-Hanafiyya was concealed could not be known and they were distinct from those who believed that he was hiding in the mountains of Râdîw. They maintained that 'Âli had named him the Mahdi. 'Abû Hâtim al-Razi adds to this that 'Abû Karîb considered Ibn al-Hanafiyya the immediate successor of 'Âli in the imâmâte and opposed those who upheld the imâmâte of al-Hasan and al-Husayn before him. This view was in conflict with the position of the majority of the Kaysâniyya, expressed in verses by Rukhâyîr, that the three sons of 'Âli were consecutively Imâms and al-Majdîî, representing the Mu'tazîlî account, expressly states that 'Abû Karîb (Ibn Narnab) considered al-Hasan as the Imâm after 'Âli. According to al-Nawbakhi, the extremist Shî'î Ênsa b. U'mâra al-barâîî of Medina was originally a follower of 'Abû (Ibn) Karîb, and among Hamza's early supporters in Kûfa were Bayân b. Sârî and al-Nahîd. The Karîbiyya and all its extremist offshoots claimed that they would return to life at the reappearance of Muhammad b. al-Hanafiyya. According to the account of the Mu'tazîlî Abu 'l-Kâsim al-Balkhi, on the other hand, the doctrine of return (ra'îya) was first taught by Hayyân al-Sarrâîî who, in contrast to 'Abû Karîb, believed that Muhammad b. al-Hanafiyya had died and would return to life. While there is no external evidence supporting either of the two groups of sources, the Shi'i sources, providing more specific details, appear to be generally better informed.

Encyclopædia of Islam, V

KURAYBIYYA — KURAYSH

KURAYSH, the tribe inhabiting Mecca in the time of Muhammad and to which he belonged; the name, which may be a nickname, is mostly (e.g. Ibn Hishâm, 61) said to come from takarrush, "a coming together, association"; but it is also possible (cf. Tabari, 1, 1104) that it is the diminutive of sharq, "shark", and it could then be a totemic name like Kilab, etc. (A man called Kuraysh, other than Fîhr, is mentioned in Nasab al-Kuraysh, 12, 7-9.) The tribe is taken to consist of the descendants of Fîhr, and he himself is sometimes spoken of as Kuraysh; but the name is mostly used only of the tribe, which is reckoned among the "northern Arabs" (cf. ad-Dânî and al-'Arab, ed. Jâzîhî, vi, p. 543A). The ancestry of Fîhr is given as: b. Músik b. al-Nâdr b. Khânâ'în b. Khuzayma b. Mûsîkta b. Liyâs b. 'Abbâs b. Nîzar b. Mâ'âd b. 'Adamîn. The following table shows the main subdivisions of Kuraysh (for a fuller version, cf. Watt, Muhammad at Mecca, 7); an asterisk indicates those commonly spoken of as "clans" in Muhammad's time.

Fîhr is said to have been the leader of men of Khânâ', Khuzayma and other tribes in fighting to defend the Ka'ba against an attack by Yamanî tribes, but the sanctuary and various privileges con-
became renowned for their *hilm* [q.v.] "steadiness" or "absence of hothedaddness", and in practice this meant that they placed business interests first and maintained a measure of unity despite their rivalries.

On the death of Kuraysh (probably in the first half of the 6th century A.D.), his powers and rights passed to 'Abd al-Dar, but after a time he was challenged by 'Abd Manaf, and this led to a division of Kuraysh into two rival groups. 'Abd al-Dar was supported by Makhdum, Sahm, Djamah and 'Adi, and these were known as the Abil or Confederates. The opposing party, known as the Mutayyabun, the Perfumed, consisted then of 'Abd Manaf, Asad, Zuhra, Taym and al-Harigh b. Fihr. It is impossible to know how long these groups remained effective. There is a reference to Mutayyabun in a letter from Muhammad to some men of Kura' written in 8 A.H. (al-Wakidi, ed. Marden Jones, ii, 750). Long before this, however, about 605 A.D. (Moqarrab, 40), the Mutayyabun had been replaced by a new confederacy, the Hilf al-Fudul [q.v.] (exact meaning uncertain), which consisted of Hashim, al-Mutactab, Asad, Zuhra, Taym and perhaps al-Harigh b. Fihr. The essential change here is that 'Abd Manaf has split into four parts, of whom two, Hashim and al-Mutayyab, have remained with their former allies, while the other two, 'Abd Shams and Nawfal, have abandoned them. This may mean that 'Abd Shams and Nawfal had become strong through commercial success. It is clear that 'Abd Shams, though not fully identified with the Abil, had developed close business relations with them. In all the stories of the pre-Islamic period there is admittedly a legendary element, but the main outline of events appears to be roughly correct, even if most of the dating is uncertain.

A man did not cease to belong to his clan when he became a Mumin, and in many of the events of Muhammad's career, and of the period up to 135/750, the influence of old rivalries or alliances can be seen. As late as the reign of Ma'muya I, an appeal against injuries was made by al-Husayn b. 'Ali (of Hashim) to the Hilf al-Fudul, and was given a whole-hearted response from men of Taym, Abil and Asad (Ibn Hisham, 56 f.). The leaders of the revolt defeated at the Battle of the Camel in 656 were from Taym and Asad. Of course, there were changes in the relative power and wealth of the clans. The clan of 'Abd Shams rose to pre-eminence through the Hamayyad dynasty, since Umayyad was a son of 'Abd Shams; and the early Sh'is and then the 'Abbasids represented their old rivals, Hashim. Under the first four caliphs and the Umayyads, men of Kuraysh played a very important role in the organisation and administration of the empire, and without their skills in these fields the empire would probably not have endured.

On the death of Muhammad, the Ansar wanted one of them to be head of the community of Muslims, but they were persuaded by 'Umar to accept Abu Bakr as khalifa, on the grounds that only a Kurayshi could hold the post. There are indications that the Ansar continued to feel strongly about this point for some decades (cf. Watt in MW, xiii (1952), 161, 164). A *badil* came to be generally accepted, however, that "the imams are from Kuraysh" (e.g. Ibn Hanbal, Musnad, iii, 126, 183; iv, 421; cf. T. W. Arnold, *The caliphate*, Oxford 1924, 47). The Qur'anic verse IX, 100/101 was also quoted in support. When the Sunni theory of the caliphate was formulated, it was generally insisted that the caliph or *imam* should be from Kuraysh (e.g. Ibn Abi Yalla, Tabaqat al-Hindabila, Cairo 1932, i, 25, 34; ii, 21; al-Mawardi, Abhum, 5; Ibn Khaldun, *Mubaddala*, i, 350-4; Eng. tr., i, 396-401). A few scholars, however (e.g. Djelal b. 'Amr), hold otherwise, and most of the Khawarij considered that a pious and upright man of any origin could be *imam* (al-Ash'ari, Malaki, 461 f.; al-Baghdadi, *Usul al-din*, Istanbul 1928, 275-7; etc.). This matter caused a little difficulty in more recent times when the caliphate was claimed by Mughal emperors and Ottoman sultans, but most of them "alame" found a way of circumventing the difficulty (Arnold, *Caliphate*, 162, 173).

The geographer al-Hamdani (d. 334/945) mentions small groups of Kuraysh in various parts of Arabia, possibly remnants of trading stations (ed. D. H. Mawdudi, *Eid al-din*, Istanbul 1892, 327). At the present day there are many Kuraysh living as Bedouin in the neighbourhood of Mecca, while in Mecca itself the key of the Ka'ba is held by a clan of Kuraysh called Shayba.

The tribe is Kuraysh, but this was not much used in the heartlands of the caliphate in the early centuries; if any tribe was used it was mostly that from a clan. After a time, some men seem to have prided themselves in descent from Kuraysh. The following are some examples: one in 'Irak, 7/13th century; six in Egypt and Syria, 8/14th; 9/15th; 11/17th, 12/18th centuries; two in North Africa, 7/13th and 9/15th centuries (G.A.L, ii, 110, 111, 112, 449; G.A.L S, i, 268 foot, 537, No. 20, 609; i, 58; Ibn Khaldun, Eng. tr., ii, 173). In Pakistan, etc. it is common at the present time in the form Qoreshi.

Bibliography: (for the earlier period): Ibn Hisham, 61-70, 75 f., 79-89, etc.; Ibn Hadi, *K. al-Muhabbar*, Hyderabad 1942; idem, *K. al-Munammad* fi 'al̲ābbr Kuraysh, Hyderabad 1946; al-Azrai, *K. Abuu-bakr Madiha*, in F. Wustenfeld, *Die Chroniken dtr Stadt Mecca*, i, Leipzig 1859; al-Mamari, *Mundir* al-Muhabb, iii, 51-122, etc.; al-Zubayri, *K. Naufir Kuraysh*, Cairo 1951; W. M. Watt, *Muhammad an Mecca*, Oxford 1933, 4-46; etc.; H. Lamens, Lettres des Kuraysh, Beirut 1924; (W. Montgomery Watt) *Kuraysh b. Badran* [see 'Kayal, Banu —] *Kurayyat al-Milh*, a group of villages in the extreme northwest of Sa'di Arabia, in the northern section of the NW-SE depression of 'Abd al-Sirjan (approx. long. 37° 40' E. and lat. 32° 25' N.). The largest settlements, (though none are larger than 2,000 inhabitants) are Ithra, al-Kukr, Manwu, Ghafl, Raid, and an-Nabk, which is the administrative centre and residence of the local *Umari*, who now reports to Mecca, but at the time of Euting's visit (1801-1802) reported to the Amir of Hadil. Until the consolidation of the house of Ibn Sa'di's power, the villages were frequently under dispute between the Shammar and Kuraysh tribes, to whose leaders the inhabitants of Kurayyat al-Milh had to pay tribute. Aside from some meagre oasis agriculture (chiefly dates, alfalfa, and a little grain in good years), the principal income was derived from the caravan trade, particularly during the pilgrimage season, but most importantly from the area's extensive salt pans, which have been intensively mined for several centuries; hence its collective name of "Salt Villages". The salt was traded southwestwards to al-Qadw, Sadakka, and Hail, and northwards to Jordan and Syria. By the mid-20th century the drilling of deep water wells and the spread of industrialisation had allowed a greater diversification of agriculture and employment for
cash wages, so that the villages were much less dependent on trade and salt production.

Repeatedly Nabataean, but certainly pre-Islamic ruins, pottery, and inscriptions attest to the antiquity of settled life in this area.

**KURAYYA,** Banu, one of the three main Jewish tribes of Yathrib (Medina), with lands towards the south-east of the oasis. As in the case of the other Jewish groups, it is not known whether they were descended from refugees of Hebrew stock or from Arabs who had adopted Judaism. They adhered firmly to the Jewish religion, but at the same time had adopted many Arab practices and had intermarried with Arabs. According to a genealogy given by al-Samhdi, Kurayya, Hadil and *Amr were sons of al-Kharadji b. al-Sarh, who was descended from Aaron (though only eight immediate names are given). The related tribe of al-Nadir was said to be al-Nadir b. al-Nabhani b. al-Kharadji b. al-Sarh. Kurayya and al-Nadir, with the related groups, after their settlement in Yathrib developed agriculture (palms and cereals) and dominated politically the previous Arab inhabitants. The Jews lost their dominant position, however, after the coming of al-Aws and al-Kharadji, though they appear to have retained a measure of independence. Both Kurayya and al-Nadir supported al-Aws at the battle of Bu'ath [906]. At the time of the Hijra, the two most important men of Kurayya appear to have been al-Zabrid b. Bathy b. Wabah and Ka'b b. Assad, each of these had an *a'um or fort. These and fifteen others are named as hostile to Muhammad (Ibn Hisham, 352). Kurayya are said to have had two assemblies (*madhliyan*), those of Banu Ka'b b. Kurayya and Banu *Amr b. Kurayya (ibid., 691 for food. It is reported that at the Hijra, Ka'b b. Assad, acting on behalf of Kurayya, made an agreement (*khid*), with Muhammad, and that later during the siege of Medina (the *Khan aqda*), he was persuaded by Huyayy b. Abihab of al-Nadir to break it, and the actual document was torn up by Huyayy (Ibn Hisham, 532, 574; al-Wakidi, 456). This report is open to grave doubt, however. Ibn Ishahh does not name his sources. Al-Wakidi has two: one is a grandson of Ka'b b. Malik b. Salim, a clan hostile to the Jews; and the other is Muhammad b. Ka'b (d. 1172/1273-8), the son of a boy of Kurayya, who was sold as a slave when they surrendered and later became a Muslim. Both these sources may be suspected of bias against Kurayya; and it is therefore probable that there was no special agreement between Muhammad and Kurayya. It is virtually certain, however, that Muhammad had a general agreement with the Jews that they were not to support an enemy against him (al-Wakidi, 76), and something like this was probably implicit in his alliance with the Arab clans of Medina, since the Jewish clans were allied to one or other of the Arab clans. The Constitution of Medina as given by Ibn Hisham (347-4) does not mention Kurayya or al-Nadir or *Kayukuh* by name; but its present form almost certainly dates from after the execution of the men of Kurayya, and these Jewish groups were probably mentioned in an earlier version.

The question of an agreement affects the moral judgement on Muhammad's treatment of Kurayya. During the siege of Medina (Dhu 'T-`Awwa 5/429), Muhammad became anxious about their conduct and sent some of the leading Muslims to talk to them; the result was disquieting. Though Kurayya does not appear to have committed any overt hostile act, they had probably been involved in negotiations with the enemy. On this ground, as soon as the besiegers withdrew, Muhammad attacked Kurayya and besieged them in their forts (*qasr*) for twenty-five nights. After negotiations they agreed to surrender unconditionally. Sa'd b. *Mu'adh, chief of the clan of *Abd al-Ashghal*, with whom they had an alliance, was brought to give judgement on them. He decreed that all the men (who numbered between 800 and 900) were to be put to death and all the women and children sold as slaves. This decree was carried out recently, W. N. Arafa in *JRAS* [1976], 100-7, has maintained that by no means all the adult males were killed, but his argument is not entirely convincing. Three young men of the clan of Hadil, who had been with Kurayya in the strongholds, slipped out before the surrender and prostrated Islam. One or two others also escaped. As part of his share of the booty, Muhammad received one of the women, Rayhana, and married her as a concubine, though she is said to have become a Muslim. Muhammad b. Ka'b al-Kurazi (mentioned above) gained distinction as a scholar.

**KURDA** [see *KARNA*]

**KURBAN**, sacrificial, victim. The word goes back to the Hebrew *korbân*, perhaps through the intermediary of the Aramaic (cf. *Diren*, *Syriaica influence on the style of the Kurân*, in *Bulletin of the John Rylands Library*, xi (1927), 85; S. Fränkel, *De vocabulis in ... orae pergrinis*, 20). The language of the Kurân, as is well known, shows a preference for religious technical terms ending in -*ûn* and some of them are not always used with their original significations. This true of *kurbân*, which occurs three times in the Kurân. In *surah* III, 179 and V, 30 it obviously means sacrifice. In *surah* XLVI, 27, however, we read: "Did those help them, whom they had taken for *kurbân* as gods to the exclusion of Allâh?" Here the word must be more or less synonymous with "gods". Probably it has a meaning which is connected with the Arabic *kâb* (see below); the commentators take the same view and the word is explained as "mediators" (see *SHAPÂA*).

The word hardly seems to occur in classical *kâbâth*. The *Lisân* mentions two traditions which are striking enough: "The characteristic of the community (i.e. the Muslims) lies in the fact that their *kurbân* is their blood", i.e. that instead of sacrifice they have offered the blood of their martyrs. And the other: "The *salât* is the sacrifice of every pious man". We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual
to the killing of an animal on the roth Dhū 'l-Hijjah and the whole celebration on this and the following ṭāhīr days is called ṭid al-Kurban [cf. ṭid al-Ashkâl] in Turkish-speaking countries Kurban-boynami [cf. Bayram].

In Christian Arabic the word means the eucharist; cf. Geff, Verzeichnis arabischer-kirchlicher Termini (= CSCO, 147), Louvain 1954: the consecrated elements, especially the host; ṭid al-Kurban = feast of Corpus Christi.

In conclusion it should be pointed out that there seems to be a genuine Arabic word ṭurāba, plur. ṭurābīn, which means the courtiers and councillors in immediate attendance on a king: the word probably comes directly from k-rr "to be near".

Bibliography: Given in the article.

(A. J. Wensinck)

**KURBUKA**, property Kur-Bugba (T. "stone-hearted bull, stallion") Abu Sa‘īd Kiwam al-Dawla, Turkish commander of the Seljuk period and lord of al-Mawsil.

In the war waged by Tutush b. Alp Arslan, Berk-yanur’s uncle [q.v.], against the two rebellious governors Aḥ Ṣonkor and Būzan, which ended with the capitulation and execution of these two, the amir Kurbuka, who had been sent to help by Berk-yanur, was also taken prisoner. After Tutush had fallen in Ṣafar 488/February 1095 (cf. birkvâṛdog), Kurbuka was released by his son Ridwân, and with his brother Altuntâsh collected a band of adventurers and occupied Ḥarrân. Muhammad b. Muslim b. Kuruyâl lord of Naṣîhīn then applied to him for help against his brother ‘Alī, who had been appointed governor of al-Mawsil by Tutush: Kurbuka made an alliance with Muhammad, but had him murdered afterwards, and seized Ḥarrân and N-qâṣbah, and set out against al-Mawsil, which ‘Alī had to surrender after a long siege (Dhū ’l-Ka‘da 488/Oct.-Nov. 1096). After the capture of al-Mawsil he disposed of his troublesome brother Altuntâsh and occupied al-Rabla. In 492/1098 Berk-yanur sent him with a large army to retake Antakīyā [q.v.], which had just been conquered by the Christians. Eddess, which had also just been taken from the Muslims, was besieged by Kurbuka on the way, but he had to give up the siege and soon afterwards appeared before Antakīyā. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers; Kurbuka’s own conduct is said to have contributed towards the disaster, as his arrogance irritated his commanders so that they only awaited a favourable opportunity to abandon him. In the battle between Berk-yanur and his brother Muham¬mad in Ṣa’īd 492/May-June 1099, which ended in the defeat of the former, Kurbuka commanded Berk-yanur’s left wing. In the following year he was sent to Adharbâyān. Here he conquered the greater part of the country, but when he was nearing the town of Khuṭay or Ṣif [q.v.], he fell ill and could not continue the campaign. He died in Dhū ’l-Ka‘da 492/Aug.-Sept. 1092, after appointing Sonktorqez his successor.

(For V. Zettersten*)

**KURBO** (from the Mongolian kurt, "an archer"); from ho, "quiver"; Tadhkhil as-nulak, translated and explained by V. Minorsky, London 1943, 32, n. 2), a military term with a variety of different meanings: "he who bears arms, the sword, chief huntsman" (Pavit de Courtaild, Dict. ture, s.v., 425; "armourer, sword-cutter, troop of cavalry, captain of the watch; leader of a patrol, commandant of a fort, gendarme in charge of a city’s security" (Sahaymân Tabâb, L. K. Coghlan, ed. Istanbul 2308[1880-1], 233), "sentry, sentinel, guard, inspector" (Vambéry, Cognahaise Sprachstudien, 326).

In Ṣafavî usage, kurt denoted a member of the Turcoman tribal cavalry which formed the basis of Ṣafavî military power, and in this sense was therefore synonymous with ḥilli-bîsh (q.v.). The kūrēs were clearly distinguished from non-ḥilli-bîsh units, which were termed qašgar-i umârid; ṣipâdîyân; etc. Kūrēs with special functions were denoted by special titles (see index to Minorsky, op. cit., under qārē; for additional titles, see index to Istakdr Barg Münghi). Ṣârīâh-i illam-ârâ-yi Abbâsî, ii, Tehran 1332/1953, 214-20; some of these titles (e.g. Ṣârīâh-i tâbâh, "head of the guards; kurt-i šâkârîn, "kurt of the sword"; kurt-i ir-â-kâmân, "kurt of the bow and arrow"), appear to denote ranks, but their relative importance is not certain. Kūrēs constituted the royal bodyguard, in this capacity sometimes being specially designated kurt-îyân-i ḥamâs-yi ḡabî (Ṭūrīkh-i illam-ârâ-yi Abbâsî, i, 99), or kurt-îyân-i šâm-i ḡabî (ibid., i, 127).

The commander of the kūrēs was called kurtîlîbî. This office is first mentioned in the Ṣafavî chronicles in 917/1505-6, and seems from the first to have been distinct from the office of the amīr al-arâmid? (R. M. Savory, The principal offices of the Ṣafavî state during the reign of Ismâ’îl I (197-xl 1070-74), in BSAS, xxvii [1960], 101). At first overshadowed by the amīr al-arâmid, the kurtîlîbî became one of the most important officers of state under Ṣâma’îl II and Sulṭān Muḥammad Šâh [q.v.], wielding great authority in both military and political affairs. It is noteworthy that for a period of forty years (ca. 955-955/1548-57), nearly all the kurtîlîbîs were drawn from the Afsâr tribe. With the accession of Abbâs I [q.v.], the importance of the kurtîlîbî declined pari passu with that of the kūrēs themselves, but he still "carried great weight in public affairs" (Minorsky, op. cit., 127).

Bibliography: In addition to the references in the text, see R. M. Savory, The principal offices of the Ṣafavî state during the reign of Ṣâma’îl I (197-xl 1073-74), in BSAS, xxvii [1961], 791; G. Doerger, Turkhâne and Mongolische Elemente im Neupersischen, i. Mongolische Elemente im Neupersischen, Wiesbaden 1943, 427-32, contains an excellent discussion of the various meanings of kurt and kūrē, with full textual references.

(R. M. Savory)

**KURD 'ÂLl, Muḥammad Fard, Syrian journal¬ist, scholar and man of letters, was born in Damascus in 1876, of a father of Kurdish origin and a Čekes mother. From an early age, he showed an interest in nature and in books, and it was reading which, combined with his innate curiosity and gifts of observation, made the greatest contribution to his intellectual development. Already bilingual in Turkish and Arabic, he learnt French from the Lazarist Fathers of Damascus, and this enabled him to acquire, thanks to assiduous reading of books and periodicals a knowledge, extensive for his time, of Western civilization, and in particular, of French literature. He perfected his Arabic-Islamic education as a pupil of some distinguished masters: Tahir a-
Dissâhir, Muhammad Mubârik and Sâlim al-Bulghâri. In 1897 he joined the staff of the first Arabic newspaper of Damascus, al-Shâam, and at the same time collaborated in the Egyptian review al-Muhtafâf. He also attempted to translate some French novels into Arabic. Four years later he decided to visit Paris, but while passing through Cairo he was detained there by the friends whom he had made by his collaboration in al-Muhtafâf and he thus had the opportunity of becoming acquainted with the celebrities of the age, most notably with Muhammad ʿAbdûlфиз (d.1907), whose lectures at al-Azhâr he attended. Obliged to leave Egypt because of the atmosphere there seemed to him so oppressive, he attended al-Azhâr, transferred in 1908 to Damascus and continued to appear for a further six years, until the time when the Ottoman authorities, irritated by Kurd ʿAll’s frankness, forbade its publication.

At the end of 1908, Kurd ʿAll succeeded in realising the dream which he had first cherished eight years before and, passing this time through Lebanon, went to France and spent a year there; in the course of this visit, for which he had been preparing himself for a long time, he observed the people of the country and their way of life, visited the principal libraries, attended, theatrical performances and took a special interest in the Académie Française. Having persuaded himself on reaching Damascus, he decided to edit his review and then, at the end of the year 1913, undertook a second journey to Europe; he went first to Italy, where he had the good fortune to install himself in the library of prince Leone Caetani, whose Annali dell’Islam had revealed to him a method of working to which the Orient was not yet accustomed; it was here that he assembled much of the documentation which he required for the composition of a definitive history of Syria, the Khîraj al-Shâam, a monumental work which is still the most complete study of this vast subject. In 1914-15, a third journey took him to the countries of western Europe, and it was on his return that he wrote the Khîraj al-Shâb, a nihal (q.v.), published in 1915, based on notes taken in the course of his three journeys and reflections inspired by his observations. Immediately after the Great War, he had been appointed general secretary of the Committee for Public Education and it was in this capacity that he considered the creation of an organisation responsible for purifying and enriching the Arabic language, publishing texts and encouraging the literary and intellectual activity of his country. On 8 June 1916, he obtained authorisation to transform the Kunuz al-adiddd, which had been founded a few months earlier, into an Arab Academy [see MADIMA III.I.1. Arab countries]; he was thus able to put into effect the project of which he had been inspired, ten years previously, by his visit to the Académie Française. The career of Kurd ʿAll was henceforward inseparable from the activity of his Academy, to which he devoted the greater part of his life and over which he presided until his death. On 2 April 1933 the only intervals in his work with the Academy were his two terms of office as Minister of Public Education and his third journey to Europe.

Kurd ʿAll was of a witty and playful nature; a great conceptualist, he loved to joke and play with words, and his style is an accurate reflection of his personality. He left an abundant corpus which included, apart from the thousands of pages of articles published in the review in which he collaborated at the start of his career, in al-Muktabas and in the Multfâf al-Majâna, of the Multfâf al-ʿArabi (MMfA), editions of texts and original works of a historical or literary nature. He was largely responsible for making known the “epistles” of Ibn al-Mukaffa, of ʿAbd al-Hamîd, of Ibn al-Mudabbir [q.v.], etc. in his Rasâd al-bulughâ, Cairo 1908, 1913, 1914, and he enriched the Arab Academy Publications with the Strati Ibn Tulun of al-Balawt (1939), the al-Musâdâd min faʾalat al—anîmîd of al-Tanâţî (1946), the Taʿrîkh bukami al-ʿIsm of al-Bayhaki (1948), the Kedîb al-arâfiyya of Ibn Kutayba (1947), and the al-Bayyara of Khushdîm (1953).

Among his original works, mention should be made of his contribution to literary history and criticism: Umûr al-bayān, Cairo 1937, and Khinda as-adîdâf, Damascus 1939. Apart from the Ghârîb al-Gharb of 1923 and the Khîraj al-Shâm, Damascus 1923 (6 vols.), his major work, Kurd ʿAll collected in al-Kadîm wa l-hadîth, Cairo 1925, a large number of the articles published in al-Zâhir, al-Musâdâd and al-Muktabas and added an account of his travels in the Hijâz and Palestine. In addition, he pleaded the cause of Arab-Islamic culture in al-Isân te al-ḥadîth, Cairo 1946, devoted a monograph to the oasis of Damascus, Ghita Dimashq, Cairo 1949, and finally published four volumes of memoirs, Mudhakkinll, Damascus 1948-51.

KURDS, KURDISTAN.

i General introduction

ii The Kurds and their country: Kurdistan

A. The territorial extent of Kurdistan

B. The ethnic and geographical extent of Kurdistan

C. Numerical extent of the Kurds

D. The geography of Kurdistan

1. Physical aspect

2. The living landscape and habitat

3. The human aspect

E. An anthropological profile of Kurdistan

iii History

A. Origins and pre-Islamic history

B. The Islamic period up to 1920

C. From 1920 to the present day

iv Kurdish society

A. The fundamental structures of Kurdish society

1. The Kurdish family

2. Tribal organisation

(a) Listings of the Kurdish tribes

(b) The Kurdish tribe and its components

(c) The chief of the tribe, his obligations, his responsibilities and his compensations

3. The economic structures

(a) Kurdish nomadism

(b) The Kurdish peasantry

II. THE KURDS AND THEIR COUNTRY: KURDISTAN

A. The territorial extent of Kurdistan. If the ethnic term "Kurd" is of ancient usage, for it is known since the Arab conquest if one does not wish to go further back (cf. below, Origins), it seems that, historically, the name Kurdistan or "land of the Kurds" dates from the time of Sultan Sandjar (d. 559/1165), the last great Saljūk who created a province with its capital called Sâbâr, to the north-east of Hamadân. This province, situated between Ashkâbâdyan and Luristan, included the regions of Hamadân, Dînawar, Kirmângâh and Senna, to the east of the Zagros and to the west of Shahrâzûr and Khûghtiyân, on the Zâb. The whole numbered 16 cantons, enumerated by Hamd Allah Mustawfî (d. 750/1350), in his Nuzhat al-kullûb (ed. Le Strange, 188; ed. Tehran 1937, 272). The nominal extent of Kurdistan varies, however, through the centuries. Sharaf al-Dîn, in his Sharafl-nîma (1596), does not hesitate to include the Lurs in Kurdistan, in chs. 3 and 4 of his 1st Book, as do all the Arab historians, who include everything in the province they call al-Dîbâl [cf. V. Barthold, Islioriko-geografichesky oboz Iran, St. Petersburg 1903, 178. For his part, the Turkish traveller Evliya Çelebi (d. ca. 1693/1682), in his Siyâhle-mâne, li, 71-5, enumerates the 9 districts which formed Kurdistan in his time: Erzurum, Van, Hakkârî, Diyarbakîr, Diyar Mokri, Amâdiya, Mawîlî, Shahrâzûr and Ardalan, and which required 17 days to traverse. But the rivalries between the Ottoman sultans and the Shî'îs of Persia broke up this unity. In the 17th century the Turkish administration gave no more than 2 kettâhîns to the provinces: Darsîn, Mûsh and Diyar Bakr. In the same way, in Iran in the 17th century, Hamadân and Luristan were detached from Kurdistan and the name was reserved for the region of Ardalân with Sînâ as its capital. Today, Iran is the only country to recognise a province by the name of Kurdistan. Everywhere else, Kurdistan has been banished from the language of the administration and the geographical atlases. In Turkey one speaks of Eastern Anatolia; in Irâq, of the provinces of the north; in Syria, of the province of Diyarbakir (Ghassemîbû, 14). B. The ethnic and geographical extent of Kurdistan. From the above, it is clear that the historical and then political extent of Kurdistan does not coincide with the actual ethnic extent. So the frontiers within each of the countries concerned must be defined more or less approximately.

In Turkey, the Kurds inhabit the whole of the eastern region of the country. According to Trotter (1878), the limit of their extent to the north was the line Divriği—Erzurum—Kars, in the region of Erzurum they are found especially to the east and the south-east. The Kurds also occupy the western slopes of Ararat, the districts of Kangîzman and Tabûzâca. On the west they extend in a wide belt beyond the course of the Murphâtes (Ritter, xl, 144), and, in the region of Sivas, in the districts of Kangî and Divriği. Equally, the whole region includes areas to the east and south-east of these limits. Some very important colonies of Kurds are even found in Clîcîa, to the south of Ankara, in Heymahna and in the large towns of Istanbul, Ankara and İsmir. In brief, it may be said that if Turkey is at present divided administratively into 67 ûls or provinces, Turkish Kurdistan numbers at least 17 of them almost totally: in the north-east, the provinces of Erzînçan, Erzurum and Kars; in the centre, going from west to east and from north to south, the provinces of Malatya, Tunceli, Elazîg, Bingöl, Mûş and Karakoçe (Agri), then Adıyaman, Diyarbakir, Sîrt, Bitlis and Van; finally, the southern provinces of Urfa, Mardin and Çolamerîk (Hakkârî). The Kurds of Turkey are also linked on the east with their brothers from Iran. The latter inhabit the north-west of Iran. Firstly in the province of Western Ashkâbâdyan, to the west of Lake Urmia (Urmîya), the districts of Makî, Kottar, Shahrûp, and to the south of the lake, Mahâbâd (ex-Sabîla); in the province of Ardalân, called the province of Kurdistan, whose capital is Senna or Sannadîjî, the districts of Bukan, Sârîkis, Sardasht, Bana, Bigjâr (Garrus), Mervîn and...
In "Irāq, the Kurds occupy the north and northeast of the country in the *Kurd* provinces of Dūhok, recently detached from the province of Mawsil, the nābiyān or districts of Zāhī, Māsurā Dīr, Ḩamādiya and *Ākra*. Left outside their administration are Sinjūr and Shāykhān, peopled by the Yazidis (q.v.); the Ḩanīf of Kirkūk, Arbili and Sūrāniyāni (*entirely Kurdish*) and, in the *Kurd* of Dīyalā, the *māhūn* of Khamānīn and Mandalī, where they are neighbours of the Kurds of Iran to the west of the Zāreg. The Kurds are equally numerous in Bagdād and Mawsil.

In Syria, they constitute three distinct belts, in the north of the country and to the south of the highway which forms a frontier and where they are in direct contact with their compatriots in Turkey. A belt of 40 km. width, in the Kurd Dīgāh; a group (60 x 40 km.), in the east of the Euphrates where the river enters Syria, Sīrāq Dālān; and finally, a belt of 250 km. in length by 30 km. in depth in the Dajlāz, between the Khābūr, a tributary of the Euphrates and the Tigris, with Ra’s al-*Ayn, Darbissiyya, Amūda, Kamīshlūy, Andīvar and Dōrīk. In this "duck's beak", the Kurds of "Irāq and those of Turkey are juxtaposed (Rondot, 80). The Syrian towns of Damāsuc, Hūmās and Aleppo count many thousands of Kurds.

Some still exist in Soviet Transcaucasia. In the Republic of Armenia, 35 villages in the rayons of Aparan, Basargedar, Huktemberia, Talin and Esmāilzādān; in the Republic of Agharoblygūn, 25 villages in the rayons of Nefeldjan, Latchia and Kubālī (Armenia, 47-8, 64). There are numbers of Kurds living in Erevan, Baku and, in the Republic of Georgia, Tbilisi or Tiflis.

The imprecise limits of the frontiers of Kurdistan hardly allow an exact appreciation of the area. The Encyclopædia Britannica estimates the length of Kurdistan at 600 miles and its breadth at 150 miles. The Kūmās al-Sāmān, Istanbul 1856, which naturally is only concerned with the Kurdish nābiyān of the Ottoman Empire, sets its length at 900 km. and its breadth between 100 and 200 km. At present, the different provinces of Kurdistan cover around 150,000 km² in Turkey, 252,000 km² in Iran, 65,000 km² in "Irāq, and 72,000 km² in Syria. The total area of Kurdistan can then be estimated at approximately 392,000 km².

While there are many Kurds who live outside ethnic Kurdistan, there are numerous non-Kurds who live in Kurdistan. In Turkey, there are some Turks everywhere, but also, in the north, some Sīsētes and some Tcherkeses, and in the south some predominantly Syriac or Jacobite Christians (C. Dauphin, *Situation actuelle des communautés chrétiennes du Tur Abdin* (Turquie orientale), in Proche Orient Chrétien, Jerusalem, xxii-iii 2 [1972], 233-7). The Armenians have in fact completely disappeared. In Iran to the west of Lake Rīdāfīya and in "Irāq in the region of Dūhok-Zāhī and Kirkūk, some Nestorians and Chaldæans are to be encountered, together with, in the towns, a few rare Armenians. The Jews, at one time relatively numerous, have all emigrated since 1948 (W. J. Fischel, *The Jews of Kurdish a hundred years ago, a traveler's record*, in Jewish Social Studies, vi [1944], 195-226; I. Ben-Zvi, *The exiled and the redeemed host in Assyria*, in The Jewish Publication Society of America, Philadelphia 1957). In Kirkūk one finds some Turcomans (I. C. Vanly, *La Kurdistan irakien*, 342-3).

C. **Numerical extent of the Kurds.** As the Kurds are not ordinarily registered as such in the censuses of the population carried out by the different states where the Kurds are resident, it is impossible to have exact statistics of the total population of Kurdistan. Besides, statistics require delicate handling, and they risk being manipulated for political motives. Cf. for Kurds, M. Durua, 1st ed. 1961, 210 and 2nd ed. 1966, 225; for Turkey, E. Esenkova, 1967, 29. Here are a few examples, whose divergences, which show the complexity of the question, may undoubtedly be explained by the fact that their authors do not apply the same criteria of ethnic adherence, religion and language. Hence the elimination of the Lurs. Account must also be taken of demographic progression, which works in favour of the Kurds, a fact which is at times equally forgotten. Here are a few figures, in thousands, supplied by: (1) B. Nikitine, *Les Kurdes*, 1956, 42; (2) S. I. Erit, *L'ethnographic*, 1958, 39; (3) A. Ghassam Louj, *Kurdistān*, 1960, 23; (4) I. C. Vanly, *La Kurdistan irakien*, 1970, 30; (5) C. J. Edmonds, *Kurdish nationalism*, in Journal Cont. Hist. vii (1971), 97:

(cf. Edmonds, p. 91 n. 1).

D. **The geography of Kurdistan**

1. **Physical aspect**

Kurdistan is in its entirety a country of high mountains. Its skeleton, in its Turkish part, is constituted by the different chains of the Eastern Taurus. These chains begin to take shape from the shores of the Mediterranean at the latitude of the Gulf of Alexandretta, and radiate at first towards the north-east. To the north of Marāq, they form a fork whose northern line pivots away from the Engērek Dağı and Nurūhak Dağı (3,000 m.), continues by the Akra Dağ, joins the chains of Mounts Muntūz (3,088 m.), Merean and Kargaparaz (3,586 m.), then curves in and crosses the mountainous chain of the Araxes and finally ends in the Ararat system.

From our point of departure a second chain, very clearly a crescent in shape, begins to the south of Malatya, continues by the mountains of Maden, the ridges of Haçs (2,689 m.) and Sasun (2,590 m.) to the south of Muğ, pursues its curve to the south of Lake Van, via Mounts Bittis and Hakari (3,630 m.), with the Cilo Dağı which culminates in Mount Reşko (4,170 m.).

Between these two lines is situated what is called the Armenian plateau, whose altitude comes down no lower than 1,500 to 2,000 m. Furthermore, some parallel chains on the northern border maintain quite a high level, such as the Çalıxak Mountains and, to the south of Erzurum, the volcanic system of Palendöken Dağı (3,124 m.), to the south of which the combination of Mounts Bingöl, Şeralettin and...
further to the west, the heights of Twinel, constitute this natural fortress of Dersim. In this mass of crystalline rocks the Euphrates has hollowed out deep canyons, and the mountains with steep slopes clothe these inaccessible sites in fantastic shapes. But beautiful fertile plains extend to the north of Malaya (1,915 m.) to the southeast of Elazığ (1,070 m.) and to the north of Murg (1,500 m.). All along this Anatolian arc frequent torrents shake the region and claim numerous victims. We may recall the earthquakes of Erzincan in 1939 which killed 25,000 and those, less murderous meanwhile, of Varto in 1966 and Bingöl and Gene in 1971.

To the south of the curve of the Taurus spread the vast flat regions of Adiyaman, Urfa (570 m.) and Diyarbakir (650 m.) which descend abruptly towards Mesopotamia with contours of 3,000 metres, always allowing for certain land movements, such as the volcanic cone of Karacadağ (1,915 m.) and the chain of Taş Akıblı, which extends from Mardin (1,130 m.) and meets on the east with the much higher mountains of Herakol (2,943 m.) and Mount Cudi (2,926 m. [see Fig. 31]).

To the extreme east and more to the north is the supporting point for the Great Ararat or Ağrı Dağ (3,165 m.) and the Small Ararat (3,075 m.) perhaps considered as the pivot of a new system of mountains. Indeed, from this centre seem to radiate several points which, on one side, encircle Lake Van, with to the north the chain of the immense sulphur-spring which is the Tenderek (3,133 m.) and that of the Alâ Dağ (3,655 m.); to the east, the Ruh Dağ (2,850 m.), the Mengene (3,610 m.) and the Ispizig Dağ (3,337 m.) and to the south the Vaviran Dağ (3,550 m.) and the chain of Satat. Let us note, apart from the two Ararat whose structure is due to very ancient volcanic erup¬
tions, two famous volcanoes, on the shores of Lake Van: to the north, the Sipan (about 4,434 m.) and especially Mount Nemrut (Nimrud'), whose highest peak has an altitude of 3,140 m. and whose crater has a diameter of 6,400 m. with an interior lake of fresh water at a height of 2,552 m. All this region to the south of Lake Van, which is itself at an altitude of 1,720 m., is in its entirety the highest part of the Kurdish-inhabited area of Turkey.

Elsewhere, other chains of mountains are connected with Ararat: these are clearly oriented north-south, lying between Lake Van and that of Urmia and also separating Turkish Kurdistan from its Iranian part. After having rejoined the almost inaccessible node of the Harki-Cramar country, they slant towards the south-west and also form this chaine magistrale of the Zagros which, in a set of parallel lines, makes up for a good part, the portions of Kurdistân, the eastern faces being situated in Iran and the western faces in Kurdistan in the plateau of Bingöl, with a thousand lakes, between the Tigris and Euphrates. But in contrast to these two rivers which are directed towards the south-west, it flows first towards the north, bends towards the east and passes into Soviet Armenia.

Let us first note the Araxes or Aras whose source is clearly in Kurdistân in the plateau of Bingöl, with a thousand lakes, between the Tigris and Euphrates. But in contrast to these two rivers which are directed towards the south-west, it flows first towards the north, bends towards the east and passes into Soviet Armenia.

The two great Biblical rivers traverse Kurdistân in particular. The Euphrates [see AL-FURÂT] is formed by two principal branches which enclose a vast Kurdistân region. The northern branch, the Kara Su (450 km. long) is made up at its source of numerous springs which come from the Diilak Dağ; then it flows in the plain of Erzurum where it receives the springs which rise in the Cîrbî Dağ, directs itself westward in narrow gorges, waters Erzincan, slants towards the south and follows a capricious course which snakes in every sense. It waters Kemah, passes by Keinalive, and runs into mountains on all sides which block its passage, to rejoin a little to the south of the Eğil the southern branch or Murat Su (650 km. long). This last has its source to the north of Lake Van, at the foot of the volcanic Mounts Alâ Dağ and Tenderek; the Murat Su climbs up again a little to the north, passes by Diyarbakir and Karkash, turns off again to the south and waters Tutak and Malâsgirt.
Then, always following its sinuous course, it passes to the north of Mus, waters Gene, Pali and Pertek, finally joining the northern branch to the north of Keban. Thereafter the two branches form the Euphrates properly so-called. Although the only important tributary on the right bank of the Kara Su is the Tokma Su (254 km. long), which flows into it to the north of Malatya and then runs outside Kurdistan, the Murat Su has numerous tributaries which, like the Peri Su (255 km. long), with their sub-tributaries, literally criss-cross Kurdistan; no area is very far from a watercourse.

The Tigris [see map], the other great xiver of the region (1,718 km. long), waters Kurdistan in its upper course. It has its source in the region of Lake Hazar to the north of the Maden Mts., waters for 300 km. of Turkish Kurdistan the towns famous in Kurdish history, e.g. Ergani, Diyarpakir, Hasankeyf and Cizre/Djazira. There are numerous tributaries, all on the left bank: Anbar, Batman, Gursu and especially Botan (226 km.), fertilize the land. It passes the 'Iraqi frontier at Fesh Khabur, where its tributary the Khabur joins it, and whose sub-tributary the Hassi waters Zakho. There then develops a complete network of beautiful streams, all tributaries of the Tigris, which are actual rivers. In the Great Zab (320 km. long), which rises in Turkey in Mergene Dagi between Lakes Van and Rizkubiy. It waters Culumcrik/Djulamarg, then in 'Iraqi the regions of Zibar and Barzan and, by one of its ramifications, waters Kirkuk/Daljuk Tut. (240 km. long) rising in the locality of Bazyan, with its various ramifications, waters Kirkuk, Daljuk Tut and Khurmatu, and traverses the 'Iraqi Mts., hurrying itself into the Tigris 30 km. south of Baghdad. Finally, there is the Diyala (385 km. long) which rises in the mountains of the 'Iraqi-Iranian frontier; its principal source in 'Iraq is the Tanghur which waters the plain of Shahrizor, and in Iran the Sirwan rising in Luristan. After Derbend-i Kehan, where a great dam has been constructed which is intended to serve for irrigation in 'Iraq, these two branches constitute the Diyala, which flows into the Tigris south of Baghdad.

Iraqi Kurdistan is also traversed by numerous streams of which several rise in the Cilis Çehme, a great massif of 3,083 m. height in the Mirkh country. Let us name only the Khat Uzun, whose various ramifications water all the Ardal Susan, not to mention the Djigatu (240 km.) and the Talatu which both flow into Lake Rizkubiy.

As with the mountains, the streams which run through Kurdistan may change their names according to the region traversed. Many watercourses, moreover, take their name very simply from the principal locality that they traverse.

There are also several lakes in Kurdistan, of which the largest is Lake Van. Situated at an altitude of 1,700 m., it has an area of 3,700 km.². Its salt waters are due to a volcanic barrier which deposits on its banks carbonate and soda sulphate. Only one kind of fish is caught there, a sort of large bleak with changing colours. To the north of Lake Van is Lake Nazik and to the north-east of Van is Lake Erof. Further to the north is Lake Bafik lying to the east of Kairose. At the sources of the Tigris to the north-west of Maden is the Hasar Golu, quite deep and with an area of about 50 km.². Its waters are salt and eels are caught there. In Iran one may cite Lake Urmia with a Kurdish population bordering it. It is larger than Lake Van (5,700 km.²), 130 km. long and 40 km. wide in places; it is more salt than the Dead Sea, and no fish can live there. Not far from there and to the south are two small lakes, the Shor Golu and the Daryaçeh Kopi. At the 'Iraqi frontier to the west of Mari Van and south-east of Penджvin is Lake Zræbar. In 'Iraqi Kurdistan there are no lakes at all.

Because of its altitude, the climate of Kurdistan is harsh. Snow covers the high summits for many months of the year. Precipitation is variable according to the regions. In the plains, rainfall varies between 200 and 400 mm. a year, although it may reach between 700 and 3,000 mm. on the plateaux between the different chains of mountains. In the maquis region, however, the climate is continental and even arid, and there are sometimes several months without a drop of water.

The temperature also undergoes quite large variations. At Karaköse in the north it may fall to −50°−55°C in winter and rise in the south in summer to +35°−40°C at Kirkmanšah (Ghassemou, 19). In Iranian Kurdistan, where a dry continental climate rules, the range may vary between −22°C. and +32°C. In general, the eastern slopes of the Zagros are more favoured than the western slopes. At Senna we have winter and +35° in July; at Khudairan, +2° in January and +42° in July; at Kirkikhi, +44.5° and +41°C. Further to the west, we find, in January and July respectively, at Malaya +1°, +5° and +20.5°C; at Ufa, +4.5° and +25°C; at Diyarpakir, +5° and +37°C; and at Van, −3.5° and +22.5°C.

2. The living landscape and habitation

Harsh as Kurdistan may be, it is far from being a desert; its mountains are covered with pasture and vegetation, and its valleys with forests and meadows which, in spring, are dotted with multicoloured flowers. There are also 10 million hectares of forests in Turkish Kurdistan, 4 million in Iran and 1,720,000 in 'Iraqi Kurdistan, of which 30 km.² are cedars. At the sources of the Tigris to the north-west of Van is Lake Ergani, where cedars are found. At Van, −3.5° and +22.5°C.

The temperature also undergoes quite large variations. At Karaköse in the north it may fall to −50°−55°C in winter and rise in the south in summer to +35°−40°C at Kirkmanšah (Ghassemou, 19). In Iranian Kurdistan, where a dry continental climate rules, the range may vary between −22°C. and +32°C. In general, the eastern slopes of the Zagros are more favoured than the western slopes. At Senna we have −25° in January and +35° in July; at Khudairan, +2° in January and +42° in July; at Kirkikhi, +44.5° and +41°C. Further to the west, we find, in January and July respectively, at Malaya −1°, +5° and +20.5°C; at Ufa, +4.5° and +25°C; at Diyarpakir, +5° and +37°C; and at Van, −3.5° and +22.5°C.

2. The living landscape and habitation

Harsh as Kurdistan may be, it is far from being a desert; its mountains are covered with pasture and vegetation, and its valleys with forests and meadows which, in spring, are dotted with multicoloured flowers. There are also 10 million hectares of forests in Turkish Kurdistan, 4 million in Iran and 1,720,000 in 'Iraqi Kurdistan, of which 30 km.² are cedars. At the sources of the Tigris to the north-west of Van is Lake Ergani, where cedars are found. At Van, −3.5° and +22.5°C.
Only a part of the arable Kurdish lands is covered by cultivation and crops. If, in Turkey, there are 25 million hectares of cultivable lands, only 30% are cultivated, of which one-third lies fallow each year (Esenkova, 168). In Iranian Kurdistan, out of 5 million hectares of cultivable lands, 24% are cultivated and 15% lie fallow (Ghassianlou, 90). In the various districts of 'Irāk, one of an area of about 8 million hectares, one quarter is cultivated (Khosbak, 41). Despite this, the cultivation of oleas in Kurdistan plays a good part in the economy of the respective countries: 15% in Turkey; 35% in Iran; and 'Irāk, 50% for corn and 15% for barley (Ghassianlou, 59, n. 6). Let us add here the cultivation of rice, which supplies 'Irāk with one-third of its production. Apart from this cultivation of foodstuffs, cotton and the newly-introduced sugar-beet give a good yield. The best tobacco of Turkey and 'Irāk is cultivated in Kurdistan which, for 'Irāk, supplies almost all of its needs (Khosbak, 45). The vine grows a little everywhere in Turkey, 'Irāk and Iran, it only flourishes in Kurdistan on sunny slopes; there are 12 million stands in 'Irāk (Vernier, 48) and the kinds of grapes are numerous and varied (see the names in Hauver, n° 34, 8; Wahby, Dictionnaire, 148). Some are reserved for the preparation of raisins used so much for food.

Fruit trees also abound in Kurdistan: pomegranates, peaches, apples, figs, apricots and centenarian walnuts. Market-gardens are developed around the villages and even in the mountains where the Kurds, an ingenious gardener, constructs terraces supported by small walls in order not to lose any parcel of arable land. Of the vegetables in general use in the west, the onion, for example, so much appreciated by the Kurds, is especially cultivated, and certain vegetables such as watermelons, cucumbers, melons, etc., without forgetting the lettuce, held in abhorrence by the Christians "Tobias's fish", which is two metres long and whose flesh is excellent. One may see a photograph of it in Hamilton (between pp. 32-3). Apart from these pleasanter creatures, one must beware of the snakes, small but venomous, such as vipers, and of the yellow or black scorpions whose sting can be deadly, especially for the very young, although the numerous lizards, geckoes or varans and the chameleons are harmless, as are the tortoises. But in spring, flies, mosquitoes and fleas are dreadful and constitute a real plague. The bee also stings, but produces a very tasty wild honey.

Apart from these creatures, who live wild, there are in Kurdistan many animals which have been domesticated and have been raised for profit since the earliest antiquity (cf. Ch. A. Reed, Animal domestication in the Prehistoric Near East, in R. J. Braidwood, B. Hove, etc. Prehistoric investigations in Iraqi Kurdistan, Chicago 1960, 119-45). Indeed, Kurdistan is a land of stock-breeding: sheep, goats, cows and buffaloes supply milk, butter, cheese and meat, skins, fleeces, guts, horns etc. of which the leather and wool serve to make clothes, shoes, felts, etc. and provide an obvious economic yield. In 1957, in the Kurdish regions of Turkey, there were 7,602,332 sheep; 4,126,016 goats, one-quarter of all Turkish stock-breeding, and 2,240,825 cows, one-sixth. There are also many buffaloes (Balsan, 128). In the Kurdish provinces of 'Irāk there are 1,574,912 sheep or two-thirds of the 'Irākī breeding stock, 2,254,829 goats (two-thirds), 226,536 cows (one-third) and 4,487 buffaloes (one-tenth). Apart from this, the large-scale breeding of the nomads (half the production in Iran; Stauffer, 292) each household has its small herd of a few animals, sheep or goats, four to eight (ibid., 290). The Kurdish villages of 'Irāk studied by Barth (19) are richer. Each house also possesses a few chickens. There are different breeds of sheep with fat tails and goats with long hair, carefully watched by shepherds expert in their craft. Other animals indispensable in everyday life are also reared. Among the Kurds of 'Irāk are found 22,289 horses (one-seventh), 32,336 mules, almost the whole production, 130,804 donkeys (one-third; Khosbak, 32). Also, let us not forget the Kurdish sheepdogs, a strong, imposing and redoubtable breed (Balsan, 236). Naturally, no pigs or rabbits [see Arab in Suppl.] are reared in Kurdistan.

The interior of the soil in Kurdistan is no less rich in minerals than its surface in vegetation and animals. But until now, its resources have been very little exploited. Quite abundant supplies of coal have been discovered in the region of Maden, Kūh, Kūmah and Harput, where it has been exploited (several thousand metric tons in 1970), but not at Salgho in 'Irākī Kurdistan. Near Sulaymānī limestone is extracted and, at Sar Cinar, a cement works has been producing since 1956, 350 metric tons of cement a day. Deposits of rock-salt can be exploited at Sinda, Shaykhān and Tur Khurmatu. Sulphur is found in the province of Senna, at Amadiyā, and a Polish group plan to extract 250,000 metric tons of it a year at Mīhrāk in the north of 'Irākī Kurdistan. Iron is not lacking in Kurdistan, and is mined (1,000,000 tonnes in 1960 at Maden). But very rich, easily exploitable deposits of iron ore are found in the region of Rawandiz and Sulaymānī. Copper exploited (32,000 t.) at Ergani,
Diyarbakir and Palu, is also to be encountered in the region of 'Akra. Chromium is found in the region of Barzan and at Diyarbakir, where it is extracted (170,000 t. annually). There is lead at Bakar, Elazığ, and Maku, gold at Yorgû and to the south of Kirmângûh, and also silver at Kemah. At Kırıkko, the reserves of salts allow the manufacture of caustic soda and chloride. But it is petrol which is the chief riches of Kurdistan. The petrol of Kırıkko gushes forth in the midst of Kurdish territory and represents a good part of the Trânâş production (85 million t. in 1970). The same applies to the petrol of Duhurn in the Shurt region and the oil-fields of Keraçok in northern Syria. Natural gas is abundant and sulphurises in the region of Çamamâl.

3. The human aspect

This region which the Kurds occupy today has been inhabited since the most ancient antiquity, e.g. Berda Balka, the cave of Hazar Merd of the Mousterian period, not far from Sulaymánî or that of Shanîdar, near Rawândiz, where the first Palaeolithic human skeleton in 'Trân was discovered. Dîanno, in the valley of Çamamâl, may be the most ancient village in the Near East, for it was probably one of the centres where man cultivated for the first time various species of barley and corn, according to excavations of a team of researchers of the University of Chicago (cf. Brakwood, Movo etc., Prehistoric Investigations in Iraqi Kurdistan). Today, the Kurd is settled throughout the land and has established numbers of villages there.

Originally, he was content to occupy the innumerable refuges, shelters under rocks and numerous caves, some of which are difficult of access and very picturesque with stalagnites and stalactites (Edmonds, 235), and which sometimes extend deep under the mountain. These caves always serve, on occasion, to shelter the herdsmen, but sometimes peasants are still to be encountered living in them. Numerous legends circulate about some of these caves where treasures are said to be hidden and where the passing of djinn and irîfres is mentioned (Edmonds, 267-8, 246, 532, 368-9; Hamilton, chs. xiv-xvi). Certainly, the nomadic Kurd, on the verge of extinction, and the seminomads live under their black tent, which shows traces of the former bedouin Arab, the kibîka of the Mongols, the yurt of the Samoyeds and the hûr of the Lupas (cf. C. G. Felberg, La tende noire, Copenhagen 1944, 81-6; Bishop, i, 573; Lesot, 144-5; and Kremp). It is formed from a great awning made of woven strips of goats' hair 50 x 60 cm. wide. The poles which hold it up are 2.50 by 3 m. in height; their number varies according to the size of the tent, i.e. according to the importance of its owner. There are no ridge poles.

Reed partitions separate the corner of the women and provisions from the part of the tent where the men and visitors stay. All the furniture consists of a few mats, cushions and some carpets in the chiefs' tents. But the Kurdish peasant lives in rough houses. The construction materials are ordinarily unfired bricks in the plains, but fired ones at Sulayminî, for example, or rough stones, in the mountains joined together with mud. The walls are 2.50 m. high. In the rough stone walls are sometimes inserted poorly-hewn beams to make them stronger. Inside, niches are arranged in the walls to serve as cupboards. The walls are roughcast with mud and sometimes whitened with lime. The door is of massive wood. There is no window on the exterior, but those exist looking out on the courtyard, with protective bars. Simple little lanterns light the place, when the door cannot be left open. The floor is of beaten earth. In the centre the hearth (lendi) is covered in winter by the hûrisi, a kind of wooden bench with a covering on which all the family warm themselves in the coldest regions. A hole in the roof serves as a chimney. Along the walls runs a broad bank of earth where people sit during the day and where they sleep at night on mats, felts or mattresses. The terrace is made of poplar trunks spaced 30 cm. apart and covered with branches, leaves and dried grass and a thick bed of hard-pressed earth. If the room is too wide (more than 3 m.), poles hold up the beams and roof battens. For the water to run off, the terrace extends beyond the retaining walls or gutters for a metre, e.g., at Sulaymánî, facilitating the running off of rainwater. In any case, a roller is always to be found on the terrace in order to press it down after downpours. One climbs up by a ladder or outside staircase. The house of the plain, where there is space, has a courtyard and a building principally composed of a rectangular living room, lengthened by a corner reserved for the animals. A solid annexe building serves as a kitchen and store for household utensils, tools and work implements. There is no cell or attie, often not even latrines. In the mountain houses the stable is often in the courtyard, as are the annexes. The living room is situated above with, at the bottom, a small corner for the provisions. Often there is also a small veranda or loggia facing south. The terrace is the favourite place for the women, who perform their many daily occupations there. (For descriptions, plans, photos or drawings of different Kurdish dwellings, see: in Dîazira, R. Montague, 53-65; at Sindîr, R. Lesot, 146-7; at Sulaymánî, Edmonds, 90-3; again at Sulaymánî and at the village of Topzaya and Belîka, H. H. Hansen, 21-43; and in Iranian Kurdistan, Bishop, i, 88, ii, 791, M. Molier, 89-91. See also Leach, 49; T. F. Atkinson, 95, 97, 99 for Transcaucasia.) Naturally, man does not live isolated in his house, but in a group. Villages have grown up, and the Kurd, a man of the earth, lives more in the village than in the towns. Like all villages in the world, and especially those in mountainous countries, the position is chosen in relation to the sun and to water, a stream or spring. So it must be oriented to be well exposed to the sun and sheltered from the wind, following the axis of the mountain chains. Exposure to the north is avoided. The south, the direction of Mecca (Molier, 81), is preferred to the east. The importance of the village depends on their proximity to places of passage (mountain passes and bridges) and also on sufficient cultivable lands and pasturages. Many villages are built on a slope, the roof of the higher houses forming a terrace for the houses below, and this occurs in all the regions of Kurdistan, e.g. at 'Akra, Bazîndjan and Sharîr Havramân. It is not rare to sight on a neighbouring peak some ruins of an old castle, a trace of the past glory of a local magnate vanished for centuries. Such as it is, the Kurdish village has a rather pleasing and sympathetic appearance, precisely because of the water, green and terraces.

The Kurdish villages are closer to one another or more dispersed, according to whether the region is more or less exposed to hazards. In the whole of the 17 provinces of Turkey with all or a high proportion of Kurdish population, according to the official census of 1965, 8,817 villages were counted, of which 395 had less than 100 inhabitants, 513 from 101 to 500, 1,851 from 501 to 1,000, 572 from 1,001 to 2,000 and only 39 with more than 2,000 inhabitants.
Three provinces of Muş, Hakari and Van can be taken as criteria for appreciation:

<table>
<thead>
<tr>
<th>Province</th>
<th>Area in km²</th>
<th>Inhabitants</th>
<th>Density in inhabitants per km²</th>
<th>Number of cantons</th>
<th>Number of villages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Muş</td>
<td>8,193</td>
<td>167,638</td>
<td>20</td>
<td>15</td>
<td>368</td>
</tr>
<tr>
<td>Hakari</td>
<td>9,322</td>
<td>67,755</td>
<td>7</td>
<td>22</td>
<td>333</td>
</tr>
<tr>
<td>Van</td>
<td>18,519</td>
<td>211,034</td>
<td>11</td>
<td>21</td>
<td>557</td>
</tr>
</tbody>
</table>

Thus the villages are more or less dispersed. They are also unequally populated, as the table below shows:

<table>
<thead>
<tr>
<th>Province</th>
<th>Inhabitants less than 100</th>
<th>100-500</th>
<th>500-1000</th>
<th>1000-2000</th>
</tr>
</thead>

<tr>
<td>Muş</td>
<td>9</td>
<td>289</td>
<td>64</td>
<td>1</td>
</tr>
<tr>
<td>Hakari</td>
<td>5</td>
<td>84</td>
<td>45</td>
<td>5</td>
</tr>
<tr>
<td>Van</td>
<td>39</td>
<td>456</td>
<td>51</td>
<td>11</td>
</tr>
</tbody>
</table>

This average of small villages from 500 to 500 inhabitants is found in 'Iraqi Kurdistan, in the region of Rawandiz (Barth, ii) and in other regions; 300 inhabitants is also the average of the Kurdish villages of Iran.

Altitude is also a very important factor in the establishment of the Kurdish village. By examining the snow contours on Hütteroth's map, e.g. to the south of Lake Van in the region of Hakari precisely, it may be ascertained that the villages are relatively very numerous between 1,000 m. and 1,500 m., quite numerous between 1,500 and 2,000 m., rare between 2,000 and 2,500 m. and that they disappear altogether above 2,500 m., apart from pasturing camps or moor. Some agreeable summer dwellings are found in the middle altitudes. Thus in 'Iraqi Kurdistan, in the province of Duhok, we have Zawitha, at 1,422 m. in the midst of vast fir woods, Suwarteruka, at 1,675 m. among cypresses and maples, Sensin, at 1,046 m. with gushing springs, Sulay, at 1,430 m. and its waterfalls, Sarr Anâdieyya, at 1,903 m.; in the province of Sulaymâni: Sarr Cinar, with great plain trees, as its name indicates; in the province of Arbîl, Sulik al-Din, at 1,090 m., Shâklawa, at 565 m. with luxuriant orchards at the foot of Saltin, Gali 'Ali Bag, at the same altitude with a great waterfall, and especially Hadjî-fill Omrân, at 1,780 m., very fresh in summer and a ski resort in winter. In the province of Hakari, the high peaks of Cillo Dağ, which are between 3,500 and 4,000 m., have for some time attracted foreign mountaineers (cf. B. Amy, La montagne des autres. Alpinisme et esprits kurdes, 1922, with maps, photos and bibliographies of the last expeditions).

The smaller the village, the more its comfort is reduced. This is the case also in Turkish Kurdistan, where more than half of the villages do not have drinking water, a mill, a school, a hospital (or cafe) or a special house for guests. The lighting there is mainly by oil, candles and kerosene. The wells are near the house, not far from the river. The Electric Company of Sulaymâni, under Japanese control, is opening for 10,000 persons (Ghassemi, 35).

To move from one village to another, to enter into more or less intimate social relations of family, friendship, tribe or commerce, the Kurd follows either the paths or tracks which link the villages or the more the larger motor roads of commercial or strategic value which have been constructed by the interested governments. In the mountains, the mule tracks or footpaths, which are often, in any case, no more than foot bridges, replace at many points these primitive bridges which are often, in any case, no more than foot bridges (Hamilton, 197). Many legends are attached to these ancient bridges (Edmonds, 201, 212, 247). In the plains, especially in Turkish Kurdistan, there are still many simple earth tracks only usable in the good season. But some modern metalled, tarred and macadamised roads have also been built. The roads through the mountains are often real works of art.

'Iraqi Kurdistan is now furrowed with numbers of fine roads which facilitate human relations. In 'Iraqi Kurdistan, some roads or good tracks link Mawsil to Zelgho, Anâdieyya, Arbîl and 'Akhira. From Arbîl one goes to 'Amedî (and also to Kirkûsh and then Sulaymâni. In Turkey, one road goes from Malahu to Eağzî, Tunceli, Erzincan, Ankara, Erzurum, and Kars. From Eağzî a branch goes off to Erzîgûl, Mux and Tavatun, and another towards Diyarbakir, Mardin and Nîsöyên. From Diyarbakir, one may branch off for Silvan and Sirt, or Silvan in the direction of Bitlis, Tavatun and Van, by the road or by steamer on the lake.

Few railways cross Kurdistan. In Turkey one may pick out the line Erzincan-Erzurum-Kars, towards Armenia; the line Malaya-Eağzî-Gemi-Mux-Tavatun-Van by ferry in the direction of Tabriz; and the line Malaya-Sivrice-Maden-Erman-Diyarbakir-Batman, towards Sirt. The Orient Express from Istanbul goes to Aleppo, skirts the Kurdish populations of the Turko-Syrian frontier, and reaches Mawsil and Bagdad. In 'Iraqi Kurdistan, a single narrow-
Several military routes fan out from the airports situated in Kurdistan. The most important are in Turkey: Erzurum, Kars, Kirkuk, Malya, Van and Diyarbakir; in Iraq: Mosul, Kirkuk, Semel, and Hamam al-Sham; in north Syria: Ramilli; in Iran, Sanandaj, Kermanshah and Rizia.

E. An anthropological profile of Kurdistan. Situated as it is at the crossroads of populations as different as the Turkish, Persian, Caucasian and Arab peoples and in very intimate relations with most of them, does the Kurdish people possess characteristics such that it may be distinguished very clearly from the others? The question can legitimately be posed, and many scholars have tried to distinguish the anthropological aspects which would allow this process of discrimination. It is evidently not a matter of searching for a Kurdish race, since this notion of race can scarcely be applied to humans, although some important genetic differences are ascertainable between more or less homogenous populations possessing such-or-such characteristic blood-group (Rufik, 1972). Anthropological researches on the Kurds began more than a century ago with E. Duhamel (1857) and N. V. Khanikoff (1866), who have been carried out in all the regions of Kurdistan.

In Iran, first of all by the authors cited, then by M. Houssey (1887); in Transcaucasia by E. Chantre (1880, 1889) and Faloutlkh (1864); in Turkey in the valleys between the Euphrates and the Tigris (G. Pisson, 1892), to the south of the Black Sea at Karakus, at Nemrut Dağ, to the west of Lake Van, and at Zencirli (von Luschan, 1922); in Syria, at Damascus (Arêns Kappers, 1937), and at Zencirli (von Luschan, 1922); in Persia, by M. Houssay (1887), by Soubrier (112, 113, 144) and Mark Sykes (321, 342, 373, 424-5), and in north Syria, by M. Houssay (1887), E. Anats (1922, 1925), by Soubrier (112, 113, 144), and Mark Sykes (321, 342, 373, 424-5).

In the 235 Yazidis examined, and the comparison with the Assyrians, the Shamar and Shembeh Arabs or the Turkomans also studied by the author is interesting. The resemblances encountered are no doubt to be explained by intermarriage. But this does not prevent E. Duhamet (1857) from recognizing in the Kurdish people a rare homogeneity with respect to its type and, for his part, Arêns Kappers (1937) admits that the Kurds, despite their anthropological differences, constitute a truly distinct race. Thus we can, in summarizing the studies of H. Field, present as follows the portrait of the Kurd of Iraq: "The Kurd is of medium height (1.66 m.) with a relatively long body and short limbs. The forehead is wide and the head wide and round. The brachycephaly predominates. The height of the face is medium. The nose is quite often convex. The Kurd is more hirsute than the Arab. His hair, rather wavy and pilent, is normally dark brown and the eyes black. But blond hair and blue eyes are also to be encountered, especially in the western regions. The colour of the skin is more clear than that of the Arabs, but less fine than that of the Assyrians. The teeth are normal and well-placed. The musculature is good, as is the health, in general, of those who have been observed?" (Th. Bois, 18).

Despite everything, these anthropological researches on the Kurds are too fragmentary and uncertain for us to be able to conclude from them what may be the origin of this people. It is indispensable here to combine the study of the language with that of the history.

Bibliography. Maps. No complete scientific map of Kurdistan exists, The Carte du Kurdistan 1/4,000,000, Cairo 1943, aims especially "to give a graphic representation of that which the Kurds occupy in the Middle East"; a Note of 12 pp. which accompanies it is intended to explain it and to justify the different data. Die Kurden, Volk ohne Staat, 12,5,000,000; ed. Die Aktuelle Landkarte, no. 224, Munich 1956, clear and simplified, does not indicate the relief at all. For Turkey, the old maps of H. Vesper 1857, or better, Turkish surveys, 1/3,000,000 of Parks, Subur, Istanbul 1948, La carte de l'Asie orientale 1/2,000,000 of the Troupes du Levant, Beirut 1939, or that of the War Office and Air Ministry, London 1951-2, 1/5,000,000, sheets NL27 Erzurum, NL28 Tabriz and NL38 Baghdad, of series 1950, CGGS, cover the whole of Kurdistan. More or less elaborate maps are often to be found in the different accounts of journeys. So much the more to be appreciated are the precise and detailed maps in the book and many articles of C. J. Edmonds. Albums. To illustrate all this: M. Zikmund and J. Hanzeła, Kurdistán, kurdistán, country of insurrection, legends and hope, Arta, Czechoslovakia 1962; K. Diltmann, Verunrechte Fronen … Live die Heiligen werden dich helfen, Hamburg 1946.

iii. — History

A. Origins and Pre-Islamic history.

The classification of the Kurds among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnic elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the expansion of the Kurd element took place from east (Western Persia) to west (Central Kurdistana) but there is nothing to have prevented the existence in Central Kurdistana, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Kardus) which later amalgamated with the Iranian Kurds.

On two Syrian inscriptions dating from about 3,000 B.C., Thureau-Dangin (Revue d'Assyriologie, v, 1910, 59-62) found a country Kur-da-ba mentioned (in which word the initial is k and not f and the function of the element a is uncertain). This country was beside the "people of Su" (cf. ZA, xxxvii, 230 n. 3), which G. R. Driver located south of Lake Van; there is an old fortress Suy in the region of Bidlis (Shuraf-im, i, 146). A thousand years later Toghtig Fiscier waged war on the people called Kur-tie in the mountains of Azu, which Driver (in JRAI [1953], 400) identifies with the modern Hazid (Skadn). The reading Kur-tie is not certain, however.

Herodotus in the 5th century B.C. mentions a name like this, but, according to him (iii, 93), the thirteenth nome of the Achaemenid empire included next to the Armenians a Xarids (which Nöldeke (Graff, 19. Jh., Leipzig 1886, p. xvi) and Kiepert (Alt. Geogr., § 81) have connected with the name of Boldan (= Bonhtan). The retreat of the Ten Thousand described by Xenophon (401-400 B.C.) made famous the name of the Kardeshen (Kardus) whose country lay to the east of the Kentritis (Bohtian). From this time onwards we continually find the name on the left bank of the Tigris near Mount Dold (p. 22). In classical authors, the country became Cordune or Duran on the numerous forms of this name, probably produced by the difficulty of reproducing the Semitic h, of Driver, op. cit.). In Aramaic the district was called Belf Kardu and the present town of Djezarat Ibn Umar, Gazartta of Kardu. The Armenians had the name Kordush, the Arabs (Balahdah, 179; Tabari, iii, 670) Bakard (Kardu). According to Yakkut (iv, 56), who relies on the authority of Ibn al-Aghir, the canton of Bgard formed part of Djezarat Ibn Umar, contained two hundred villages (alamkain,
According to this, the term ropSuato 8p7j was sometimes considered to have a certain consonantal resemblance with the name of a bar (to be strong); on the other hand, there is a reference to his commentary on Constantine Porphyrogenitus, his principle centres of the Kurds. It has therefore been noted that the ancient Karduchoi is at the present day one of the irdiguous people, it is certain that the land of the Khaldi was identified with the Khaldi and Corduene was called Manisarus. According to Hübschmann, Die aliarmanische Ortsnamen, 229, and Armenian Grammar, it/2, 518-20, the province of Corduene was only superficially Armenised.

There is nothing really surprising in finding at the time of Xenophon an Iranian tribe settled to the north of the Tigris, but we have nothing but the evidence of the name from which to judge the ethnology of the Corduene. The name has Semantic analogies (Akkad., Assy. bardu, "strong," "hero," bardu to be strong"); on the other hand, there is a certain consonantal resemblance with the name of a people Kahlid, better known under the Assyrian form Urartu/Uzara, in Hebrew Aretar, among the Greeks Alpadoi, X Jordan and sometimes Xkaldai. These people appeared in Armenia towards the end of the 9th century B.C. and afterwards Corduene was called Manisarus. According to Hübschmann, Die aliarmanische Ortsnamen, 229, and Armenian Grammar, it/2, 518-20, the province of Corduene was only superficially Armenised.

The justifiable distinction between the names Kurl and Kordi does not, however, decide the important question, how the Cyrtii (= Iranian Kurds) came to colonise lands west of the Zagros, the country of the ancient Corduene, and the mountains of the Anti-Taurus as far as northern Syria. The problem still requires careful research. In the first place, the Media and Persian conquests must have brought about considerable displacements of the Iranian peoples. We have an example in the migrations of a part of the Asagartiya whose original home was in Sistan. In the Assyrian period we find these Sagaritians in Media (Zikirtu or Zakritu, cf. Streck, in ZA, xiv [1890], 146) and in the time of Darius (Biblioth. inscr. 2, 90) their capital was already in the Assyrian plain at Arbela, where Darius had their chief Citrakakha executed, whose portrait on the rock of Buxur suggests a Kurdish type (L. W. King, The sculptures of Behistun, London 1907). Between 220 and 171 B.C. we find Cyrtian mercenaries taking part in the wars between Rome, the Seleucids and the kings of Pergamon (Livy, xiii, 58, 13; xxvi, 40, 9; Polyb., v, 52, 5; cf. Weissbach in Pauly-Wissowa, s.v. Cyrti, and A. J. Reimach, Les mercenaries de Pergame, in Archives d'histoire des religions [1909]). A very interesting state of transition is seen from the Armenian Geography of the 7th century, in the case of the province of Kordi (according to Adonts, Armenia, 418, Kordi is from *kordišk which horiti means "Kurd", as airpoš means "inhabitant of Atropateni"). In the time of Faustus Byzantinus (4th century) Kordi was only a canton near Salmān [q.v.]. As a province, Kordi stretched from Diarbekr to Diarbekr Ibn 'Umar and included the following cantons: Kordi, the three Kordi (Kordili), Aituanb, Aigata, Moholauhb (Otho- laukh), Orsrauih (Orsinau), Karathunih (Sarapil), Caluuk and Little Albak (Hartmann, Belkaz, 93; Hübschmann, Die aliarmanische Ortsnamen, 235).

We see the changes that were gradually brought about. Of the three districts, Kordi, Kordi and Tormīr, which Faustus mentions in place of the ancient Corduene, Kordi had become a mere canton of Kordi and Tormīr disappeared altogether to the advantage of Kordi (Kordi), of which simply upper, middle and lower cantons were distinguished.

Hübschmann op. cit., 385, confines himself to distinguishing between the Kordi (Kordi) of the Cóptos, but in general the linguistic distinction established by M. Hartmann and Nödeke does not preclude the existence of hybrid and corrupt forms (M. Hartmann, Botuan, 92: "es gingen wohl schon früh die Namen durcheinander"). Nödeke even
KURDS, KURDISTAN

KURDS, KURDISTAN

distinguishes a third group of names: Aramaic Kurdis (Arabic Karwiyah), meaning the true Kurd, as opposed to Avasyis and Avestan Ahtricsi, and thefourth group of names: Aramaic Kupluwum, meaning the "dragon-king" (Kurd.) Haftum-Bolt killed by Arctas, and Pappak, cf. Noldeke, Gesch. der Perser und Araber, 21. According to another legend, especially popular in the north and west, the Kurds were at one time divided into two branches, Milzn and Zilãn, the former coming from Arabia and the latter from the east; the Zilãns were regarded as an inferior race (cf. P. M. Sykes, in Jaisl. R. Anthropologisk Tidsskrift, xxxvii (1908), 476).

In the 9th century, the existence of an Iranian non-Kurdish element among the Kurds has been definitively established (the Gûrûn-Zâta groups). In several districts a social stratification based on the political domination of newcomers has been established (at Sulaymaniya [gawa], at Sawdj-BulAk [gawa], and at Kesã, where we find remnants of the Mandu-si [?] in subjection to the Shâhid). Systematic investigation may discover traces of ancient peoples overlaid by a Kurdish element giving an appearance of unity.

Genealogies and popular etymologies. The Muslim sources and Kurdish traditions do not help us to solve the problem of the origin of the Kurds. Mas'ûdî (Murâdî, iii, 251) already speaks of the descent from those Persians who escaped from the tyrant Dabîhâz. This legend is best known from the version of the Shâhid-nama (Masan, i, 27-8; Mohi, i, 71; Vullers, i, 36, verses 29-38). In 1812 Morier (Second journey, 157) mentions the celebration at Dannyân (on 31 August) of a festival commemorating the delivery of Persia from the tyranny of Dabbsk, known as the 'Abâd-i Kurds, "The Kurd festival". On the other hand, the Kurds sought Arab genealogies for themselves. Some (Murûdî, iii, 253) claim as their ancestor Rabl b. Niezr b. Ma'add, others Mu'éz b. Niezr, both surnyms of the districts of Dhiyar Rasul (Masûlî) and Dîyûs Mu'tar (Rakbâl). They said that the Kurds had separated from the Arab stock as a result of feuds with the Chassanids.

More of interest is a series of ancestors among whom we find Kurd b. Mard (cf. of Masûlî) the neighbours of the Kurds) b. Sûasã b. Harb b. Hawâzin (Masûlî, ibid., and Tarmîkî, 88-91; Kurd b. Isfandîyarîd b. Manbûghâr; Ibn Ijâkal, 185-7; Kurd b. Mard b. 'Amir). All these genealogies may contain a few grains of historical fact among the traditions of Semites, interfmingling of the tribes of the Zagros and of the Fars.

In later times, the names of the tribes were often explained by those of their eponyms. The Sharâf-nawa, in 357, makes all the Kurds (the Bagdawî and Belkhi tribes) come from Badjân and Bolôt; the former of these names may be connected with that of Basn-av, a tributary of the Tigris (Andres, in Hartmann, 131), Eucyploedia of Islam, V while the second recalls the Iswâm of Herodotus, or the "dragon-king" (Kurd.) Haftum-Bolt killed by Arctas, and Pappak, cf. Noldeke, Gesch. der Perser und Araber, 21. According to another legend, especially popular in the north and west, the Kurds were at one time divided into two branches, Milzn and Zilãn, the former coming from Arabia and the latter from the east; the Zilãn were regarded as an inferior race (cf. P. M. Sykes, in Jaisl. R. Anthropologisk Tidsskrift, xxxvii (1908), 476).
picture is given in the *Sharaf-nama* (1003/1596). The Turco-Persian frontier became gradually stabilised and the Persians fell back behind the wall of the Zagros and its northern extension. Then Turkey began the work of strengthening the authority of the central power within her eastern provinces. Towards the end of the 19th century the last Kurdish principalities disappeared in Turkish territory (Hakkarî, Bâdirî, Sulaymânîyya) and in Persia (Ardabil). But the great tribes still exist, and their envoys assure the preservation of the Kurdish element with its social and ethnic peculiarities. Kağâr Persia hardly ever interfered in the domestic affairs of her Kurdish tribes, while in the late Ottoman period Turkey tried to use the Kurds as a political support for the central authority. Sometimes the Kurds were overwhelmed with favours, and sometimes they had to resist attempts to abolish the remnants of their ancient autonomy. Several risings of the Kurds took place in the 19th century, and towards the beginning of the 20th century a Kurd movement added one more element to the nationalist agitation within the Turkish empire. The revolution of 1908 drew the Kurds into politics; newspapers, magazines and Kurd societies began to multiply. During the First World War of 1914–18 the idea of an autonomous Kurdistan under such heads as Zawzan, Jâulât, Armlînya, Arzalan (one of the gates of Barda‘a was called Bab Arrin), al-‘Ijaza, Syria and al-Ihughir (‘Jacobites’) and the Drurîn dJârtighAn). To this list, the *Tanbih* of the same author (88–91) only adds Bazindjan (cf. Iftakhri, 115), Nashawîra, Bâshîkân, ZâbAdî, Shahrawî, Bâmaddakî, JShusrawl, Nasrî, Mihrâkî, Mubârîkî, Khâdiân, Fârâbî, Mâdîanî, Shahrîyâr, Kîshkân, Burjî, ilamâ<dhan, Shahrizûr, with its dependencies, and reproduced by Ibn Hawfcal, 253; *Istakhri*, 125, the king of al-Zawzin was called al-Khâdîrî [q.v.]; cf. the story of Daysam below); in QîbAl*.

But the great tribes still exist, and their cadres of families of Kurds were exterminated, but we must recognise the possibility of regrouping among the cadres of the old families and their denationalisation. The old term of Djîliya (Kûh-Gilî) is now inhabited by Kurds under his command), Baylaktan, Bâb al-Abbâb (Darband), al-Dîzîra, Syria and al-Thughrû (i.e. the line of fortresses along the Cilician frontier).

*Istakhri*, 98, particularly mentions five *ramîn* of Fars, this term being applied to districts over which the Kurds were distributed (in spite of de Goeje, BCA, iv, 250, it is preferable to keep the reading *ramûn-ramûn* from Persian *ramûn*, "lock", "crowd") for it is improbable that some could have given a plural *ramûn*.

Each *ramûn* had its town, its Kurd chief in charge of the *râmdj* and responsible for public safety. These *ramûn* were: 1. Djîlîya, or Rashidjân, bordered by Işfâhân and Ardabil; 2. Lâwâlijân, between Shsirz and the Persian Gulf; Djîlân, in the *kafr* of Sâbûr, 4. Kâribîs in the direction of Kûrmân; 5. Shsirîyâr, alongside of Işfâhân also called Bâzdânjân after the principal tribe, a part of which had been transferred to the province of Işfâhân. As a supplement to the list of *ramûn*, *Istakhri*, 114, gives a list of 33 nomad tribes (*bâyî, plur. âhyâ*) of Fars, based on the records of the *dawâs al-salâbâd* and reproduced by Ibn Hawfcal, 183-7 and *Mukaddasî*, 446: Kûrmân, Râmâni, Mudâdhâbî, Muhammad b. Bâshîr, Bâdkî (Muqaddasî: Thâlîbî), Bândîdîmân, Muhammad b. Iâbâk, Sâbûlî, Işîdî, Adbârîkân, Shsirhârî, Tahmâb-îh, Zâbâdî, Shahrîyârî, BarZâmâî, Zândî, Safârî, Shâyhîyârî, Nûshârî, Muqaddasî, Işfâhânî, Shsirhârî, Fârâbî, Sâlmânî, Shâhîkân, Kadiî, Djâlîlî, in all 500,000 families living in tents.

The *Fars-nama* (ca. 500/1107) says (168) that the Kurds of the old large *ramûn* of Djîliya, Dîlân, Lâwâlijân, Kûrmânîyân, Bâzdânjân, who formed the most brilliant element in the old army of Fars, all perished in the wars at the time of the introduction of Islam, with the exception of a single *Alek*, who became a Muslim and left descendants. Other Kurds were transferred from Işfâhân to Fars by ʻAqlîd al-Dawla. It is difficult to admit that 500,000 (?) families of Kurds were exterminated, but we must recognise the possibility of regrouping among the cadres of the old families and on their denationalisation. The old *ramûn* of Djîliya (Kûh-Gilî) is now inhabited by Kurds; we do not know how long they have been there. For the rest, *Istakhri's* list mentions a tribe al-Lurîya (variant: Lâzâb) among the Kurds of Fars. On the other hand the *Fars-nama* distinguishes from the Kurds the Shabbânîs (q.v.) clans, who had become very powerful in Fars at the time of the last Bayids. The *Masûlik al-abshâr* of *Umarî* speaks of the Shabbânîs under a separate heading, and the *Sharaf-nama* does not mention them among the Kurd dynasties. One of their clans, however (Râmâni), bears the name of one of the "kurd" tribes of *Istakhri*. Everything then suggests that the Kurds of Fars differed considerably from the tribes of Kurdistan (cf. p. 381 and LUR). The term al-Zawzan, which corresponds broadly to central Kurdistan (pouns in Kurdish "summer pasturages"), is not well defined. According to Ibn Hawfcal, 250, the king of al-Zawzan was called al-Dâyrân (= Dorânî, Armenian king of Vaspurakan), *Mukaddasî*, 137, regards Zawzan as a *nâhîya* of Dîzîrat Ibn Umar. Later this region, which had a mixed Kurd and Christian population, became extended in area. According to Ibn al-ʻAthîr (in Yâkhî, ii, 257), al-Zawzan began at two days’ journey from Mawâlî and stretched to the borders of Kâribî; on the *Adhârîyâdîn* side it extended to Sâlmâ. Many strong places belonged to the Bâshîawî and Bâshî Kurds; the former held Bâshî, Bâshîr [and Funk];
to the latter belonged: Dihurqalil (Gurgil), the residence of their multih Attil (Shahr-i-nama, i, 172; Nahl Attil), 'Ali, Bâz al-hamârî. To the lords of Mawâlî (the Zangids) belonged Atîf (= Elî), Arwákh, Bakhtawâkh (= Bakhtî in Barâwî), Bâzr, Nigâwar (?), NÎraw (east of Akî) and Khawâghb. The text was completed by the Turk general Awdâl and his adversary Ya'kûb b. Bâkhît (Kâmîl, vi, 350-1). A Kuríd rising broke out in 231/845 in the regions of Iṣfâhân, Dîbâl and Fârs; it was speedily suppressed by the Turk general Qâfî.

The Kurds under the caliphs and Buîydîs. Of the Persians and Christians, took part in the rebellion of Abû-l-Aswâd; on this occasion he returned to Mawâlî and with new troops set out against the Kyûrâdîs. At Abwâz, Ya'kûb appointed a Kuríd lieutenant, Muhammad b. Layhûyâ; the latter, a Kuríd and commander of the Kuríd levies, had been sent by the caliph to put down Ya'kûb's rising (Ibn Khâlikîn, Wâsâyân, ed. de Slane, i, 304-5). When Ahmad had departed, Muhammad, after securing from al-Khabîth further reinforcements consisting partly of Kurds, seized Shûstâr, where, according to the arrangement he had to have had the qâdî of Tabâristân, but instead he did it in the name of al-Khabîth, but instead he did it in the name of the caliph al-Mustâmid and his adversary Ya'kûb b. Bâkhît, Ya'kûb appointed a Kuríd lieutenant, Muhammad b. Layhûyâ; the latter, also a Kuríd and commander of the Kuríd levies, had been sent by the caliph to put down Ya'kûb's rising (Ibn Khâlikîn, Wâsâyân, ed. de Slane, i, 304-5). When Ahmad had departed, Muhammad, after securing from al-Khabîth further reinforcements consisting partly of Kurds, seized Shûstâr, where, according to the arrangement he had to have had the qâdî of Tabâristân, but instead he did it in the name of al-Khabîth, but instead he did it in the name of the caliph al-Mustâmid and his adversary Ya'kûb b. Bâkhît, his Zandî allies deserted Muhammad, and Shûstâr was recaptured by Ibn Layhûyâ. Muhammad retired to Kûm-Hûrzûh, but he was disbanded by the latter, Muhammad again sought the help of al-Khabîth. The latter sent him troops, which Muhammad sent into battle but suddenly left them in the Kûh and attacked them. To avoid a breach with al-Khabîth, Muhammad agreed to proclaim him caliph. The death of Ya'kûb (265/ 879) and of al-Khabîth (270/883) put an end to these exploits (Kâmîl, vii, 264).

About 261/874 the Kurds were among the parties to the battle of the Arabic Hamûd b. Hamûd (cf. Hamûdîs) when he established himself in Mawâlî. The Kuríd rebellion raised in 260/874 by Abû Laylâ did not last long (ibid., vii, 325, 332). In 263/976 the Hâdîbâní Kurds led by their chief Muhammad b. Bilâl laid waste the region of Mûnîkh. Abû Askâr b. Hamûd, the new governor of Mawâlî, pursued them, but suffered a reverse at Mûrâbâh. With reinforcements sent by the caliph he resumed next year the pursuit of 5,000 Hâdîbânî families. The Kurds began negotiations to gain time and retired to Arjâhîya. (Abû Askâr returned to Mawâlî and with new troops set out once more against the Hâdîbâní, who had entrenched themselves at Dîbâl, al-Salâk (probably Lâdîdân, cf. Sâwâq-ulâlâq). The Hâdîbâní were forced to surrender, and their pacification was followed by that of the Hûmâyî tribe and of the people of Dîbâl Dâsin (ibid., vii, 371). In the region of the caliph al-Mu'âktarîb, the Kurds plundered the environs of Mawâlî but were punished by the Hamûdîs government; the Dîbâlî tribe put up a particularly stubborn resistance (ibid., vi, 318). Under the year 357/943 Ibn Miskâvâyâ, Faqîrîb b. âlmân, Gâmsî, vi, 105, speaks of the expedition of the Hamûdî tribe against Arjâhîya; on this occasion he
had as an ally Djasfar b. Shakhkiyya, chief of the Hadithanis who were settled at Samah.

About this time, Daysam b. Ibrahim appeared on the scene, and his adventurous life is closely associated with the Kurds. He himself was the son of an Arab by a Kurd woman. His followers were Kurds with the exception of a small body of Daylamis. Daysam was a Khārid. He seized Adharbāgyūn siter Yûsuf b. Abī Tād addressed in 329/943 used his Kurds to drive out Lâshkarī b. Mardî, one of the lieutenants of the Ziyārid Wushmāġīr. But the Mshīrīd Marzubān, a noted Shīʿī, succeeded in taking Adharbāgyūn from Dalsam and the latter took refuge with his father. Khâlid Daysam (the Armenian king of Vaspurakan, Khasik or Gakhik, son of Deranik9). Then the people of Tābriz appealed to Daysam, but again he suffered a reverse and with the consent of the Mshīrīds fell back to Târum. In 337/948-9, Marzubān was made prisoner by the Būyid Rūk al-Dawla, who sent a representative to Adharbāgyūn. Marzubān's brother Waṣāiddūn then thought of Daysam, to whom his Kurds had remained faithful, and sent him against Rūk al-Dawla's representative. Daysam was defeated, but held out in Ardâbīl and Bâdgâwā. When Marzubān returned from his captivity, Daysam had to take refuge first in Armenia and then in Baghdad, where the Būyid Muftiz al-Dawla treated him generously. As his friends were urging him to return to Adharbāgyūn, he went to the Hamdānīs of Mawṣil and Syria to ask for assistance. In the absence of Marzubān, Daysam returned to Samah in 344/956-6, where he had the Khābūs read in the name of Sayf al-Dawla of Syria. Once more driven out by Marzubān, Daysam sought refuge with his Armenian friends, Ibn al-Dayrānī (Deranik's Khâlid had to hand him over to Marzubān, much against his will. Daysam was blinded and died in prison in 345/956-7 (Tâdjarî, ed. Amedrez, i, 277-8, ii, 287, 351, 375-7).

During Daysam's captivity, in Rayy, several independent governors set themselves up in the northwest of Farsa. One of them (about 340/951) was Muhammad Shâhidī b. Khurshīd b. Khurshīd b. Khurshīd b. Kārsī of the Kawārid tribe, of whom a later sprang the great dynasty of the Ayyūbids. The principal cities of the Shâhidīs were Dâbbī and Gângâ. The Shâhidīs were allies of the Byzantines and of the Sâlīds. In 405/1016 Abū Susāwī bought Anī for his young son Manûb. From this time onwards, the Khārids divided into two branches: that of Gângâ and that of Anī. In 1122, Anī was taken by the Georgians but between 320/932 and 557/1162 and again from 1165 to 1174, Anī was again held by the Shâhidīs. The Shâhidīs were enlightened princes and left a number of remarkable buildings. Cf. the articles Arâb, Dâbbī, Gângâ and Shâhidī; the Armenian bibliography in Lych, Armenia, i, 365-7; cf. also Barthol. in the appendix to his Russian translation of Lane Foei. Muhsāmadan dynasties, St. Petersburg 1899, 294, Barthol. Para. ndapti na ... neteti Mandānī, Aniyakarga Serigh, No. 5; N. Y. Marc, Eight or some "abolki", in ZVOIRAX, xx (19R1), 130; E. D. Ross, On three Muhsāmadan dynasties, in Asia Major, ii (1925), 215.

In 340/960 a pretender appeared in Adharbāgyūn. He was called Isḥāk b. ʿĪsā, and was supported by Fâlī, chief of the Kāsānī (i) Kurds, while his adversary, the Mshīrīd Dâṣānī b. Marzubān relied on Hadithānī support. Isḥāk was soon disposed of (Tâdjarî, ii, 179). The Kurds and the Daylamis also played a considerable part in the quarrels between Dâṣānī and his brother Naṣir al-Dawla and between Isḥākī b. Marzubān and his cousin Imaṁī b. Waḥṣūdān (Tâdjarî, i, 226, 239; Kâmil, viii, 400-3).

About 348/959, the second Kurds dynasty arose in Ḍiḅḅ Ṭa (Zambañ, Manuel, 221) founded by Hasānawwāy (Hasānawwāy) b. Harîn (p. v.; cf. also the Shārāf-nûmā, i, 20-3), chief of the Bāzinawī (Bāzinī) tribe, who had assisted the Būyid Rūk al-Dawla on his expedition to Khurāsān. Rūk al-Dawla showed great tolerance to the Kurds, and when someone complained to him of his excesses he used to say: "Even the Kurds must live" (Tâdjarî, ii, 281). Ibn al-Afīrī (vii, 257) praises the noble character of Hasānawwāy, his prudent policy and the purity of his faith. But Daysam b. Abī Salīm, the last of the Shâhidīs, was dispossessed of his castles (Kasānī or Kasānān) in 320/930 and in 368/978 used his castles when he was driven out by the Būyid Shâhidīs of Mawṣil and Syria. Daysam was a Khārid. He seized Adharbāgyūn siter Yûsuf b. Abī Tād and in 329/948 used his Kurds to drive out Lâshkarī b. Mardî, one of the lieutenants of the Ziyārid Wushmāṯīr. But the Mshīrīd Marzubān, a noted Shīʿī, succeeded in taking Adharbāgyūn from Dalsam and the latter took refuge with his father. Khâlid Daysam (the Armenian king of Vaspurakan, Khasik or Gakhik, son of Deranik9). Then the people of Tābriz appealed to Daysam, but again he suffered a reverse and with the consent of the Mshīrīds fell back to Târum. In 337/948-9, Marzubān was made prisoner by the Būyid Rūk al-Dawla, who sent a representative to Adharbāgyūn. Marzubān's brother Waṣāiddūn then thought of Daysam, to whom his Kurds had remained faithful, and sent him against Rūk al-Dawla's representative. Daysam was defeated, but held out in Ardâbīl and Bâdgâwā. When Marzubān returned from his captivity, Daysam had to take refuge first in Armenia and then in Baghdad, where the Būyid Muftiz al-Dawla treated him generously. As his friends were urging him to return to Adharbāgyūn, he went to the Hamdānīs of Mawṣil and Syria to ask for assistance. In the absence of Marzubān, Daysam returned to Samah in 344/956-6, where he had the Khābūs read in the name of Sayf al-Dawla of Syria. Once more driven out by Marzubān, Daysam sought refuge with his Armenian friends, Ibn al-Dayrānī (Deranik's Khâlid had to hand him over to Marzubān, much against his will. Daysam was blinded and died in prison in 345/956-7 (Tâdjarî, ed. Amedrez, i, 277-8, ii, 287, 351, 375-7).

During Daysam's captivity, in Rayy, several independent governors set themselves up in the northwest of Farsa. One of them (about 340/951) was Muhammad Shâhidī b. Khurshīd b. Khurshīd b. Khurshīd b. Kārsī of the Kawārid tribe, of whom a later sprang the great dynasty of the Ayyūbids. The principal cities of the Shâhidīs were Dâbbī and Gângâ. The Shâhidīs were allies of the Byzantines and of the Sâlīds. In 405/1016 Abū Susāwī bought Anī for his young son Manûb. From this time onwards, the Kurds divided into two branches: that of Gângâ and that of Anī. In 1122, Anī was taken by the Georgians but between 320/932 and 557/1162 and again from 1165 to 1174, Anī was again held by the Shâhidīs. The Shâhidīs were enlightened princes and left a number of remarkable buildings. Muhsāmadan dynasties, St. Petersburg 1899, 294, Barthol. Para. ndapti na ... neteti Mandānī, Aniyakarga Serigh, No. 5; N. Y. Marc, Eight or some "abolki", in ZVOIRAX, xx (19R1), 130; E. D. Ross, On three Muhsāmadan dynasties, in Asia Major, ii (1925), 215.

In 340/960 a pretender appeared in Adharbāgyūn. He was called Isḥāk b. ʿĪsā, and was supported by Fâlī, chief of the Kāsānī (i) Kurds, while his adversary, the Mshīrīd Dâṣānī b. Marzubān relied on Hadithānī support. Isḥāk was soon disposed of (Tâdjarî, ii, 179). The Kurds and the Daylamis also played a considerable part in the quarrels between Dâṣānī and his brother Naṣir al-Dawla and between
The historians record the exploit of the Kurds under the authority of Mawṣil (Abū 'l-ʿAbd Allāh al-Dalwa), who had taken refuge with Fulghr al-Dawla, who was notorious for his hatred of the Kurds. In 422/1031 (Abū 'l-Faraḍj, 342). He earned the reputation of being a just ruler and stopped the Byzantine hordes arriving who were destined to modify radically the ethnical aspect of the Near East.

The Turkish conquest. When in 420/1029 the Ghuzz preceded the Saljūqs, the Türkic general of the Charnawwids, wanted to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds, being captured by the Ghuzz, sent a message to his men to cease fighting. This caused a tumult and Tash was killed (Kāmil, ix, 258). In the same year the Ghuzz reached Marāgha and executed many Hādhābī Kurds. The Kurds made an alliance with the ruler of Adharbāydān (Wāḥṣūdān II) and the Ghuzz had to retreat. Another body of Ghuzz, after a raid into Armenia, returned to Urmia and the lands of Abū 'l-Ḥayyāḥ Hādhābī; the Kurds attacked the Ghuzz but suffered a defeat. In 432/1041 the Mūsīfīrids, Wāḥṣūdān II b. Māmlān massacred a large number of Ghuzz at Tābūz; the Ghuzz of Urmia went into Khaḍīrā, a dependency of Mawṣil, and ravaged the country, but while they were involved in the moutnains the Kurds attacked them, killed 5,500 men and took many prisoners and much booty (Kāmil, ix, 270-2).

On the approach of Tughrīl Beg's troops, the Ghuzz took fright and pushed onwards. Kurdish guides led them through al-Zawżān to the Dījarā. One section of the Ghuzz under Maṣūr b. Ghuzzūghī remained to the east of the Dījarā, while the other under Bākā marched on Dīyarbakr, and going on pillaged the districts of Dījarā, Bāzdāb, Hūsainiyā (Yāḏīkī, ii, 270: a town between Mawṣil and Dījarā) and Fāshābār. The Marwānid Sulaymān b. Naṣr al-Dawla, ruler of Dījarā, persuaded the Ghuzz to wait till the spring before traversing his lands to join the other Ghuzz who had settled in Syria. Then by a ruse he seized Maṣūr, and with the help of the Buyyūnī Kurds of Fīnku, pursued the Ghuzz. But the latter did not cease their depredations; they ravaged the district of Dīyarbakr and seized Mawṣil (Kāmil, ix, 272-3).

Meanwhile, the dynasty of the Ḥāsašwāhidīs had perished and the power in Dībā had passed to a new family the Banū ʿAmmāz (see Zambaur, 212, and Ṣannāʾīdīs. The Sharāf-nāma, i, 22, has ‘Ayārā, which is often called that of Abū l-ʿIshāw. Previously in 340/951 during a Turkish rising in Hamadān, the Būyūd Muʿizz al-Dawla had had recourse to the services of Ibn Abī l-ʿIshāw, chief of Huwār (Taḏāriḥ, ii, 2). The real founder of the dynasty seems to have been Abū l-ʿIshāw Muhammad b. ʿAmmāz (Kāmil, ix, 159) who ruled 350-404/960-710. His son Abī l-ʿIshāw slew the last of the Ḥāsašwāhidīs, Zāhir (Ṭāhir) in 406/1015-16. The possessions of the Banu ʿAmmāz included Shahrirā, Kirmānghā (occupied in 433/1043-45; Kāmil, ix, 309, 310),
The defeat of the Emperor Romanus IV at Malazgird (1066) delivered all Armenia into the hands of the Franks, which they held as the Great Seljuk Empire. Sandiar died in 438/1046 at Shirvan. Ibrahim took Shamiran (Shamirgan? Sayanara?) and subdued the Djibala. Sa'd, son of Abu'l-Shawk submitted to the Seljuks. The dynasty lasted till 540/1149 (Mumendjân-droyat). During this period we often find the Kurds men mentioned in Syria, where they came into contact with the Franks (cf. Derenbourg, iii, 542, 599). The 'Abbâsid caliphs, freeing the Kurds, seem to have been a Turk foreign to the tribe.

The important fact is that it was from Djibâl that the Shaddadid dynasty had come, the memories of which must have been still alive in the time of Shadi 'Abbâsid [see Ayyûbids] and Shâfikîkh [q.v.], son of Abû-l-Shawk, who was perhaps a Hakkari? At this period this tribe lived south of the territory which now bears its name; cf. Hoffmann, ‘Assos, 203.

After the death of Abî 'l-Hayyâl, Zangi intervened in the quarrels among his successors, seized Aslib and dismantled its defences; the fort of Dâlût received the name of 'Amâdiya (‘Imâdiyâ, in honour of Imâd al-Dîn). In 533/1140 Shâmî took Shahrizur from Kifdjak b. Arslân Tash the Turkmân. In 537/1142 he sent a new expedition against the Hakkârî and took the fortress of Al-Shâbîhî (Aslib), which he rebuilt. In 538/1143-4 Irân and Kûrânî were taken (Shams al-Dîn, in Recueil, iii, 685).

The Selâmî family, lord of al-Rûbâyî (cfr. Şerqubi-name, i, 284, Rûbâyî-bulât?), Fasîb and Akûr (Elk?) joined Zangi of his own accord. The last expedition of Zangi was against the Baghdawî of Fanûk (Fînîk), but the siege of this town was raised on the death of the Atabak in 541/1150: (ibid. al-Áhir, al-Áthabakiyya, in Recueil, ii, 86, 114, 129, 188). Karadjî Tâdîn, mukhâ (?) of Haikarî, who was sent in 547/1152-3 by the Atabak of Mawâs against the Atabak of Âdharbâyjân, seems to have been a Turk foreign to the tribe.

Later, after the death of Selâm al-Dîn (589/1193), the Zangâids consolidated their position in central Kurdistân. In 667/1221 ‘Imâm al-Dîn, a younger son of Arslân Shâh Zangi, received as a fief the strongholds of the Humayûdî (= Akr and Shûsh). In 675/1278 the same prince seized ‘Amâdiyâ and “the remainder of the fortresses of the Hakkârî and Zawarî“ which were ceded to him by Muzaffar al-Dîn Kûbhûrî of Arût (Abû ‘l-Fara‘î, 433, 438). It must have been these events that caused the Hakkârî to be driven back towards the lands at the sources of the Great Zäb.

The Atabâks [q.v.], Atabâks of Diyarâbâk, several times came into conflict with the Kurds (Abû ‘l-Fâ’îdî, iii, 383; Usûmân, i, 321). The ‘Abbâsid caliphs, freeing themselves from the tutelage of their protectors, negotiated with the Kurds (cf. the case of Usûmân Humayûdî in 528/1134, and Kûmî, xi, 7, 188) and sought to weaken the Turks. In 531/1142 under the caliph Âbrîl, a minor incident resulted in a war between the Kurds and the Turkomans (Kûmî, iii, 342) which extended over a vast area (Syria, Diyarbâk, Diyarra, Mawâs, Shahrîzur, Hakkârî and Âdharbâyjân). Two years later the rivals stopped fighting and joined against the Christians of Armenia, Assyria, Mesopotamia, Syria and Cappadocia, but new feuds soon broke out between the Kurds and Turkomans. After many fierce battles, the Turks fought their way back into Cilicia. The Turks practically exterminated the Kurds of Cilicia and Syria. As the Kurds on leaving their old homes had entrusted their goods to their Christian neighbours, and as the Christians concealed some Kurds, the Turks finally fell upon the Christians at Thelmuzen (? and Arbûtîl (= Arabûtî?) (Michael the Syrian, in Recueil, doc. arm., 395).

The important fact is that it was from Dwûn that the Shaddâdî dynasty had come, the memories of which must have been still alive in the time of Shâdî ‘Abbâsid [see Ayyûbids] and Shâfîkhî [q.v.], son of...
of Shâhî, were born in the old home (the village of Āqálanakân). Shâhî al-Dîn [g.e.] was born at Takrit, but Kurd traditions were certainly familiar to him through his father and uncle. The persistence of Iranian names in the Ayyûbîd family is significant. Nevertheless, the scene of the main activities of the dynasty was Egypt and Syria. The families of the old Sâlûqût Atâbâks, even when they became vassals of the Ayyûbîs, continued to rule in Diyarbakr (Arûtikî), Mawsîl (Zangûdû) and Arbil (the Beqetgûnîs, at first deputies of the Zangûdû). By the treaty of 586/1190 between 'Azî al-Dîn Zangûdû, Shâhî al-Dîn annexed only Aleppo and Shahrizûr (Ibn al-Ábdî, Al-Áshârîyûn, Recueil, iii, 324; Kâmil, xi, 340; Bahâ'î al-Dîn, in Recueil, iii, 85). In 585/1190 Shâhî al-Dîn gave Shahrizûr to his mansûrî Keşvî (?), a relative of Ya'qûb b. Kifdijû. The only independent way by which the Ayyûbîs penetrated into Kurdistân was that of Kîlîât. A district that was first conquered by Tâkî al-Dîn in 587/1190 (Kâmînî, xii, 409), but it was not only after the death of Shâhî al-Dîn that his nephew al-Malîk al-Awfrûn al-Dîn Ayyûb installed himself there in 604/1207. Later, Shîrî passed to his brother Aslîraf, who assumed the title of Kâmil (Ibn al-Áthîlr, ed. Quatremîre, 328). For Syria and Egypt (cf. d'Ohsson, iii, 309, 330, 337). An echo of these events is found in the appearance in Algeria of two Kurd tribes: Lawân and Bâbûn (Ibn Khaldûn, Hist. des Berbères, tr. de Scâne, ii, 461, 473).

Returning to Hâdîjalîydîn, Hulâgû set out for Syria in 657/1259. In the Hakkûl country, the Mongols put all the Kurds they found to the sword and razed the town of Lûlug (d'Ohsson, iii, 250). The taking of Baghdad resulted in the depopulation of Shahrizûr [q.v.], and its Kurd inhabitants, according to Shâhî al-Dîn al-Umarî, left for Syria and Egypt (cf. d'Ohsson, op. cit., iii, 309). A little later a Kurdish horde had to go into exile. Arbil was taken with the help of the Atâbâk of Mawsîl, Badr al-Dîn Lûlug (d'Ohsson, iii, 250). The taking of Baghdad resulted in the depopulation of Shahrizûr, and its Kurd inhabitants, according to Shâhî al-Dîn al-Umarî, left for Syria and Egypt (cf. d'Ohsson, op. cit., iii, 309, 330, 337). An echo of these events is found in the appearance in Algeria of two Kurd tribes: Lawân and Bâbûn (Ibn Khaldûn, Hist. des Berbères, tr. de Scâne, ii, 461, 473).

Returning to Hâdîjalîydîn, Hulâgû set out for Syria in 657/1259. In the Hakkûl country, the Mongols put all the Kurds they found to the sword and razed the town of Lûlug (d'Ohsson, iii, 250). **KURDS, KURDISTAN**

"Kayai", Christian highlanders, forming part of the Mongol armies stationed in Arbil, brought a charge against their chief the Dinka, who fled to the Div. On the 6th of Dec. 1323 and came into conflict with the Kurds, whom the Arabs supported. Incidents began in 696/1297 but the situation came to a height in 720/1320. With great difficulty, the Mongols drove the Christians out of the city. The Mongols had summoned the Kurds to help them in the siege, but their Amir, who were friendly with the Christians, wanted to use the Kurds to prevent the massacre of the Christians by the Arabs. The massacre took place, but the Kurds had no share in it (Histoire de Mar Jaballah III, tr. J. E. Chabot, Paris 1895, 123-77).

The country between Marâgha and Arbil was a kind of high road for the Mongol armies; at this time the country south of Lake Urmia was still for the most part occupied by Turks and Mongols (cf. Sawy-Ver. Karâbut). The capital of the province of "Kurdistan" under Uyâneyî was moved from Bâkûr to Sultânâbâd (of Cântâmâl). The extent to which the province had increased was possibly that of ten of which they were under the Sâljîks.

When the Ilhâns had disappeared, two families of Mongol chiefs of the tribes of Sulduz [z.] and Djalâyîr [d.] became rivals for power. By virtue of the division of the fiefs between "the two Hasans" (in 738/1338), (Persian) Kurdîstan and Khurasân returned to the children of the Amir of Arakan or Arqâz (?). In 784/1382-3 the Djalâyîr Bayazîd carved a fief for himself out of Persian Kurdistan and Umarî. The king (Zambârî, 253, and d'Ohsson, 263) carved a fief for himself out of Persian Kurdistan and the province of Mawṣîl; 500 Dâsini lived at Kâfri (cf. Hoffmann, op. cit., 1393). The capital of the province of "Kurdistan" under Umarî had only a transitory character. The province of Mawṣîl was moved from Bahâr to Suḫān Abâd (of Oldjeytii). The extent to which the province had increased was taken in the fate of this Muslim element. The Masâliḳ al-aqâf of Shâhâb al-Dîn al-Umrâî (d. 749/1348) shows how exactly the chancelleries of *d.* 749 (d.) show how exactly the chancellaries of the Mamlûk Sultâns were informed about Kurd affairs. According to al-Tâthîf, *d.* 749, (ed. Le Strange, 107), according to which its revenues were completely eclipsed the political part played by the Kurd tribes, but in Egypt, where the Mamlûk Sultâns were interested was taken in the fate of this Muslim element.

by Behnsch, *Rerum seculo XV in Mesopotamia gestarum liber*, Breslau 1853.

The Persians had to deal with the Kurds in his campaigns of 796/1394, and 803/1400-1. After overrunning Baghdad and Diyarbakr, Timfir attacked Dzirza, which was destroyed. The dependencies of Dzirza were likewise conquered. Timfir next crossed the mountains separating Diyarbakr from Mshh and gave a favourable reception to Sharaf al-Din of Bidlls, renowned for his kindness and justness throughout all Kurdistan. In 803/1400 Timfir returned from Baghdad to Adharbaydjan and on the way was attacked by the Kurds.

After the death of Timfir, Kara Yusuf Kara Kooyunlu succeeded to his position. He returned to Kurdistan and sought refuge at first with Shams al-Din of Bidlls. He gave him his daughter and with his assistance re-established his power. In 828/1421 Kara Yusuf by a nishan confirmed the princess of Bidlls in their possessions. When in 828/1421 Shahrizor, son of Timfir, arrived in Armenia, homage was done to him by Shams al-Din of Bidlls, Malik Muhammad Hakikari, Malik Khallil of Hisn Kayfa, the amirs of Khilaz, etc. The Kurds of Khoy also remained loyal to Shahrizor's governor (Malik*) al-sa'dayn, in *Notices et extraites*, xiv, 153).

The Ak Kooyunlu [the Bayandur dynasty] whose principal centre was in Diyarbakr, conducted a systematic policy of exterminating the great Kurd families (Sharaf-*n*ma, i, 1841 insf-1 khatt窆d ad-yi Kurdistan) and in general they persecuted tribes who had compromised themselves by their attachment to the Kara Kooyunlu, like the great tribe of Cambazgok. Uzum Hasan's generals *Sh* Khallil and *Ar*ab Shah conquered Hakikari, which was later taken for a brief period by the Dumbii tribe from Bultan. In 875/1470 (cf. Behnsch, *op. cit.*, 14) Dzirza passed entirely into the power of the Ak Kooyunlu, who appointed their own governor Chalab Beg, whose merits are recognised even by the Sharaf-*n*ma, i, 125. The Ak Kooyunlu general Sulayman b. Bizeen drove out of Bidlls the Dzirza. Khan who was later put to death by Yabghu Uzum Hasan.

The Safaids Shih and the Ottoman Sulatans. Shih Ismaiil had invaded Armenia at the beginning of his war with the Ak Kooyunlu. After the battle of Sharir (697/1292) he won all the country between Baghdad and Marash. Ismaiil's policy with regard to the Kurds did not differ from that of the Ak Kooyunlu. Like the latter, the Shah relied on the Turcoman tribes, but being a zealous extreme Shii (cf. Khat*ah* in *El*) he was still more predisposed against the Sunni Kurds. When eleven Kurd chiefs presented themselves at Khoy to pay homage, Ismaiil imprisoned most of them and appointed in their stead governors chosen from the Khilz-bash tribes.

Henceforth, for about three centuries Kurdistan became the arena for the struggle between the Ottoman Sulatans and the Shii of Persia. The defeat of Caidran [g.r.] (1520/1544) was a terrible blow to the prestige of the new Persian dynasty. In spite of the temporary successes of the successors of Shih Ismaiil, their conquests never attained the importance of his early victories and Persian territory west of the Zagros melted away. Ismaiil's attempt to thrust Persian governors upon the Kurds was a marked contrast to the Ottoman policy instituted by the able Hakim Idris, himself a Kurd, which aimed at giving Kurdistan a feudal organisation securing the predominance of the Kurd nobility.

The battle of Caidran deeply affected Kurdistan.

Malik Khallil (Sharaf-*n*ma, i, 255), the dispossessed prince of Hisn Kayfa, had retained possession of Shir and was trying to regain his hereditary fief. Muhammad Beg of Shish was fighting against the Persians. Ahmad Beg of Mayyarkhakan, Kisin Beg of Agli, Djaghrit Beg of Pshis, had declared in favour of the Ottomans. The governor of Dzirza had succeeded in repulsing the Persians from Mawjil. Sa'd Beg Sofran had taken Arbil and Kerkuk. Some twenty other chiefs were wavering in their loyalty to the Persians. A personal visit by Idris to all these chiefs won 25 of them over to the Sultan.

When Selim had left Tabriz, Ismaiil sent reinforcements to Diyarbakr and Hisn Kayfa. Idris summoned to him the Rokhlu Kurds, the exiled Kurd Beg, a former Persian governor of Kurdistan. The Kurds of Diyarbakr resisted the Persian attack until help arrived from Blyikli Mehmed Pasha. Blyikli and Idris met at Hisn Kayfa and defeated the Persians. Then, reinforced by 5,000 Kurds (from 'Armadiya?), the Turks relieved Diyarbakr and took Mardin, except for the citadel which remained in Persian hands. The Persian commander then executed a successful diversion from Baghdad and Kirkuk and the people of Mardin drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Nigdil-Urfa road. The Persians were defeated, and Blyikli forced Sulayman Khan, who was still at Mardin, to surrender. The occupation of Nisibin, Bursa, Mayyarkhakan, Diyarbakr and Singaj followed and Idris completed the administrative organisation of the sandjah. In the province of Diyarbakr eleven sandjahs were put under Turkish officials and eight under Kurds (Ahmad beyli). The idris confirmed the investitures of the new begs, but the latter were always chosen from the same family. Five hereditary beyli (Kurd beyli) retained their dynasties with the transmission of power direct from father to son (cf. Tischendorf, *Das Laisnemen in a. meslem*, Staaten, Leipzig 1872, cha. ii and iv, quoting *Ayn-i Ali Muh'dhin-zade who wrote at the beginning of the 11th/12th century.* A similar system was later applied throughout Kurdistan from Malatya to Bayazid and Shab. Idris followed the *Sharaf-*n*ma, and the very interesting remarks of Ewyia Celebi, iv, 176-80, 277-316, on the 37 sandjahs joined to Van by the law of Sulayman I and the order of march of the local army). Only the province of Kirmanship remained to the Persians. Idris was liberally rewarded and the firmanal of investiture was sent him with the spaces left blank for him to fill in the names of the recipients (von Hammer, *GÖR.*, i, 749).

In 1381/1390 Shih Tahmasp recovered Baghdad from Blyikli Pasha, a Kurdish of the tribe of Mshh (Mosuli?). A long series of wars began again.

Sultan Sulayman led armies against Persia in 1533, 1534, 1535, 1536 and 1538. In this year the Haghabad troops conquered the Kurds of Belaga and Shahriyar while the Persians were occupied in Georgia (von Hammer, *op. cit.*, ii, 236).

By the peace of 999/1590 'Abbás I had to cede to the Turks the western provinces, including Adharbaydjan, Shahriyar and Luristan (ibid., ii, 559) but in 1010/1601 fighting was resumed and by the peace of 1021/1612 Persia regained possession of the lost provinces, except Shahriyar (ibid., ii, 745). Shah 'Abbás transported 15,000 Kurds to the frontier of Khurstand to serve as a bulwark against the Turcomans.

Towards the end of the reign of Shih 'Abbás, Turkish efforts were concentrated on Baghdad.
During Hafiz Pasha's first campaign (1024/1615) his army included the Kurdit troops. The Kurds fought bravely. The Persians, having defeated the attackers, sent punitive columns to Mardin. After the death of Shah 'Abbás, the grand vizier Khosrow Pasha [q.v.] advanced on Bagdad in 1036/1625. Sayyid Khán of Amādiyā, Nira Beg Şhrthn and the mixed-Kurdish tribe of Bābdām took the side of Khosrow Pasha, while Ahmad Khan Ardalān threatened the Turkish flank. Khosrow Pasha advanced as far as Sīmā [q.v.] and Hamādān. On their way back, the Turks defeated at Čamānlā and Dārān, the Persians fell. Bagdad still held out, and when Khosrow Pasha had retired, Ahmad Khán Ardalān reoccupied Şhrthār (von Hammer, op. cit., i, 17, 23, 49, 86, 93). Not till 1048/1638 did Murād IV finally take Bagdad, and in the gūsuo mūdē, 86, 93). Not till 1048/1638 did Murād IV finally take Bagdad, and in the gūsuo mūdē, i, 217). The tribe of the principal fief was Namlrān; this fief lay along the right bank of the Bokhdn and the Tigris. It did not include the sources of the Bohtān. Towards the east, the neighbours of the Bokhd were the Sindīyān (cf. under 'Amādiyā) settled on the Bābdām.

The great struggle between the Safawīs and Ottoman made the Kurds conscious of their political importance. The Sharaf-ndma has preserved for us an accurate picture of the feudal life of the Kurdis tribes and principalities at the height of its development about 1005/1596.

Sharaf-ndma. This book by the chief of Bīdīls, Sharaf al-Dīn [see Bīdīl], finished in 1005/1596, occupies an exceptional place among the sources for Kurdish history. The history of the Kurds in the strict sense (vol. i. in Veltšimov-Zernow's edition) is divided into four parts (aṣājil): the first of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (udūlātāt); the second with those whose members have sometimes had coins struck and the kawthā excised in their name; the third enumerates the families of hereditary governors (iṣlākhīn); and the fourth is devoted to a detailed history of the chiefs of Bīdīl. Part i. gives five dynasties, the Marwānids [q.v.], the Hasanwayhids [q.v.], the Dīārbakrīs, the Hasawajids [q.v.], of Dinawar and Şhrthār; the Faṭjāiyās of the Great Lūr [see Lūr-i Bażībāz], the princes of little Lūr [see Lūr-i Kōkān] and the Ayyūbids [q.v.].

As the distinction between the second and third class of princes is rather subtle and the order in which Sharaf al-Dīn enumerates the dynasties is quite arbitrary, it is better to arrange these dynasties according to the geographical position of the fiefs, taking Dijarat bn 'Umar as the centre. This list will be followed by that of the Kurd tribes in Persia. The fiefs of the second class (including Bīdīl) will be marked with an asterisk (*).

Sharaf al-Dīn distinguished as far as possible between the tribes and the families of their chiefs, and it is necessary always to bear in mind the bases of feudal organisation in Kurdistan. Chiefs of various origins rule the Kurdis, Kurdized and Christian tribes, with the help of various Kurdis tribes (ṣagrīt), which are sometimes settled, sometimes nomadic or rather semi-nomad.

Group A. Between Dijarat and Darān:
1. The chiefs of Dijarat *claimed Umayyad origin, but gave as their ancestor K̄hālid b. al-Walid. In such confused genealogies we have a combination of memories of the Kurdis alliances of the Umayyads with the local cult of the descendants of the famous general K̄hālid b. al-Walid [q.v.], whose tombs are shown near Sīfīr (Hartmann, Bohānān, 12, 124). These chiefs were at first Yasīds and only later became converted to be orthodox Sunnīs. After the death of Sulaymān b. K̄hālid his three sons divided his possessions: Dijarat fell to Mir 'Abd al-Azz, Gurgūl to Mir Hādīdī Beg and Fīnk to Mir Abbād. These three branches each kept their own fiefs in later times.

The Sharaf-ndma refers to the possessions of this family as wāliyāt-i Bokhd (i, 320), and enumerates in detail but without system the nāhāyās forming this important fief: Gurgūl, Arwālī, Pirāz, Bābdān and Tāmāz (Khalīl) occupied by the tribe Čāršt; Fīnk; Tūr; Haftāyān (Hēthum) and Shāh inhabited by the Christians; Nīgh Atīl; Aramāštā. The tribe of which (Būspīl) is the chief among those of Bokhd; Kāwār or Kāntī (?); Dāyr-dīn which belongs to Tāmāz.

In spite of the careful study by M. Hartmann, Bohānān, in Mittel. d. Vorderasiat. Gesell. (1890), No. 2, and (1897), No. 1, 1-163, the localisation of some of these places is not quite certain.

The fief of Dijarat bn 'Umar lay between the right bank of the Bohānān and the Tigris. It did not include the sources of the Bohānān. Towards the east, the neighbours of the Bokhd were the Sindīyān (cf. under 'Amādiyā) settled on the Bābdām.

2. The ancestors of the rulers of K̄hālān, Is-bāyār (Spānht, Ispert; in Ewliyā Čelbi: Is'bāyār) and Mūkiks (Muktis) were three brothers who came from Baḥdān [Kāns] in the time of the Saljuqs (i, 179). The tribe of the principal fief was Namāran; this fief lay along the right bank tributaries of the Bohānān and stretched as far as Marvānān.

3. Shīrwhān (on the right bank of the Bohānān below K̄hīzān and north-east of Sīfīr). The ancestors of the "Shīrāwa" chiefs were in the services of the Ayyūbids and came to Shīrwhān at the same time as the "Malīkkīn" to Hīṣn Kayāla. The Shīrāwa played even the rôle of viziers by the Malīkkīn (op. cit., i 255). The capital of Shīrwhān was Kūfrā. The other dependencies were Āwīl, Ṣhabīṭān (also called, Ġanī = Čīrākān) and Īrūn.

Bīdīls. The Rozāqī (Rozāqā) tribe is said to have taken its name from the fact that 24 clans, assembled one day (rūf) in the village of Šīfīr in the canton of Kūfāt (now the of Modūxt west of Shīrwhān). The Ruzagī took Bīdīl and Haftāyān (Hēthum, the Kundis of the "Shīrāwa" chief; were in the services of the Ayyūbids and came to Shīrwhān at the same time as the "Malīkkīn" to Hīṣn Kayāla. The Shīrāwa played even the rôle of viziers by the Malīkkīn (op. cit., i 255). The capital of Shīrwhān was Kūfrā. The other dependencies were Āwīl, Ṣhabīṭān (also called, Ġanī = Čīrākān) and Īrūn.

The Rozāqī took Bīdīls and Haftāyān (Ṣāsīlān) from the Georgian king Tūfīt (David the Curopalalus, 984-1020 ?). Later they brought from Ak̄hālīt two brothers of Sāsānīd origin. One became chief at Bīdīls and the other at Shīsān, 18 fiefs of the line of Dīyāl al-Dīn had ruled at Bīdīls before 1005/1596. The only interruptions took place under the Šālājūds (554-784/1160-95) under the Ak̄ Koyumū (872-1009/1470-95), under Šāh Ismsālī (932-1075/1527-74) and between 941/ 1341-5 and 989/1578. In this last year Şītān Sulaymān wanted to exchange the hereditary fief of Čamīr Shams al-Dīn for that of Māštāyās. Shams al-Dīn had to leave Bīdīls, but fearing new intrigues, went to the court of Şāh Tāhmsīp, who treated him with generosity. Shams al-Dīn died in Persia in 965/1558. His son Sharaf al-Dīn, born in exile in 960/1554, was carefully educated at the court (the Şāh even had him taught painting). He ruled several Persian provinces in succession, and was appointed chief of all the Persian Kurds. After the accession to the throne of Ismsālī II, Sharaf al-Dīn fell under suspicion
and was sent to Nakhdunah. From there he succeeded in reaching Van and received from Murad I investiture for Bidlis, to which Mugh was added in 991/1583. For the year 1065/1655 Ewliya Celebi (iv, 81-82) gives us a detailed description of Bidlis. The last prince of Bidlis, Sharaf Beg, was dispossessed by the Turks in 1849 (Lynch, Armenica, iii, 249).

The rulers of Şasvin (1420) were called Şarān from their ancestor ẓa'al-Din, brother of Dīn of Din of Bidlis. The descendants of Şasvin were at first Şasvin, Bābul, Şasvin and Tamkūl. The Rūmūqa (see above) arrived afterwards; later, after the annexation of Arzan the clans of that district Khalid, Dayr Mughānā, Azālān, who had at first belonged to Hind Kayfān, came to join those of Şasvin.

6. The Swāwiydī chiefs claimed a Barmakī origin. Their ancestors were adopted by the Swāwiydī tribe. The hereditary lie of the Swāwiydī was Gāndj (this should be read for Kīthā in Kāmba-miner, i, 460). 7. The Pārūkī tribe, which Sharaf al-Dīn places among the tribes of Persia (i, 328), is said to have been of Swāwiydī origin. According to the Sharaf-nāma, i, 326, it had no definite religion and showed signs of disintegration (bidlī). The tribe was divided into two branches, Khalīlī Beg and Sheker-begī, and one was under the Amirs of Bālbī. Khalīlī received as fiefs Kīnān, Malāzgīrd and the canton of Ubdān (i) of Moğābī. They grew so proud that they thought of proclaiming their independence. After the battle of Cildırin, the Swāwiydī dispossessed the Pārūkī from many of their fiefs (ibid., i, 257). In the time of Shāh Tahmāsp, Khalīlī Beg, appointed chief of the Pārūkī, received Zāgām (near Tīlis). Later, Pārūkī were transferred to Alashkert, where the tribe increased.

8. The Mirdāsī chiefs (Mirdāsī in the Selid-nāma) claimed to be descended from the ʿAbbāsīdīs. Their ancestor was a religious leader who came from Hakkārī to Ağī and whose success the Mirdāsī became. The tribe themselves said they were of Arab origin, being Banū Kālām from around Aleppo, who migrated about 426/1032 as a result of troubles with the Fātimids (see Kālam b. Kālam and Mirdāsī). The main one of these three branches, the Būdūkānī, lived at Ağī; it maintained good relations with the Ak Koyunlu, but under Shāh Isḥāk, Ağī was occupied by the Persians. Of the other two branches of the Mirdāsū, one ruled at Pālū, at Baghīn (below Kīght) and at Ḫarpūr, and the other first at Bardaṅgan and later at Dārmar (south of Aḩmād Khan) 9. The rulers of Camiśgezek claimed to be of ʿAbbāsīd descent, but their names rather show a Turkish origin (Salātdīk). Their Ṣahībat was called Malikī (Maliq-Shāhī?). There were about 6,000 fortunes of Malikī in the Persian service (in Persia?). The nomads and in summer moved to the Ağa Tagh area. The restored dynasty received the fief of Hind Kayfān from the ruler of Mārdūn. The first chief mentioned by the Sharaf-nāma is Malik Sulaymān who died in 730/1335. The Ak Koyunlu seized Hind Kayfān, but Malik Khaḷīl, who had taken refuge in Hamā, later regained possession of his fief. At a later date the Ottoman sultans dispossessed the sons of Malik Khaḷīl. Among the dependencies of Hind Kayfān, the Sharaf-nāma mentions Saffīr, Bāshārī, Ṣūr (which sometimes figures among the possessions of Dīsa or, cf. ibid., i, 227, 228, 229) and Arzan.

10. Sulaymān, rulers of Murwārīdī origin (i.e. from the later branch of the Umayyads) established themselves at first at Khūlīn in the canton of Ghaḍīzī (between the Kulp and the Bāmān Su before they join) and gradually captured many strongholds and territory as far as the Tigris. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala Tagh (Niphates). The chief of these tribes was Banūkī, but the more enterprising was Bāṣīyān, 1,000 families of which migrated to Bāyāzīd under their chief Shāhān Wāzīr. A number of these tribes professed Yezidi doctrines. The Sulaymānī lived on bad terms with their neighbours of Sāfī. They were divided into two branches, that of Kulp and Bāmān and that of Mayyārāfīrīn.

11. Zrākī (the modern pronunciation attested by Addād Scher, in JA [1940], 159-39); according to Sharaf al-Dīn, Zrākī is a contraction of the Arabic Ahrāzī. The ancestor of the family, who was an Arab holy man from Syria of ʿĀlīd origin, arrived in Mārdūn in the time of Artūk (d. 514/1122; Abu ʿI-Fadālī, Mīzbās, i, 590). The family formed connections by marriage with the Artūkīs and later with the Ak Koyunlu. There were four branches of Zrākī, the principal branches being those of Tādīl (west of the Bāmān Su) and ʿAṭāk. The two other branches were that of Darzīn (an old Cappadocian comitatē Dayr Zīr) and that of Kurdiḵīn (between Dīyarbakr and Mayyārāfīrīn), the latter descendants of the marriage of a Zrākī chief and a gipsy woman (dokhtar-i kābulī).

12. Kīls. The ruling dynasty believed it was related to those of Hakkārī and Amādīyā. Their ancestor Mand (Muntāshā) had rendered services to the Ayyūbīds, who gave him the canton of Kūsār (near Antarī). He united under his rule the Yazidis of Khūsār and those living between Hamā and Marāq, as well as the Kurds of Dīna and Kīls. Under the Mamūt Sultan and under Selim I, disputes broke out between the Yazidis (Shaykh Izz al-Dīn al-Dīn of Dīsa) and the family of Mand, which ended in favour of the latter; but the hereditary rights of this north Syrian fief do not seem to have been on a very solid basis.

Group G. Between Dīsa or Ṣīrī and Khos:

13. Hakkārī [see Hakkārī and Ṣarmāshā]. Sharaf al-Dīn does not seem to know the old quarters of the tribe around Amādīya from which the Zangī ad-Dīns had driven them northwards. The amirs claimed to be of ʿAbbāsīd descent.

The first amir mentioned in the Sharaf-nāma is Izz al-Dīn Shir (probably simply an arabisation of the name Yazādīn-Shir) who held out against Timūr in 269/887 in the fortress of Van. Under the Ak Koyunlu, the tribe of Dambūl (of Dīsa) took possession of Hakkārī, but the Christians of Dīsa (Armenians) went to Egypt to bring back the see of the ancient family Amīd al-Dīn Zarrī Ceng ("Golden arm"). The restored dynasty received the name of Shambū (M. Garzoni, Grammatica della...
The Dumbull are a tribe of Bohštán (Sharaf-numā, i, 131, 310: Dumbāl-i Bokh, which for long remained Yazdā). The Dumbull later came into Skaraf-tatna castle under 'Imad al-Dīn Zangā'ī (521-41/1127-46) of Sūlamīn, whose headquarters were SutQnl in Hasanwayhid descent. Its lands lay west of [?].

The possessed of the chiefs of Darnā and the whole ëšēâyāt of Sohrān to Husayn Beg Dāsenī, a Yazdī chief which provoked a bloody war with the Sohrān (i, 274-7). The latter ended by regaining their patrimony and Husayn Beg was executed at Istanbul, on the region called Dāsenī, cf. Hoffmann, Anarūs, 202-7.

The Dumbull are a tribe of Bohštán (Sharaf-numā, i, 131, 310: Dumbāl-i Bokh, which for long remained Yazdā). The Dumbull later came into Skaraf-tatna castle under 'Imad al-Dīn Zangā'ī (521-41/1127-46) of Sūlamīn, whose headquarters were SutQnl in Hasanwayhid descent. Its lands lay west of [?].

16. The Dumbull are a tribe of Bohštán (Sharaf-numā, i, 131, 310: Dumbāl-i Bokh, which for long remained Yazdā). The Dumbull later came into Skaraf-tatna castle under 'Imad al-Dīn Zangā'ī (521-41/1127-46) of Sūlamīn, whose headquarters were SutQnl in Hasanwayhid descent. Its lands lay west of [?].

17. The inhabitants of the Dumbull are [not very clear]. The principal chief of Sohrān, which was embellished by their buildings (Rich, Narātī, i, 157) was Hārī (on a tributary of the Great Zāb below Rawandīz). The Sohrān were still a powerful tribe about 1090-1596-7, but later succumbed to attacks of neighbours and the Bābān (Narātī, i, 157) benefited by their decline.

21. 'Amādiyā [q.v.]. We have seen that the town of 'Amādiyā was built on the site of an ancient castle under Ùmad al-Dīn Zangi (521-41/1127-46). The local dynasty of Bānā mentioned in the Sharaf-numā seems to have settled in the country after the end of the Zangā'ī (7th-10th century). The chiefs of 'Amādiyā were known for their favour in religious studies. The Sharaf-numā gives their names for the Timūrid period. Later under Ùsamālī (i, 2), the Bānā annexed the Zābło district inhabited by the Śindī and Sūlamīnā which had at one time formed a separate fief (wilāyat-i Śindīyān). In this way the fief of Bānā was incorporated the greater part of the mountainous country north of Mawjī (Mount Gārā, etc.).

22. Ţasānī (Dāsinī). The chapter dealing with this important Yazdī tribe is lacking in the manuscripts, but in the text we find a reference which shows that the amīr of 'Amādiyā took Dohāk from the sandāqi

23. Sohrān ("the red ones"), descendants of Khalīs, an Arab shepherd of Bāghdād who had fled to the village of Hádiyān in the nādīyā of Āwān (in the Sohrān territory). His son was proclaimed Amir of Bāfka (east of Rawandīz) and seized the castle of Āwān. The last representative of Sohrān, which was embellished by their buildings (Rich, Narātī, i, 157) was Hārī (on a tributary of the Great Zāb below Rawandīz). The Sohrān were still a powerful tribe about 1090-1596-7, but later succumbed to attacks of neighbours and the Bābān (Narātī, i, 157) benefited by their decline.

24. Bābān. This name is really applied to several successive dynasties. Their principal fief lay south of the little Zāb and had as its capital Shāh-Bāzār, but in 1090-1596-7 the Bābān built a new capital Sulaymāniyā (q.v. for details).

25. Mukārī, who now occupy the region south of Lake Urmā (for details see Sāwda-buṣīb). The former fief of the Bābān, which was established by their buildings (Rich, Narātī, i, 157) was Hārī (on a tributary of the Great Zāb below Rawandīz). The Sohrān were still a powerful tribe about 1090-1596-7, but later succumbed to attacks of neighbours and the Bābān (Narātī, i, 157) benefited by their decline.

26. Banā. The geographical names for the Timūrid period. Later the Bābān built a new capital Sulaymāniyā (q.v. for details) and the Bābān (Narātī, i, 157) benefited by their decline.
The principal tribes of Persia were three in number: Sīyāh Manṣūr, Cīgānī and Zangana. Their eponyms were three brothers who came from Luristan or "Gurān and Ardalan". Besides those tribes and the lesser ones mentioned by Sharaf al-Dīn, there were 24 tribes (vīrān dōr) of Kārbābāgh [g.v.] (in Transcaucasia), about 3,000 men under one ruler, and the Gil tribe in Kūrūsān without counting tribes of minor importance.

The tribe of Sīyāh Manṣūr. In the time of Shāh Tahmāsp its chief had become Amir al-umār of all the Kurds in Persia (over 24 tribes).

A part of the Cīgānī emigrated to Gharāt Īrān. The tribe of Zangana (Zengene) distinguished itself in al-Gūrān and Kūrūsān.

From 1350 to 1750, "Great Kurdistan", as it has been described by Sharaf al-Dīn, and in so far as it consisted of a series of autonomous Kurd chiefships, had been already reduced in size by the introduction of Turkish rule in the saṅdaks of Dīyarbakr and Vān. Not only did the treaty of 1049/1639 put an end to the Persian expansion westwards, but Turkey during the reign of the Shāwādī Īrān episcope succeeded in re-occupying the western provinces of Persia as well as Transcaucasia [von Hammer, GöR, iv, 231]. Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralisation.

As early as the reign of Murād IV, we find Malik Ahmad Fāsha, appointed governor-general of Dīyarbāk in 1048/1638, making an expedition against the Vakīls of Sindjār. Later (1061/1651), the same Fāsha, after his transfer to Vān subdued all the Kurds in this region.

In 1076/1665 a Kurd, the son of a Ṣayyāb, declared himself the Madhī, but was captured by the rulers of Mawjīl and 'Ammākiya. The affair ended harmlessly by Sultan Mehmed IV taking the sīdāzand Madhī into his personal service (von Hammer, iii, 569).

In the reign of the feeble Shams Humayn, the Kurds of al-'Īrāk in 1131/1719 besieged Hamadān and carried their depredations up to the capital itself. In 1134/1722 by order of Shāh Tahmāsp II an attempt to retake Isfahān, which had been occupied by the Afghānī, was made by the Kūrī chief Pandun (Ferduši?), but it was confined to an attack on the Armenian quarter. The Afghānī drove off Pandun who went back to his lands and submitted to the Turks [J. Hanway, A Historical account of the British trade, London 1753, iii]. Fortune deserted the Saṅdaks. Even 'Abbās Kull Khān Ardalan submitted to Hassān Fāsha [von Hammer, iv, 211; cf. however, RMM, xvi, 87]. His example was followed by the chiefs of Liqjāwrāt, Dārma, Dişt, Haršīn and finally by the sīdāzān 'Alī Mardān Baktīyārī (Fa'yllî?) [von Hammer, iv, 227].

The Afghānī. During the bloody and transitory period of Afghāni rule in Isfahān, Afghānī defeated the Turks (battle of Aqqūldjā in 1138/1726), who had in their ranks 20,000 Kurds under Bebek Sulaymān oglū (Sulaymān Bābn). The Turks attributed their defeat to the conduct of the Kurds, upon whom Afghānī had lavished promises; indeed, shortly before some of the Kurds had gone over to the Afghānī. In spite of his initial success, in the next year 1140/1727 Afghānī had to repudiate his sovereign rights by ceding to the Turks the whole of western Persia, including the Kūrī and Lur cantons.

Nādīr Shāh. Towards the end of the reign of 'Alī Mardān II, affairs began to change. By the treaty of 1144/1732 the Persians regained their western provinces, and soon Nādīr invaded Ottoman territory and advanced up to the gates of Baghdad. The Turks tried in vain to check his advance with Kurdish troops until in 1146/1727 Topāl 'Olgām Pasba appeared on the scene with Kurd reinforcements which he had raised in Mawjīl. Nādīr was defeated. In 1147/1734, he operated with success in the Caucasus and took Tiflis, which had a garrison of 3,000 Kurds. By the peace of 1149/1736 the old frontiers of 1049/1639 were restored. In 1153 Nādīr again invaded Turkish territory, but in spite of Kūrū and Arab help was driven back to Sinna where he was finally defeated (von Hammer, iv, 317, 398-9).

Nādīr was not popular with the Kurds, although there is an epic poem in the Gūrān dialect on his struggle with Topāl 'Olgām Pasba. Among the Ardalanī, Nādīr replaced Subbān Verdi Khān by his brother, who provoked a popular rising (RMM, xix, 88). In 1157/1742 during a revolt of the Turkomans, the Kurds of Kūrūsān (Camisbūgćı and Karaforlu) refused their help to Nādīr, who punished them and transported them to Meşhād. Nādīr was assassinated in 1161/1747, while on his way to punish once more the Kurd rebels of Khūsānī (Jones, Narrative, Lond.
unify in favour of Turkey. During 1848-54, a mixed commission composed of representatives of four powers went over the frontier, but the attitude of the Ottoman delegate Darwish Pasha prevented an agreement being reached. Darwish Pasha not only had the canton of Kotur occupied by soldiers, but in a secret memoir (published at Istanbul in 1886 and 1902) developed the thesis that all the Kurd cantons south and west of Lake Urmia belonged to Turkey.

Turkey in the 19th century. In 1846, the governor of Siwa, Rashid Mehmed Pasha, was given the task of pacifying the Kurds and installing Turkish governors in Kurdistan. About 1830 a great Kurdish rising broke out in several places. Its leaders were Badr Khan and Sa’di Beg, Isma’il Beg and Muhammad Pasha of Rawanduz. About 1820 (1830?) he had declared himself independent and attacked the tribes of Khudkhâr; in 1831 he seized Arbil, Artun Kôpri, Köy-Sandjâk and Râíiya. The following year he extended his power towards Mawsil; at Alqosh 172 Christians were put to death. Akra, Zibar and Arâdîiya were next taken. In 1833 the troops of Rawanduz penetrated as far as Zakho and Dîzîran to re-establish Badr Khan in power there. The Yazidis were severely punished on several occasions. Their chief, ‘All, who pretended to become a convert to Islam, was executed (cf. the popular ballad commemorating this event, J A [1923] 134-5), and a whole body of Yazidis were massacred on the hill of Köyündik. In 1835 Ottoman troops were sent against Rashid Mehmêd Pasha from Baghîzdî, Mawsil and Siwa, and in 1836 the Mîr of Rawanduz was captured by a ruse. Rises and their suppressions continued for several years longer (cf. Poujolau, Voyages, 1, 373; Molkhe, Briefe, Berlin 1842, 259-64).

The Russo-Turkish Wars. In 1804-5, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish wars of 1828-9, 1835-6, 1877-8, each had far-reaching effects in Kurdistan (the question has been specially studied by Avetianov, Kurdî et steinâlik Russî, Tîllîe 1900). As early as 1829 the Russians had raised a Kurd regiment. As a result of the expiration of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurd regiments. On the other hand, when the Turkish troops had left for the north, a considerable rising was stirred up in Bethan by the popular Vazîr Şîhr, nephew and a former rival of Bâdr Khan.

The war of 1877-8 was at once followed by a rising among the Hakkiri Kurds of Bândînû and Bethan directed by the sons of Bâdr Khan and later by the rebellion under Shaikh ‘Ubayd Allah of the Nakshbandi order. The Kurds fled to Switzerland and London, brought complications into the hitherto quite peaceful relations of Kurds and Armenians, in as much as the latter had hitherto submitted to the authority of the Kurd feudal chiefs. About 1891 Shâkir Pasha, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurd regiments, like those of Russian Cossacks. The object of the reform was to train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory, for later the Hamîdiyya levies were transformed into regulars (Khâlîf swarî). The creation of the Hamîdiyya in any case, by the part given to the Kurds and the ambitions aroused, made a considerable stir. There was even bloodshed between the tribes.

Armenian-Kurd relations. At the same time, relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European consuls) were changing for the worse. The summer of 1894 was marked by bloody encounters at Şarûn which ended by the devastation of five villages and the whole of the canton of Talîrî (Dâlverchîn) inhabited by Armenians. The events at Şarûn were the first of a long series of Armenian demonstrations and their singular suppressions, in which the Kurds took an active part. In 1895 an attempt at a rising had been made among the Hakkiri Kurds, but was speedily suppressed; it was not directed against the Christians. From the beginning of the 20th century to the World War, the relations between Armenians and Kurds seem to have been fairly peaceful. On the question in general, see Abovian, Kurdî, in the Nasuh newspaper, Tîllîe 1848, Nos. 46, 47, 49, 50, 51 (where the "father of Armenian literature" gives a very sympathetic picture of the Kurd character); Creagh, Armenians, Kurds and Turks, London 1880; A. S. Zelenoy, Zarîsha h karte raspredeleniya armiansk.
The 20th century. At the beginning of the 20th century a new figure appeared on the Kurdish horizon outside of the usual centres of Kurdish movements: Ibrahim Pasha b. Majmud b. Timawt b. Ayyub, chief of the Milli (Mill) tribe in the canton of Şanlurfa (between Diyarbakr and Aleppo). Ibrahim Pasha had made himself an almost independent position. When the constitution of 1908 was proclaimed, he openly rebelled and retired to the mountains of Şabd al-‘Aziz where he was killed (M. Wiedemann, Ibrahim Pasha’s Glick und Ende, in Asien, viii, 1909, 34–7, 52–4, and Sir Mark Sykes, The creation of Armenia, 35–77).

A considerable agitation was aroused among the Kurds when the question of the Turco-Persian frontier was re-opened. After the check to the Russians in the Far East ( Russo-Japanese War), Turkey in 1905 occupied the disputed cantons of Urmiya and Sąwdlı-Buták inhabited by the Kurds. The latter were drawn into the very complicated political game. Turkish occupation only ceased at the beginning of the Balkan War (in October 1912), but only to make room for Russian troops sent into the districts of Köyö and Urmiya. Scions of noble Kurdish families travelled in Russia. On 17 November 1913 a protocol of delimitation was signed at Istanbul and just before the World War I, a Four-Power Commission (Turkey, Persia, Britain and Russia) succeeded in settling the frontier of the disputed regions by re-establishing generally the status quo of the beginning of the 19th century (cf. Minorovsky, Turetsko-persidskaya granitsa, in Izvestia Russ. Geogr. Obsch., Petrograd, lii [1926], 55–97).

The War of 1914–18. In the course of the war from 1914 to 1918, the Kurds were between two fires. On the activities of Ismā‘il Agha Simko, see Şarqān. On the inter-allied plans (March 1914) regarding Kurdistan, of the documents in Rassd Asidshō Turkī, Moscow 1914, 153–7, 222.

After 1917–18, the situation was radically changed. Kurdish committees were formed everywhere (cf. Driver, Report on Kurdistan, Mount Carmel, Palestine 1919; this publication is in the British Museum). Shārīf Pasha assumed the role of Kurdish representative in Paris and on 22 March 1919 and 1 March 1920 presented to the Peace Conference two memoirs on Kurdish claims with a map of “Kurdistan integral” (cf. L’Asie française, No. 175, 1919, 192–2). At the same time, on 20 December 1919, an arrangement was reached between Shārīf Pasha and the Armenian representatives, and the two parties made jointly declarations to the conference (cf. the text of the agreement in the newspaper Peyam-i Sābōd, Istanbul, 4 Feb. 1920; cf. also Le Temps, Paris, 10 March 1920). The Treaty of Sévres of 10 August 1920 having created Armenia (Arts. 80–93) out of the four wilayets (of Trebizond, Erzerum, Vān and Bīlīf), provided in articles 62–4 for “a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia”. If the Kurdish population within the limits mentioned showed to the Council of the League of Nations “that a majority of the population of these regions desires to be independent of Turkey and if the Council then thinks that this population is fit for independence”, Turkey agreed to conform to the recommendation, and in this case the Allied Powers would raise no objection to the voluntary annexation to this “independent Kurd state” of the Kurds living in the vilayet of Māvṣīl. As a result of later events, the Kurdish question reduced itself to the fate of the Kurds in the vilayet of Māvṣīl. The Turkish representatives held that “the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs” (Conference at Lausanne, speech of Ismā‘il Pasha at the meeting of 23 Jan. 1923). By the decision of the Council of the League of Nations on 16 December 1925, the wilayet of Māvṣīl was allotted to Ġīlāk, both with a stipulation reserving to the Kurds the fullment of their desires, notably that “officials of Kurd race should be appointed for the government departments of the country, for the administration of justice and for teaching in the schools and that the Kurd language should be the official language of all these services”.

During the long negotiations concerning Māvṣīl, serious troubles broke out in the region of Khārbat and Diyarbakr as a result of the insurrection of Shāykh Sa‘īd Nakhashndī, Shāykh Sa‘īd was captured on 10 April 1925 and executed at Diyarbakr. After the settlement of the Māvṣīl question, the Turkish government in Ankara enforced a policy, the tendency of which was to eliminate from Kurdistan feudal and tribal influences; cf. Gentzion, L’insurrection kurde, in La Revue de Paris, 15 Oct. 1925.

Bibliography: A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persian, Armenian, Arazān and Georgian sources. A systematic ransacking of sources like the Selim-nāma of Ḥakim Idrīs and his son Abu ‘l-Ḥaqq and the Tūsī-Hāfl Qām-i Ādār-yi ʿAbbāsī would yield a rich reward. The basis of our knowledge of Kurd history is certainly the Sharaf-nāma (down to 1005/1596). The text was published (mainly from a manuscript collated by the editor himself) by Veliaminoff-Zemof, Chefred-nameh, i (history of the Kurds), St. Petersburg 1866; ii (variants of volume i, and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1005/1596), St. Petersburg 1862. New editions of it exist by M. ‘A. Āwnl, Cairo 1931, and by M. A. ʿAbbasī, Tehran 1343/1965; Arabic translations by M. J. Bedi Rojhyanī, with cópious notes and comments, Baghādād 1371/1953; M. ‘A. Āwnl and Yahyā al-Khalīfī, Cairo 1958–62, 2 vols.; a Russian translation by E. I. Vasil’eva, i, Moscow 1967; the French translation by F. B. Charmoy, Chefred-namah ou fastes de la nation kurde, in 2 volumes and 4 parts, St. Petersburg 1868–75, includes commentaries (including a translation of the relevant chapters in the Diwan-nāma of Ḥājjī Khalīfa), but is now in many respects out-of-date and lacks an index. Cf. also the works of H. Barth, Über die Kürden-
KURDS, KURDISTAN

The Kurds, a long persecuted ethnic group, have faced numerous challenges throughout their history. During the First World War, with the end of the Ottoman Empire, the Kurds found themselves divided between five countries: Turkey, Iran, Iraq, with some important minorities in Armenia, Georgia, and Azerbaijan. The First World War led to many political upheavals in the Near and Middle East. The situation of the Kurds, who had escaped to seek refuge abroad, was quite complicated. Shaykh Sa'id Naksjbandi, who had been hanged at Diyarbakir with 53 other insurgents, was soon made a prisoner, judged by the Russian authorities. The sultanate was abolished in 1923, and the Ottoman Empire and the Persian Empire were henceforth divided between five countries: Turkey, Iran, Iraq, with some important minorities in Syria and several colonies in the lands of Soviet Transcaucasia. For his part, General Ridi Khan overthrew the Kadjar dynasty and founded the Pahlavi dynasty on 26 December 1925. For his part, General Ridi Khan overthrew the Kadjar dynasty and founded the Pahlavi dynasty on 26 December 1925. For his part, General Ridi Khan overthrew the Kadjar dynasty and founded the Pahlavi dynasty on 26 December 1925. For his part, General Ridi Khan overthrew the Kadjar dynasty and founded the Pahlavi dynasty on 26 December 1925. General bibliography:

In Turkey, after the First World War and during the long negotiations concerning Mawil, some Kurdish nationalists, disillusioned at seeing their hopes of an independent Kurdistan vanish, a Kurdistan foreseen by the Treaty of Sèvres (10 August 1920) but suppressed by the Treaty of Lausanne (24 June 1923), provoked troubles. Shaykh Salih Nakhbandi of Piran led a rebellion in the regions of Urfa, Severe and Diyarbakir, either through religious fanaticism and respect for the caliphate (Gentzou) or at the alleged instigation of Britain (Muștafa Kemal). The Shaykh was soon made a prisoner, judged by the Tribunals of Independence (April-June 1924) and hanged at Diyarbakir with 33 other insurgents. The whole trial was followed by the Turkish newspaper Vakit, from 20 April 1924 to the 28 June, insisting upon the nationalist character of the movement. The failure of the attempt forced the leaders who had escaped to seek refuge abroad.

On 3 October 1927, the Kurdish National League
The black Birina re...

Deng, Frat fusion of all the old committees or associations. IbsAn Hoyboun saw wound, and the long classical poem M/m-o-Zin appear in the Turkish press, and, between 1965 and articles on Kurdist and the Kurds were able to Turkey. Kurdistan stayed calm throughout the headed it. This revolt was the most terrible for the officially there were no longer Kurds in Turkey. All gated on 5 May 1932 which established a plan of 31 August 1925, interpreted differently by Agabekoff, in his Haki-

periodic convulsions were felt at Menemen, Erzurum, the region of Diyarbakir, inhabited by the Zaza Kurds. It was Sayyid Rüd, Shaykh of the Naksbbandl brotherhood, who headed it. This revolt was the most terrible for the Kurds by force were to trigger off in the light of day. But soon everywhere the journals were forbidden, published works confiscated and their authors prosecuted. In addition, to avoid all possible contamination by events in 'Iraqi Kurdistan, which had been in revolt for several years, a presidential decree of 23 January 1969 and published in the official journal no. 19, 537 of 14 February 1967 declared: "It is illegal and forbidden to introduce the country to distribute, under whatsoever form, every publication, record or tape registered of foreign origin and in the Kurdish language". Some virulent articles against the Kurds appeared in the Turkish nationalist review Otüben (no. 40, April 1967, no. 42, June 1967; cited in Vanly, Kurdistan irakien, 298-300). It was this which led to a retort by the associations of Kurdish students of 19 Kurdish towns, protesting that such an attitude was contrary to art. 12 of the Constitution and art. 37 and 4 of the Treaty of Lausanne (1923). In April 1970, brutal police operations in the town of Silvan, in the province of Diyarbakir, provoked the condemnation of the Kurdish students and of liberal Turks (cf. Milliset, June-July 1970), as well as the question, on 24 July 1970, in the House, of a Kurdish deputy, Mehmet Ali Aybar, an old president of the Labour Party of Turkey (ITP). The Fourth Congress of the ITP (29-31 October 1970), in a resolution, recognised the right of existence of the Kurdish people in Turkey (Vanly, Survey, 57-4). More than the ethnic and political side, it seems that from now on the economic and social question must play a role in the solution of the Kurdish problem in Turkey (Rambout, 23-44; Intercept, 196-8; J. Elia, 35-40; Ghassanmou, 50-62; Arts, 23-46).

Elia, 35-40; Ghassanmou, 50-62; Arts, 23-46).
In Iran, the situation of the Kurds has always been different from that which they experienced in Turkey. Indeed, the Iranian government often insists on the affinities, as much racial as historic, which unite the two peoples. But this does not prevent political and social malais appearing from time to time, and conflicts, often latent, sometimes bloody, must be recorded. Already during the Great War, the province of Ardabil in northern Persia had been troubled by the movements of the Turkish or Russian armies on this territory. The chief of the Shahsak, Isma'il Agha Simko, profited from it to attempt to carve out for himself a small Kurdish state of which he intended to assume the leadership. He also succeeded in uniting under his command the Kurdish tribes of the north of the country, achieving several victories over the Turks, the Assyrians and the Iranian troops, changing camp according to the circumstances. He also became the only authority of the region, to the west of Lake Urmia, finally to be assassinated at Urmia by the Iranians on the 21 June 1930 (Arfa, 58-59), in the same manner as he had murdered the Assyrian Patriarch, Mar Shimun Benjamin, on the 3 March 1918 (Joseph, 140-1).

For his part, further to the south, in the province of Kurdistan, Şairal-Dawla Kâdılar, related by marriage to the great Kurdish families of Sanandaj, rose in revolt, but was defeated. Some Kurdish chiefs refused to be disarmed, and it was not until 1930 that Di'itarr Sultân surrendered (Arfa, 64-7; Ghassemîou, 73-5).

But the Second World War was also bound to have a great influence on Kurdish nationalism in Iran. Indeed, the occupation of the provinces of the north and west of the country by the Soviet and British troops (25 August 1941), followed by the abdication of Reza Shâh (16 September 1941) favoured, by the enfeeblement of the central power, the movements of emancipation, and, for several months, the Iranian army had to confront harshly Hana Râşid Khiâ of Bânch who, aided by numerous neighbouring tribes, had made himself master of the Kurdish-Shiite-Malîan region in the summer of 1942 (Arfa, 67-70). But this was only the prelude to a real independence movement. First of all, the Kurds profited from the situation to form (September 1942) in the no-man's-land where central authority had disappeared an organisation Komelat jiyant Kurdistan ("Committee for the Life (Resurrection) of Kurdistan") (Eagleton, 34). This nationalist but quite conservative committee was composed of city intellectuals and of petits industriels and hygiene. A small army was constituted of tribal elements with four generals, among them Mollâ Mûsâfê Barzî, who came from Trak with his well-equipped contingent of armed men. But on the
overcome him. Wounded at the battle of Bazyan (27 June 1919), Mahmūd was taken prisoner and condemned to death, but, with his sentence commuted, was sent into exile to India. Meanwhile, several British officers had been assassinated at Zağhā, Amādīyā and Ḥakrā. Major Soarne governed instead of the šayḵā, and calm soon returned. Difficulties arose with the installation as king in Baghdād (23 August 1921) of the Amir Fayṣal of Arabia, who had been chased from Damascus by the French, and the intention of attacking by the Ṣarḵūn, the idārāt of Mawfīl, which the Turks continued to claim and which the Kurds wanted to organise for their own profit. The recent Treaty of Sèvres (10 August 1920) recognised in effect the right of the Kurds to independence. Since agitation did not cease to spread over the whole of Kurdisan, Šayḵy Mahmūd was recalled to Sulaymānīyya (September 1922) and was no longer content with the title of kūhmandāt, but proclaimed himself king of the whole of Kurdisan (November). He set up a government of eight members, issued postage and fiscal stamps, levied taxes on tobacco and published a newspaper Rej-i Kurdisan "The sun of Kurdistan" which gives many details of all these events (Edmonds, A. Kurdisan, p. 312; Rambout, 58-9). But there were soon frictions between King Mahmūd and his British protectors, as well as with some Kurds who envied his authority. His intrigues with the Turks also triggered off raids by R.A.F., who forced him to take refuge at Sardasgh (3 March 1923), where he published a newspaper, Bangā hāmg "The call of truth". He stayed there until 1930, the year which saw the end of the British mandate.

This new political régime did not help the situation of the Kurds of Trāk, much, for the Trāk government wanted immediately to withdraw from the Kurdisan region and to suppress the teaching of the Kurdish language in the administrations of the north. Whence a malaise which degenerated into open revolt when Trāk soldiers opened fire on the civil population of Sulaymānīyya (6 September 1930). Šayḵy Mahmūd once more headed the movement. The Trāk army was incapable of bringing it to an end (September 1930-April 1931), and asked for the intervention of the R.A.F. This was very severely criticised by a number of Britons, and especially in a Note of General H. C. Dobbs, former High Commissioner at Baghdād; Mahmūd was sent into house arrest in Baghdād. In 1931, Šayḵy Ahmad of Barzān, a less balanced personage, as Longrigg says (86, 103), quarrelled with a neighbouring Kurdish chief. In order to restore calm, the government undertook a winter campaign which also necessitated the intervention of the R.A.F. (cf. Mumford and Wilson, The Crisis...). There was a new uprising in 1932-4, and Šayḵy Ahmad and his young brother Mollā Muṣṭafā, who had helped him militarily, were forced to reside at Kīrķūk and then at Sulaymānīyya. In 1947, during the abortive insurrectional adventure of Rāshid 'All Gaylānī and the "Golden cadre", Šayḵy Mahmūd, who had profited from it to escape from Baghdād, had tried to raise a levy of Kurdish troops to help the British (Longrigg, 295). In 1943, Mollā Muṣṭafā Barzānī, in residence at Sulaymānīyya, unhappy with the food supplies and the social conditions of his supporters, succeeded in escaping as far as his territory of Barzān, accompanied by Šayḵy Lutfī, son of Šayḵy Mahmūd, and raised the standard of the revolt. A Kurd, Māḥdī Muṣṭafā, named as Minister of State, intervened to settle the affair. Barzānī surrendered on condition that the Kurdish districts would be better provisioned, that Kurdish and non-Arab officials would be sent there, and finally that schools and hospitals would be opened in Kurdisan. These conditions, accepted by Nāfī: Saʿīd, the Prime Minister, who even foresaw the establishment of an entirely Kurdish hawatī (Longrigg, 328), were not agreed by the regent 'Abd al-Ilāh and, in the spring of 1945, the revolt broke out more fiercely. This time it was more serious. The Kurds achieved several spectacular victories, while the army underwent heavy losses. Once again the R.A.F. came to play its role; in addition to Trāk and the Highmīlete monarchy. At the end of August, the operation was completed. Mollā Muṣṭafā withdrew to Iran with a party of his troops and his plunder (Rambout, 74-82). Four of his officers who had had faith in government promises of amnesty, Muṣṭafā Khushnavā, 'Īsāt 'Abd al-ʿAzīz, Mubānnd Māḥdī and Khayr Allah 'Abd al-Karīm, were tried and executed on 19 June 1947.

After these events determined by force, all that remained for the Kurdish nationalists of Trāk was to go underground, and this is what they did. They founded the Democratic Party of Trāk (D.P.K.) with leftist tendencies, and published two bulletins starsi "Liberty" and Risgārī "Liberation". In its second issue (October 1946), the latter exulted an Armeno-Trākī Union. At the same period, Colonel Elphinstone, chief of the Intermittent Service in the Levant, asked himself if these efforts were not going to lead to the constituting of a Republic of the Soviet Union with an Armeno-Trākī character. In any case, the calm returned, the Kurds profited from the liberty which had been left them to work with more ardour in the cultural domain. Literary reviews saw the light of day. Collections of poetry and articles on the history of Kurdistan and famous Kurds of the past were published. Sulaymānīyya became a very active cultural centre and a lively seat of Kurdish nationalism. Main, Iraq, from mandate to independence, London 1935; S. H. Longrigg, Iraq, 1900 to 1930, a political, social and economic history, London 1953, 1956; J. C. Edmonds, Kurds, Turks and Arabs, polette, travel and research in north-eastern Iraq, 1919-1925.

*Iraq* Kurdish nationalists, the proclamation of the *Iraq* Republic (24 July 1958) until 1970 underwent many vicissitudes. This Republic aroused the enthusiasm of the Kurds who, with the other political parties, had participated in the overthrow of the Hashimit monarchy. For the first time in history, the (provisional) Constitution of the state proclaimed in effect, "the Arabs and Kurds are associated in this nation". The Constitution guaranteed their national rights within the heart of the *Iraqi* entity (art. 31 (cf. *Orient*, no. 7 (3rd quarter 1958), 191-9). For his part, General *Abd al-Karim Qasim* [*ibid.*] reinstated the Kurdish officials suspended in 1947 and authorised (2 September 1958) *Molla Mustafa*, who had taken refuge in the Soviet Union since this date, to return to *Iraq*. He received him there with joy on the 7 October 1958, while his companions in exile returned in April 1959. Qasim gave him a personal guard and a house in Baghdad and, for some time, made him his counsellor to whom he paid attention. The Kurdish Democratic Party, which had prepared itself in secret for the great day and, from April 1959 published its weekly newspaper *Xebat, "Struggle"*, was authorised to appear. The Kurdish reviews and newspapers prospered, and from now on had a political aspect no longer simply a literary one. But this did not prevent the government troops were garrisoned. The Kurds had sought to eliminate the latter. They multiplied their pamphlets, seized military posts and convoys of munitions and took prisoners by hundreds. The *Iraq* army, beaten and humiliated, then brought in the "National Guard", aid of the Ba'athist government, whose atrocities against the communists and all the opponents of the regime aroused universal repugnation.

By a new coup d'état, aided by the army, General *Abd al-Salam 'Arif* ousted the Ba'thists and took all power into his own hands (18 November 1963). Military actions did not continue any the less. Barzani launched an appeal to the International Red Cross (September 1963; Vauly, 219-21), and the Kurds addressed themselves to the Pope on the occasion of his journey to the Holy See (9 January 1964; *L'Orient*, Beirut, no. 5420 (4 January 1964); complete text in C.E.R. no. 39, 82-8; cf. Mauries, 95, 96).

With a view to finally settling the Kurdish problem, Field-Marshal *'Arif* negotiated a ceasefire (20 February 1964) which *Molla Mustafa* accepted without even consulting the political bureau of the D.P.K. The Kurds who, as much as the *Iraqis*, needed a breathing space, profited from it to make known to the outside world the true situation, thanks to foreign journalists who came to visit them; they renewed their provocations in livestock and munitions. The *Iraqi* government, occupied with still-born projects of Arab unity, left things to settle down, persuaded that in the end discarding would be settled through weaknesses. Nothing came of it and the Kurds, disillusioned at seeing that no-one was seriously occupied with their demands, after October 1964 resolved to organise in effect their internal autonomy. They nominated administrative officials at all levels, levied dues and taxes, mated out justice in their tribunals. Naturally, too, their troops were better-and-better equipped and trained. For the Sixth Congress of the D.P.K. (1-7 July 1964), the general state of the revolution (9-10 October 1964) as well as the new organisation of the Party and Constitution (17 October), cf. Vauly, 227-44 and texts: Constitution, 375-5, Administrative Law, 376-7. On the military organisation, *ibid.*, 344-8; Pradier, 270-23.

But the ceasefire of February was bound to provoke a serious crisis in the heart of the Kurdistan insurrectional movement between Barzani and the political bureau of the D.P.K., which in a brochure published on the 19 April, *L'accord 'Arif-Barzani, une paix ou une capitulation?* accused him of having by this accord betrayed the objectives of the revolution. There was even a bloody engagement at Mawat, on 17 July, between antagonistic groups. At the Sixth Congress, 14 out of the 17 members of the political bureau were excluded from the party, among them *Ibrahim Ahmad* and *Djalal Talabani*, and took refuge in Iran. This crisis due to differences of view between theoreticians and realists, despite its miseries, did not have any repercussions on the later military government of their neutrality, they were met with excuses. However, negotiations were embarked on and, on the 14 April 1963, the Kurds even presented a detailed *Memorandum* in which they expressed their desiderata (*Orient*, no. 26 (and quarter 1963), 207-11). Meanwhile, once it considered itself quite strong, the Ba'athist government imprisoned the Kurdish deputies, issued an ultimatum (to June 1963) and the same day resumed hostilities with an increased violence. As in the interval, the Ba'th had also assumed power in Damascus, the Syrians lent assistance to their *Iraqi* friends by sending aircraft and the *Iraqi* army, the Arab brigades. The Kurds had soon eliminated the latter. They multiplied their pamphlets, seized military posts and convoys of munitions and took prisoners by hundreds. The *Iraqi* army, beaten and humiliated, then brought in the "National Guard", aid of the Ba'athist government, whose atrocities against the communists and all the opponents of the regime aroused universal repugnation.
military situation, the situation between Kurds and Iraq became very tough. On 10 May 1966, the Iraqi government promulgated a new provisional Constitution which passed over in silence the rights of the Kurds explicitly recognized in the 3rd art. of the Constitution of 1958. This would not do for the Kurds who, for their part, had not disarmed their troops. The spring offensive was launched on 4 March 1966 by almost the entire Iraqi army (infantry, armour, aircraft) with its head General 'Abd al-Rahman 'Arif, brother of the President. It began by achieving some local successes (March-May), but in summer (June-September) some murderous combats developed in the chain of Safin. The small town of Pendaflin, which had been destroyed, was occupied by the 'Iraqis. Throughout this period, while the Kurds used artillery for the first time, the 'Iraqis used toxic gases, but suffered heavy losses (319 killed, 2,021 wounded, 12 tanks destroyed and 9 aircraft shot down). Egypt helped 'Iraqi (Le Monde, 22 October). The winter campaign (22 December 1965-end February 1966) was resumed with intensity. On 1st January 1966, Barzani sort a Memorandum to the U.N.O. (text in Vanya, 378-9). On 13 April 1966, Marshal 'Abd al-Salâm 'Arif was killed in a helicopter accident. His brother, the general, was chosen to replace him as head of state. The same day as this death a new offensive began to liquidate definitively the rebellion. This campaign, which lasted from 12 April to 15 June, was particularly notable in May for the battle of Rawindix or Hendrin, the "Kurdish Verdun", as an eye-witness called it, R. Mauritès (171-213), and was transformed into a rout for the 'Iraqis who, despite intensive use of napalm, lost 1,056 killed, 476 wounded, 600 mercenaries, the "cavaliers of Saladin" were put out of action and an enormous booty taken. The Kurds for their part only had to lament 38 killed and 85 wounded. Despite proclamations of victory, after a new ceasefire demanded from the 15 June by the government, an accord negotiated by the Prime Minister Barzâr (d. 28/9/73) was signed on 25 June 1966 (Vanya, 379; Viennot, thesis, ii, 189-92). Some secret clauses recognised in effect a certain autonomy for the Kurds of 'Iraq; 'Arif made a visit to Baghdad (28 October) to try to reach agreement with him, for the Iraqi General Staff, unhappy with the "Bazzi-iz plan" did everything to torpedo it. Again, things dragged on for a long time. But the war of 5-11 June 1967 was bound to have its counter-effect in several Arab lands, as also in 'Iraq, where a new coup d'état (27 July 1967) saw General Ahmad Hasan al-Bakr install himself as President of the Republic, followed by a second coup d'état (30 July 1968) in which al-Bakr took over all power and re-established the Ba'hist dictatorship, whose "National Guard" in 1963 had hardly left behind good memories. While the Kurds maintained their material and moral potential and made a great effort in the field of primary instruction by opening 300 schools in 1966, the government lifted with the Kurdish dissenters, created an (Arabic language) University at Sulay'manîya and the new administrative division (jum'â) of Duhok among the Kurds, but nevertheless prepared to resume hostilities. These, preceded by several skirmishes, began in April around Koy-Sanglaj. The 'Iraqi troops had to abandon the towns of Kala-Diza, Pendjîwa and Çîwarta, and then attacked in June the peasant population of Arbîl, Halabîja and Badîna, spraying the harvests with napalm and sulphuric acid.

In July, cholera broke out at Kala-Diza. In August there was the massacre of Dakan, at Shâykhān. In January (5 January 1979, L'Express mentioned that between September and November 1978, the Kurds had stopped the 'Iraqi offensive outright; 131 aircraft had been shot down during the last six months. Also in January 1979, the Ba'hist regime opened negotiations with Barzâni and the executive bureau. A Kurdish delegation, headed by Dr. Maîmûd Úlmân, went to Baghdad and, on the 11 March, an accord on 13 points was signed at Nawperdan, in Kurdistan, between the two parties, which put an end to a war of nine years (text in Kurdistân facts, February-March 1979). The Kurds obtained their internal autonomy and the Vice-Presidency of the Republic. The Kurdish language became the second official language of 'Iraq (Arabic text in al-Dinwârî, Baghdad no. 701, of 12 March 1979, Kurdistân facts, February-March 1979; German text, Nebuz, Kurdistân, 235-4). Five Kurds were named as ministers, the amnesty was declared on both sides. Great festivities celebrated the event. However, all the problems were not solved. There was an attempt against Mollâ Mustâfî (29 September 1972), troubles at Singîr (summer 1972) and controversies over the attribution of the territories of Kirkûk after the nationalisation of the I.P.C. (1st June 1972). In June 1973, an Appel en faveur du Kurdistân irakien for the application of the accord of 12 March 1970, emanated from combined groups and from Black Africa (Le Monde, 13 June 1973).

The Kurds of SYRIA and LIBANON, apart from some great families and their entirely arabisized dependants, such as the Barûn of Hamât, the lords of 'Akkar, the Dimsha, the Druse chieftains (Dâbîr Bédîn "soul of steel"), have preserved their original characteristics, although some may often have been settled for several centuries and, in every case, well before the establishment of the French mandate. They posed practically no political problem to the mandatory...
power and were able to develop freely a very lively cultural movement. They had a large share in the economic prosperity of the Dijzara (Rondot, Les Kurdes du Syrie, 94, 99 and passing; A. Mu'asawad, al-Abrad fi Lubnan wa-Suriya, Beirut 1945). But difficulties of a political order arose under the various régimes after 1937 and the plan for the “Arab Belt” (1953). Then, on the pretext of agrarian reform, the lands of the peasants were confiscated, and 120,000 Kurds forfeited their Syrian nationality, also loosing the right to become civil servants, to send their children to state schools and to be admitted to the public hospitals. All Kurdish books and music were forbidden. The names of villages were changed to give them Arab names and to settle Arabs there instead and expel Kurds (I. C. Vanly, Le problème kurde en Syrie, 1968 [cf. Muhammad Tâlib Hillî, Didda 'an muhâfazat al-Dijzara min al-nazâri al-kaumiyiya al-islâmiyya al-siyasiyya, 1963, ed. I. C. Vanly, and 1968]; idem, La persécution du peuple kurde par la dictature du Baas en Syrie, Amsterdam, October 1958. (Th. Bos))

IV. KURDISH SOCIETY

The social and economic life of Kurdistan is strongly structured. If a small part of the Kurdish people still leads a nomadic life, its great majority is now sedentarised in numerous villages, but “it survives as well today, and in the countryside Kurdish society is essentially tribal” (Edmonds, 12), as always among nomads. But in the detribalised villages the organisation of the group comes under the influence of the government administration, landlords and religious leaders. This leads to a certain number of transformations of fundamental structures at present clearly evolving in Kurdish society, family, tribe and landlord, which we are going to examine first before considering the religious impact, then proceeding to the religious impact, first before considering the religious impact, then proceeding to the religious impact.

A. The fundamental structures of Kurdish society.

1. The Kurdish family.

The normal Kurdish family consists of a cell or household composed of the father, mother and children. This household, founded on marriage, is ordinarily monogamous and not patriarchal. Marriage is essential. In Kurdistan there are no old bachelors or spinsters, and also no celibacy nor free love at all. Prostitution does not exist in the small Kurdish villages. Horizontal or simultaneous polygamy was very frequent in the past, and was still so in the 19th century. The chiefs of tribes did not always keep to the four legitimate wives authorised by the Kurîn. Ibrahim Pasha, founder of Sulaymanîya, had 40 wives (Campanile, 107); the great Bedir Khân had 14 and 99 children. At his death, 21 boys and 21 girls remained to him. These customs are now ended. In the past, polygamy was a luxury and a sign of power; today it is sometimes an economic need. It can still be encountered in the urban poorly-educated milieu (Hansen, 138), but also in the peasant milieu (Barth, 29). In any case, where it is found, it does not exceed 2% in the Kurd Dagh (Dagestani, 91); 4% in Erzîk (Barth, 24), and there are never more than two wives. Among themselves, they are called hewil. In Turkey and among the Soviet Kurds, polygamy is forbidden by the civil law. But vertical or successive polygamy always exists, thanks to divorce or repudiation, for three tâlîks suffice for a husband to be able to repudiate a wife who no longer pleases him in order to marry another. Also, the girls of Shâlîz at 70 had been married 19 times (Hansen, 138), and similarly old Ibrahim, sôha of the Dîzal (Hay, 43). The wife can also be repudiated because of sterility or the impossibility of bringing male infants into the world. In this case, she may remain with her husband. If she is repudiated for other reasons, she returns to her father and has few chances of remarriage. A woman guilty or even simply suspected of adultery will not only be repudiated, but will run a high risk of death, which her own father or brother or one of his parents will be entitled to inflict on her. The children of the repudiated wife remain with their father. The widow remains in the house of the father or brother of her husband (Barth, 29). The levirate is practised at times, and a little everywhere (Dagestani, 99; Avdal, 221; Barth, 29; Edmonds, 345; Hansen, 138), not as a rule of law, but for convenience. In the Kurdish family, the husband has great authority,
but the wife also has her word to say. Speaking of the situation of the two spouses, Mrs. Hansen (117) finds that of the woman inferior to that of the man in the humble villages, equal in the village aristocracy and the educated urban milieu, but superior in the uneducated urban milieu.

The birth of a child is always desired, even if a son is not necessarily preferred to a daughter. Also, the children are numerous but decimated by a fairly severe infant mortality. The children are always well-treate, but without excessive refinement, and life is harsh. The name is given at birth and ordinarily by the women (Nikitine, 106), but at times by the mollah (Barth, 112; Hansen, 108). This name is often that of an Islamic personage or a hero of history or national legend, or it may well be one of the virtues which one wishes to see possessed by the newborn, or the name of a flower, fruit, animal with qualities appreciated by everyone. Hypocoristic forms of the name are very widespread. Some names possess at the same time the desinence $a$ of the masculine and the desinence $e$ of the feminine. But curiously, the masculine forms are used to address individuals who are not noble, while the feminine forms are reserved for persons of distinguished birth (Celadet Bedir Khan, Grammaire 98). On names, diminutives, surnames, see Edmonds, 42.

Circumcision, $eswe$, is practised a few days after the birth, either by a specialist $sinwther$ or by a simple barber (Barth, 112; Nikitine, 106). In some places, the ceremony may be carried out later, when the child is 5 or 7 years old and often with several children at the same time. The chief or notable whose son has to be circumcised organises a small festivity, and offers a meal to the families concerned (Barth, 112).

2. Tribal organisation.

(a) Listings of the Kurdish tribes.

A fundamental element of Kurdish society is without dispute the tribe. We possess at present the nomenclature of all the Kurdish tribes. In 1826 Lory already made a good summary of the Kurds of Turkey (61-87), the Caucasian territories (88-9) and the Persian territories (92-122). Jabe (1860) specified many of them (118 of the Kurdish texts). A map of their habitat in Transcaucasia was published at Tiflis by E. Kondratenko (1896) and Col. Kartov (1897). In 1908 Sir Mark Sykes recorded 395 names of Kurdish tribes of the Ottoman Empire, and G. R. Driver (1919) drew up Sykes' list differently and added the Kurdish tribes of southern Kurdistan (‘Irak) and those which remain outside the Kurdistan foreseen after the Great War (19-74). But the different political events which have occurred since then have led to many changes in the distribution and situation of the Kurdish tribes. In the Kurdish edition of his History of Kurdistan (1931), M. A. Zakl draws up a complete table of all the tribes (1939-96, Arabic tr. [1939], 372-468 with map). The Kurdish tribes of Syria were counted by the French services of the Levant in 1930 (5th part, 137-90), and with more care and exactitude by P. Rondot in 1939. The lists published in Roja Rās of the Kurdish tribes of ‘Irak (No. 66,14—January 1949) and those of Iran (No. 68,4 of February 1946) are not of much use, given the few precise figures, in particular. M. Mokri in Persian gives information on the Sandjābī tribes of Iran (1946), and A. Azzawi presented in Arabic (1947) an excellent study on the Kurdish tribes of ‘Irak (27-222). A good account of the tribes and sub-tribes of ‘Irak, northern Kurdistan (18-27), and southern Kurdistan (45-51), is supplied for us by H. Field in his Anthropology of Iraq (1953), with their numerical importance, the names of the chiefs and the habitat. But in fact, his information is earlier than that supplied by A. Azzawi. In Persian, the name of 460 tribes are to be found in Mardōgh (1953), 1, 75-120, and a long study on the tribes of Sanandaj, 11, 10-48. Finally, in B. Karabadat there are eight sketches of the position of the Kurdish tribes and clans of Turkey in the villages of Urfa, Mardin, Diyarbakr, Shīrt, Diiai and Djaff, Mus, Van and Hakkarî, and similarly in the border districts of Syria, ‘Irak and Iran. As for the Yazidi tribes, they were in their turn enumerated and placed by A. Azzawi in 1935 (14-71), and those of Singjar and Djabal Akkâr especially by R. Lescot (1938), 251-61. The interest of this vast table and listing is particularly to show the universality of the tribal phenomenon in the history and life of the Kurdish people. Clearly, it is not our concern to write at length on these different tribes. The fundamental work remains the Sharaf-níma (1956). Much historical and ethnographical information is to be found in the different works of Soane (1912-26). Longrigg (1935), Leach (1940, Nikitine (1950), Barth (1953) and Edmonds (1957). An exhaustive study of the Yazidi tribes, clans and villages with statistics is given us by T. Hâbîl (1949) in his work on the Yazidis in Arabis (224-60).

(b) The Kurdish tribe and its components.

“The Kurdish tribe is a community or a collection of communities which exists for the protection of its members against an external aggression and for the maintenance of the old social customs and way of life” Hay, 55). It is evident that a land of mountains, such as Kurdistan, favours the birth and development of groups more or less closed and shut in on themselves, as perhaps was the tribe in its origin. Although constituted like every human grouping which is formed from a kernel like the family, it would be wrong to believe that the Kurdish tribe is an enlarged family, a little in the manner of which the Bible speaks of the Twelve Tribes of Israel (E. Mil-ling, 284). Indeed, some contemporary Kurdish sociologists are opposed to this way of seeing things. If the vertebral column of the Arab tribe (habīla) is a kinship line (nsaad), among the Kurds it is the soil (arg), i.e. the region inhabited by all and submissive to the chief of the group (Khesbâk, 68; Akrâwi, 18).

However, the western sociologists who have studied tribal organisation among the Kurds (Leach, 1949; Barth, 1953; W. L. E., 1956) seem to have remarked some differences among the nomads on the one hand and the sedentaries on the other. Barth also examined the political organisation of the Djaff, a powerful federation of tribes, almost entirely nomadic until very recently (34-44 and diagr. no. 2); political organisation among the Hamavand (45-9 and diagr. no. 4 and 3), where the economy is based on agricultural exploitation and where non-tribal elements are mixed with the population; and finally, the organisation and political structure of the Baban, a princely family (60-6 and diagr. no. 6). For his part, the anonymous W.E.E. (1952) was able to distinguish in the rural population various types of social and economic organisation, e.g. the classical tribe under an agha claiming a common origin and divided into iras or fractions, such as the Girdi and the tribe under a “feudal” chief of different lineage, such as the Dżawai, the Baban. The influence and the social role of the landlords and religious shaykhs, who are not chiefs of a tribe, are another aspect of the problem (cf. Rondot, Les tribus montagnaires, 39-47).
Furthermore, real social classes are recognisable in Kurdish society. The most evident distinction exists between the villagers of tribal origin, *äštir* (‘aštira) and those who are not and are named after the regions and dialects, either *kurdmande* (Kurdmand), *goran* or *mishka*, some of them being sometimes almost the serfs of the landlords of the village (Nikitine, 124). The last name *mishka* should be preferred, says Edmonds (123), for the two others denote different meanings (dialect or tribe). Perhaps they are to be seen as the descendants of the autochthonous populations conquered by the warlike tribes? But even within the same tribe, there is no uniformity of rights and duties. There are the noble families, one might say, *teirin*, such as the Bagrellas; and the commoners who comprise firstly a military caste, the *xulam* (xulam) (Nikitine, 125) or *piştname* (Barth, 49), a kind of praetorian guard of the chiefs who are recruited in all the *tira* of the tribe (Barth, 45) and who, in the past, had almost the status of slave (Nikitine, 125), and finally the class of peasants.

Perhaps one may now give the classical scheme of the organisation of a Kurdish tribe according to Rendot (1918), with regard to the Omeran. At the base is the house or household or family in the strict sense of father, mother and children. A group of houses form a *famik* or *mal*, an extended family. The union of many *bavik* constitutes the clan or *ber*. The collection of all these clans gives us the tribe or *äštir* (‘aštira). The terminology is different in Barth, who divided e.g. the Djatt *aštira* into a certain number of tribes or *tira*, a political group not to be confused with the *har*, a group of the same lineage. The *tira* is subdivided into many *halten*, each *halten* composed of 20 to 50 tents or households united by economic links as well as by family links. At the head of the *halten* there is, or used to be, a *pasha*, the chief of a village, the *tira* has at its head a *ra'is* (*räis*); and at the head of each *halten* an elected chief of a village, the *kîkâ*. Among the Hamawend, the chief of a *tira* is called *ägâh*. For his part, Leech (1943) has prefixed the Islamic term *alî* which "names describes at the same time the people and the territory which occupies it". It is essentially descriptive of a political grouping. It is formed of one or several clans of *veyan*, descriptive of a kinship grouping and divided into several subsections or *tira*. He also finds, he says, the normal anthropological classification: *aštir*, *dvja* and *tira*, i.e. tribe, clan and lineage. This divergence in vocabulary where Arabic and Kurdish words of different dialects are mixed together hardly favours clarity of exposition.

Let us draw attention to the system of the *oba* (ed. the *bödêl*), which is particular to the semi-nomadic tribes and which makes its appearance towards the end of the 19th and the beginning of the 20th century. It is a temporary association of stock-breeders from different villages, formed in the spring to lead the herds to the pastures and to return at the end of the autumn. Neither kinship nor tribal relations are necessary to be a member of the *oba*. The *ser-oba* or *oba bâg* organises the transhumance on condition that he has dues appropriated in kind. There are still to be remarked the differentiations in the groups: the chief *ser-oba* and his family, the different more or less important landlords and the simple shepherds. On this organisation of the *oba*, see Ereb Şemao, Şinåmed hirital (ed. Beirut 1947, 99), Nikitine, 149 ff.; Chassemiou, 135-60. According to O. L. Vîlevsky, Economie de la communauté agricole chez les Kurdes, 1936, it is around the *oba* that the "class struggle" is concentrated in Kurdistan.

(c) The chief of the tribe, his obligations, his responsibilities and his compensations.

The chief of the tribe, whatever its importance, is ordinarily called *ägâh*, a relatively recent title, at the earliest after the conquest of Baghdad by Sultan Murad IV in 1637 (Edmonds, 223). He always comes from the family of the chiefs. He normally acquires this rank by heredity, but not always. The eldest son generally takes the place of his deceased father, but not necessarily, for a younger brother, judged more able, because more competent or better-supported, can supplant his elder brother. But the choice can also be made after the election of other chiefs or clans, or even, if necessary, by violence. In some cases even, the central government can intervene and nominate the chief directly.

In the feudal age, the chief, almost autonomous in his tribe, had to supply the suzerain, sultan or *shâh*, with levies in the form of troops or tributes which, naturally, he levied on his dependents, whom he had besides to aid protect in time of war and danger. But this is ancient history. Today the chief has other obligations, and especially it is to him or his representative, the chief of the village, that there falls the duty of sheltering guest travellers, Kurds or foreigners, more or less generous according to the seasons or circumstances. To collect his expenses, the chief imposes on the people of his tribe certain dues, which bear the general name of the *ägâh’s* right, *aštir*, either taxes on all the revenues of the shepherd or peasant, or corvées, *hârâz*, days of obligatory work, not to mention some obligatory presents, *bâdêl*, in certain circumstances (marriages, feasts) and the rights of justice or fines in each which he can exact for theft, abduction or murder, if recourse is had to his good offices and to his intervention to regulate the litigation (details of all levies due to the chief will be found in Th. Bois, Connaissance ... , 35-6 or Le vie sociale, 610-11 and notes 46 and 47 with the references). These tribal rights should not be confused with the other rights to which the Kurdish shepherds or peasants are obliged by the landlords.

3. The economic structures.

(a) Kurdish nomadism.

The nomads are essentially organised around the tribe and are devoted almost exclusively to stock-breeding in a fairly closed economy. The life of a nomad is harsh and is submissive to the heavy authority of the chief. But this way of life, both for social and economic reasons, is tending to be transformed and to disappear. On nomadism and its repercussions on the economy of Kurdistan, see J. Frélin, Les formes de la vie pastorale en Turquie, in Géographischema Stockholm Annalen (1944), 219-74; H. Christoff, Krudm en Armænien, Hamburg 1935; O. L. Vîlevsky, Economie de la communauté agurpose nomade kurde de la Transcaucasie et des districts environnants dans la 2* moitié du xixe s., in SE (1936), No. 4-5, 135-61; N. Bogdanova, L’exploitation florale des nomades, in Arch. Hist. Acad. Sc. URSS, li (1939); J. F. Petrushevsky, Essai sur l’histoire des relations florales en Azerbaïdjan et en Arménie, du xvi* au début du xixe s., Leningrad 1949, 389; W. D. Fütteroth, Bergnomaden und Yaylabauern im mittleren kurdischen Taurus, Marburg 1959, 290; T. R. Staufer, The economies of nomadism in Iran, in MEJ (Summer 1965), 283-302; V. Montell, Les tribus de l’Asie and la saédentarisation des nomades, Paris-The Hague 1966. Also, X. de Planhol, Les fondements géographiques de l’histoire de l’Islam, Paris 1968, 442; H. Cerrée d’Encausse, Aperçu sur le problème du
There are the dues in kind or in corvée labour (80%), peasant only reaches 60 dollars (Ghassemlou, 168). Reaches 5,600 dollars a head, that of the average highly precarious. Indeed, the dues are heavy. If, in a price which renders the situation of the peasant at a loss, the pair of oxen used for labour and the work carried out in a hectare or a quarter of the harvest and the peasant 1/4 of the harvest; stîkbar, in which the landowner supplies the land, the water, the seed and the harvest of labour, and takes 1/4 of the harvests; sitqat, in which the landowner supplies soil and water and receives 1/4 of the harvest; and zamânî, in which the landowner, in return for supplying earth and seed, takes 1/4 of the harvest (Ghassemlou, 132-8). In 'Irâqi Kurdistan the same problems are encountered. Thus in the summer harvests, tobacco or cotton, the landowner takes 1/4 and 1/4 in the case of the rice; for the winter harvests, wheat or barley, 1/4 or 1/4. In addition, there is that which is owned or leased: 7.5% for the serbal, the agent of the landowner, 10% for the government, and in addition, all that is set aside for the qahvani or coffee maker of the master, the mawdîf or guest house, etc. (Khosbak, 48). Also, for the distributized villages under landlords, the revenues of the soil are distributed roughly as follows: 1/4 for the landowner, 1/4 for his representative in the case of the landowners who do not always live on the spot but are settled in the villages, 1/4 for the share-cropper or farmer, and 1/4 for the agricultural worker who has neither land nor beast, but only his labour. If account is made at the end of the year, the poor Kurdish peasant is left with empty hands and overwhelmed by debts (Rossi, 86), for he is often forced to take on usurious loans in order to survive until the next harvest.

If such are the conditions of life of the Kurdish peasant, one can understand the rebellions which break out from time to time, e.g. that of the Muslim of the Kurîn-Dagh (Syria) directed by İbrahim Khalîl between 1930 and 1940 (cf. Th. Bois, Les Kurdes, 15-115), and the revolt of 20,000 families of Dîzî, in 1954, who demanded the reduction of the tax to 1/4 of the harvest, the suppression of forced labour, and the suppression of gifts on the occasion of feasts or marriages (Gavan, 19).

To remedy this feudalism of the land which makes the Kurdish peasant a taxable serf, subject to forced labour at pleasure, some projects of agrarian reform have been envisaged by the governments of the regions inhabited by the Kurds. In all these lands however, the feudalists, chiefs of tribes or religious nîkâhs, privileged in the past, have been the stubborn enemies of these attempts at reform.

In Iran, since 1955, a law provides for the distribution of the lands belonging to the crown and state (Muhammad Shah, 203). In 1960, an agrarian law aimed at regulating the property of private lands by fixing the maximum at 400 hectares for irrigated lands and 800 hectares for non-irrigated lands. Provision was also made for rural co-operatives which, from the beginning, rose 4.5% in 1965 and 8,000 in 1969. But above all, the Shah proclaimed the "White Revolution" (26 January 1963), approved by referendum and which, in its
bound to benefit from these agrarian reforms. But it general outcry on the part of the landlords, and many (Vernier, 398). There was euphoria among the of non-irrigated lands.

Properties should not exceed 230 hectares in irrigated agriculture. According to this law, the area of law which was aimed at putting an end to feudalism, the Shammar (Warriner, 160). but the major part was assigned to Abmad al-Ajjil (6,863 peasant families from the region of Sinflj c Ir3k a

destroyed. Finally, in 1954. Decree No. 21 allowed the chiefs the ownership of the properties of the tribe. In

August 2958, the new Republic published an agrarian law which was originally rather favourable to the chiefs of tribes, Arabs or Kurds. In 2932, law No. 50 (Dowson) assigned landed property, pasture or arable, to the tribes, then law No. 53 (called lasma) assigned to the chiefs the ownership of the properties of the tribe. In 1933, Law No. 28 forbade the peasant "in debt" to leave the land of his master, unless his house was destroyed. Finally, in 1954, Decree No. 11 allowed the Minister of Justice to assign the national properties. Furthermore, e.g. in 1952-4, 1,794,560 dönems (in 'Irak a dönem = 1/4 hectare) were distributed to 6,863 peasant families from the region of Singdir, but the major part was assigned to Ahmad al-Ajjil, 452/1 of the Shammar (Warriner, 160).

These problems of the land are not posed in the

Kurdish society, based on the land (tribe and village) and blood (family), is coloured by a religious aspect which appears often in daily life (cf. Th. Bois, L'îme des Kurdes, 47-8). The central kernel of the present Kurdish habitat, to the east of the Tigris, around Lakes Van and Urmiya, as well as in the north and east of 'Irak, was contained before Islam within the Sâsnûn empire (224-642) where Zoroastrianism became the state religion. But already before that, in the time of the Puthians, Christian evangelisation had encountered there some Jewish groups against pagan populations who worshipped trees, had
a solar cult and sacrificed to the devil. Some of them were converted. The Arts of the martyrs of Persia (Syria) and of the Iraqis (Edmonds, Leipzig 1892) report that these autochthonous Christians suffered under Sapor II (309-62). But at the beginning of the 5th century the church was reorganised, bishops were installed in all the Kurdish lands (cf. F. Labourd, Le christianisme dans l'Empire perse sous la dynastie sassanides (224-653), Paris 1904, passim) and a number of monasteries were built, some of which were maintained until the invasions of Timur (1336-1405); cf. Fley, D'histoire chrétienne, passim. But the mass of the people followed the official cult, and the Kurds recognise that their ancestors could have been magi or followers of Zoroaster (Sir Mark Sykes, The caliph's last heritage, 142).

The fall of the Sassanian dynasty (642) favoured the Islamisation of the country that the Arabs had begun to invade a decade or so previously. This happened neither without a blow nor without regret. But after many battles in which they allied themselves sometimes with the Sunnis, sometimes with the heretical Khwarizmis, the Kurds ended by rallying collectively to the new religion. Having become Muslims faithful to the Sunna, the Kurds follow almost in their entirety the juridical school of al-Shafi'i (d. 204/819), as the Sharaf-nami already recognised (1,4) and also Ebyla Celsi (IV, 75).

In the course of history, the Kurdish chiefs of the convents have shown a fine religious zeal without the national factor intervening, beginning with Salih al-Din or Saladin (1137-93). They immortalised their passing by building mosques, schools, hospitals or simple fountains (Sharaf-nami, ed. Cairo, 97-171). Alongside these builders, an intellectual élite, 'ulama and fakhs, devoted itself to the study of theology and law. Also to be noted are the famous madrasas of Bitteh (Sharaf-nami, 455-495), of Djalma (ibid., 173) and of Zako (ibid., 147). At Akhtca, one of these scholars worked on the construction of the Observatory of Maragh in the 7th/8th century (ibid., 409).

'Almawiyah is also a centre renowned for its masters (cf. Damien), Imad al-Haddad, 39-64; al-'Abbadi, Imad al-Din, 141-165. The famous university of al-Azahr in Cairo counts many Kürdi students of theology (cf. Nikitine, Les Kurdes, 210). The cemetery of Eyyub in Istanbul and that of Sévati contain the tombs of numerous Kurds who, in the Ottoman period, held the post of Shaykh al-Islam (cf. Th. Bois, La religion, 7).

But over against this official and institutionalised Islam, there has sprung up a popular Islam, often on the fringe of the authorities, civil as well as religious, and which leads a very active life. It is the world of the small folk, peasants or artisans, illiterate for the most part, a kind of secular tertiaries attached to a mystical fakhr and linked directly to a sheikh who serves them as spiritual guide, mystically linked to a (art ha shaykh, the shaykh is the leader of the tribe who sees there competition with his authority; he is endowed, with supernatural and miraculous powers and also is regarded as a man of the orthodox 'ulama who have almost no faith in him and distrust him; finally, and above all, he often has the ambition to play a political role; whence the suspicion which he meets with from the government authorities. On the other hand, the credulity of the murids is well imaginable, and their fanaticism can lead to many excesses and eccentricities. Hence from time to time some individuals with an inner light arise who claim to be their murids, or who are reformers without a mandate but preaching social revolution. Examples abound (Campanile, Storia, 91-3; Nikitine, op. ed., 227; Rondot, Les tribus montagnardes, 43; Th. Bois, L'âme des Kurdes, 52-53; Edmonds, Kurds, 24-6). A recent group of Naflsh-bandis, the Nalice, was founded by the Kurd Sa'id Nalice (1870-1969) in Turkish Kurdistan (cf. MW (1965), 232-3, 338-41, 1965, 71-74). The hand of the sheikhs and their adepts, especially Naflsh-bandis, is to be found in many uprisings in Turkey and in Irak, with the bloody government reactions which follow, as e.g. the movement of Shaykh 'Ubaid Allah of Nacre (1880) and that of Shaykh Sa'id of Piran (1925), which brought about the closure of all the mystical tekkés in Turkey, and also the insurrections of Shaykh Maimud of Barzilje (1919 and 1942).

But these different brotherhoods, despite all their excesses and political involvements, are always considered as integral parts of orthodox and official Islam. It is not the same with some sects who, pushing their teaching to the extreme, have left the fold of Islamic orthodoxy, as the Yazidis (q.v.) who, born of the 'Adwiyah of Shaykh 'Adi b. Musaffir (ca. 1073-1162), have diverted their spirituality completely from it to the point of having forgotten their origins (cf. Th. Bois, Les Yezidis, essai historique et sociologique sur leur origine religieuse, in Mashriq, IV (1961), 191-243). Similarly, the Ahl-i Hak and those of their adversaries, have left the fold of Islamic thought. Dr. Mohammad Mokri has published numerous Guran and Persian texts concerning them, e.g. L'Islamisme kurde, Paris 1966. Edmonds studies the members of the sect of the Ilkhanian frontier, known by the name of Kakal, op. cit., 182-207; idem, The beliefs and practices of the Ahl-i Haq of Iraq, in Iran, Journ. Brit. Inst. of Persian Studies, vii (1969),
To be encountered among the Kurds are some aberrant small groups in Trāṣ, such as the Sarāl who are connected with them and, around Mawīl, the Šabāki who are Kurdish Khalībāšt, not without contact with the Echtāštā, formerly so powerful in Turkey (Edmonds, 268-9).

C. Customs and social traditions.

1. Dress.

Clothing is characteristic of man. The style of clothing changes from one country to another and varies with the social rank [see Trāṣ]. It also evolves with the times. So it is among the Kurds. Today, the costume of the Kurds tends to fall into line with the times. So it is among the Kurds. Today, the clothing changes from one country to another and

2. Marriage and burial customs.

From the cradle to the grave, man is everywhere accompanied by customs or traditional rites, which vary with civilisations. Among the Kurds there are to be found some customs very much alive which have been preserved from time immemorial. The choice of a fiancée, her toilette before the wedding, the price of prenuptial virginity, whose lines bloodied by the ruptured hymen will bear clear proof, the crossing of the threshold and introduction into her new household, the joys at the birth of the first baby, after a confinement which has nothing of a story about it (cf. A. Brunel, les origines de l'islam, Paris 1946, 100-11), are the occasion of usages respected by all. It does not concern us to give a systematic and exhaustive account, but to indicate some examples, according to the various Kurdish regions. Kurds in general: Campanile, 103-5; K. A. Bedir Khan, La femme kurde, in Hufaz, 19 (1933), 6-8/294-6; Tavernarès, Les mariage chez les Kurdes, in ibid., 54 (1943), 12-15/264-8. Kurds of Trāṣ: Barth, in op. cit., 24-24/237-231; Edmonds, 235-6; Hansen, 135-38. Kurds of Iran and the Urmîya region: ibid., 113-15; Kurds of Syria and the KurD Dašt; K. Dogheestani, La famille kurde contemporaine en Syrie, Paris 1932, passim. Kurds of Azərbaydjan: Nikitine, 135-38. Kurds of Transcaucasia: E. A. Würd, in Actes du Cong. intern. d'histoire des religions, Paris 1941, 22-23 (cf. Nikitine, in L'Afrique et l'Asie, xli [1960], 73-61).

The funerary rites are no less varied, whether in regard to the toilette of the dead, the funeral cortège or cortege, the ceremonies of mourning and the tree of the deceased, dara sin, or the collective meal of condolences. Descriptions of them are found for the Kurds in general: Campanile, 21-5, with a fine elegy; Nikitine, 135-38; Mukri Kurds: O. Vîlsk, Mukrîsî Kurds, in Peremiyatskîa etnografîsî person, l(1958), 241-48. Kurds of Turkey: Ahmed Mêrez, Ismâyîl mîn ("My memoirs"), Erivan 1964, 89-94. Yazidi Kurds: Lescot, op. cit., 154-6; Dower, 97-8, 185-6; I. Joseph, 191-23; Damudiîl, 70-2. Children’s funerals: Hansen, 139-43.

3. Festivals and seasonal rites.

Among the numerous festivities which punctuate periodically the life of the Kurdish people, the Islamic religious festivals are famous everywhere and so do
neurosis of Salih Karadaghi, 32, at the door, New Year. Husband in the house, baby in Tehran, in Iran, for the festival of the birth of the Prophet.

picturesque and lively details. Stig Wikander believed heron berdan, Erebo Eremo, shearing of the sheep, xoxan; the departure for the summer pasturage, xoxan; the departure for the spring (Wahby, pp. 12). In Iran, on the eve of the New Year, the family and with friends, with the aim of having off-scene entertainment and masquerades with a mask, the festivities are associated with all kinds of solemnity and gaiety in 604/1207. An account of it has been given by a native of Arbil, Ibn Khalidin (d. 684/1284), French tr. J. Sauvaget, *Historiens arméens*, Paris 1946, 118-19. On the occasion of the festival, a panegyric is read, of which numerous specimens are to be found in Kurdish. Let us cite simply the *Mevslidname* of Mela Ahmad of Batêl (1425-95) edited in Cairo in 905 and re-edited in Istanbul in 1919 and always used; Blyssá Fázbek, *Lage of the Prophet*, edited in Damascus, in *Küdesna Hasevi, 4* (1933); Shaykh Mohammad Khalî, *Mevslidname-i new-zar* (*The new account of the birth of the Prophet*), Sulaymân 1937; idem, *Mevslidname*, in *Kurdistan* (Tehran) Nos. 166 ff.; Mela Hasan Harûpî, *Mevslidname*, in *ibid.*, Nos. 43-74 (1960-6).

A very popular festival among the Kurds, and now official in Iraq since the establishment of the Republic (1958), is *Nevruz* (see rawwâr), or the festival of the new year, i.e. in spring (21 May). It is a sort of national festival of the Kurds. Moreover, it has always been celebrated by the Yazidis, who are supposed to have preserved many ancient traditions and who call it *Sertal*. There is also the Festival of the New Year (cf. Lescol, *op. cit.*, 71). The festival is in any case earlier than Islam, as “myth of the eternal spring” which was always celebrated in the Iranian world (cf. G. Widengren, *Les religions de l’Iran*, Paris 1968, 58-67). It is said to have been instituted by the mythical King Djamâlid (H. Massé, *Croisières et contes persans*, Paris 1938, 145). Today, the official festival is accompanied by speeches, poetry, dances and theatrical scenes, where the myth and struggle of the smith Kaew against the dragon Zakhâh or Ahi Duhaka is enacted, a prefiguration of the struggle of the Kurdish people for its independence. In Sulaymân, the festivities are associated with all kinds of entertainment and masquerades with a false aim. It is a real carnival (Edmonds, 81-5; Taufiq Wahby, *The rock sculptures of Gundâh caves*, in *Summer*, iv/1 [1948], Fr. tr. in *BCEK*, vii [1940], 2-13). Ereb Şemo cites another form of carnival: *Koze geldi*, Berbâng, in *Berevoh*, Erivan 1969, 62-2. It is in connection with this festival that a special cake, *sannani pasan*, is baked, which, by night, *Azâha or Fatima will come to bless by touching it with their hands. It is eaten in the family and with friends, with the aim of having off-spring (Wahbi, pp. 11-12). In Iran, on the eve of the New Year, magical rites are mixed with the rejoicings (N. Meker, *Les rites magiques dans les fêtes du “Dernier Mercredi de l’année” en Iran*, in *Millâner Magazin*, Tehran 1965, 288 ff.). The girls make vows then: Thirteen at the door, New Year. Husband in the house, baby in the lap (Mâser, *op. cit.*, 159). Abroad, the Kurdish students celebrate this national festival with gaiety (Deichl Delair, *Nevruz and the legend of KaPan*, in *The Kurdistân Journal, U.S.A.*, lii [March 1965], 2-5). Let us note further in Kurdistân, London, organ of the K.S.S.E., Nos. 978 [1961], the poem *The festival of Nevruz* of Salih Karadaghi, 32.

Other seasonal festivals are celebrated above all by the shepherds on the occasion which concerns them particularly: the first lambing, *swapet*; the departure for the summer or summer pasturage, *berdawî*; the shearing of the sheep, *berbâng*; and above all the releasing of the rams, *beran* bordan. Ereb Şemo, ibid., 98, has described these entertainments with many picturesque and lively details. Stig Wikander believed that he had discovered in this last festival reminiscences of ancient myths (*Ein Fest bei den Kurden und im Avesta*, in *Orientalische Studien*, in *Uppsala Universitet*, ix [1960], Uppsala 1961, 7-26). The peasants also have their traditions. At the time of the harvest, the first sheaf reaped is offered to the stranger who passes by (Hamilton, *op. cit.*, 51), and the gathering of the mulberries is the occasion of a festival with a special dance, *gêzidan*, the sweeping, which consists of sweeping the soil under the trees before the children climb them to shake them so as to allow the women to gather the berries (Edmonds, 170, n. 1).

Although it does not really concern us here as a festival properly so-called, let us indicate some more or less superstitious practices which relate to the cycle of nature and whose origins stretch back without doubt into remote antiquity. If activities to make the rain stop are mentioned only rarely (cf. Nikitine, *Une apologie kurde*, 19), by contrast T. Wahby, *op. cit.*, 5-9, counts no less than nine different rites, more or less laughable and doubtless efficacious, to combat drought and obtain rain. If the prayer *najî berdan* does not succeed, a derawî is performed: a water tank or women are to harness themselves to a plough and till the river. Still other singular acts are to be performed in order to have one’s prayers finally answered (cf. S. Reimond, *Chants pour obtenir la pluie en Kurdistân*, in *L’Anthropologie*, xvi [1968], 635).

4. Dances and music.

The Kurds sing always and everywhere. All the family festivals, birth, circumcision, and especially marriage, are accompanied by dances and songs, and equally the tribal or peasant gatherings and some religious ceremonies. The name of the dances varies according to whether it designates the region or the tribe where it is danced, e.g. Botani, Serbedî, *êzanî*, or according to the different figures which distinguish them, *gêzidan*, *gazîn*, *gazîna*, or the rounds *gëzidan*, *hûxî*. The students have a special dance *bûlê or bûlê*, of which TawOspardz has given us some examples and has described the rhythm (*La vie universitaire au Kurdistân*, in *Hasevi*, No. 53 [15 March 1943], 772-6). The old or more recent travellers admired the particularities of these Kurdistân dances (e.g. F. Millingen, *Wild life*, 378-9, or Edmonds, *Kurds*, 84; Drower, *Peacock angel*, 130-4; Bois, *Connaissance, 62-2, cites the name of twenty dances*). Let us note that these folkloric dances are mixed, which distinguished the Kurds from the other neighbouring Muslim peoples.

Kurdish music, inseparable from the dances and songs, is part of what it is convenient to call oriental music, but it cannot be confused either with Arabic music or with Armenian or Turkish music at all, although it has had an influence at times on the songs of the neighbouring countries, such as Iran or Mesopotamia (cf. S. Jargy, *Chant populaire et musique savante au Proche Orient arabe*, in *Orient*, vii/2 [1958], 108-9). Kurdistân music today is not learned, but popular, and knows neither harmony nor polyphony. Its melodies, as numerous as varied, preserve a serious, pathetic, quite often melancholy character, as a consequence quite astonishing among this warlike people (cf. Dulaurier, *Chants populaires de l’Armenie*, in *Revue des deux Mondes*, 10 April 1853, 224-55). Western travellers have not failed to draw attention to the originality of this music. Some have felt the attraction and very palpable charm of these chants; others, on the contrary, e.g. Mrs. Hansen, 125-9, have found this music “flat and false” with its 17 tones. It was an Armenian priest, Vartabed Comitas (1859-
The Islamic religion does not authorise music at all in its liturgy, and music has taken refuge in the modes of entertainment. As for the Ahl-i Ha^k, Mohammed Mokri gives the name of several Kurdish games; Bous, La vie sociale, 52-362-9 and notes 136-94.

The abundance of game in Kurdistan, furred and feathered, already mentioned above, is at the origin of the Kurds' passion for hunting. The best way of learning about this national sport is to read the two articles of Osman Sabri, who explains in them the methods employed with the art of an experienced hunter. Nîdir ("Hunting") in Ronah, 17 (1 August 1943), 317-23, 18 (1 Sept. 1943), 347-50. He is presented in three ways (317), also the hynia (317), the ibex (318), the fox (319) and the hare (319). There are five ways of hunting the partridge, with the spear, the bow, the rifle or the running noose, depending on whether one wishes to capture it alive or to kill it (320). Game can also be hunted with the help of birds of prey, sparrow-hawks or falcons of different kinds and at a more or less expensive cost (321-2). The way in which these birds are trained is also indicated (347-8).

Os. Sabri very much appreciates hunting the hare with the help of a hound, of which there are several kinds (348-9). The author does not forget fishing (350), which may be done with the net, hook or harpoon. Hamilton devotes a whole chapter to the hunting of the ibex, so picturesque and so difficult (326). Among the odours and whose style and rhythms he studies scientifically. See also Edith Gerson-Kivi, The Music of Kurdistan Jews. A synopsis of their musical styles, in Yedval. Studies of the Jewish Music Research Centre, ii, Jerusalem 1972.

The forms of speech known to outsiders as Kurdish do not constitute a single, unified language. Instead it can be said that the various Kurdish dialects, which are clearly interrelated and at the same time distinguishable from neighbouring languages, form a substrate. On the other hand, Northern Kurdish dialects in both its phonetic and morphological structure, and it may be inferred that the greater development of the Central and Southern dialects has been caused by their closer contact with other (Iranian) languages, or, indeed, their absorption of such a substrate. On the other hand, Northern Kurdish has been used in various modifications of the Arabic script and still is so written in 'Iraq and Iran. The Armenian script has also been used on occasion, and in recent years alphabets based on both the Latin and Cyrillic scripts have been devised, especially for Northern Kurdish.

V.-LANGUAGE

The many forms of speech known to outsiders as Kurdish do not constitute a single, unified language. Instead it can be said that the various Kurdish dialects, which are clearly interrelated and at the same time distinguishable from neighbouring languages, form a substrate. On the other hand, Northern Kurdish dialects in both its phonetic and morphological structure, and it may be inferred that the greater development of the Central and Southern dialects has been caused by their closer contact with other (Iranian) languages, or, indeed, their absorption of such a substrate. On the other hand, Northern Kurdish has been used in various modifications of the Arabic script and still is so written in 'Iraq and Iran. The Armenian script has also been used on occasion, and in recent years alphabets based on both the Latin and Cyrillic scripts have been devised, especially for Northern Kurdish.

The common "Iranian" phonemic inventory of Northern Kurdish is: \( \text{i, i, i, k, k, e, e, } \) and emphatic \( \text{i}, \text{e, e} \). In the north-east, probably under Caucasian (Armenian) influence, a further distinction between aspirated phonemes \( \text{p', f', f, k'} \) and unaspirated \( \text{p, f, k} \) is found. In a large part of the Kurmanji area \( \text{o, u} \) are replaced by \( \text{u, o} \) respectively. In Central and Southern Kurdish the distinction between \( u \) and \( o \) is lost, in favour of \( u \). A new distinction is made, however, between palatal \( l \) and velarised \( l \) (though this coincides with \( r \) in Arbil), and \( g \) has acquired phonematic status in Sulaymaniyya and other more southerly dialects. In general, Kurdish is marked by a greater degree of phonetic development than Persian, notably in the loss of potential and stress to trivocals, e.g. \( \text{do} \) "water", P(persian) \( \text{d} \); \( \text{lo} \) "night", P lab. Many post-vocalic consonants, especially dentals, have been lost, e.g. \( \text{bild} "brother", P \text{beld} \); \( \text{dun, dam} "to give", P \text{dun} ; \text{si} "white", P \text{safi} ; \text{sa} "dog", P \text{ra} ; \text{eld} "mountain", P \text{ak} \). The development of the ending of the past participles of verbs is noteworthy, e.g. North: \( \text{m} \); Central: \( \text{mi} \); South: \( \text{mi} "dead" \), cf. Cent. \( \text{z} \); \( \text{z} \); South. \( \text{z} "alive", P \text{z} \).

There is no single early historical sound change which characterises Kurdish, but a combination of two later changes and one conservative service to identify a dialect as Kurdish, viz. (i) \( -p-, -b-, -m-, -n-- \) replaced by \( -d-, -d-, -d-, -n- \); (ii) the development of the ending of the past participles of verbs is noteworthy, e.g. North: \( \text{m} \); Central: \( \text{mi} "dead" \), cf. Cent. \( \text{z} \); \( \text{z} \); South. \( \text{z} "alive", P \text{z} \).

The common "Iranian" phonemic inventory of Northern Kurdish is: \( \text{i, i, i, k, k, e, e, } \) and emphatic \( \text{i}, \text{e, e} \). In the north-east, probably under Caucasian (Armenian) influence, a further distinction between aspirated phonemes \( \text{p', f', f, k'} \) and unaspirated \( \text{p, f, k} \) is found. In a large part of the Kurmanji area \( \text{o, u} \) are replaced by \( \text{u, o} \) respectively. In Central and Southern Kurdish the distinction between \( u \) and \( o \) is lost, in favour of \( u \). A new distinction is made, however, between palatal \( l \) and velarised \( l \) (though this coincides with \( r \) in Arbil), and \( g \) has acquired phonematic status in Sulaymaniyya and other more southerly dialects. In general, Kurdish is marked by a greater degree of phonetic development than Persian, notably in the loss of potential and stress to trivocals, e.g. \( \text{do} \) "water", P(persian) \( \text{d} \); \( \text{lo} \) "night", P lab. Many post-vocalic consonants, especially dentals, have been lost, e.g. \( \text{bild} "brother", P \text{beld} \); \( \text{dun, dam} "to give", P \text{dun} ; \text{si} "white", P \text{safi} ; \text{sa} "dog", P \text{ra} ; \text{eld} "mountain", P \text{ak} \). The development of the ending of the past participles of verbs is noteworthy, e.g. North: \( \text{m} \); Central: \( \text{mi} "dead" \), cf. Cent. \( \text{z} \); \( \text{z} \); South. \( \text{z} "alive", P \text{z} \).
KURDS, KURDISTAN

VI.—FOLKLORE AND LITERATURE

A. Popular and Folk Literature

As among all peoples whose scholarly instruction is little developed, the oral literature of the Kurds is superabundant and very rich: Prof. O. Vilkovsky was able to speak of the "hypertrophy" of their folklore. A mass of documents has also been collected and published by foreign Orientalists: A. Jaba, Recueil et notices et récits kurdes, St. Petersburg 1860; E. Frym and A. Sokol, Kurdistische Sammlungen, St. Petersburg 1890; O. Mann, Kurdische, Persische Forschungen, iv. Die Mundarten der MUKRI, Berlin, i, 1906, ii, 1909; H. Makas, Kurdische Texte (Mardin), Leningrad 1928; B. Nikitine, Kurdish stories from my collection, in BSOS, iv (1926), 122-38; idem, Quelques fables kurdes d'animaux, in Folklore, xi, (1929), 228-44; E. Lascot, Textes kurdes, i, Paris 1940, ii, Beirut 1947; Th. Beis, L'âme des Kurdes à la lumière de leur folklore, in Cahiers de l'Est, Beirut, Nos. 5 and 6 (1946); S. Wikaner, Recueil de textes kurmandjâdji, Uppsala-Wiesbaden 1959; D. N. MacKenzie, Kurdisch dialect studies, London 1961-2. Kurds themselves, since the end of the First World War, have gone about collecting their treasures of folklore from the old folk or the decreasingly numerous professional storytellers and singers. Firstly, the Bedir Khan annals, from 1903 to 1946 in their famed "Kawar, Ravani, and Roja nê"; H. Cindi and E. Evidal, Folklor kurmança, Erivan 1936; Cindi, Folklor hîrmânî, Erivan 1937; and there is a comprehensive survey in I. M. Resul, Edëbi folklor-i hûrdî, Lâkolhâwê, Baghdad 1970 (cf. Th. Beis, Connaissance, 117-25).

This folkloric richness is found, firstly, in the proverbs, popular sayings, enigmas or riddles. The Kurd likes to embroider his conversation with rhymed and rhythmic sentences which denote a real sense of observation. Proverbs also supply a racy summary of practical wisdom. Thousands of them have been published: E. Noel, The character of the Kurds as illustrated by their proverbs and popular sayings, in BSOS, iv (1921), 78-93; D. P. Marguevsk and Erric R. Bedir Khan, Proverbes kurdes, Paris 1938; Lascot, Proverbes et énigmes kurdes, in REI, iv (1937), 237-50, reprinted and added to in Textes kurdes, i, 189-237; Frampelini, Proverbi kurdo, Milan 1963; MacKenzie, Some Kurdische proverbs, in Iran, JIBPS, viii (1970), 105-73; Ismail Heqi Şawayes, Oise-i fîşnim, Bahrain 1923; Marifî Çayraw, Hazar bêj â pend, Baghdad 1930; Cegerekwin, Gûna fîshivin, Damascus 1937; M. Xal, Pend-i fîshîn, Bahrain 1937; Djumil Renna, Amelîl kurdiyapa, Aleppo 1957; O. Celî, Muzulâ me id'dilîcî xinâmî xirvan, Erivan 1966-7, 2 vols.; O. Celî and C. Celî, Kurdische poselîvî in popovawî, Moscow 1972; J. Nebes, Sprichbucher und Redensarten aus Kurdistan, Munich 1970. There are numerous proverbs and sayings cited in Cindi, Folklor, 1947, 149-81, and in the grammars of Jardim and Deidar, as well as in the dictionaries of Markdlcik, i, 8-66.

The songs are infinite in number and variety: dance songs, dilok, songs of love, lâwî, or war, sar or dalal; songs which accompany the transhumance in the spring, serbî, or in the autumn, palîtîk; lullabies, lori; epithalama, kevail or seresavonî; also songs of mourning, sin or gevî, punctuate the daily life of the Kurds from the cradle to the grave and throughout their days of hard labour. The reviews Kawar, Ravani, and Roja nê have published hundreds of them, as have Cindi and Evidal, Folklor, 342-474; Cindi, Folklor hîrmânî, 189-248; see also Rondot, Trei...

Alongside these minor genres, the numerous much longer legends constitute choice morsels of Kurdish folklore. They can be classified in different categories which, however, are often combined. Some legends basically concern the supernatural, such as *Mâmî Aalâm* (Lesoc, *Textes* ii, p. 360) or *Sûhurâd or Hothek;* others are a purely kylïde form, such as *Zeîra & Fâtîq, Lâyân & Mâyîn, Sîyaband & Xorât, Zambîfîrek, "the basket-seller", Xurîjî & Xasn, Sûhrîn & Xosgèn, Xîlê & Fêrhad, Farsî & Sîhiye, Manîca & Bîjaft*, finally, the epics with an historical plot, such as *Dimdûm, Jûvlûl*, the adventures of Rustem with Zoraw, Changir or Zendeheng and more recently the exploits of Nadîr and Topal, the Twelve Cavaliers of Meriwan, Abdul Rehman Baiban or Ezdûnî Bedir-Xan. These accounts were the glory of the poets, but also of the professional troubadours, whose class is on the point of disappearing. All these texts can be read in the collection of Mann, Soûn, Cindl ete, and also Bois, *Poêtes et troubadours au pays des Soriqits*, in *Mâljî* ii (1939), 260-99; various authors, *Kurdîche legendeb*, in *Textes et tr. thosoc*, 1968; V. Minorsky, *The Gürânî*, in BSOS, xi (1943), 75-103; O. D. Dallali, *Kurdish geylechole pièces Zlatroshikhân*, Moscow 1967; O. F. Qazi, in *Mâljî* (1939-40), 217; Diwânzde siwarî Merman, *Sulayman* 1935; Gew, *Tabriz 1966; A. Ayyubian, (Jirîke kurde, ruhijjian.., Moscow 1967; O. F. Qazi, in *Mâljî* (1943), 75-103; BSOS, in *Joyce Blau*, 1967.

Narrative legends, few in number, have a rather dry list of titles (535-58). Even today, many poets in the Arabic language—al-Zâbâwî (1683-1936), Ahmad Shawkî, the prince of poets (1880-1932), al-Rukshî (1875-1945), the sociologist Kâsim Âmin (1885-1968), the novelists al-Akbâd (1889-1964), Muhammad Taymûrî (1892-1925) and his brother Mahîmîr (born in 1894)—are all of Kurdish origin. The following historians who write in Persian, such as Muhammad Nâdirî Kurdistanî, Ragîdî Yâsîmî and İbîn Nûrî, or those who write in Turkish, such as M. N. Dersimîîî and A. Yamîkîî, are all Kurds. If the old writers knew and composed in all the great Islamic languages, Arabic, Persian and Turkish, rather than their mother tongue Kurdish, the young authors of today use the European languages, English, French, German and even Russian, especially in Armenia, where they further add Armenian. Indeed, the Kurds have been at all times polyglots as they have been polygraphs, the same authors exercising their talents as much in poetry as in history, in the physical and human sciences and in journalism.

In 1860, A. Jaba, in his *Recueil de notices et de recits houards*, 3-11, gave a brief notice on eight poets, who used the Kurmanji dialect, and almost all originating from Hakari. Less than a century later, "Ali”-al-Dîn Sigidî published in Baghdad a *History of Kurdish literature* (1925), a large volume of 634 pages in which, after an introduction on Kurdistan and the Kurds (3-66), he recounted the stages and forms of Kurdish literature (69-146), then gave substantial notices on twenty-four poets (147-334), followed by a rather dry list of 322 other authors (335-58). Even so, he confines himself to the no longer living poets of Iraq and Iran. Since then, there have been two more recent works of Mârîf Xandîr, *Essay on the history of contemporary Kurdish literature* [in Russian, 1967, 232 pp.] and of İzz al-Dîn Müwafî Râsûl, *Realism in Kurdish literature* [in Arabic, 1966, 236 pp.], not to mention other studies which show the progress of Kûrdology since Jaba’s time and faithfully complete our information on this oriental literature still so little known in the West.

1. Origins and the classical period

Jaba’s informant gave the 15th century as the period in which the first poets flourished: Efi Herîrî (1425-95), Šex Emmedı Şenî, better-known under the name of Meîâyî Cînrî (1407-81) and Meîa Emmed of Bâştî (1414-95), who were therefore contemporaries. Mr. Mîhmed of Mûki, er enamed Faqîrî Teyrîan, was also by other witnesses, such as Hâdîlî Kâhilînî (1638) (cf. Adîn Advâr, *La science chez les Turcs ottomans*, Paris 1939, 94, 106), or the traveller Eliyâhû Câlipî in his *Kâmîl* (ix, 7-8) and taken up many times in the *Sharaf-nâmâ* and *Encyclopædia of Islam*, V
supposed to be even earlier than them (1307-75). All these dates are to be corrected and placed later. In fact, D. N. MacKenzie in his article Meld-é Jast and Fagl Yawdir, in Yıldın-ma-yi İran-ı-yi Minorşky, Tehran 1969, showed pertinent thanks to the method of the nbi, that Melayé Cizrl lived between 1390 and 1600 and his disciple, Feqiyé Tyvan, between 1550 and 1600. The most famous is Melayé Cizrl, later than Hâfiz (d. 791/1380 or 792/1390) and Dîrî (875/1470), in which Dîrî of more than 2,600 verses has remained very popular among the shaykhs and mollahs, much more than among the masses. It has always been read and commented on in the Kurdâ schools of Kurdistan, but its text is difficult. His ideas are those of Persian Sûfîsm. His works include, in Persian, the classical poem al-Adrîb b. al-Mella Muhammed al-Buhtî al-Zavîngî, Nos. 35-57 (194X-3), incomplete by Mohammed Şeqf Anwasl Hesînî, Istanbul 1346/1922; Qeşri Çemî Fäqî, Dîwan Mâli, in Latin characters, in Hâmar, Nos. 32-57 (1941-3), incomplete text; and above all, the fine edition of Shayqî Ahmad b. al-Mella Muhammed al-Dalîfî al-Zîvîngî, al-Fîqâh fi lâgårî Diwan Shayqî al-Dîrî, 2 vols., 597 pp., published in 1965, whose Dîrî translation and finally a mystical commentary. Melayé Bate is especially known for his Metâvd, published by von Le Coq, Kurdische Texte, Berlin 1903. Feqiyé Tyvan, who composed an elegy on the death of his master Cizrl, is the author of numerous works, in particular of the History of Shayqî Sanâan, published and translated into Russian by M. M. Rodenko, Moscow 1965, and in Persian by Q. F. Qazi, Tabriz 1967.

The succeeding generation of poets cited by Jaba is dominated by Ekmedê Xani (1650-1760), who settled at Bayazîd. He is the author of the famous, Kurdish national epic, Metvîd. In this work, which has been frequently re-published, the poet adapted the popular epic Mâmi Ahân, publ. by R. Lucot, Beirut 1942, and by N. Sâza, Damascus 1957, which he recomposed according to classical literary rules, and also Islamising it more. This poem of 2,655 couplets is the real breviary of Kurdish nationalism. If the text of the popular epic Mâmi Ahân has multiple variants which have been translated into German, French, Russian, Romanian, English, Armenian and Arabic, the classical poem Metvîd has also had numerous editions: Istanbul 1338/1920, Aleppo 1947, Hewlard (Irbîrî 1954; translated into Mukri by Hejar, Baghdad 1960; with Russian translation by M. B. Rûdenko, Moscow 1965; with Turkish translation by M. E. Bûxaslan, Istanbul 1968. Many authors often confuse these two epics. Apart from numerous pieces of verse written in Turkish, Arabic and Persian, Ekmedê Xani is also the author of a rythmized Arabo-Kurdish vocabulary Nûhûr "First fruits" edited by Yûsûf Dîrîzî al-Dîn, al-Hâdîyya al-Balâdisyâ fi l-Îsga al-Kurdisyâ, Istanbul 1310/1892, 227-97, and also in facsimile by von Le Coq, Kurdische Texte, i, 47. His disciple and successor in his school of Bayazîd, Isamîlî Bayazedî (1634-1709), also left behind many Kurdish poems and a Kurnanci-Arabic-Persian glossary, Guitar "The rose garden".

In the 18th century, mention should be made of Şerîf Xan (1685-1748), of Cûlman, of the family of the amis of Hakâtî, author of numerous verses in Kurnanci and Persian, and Mûrad Xan of Bayazîd (1738-75), author of numerous lyrical poems. In the same period, but at the court of the walis of Ardalan or the sultans of Hewraman, appeared a whole panoply of poets whose lyrical or religious works are in the Gûrân dialect. One may cite Emdê Xeëti (1340) and Şîx Mîstês Besarani (1411-1702), whom Minorsky believes to be more recent (d. 1706). In this case, he would be contemporary with a whole group of poets, with Xûnaç Qûbâtî (1070-50), author of a Sulâsûn-nûs, and with Mahâtî (d. 1783). It is impossible to cite all the poets who lived in the 19th century. We have attempted to mark how the influence of Western literature spread between the two World Wars. Their names and the list of their works will be found cited in the literature of Ximadar (218-23) and Rostûl (222-32). On the poets in Gûranî, cf. Minorsky's article, The Gûrân. Some have been studied at greater length by Sîjdât in his History of Kurdish literature, a.g. (222-32), Mevlevî (1860-82). It will be noted that the dates advanced by the different authors do not always coincide, and the taste of the Kurdish poets for choosing a tâkhûllî or pseudonym will also be remarked.

Let us also mention some women who have played a role in literature: Mah Şeref Xânîn of Ardalan (800-97), Sîrâ Xânîn of Diyarbakîr (1843-93) and Mirhêban of Bervartî (1858-1905).

2. The modern age.

The end of the First World War gave Kurdish literature an impetus which still continues, thanks to the numerous newspapers and journals which have allowed young talents to publish their poems and express their national and social ideas (see section 3 below).

It is extremely difficult to make a choice among the poets of this revival which extends from 1920 to our own days.

In the intellectual radiance of Sulaymân, the real capital in Îrâq of Kurdistan, let us cite before all Piromî "The old man" (1863-1950), pseudonym of Hacî Têvîqî, an original spirit, indefatigable traveller, journalist, who devoted the last years of his life to making known to the young Kurds, who adored him, the beauties of their land, their language, their history and their literature. The tortured Bakes, Fâlq Abdallâh (1903-48), did not cease to encourage the youth and to exhort them to work and study and to exalt in them love of their homeland and of goodness. Ziwa,
Abdallah NiThem (1873-1948), is full of lyricism and sensibility in singing of nature and the national soil.

Gora, Abdallah Suleyman (1904-63), one of the greatest contemporary Kurdish poets, has abandoned stereotyped forms and classical metre, for he is the partisan and practitioner of free verse, as he has been of liberty of ideas and of life; a poet with advanced ideas, who is not lacking in lyricism to criticise social abuses. Qami, Mihemed Emin (1880-1900), published from 1951 to 1955 numerous small books which each evoke an aspect of the Kurdish in which he celebrates with love. Let us further mention among the Kurdish poets of Irak, Emad Mustaf Cef (1897-1955; ed. Sulayman, 1960); Hamdi (1936-11; ed. Bagdad, 1958) and the younger Abdul Wahid Nuri (1903-44), Dildar (1913-45; Dinas, ed. Hewer 1962) and Dikar, born in 1926, who edited in 1957 the Quatrains of Bahar Tahir, the 9th century writer, whom some Kurds claim as their own.

In Iran, at the time of the Republic of Mahabad, two young patriotic poets came to the front: M. Hamim and especially 'Abd al-Rahman Hejar (born in 1920), whose works, in particular his publications of thousands of verses to exalt love of the homeland and liberty, such as Allokb (Tabriz 1945); in 1958, he published a collection of verse narratives and the comedy of the Dog and the Moon, Beht serem dar u lasayi sag u manges; he presented a summary of his autobiography (142-5) and several poems (185-222), in the Kurdish dialekt Mutcr of K. R. Ayubi and I. A. Smirnova, Leningrad 1968, and published a translation of the Quatrains of Khayyam (Beirut 1968).

In Kurdistan, one may note Kamran A. Bedir Xan, writer of romantic free verse, and above all Cegexwin, Siv'ul Xesin (born in 1903), author of two collections; Dinas Cegexwin (Damascus 1945) and Soma inesl "The revolt of liberty" (Damascus 1954); an extremely vibrant and patriotic poet, preaching the "The revolt of liberty* (Damascus 1954); an extremely vibrant and patriotic poet, preaching the "The revolt of liberty", such as the pages of Victor Hugo, G. S. Cochrane and others, the rest of Persian verse, an undercurrent of revolt, such as Lenin and Stalin, or Armenians, Aboyan, Toumanian, Isahakian, etc. The principal names of the translators to be encountered are: C. Cell, H. Cindl, E. Evdal, Q. Murad, N. Essed and T. Murad. Some even write several of their works directly in Armenian, such as C. Cell, E. Evdal, Nadj=x Xilo Mehdni and many others.

In 'Irak, many articles of scientific popularisation have been translated, e.g. Dr. Hapiin Dixirmacl, and Nadi Elbas have specialised in the translation of accounts of early British travellers in Kurdistan.

In the purely literary domain, the novel is the genre which seemed the best adapted to the mentality and art of the Kurds. In the review Husar, one may read the stories of Nureeddin Zaza (born in 1939), and the fables in prose of Mastic Elahem Botli. In these stories, Qadiri Can (born in 1918) is concerned with religious fatalism and the feudal ascendency. But one should note very especially Osman Sebri (born in 1909) who, whilst a poet when in the mood, is particularly a born storyteller, with a lively, simple and direct style.

In 'Irak, where the intelligentsia is more numerous, history is a privileged field, with the found 'Iraqi Hamed Muhiddin (1889-1947) as the author of varied studies: The history of the Kurds emirates, 1929-31, Famous Kurds, 1931, The Soviet emirates, 1935, The Kurds and Nadir Shah, 1934, The Zoroastrian, 1934, Mubarran Kurdistan or Atropatene, 1938, etc. General Mihemed Embo Zeli (1850-1948), published a Summary of the history of the Kurds, 1931, a History of the Kurdish states and emirates in the Islamic period, 1946, a History of Sulaimani and its district, 1939, and two volumes of Kurdish celebrities and Kurdistan, 1945-57. All these works have been translated into Arabic. Retig Hilm (ul. 1961), began the publication of his Memoirs, in fascicules of a hundred pages, beginning in 1956 and entitled them A recollection, Southern Kurdistan, the recollections of Shafiq Mahmud (a work still uncompleted). Tewfik Wehbi, pioneer of Kurdish grammar, 1929, 1956, is also a historian who has studied the Va'ddis, 1964, and the origins of the Kurds and their language, 1965.

Literary criticism began with Yusuf Rofii and Dildar, Kamiran and especially Maruf Nizamdar, who
in review articles and prefaces of anthologies presented many ancient and modern poets. Xiznedar, apart from his History of Kurdish literature, also composed Ắşb us gasyyet le ńićk kurdı da ("Rhythm and rhythm in Kurdish poetry"), Baghdad 1962. Comill Bendj Roffeyndar, Arabic translator of the Sharaf-namı in 1957, is especially interested in the poets and writers of the Zengene, Kelhür and neighbouring tribes. Alia' al-Din Sijfeld published not only his History of Kurdish literature (in 1953), Researchs on Kurdish literature (1968) and also the Value of knowledge (1970), but also five volumes of Necklaces of pearls (1957-72), a collection of literary narratives, stories and anecdotes, in which philosophy, beliefs and history are mixed, and his Journey in Kurdistan (1956). Let us finally cite Izz al-Din Rasol (born in 1931), for his works on literature and folklore (1958).

* In Irak also, numerous authors, writers, journalists and militant, have published, in verse and prose, collections and articles in which they have pleaded for the most Urgent social causes of the disinhett, such as Şerif Futah in The companion of the children (1948), The Kurdish woman (1958), The new life (1960), Ibrahim Edmed (born in 1931), in Misery (1959) and many articles in newspapers; Alim corpses Emmed Emmed (born in 1921), in Unce Omar (1954), The tranquil lake (1957) and The path of liberty (1954).

* In Soviet Armenia, one also finds young literary critics who give in Kuya late their often severe appreciations of poetic works which appear. Among them are Mikhail Rejd, and especially Elmireide See, and Orlin Kelle Cell is an excellent critic. Her books on Cegherwini, Dimdum, on proverbs and his articles on folklore are the proof of that, and he has also published Poems (1954) and Tell Humas, a kind of epic (1960). But the prose writers there are less numerous than the poets. They do not enter into the domain of the dream, nor even into history properly speaking, but most of their writings set forth the wretched life that they led in the past in the time of the Turks and the revival of their present social situation. At their head is their veteran Erebut Şemo (born in 1898), who is also the most fecund. His latest compilation, Beresok (Erivan 1959), takes up the text of Berbang "Tunen" (1958), a revision, revised and corrected, of Şinmed kurd "The Kurdish shepherd" (1935), retranslated and republished in Beirut (1946), in which he narrated with much freshness and simplicity the life of his childhood as a small herdman, the picturesque events of the life of the tribes and the implantation of communism among them; there are also his Juna bestuwur "The happy life" (1959) and the unpublished Hopo, which is its complement, in which is described the existence of the Kurds under the Soviet regime. Şemo has also published Dimdum (1960), which is the romanticised history of this famous epic. He is furthermore the author of numerous articles in many Russian language newspapers on all the social and historical subjects which interest the Kurds. Ell Erdal-Refan published in this same vein of social chocolate, Khal Kamen "Ludly Xalid" (1959), and others. Şurdi Metasuni, "The village of heroes" (1968), and Rehan Gazi, Hisyarb An "Awakening" (1960), which speaks of the resistance of the Kurds of Iran against their Turkish or Iranian oppressors.

Thus one sees the true novel, as it is understood in the West, does not yet really exist in Kurdish literature. It is rather the new genres which Kurdish writers prefer, even in 1948. The same remark may be made with reference to the theatre. In Armenia, from the beginnings, there were attempts with W. Nixid, Rus a jodu, "The abduction" (1953) and A. Mirzai, Zenadl gulu "Time past" (1943), and recently Ismaila Duko, Zevecan bëc dil "Marriage without love" (1961). In all these cases, the theme is the struggle against the customs of the past age. Similarly in Irak with Burkan, Kiş a quiican "The girl and the school" (1956), and Jiri, Afret a niquest "The woman and the talisman" (1956), plays performed in the schools. There are also critical themes in the comic scenes of Emna Mirza Kerin. In 1953-4, Goran published in his newspaper Sin several verse plays, including The poor man's dream, The voice of death, etc., which aim at waking up a new generation of Kurds from its inhibits of life and thought. But the Four martyrs (1959) is a patriotic play of Xadl Deilal. Cemal Abud Qadir Babun published Nérko (1960), a play in five acts in verse, and Zaki Emmed Henari, The fate of the oppressor Dashak (1960). Let us mention especially, because it was published in Istanbul (1965), Birluna res "The black wound" of Musa Anter (born in 1920), in which the author calls attention to the misery and ignorance of the Kurdish peasant in Turkey. On Kurdish theatre, cf. Azadi Karho, The Kurdish stage, in The Kurdish journal, 1/3-4 (1965), 115-38.

C. The Kurdish press.

The influence of the press is basic in the national and cultural life of a people. With regard to this, the development and transformations of the Kurdish press are characteristic of the political evolution of the Kurds. Of the 119 recorded newspapers and reviews, whose periodicity is all relative, some have only had ephemeral life. The publishing centres have been moved from Istanbul to the different towns of Iran, Bagdad, Sulayman, Hewler and Kirkuk; of Iran, Tehran, Mahabad and Tabriz; or even to Damascus and Beirut. Often these newspapers are bilingual. Most of the journals consist of linguistic contents. The KURDS, KURDISTÂN
The equivocal political situation in Iran between the years 1941 and 1946, especially after 'the proclamation of the independent Kurdish Republic (1945-6), brought about the blossoming of a whole Kurdish press. Nevertheless, in Erbil the municipality published (1962-3) its newspaper Hezâr, with 76 nos. In Bagdad there appeared in 1964 the first Kurdish issue of the seasonal journal Jutim, published by the tobacco administration, and, in 1965, Biyareet "Fraternity", a political newspaper of Sahîl Yûnîî. It is this period which saw the appearance in Turkey, in Turkish and in Kurdish, several ephemeral reviews: Dicle & Fırat (1962-3) in Istanbul with 8 nos.; Dengî, in 1965 and in 1966 Dengî dawîc "The new voice" which only had 4 nos. before it was immediately stopped and the directors prosecuted.

The end of hostilities in Kurdistan saw the birth, from 1970 to 1973, of 29 periodicals, of which 2 were in Kirkuk, 5 in Hawler, only 4 in Sulaymânî, but 16 in Bagdad, which seems to indicate that the 'Irakî capital has now become the intellectual and cultural centre of the Kurds in Iraq. In Sulaymânî, there is Birayet (1971-2, 18 nos.); Dengî xwamîna (7 nos.); Jîn, since 1971, presented as the continuation of the newspaper founded by Pîmerend, and since 1972, the monthly Ezîret "The star", intended for children. In Bagdad, there is Birayet, supplement of the daily Talêhî (1970-1, 18 nos.). Since 1970, the Philatelist Club has published Gêle-i xwamîgen "The world of stamps", in Arabic, Kurdish and English. The General confederation of trade unions has as its official organ Biyareet-i kuvehêran "The awakening of the workers" which, since its no. 289 of December 1972, has a Kurdish section. One should mention as an annual publication The Journal of the Kurdish Academy, izî (1973), a great volume of 800 pages whose editor-in-chief is İhsan Şîhrzad, Minister of Municipalities, and of which one section is in Arabic. In Iran, one should note the name Rêgari yûkhî "The path of unity", a monthly publication of the Iranian Govern-
ment, whose no. 1 came out in April 1973 and which continues to appear regularly (1974-78).

The different Kurdish groups abroad publish ephemeral bulletins, at times simply typed. In 1949, there appeared in French Deneg Kurdistan "la Voix du Kurdistan", organ of the D.P.K. in Europe. Since 1958, the Association of Kurdish Students in Europe has published in English each year a new edition of Nakhshbandi practices of Egypt which was to be his residence for the rest of his life, with the exception of a return visit to the Holy Cities in 1923/1905. He lived first in the West and a place where the products of European creation of St. Mearop, inventor of the Armenian

**Early history.** From earliest times, Georgia has been a meeting-place for the cultures of East and West and a place where the products of European

The Georgian people (who refer to themselves as Kartvel-ebi and their homeland as Sa-kartvel-o, after a mythical, semi-divine ancestor Kartlos) are descended from him. The best known of his numerous writings is Tanver al-kubth fi mu’dwilat ‘ullam al-shaykh, a compendium of religious knowledge of which the third part is devoted to Sufism. The eighth edition of this book was printed in Cairo in 1936/1959. He also wrote a biographical dictionary of Nakhshbandi saints (al-Mawādah al-sarnadisyiya fi mandāhib al-Nakhshbandiyah), published in Cairo in 1320/1931, as well as manuals of Shafi‘i and Maliki fiqh.

**Bibliography:** A comprehensive account of Muhammad Amin’s life is given in a 55-page preface by Shaykh Salah al-Azzam to Tanver all-ka(sh)b (6th ed., Cairo 1358/1940). Some mention is made of him by A. J. Arberry in his Sufism, London 1950, 129-32, where Muhammad Amin’s description of Nakhshbandi practices of dākh is summarised. The same passage from Tanver al-ka(month is also to be found in French translation as an appendix to Jean Gouillard’s version of La petite galacée.

**KURDS, KURDISTAN — al-KURDJ**
and Asian commerce were exchanged. In Hellenic times, the western Caucasian region, Imereti and Mingrelia, formed the famed Colchis, land of the Golden Fleece sought by Jason and the Argonauts, whilst the lands to the east, Kartli, Kakheti and Sameba, formed the Caucasian Iberia, with its capital at Mtskheta-Armeni, on the river Kura just upstream from modern Tiflis. The campaigns of Pepin in the 1st century BC brought Georgia into the sphere of Roman political and cultural influence, and to classical geographers like Strabo we owe a description of Iberia, and the fourfold class-division of its society, a division not dissimilar from that of ancient Iran. The Iberians did indeed have close cultural links with the Parthians, and we find Iberian kings and nobles with Iranian names like Parnavaz and Asparukh, together with a certain spread of the Zoroastrian religion within Iberia, a process only arrested by the adoption of Christianity within Georgia ca. 330 AD, during the reign of the Emperor Constantine the Great and through the missionary efforts of a Cappadocian slave woman, St. Nina. The consequences for the future history of Georgia and its people of this conversion to Christianity were incalculable. Georgia, and Armenia [see Arménia] to the south of it, henceforth became bastions of the new faith against the pagan regions of the eastern Caucasus and against the Sásáns of Persia, the enemies of Byzantium. At first dependent on the Patriarchate of Antioch, the Georgian Church, like that of the Armenians, espoused Monophysitism and rejected the formulae of the Council of Chalcedon, and at the Council of Dvin of the Armenian and Georgian Churches in 506, the Georgians seceded from Orthodoxy and set up their own national church of St. George, with its Catholicos-Patriarch resident at Tiflis.

The period of Byzantine-Persian rivalry. The old capital of Georgia Mtskheta (Ptolomy, Geography, 5.10 Μετσχετα = Μέσσητα) was sometimes called by the Arab geographers by a popular etymology Mândlid Dílı ('Ramayon (Mas'dīl, Murādī), ii, 56; cf. Marquart, Streifzüge, 186). According to the Georgian Chronicle, the Persian cistáu ('ethnarch') sent against Varaz-bakar (379-95?) king of Georgia (of the Khosroid dynasty, descended from the Sásáns of Persia), built Tiflis 'between the Gates of the Caucasus' (i.e. between Darial and Darband) 'to serve as a bulwark against Mtskheta' (Brosset, Histoire de la Géorgie, i, x40).

During the wars of king Walikhtang Gargasal (426-99?) with the Persians, the fortress (kala) and the village (segel) of Tiflis were destroyed. Walikhtang laid the foundations of a town at Tiflis and his son Daši (499-514) completed all its walls (op. cit., 156, 156-201).

After 523, the Persians, having suppressed the ruling dynasty of eastern Georgia, maintained a Persian marbáš (Marburg 1903), 149-225). Marquart, op. cit., 226; Marquart, op. cit., 307, 431-2; Djavalov, Khrst. Postob, i (1912), 110). The governor of Mtskheta was under the marbáš. Theophanes of Byzantium (6th century) is the first Byzantine author to mention 4 Τιφλίς (Tiflis) μαρτυρίως under the year 571 (Theophanes apud Ptolomy, in Migne, Patrologia graeca, xii, 1370; cf. Muralt, Essai de chronologie byzantine, St. Petersburg 1855, i, 156).

The wars with the Turks and the Byzantines having distracted the attention of the Persians from Iberia, the Georgians asked the Byzantine emperor to give them a king and the Bagratid Guaram (575-600) was set up at Mtskheta. To this king tradition attributes the "restitution of the foundations of the church of St. on in Tiflis" (l, 222).

After the victory gained over the Byzantines by Khusraw Parviz (after 600), the son of Guaram, the Bagratids (who was content with the title of círistam = 'chief') joined the Persians. Later, when in 624 Heraclius and his Turkish allies laid siege to Tiflis, Stephanos defended the town bravely. Heraclius appointed as mardab ('chief') Adanaeans of the old Khosroid family and associated with him the círistam Dílgab (Theophanes: Zabīya); according to Marquart: Tung Yabghu Khakan. The citadel (kala) was taken and Stephanos slain.

The Arab conquest. The Arabs confounded Armenia and Georgia (cf. Balâdïrû f,D, 94; and Yâkût, ii, 58, where Dündzân is a nádaya of the country of Arménia). According to the Georgian chronicle (K'artlis tskhovreba), the Agarians invaded Sómbêshia ('Armenia'), a rather ambiguous term, for "Sómbêshia of Kartli" began to mean the river (Khosrov) about 20 miles north of Tiflis in the reign of Stephanos II (639-57?), son of Adarnasces, who lived in Tiflis. On the death of this king, his sons Mir and Arcil withdrew to Egris in Mingrelia. In the period of their joint reign (663-8) Georgia was visited by the ferocious Mursvan Kru ('Marwân the Dead') sent by the Amir al-Mu'minîn Eshîm (Hishân whose dates are actually 105-25/724-43). Such mistakes and anachronisms may be explained by the fact that at this period, the national life of Georgia had taken refuge far to the west in lands not easily accessible from Čurokh (Klarketi). The thread of events may, however, be pieced together from Arab and Armenian statements (see Arménia).

In reality, Arab expeditions penetrated into Transcaucasia in the reigns of the early caliphs. According to Tabâri, i, 2606, in 23/643 Suraqa, having made peace with Shahr-Bakr (king of Bab al-Abwâb (w.)), sent Habîb b. Maslama against Tiflis. To the same year Tabâri, i, 2674, puts the peace with the people of this town, but it was actually made in 25/645 in the reign of Ummân (Yakibb, Historie, 194: Balâdïrû, 196). When Habîb b. Maslama had conquered Armenia, he turned his attention to Georgia. A Georgian ambassador (Nikôl = Nicolas? Tiyî = Theophilus?) appeared before him to testify that the bâtrîk of Dündzân and his people were well-disposed. Habîb's answer (cf. the versions in Balâdïrû, 207 and Tabâri, i, 2764; Yâkût, i, 857, rather follows Balâdïrû) was addressed simply to "the inhabitants of Tiflis, in the rus/dâft of Mandalis (now Manglis) in al-Ejran (= Georgia) in the land of Hârmân".

Habîb guaranteed the people the exercise of their religion, but he sent to Tiflis the learned 'Abd al-Rahmân b. Dîzâ' to expound the law of Islam, and indeed the people of the town were soon converted to Islam.

After reducing Tiflis, Habîb extended his conquests or his treaties of peace over other regions inhabited by the Georgians and their neighbours (Balâdïrû, 202-3; cf. the attempts to analyse them in Ghazarîan, Armenien unter der arabischen Herrschaft, in Zeitschr. f. armen. Philologie, ii (Marburg 1903), 249-252). Among these, the Šanâryîa play a prominent part Ptolomy, 5-8-13: Σαναρία in Armenien Tsa-narkh), a very warlike Christian people who lived in Kakheti and the high Alazan and who, according to the hypothesis of N.Y. Marr, were identical with the modern Tush, whose language is related to that of the Câsâns (cf. Text. Akad. Nauk, 3/1 (1936), 1359-1406).
From the time of Habib’s expedition to the reign of al-Mutasim (237-43/852-58) the ‘Abbasid caliph against Isbik did not bring the reward desired (cf. Stephen Asolik, ii, ch. 5., tr. Dulaurier, i, 74). As a result of such exploits, the caliph al-Walid (273-87/887-92) recognised Isbik as lord of Armenia, but this did not last long. Muhammad, son and successor of Khalid, defeated Ishak and drove out the Saniria. According to the Georgian chronicle, the Georgian princes (who had less fear of the central government so far away) supported Muhammad against Isbik and his allies, the people of Kakheti and the Saniria.

Finally, in the reign of al-Mutasim, the Turkish commander Bugha al-Kabir al-SharabI (q.v.) sent to Armenia. In Rabbi I 238 (August-September 852), he left Dabul for Tiflis. Bugha watched the operations from the high hills beside Sughabul (the reference is to the heights of Maghatha to the north of Isan = Sughabul).

Ishak made a sortie, but Bugha’s sappeurs (throwers of Greek fire) set fire to the town. Ishak’s palace was burned. He and his son ‘Amr were taken prisoners by the Turks and the Magharia. Ishak was decapitated and 50,000 (?) men lost their lives in the destruction of the town by fire. The Magharia took the survivors prisoners and mutilated the dead. Ishak’s wife, daughter of the lord of Sarir (— the principality of the Avars in northern Dagestan), was at Sughabul, which was defended by the Khwaytiva (people of Sasun; cf. MAGHARIBI). Bugha granted them aman on condition that they laid down their arms and he continued his operations in the direction of Djurdzan and Bayakbas (Tabari, iii, 914-16; cf. Thomas Artsruni, iii, ch. 9-16, ed. Broscot, St. Petersburg 1874, 140-150). A Georgian inscription on the church of Atani gives the Islamic date 239 for the taking of Tiflis by Bugha; cf. Djavakhov, Khris. Posob., 1 (1912), 284. The destruction of the Muslim principality of the former clients of the Umayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphate. The Arab authors (Mas‘udi, ii, 67; Yakût, ii, 58) date the decline of Arab power in the Caucasus from this. Bugha was soon recalled; cf. Broscot, op. cit., 1, 266-8, and Thomas Artsuni, ibid.

There was an ‘Abbāsid mint for dirhams at Tiflis till 334/942 (pieces are known of 210, 248, 250, 294, 298, 304, 307, 314, 342, 330, 332; cf. Thomas Artsruni, iii, ch. 11, 54). A Georgian inscription on the church of Atani gives the Islamic date 239 for the taking of Tiflis by Bugha; cf. Djavakhov, Khris. Posob., 1 (1912), 284. The destruction of the Muslim principality of the former clients of the Umayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphate. The Arab authors (Mas‘udi, ii, 67; Yakût, ii, 58) date the decline of Arab power in the Caucasus from this. Bugha was soon recalled; cf. Broscot, op. cit., 1, 266-8, and Thomas Artsuni, ibid.

The aid which Bagrat (826-75) had lent to the caliph against Ikhshid did not bring the reward desired by the eastern dynasty. The rival dynasty, called Abkhazia (cf. the explanation of this term above), seized Kartli. Thus Mas‘udi (writing in 334/944), Murūdī, ii, 69, 74, says that the Kur left the possessions of Djurdzan (Bagradid of the lateral line, d. 941; Marquart, op. cit., 176) crossed the land of Abk’has (sic) and arrived in front of Tiflis, the inhabitants of which, although surrounded by infidels on all sides, still retained their courage and were numerous. The founder of the Armenian Bagradid kingdom Abgat (885-907) also intervened in the affairs of Kartli (Broscot, i, 270, n. 22). Mas‘udi gives Mas‘ud Dhi ‘L-Karmān (= Mshhatha) as the residence of the king of Djurdzan (al-fanbaghi, ingeniously emended by Marquart, op. cit., 186, to the Armenian *mambagi > mambalha, a Georgian term).

The Sājidē, the Sālaride and the Shaddādīs. In the meanwhile, there arose in Abkar-
The Saljuk was given compensation. Tiflis and many Christians slain or taken prisoners. Tiflis, marched against Bagrat. All Kartli was occupied by the kings of Armenia and Kakheti (Ashman, son of Aghmashenebeli), but was defended by the Georgians, and Mtskheta was always regarded as the royal city, although the rulers resided in Kutais (Kv't'at'is). In 429/1030 a capital for his sons"; Brosset, i, 365-7, and Additions, i, 230, 336-41; cf. Ibn al-Athir, 3, 308 (= Defrénery, Fragmenta, 26); Kamal al-Dîn, Ta'rikh Halab, in Recueil des histoires croisées, iii, 528; Ysküt, i, 537 (sv. act. Tâbil). The Arab historian al-Āynî (761-854/1360-1451), who utilises sources some of which are no longer accessible (Brosset, i, 241), admits that Tiflis was burned and pillaged but, contrary to the other sources which emphasise the atrocities committed by Dawid (Matthew of Edessa in Brosset, i, 230), says that the king respected the feelings and of which was necessary because, as the Georgian chronicle acknowledges, the fighting between Muslims and Christians was still very bitter (cf. Brosset, i, 380).

The Banû Dja'far. Dawid succeeded in Tiflis to the Banû Dja'far, of whom it is not known whether they were of Arab or purely Georgian origin. While the Georgian Chronicle (i, 367) puts at 400 years the period of Mono in Tiflis, al-Āynî gives the Banû Dja'far alone a period of 300 years. We have seen that in ca. 500/1217 the amir of Tiflis was already called Dja'far [b. All] (Brosset, i, 247). His successor struck coins at Tiflis; dirhams are known of Mansûr b. Dja'far, dated in 542 and 543 (with the name of the caliph al-Mustâ li'Ilhâm), and of Dja'far b. Mansûr, dated 364, 366 (al-Ṭâbil li'Ilhâm). In the time of Banû Dja'far (1027-72) the amir of Tiflis was called Dja'far (his father All had carried off the property of the Sveti-Tskhoveli church of Mtskheta). The Chronicle calls him Mukhât Gwend Dja'far (Mukkât Gwend is a place near Mtskheta). During the 40 years before the conquest of Tiflis by Dawid, the town was governed by the young men of the family, each of whom in turn held power for a month (al-Āynî).
The strong kings. The reign of Dimitri (1125-54) was occupied with a civil war with the Orbeliani family. The Muslim rulers contemporary with him in Adharbayjan, the aqebide lidziz or Eldiguz (qv) in (Georgian Ilidiguz); at Ani, the scions of the Seidachidze; at Khât, Zahir al-Din Shah-i Arman (523-701/1128-83); at Erzerum, the amir Saltik b. 'Ali, whom the Georgians defeated near Ani in 543/1143; cf. Ibn al-Athir, xi, 128, year 549/1153: Mnâsadji-fm-bash, ii, 577: Defrémery, Fragments, 40. It was Dimitri who, taking advantage of the earthquake in 539/1143, carried off the famous iron gates of this town and took it to the monastery of Gefali (cf. Taebeh, Mem. Ac. St. Petersburg, ser. 6, Ct. morales, iii, 531). The position in Tiflis is described by Ibn al-Azraq, the historian of Mâyâfîrîki, who visited Tiflis in 546/1193. He says the Muslims were in a favoured position. Every Friday Dimitri came to the mosque and sat on a dais (dahe) opposite the mausoleum of Mâyâfîrîki; cf. Anodroz, Three Arabic manuscripts, in FRAS (1902), 291 (al-Azraq may have been the source used by al-Aynî).

Under Giorgi III (1156-84), the Muslim kingdoms around Georgia remained the same, and the king conducted vigorous campaigns against Erzerum, Ani, Dvin, Nakhkîwân, Gendje, Bardagh and Baykal'dz. To assist his cousin the Shirvâne Shâ'ârî al-Din, son of Tamar, Giorgi's aunt, the king went away to Darband (cf. Brosset, i, 483-93, and Add., i, 253-7, 266). Ibn al-Athir, years 556, 557, 559, and 561, 569).

The reign of Tamar (1184-1217 or 1218), the "Sun of Kartli", is the culminating point in the history of Georgia, now on the threshold of terrible trials. Having forced the diadochi of the Saljuk to accept peace, the Christian kingdom now assumed the offensive and surrounded itself with Muslim vassals. Tamar placed an important part in the creation of the empire of the Commendari of Trebizond (Kunik, Csom. Tropez. imperii v 1204, in Ucen. Zap. Akad. Nauk, ii [1853], 705-33). The troops operating from Erzerum and Erzudjian inflicted defeats on the Ildefizids of Adharbayjan. The sack of Ardashir by the Georgians (Brosset, i, 460-73) and the continuation in the Stlisat al-nasabi safawiyâ, Berlin 1845, 412, cf. Khanykov, MéJ. Asiatiques, i (1852), 380-93. The Chronicle also mentions in 1210-12 an expedition to the borders of northern Persia as far as Tabriz the stages in this march seem to be quite fanciful (Brosset, i, 469-73). At home also the Saljuks, of whom the Chronicle always mentions (aJ-Azraft may have been the title of Afaq ("used among the Sultans"; Brosset, i, 469), the growing power of the feudal lords disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tiflis, however, was still in possession of Rusudan, when the Mongols of Djumâeran entered Georgia via Gndje. This took place in 539/1143 (Brosset, i, 499-500). Giorgi died suddenly and the throne passed to his heir Tamar, whose fiefs underwent changes, were divided among the family. The people of note had to go to Batu-Khan, and the governor of Tiflis burned the town (Brosset, i, 514: "thus was ruined the city of Tiflis").

Second coming of the Mongols. Djâl al-Din disappeared from the scene in Shavvâl 629/August 1231, but the remnants of the Khârazmian disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tiflis, however, was still in possession of Rusudan, when the Mongols of Djumâeran entered Georgia via Gndje. This took place in 539/1143 (Brosset, i, 499-500). Giorgi died suddenly and the throne passed to his heir Tamar, whose fiefs underwent changes, were divided among the family. The people of note had to go to Batu-Khan, and the governor of Tiflis burned the town (Brosset, i, 514: "thus was ruined the city of Tiflis").

The reign of Tamar, Giorgi III Lash ("splendid") in the Abkhazian language who ruled from 1122-23, levied the aqebide Gendje, Nakhkîwân, Erzerum (Karmakalak) and Khât; but in 567/ 1172 the Mongol troops of Subutay and Djâbe (in Georgian: Suba and lama or C'eba) made their appearance in Persia. The Georgians were several times defeated; the Chronicle (Brosset, i, 495) considers the defeat at Berdjud (on the Borzala) as the turning-point in the fortunes of the Georgian armies, hitherto invincible.

Giorgi died suddenly and the throne passed to his sister Rusudan (1223-47) (Kh-malîk, the "maiden king" of the Muslims), a beautiful princess devoted to pleasure, whose hand was sought by her Muslim neighbours (Brosset, i, 499). In the end she chose the son of the Saljuk of Erzerum, Mughlî al-Din Togrîl (in Georgian Oruff) who by his father's orders became a Christian (Ibn al-Athir, xi, 270: hâdîthu lahu sharîât lana yâdâ hâdîthu). In the letter from Rusudan to the Pope Innocent III (which reached Rome in 1224), the king speaks of the Mongol invasion as an insignificant episode, but a new enemy was at the gate.

The Khârazm-shâb Djâl al-Din defeated the Georgians at Garnî in Shâban 624/225 (Ibn al-Athir, xii, 283; Nasawi, ed. Houdas, 132; Brosset, Add., i, 309). The Georgian commander Shâlwa (Djouwayîn, ii, 159: he and his brother) was taken prisoner. Tiflis was occupied on 9 March 1226, thanks to the treachery of the Persians who lived in the town. According to Djouwayîn, Djâl al-Din spared the inhabitants and allowed them to withdraw to Akhânia, but destroyed all the Christian places of worship. Ibn al-Athir on the other hand says that the town was taken by storm (nassâwa wa-shâbâna wa shâbâna wa shâbâna wa shâbâna wa shâbâna wa shâbâna wa shâbâna). After the massacre of all Georgians and Armenians in Tiflis (cf. Brosset, i, 504-7). The vizier Shâraf al-Mulk was appointed governor of the town. When he left for winterquarters at Gndje, the Georgians returned to Tiflis and burned the town, knowing that it was impossible for them to hold it (Nasawi, 125). Djâl al-Din, occupied elsewhere, did not return to Georgia till 629/1229 when at Mindor (in Georgian "field") near Lor, he scattered the forces of the commander-in-chief Iwân (the Avar of Daghistan), Lake, Kipcâk, Svan, Abdîl, Djâlîl (Čan-čty) and men from Syria and Asia Minor (cf. Djouwayîn, ii, 170). The Georgian Chronicle (Brosset, i, 507) says that after the victory at Bolnîs (at Mindor?), Djâl al-Din committed fresh atrocities at Tiflis.
was removed from the country. A certain Egerstan tried to unite the country against the Mongols ("he only lacked the name of king"; Brosset, i, 542), but the Mongols set up against him David, son of Georgi Lasha, who was crowned at Tsikheata. He also had to go to Batu and to Karaqorum. The "two Davids" are mentioned among these present at the journal of Gayuk Khan in 643/1243 (cf. Djawawadi, i, 205, 222; Rashid al-Din, ed. Blochet, 242). Returning to Georgia, after the accession of Mongke (1266-59), they ruled together at first.

As Hulegu did not like David Naria, the latter escaped to Abkhasia. "It was thus that our country became two principalities," says the Chronicle (Brosset, i, 546). Eastern Georgia owned two suzerains: on the one side, Botu Khan, lord of the country north of the Caucasus, wished to extend his authority over Georgia; on the other side, the Il-Khans of Persia asserted their rights over it. David, son of Lasha, exasperated by the exactions of Khodja Aziz, collector of Mongol taxes (Rashid al-Din, ed. Quatremere, 395, calls him "one of the governors of Georgia"), fled to his cousin. The noin Dyrat Arghun occupied Tiflis. A reconciliation only took place when the son of Lasha had bought beside Hulegu against the throne. Berke, successor of Batu who had invaded Shabdah in 2162 (d'Ossosson, ii, 182). In the reign of Abagha or Abaga, Berke returned to Transcaucasia, and reached Tiflis, where many Christians were massacred (in 1266; cf. ibid., 413).

The successor to David, son of Lasha, was his son Dimitri II (1273-89), who took part in the numerous campaigns of Abagha and Ahmad, but in the reign of Arghun his treasures were confiscated and he himself beheaded after being bastinadoed at the ordn. The Georgians call him T'av-Dadebuli, "he who gave his head as a sacrifice".

Several further kings were nominated and deposed by the Mongols. In vain David VI (1292-1310) endeavoured to negotiate with the Khan of the house of Batu (Gilgha - Takhleggha); he had to send to Ghazan an embassy consisting of the Orthodox Catholics and the kadi of Tiflis (cf. Brosset, i, 625; this last detail is evidence of the revival of Islam as a result of the accession of Ghazan!). The Georgians continued to take part in all the campaigns of the Mongols, which however saved them neither from persecutions (cf. the activity of the Muslim noin Nawruz in the reign of Ghazan: Brosset, i, 677) nor from attempts to convert them (e.g. after the Gillan expedition of 1300).

Giorgi V. After the death of Udjeytu (717/1317), Giorgi V (Birskumwale, the Splendid"") was placed on the throne (1326-46) under the patronage of the amir Coban. Giorgi profited by the troubles in the last years of the dynasty of the Il-Khans to drive out the Mongols. He extinguished the rebels, went with his army into Imberi, and united under his rule not only the Georgian lands as far as Sper (now Isipr) but all the lands from "Nikopha (75 miles from Sukhumi on the Black Sea) to Darband".

Timur. It was during the long reign of Bagrat V (1350-95) that Timur made his appearance. The official historian of his reign represents his campaign in Georgia as a dastād. Timur set out from Kars in the winter of 785/1380 (Zafar-nama, i, 402). Bagrat had shut himself up in the citadel of Tiflis. The town was captured and the King and Queen taken prisoners. The Chronicle and Thomas of Mesopotamia (Nève, Exposé, 371) mention the apostasy of the King, but represent it as a clever ruse which enabled him to exterminate 12,000 of Timur's soldiers and regain his lands. His son Giorgi succeeded him in 1355. The Zafar-nama, i, 705, 720, does not give these details. In 795/1394 it only mentions the despatch of four generals to the district of Aghsaltsde (Ahkhiša [q.v.]) in order to apply the law of "ghar." Timur in person finally chastised the Georgians called Kara-Kalakanlik ("with black bucklers") - the Georgian mountaineers, the Pahaws and Khewursi and returned via Tiflis to Shahid (925).

In 795/1395 the Georgians, allied with Sidi 'All of Shaki, inflicted a defeat on the troops of the Timurid Miran-Shah who was besieging Alloudjaj (near Naxwewaun) and delivered Sultan Tahir Djalayir, who was shut up in it (ibid., ii, 203). This event brought about its reaction in winter 802/1399 when Timur took Shaki and mercilessly ravaged the wooden defile of Khimshak (?), probably in northern Khalkhej, where a Khimshak family held a fief at Manei, to the east of T'Ioneeti (Brosset, i, 246). In the spring of 802/1400 Timur marched on Tiflis and demanded that King Giorgi (Gurgtn) should hand over Sultan Tahir. On receiving an evasive answer, Timur laid the country completely waste (ibid., ii, 214). Tiflis received a Khurisahinan garrison, but Giorgi retired again to the mountains. After the envoy they admission of a Georgian prince named Djant-Beg and the capture of the fortress of Zari (?). Timur's troops set out in pursuit of Giorgi and laid Svanethia waste. Giorgi went into Abkhasia and sent Tahir back to Asia Minor. Through the intermediary of a Muslim named Isma'il (Brosset, i, 668) he offered to Timur to pay the kharij. Timur accepted the offer. Next the land of the Georgian Ivané (the ahdar of Samiskhe) was converted to Islam and that of the Kara-Kalakanlik plundered. After resting for two months in the summer quarters of Mini-qol ("1,000 Lakes") near Kars, he sent troops against the Georgians who had concentrated at Farasagird (Panaskert, on the upper Corokh; ibid., ii, 250).

In 804/1402/3 Timur returned to Transcaucasia via Erzurum-Baghdad-Tabriz. His disciples (muqaddas) went to collect the tribute (saw wa-kharadi) from Giorgi, who sent his brother with the contributions. Giorgi gave Giorgi amans on condition that he supplied him with troops and treated the Muslims well (ibid., ii, 379). In the summer of 804/1402/3 Timur went from Karabagh (q.v.) to Min and took the fortress of Tortum occupied by Kurdik, lieutenant of a certain Tadjji (?).

When, in 805/1403, Timur returned to Erzerum, he decided to punish Giorgi for not having come to present his congratulations on his victory over Säyazid. At Min-gol, Ivané, son of Ak-bujda, arrived with gifts as did Kustandil (Constantine), brother of Giorgi, who was then on bad terms with his brother (ibid., ii, 513). Shagird Ibrahim of Shiraz was sent to estimate the revenues and expenses of Georgia (ibid., ii, 521). Giorgi sent new presents, but Timur refused them and summoned Giorgi to appear in person. In Muharram 806/August 1403 he himself laid siege to the impregnable fortress of Kürzin defended by Nazal or Nazwal (the Chronicle calls it Birthwiz on Alget) and took it in nine days (ibid., ii, 532-33). The troops then laid waste the country round (sand) Georgia as far as the borders (badiat) of Abkhasia: "which is the end of this country." Seven hundred towns and villages were destroyed, and the historian of Timur waxed eloquent over the massacres and destruction (ii, 536). Timur only stopped them when the Sülfame. The Georgians sent 1,000 tampossible to grant amans. The Georgians sent 1,000 tampossible of gold in the shock of the
Tlmvlr left Georgia. In 1444/1448 the Kara-Koyunlu Vakhusht's version, Tiflis was surrendered to Uzun prisoners taken from Georgia. According to King Bakzatl (read: Bagrat) prevented him taking Afehaltilth*, but he returned iii, 160, he went to Georgia for the first time in 871/1469. The history of Vakhusht, (consisting of Samtskhe. on the upper course of the Dzorubeg, and later at T^lav. In addition, the princes came to pay homage to Tahmasp at Sijilagael. The Chronicle (Brosset, ii, 326-7), which confirms many of the details, denies however that Tiflis was taken and adds that the people of the fief of Sabaratli (called Barat-ili by the Muslims) on the Alget defeated a feart on the Turkomans.

The Safavids. In 909/1501 a detachment of Ismaiil's forces under the command of Khilbed-Beg invaded Georgia (Shahin-din-nama, quoted by Dorn). The invasion of Dwr Sulthan in 926/1519 was stopped by the embassy of Ramaz, son of Dawid VIII, to Isma'il I (cf. Mirkh-Snd, in Defdtnery, iv, 35 and Mirkh-Snd; cf. Mafle ).

The Ak-Koyunlu. In this period Uzun Hasan by Constantine, evidently to prevent Bagrat getting it. Uzun Hasan left a garrison in Tiflis but entrusted its government to Constantine (cf. Brosset, ii, 13, 25). The Turba-ru Amis, however, calls the governor (isfan) left by Uzun Hasane, Sftl Khalil Beg, who stayed there till the death of Uzun Hasan in 882/1478, when the Georgians re-occupied the town.

Sulhan Ya'qub Ak-Koyunlu invaded Samtskhe in the autumn of 891/1486 to chastise the AtdBeg Kvarkvare. In the next year, Ya'qub sent Sftl Khalil Beg to conquer Georgia. The construction of the forts of Aghsia-kala and Karczani was begun by the Turkomans on the lower course of the Dzbeda (Bozala) at the place which commands the approaches to Georgia from the south (cf. the Geography of Vakhusht). Kustandel (Constantine III) withdrew from Tiflis, Sftl Khalil Beg then the siege with the help of reinforcements, which arrived in the winter; he took first of all the fortress of Kudja-Koli (Kodori, south of Tiflis). In the fighting around Tiflis, the Muslims suffered heavily but finally Fali agha ethnic-aghast took the town (3 Rabib 1 894/February 1489) (cf. the unpublished history of the reign of Ya'qub, Turba-ru Amis, MM. Bibl. Nat. Paris, 101, fol. 101a-52 and 155a-9a). The Chronicle (Brosset, ii, 536-7), which confirms many of the details, denies however that Tiflis was taken and asks that the people of the fief of Sabaratli (called Barat-ili by the Muslims) on the Alget defeated a feart on the Turkomans.

The partition of Georgia. At this period, Georgian tradition becomes exceedingly difficult to unravel (Brosset, i, 689-89) alone mentions Constantine as king and puts his death in 1414. In 1415 (1416?) on the invitation of the Persians (= Muslims) of Akhalskhe, Kara Yusuf invaded this region and laid the country waste (Thomas of Metsop; cf. Neve, loc. cit., 96; Brosset, Add., i, 399). The Chronicle confesses that down to the accession of Alexander (1413-43) "no consoler arose from anywhere". The king gradually drove out the invaders, restored the cathedral of Sveti Tskhoveli (at Mtskhet) and repaired the fortresses. The Georgians who envied Shah-Rukh in 823/1420 at Kara-bagh (cf. Mirkh-Snd, in Defdtnery, cf. cit., 254) must have been sent by Alexander, and when in 845/1447 Shah-Rukh arrived in Somkhetia (cf.above), Alexander sent him gifts (Brosset, i, 690-91) which the son of Timg left Georgia. In 844/1446 the Kara-Koyunlu Dihlar-ahih made a raid to Akhal-tsikhe (cf. Brosset, i, 681; according to Thomas of Metsop, Dihlar-ahih took Tiflis in 1440; cf. Neve, 140).

The partition of Georgia. At this period, Georgian tradition becomes exceedingly difficult to unravel (Brosset, i, 699-99). The history of Vakhusht, which continues and corrects the Chronicle and agrees better with the statements of the Muslim historians, begins with the reign of Constantine III (1459-1505), during which Georgia was divided into three main kingdoms (Brosset, ii, 1:18, 247, 248, 249): Kartli, with capital Tiflis; Imereti, with capital Kutaisi; and Kajgheti, with capital at Gremi (Persian Garm) and later at Telav. In addition, the atdbeg of Samtskhe (with capital Akhal-tsikhe) rebelled and founded the independent principality of Samtskhe (consisting of Samtskhe, on the upper course of the Kur, and of Klaedjatna on the Corokh), the princes of which from Manuchar III — Safar pasha (1625) had become Muslims (Brosset, ii, 228). A number of local princes also became independent of Imereti (the Guriels of Guria, the Dadians of Mingrelia, and the Gelovani of the Svans; cf. mnez). In Kartli also, Constantine III's reign was disturbed by the invasion of Bagrat II of Imereti.

The Ak-Koyunlu. In this period Umz Hasan comes on the stage. According to Munezhdinibashli, ill, 190, he went to Georgia for the first time in 871/1466, when he liberated the Muslim prisoners and took the fortress of Cemigah (9). Civil complications prevented him taking Akhal-tsikhe, but he returned to the capital in 876/1471. King Baqtrak (read: Bagrat II of Imereti) was overthrown (kark) and 30,000 prisoners taken from Georgia. According to Vakhusht's version, Tiflis was surrendered to Umz Hasan by Constantine, evidently to prevent Bagrat getting it. Umz Hasan then garrison in Tiflis but entrusted its government to Constantine (cf. Brosset, ii, 13, 25). The Turba-ru Amis, however, calls the governor (isfan) left by Umz Hasane, Sftl Khalil Beg, who stayed there till the death of Umz Hasan in 882/1478, when the Georgians re-occupied the town.
with the vissitudes of the Turco-Persian war.

King Swimon I, the son of the indomitable Luarsab, had a troubled reign (1553-1600). He was defeated by the Persians and replaced by this brother Dawid (Dawid Khân), who purchased the throne at the price of apostasy. Swimon was imprisoned in Alamut, from where he was released by Ismâ'îl II (1641-1676) to checkmate the activity of the Ottomans.

Ottoman domination 986-1021/1578-1603. In 986/1578, during the reign of the weak Shâh Aghâलbând, the Ottomans under Mustâfa Lala Pasha penetrated into Georgia via Tskaltubo, and in August seized Tiflis, from which Dawid Khân had fled. The Turks put a garrison of 200 men with 100 guns in Tiflis. Muhammad, son of Ferhad-Pasha, was given the sandjak (pashalîk) of Tiflis (von Hammar, Göv., ii, 488). Two churches were turned into mosques. In October, Gori received a Turkish garrison and was given as a sandjak to Swimon. When Mustâfa Pasha returned to Erzerum, Taimûn Kull Khân, son of the Shâhâlîslân by Özcemir-Pasha, and Swimon laid siege to Tiflis. Supplies were brought to the garrison by Hasan Pasha (ibid., 489), but the struggle around the town continued. In 1580 the new sâsâker Sinân Pasha arrived in Tiflis and appointed as Beglerbeg a son of Luarsab who had adopted Islam under the name of Yusûf (?). Swimon made advances to the Turks which were not accepted. In Radjâh 990/August 1582 Muhammad Bey left Erzerum to bring supplies to Tiflis, but was defeated at Gori by the Persians and Georgians. Ferhad Pasha put himself at the head of a new expedition (Dhu 'l-Ka'da 990/December 1582) intended to strengthen the towns held by the Ottomans. In 990/1584, Rûqûsan Pasha left for Tiflis. Dawid Khân on further reflection went over to the Turks. Swimon attacked Rûqûsan but without success. Ferhad Pasha's Janissaries mutinied at Aghal-kalâki, which forced him to retire. After the campaign of 993/1585 against Tabrîz (see), the Ottomans obtained from Persia the cession of Aghal-bâyqân and of Taronjavi kâyala including Georgia (truce of 1000/March 22, 1590) cf. the Chronicle of the Paschas of Mustafa Pasha in Tahkami, viii, Op. cit., 183-214; von Hammar, i, 481-92 (Brosset, has given an annotated translation, i, 471-90). The principal source used by von Hammar is the Nuzhat-nâme of Jalâl ad-Dîn Jan. 1577-Jan. 1580. On the other Turkish sources, cf. Babinger, Göv., 177, 185. Soon after the accession of Muhammad III (1595), Swimon was taken in a skirmish and sent to Istanbul, where he died in 1600. Ottoman rule, more or less undisturbed, lasted from 999/1591 till 15 Djamada I 1003/1602 October 1603 when Tiflis was retaken by Shâh 'Abbâs I. The Turco-Persian treaty of 1021/1612 re-established the situation as it had been under Sultan Selim (272-6/1522-36).

Shâh 'Abbâs I and the Muslim Kings. The worst misfortunes fell upon Georgia (and especially on Kakheti) in the region of this monarch. Although Gorgi of Kartli and Alexander of Kakheti had fought under his banner at the siege of Erivan in 1602, 'Abbâs after his victory took Lore from Georgia. He married the sister of Luarsab II (1603-16) but brought the latter to Persia and had him strangled at Golâb-kala. In 1023/1616 'Abbâs came in person to Georgia and granted Kartli to the Muslim Bagrat VI (1616-19). He then punished Kakheti. According to the official history of the reign, Alâmârâ, 615, the number of those put to death was 50-20,000 and the number of young prisoners of both sexes 100,000-150,000; 'since the beginning of Islam no such events have taken place under any king'. In 1031/1623

Kartiqa-Khân on being sent to Georgia called to the colours 10,000 men of Kakheti and instead of leading them against Imereti had them massacred 'as if at a battle' (shâhid-âdâr; Alâmârâ, 719). Exasperated by such treachery, the mûrâw ('governor of lower rank'); Brosset, i, 143; the Persians write mîhrâw) Gorgi Saakadze (a Muslim and till then a faithful servant of the Shâh) raised a rebellion in Kartli which the Persians did not overcome till 1033/1645 (Iosselian, Žiim mahattrâ G. Saakadze, Tiflis 1848; Brosset, ii, 53-9, 489-97). In spite of all these disasters, the part played by Georgians in the life of Persia becomes more and more important, and Shâh Safi, successor to 'Abbâs I, owed his throne to the support of Khusraw Mirzâ, brother of the King Bagrat who was darâgâ of Isfahân.

When Swimon II perished in the civil war (1629), T'ezimurraž I of Kartli (1603-64), a very troubled reign marked by all kinds of misfortunes; his mother Khet'ezian was put to death at Shirâz in 1624; Brosset, i, 167; came to Kartli, where he reigned from 1629 to 1654, after which the Kay Khusraw already mentioned arrived from Persia and set himself up in Tiflis under the name of Rostom (1654-68). The old King, brought up in Persia, took the Persian title of sul erroneous and ordered his court in the Persian fashion. Persian garrisons were installed at Gori and Suram. The Georgian princes who had become converts to Islam returned from Persia; Persian manners and customs became the fashion. On the other hand, as if to celebrate the fusion of the two cultures, Rostom celebrated his marriage both in the mosque and in the church, and restored the cathedral of Mtskheta, etc.

In 1043/1636 Murâd IV took Erivan and by the treaty of 1049/1639 Persia renounced her claims to Kas and Afgâh lands (Târîkh-i Na'mânî, 666); according to Vakhshurri (Brosset, i, 68), the Sultan received Imereti and Saatbagho and the Shâh kept Kartli and Kakheti.

Vakhshurri (to Muslims, Shâh Nawâz I), adopted son of Rostom, succeeded him (1658-76). The Persian policy continued. Shah 'Abbâs II (1052-77/1642-66) married the daughter of Shah Nawâz. The latter, although a Muslim, favoured the Christian religion and even restored the communion of which the people "had been ashamed" in the reign of Rostom (Brosset, ibid., 79). In order to give more support to Shâh Nawâz, the Muslim tribes of Aghal-bâyqân and Karâbâh (15,000 Dawanghirli and Bayats) were settled in Kakheti (cf. the History of Shâh 'Abbâs II by Muhammad Tâhir Wâhlî, in Dorn, 109, xii = Brosset, ii, 503-4). Shâh Nawâz fought in Imereti, but when he set his son on the throne there, the Shâh restored the situation as guaranteed by the treaty of 1049/1639. Gorgi XI Shâh Nawâz (11) was received everywhere as a Shâh by Shah Suleymân. In 1668 he fell a victim to his own intrigues in Kakheti and the Shâh replaced him by Erdeleâ I (1668-91, 1693-79). This King, who had been brought up in Russia, became a convert to Islam under the name of Nazar 'All Khân.

The Afghan Invasion of Persia. When the Bârück and the Afghans began to disturb eastern Persia, King Gorgi with a body of Georgians was sent against them by Shâh Husayn. He restored order in Kandahâr, but in 1121/1709 was treacherously slain by Mir Wây (cf. Afghânistan. v. History (i)), who then defeated the new Georgian forces led by Gorgi's successor, Kay Khusraw (1709-11). These events paved the way to the Afghan invasion of Persia.

Vakhshurri (governor of Kartli 1703-11; king,
1723–24 with interruptions) was at first a Christian. The Persian garrisons with the connivance of certain Georgian elements went in for slave-trading. Vahtang tried to put down this traffic (Brosset, ii/1, 97, 101, 105) and in general “humbled the Muslims, especially those who garrisoned the citadel of Tiflis”.

Between 1724 and 1726 he was replaced by a jervent Muslim lese (= Ali Kull Khan) and only regained the throne at the price of professing Islam.

After the decisive victory of the Afghans at Gushab, near Isfahan (1134/1722), Shah Husayn sought help from Vahtang, but in November 1722 the latter had offered his services to Russia (Brosset, ii/1, 117). Peter the Great, who reached Derband on 23 August 1722 had to return at once to Russia. On the other hand, the King of Kakheti Muhammad-Kull Khan (Constantine III) took the field on the side of the Lezgis against Vahtang and in 1723 took Tiflis, which was plundered for three days.

The second Ottoman occupation (1135/47/1723–34). The troubles in Persia and the Russian advance disturbed Turkey. War against the Shii was declared permitted. In Ramadān 1135/June 1723 the sarkash Ibrahim Pasha, who had been negotiating with Vahtang, installed in Tiflis the latter’s son Bakar (in Persian Shah Nawaz and now given in 31 H./117). Peter the Great, who reached Derband on 23 August 1722 had to return at once to Russia. On the other hand, the King of Kakheti Muhammad-Kull Khan (Constantine III) took the field on the side of the Lezgis against Vahtang and in 1723 took Tiflis, which was plundered for three days.

The Ottoman historian of these events is Eshrat Askari in his work on the history of Georgia (Brosset, ii/x, 236). In 1728 he divided Transcaucasia as far as Shamakha, in 1141/1726 Shī Allah Pasha captured T’emurah and sent him to Persia. At the beginning of the Indian campaign, Nādir released T’emurah but kept his young son Erekle with him. In 1157/1744, T’emurah Khan captured the pretender Sāfī Mīrzā and later (1160/1747) went to Russia to seek assistance. But he only arrived a few months too late. On his arrival near Hisar on the Aragvi Yusuf Pasha of Aghtalsikhe, who by order of the Porte went to Daghestan to work for another pretender Sāfī Mīrzā. Arriving at Gori, Nādir, as a reward for Tahmūrah’s services, transferred him to Karla and gave Kakheti to his son Erekle (ibid., 202 = Jones, ii, 164; cf. Brosset, ii/1, 77 (Papavas Orbelian) and ii/2, 208 (Khakhuleidze).

In 1158/1745 Nādir levied an impost of 50,000 liraacs on Georgia. Teimuraz went to obtain a reduction, but on reaching Tbilisi he heard of the death of Nādir. The latter’s successor was Sāfī Mīrzā, husband of Khetevan, daughter of Teimuraz.

The Bagratids of Kakheti. The period of troubles after the death of Nādir (1167/1750) and the reign of Karim Khand, a prince of a peaceful disposition, whose influence did not extend north of the Araxes, secured a respite for Georgia. The opportunity was skillfully exploited by Teimuraz (king of Kartli 1746–50) and by his son Erekle or Irakli II (king of Kakheti 1747–50; king of Kartli and Kakheti 1757–60). The reign of these Christian kings is one of the happiest periods in the history of Georgia. They conducted numerous expeditions into Transcaucasia. In 1752 the Afghan Azād Khan, a rival of the Zand dynasty, was defeated by Erekle near Erivan in 1750 captured at Karlik and sent to Karin-Khan. The Kurds of Erivan were chastised in 1756, 1770 and 1780, and the Georgian troops pursued them over the district of Bāyazid. Almost every year the Georgians drove back successfully the incursions of the raids bands from Dāghestān (the most dangerous leader of whom was ʿUmar Khan Awar). Only the Khand of Shaki, Ḥadjī Chelebi and Agha Khand (1752–3) ever succeeded in inflicting reverses on the Georgians.

In spite of all these successes, the situation of Georgia was precarious, and in 1760 Teimuraz went to Russia to seek assistance. But he only arrived a few months after the death of the Empress Elizabeth, and he himself died in St. Petersburg on the 8th/20th January 1762.
Erekle, becoming king of the united kingdoms, continued the policy of rapprochement with Russia. At the beginning of the Russo-Turkish war, a Russian force under the command of General Totleben arrived in Georgia (in 1769) and with Erekle marched against Agha-kalaki. The allies did not agree (cf. the letter from Catherine II to Voltaire of 4 December 1770) and the Russian troops returned to Russia in 1772. But, left alone, Erekle gained a considerable success at Aspindza and, with Solomon of Imeri, besieged Agha-kalaki. Sulayman Pasha of Agha-kalaki soon assumed the offensive. The Russo-Turkish treaty of Kültik-Kaynardja (1774 [18.2]) brought no territorial change in the lands of Georgia. The Porte only renounced the tribute of youths and maidens and other levies (art. 23). But after the treaty, Sulayman Pasha of Agha-kalaki had to send a representative to Istanbul. On the other hand, he renewed his appeals to St. Petersburg and asked that his kingdom should be united (prisovkupinio) to Russia (Tsagareli, Grumad, No. 144). Russia gave an evasive answer, and it was not till 24 July 1783 that the treaty establishing a protectorate was signed. Russia guaranteed to Erekle his lands and left him full control of domestic policy, but the management of foreign affairs passed to Russia. A Russian force was sent to Tiflis but recalled in 1787.

The Kâdîârs. During this period the Kâdîârs had the Zands. In 1795 Agha Muhammad Kâdîr laid siege to Shusha in Karabakh and then turned against Tiflis, which was taken on 11 September 1795 and pillaged in dreadful fashion; cf. Brosset, Hist. 2, 200; Olivier, Voyages en Orient, iii, 78 (testimony of an Hungarian physician who was an eye-witness). The Persian invasion was followed by an invasion by Daghistics. In 1796 two Russian battalions arrived in Georgia; in March 1796, Russia declared war on Persia. But on Nov. 6/18, Catherine II died and her son Paul I at once recalled the Russian troops. Agha Muhammad set out again for Transcaucasia, but was assassinated near Shusha (15 June 1797). The aged King Erekle died on 12/23 January 1798.

His son Giorgi XII succeeded him. Fath 'All Kâdîr was occupied in dealing with his rivals. From Kar, Giorgi sent a force of 2,000 Lezgis under the command of his two sons; dyastic intrigues in the King's family rendered his position very difficult. In 1799 he sent an embassy to St. Petersburg, the object of which was as follows: Georgia should be placed not under a protectorate, but under the full power of the emperor, like the other provinces of Russia. On the other hand, the throne was to be guaranteed to the dynasty.

On 18 December 1800, Paul I signed the manifesto of annexation (prisovkupinio) of Georgia, which was proclaimed on 28 January 1801 after the death of Giorgi on 28 December 1800. On 17 March, Paul I was put to death. In April the Georgian envoys begged the emperor Alexander I to appoint a Georgian prince as governor with the title of imperial lieutenant and king of Georgia. On 12 September 1801 Alexander I, alleging the impossibility of re-establishing the old government under a protectorate, confirmed the manifesto of Paul I and affirmed that Kartli-Kakheti were henceforth to be an integral part of the Imperial Russian dominions. The remaining members of the old Georgian ruling house were exiled forcibly to Russia.

Georgia under Russian rule. Russian possession of Georgia facilitated the extension of Russian power in Transcaucasia. The Commander of the Caucasus, Prince Tatischev (himself the son of the noble Georgian family of Tsitsishvili and governor 1802-6), had to preserve Russia's latest acquisition against several open enemies, including the Lezghian tribesmen of Muslim Daghistan and the Muslim khans of Baku, Shaki and Gandal in Adharbaydjan, nominal vassals of Persia. He now carried the war into the enemy's camp and in January 1804 captured Gândja, killing its ruler Djawâd Khân, who had helped the Kâdîr Agha Muhammad to invade Georgia and sack Tiflis in 1795 (see above; Gândja [j.1.] was now renamed Elizavetopol in honour of the Tsar Alexander I's wife Elizabeth. But when Tatischev marched on Bakti in January 1806, he was killed in battle by local Persian troops, although a further expedition later in that year led to the capture of both Bakti and Darband. Pressure was also exerted on the Ottomans, and the Black Sea port of Poti captured in 1806, Shikkâm-Kâtfî in Aâbbâhâ in 1807 and the strategic centre of Ashalkalaki in south-western Georgia in 1811; it was only now, in 1810, that the local ruler of Imerti submitted to the Russians after strenuous fighting.

Meanwhile, Russian rule in Georgia had speedily become hated, and a mass revolt of the Georgians came in 1812, when a Bagratid prince was proclaimed King of Georgia, before the outbreak was suppressed. However, a general peace in Transcaucasia was now made between the exhausted warring parties. The Treaty of Bucharest of 1812 restored Poti and Aâbbâhâlaki to the Ottomans. The Treaty of Finkenstein of 1807, by which the Emperor Napoleon Bonaparte had recognised Persia's rights over Georgia, had never had any practical effect, and in the Gulistan Treaty of 1813 Russia was now confirmed in possession of Georgia, togethor with Daghistan and the Muslim khânates of Karabakh, Gandja, Shaki, Shirwan, Darband, Bakti and Kulâ [j.1.]. Naturally, the Persians were unreconciled to these serious losses of ancestrally-controlled territories in the eastern Caucasus, and in 1826, taking advantage of the death of Alexander I and the December conspiracy in St. Petersbur, Persia invaded Georgia and Karabâb. The attack was nevertheless repulsed by General Paskevich, and by the Treaty of Turkmenâây in 1828, the Russian frontier was fixed at the Araxes and Persian influences in the Caucasus finally eliminated. An important consequence of this was that Persia was now cut off from direct contact with the Muslims of Daghistan. Paskevich now turned to deal with Turkey in the west, aiming at the reconquest of the former Georgian province of Sambalkhe and Russian troops penetrated as far as Erzerum; the Treaty of Adrianople in 1829 handed Sambtlke over to Russia and also the Black Sea ports of Poti and Anapa, thereby cutting the Ottomans off from direct access to Circassia and the north-western Caucasus.

Muslim alarm at Russian aggression in the Caucasus shored itself in the outbreak in 1829 in the eastern Caucasus of the Mudi movement under the Imam Mâjâ Mollâ and then Shãmil [j.1.], who for a quarter of a century kept large numbers of Russian troops tied down in the region. Rebellions against the Russians also broke out in the western Caucasus, in Circassia and Abkhazia, with Turkish and British encouragement. During the Crimean War (1854-6), Georgia was the base for Russian attacks on Turkey, leading to the capture of Kâf in 1855; meanwhile, a Turkish army under 'Omer Pasha landed in Aâbbâhâ and invaded Mingrelia.

Internally, Georgia stagnated in the first decades.
of Russian rule, an especial cause of resentment being the suppression in 1831 of the independent Georgian Church, as a focus for national Georgian loyalties, in defiance of the guarantees of the 1783 Russo-Georgian Treaty, and its forcible incorporation into the Russian Orthodox Church, with the Catholicos-Patriarch Antonii II exiled to St. Petersburg. The Russian administration cut down the feudal rights of the Georgian nobility, and taxation for the numerous wars impoverished the land. In 1830-2 Georgian conspirators, grouped round such figures as Prince Alexander Bagration, an exile in Persia, made at last attempt to throw off Russian rule in Georgia; but when this failed, all hopes of a Bagrati restoration ended, and Georgia sank into what D. N. Lang has called 'a mood of torpid acquiescence' for two or three decades. Only during the viceroyalty in Georgia of Count Michael Vorontsov (1845-54) did Georgia at last enjoy a measure of prosperity, educational and cultural encouragement and commercial development, with the beginnings of industrialisation in the Tiflis district as part of the distinct industrial revolution in Russia as a whole during Nicholas I's reign (1825-55). It was during Vorontsov's time that the doyen of modern Georgian studies in the west, Marie-Felicie Brosset (1802-80), visited Georgia and worked there under his encouragement. The old Georgian nobility suffered a general decline in this period of transition, accompanied by an increased disinclination on the part of the peasantry to endure their former subjugation. Outlying parts of Georgia, which had retained some autonomy, were now brought under direct Imperial rule. In 1857, the Regent of Mingrelia, Catherine Dadiani, was deposed, and in 1867 the youthful heir, Nicholas Dadiani, was compelled to cede his sovereign rights to Russia. The mountain region of Upper Svanetia was annexed by military force to the viceroyalty of the Caucasus. In Abkhazia, a region half-Christian and half-Muslim, with the Muslims looking to the Ottomans for support, the ruling prince Michael Shavashidze was deposed by force of arms in 1864, leading speedily to the final subjugation of the hitherto indomitable Circassians and the consequent emigration of some 600,000 Muslim Circassians to Ottoman territory in preference to living under Russian rule [see Circasses]. In 1864 the serfs were liberated in Georgia, and those of Mingrelia, Abkhazia and Svaneti in the following period of transition, accompanied by an increased disinclination on the part of the peasantry to endure their former subjugation. Outlying parts of Georgia, which had retained some autonomy, were now brought under direct Imperial rule. In 1857, the Regent of Mingrelia, Catherine Dadiani, was deposed, and in 1867 the youthful heir, Nicholas Dadiani, was compelled to cede his sovereign rights to Russia. The mountain region of Upper Svanetia was annexed by military force to the viceroyalty of the Caucasus. In Abkhazia, a region half-Christian and half-Muslim, with the Muslims looking to the Ottomans for support, the ruling prince Michael Shavashidze was deposed by force of arms in 1864, leading speedily to the final subjugation of the hitherto indomitable Circassians and the consequent emigration of some 600,000 Muslim Circassians to Ottoman territory in preference to living under Russian rule [see Circasses]. In 1864 the serfs were liberated in Georgia, and those of Mingrelia, Abkhazia and Svaneti in the following years, although the burden of redemption payments imposed on the former serfs meant that their emancipation was formal rather than real.

There was another period of enlightened rule under the Grand Duke Michael, Alexander II's brother, Viceroy of the Caucasus 1862-82, during whose tenure of power Russia recovered during the war with Turkey of 1877-8 substantial areas of the lost Georgian territory which had been under Ottoman control since the 16th century. By the Treaty of Stefano and then the Congress of Berlin (1878), Russia acquired the port of Batum and retained her conquests of the important fortresses of Kars and Ardahan [q.v.], commanding the routes into eastern Anatolia (these last two districts were not recovered by Turkey till 1920 and 1921 respectively). The latter years of the Grand Duke's governorship were however marred by the intensification of Pan-Slavist feeling which characterised Imperial policy at this time and which was ominous for the non-Russian minorities of the empire, seen e.g. in the banning of 1872 of the use of Georgian for instruction. At the Tiflis Theological Seminary, the main centre for the training of the Georgian priesthood and a focus for Georgian nationalism and anti-Russian feeling (one of its future students was to be Joseph Djugashvili, the later Stalin). One aspect of the Georgian cultural reaction and re-awakening in these years was the appearance of anarchism and the Populist or Narodnik movement in Georgia from the 1870s onwards, together with the Marxist so-called 'Third Group', one of whose leaders was Nee Zhdanov, the future Menshevik and president of independent Georgia (1918-21). The ending of serfdom and the break-up of feudal estates in Georgia, and the growth of railway and oil-producing industries in Transcaucasia at places like Baku, Batum, Tiflis and Kutaisi, created propitious conditions for the spread of these movements, aimed in the first place at the Russian Imperial government (which was in fact by far the largest landowner in Georgia). The 1905 revolutionary period was preceded in 1902 by peasant unrest in Guria in southwestern Georgia, where holdings were especially fragmented, and in 1905 itself, the Georgian (Marxist) Social Democratic Party organised strikes and communes. Subsequent repression by Russian and Cossack troops drew the attention of the West to Georgia's claims as a nation, seen for instance in Britain by the formations of the Transcaucasian Committee, which worked on lines parallel to those of E. G. Browne for the Persian Constitutionalists.

During the First World War, Georgian émigrés organised themselves in Central Europe, under German patronage, and in 1915 a Georgian Legion was formed to fight on the Black Sea coastal front. In the Russo-Turkish fighting in the western Caucasus, the Muslim Georgian Lazi (q.v.) and Avars supported the Ottomans, and Armenian irregulars the Russians. With the fall of the Tsarist government in April 1917, the Georgian Mensheviks assumed power, but the crumbling of the Imperial Army allowed Turkey to recover her occupied territory in eastern Anatolia and to advance on Transcaucasia, wreaking vengeance on the local Armenians in requital for Armenian slaughter of Muslims. The Muslims of Adharbaydjan refused to continue fighting against Turkey, and now, cut off from Russia itself, Transcaucasia on 22 April 1918 declared itself an independent federative republic, comprising Christian Georgia and Armenia and Muslim Adharbaydjan. The Ottomans still pressed for the retrocession of territory in Georgia lost to Russia in the 19th century, and had taken the offensive and occupied Batum. Centrifugal forces thus soon made the Transcaucasian Republic dissolve into its three component parts, and on 26 May 1918 an independent Georgian Republic, under German protection, was set up; peace was made between Georgia and Turkey in June, with Turkey regaining Batum, Kars, Ardahan, Alghitsikhie and Akhaltsikhe. Hence from 1918 to 1921 a Menshevik or Social Democratic régime governed Georgia, headed by Zhdanov, with a great upsurge of Georgian nationalism (Georgia's first university being opened at Tiflis in 1918) and hopes of the following of a peaceful policy of democratic socialism. After the Armistice of November 1918, British troops replaced the German ones in Georgia, with Oliver Wardrop as Chief British Commissioner to the three Transcaucasian republics, with his headquarters in Tiflis. On 27 January 1919 France and Britain recognised Georgia diplomatically as a sovereign state. However, the new state was under pressure, having to fight off Armenian claims to Georgian territory, the Kemalists, Turkish forces to the south, and above all the Bolsheviks. In February 1921 the Bolsheviks were
threatening Tiflis itself, and it fell after a heroic
sea to Istanbul.

Georgia groaned under the repression of Stalin and
pressed. For the next two decades or more, up to 1953,
minating in a general uprising in 1524, ruthlessly sup¬
ernating in a general uprising in 1524, ruthlessly sup¬

According to figures from January 1970, the toal
population of the republic is 4,68,00,00, 48% of these
beig town dwellers and 52% rural, the main towns
being Tiflis (pop. 907,000) and the much smaller
centres of Kutaisi, Rustavi, Sukhumi and Batum.
Ethnically, the population is returned as being 67%
Georgian, but with considerable minorities of Arme¬
nians, Russians, Azerbaijanis, Ossetians and Ab¬
khazians (see DB, 256-90). What proportion of
all these may still be described as Muslim is unclear,
but in 1921 the capital Tiflis had a fair number of
Turks in its population, and in 1922, under Soviet
rule, there was still being produced a local Turkish
newspaper, Yeni fikir, and a journal, Dan yildiz.
(see Mirza Bala, Maiyurul, Baku 1921) but the 1922 census enumerated only 3,255
Azerbaijani Turks and 3,984 Persians, presumably all
Muslims. The Azerbaycan Turks in Georgia arc
indeed be located in the present day ruins known
the north of the Wadi 'I-Kur£ (p.196), though that of al-tfidjr

KURJIB b. Dābir al-Kurayhī, the ardent eulogist of the Zirid princes of al-Kurayh and of their governors, the Banū Abī l-‘Arab, and a very capable poet, is described with great verve the poetic contests stirred up by his strong personality and his biting aggressiveness in the literary sessions of al-Kurayh, owing his success as much to his lack of scruple as to the swiftness of his replies and his improvisations.

However, Kurhub remains a poet with a ready talent able to adapt himself to the thematic and formal exigencies of the genres employed by him. Variety of usage of verse-forms, suppleness of verses and purity of language combined in due course to place him in the dité of the poets of Ifrlkiyo during the 18th-19th centuries for the Lezghins [f.v.]. KURHUB (Russian: Kurin'kiy yazlk) is also the former designaton for the Lezghin language, and appears as such in the 1250 Nigerian census. (R. Wixman)

KURIN KHAÑATE (see LEZHGIN).

KURIYA, KAWIRY, the Arabic name for the modern town of Coria in Spain, municiipio of the province of Cáceres on the banks of the Alagón River. It was the Caunum of the Romans, who built its walls, as was noted by Al-Ḥimyarī ("strong walls of ancient construction"). Al-Idrisi states that this city belonged to the ši‘lum of al-Ḥaṣr, and was then "an attractive, well-built and spacious town, whose surrounding countryside was fertile and highly productive of fruit". Al-Iṣṭaḵšārī’s itinerary (472) places it at 12 days’ journey from Córdova.

When the Muslims withdrew to the line of Coria, after the famines of the post-136-733 period (Al-Ḥibūr maḏḏāma, 62/67), the town was thus left in the frontier zone, and must have been one of the main centres of the Berber settlement of the north-west of the peninsula. There were frequent rebellions there. In 1707/86 ‘Abd al-Rahmān I attacked there the rebel Abu ‘I-Aswad Muhammad b. Yūsūf al-Fāhi (ibid., 138/950). Muhammad b. Tāhūr al-Masmāḏ rebelled there during the amirate of Muhammad I, and in alliance with Ibn Marwān al-Dijlīkī made Coria one of his main centres (Ibn Ḥ ḥārān, ed. Lévi-Provençal, 466; Ibn Khaldūn, Ytar, tr. de Slane, iv, 289). It is in this region and around this same period that the Christian sources place the revolt of Zīṭh/Zeltī (Cron. Alfonso III, Valencia 1961, 63-2). The town became much fought over; it was taken by Ocdhlo in 860, but recaptured by the Muslims in 862. Alfonso III besieged it without success in 868, but ended by taking it some years later. Yabīr al-Tudījī, sent by al-Ḥakam II, attacked the King of Navarre and the Count of Castile near Coria (Makkārī, Aṣālata, i, 248). Al-Mansūr [f.v.] passed by Coria on his route into the Christian territories during his campaign of 387/997. The town was taken by Alfonso VI (427/1037), and he fled there after the defeat of al-Zallīkā [f.v.]. Al-Mutawakkīl b. al-Afīs marched the army of Spain to the letter to Yūsūf b. Tāhūr al-Battūl al-Mansūriyya, ed. Allouche, 23. It was occupied by the Almoravids in 313/1129-30, but definitively taken by Alfonso VII in 1143.

KURKUB, a town in Khūzīstān, on the road from Wāsit to Sūs (Sus). The statements regarding distances given by the Arab geographers were collected and arranged in P. Schwart, Iran im Mittelalter nach den arab. Geographen, 1921, iv, 396 ff.; cf. also 431. The town was noted for its carpets; there was also a state tān [f.n.] manufacture there. A material called sānāḏīrīd was made there, cf. de Goeje’s glossary in ODA IV, xv, Al-Iṣṭaḵšārī and Ibn Hawkal say that the sānāḏīrīd of Fāṣī [f.v.] was better than that of Kurkūb; the latter was a mixture of silk and cotton, while in the former wool was used; cf. on the textiles of Kurkūb, R. & S. Jerje, Isamic textiles, material for a history up to the Mongol con-

KURRA. Political organisation. The term kurra, sing. kurra [Ar.], occurs in Arabic historiography referring to a group of 'Iranians rising against 'Uthmān and later on against 'Āli, after he had accepted the arbitration. In European research, kurra has been usually rendered as "reciters of the Kur'ān" (kurra < ḫrāʾ) "to recite".

Brunnow was the first historian to try to assess the role of the kurra as an independent group acting within a heterogeneous Khārijīte [q.v.] movement. Brunnow’s results were partly rejected by Wellhausen, who held that the kurra were not an autonomous movement which was merged in Khārijītism at a certain date. He claimed that the kurra had in close connection with the learned ḥudūdī, forming a wider circle of pious men around those ḥudūdī, the supposed nucleus of men of religious learning. It was the khurrah’s religious zeal, unhampere by scrupulous deliberation, which according to Wellhausen led them to act against an Islamic authority which in their opinion had failed to carry through the commandments of the Holy Book. Their ardour for the sake of Islam became obvious for the first time, when they took part in fighting against the Ridda [q.v.] rebels (Battle of the Yamamah or of ‘Aqrabū [q.v.]). During ‘Āli’s war against Talhah and ‘Abd Allāh, they threw in their lots with him, and they supported ‘Āli in his abortive wars against Mu’āwiya. When the Syrians proposed to resort to the judgement of the Kur’an, they at first approved of ‘Āli’s compliance with this proposal, but later on, when the disastrous consequences of the arbitration had become obvious, they turned against ‘Āli, blaming him ruthlessly for having preferred human decision to God’s judgement. In the Khārijīte rebellions against ‘Āli, and later on against the Umayyads, the kurra are said to have been the most fanatical instigators. Wellhausen’s account of the kurra shows his general view of the early Muslim parties as resulting from a politico-religious conflict. This view, which aimed at studying the development of political and religious thought in Islam, has proved very fruitful, but it impedes us in realising the social conflicts concomitant to religious strife. Therefore, until recently the character of the kurra was described vaguely or even misleadingly. If the kurra actually had been a group of people applying themselves to a peculiar form of reciting the Kur’ān, or holding a certain view concerning the validity of the Kur’ānic commandments, why do we not find any trace of such a group in treatises on heresiography or on recitation of the Kur’ān? Besides this arguments et silento, one doubts whether Wellhausen’s almost generally-accepted assumption was right that only after ‘Āli’s political defeat did the kurra, repenting of their imaginary failure, become the fanatical partisans of the Kur’ān. For according to the sources, they had never been wholehearted followers of ‘Āli’s cause; hence they had no reason to consider themselves as traitors because they had urged ‘Āli to accept the appointment of the two arbiters.

Recent research into the matter has tended to take the social groups into consideration, reasoning in principle Brunnow’s idea. In a detailed study on Kifān political alignments, G. M. Hinds has drawn an entirely new picture of the kurra. He states that a group of people called kurrā’ first acted jointly against Sa‘d b. al-‘Āṣ, Ujūmah’s governor in Kūfa until 33/653. The evidence adduced by Hinds proves that most of the kurrā’ were ‘Irāk in the very beginning of the conquests and thus had acquired some privileges. But under Ujūmah, the political situation, in southern ‘Irāk was changing rapidly: these early-comers who could not stabilize their position by amalgamating with an influx of population belonging to their respective tribal entities gradually lost their influence. Al-Aṣhtar and Yazid b. Kays, who were to play a prominent part in the subsequent troubles, were among these early-comers who feared lest they be ousted from their position. Their situation was even aggravated when Ujūmah allowed the fighters of al-Kādisiyah now resident at Medina to exchange their shares of ‘Irāqī land for landed property in the Arabian Peninsula. To carry through this measure meant first of all a careful distinguishing between the worthy residents and the others; this was the task which the kurrā’ had been in charge of. The early-comers suspected that they would be the losers by these administrative measures. Fearing a blow to their pretended rights, they succeeded in removing Sa‘d b. al-‘Āṣ from his post. They then elected Abū Mūsā al-Aṣhtar governor of Kūfa. During the events which led to the murder of Ujūmah, the kurrā’ played only a secondary part, though al-Aṣhtar figures in the list of the assassins. When ‘All arrived in the vicinity of Kūfa, the powerful tribal leaders did not join him. They seem to have favoured a neutral position, which would have served their interests best. ‘All, pursuing an egalitarian Islamic policy, did not even want to attempt a compromise with them. A coalition between him and the disappointed early-comers therefore came into being. Al-Aṣhtar, Husayn b. ‘Aṣ, and Abī Dā’ir b. Hātim are said to have been kurrā’; now they were Shī‘i leaders. During the fighting at Siffin, the kurrā’ are mentioned as separate para-tribal entities supporting ‘All. When Mu’āwiya suggested settling the points at issue by means of arbitration, the kurrā’ urged ‘All to accept the proposal, because they envisaged a peace in which ‘All would be able to accomplish an Islamic policy checking an ascendancy of the new-comers. When they felt that their dreams would not be realised, they turned against ‘All, who refused to withdraw from the agreement. ‘All tried to placate this dangerous internal opposition by giving high appointments to the most prominent kurrā’, but the majority of the kurrā’ became his irreconcilable enemies. In the Khārijīte movement of the first century they are often mentioned as one of the most active groups.

In the light of these new results, it seems rather absurd to refer to the kurrā as “Kur’an-readers”. Shaban was the first to suggest a new interpretation. He holds that kurrā’ means “villagers” (ahl al-kurrā’) denoting those participants in the early wars (ahl al-ayyām) against the Sasanid Empire who had occupied the vacated estates of southern ‘Irāk and whose de facto privileges had been threatened since Ujūmah’s reign. Shaban and G. H. A. Juynboll have adduced evidence corroborating this thesis, but it still remains speculative. The rendering of kurrā’ as “Kur’an-readers” seems to be a result of the well-known fact that Muhammad used to appoint reciters for stimulating the zeal of the Muslim fighters (see Shihb Ahmad al-‘Āṣ, al-Tāsimī, al-‘idbā’īyya wa l-shihṣibā’īyya fi l-Baṣra, Beirut 1969, 56 ff.), further

KURRĀ — KURRA  409
mora, the "Irakian Jurrâ" had appealed to the Kurra. But they did so, not because they held some special doctrine concerning it, but because they wanted to enforce the judgment of the Kurra in that actual issue, where the reference made in the Sifina agreement to an ill-defined "practice" (rûma) seemed dangerous for their interests.

1. Life and career of Kurra.

There is no need to make an organized presentation of Kurra's governorship. The extensive number of papyri discovered in Egypt through the last 80 years, together with a couple of earlier reports, has produced a wealth of information about Hurra's governorship, if indeed they mention it at all. As Becker observes (Beitrgge, ii, 245-5), this doubtless increased the Arab chroniclers' general contempt for the Byzantines in the middle and eastern Mediterranean. Finally, Kindt notes that Kurra re-organized the diwân of Egypt in 45/763-7, the third person (after 'Amr b. 'Abd Allâh and 'Abd Allâh b. 'Abd al-Malik) to do it. As Becker observes (Beitrgge, ii, 245-5), this doubtless increased the Arab chroniclers' general contempt for the Byzantines in the middle and eastern Mediterranean. Finally, Kindt notes that Kurra re-organized the diwân of Egypt in 45/763-7, the third person (after 'Amr b. 'Abd Allâh and 'Abd Allâh b. 'Abd al-Malik) to do it.
KURRA N. SHARIK -- KURRAM

KURRAM, Kurram, the name of a river which flows down from the western end of the Safi Kohn or Spiti Ghar range of the Hindû Kush-Koh-i Bâbd massif of eastern Afghanistan and which joins the Indus River in modern Pakistan just below tribal. The lower course of the river flows through Darah [q.v.], and the middle reaches through the northernmost part of Waziristan [q.v.]. The upper valley, beyond the headland of Thal, forms what in British India and now in Pakistan is the administrative region of the Kurram Agency, a thin wedge of territory some 70 miles long and covering 1,305 sq. miles. From the headwaters of the river, the fairly easy Shutargardan Pass leads towards Khost and the Shi'ite Turf began to complain of oppression by Afghan officials, and this caused in Kurram in favour of a British presence there or at least of some degree of British protection, especially as the Treaty of Gandamak made with Muhammad Yâsbî Khân in 1879 declared Kurram to be an assigned district, to be administered by the Government of India, together with the Khyber and the Pathan districts of northern Baluchistan. Hence in 1892 British forces moved up from Thal at the request of the Turi, and in the next year the border with Afghanistan was delimited along the Durand Line at the head of the valley. In 1894 it became a political agency, and then at the time of Lord Curzon's creation of the North-West Frontier Province in 1901, Kurram became one of the five tribal agencies. British garrisons were withdrawn, and replaced by two battalions of the Kurram Militia, organised on the same lines as the Khyber Rifles [see KHYBER PASS]. It was down the upper Kurram valley that Nâdir Shah brilliantly penetrated with an Afghan force during the Third Afghan War of 1899.

Kurram now comes within Pakistan, and has its administrative centre in the town of Parachinar. The Pakistan government gives the Kurram Agency the same degree of autonomy as the other tribal areas, except that it enforces certain regulations identical with those prevailing in the directly-administered areas along the Indus, including the collection of land-tax; in fact, a negligible amount of taxation is collected from this economically poorly-endowed region, and the Agency receives back far more from the central government's purse than it sends out. In 1961 the census estimated the population of the whole Agency at 22,953, with the population of Parachinar as 22,953.

Kurram is divided into an Upper Valley and a Lower Valley. The 1961 census estimated the population of the whole Agency at 200,512, with the population of Parachinar as 22,953.

(C. E. Bosworth)

**KURRAT AL-AYN, Fatima Um Salama**, also known as Khâliqâ, Zârin-tâ, Thâhirah (see below), Persian poetess and Bâbî martyr, was born in Kazvin in 1217/1814, the eldest daughter of a famous mawdudâh, Hâdâdî Mûllâ Mûhammad Saiûb Bânghalah. She was educated in Kazvin, and became proficient in the Islamic sciences. She was married to Mûllâ Mûhammad, the son of her uncle Mûllâ Mûhammad Tâkî, by whom she had three sons, Shâykh Ismâîl, Shâykh Bâhâram and Shâykh Ishâk, and one daughter. While staying with him in Karbalâ', she joined the Shâykhî sect, together with her sister Mardiyah and brother-in-law, Hâdâdî Mûllâ Mûhammad ‘All, an action that earned her the fierce hostility of her husband and father-in-law, though her own father remained neutral. She studied with Sâyîd Kazim ‘Alâ’î, a brother-in-law, Hâjdj Mulla Muhammad Saiib Bârâghânî. In turn, she was back in Karbalâ'. It was here that she had returned to Kazvin. It was here that she studied with Sâyîd Kazim ‘Alâ’î, together with her sister Manjiya and seven other Bâbîs, was cruelly put to death by means of kuryâštik, and it is uncertain whether one should link with the adjective *kurayštik*, which has further given forms closer to the English *corsario*, still in use today, as is also the noun *kuršân*, and also *SURSAK* (Q. 7:129, 63-133; ‘All al-Wardî, *Ta’rikh-i jadîl or New History of Mindâh and Ummî, Tehran 1977-2; Muhammad ‘Alî Malik Khurşuwal, *Tâ’rikh-i juhâdî-an, or mir, Tehran 1973-4, 129-215; ‘All Akbar Mashîr Salîmî, *Zârutân* al-Makkânî, Tehran n.d., i, 70-98; Miâdî Asad Allah Fâdîl ‘Alî Mâsandarunî, *Kûrdštî-i Zâhîh al-kâhî, iii, Tehran 1992, 152-90. Husâm Nûsâbînî, *Kurrât al-’Ãyn*, Tehran 1977-2; Muhammad ‘Alî Malik Khurşuwal, *Tâ’rikh-i juhâdî-an, or mir, Tehran 1973-4, 129-215; ‘All Akbar Mashîr Salîmî, *Zârutân* al-Makkânî, Tehran n.d., i, 70-98; Miâdî Asad Allah Fâdîl ‘Alî Mâsandarunî, *Kûrdštî-i Zâhîh al-kâhî, iii, Tehran n.d., i, 70-98; Miâdî Bândâmî, *Tâ’rikh-i Rûdâyî-i Irân*, Tehran 1472/1953, ii, 204-9; H. M. Sâyîlî, *The Bâb*, London 1973, esp. 24-7, 162-71.

(L. F. Elwell-Sutton and D. M. MacEoin)

**KURSAN (A), pl. karsân**, and also karsânî, karâqânî, "corsair, pirate", stems from Italian corsale, which has further given forms closer to the original but less commonly-found, such as karsîl, pl. karsîllî/karshîllî, and karsîldî, pl. karsîlîyana. In turn, Arabic has formed the abstract noun *kursaniya* "privateering, piracy", still in use today, as is also karsânî, sometimes conceived of as a plural. In the colloquial there is further the verb *kursâni* "to raid, act as a pirate", and the dialects also give to *kursânî* the double sense of "corsair" and "boat". This latter term was an Andalusi one (cf. Pedro de Alcoba, *De luoghi arabici liber duo*, Cringdtdn 1833, 158), and it is uncertain whether one should link with the Spanish corsario the adjective *karshiyat* used by al-Sâkiq, ed. G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de lesbi*, Paris 1931, 50, to denote women who are supposed to have recovered their virginity (the two editors prudently suggest the translation "carried off by the corsairs?", and P. Chalmete, in *Alm. (1971 II), § 111, translates this term as corsarios). The necessity felt by the Arabic language, probably in the course of the 3rd/9th century, to use a loanword shows that, even if piracy had long existed in the Red Sea and Persian Gulf, the Arabs (who called a pirate *lis al-bahr* "sea-rober") had a distinct feeling that privateering had a different character. They
nevertheless adopted the same term to denote two distinct forms of activity, which are indeed often enough confused, even by Europeans; in fact, privateering consists of attacking enemy ships with the more or less explicit connivance of the authorities, whilst piracy proper is a purely private enterprise involving the capture and pillaging any vessels encountered.

i. The Western Mediterranean and the Atlantic

It was in the Mediterranean, "the sea of adventure" (Ch. E. Dufourcq, L'Espagne catalane et le Maghreb aux XIIe et XVIe siècles, Paris 1965, 574), that the Muslims most continuously practised kahṣana from the moment onwards when they established themselves along its shores and had to face attacks from the Christian powers there. In reality, the Arabs—and very soon, as will be seen, adventurers of European origin, renegades and captives—were merely participating in a traditional practice of the Mediterranean basin since the most early antiquity, whilst at the same time giving it, more or less consciously, a religious aura. It was often in the name of Islam that the corsairs of the southern shores of the Sea acted, just as those of the northern shores acted at times in the name of Christianity. It was for this reason that privateering, if not piracy, soon came to be considered as an integral part of the holy war, dhikād [4.2] and it is as part of this that the question is treated in the works on law.

Given the fact that it is impossible, in an encyclopaedia article, to go into detail and to trace the entire history of privateering and piracy as they were practiced by men based on the coasts of the Muslim lands, what follows is a sketch of the broad features of the topic. Reference should be made to those sources which are in general well-documented and which have been utilised for this present article, and also to the articles MURA and SAFRA, especially for technical details; the article FRO in the Supplement should also be consulted for the topic of the ransoming of captives.

From the 251/864th century onwards, there were added to the attacks against the islands and the shores of the western Mediterranean by corsairs coming from the Near East, raids undertaken by the people of Ifriqiya, whose regularly-organised fleets succeeded in gaining control, in the first decades of the 3rd/9th century, of Malta, Sicily and Pantelleria [see KAWSA], whilst the Balearic Islands were definitively taken over by the Spanish Umayyads in 925/530.

However, from the 10th/14th century onwards, what one may properly call organised pirate activity began to take shape both in North Africa and in Muslim Spain. One notable act is that in which, after the suppression of the "Revolt of the Suburb" in Cordova [see AL-ANDALUS and KURTA] in 260/878, a group of émigrés who practised piracy in the central and eastern Mediterranean gained control of Alexandria and in 273/887 seized the island of Crete, which they made into a Muslim possession and a centre for their further activities [see KURTA]. It was likewise from Spain that there set out the Muslims who, between 278/892 and 283/897, established themselves at Fraxinetum [q.v.], where they founded a pirate state which lasted for 80 years. As early as 229/842, other corsairs sailed up the Rhône to Arles, and they renewed their incursions in 235/830 and 255/869; under the Umayyads of al-Andalus, the sailors of Pechina acquired a great notoriety in this respect (cf. Lévi-Provençal, Hist. Esp. Mus., i, 244, 519, 535, 552, ii, 154-60). Some centuries later, Ibn Khaldun, Hist. des Beschers, text, i, 619, tr. de Sale, iii, 117, summarised the two essential forms which the activities of the kahṣana took. "A more or less numerous group of corsairs gets together. They build a ship and choose as its crew men of proven valour. These warriors go off and descend on the coasts and islands where the Franks dwell, arriving there suddenly and carrying off everything they can find. They also attack the infidels' ships, frequently capturing them, and then return home, laden with plunder and prisoners". This text is one of the ones rarely encountered on this subject in the Arabic sources, which dwell at much greater length on the Christians' naval enterprise against the Muslim lands, or on the spectacular attacks from the Atlantic made on al-Andalus by the "Northmen" from 230/844 to 355/966 [see AL-MARA]. In the Mediterranean, violent attacks by the Christians were more difficult, for a defence system had been established along the coasts, whether in Spain (see R. Arié, L'Espagne musulmane au temps des Naufragés, Paris 1973, 273-8) or from Alexandria to Tangier (see M. Tabi, Emirat aglibide, 395).

Concluding the situation obtaining on the high seas, Ibn Khaldun's remark [MUHAQQA, ed. Qalam/Noster, ii, 35, tr. de Sale, ii, 43, tr. Rosenthal, ii, 47] alleging that "the Christians could not even launch a plank on the Mediterranean" is probably correct for the 3rd/9th and 4th/10th centuries, when the Muslims did have command of the seas. Economic necessity accordingly compelled the states to try and assure the safety of navigation along the various commercial routes (see Chr. Courtois, in Mélanges G. Marcas, Algiers 1957, ii, 51-9), but the international agreements made with this end in mind were not always respected by the pirates. The activities of these last were however controlled, and there are extant some interesting fatwas on these. M. Tabi has published one of them (in Cahiers de Tunisie, 1956), pronounced by Sabūn (d. 240/854 [q.v.] and concerning three associates who had organised a pirate enterprise but had then fallen out over the division of their booty. More interesting still is a fatwa of Muḥammad b. Sabūn (d. 255/870 [q.v.]) analysed also by Tabi (Emirat aglibide, 554-5); it emerges from this that seizure was legal in the case of a Christian merchant ship making for a non-Muslim country, but illegal when it was the case of a building utilised for commercial exchanges between Christians and Islam. Thus, whilst hindering freedom of navigation, pirate activity tended to divert traffic into a pattern favourable to the Muslim lands.

After the beginning of the 5th/11th century and during all the Crusades period, privateering may be regarded as more often than not assimilable to the dhikād. The Zirids (see H. R. Idris, Zirides, index) organised it on a grand scale and sowed terror in the western Mediterranean, whilst the island of Djurba [q.v.], already an important base, became a real haunt of pirates, who were not content with attacking Christian ships but also infested the coasts of Ifriqiya. Djurba was conquered in 510/1121 by 'Ali b. Yahya, but soon resumed its traditional rôle, until it was captured in 520/1125 by the Normans of Sicily; it was to remain the plaything of Christian and Muslim rivalries until the end of the 12th century, and then was to play a leading part in the events of the 13th century.

Various dockyards built along the coasts of the Maghrīb and al-Andalus [see AL-ANDALUS], especially at La Caleta (María 'Ibarran), Bône and Bougie,
provided local pirates with galleys which skirmished the coasts of the Mediterranean islands and swept the seas in search of prey. As well as the cargoes and crews seized on the open seas, the raids on the Sardinian and Coriscan coasts secured slaves of both sexes which were much in demand.

Doutouq (sp. lanli, index) has gathered together considerable material on the 7th/13th and 8th/14th centuries. From this, it appears that, despite the rulers’ desire to make maritime commerce safe, the occasional prohibition of privateering warfare and concluding of international treaties, the Mediterranean remained for adventurers of all varieties a special field of activity. After having died down somewhat, from the Muslim side, in the 7th/13th century, sararana revived with fresh force, and the islands and shores of the Christian world were often ravaged. On the Christian side, their exploits yielded nothing in scope or violence to the Muslims; Sicily ravaged. On the other hand, their exploits yielded nothing in scope or violence to the Muslims; Sicily ravaged.

Arudj chose Tunis as his base most famous of them should be consulted, and one concluding of international treaties, the Mediterranean
centuries. From this, it appears that, despite the

in 1630, by the expulsion of the Moriscos [504]. Like their predecessors, these last groups settled in various parts of North Africa where, without always openly proclaiming dhikhdh, they constituted a fresh impetus and a new pretext for the Barbary pirate activity, seeing in this a means of mounting a revanche. Algeria and Tunisia remained very active centres (see M. de Epala and R. Petit (eds.), Études sur les Moriscos andalous en Tunisie, Madrid 1975, index), but it is from this point onwards that piracy based on the port of Sale comes into prominence, and the history of this is well-documented for us (see H. de Castres, Les corsaires de Sale, in Ronce des deux mondes, XVII [1993]). L’Europe, l’Islam, traités et industries indigènes à Rabat et Salé, Paris 1902, 152-72; and R. L. Caudeville, Les corsaires de Salé, Paris 1948). During the 8th/14th and 9th/15th centuries, Sale [see Sale] had been a centre for privateering on a relatively modest scale only, like other ports of the Moroccan littoral like Tétouan [see TETOUAN], whose corsair fleet had however been destroyed by the Spaniards in ca. 1630/1400, or al

Amongst these pirates, Murad Raâs was especially notable. He was the first, in 924/1519, to seize Algiers. After his death in 924/1518, his brother Khavr al-Dln (d. 953/1546), who had helped, together with Sinan Pasha, in seizing V and to seize Algiers. After his death in 924/15*3,

It is, it is true, difficult to distinguish between naval warfare, privateering and piracy in the activities of these corsairs, whose common feature is that they succeeded in founding “Barbary” states in more or less nominal dependence on the Sublime Porte and from there, was able to defy the power of Charles V and to seize Algiers. After his death in 924/1518, his brother Khavr al-Dln (d. 953/1546), who had offered the province of Algiers to the Ottoman sultan, resumed his pirate activities against Mediterranean shipping and his attacks on the Christian towns. For his part, Dragut (d. 972/1565) set up his base in Darsa, and then succeeded Murad Agga, whom he had helped, together with Sinân Pasha, in seizing Tripoli from the Knights of Malta; he may be considered as the founder of the new democracy.

It is, it is true, difficult to distinguish between naval warfare, privateering and piracy in the activities of these corsairs, whose common feature is that they succeeded in founding “Barbary” states in more or less nominal dependence on the Sublime Porte and that they established pirate organisations which necessitated numerous interventions by the Europeans. The battle of Lepanto in 1571 [see ARAKAKH] put an end to privateering, but made no difference to piracy, which continued to rage until the conquest of Algiers.

Amongst these pirates, Murad Raâ’s was especially notable. He was the first, in 953/1585, to venture into the Atlantic (if one excepts the expedition of Khaghân [see al-Mas‘ûdî, Murâqî, I, 258-9 = § 274] and his companions from Cordova in the 9th century, see Lévi-Provençal, Hist. Esp. Mar., I, 324, liii, 343). Murâd Raâ’s learnt to plunder the Canary Islands, and on route, put in at Sale, which was not as yet the nest of corsairs of which later history was to have a burning memory.

It should also be noted that, at the moment when these Barbary states mentioned above came into existence, there was an event of highest importance happening in Spain, so the reconquest of Granada, followed by the exodus of the Andalusians and then,
from Greece to the I-askarid capital at Nicaea. The growth of Venetian fleets in the Aegean. In 633/1236, the Byzantine Emperor Alexios I burned his positions at Abydos (near Canakkale [q.v.]) and Syria. Muslim states sheltered corsairs and used their own vessels simply to collect booty by harrying foreign settlements or commerce, rather than to protect trade or acquire new lands, they may be described as "pirate-states." The most notorious was Aydınlı (see Aydın), especially in the days of Utkür Paşa [q.v.] but ships from other maritime emirates of Veneția, Sarıkhan and Karsalı [q.v.] also engaged in sea-borne raids. In the Black Sea, Şahzade Celebi (d. ca. 724/1324?) established an emirate around Sinop [q.v.], whence he made raids on Genoese and Trapesantine commerce and settlements. The Ottomans do not seem immediately to have taken to the sea as corsairs. When Orhan [q.v.] gave lands to Kara Mürsel after the conquest of Nicomedia [Iznik], Iznik [q.v.] in 739/1337, his purpose appears to have been to protect the shores of the Gulf of İzmir against Byzantine raids.

During the 8th/14th century, Turkish raids became a feature of life in the Aegean. In 78/1382, corsairs from the mainlands Anadolu ravaged Sanctorum, and in 717/1316 Marino Sanudo reported how the Turks infested the Cyclades, their attacks made easier by the disunity among the Latin Lords of the islands. In 723/1323, Utkür of Aydınlı occupied the harbour of Smyrna and began his attacks on Christian ships and on islands and territories in the Aegean and mainland Greece. In 728/1328, however, he signed an agreement with Andronikos III Palaiologos not to attack Byzantine shipping. It was possibly in part to compensate them for loss of booty that Andronikos employed Utkür's troops as mercenaries in Albania. With the death of Andronikos III in 742/1341, Utkür's fleet began to raid throughout the Aegean and, between 742/1341 and 744/1344, interceded in the Byzantine civil war on behalf of his friend and ally John Cantacuzene.
Piracy particularly affected Venetian and other Latin commerce. In 731/1331, Venice had imposed a treaty on the Catalans of Athens, forbidding them to help or employ Turkish corsairs, although this did not prevent the Catalans calling on Umur to defend the Duchy of Athens against the claims of Gautier de Brianse. The activities of Umur and other Muslim corsairs eventually led Pope John XXII to assemble a fleet under the command of the Venetian Pietro Zen to which Venice, the Papacy, France, and the Knights of St. John contributed vessels. This force did much damage to the Turkish corsairs and defeated the fleet of Yaghîshî Beg of Karaf in the Gulf of Edremit in 735/1334. However, it disbanded after the death of Pope John in the same year, and piracy continued as before. More effective was the Latin occupation of the port of Smyrna in 745/1344, and the death of Umur in 749/1348, after which Khâlid of Aydîn signed a treaty with the Latins, according to which he undertook to burn all the ships in the emirate, forbid all acts of piracy and offer no help to corsairs. Large-scale raids may have ceased, but in a letter dated 757/1356 theAndre Des Andraments to the Sultan suggested that the Turks from Aydîn continued to attack Christian shipping. finely based on other emirates seems also to have flourished. After 757/1356, Ahmed Ghaçî of Mentosaîèr prevailed on shipping between Cyprus and Rhodes.

Ottoman raiders began to appear on the Aegean in the 1300s. They seem to have infested the Sea of Marmara considerably earlier, leading the Emperor John VI Cantacuzene to clear the old harbour of Haptaiskalon in Constantinople some time after 750/ 1350, as a base against Turkish pirates. The annexation by Bayezid I [924] of Sarukhanî, Aydîn and Mentosaîèr brought the western Aegean shoreline under Ottoman control by the 1390s. With Bayezid’s construction of an arsenal at Gallipoli, the Ottomans were able to build sizable fleets. In 793/1392, an Ottoman fleet of 60 vessels ravaged Chios, the Cyclades and the coasts of Euboea (Negroponte, Igvorgos) and Aitika. To meet this new threat, Venice allotted a fleet to Francesco I Crespo di Naxos. The defeat of Bayezid by Timâr in 804/1402 and the subsequent restoration of the emirates put an end to the depredations of an Ottoman fleet under the Sultan’s auspices, but did not otherwise prevent piracy. In 806/1403, the restored ruler of Mentosaîèr, Tiyâs Beg, signed a treaty with Venice in which he undertook to prevent acts of piracy. He was evidently unsuccessful, since in 813/1410 a Venetian fleet appeared off the ports of the emirate as a forceful reminder of the beg to adhere to the terms of the treaty. It made no difference. In 817/1412, vessels from Ottoman territory raided the Cyclades and, at about this time, the Florentine Buondelmonti reported Turkish raids on all the Aegean islands except Patmos. Perhaps the shared reverence for the shrines of certain saints, such as St. George of Levitha, called Kîc Papas or Koc Baba in Turkish, led the Turks to leave the monasteries of Patmos in peace. Piracy remained endemic throughout the 9th/15th century, and measures such as the imposition of direct rule on the Venetian Duchy of Naxos in 899/1494 only temporarily deterred the corsair fleets of Kârân Hasan and others.

There were, however, significant changes in the Aegean in the late 9th/15th and 10th/16th centuries. Under Mehemmed II and his successors, the Ottoman fleet became an instrument of conquest and a weapon of imperial policy rather than simply a pirate fleet of the Sultan. Mehemmed II’s fleet, for example, played an important part in the conquests of Constantinople in 857/1453, Sinop, Trebizond (Trabzon [941]), and Lesbos (Mudîzîlî) in 865/1462-2 and Euboea in 875/1470. Under his successor Bayezid II, Ottoman fleets appeared in the Ionian Sea during the war with Venice between 904/1499 and 908/1503. As the frontiers of naval warfare moved south and westwards from the Aegean, Turkish pirates such as the famous Kâmîl Reys [934] extended their activities to North Africa and the western Mediterranean. By 957/1549 most of the Aegean coasts and islands were Ottoman possessions, and the odd exceptions such as the Venetian Tinors (Istincîlî) and the Genoese Chios, which in any case fell to the Ottomans in 974/1566, did not threaten Turkish hegemony in the area.

The Aegean was now an Ottoman sea and the Sultan had no wish to encourage piracy in his own waters. The Ottoman government attempted to control the activities of corsairs, forbidding the construction of privateer vessels without special permission. In 967/1560, the kâdet of Isâmîd received instructions to seize all alleged illegally-constructed ships, whereas in 972/1565, the Ottomans (Rodos [943] and Mentosaîèr were encouraged to build ships and serve in the Imperial Fleet. The squadron permanently based in the Aegean at Kavalla, Lesbos and Rhodes presumably guardian the seas against pirates as much as against enemy action. In the 1550s/ 1560s Mustafa ‘Ali of Gallipoli or Gelibolu [947] looked back with nostalgia to the mid-century when the Imperial Fleets kept the sea free of corsairs.

It is, however, most unlikely that Muslim pirates ever disappeared from the Aegean. The western shores of Anatolia seem, in fact, in the 10th/16th century to have been a forcing ground for pirates who, after acquiring sufficient ships and booty in their native waters emigrated to Algiers (al-Fâsim [934]), or later to Tripoli (al-Gharb [947]) or Tunis [947], where their raids on non-Ottoman Christian shipping changed them, in Ottoman eyes, from pirates to warriors of the faith. The famous Khayr al-Dîn Barbarossa [934] and Sîbîb Reys [934] of Algiers, for example, originated from the west coast of Anatolia, found fame in North Africa and, like many lesser known corsairs, later served in the Ottoman Imperial Fleet. Mustafa ‘Ali specifies Kazeddîlî in particular as an area from which many North African pirates originated.

In the late 10th/16th century, piracy seems to have increased throughout the Mediterranean, and the Aegean too was affected. It is most likely that the disorders in Anatolia in this period found their counterpart on the sea.

Bibliography : There are no modern studies of Turkish pirates in the Aegean. The only coherent account, relating to the 10th century only, appears to be Geliboluun Mustafa ‘Ali, Meîtîd’ül-meîdîlâs fi İmbârîd-ü medîyalîs, facs. edition, Istanbul 1955, 34-9. For Tzačas, see The Alesiad, Books VII, VIII, IX, XI, and A. N. Kürat, Caffa Bey, Antikara 1966. There are scattered references to piracy in Pachymeros, De Michaelis et Andronies Palaiologos, ed. Becker, Bonn 1839; Nikiferos Gregorios, tr. J. L. van Dieten, Rhodische Geschicht, Stuttgart 1973; Buondelmonti, Liber insularum archipelas, ed. Sinur 1824, Legrand 1897, and in other contemporary Greek and Italian writers. See also Piri Reys, Kâdet-i bahriye, facs. Istanbul 1935. For further references, see M. F. Köprüli, Anadolu beyâniîîler tarihine aid notlar, in Türkiye Mezunları, II (1920), 7 ff.; G. H. Uzuncar$ili, Anadolu beyâniîîler,

iii. In the Persian Gulf

Piracy has been endemic in the Persian Gulf since ancient times, which is hardly to be wondered at in view of the poverty, until very recently, of the resources of the country and the richness of the commerce which has at various periods passed through its waters. Piracy has flourished most in time of war or in its wake, when authority has broken down and the predatory instincts of the maritime tribes have been given full rein. Thus, for example, the Karratian revolt, the Mongol invasions and the collapse of the Abbásid caliphate were all accompanied or followed by maritime depredations on an extensive scale.

To all intents and purposes, piracy in the Gulf was insinuating itself from maritime warfare, which in turn originated in political, dynastic, sectarian or racial conflict among the littoral principalities. Hostilities at sea were apt to degenerate swiftly into piratical warfare, which gave rise to a law unto themselves, plundering any vessels that came within their reach. Their depredations were shortly to be overshadowed by those of the Kāsīmī tribal confederacy (see al-Kawāsim) of Shīhārja (al-Shībār) and Ṭan'ah or Shībār, which took advantage of the disturbed state of Persia to re-establish themselves at Līnā (which they had first seized after the death of Nādir Shāh and from which they had been expelled by Kārin Khān in 1770/1771) and to prey upon shipping—European and Indian as well as Arab and Persian—off the Persian coast and in the Straits of Hormuz.

Part of the impulse for the Kāwāsim's marauding was that which occurred after the destruction of the Kāsīmī confederacy (see al-Kawāsim) of Shībārja (al-Shībār) and Ṭan'ah or Shībār, which gave rise to a law unto themselves, plundering any vessels that came within their reach. Their depredations were shortly to be overshadowed by those of the Kāsīmī tribal confederacy (see al-Kawāsim) of Shīhārja (al-Shībār) and Ṭan'ah or Shībār, which took advantage of the disturbed state of Persia to re-establish themselves at Līnā (which they had first seized after the death of Nādir Shāh and from which they had been expelled by Kārin Khān in 1770/1771) and to prey upon shipping—European and Indian as well as Arab and Persian—off the Persian coast and in the Straits of Hormuz.

The Kāsīmī war fleet, operating with Wāḥḥābī encouragement, if not under actual Wāḥḥābī direction, was reckoned in 1723/1780 to number some 70-80 large ships; if fishing and pearling vessels were included, the Kāsīmī confederacy's total strength was said to exceed 800 vessels manned by 28,000-25,000 fighting men. (Another estimate, made in 1723/1780, put the resources of the Arab maritime tribes at 80 large ships and 161 smaller craft, manned by 10,000 fighting men.) Controlling Līnā and part of
Kurān

Kishm Island, and with bases at Khawr Fakkān, Dibba and Khawr Kalba, facing the Gulf of ʿUmmān, the Kawāsīm were able to strike at will at any ships entering or leaving the Straits of Hormuz. Often they would lie concealed, waiting for their prey, in the deep winding inlets of Khawr al-Shāʾīn (Elphinstone's Inlet) and Ghulbāt 'All (Malcom's Inlet) on the western and eastern sides respectively of the Musandam peninsula (Raʾs al-Dībāl), the existence of which was not known to European seamen until the first survey of the Gulf was undertaken by the Bombay Marine (the armed maritime service of the English East India Company) after 1235/1820.

Hence the Kawāsīm were able on a number of occasions to elude pursuit by the cruisers of the Bombay Marine by slipping into these hidden anchorages.

With the passage of time the Kawāsīm grew bolder, ranging as far afield as the coasts of Kutkh and Kathlawar, the ports of the Hadramawt and the lower reaches of the Red Sea. They sailed in squadrons of up to twenty dhows, taking their prizes by closing alongside, grappling and boarding. As often as not they would put the entire crew of a captured vessel in the sword—generally among chlorous avowals of religious fervour. Women, children and slaves taken captive were afterwards either dispersed among their captors or, in the case of the first two, held for later ransom. A fifth of all booty taken was reserved for eventual consignment to the Saʿūdīs (q.v.), the Wahhabi capital. A good portion of the remainder was customarily disposed of at Bājrān, which served as the principal clearinghouse for the proceeds of Kāsimī piracy.

After the capture of a number of European and Indian ships by the Kawāsīm the British authorities in India dispatched an expedition to attack Raʾs al-Khayma, Linga and the Kāsimī outposts on Kishm Island, and at Shinās, on the ʿUmānī coast, in the autumn and winter of 1809-10 (Shabān-Dhu l-Hijjah 1224). The expedition had only partial success in crippling the Kawāsīm's naval capabilities. Many Kāsimī dhows were absent from their home ports on piratical or trading voyages, while others had been hidden, after word of the expedition's objectives had leaked out ahead of its sailing, in the inlets of the Raʾs al-Dībāl. The expedition's commanders were also inhibited by the orders given them not to cross swords with the Wahhabi ruler. A second expedition, dispatched in the winter of 1819-20 (Muharram-Dhu l-Hijjah 1225), after the defeat of the Wahhabis and the destruction of Dirīyya by Ibrāhīm Pasha the previous year, was far more effective in subduing the Kawāsīm. Raʾs al-Khayma and the other piratical ports were reduced, the Kāsimī war fleet was burned or prised, and the Kāsimī chieftains, along with the other principal strongholds of the Pirate Coast, were made to subscribe to a treaty (the General Treaty of Peace of Rabīʿ I, 1225/January 1810) outlawing piracy for ever.

Neither the expedition of 1809-10 nor that of 1819-20 had attempted to bring to book the man who over the division of the spoils from their joint conquest of the island in 1207/1793. From that time until the end of his life he conducted an unrelenting war of attrition, marked as much by fierce daring as by atrocious cruelty, against the trade and shipping of the Āl Khaifa and their kinsmen, the Āl Sabāb of Kuwait. His most remarkable single feat was his capture in Dhu l-Kaʿda 1224/December 1809 of twenty large Kuwaiti dhows, whose crews he massacred to a man. He escaped the attentions of the British expeditionary force at that time in the lower Gulf, partly because of confusion over his status (he was a Wahhabi protégé) but mainly because his stronghold at Khawr Hasan was deemed too difficult of access to attack from the sea. Some time later (in 1227/1812 or 1228/1813—the accounts vary) he fell out with the Wahhabis and was forced to abandon Khawr Hasan. He established a new lair in 1234/late 1815, after the Wahhabi collapse, at Dammām, on the Ḥasad coast, from which he continued to harry the seaborne commerce of Bahrām.

Rahma b. Dībār was again spared retribution at the hands of the British expedition of 1819-20, less because he had now assumed the guise of a Persian dependant than because his vendetta against the Āl Khaifa, however, brutally it might be conducted, was reluctantly conceded to come within the category of legitimate warfare and not that of piracy. As a consequence of the improved security established by the British expedition and the subsequent system of "watch and cruise" operated by the Bombay Marine, Rahma b. Dībār's fortunes steadily declined, until by 1241-2/1826 his fleet has been reduced to a single dhow. Now seventy years of age and totally blind, he had his last fight with the Āl Khaifa war fleet off Dammām in Dhu l-Muʿāzamah II, 1242/December 1826-January 1827. Surrounded and outnumbered, he calmly set fire to the magazine of his ship and blew herself and everyone aboard to the gates of Paradise.

The last serious piratical outbreak in the Gulf occurred in Shawawl-Dhu l-Hijjah 1250/February-April 1835, when the Banū Yās of Abu Dhabi (Abū Zābl), hitherto little given to piracy, made a wholesale attempt upon the trade of the Gulf in a desperate bid to recoup the losses inflicted by the British. Their efforts had been severely depressed by prolonged warfare with the Kawāsīm and the loss of the annual pearl fishery for several years running. Brought to action off the Tuḥūb by the Bombay Marine lop Edolphinstone on 18 Dhu l-Hijjah 1250/16 April 1835, the Banū Yās war fleet was outflown and scattered. The following month the British political resident in the Gulf, Captain Samuel Hennell, persuaded the rulers of Abu Dhabi, Sharīja, Raʾs al-Khayma, Dubayy and ʿAdīmān to agree to a suspension of hostilities at sea among themselves for the duration of the coming pearling season. The maritime truce signed on 22 Muharram 1255/2 May 1835 ran for a period of six months, to 29 Rādjab 1256/1 November 1835. It was renewed every spring for the next seven years, being gradually extended in length to cover the full twelve months of the year. In 1259/1843 it was renewed for a ten-year period, at the expiry of which it was made permanent, in a treaty signed by the principal Trucial Shāykhns on 25 Rādjab 1268/4 May 1835. Though isolated outbreaks of piracy were to occur at intervals up to this century, notably in the narrow waters between Bahrām and the Ḥasad coast, the institution and consolidation of the trucial system brought to an end the great age of piracy in the history of the Gulf.

Bibliography: J. B. Fraser, Narrative of a journey into Khorasan in the years 1821 and 1822, London 1822; J. S. Buckingham, Travels in Assyria, Media and Persia, London 1830; F. Whitlock, An
This throne of God has been an object of debate, for example: to be mobilier au Proche-Orient médiéval, an ink stand and the base of the small oriental table, other usages (including that of footstool!) indicates kursi (J. Sadan, 1929). In early period in Muslim history, attributed a particular sanctity to an empty throne of King Solomon) is to bestow a particular sense, among the seven heavens encircling the universe, the two furthest from the throne of God “sitting” on a seat, in a very general sense (chair, couch, throne, stool, even bench). In the daily life of mediaeval Muslims it refers more specifically to a stool (i.e. seat without back or arm-rests), and there are a number of other terms which are applied to a throne (sairi and lobster, for example). Kurš in is more level, hot and fertile, being especially devoted rising in the south-east to a height of over 1,200 feet, practically the famous La Campifia [see Th. O. Kurz, in Selections from the records of the Bombay Government, new series 2968; R. D. Bathurst, Artists and the Arab Coast, ii, 225-6). In mediaeval Muslim concept (Sadan, xvi, 129-30, in the Arabic translation of the Krussin (Burhani) need not therefore indicate a seat in the sense which, in richer and more exact terminology, the term tends thus to become loaded (especially in colloquial speech) with senses which, in richer and more exact terminology, are given by distinct terms. Among the other objects designated by hurs the following are examples: a support (stool) on which the turban is deposited during the night (Dozy, Suppl. ii, 455-6); a chair of particular design used by women in childbirth (ibid.); a stool for daily ablutions (al-Tanukhi, Mustafa, 128); in mediaeval Egypt, a seat for flour sellers (Malconides, Tisarti, ed. Derenbourg, 1, 137); an astrolabe-stand (Dozy, loc. cit.); a slab into which a pointed instrument is implanted, through the base (ibid.); in Mecca, a kind of moving ladder (or staircase) near the Ka‘ba (bid.); among the Persians, a kind of stove (a low “table”, under which a fire is lit; blankets are laid on this table and then wrapped round the knees to provide warmth, ibid.) the base of a column, pedestal (Beaussier, s.v.); a plate supporting the powder compartment and percussion mechanism of the flint-lock rifle (ibid.); in Spain, small pieces of silver or gold worn by women in their collars and known in Spanish as kori (Dozy-Engelmann, Glossaire des mots espagnols, 95); hurs is the seat of a bishop, his see, chaise etc. (Dozy, Suppl., loc. cit.); in orthography, each of the characters ( alf, waw, yāt, b) on (or under) which the ksera is placed; in calligraphy, a kind of embellishment in square form (Huart, Calligraphes, 352). In certain miniatures illustrating an Arabic astronomical work, which represent dah al-hurs (Cassiopeia) in the form of a woman seated on a chair with back and arm-rests, we find the shape of a genuinely “classical” chair (E. Weisbach, in Ars Orientalis, iii, 8-9 and figs. 6, 44, 47, 51), which, copied from one manuscript to another, tends to become modified to the point where it is adapted to the mediaeval Muslim concept (Sadan, op. cit., 135-6). In general, the hurs is nothing more than a very large stool. But, surrounded by other lower seats (cushions for example), such a stool can draw attention to the person who is seated there (see the dimensions indicated by M. D. Lutfi in Sommer, xvi, 129-30, in the Arabic section, unless it is lecterns that are in question). These kursi stools were of various heights. Some had straight legs, others crossed legs (they are illustrated by a rich iconography, as well as by texts: O. Kurz, loc. cit.; Sadan, op. cit., 133-33). In the modern period, kursi is also applied to various chairs of “western-style” form.

(G. Huart - J. Sadan)

KURSUN, KURTUBA

KURTUBA, Spanish Cordoba, French Cordoue, English, Italian and German Cordova (Kordova), Latin Cordoba, a town of southern Spain, situated at 390 feet above sea-level on the right (north) bank of the central course of the Guadalquivir (from the Arabic al-Wad al-Kabir “the great river”), the ancient Baalis, with 2,254,900 inhabitants, is at the present day the capital of the province of the same name which lies on both sides of the river in the heart of Andalusia.

The southern and smaller half of the province, practically the famous La Campiña [see Kâşanîya], rising in the south-east to a height of over 1,200 feet, is more level, hot and fertile, being especially devoted...
to viticulture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights over 2,000 feet high in the central Sierra Morena (Marismas Montes) with the plateau of los Pedregales which inclines in a northerly direction to the Zújar valley in the west and the Guadalmez valley in the east; this plateau is called Plana al-Andalus by the Almoravides and by others Plana al-Baḥrī, "Field of Crops", and in it lies the little town of Pedroche, known to the Arabs as Bitrājū or Bitrāğ (whence al-Bitrūjī). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (caballos cordobeses) and rich deposits of coal and minerals. The name Córdoba has frequently been explained as from the Phoenician-Punic Ḫariba, "good town" since Conde first suggested this etymology in his Descripción de España de Xerif Aledres, Madrid 1799, 105 (for even rarer etymologies, see Madoz, vi, 646 and al-Makkari, i, 352). The name is certainly not Semitic but Old Iberian (cf. Salduña, the Old Iberian name for Caesar-Augusta, whence Saragossa, Zaragoza; there is a Salduña — Marbella in the south between Málaga and Gibraltar). After the Second Punic war it became known as an important and wealthy commercial city (see Cordobae) under the name Córdoba or Corbūs or Corduba. It was finally taken for Rome by C. Marcus in 232 B.C., colonised with Roman citizens and as Colonia Patricia raised to be the capital of the Provincia of Hispania Ulterior. As Cordoba had taken the side of the Carthaginians in 149 B.C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lucan) alternately with Hispalis (Seville) and Italica (later the Arabic Tüika).

Towards the second decade of the 5th century A.D., Córdoba was devastated when the Vandals conquered Baetica en route for North Africa. In 534 it passed to the Byzantines, who had come into the Iberian peninsula to help King Athanagild of the Visigoths, and the Greeks spread all through southern Spain. They probably took upon themselves the rebuilding of the old protective wall of the Roman urbs quadrata and the enlargement of this encircling in a southwards direction, as far as the northern bank of the river. In 575, King Leo, Athanagild, Athanagild's successor, recovered it from the Byzantines; but although it was an episcopal see, it remained a place of no importance under the Visigothic domination.

At the time of the Muslim conquest of Spain, Córdoba was leading a precarious existence; its protective encircling was partially ruined on the west side, and a heavy surge in the river's height had destroyed its bridge. The freedman Mughīlī al-Raml, governor of Córdoba, destroyed the last bridge of its kind without resistance in Shawwāl 92/July-August 711, and three months later, in Muharram 93/October-November 711, the fortified church of San Acisio to the south-west of Cordoba, where 400 knights of the Cordovan nobility had held out against the invaders, surrendered to al-Mughīlī; he treated the Cordovan citizens with leniency and entrusted the guarding of the town to the Jews. The governor al-Hurr b. 'Abd al-Rahmān al-Thāqafi transferred the capital of al-Andalus from Sevilla to Cordoba (97/100/716-19). His successor, the governor al-Samb b. Mālik al-Khwāriz (100/2719/21) restored the old Roman bridge and the ruined part of the protective encircling, and he founded the first Muslim cemetery of the town, st. the Makbarat al-Rabāb or "Cemetery of the Suburb" on the northern bank of the river. In 133/750, the governor Yūsuf b. 'Abd al-Rahmān al-Philī expropriated the church of San Vicente, where he established the first cathedral mosque (al-Dabāna) in Cordova. This governor (239/3874-56) was overthrown by the Umayyad prince 'Abd al-Rahmān I b. Muḥawīya al-Dāliḥī (q.e.), the only Umayyad who had escaped from the massacre of his house in Syria; the great period of prosperity of the city now began, and lasted throughout the Umayyad dynasty (q.e.) of Cordova, which was independent of the 'Abbasids in Bagdad (138/950 or 422/756-1013 or 1015).

This incomparable period of splendour of the western rival of Bagdad, the city of the caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridgehead, the Christian fortress-tower of La Calahorra (Arabicised from the Iberian Calagurris), the Ka'ba of the west; although, at the reconquest in 1216, it became a Christian cathedral and was disfigured by alterations, it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (Patio de los Naranjos), the wall which encircles it as if it were a fortress or monastery, and the bell-tower, which is a work of the 16th century constructed from the remains of the 12th century Arab minaret. Also, the name of La Mesquita or "The Mosque" has remained the popular one for this building. However, all the other splendid buildings and monuments of this world-famed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd 'Abd al-Rahmān I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Arabs of North and South but also between them and the Berbers of North Africa, the Spanish renegades and the Mozarabs who remained a constant weakness to Arab rule in Spain and brought about its ultimate fall, he began the building of the great mosque in the last two years of his life 171-71/785-8. His son and successor Hishām I (172/786-99) completed it, and built the minaret (often called in Spanish sanamera and nurra = nurra), but 'Abd al-Rahmān II (100-1018/822-52), son and successor of the Amīr al-Hārān I (180-206/796-822), found himself forced to enlarge the building; by extending the 11 naves southwards he added 7 naves with 10 rows of pillars and built the second mihrāb into the south wall, where was later constructed the chapel of Nuestra Señora de la Vieja) for his beloved al-Zahra', one-and-a-half
hours' journey north-west of Cordova at the foot of the Sierra (cf. al-Makkišn, i, 344 ff.). In 1853, Pedro de Madrazo identified the remains of this town, and in 1923 the whole of its encinte was declared a national monument; since then, excavations have restored some of the splendours of the great caliph al-Nizar's creation, and especially, the great hall called the "Salon Rico", which is at present to a considerable extent restored. The most beautiful extension of the mosque proper (almost doubling its length of the building in the east and thereby raised the "miskar") alone has survived in its entirety. The last great extension was made by Hisham II al-Mu'ayyad's (596-596/1198-1204) powerful vizier, the regent al-Mansur (Almanzor, d. 601/1204), who ordered his Prime Minister or Grand Vizier (called magíj in Spain) MdTaAr al-Sáhíbí to extend the enceinte in the mosque to the south by the addition of 14 transcepts, and built a splendid new mahábra, a new sáhabí and the third noble "miskar", which alone has survived in its entirety. The last great extension was made by Hisham II al-Mu'ayyad's (596-596/1198-1204) powerful vizier, the regent al-Mansur (Almanzor, d. 601/1204), who ordered his Prime Minister or Grand Vizier (called magíj in Spain) MdTaAr al-Sáhíbí to extend the enceinte in the mosque to the south by the addition of 14 transcepts, and built a splendid new mahábra, a new sáhabí and the third noble "miskar", which alone has survived in its entirety.

After the complete extinction of the Umayyads with Hisham III al-Mu'ta'íd (942-942/997-998), Cordova became a republic under the presidency of three Qawwálds: Abu 'l-Hazm Djawwar b. Muhammad b. Djawwar (931-40), Abu 'l-Wálid Muhammád (943-64) and Abd al-Malik (1064-70). In the latter year it passed to the Almoravides; in 947 to the Almoravides, which in 1187/1223 built the protective enceinte of the eastern part of the town; and in 1128 to the Almochads. With its conquest by Ferdinand III of Castile in 1236, it was doomed to inevitable decline.

Of the countless Arab scholars who belonged to Cordova, we will only mention here Ibn Hazm (d. 458/1066), Ibn Rustah (d. 524/1128) and Maimóncides (d. 501/1104) (see Ibn MAMÖNE).

Bibliography: Makkati devotes a whole book to Cordova, i, 397-62 (epitomized in Gayango, History of the Mohammedan dynasties in Spain, i, 200-49), though it contains many literary and historical notes referring to other places; Idrisí, L'Afrique et l'Espagne, 1866, 288-14 (Arabic text = tr. 236-66; Yánú, iv, 58-61; al-Kazwíh, Aghdr al-bídà, 370; Madza, Diccionario geogr.-estadíst. hist., vi, 646-90; Schack, Poetie und Kunst der Araber in Spanien und Sicilien, i, 162-222; Concireiras, Estudio descritivo de los monumentos árabes de Granada, Scellera y Cordóba ó sea La Alhambra, El Alcázar y la gran Mezquita de Occidente, Madrid, 1885, 2nd ed. 1892 (with drawings and plans), 401-108; Rodrigo Amador de los Ríos, Inscripciones árabes de Córdoba, Madrid, 1879, 3rd ed. 1892; ibid., Una excursión a las ruinas de Medina Az-Zahra in La España Moderna (4. Die sechseckigen viereckigen Systeme sich kreuzender Bögen als Stützkonstruktionen der vier Rippenhüpf- polin in der ehemaligen Hauptmoschee von Córdoba,

Among his masters, the best known is Abu 'l-'Abbás Ahmad b. 'Umar al-Kurtubi whose commentary on Muslim, al-Musā'min fi sh̄āb Muslim, he studied. This man was an eminent Malikī faqīh, born in Cordova in 578/1183, and died in Alexandria in 656/1259. (He was a teacher of traditions and a foremost expert on the Arabic language. He travelled in the Orient where his reputation became widespread. Al-Nawawi quotes his Musā'min in a number of places in his own work.) There is mention of two other masters from whom he learned hadīth: the kāfis Abī al-Hassan b. Muhammad b. Muhammad al-Barki, and the kāfis Abī l-'Iṣāf Allī b. Muhammad b. Allī b. Ḥaṣ al-Yaḥyabī. Among his works, his biographers first mention his commentary on the Koran entitled Al-lamā'ān Al-Kurtubi bi-ṣaḥa'ab al-A'mal, which is devoted to biography of the Malikī 'abd al-Rahmán b. Nafih al-Shafi'í of Spain and the Maghrib up till the 8th/14th century. He also features in an article in Nafī al-šib al-Malikī. Very little information is known concerning his life. Born in Spain, he was one of those who travelled outside this country (al-Malikī). Al-Dhahabi is said to have written of him: "He travelled, he wrote and he took lessons from the masters." In fact, he made his way to the Orient and settled at Munyat Abī Ṭikhraybī in Upper Egypt (Muḥān Banī Ṭakhraybī in the version of Ibn al-Imād, Sharh Kashf, v, 335); he died and was buried there in 674/1277.

Al-Dhahabi says of him, in his Ta'rikh al-Islām, that he was an imām versed in numerous branches of scholarship, an ocean of learning whose works testify to the wealth of his knowledge, the width of his intelligence and his superior worth. Al-Kurṭubī, in his "Uyun al-ʿuwalīfī, refers to him approximately the same terms. But in addition to being a conscientious scholar, he was remembered as a pious man, inclined towards asceticism and towards meditation on the life after death. He appeared in public attired in a single garment and wore a small cap (ṣabā'īyya) on his head.

Among his masters, the best known is Abu 'l-'Abbās Ahmad b. 'Umar al-Kurṭubī whose commentary on Muslim, al-Musā'min fi ṣhab Muslim, he studied. This man was an eminent Malikī faqīh, born in Cordova in 578/1183, and died in Alexandria in 656/1259. (He was a teacher of traditions and a foremost expert on the Arabic language. He travelled in the Orient where his reputation became widespread. Al-Nawawī quotes his Musā'min in a number of places in his own work.) There is mention of two other masters from whom he learned hadīth: the kāfīs Abī al-Hassan b. Muhammad b. Muhammad al-Barkī, and the kāfīs Abī l-'Iṣāf Allī b. Muhammad b. Allī b. Ḥaṣ al-Yaḥyābī. Among his works, his biographers first mention his commentary on the Koran entitled Al-lamā'ān"
know the Book of God, is that he is to reject that which He forbids and to remember that which has been explained to him in this Book, to fear God and stand in awe of Him, to hold himself under His protection, and to abstain from disobeying Him through shame in respect to Him; then he becomes, as opposed to the burdens of the prophets (ja-tawwiq hummabi *ʿala ʿl-tawit*) and he must become a witness to the Resurrection before adepts of religions of a different persuasion (milat). Thus is the high estimation placed by al-Kurtubi on the role of the commentator.

The entire Introduction is divided into chapters which constitute a sort of ethic, methodology and theology of the commentary. Attention is drawn to the superior qualities of the Kur'ān (labādī al-Kur'ān) which comes from the light of the essence of God (ja-ʿuwa min ʿur dhihāt); God gives his servants the strength to bear it (4:40). Then (10), al-Kurtubi turns to the manner of reading the Book of God (hāṣfiyyat al-ṣāhib li-Kur'âb Allâh) in a chapter which may be compared with that of al-Ghazālī in the Ihyā‘. INTABAR al-Kurtubi; he discusses at length the problem of knowing whether the Kur'ānic text may be chanted or set to music: he maintains that it is impious to believe that the Kur'ān requires embellishment by the human voice. An important chapter (17) concerns the inward dispositions of men who pursue knowledge of the Kur'ān: they must rid themselves of all hypocratic consideration of the self (labādī min al-riya) and, turning towards God through takba and inwā', attain with self-purification to perfect sincerity (ibūs). This could be interpreted, on account of the opposition of the two terms-riya and labās, well-known in Sufism, as a sign of deep mystical piety, and this is confirmed by the passage which follows: “It is not the giving of the words of the Book and its sacred character is an obligatory requirement of the reader and of the ‘bearer’ of the Kur’ān: it comprises a precise and concise history which it acquires, with a view to recompensing it through shame in respect to Him; then he is charged with the responsibility of the Book and its sacred character is an obligatory requirement of the reader and of the ‘bearer’ of the Kur'ān: it comprises a precise and concise history which it acquires, with a view to recompensing it to perdition.” Thus, he draws from this all the metaphysical consequences: al-Kurtubi simply gives it the sense, according to Katada, of al-ʿaśim bi-rāb ʿam khaṭā (He who concerns Himself with the government of His creation), or, according to al-Ḥasan al-Kūrānī, the sense of al-ʿašim al-ʿašim male bi-nūr khānṭub. He who exercises His surveillance over every soul and that which it acquires, with a view to recompensing it according to its actions.

Finally, al-Kurtubi reduces considerably, but not entirely, the dependence on interpretations and especially elucidations based on accounts furnished by rabbinical legends, apocryphal gospels and other equally unreliable sources. Thus, he makes very little use of the ishrāfiyya (p.r.), unlike al-Ṭabarī and even al-Kūrānī. But, unlike Fākhr al-Dīn al-Rāzī, al-Kurtubi does not attempt to derive philosophical notions and conceptions from Kur’ānic verses. Thus, when explaining the verse kāsūyin (II, 235) in the verse of the Throne, al-Rāzī interprets it at once as denoting baʿṣim li-țaḥātah (existing through Himself) as Ibn Sīnā defined it in the Jāmā‘, and he draws from this all the metaphysical consequences: al-Kurtubi simply gives it the sense, according to Katada, of al-ʿaśim bi-rāb ʿam khaṭā (He who concerns Himself with the government of His creation), or, according to al-Ḥasan al-Kūrānī, the sense of al-ʿašim al-ʿašim male bi-nūr khānṭub. He who exercises His surveillance over every soul and that which it acquires, with a view to recompensing it according to its actions.

Bibliography: Given in the article. The Taṣīr is quoted according to the 3rd Cairo edition (Dar al-Kutub), 1385/1966. (R. ABADIE)

AL-KURTUBI, YAMMĀN. R. SUMRAN AL-KUARR, &Amdash; poet and Maliki jurist, born in Cordova in 1687/1969. He travelled extensively in the East, visiting Cairo, Baghdad and Damascus for the purpose of study. He died in Maywil on the Qd al-Fitr in 567/172. His chief surviving literary works are
Dala‘ī al-akham, Abūl-‘Imra‘ All, and the poem on Muslim religious observances, the Uṣūlīs aš-šī‘a, also known as al-Māhidātān al-kuryyān, for which he is best known. The Uṣūlīs sets out in summary form the basic observances of the five “Pillars of Islam” in rhyming couplets designed to be easy for children to memorize, but the contents of the poem are in no way simplified for the juvenile reader. The eighteen abāb into which the Uṣūlīs is divided are each linked by an obligatory rule (fard‘ūj) connected with each observance, and with rules which are recommended but not obligatory (sunnā).

The Uṣūlīs has been the subject of two commentaries, those of Ahmad b. Zārūr al-Ṭātār (died 941/1533) and Muhammad b. Ibrāhīm b. Khālid al-Tātār (died 941/1533).

Kūs, a town of Upper Egypt situated on the eastern bank of the Nile, some 30 km. to the north of the ruins of Thbes (al-Aswūn/Luxor) where the course of the river is at its closest point to the Red Sea, or about 200 km. from Kusayr [q.v.]. This large village with a Coptic name, first called Ks or Ksī (H. Gaubert, Dictionnaire des noms géographiques contenus dans les textes hiéroglyphiques, v, Cairo 1938, 178) seems to have become a more important place with the name Apollinopolis Parva in the Ptolemaic age, when the Greek sovereigns of the 1st and 3rd centuries A.D. undertook to develop commercial contacts between Egypt and Arabia Felix and the Indian Ocean through the ports of the Red Sea, and favoured the building-up in this region of various centres to the detriment of what was left of Thbes. The remains of the small Ptolemaic temple are still visible in the town. Under the Roman domination, Apollinopolis Parva was, like Copts/ Kifīt [q.v.], although to a lesser degree, the terminus of the caravan route from Berenice; it too took the name Diceliatopolis towards the end of the 3rd century A.D. A bishop of the town is mentioned among those present at the Council of Ephesus in 431. The Greek residents would appear to have been in a minority, and when the pressure exerted by nomadic peoples between the Nile and the Red Sea brought about an end contacts with the east and caused a decline of urban life, the town reverted to its Egyptian name (in Coptic form, Kōs) more than a century before the Arab conquest; this name was retained, transcribed into Arabic as Kūs. In the organisation of Arab Egypt, it belonged first to the Kifīt al-Kifīt and al-Aswūn. A rampart was constructed in about 232/847 to protect the urban area against the attacks of the Boha [q.v.].

Subsequently the town developed: al-Ya‘kābbī noted towards the end of this century that it had already taken the place of al-Aswūn (Buhūlah, BGA, vii, 324, tr. Wiet, 183) and according to al-Mas‘īdī, in the first half of the 4th/10th century, it had taken the place of al-Kifīt (Marqīj, iii, 50 = § 893). The reason for this prosperity must doubtless be attributed to the trading of its merchants with Nubia; its administrative status, however, did not change, because the population of the town was basically Christian, and the Muslim community was comparatively small. Under the Fatimids, the restoration of contacts with the Indian Ocean through the ports of the Red Sea, especially al-Ayyīh [q.v.], brought advantages, at first most notably to Usūn [q.v.], where goods unloaded at al-Ayyīh joined the Nile. But at the time of the serious crisis experienced by the Fatimid caliphate in the mid-16th century, the occupation of the region of Usūn by the negro troops who took refuge there after being expelled from the capital, after 459/1067, and the revolt of the Arab tribes of Upper Egypt, disrupted commercial traffic until the restoration of order by the vizier Bahd al-Djanūlī [q.v.] in 469/1077; the traders then adopted the practice of joining the Nile at Kūs, thus avoiding the extreme south of Upper Egypt, where Usūn began to decline. The governor of the Upper Sa‘d, given the task of maintaining order in the region, installed himself in the town which became the new capital of the south and a point of surveillance on the situation in the Red Sea. Kūs was henceforward an important market on the major trade-route with the Far East, frequented by the Muslim community of the Caneta of Cairo on account of the presence of a Jewish community providing a staging-post for these exchanges.

The establishment in Palestine of the Latin kingdom of Jerusalem, which cut the normal route of the Pilgrimage to the Holy Land, deflected towards Kūs a large proportion of the pilgrims (who used to embark at al-Ayyīh, which lies opposite Mecca) and added still further to the increase of traffic. A mint was established there in 516/1122 (al-Makritī, Ittā‘īs, iii, 93) and no doubt continued to function there until the arrival of the Ayyūbids. In the troubled times that marked the decline of the Fatimid caliphate, the role of the governor of the Upper Sa‘d was seen as “the most important post after the vizirate” (Ibn al-‘Athīr, xi, 194) and an ante-room of power, to which the careers of the viziers Ridwān and Shāwar also bear witness.

In 550/1155, Tā‘līf b. Ruzzayj ordered the construction of the mosque and gave to the town one of the finest minbars of the Fatimid epoch; the Muslim community grew, apparently through the installation of families from Usūn and Ismā‘īl; but the town continued to have a Christian majority.

The abolition of the Shī‘a Fatimid caliphate seems to have been strong felt; from 562/1167, Kūs was besieged by the Su‘di troops of Shāhād, who did succeed in capturing the town, and it seems to have been affected by the revolts in Upper Egypt that followed Saladin’s accession to power in Cairo. However, when the Ayyūbids reverted to the policies of the Fatimid in the area of the Red Sea, the growth of Kūs continued. It served as a point of arrival for Yemeni traders in Egypt and it was a staging-post for the merchants of the “Alexandrian Koreans” (al-Nuwayrī [see Kārīm]), This flow of wealth into the town was reflected in the agricultural prosperity of the surrounding countryside, where the growing of sugarcane was developed, and Kūs became a centre for sugar production. The urban area outgrew its fortifications, and in the 7th/13th century Yākūt considered it the third city of Egypt, after Cairo and Alexandria (Muqaddas, col. Wunstenfeld, 552). Cultural life developed; the poets Ibn Matrūh and Behā‘ al-Dīn Zābār spent part of their lives in Kūs. The town was nevertheless unable to play the part of a regional capital because the minds of the growing Muslim community of Kūs were not reconciled to Sunnī
Islam: the influence of the Sunni counter-reformation promoted by the pietist school in the neighbouring town of Kûs [q.v.] led to the founding of the first madrasa of Kûs in 680/1280. Henceforward Kûs became in its turn a centre for the propagation of Sunni Islam in Upper Egypt.

The Mamlûks felt that the town seems to have reached its zenith, even though the inclusion of Egypt in a political unity embracing the Syrian states had long ago deprived the governors of Kûs of the power that they had enjoyed in the last days of the Fâtîmid caliphate. The expeditions mounted against the Christian kingdom of Nubia in the last quarter of the 7th/13th century and at the beginning of the 8th/14th one contributed to the maintenance of a strategic role for the town, its main function being to control the highways of the South.

Doubtless following the collapse of the Latin kingdom of Jerusalem, and especially since the start of the Mamlûk period, the pilgrims to the Hajjâz for the most part reverted to the route via the Gulf of Suez, but a certain number continued to use the 'Ayyûhab route, and traders still frequented it. Kûs was then known to Europeans as a staging-post in the transporting of spices. The profits from large-scale commerce, but also from urban craftsmanship (textiles in particular), created the wealth of its markets. The Christian community continued to be important and perfectly integrated into the Mamlûk state (they were employed in the administration of the funds of the sultans and amînîn); it was during this period that Athanasius of Kûs drafted in Arabic his grammar of the Coptic language. But the Muslim community now played a dominant role. Nothing, however, of an architectural nature remains of the Muslim city which seems to have developed around the ancient town, never penetrating the Christian enclave with its churches, grouped round the Pharaonic temple; this is because the severe post-medieval decline affected this peripheral zone first.

The names are known, however, of some fifteen places of education, madrasas or mosques, including a dâr al-hadîth, whose Sunni Muslim teaching was felt throughout Upper Egypt, eliminating the last traces of Shî'ism which in the Mamlûk period long held out only in Udûf, creating a movement of people from the minor centres of the province to Kûs, and from Kûs to Cairo, and ultimately spreading Islamic culture in Upper Egypt to an unprecedented extent. The Shî'îm chief bâbî Tâbi al-Dûn Ibn Dakîk al-Tû al-Khûshayfî, al-Nawwâyî and al-Munayyir were the products of this social and cultural phenomenon.

The factors which had assisted the expansion of the town disappeared altogether towards the end of the Bahri period and at the beginning of the Cairean era. The fight against the Arab tribes, constantly growing in strength since the disappearance of Christian Nubia permitted them useful access to Upper Egypt, unloading their wares at Tûr in the Sinai peninsula, closer to the Mediterranean. This occurred perhaps from 775/1375 onwards, the date at which a serious drought affected Kûs and the surrounding region. (al-Mâshîrî, Kûsî, ed. Wiet, iii, 300).

Henceforward, the major commerce of the spice trade only occasionally passed through Kûs. The town, living on its assets, nevertheless remained probably the most important urban centre of Upper Egypt until the catastrophic crisis at the start of the 9th/15th century: famine, epidemic and political upheaval. According to al-Mâshîrî, the plague of 886/1480-6 killed 17,000 people at Kûs (Kûsî, ed. Wiet, iv, 124), or a large section of the population. In the unfavourable demographic context of the 9th/15th century, and in view of the total transformation of the regional framework which had formerly promoted the prosperity of the town, this destruction of the fabric of the town proved irreparable. When the Mamlûk state had succeeded in surmounting the problems of the early decades of the century, at least from the time of the sultaneys of Barsbay [q.v.], onwards, the governor of Kûs was not thought of as a secondary figure under the authority of the kâsîf of Asyût.

A section of the Muslim élite apparently left this declining city, and the proportion of the population formed by Christians began to rise once more, in an Upper Egypt no longer invigorated by commerce of any kind and henceforward less Islamised then the rest of the country. Commercial relations, on a reduced scale, with the Red Sea through the Kusayr highway, now tended to be directed from Kûs, and not from Kûs; it was to Kûs that the bâbî was transferred after the Ottoman conquest. The major regional centre was henceforward Gîna [q.v.], where the Hashwû Bedouins [q.v.], settled; their hegemony was gradually established over the region in the course of the 9th/15th century and was to be maintained until the end of the 16th century. The material ruin of the medieval Muslim urban cadres seems to have been essentially brought about during the 17th century, a period when the city, although the seat of a kâsîf, appears to have sunk to its lowest depths of degradation and dilapidation. It only recovered a certain degree of vitality in the second half of the 18th century, although the population numbered only 5,000 at the time of the French expedition. The renewal of the town dates from the end of the 19th century. The swelled of the population following the rural exodus to towns, the opening-up of the town towards the outside world by means of education dispensed by foreign missions and the Egyptian state, and the installation of a modern sugar-producing industry, have brought about the rebirth of a expansive urban area, where, apart from a few isolated remains, nothing bears witness to the ancient mediæval centre.

Kâs Owâsî (see KUSOWA). KUSANTîNA (see KUSANTINA).

AL-KUSANTîNA (in dialect: Ksentini, in French Ksentini) Ksentî, Algerian dramatis...
progress was mediocre, and he learned French in the street. Some years later he was apprenticed to a cabinet-maker. In 1909 he married one of his cousins by whom he had two daughters, both dying in infancy. Having grown up in a class of petty Algerian artisans, nostalgic for the past and constantly on the verge of poverty, al-Kusantini inherited a dual legacy of bitterness and failure. He felt ill at ease in his milieu, from which he brusquely broke away in 1914, abandoning his wife and settling out to travel the world. During the first months of the war he worked as a merchant seaman; Marseilles, Malta, Salomica, India, China and America were all to be visited in turn by this son of the Mediterranean, this bit of a "card", insatiably curious, interested in everything but attached to nothing.

Four years later he returned to France, where he worked for a while in a factory in Normandy and married a Frenchwoman. In 1920 he moved to Paris and obtained employment as a cabinetmaker in the workshop of a large store. It was at this time that he began attending theatres and he even played a number of walk-on parts, in particular at the Théâtre des Champs-Élysées. In 1926, he rapidly became friendly with some amateur comic actors (Allalò, Dahtànû, Bash Djarrâh), and, a few months later, he appeared in public for the first time in a play by Allalò, Don Alklak (Bâ 'Aklah), a play which owed its success to his flair for energetic bufoonery. From the very start he made a powerful impression, with his innate acting talent and his unusual gift for improvisation, expressing himself not only with his face but with his whole body, from head to foot; he was all movement. His silhouette, his mime, the twinkle of his eye, the unexpected laugh gave a sharp edge to each response emphasising the word, with an incomparable shaft of humour. To call him a comédian would be an understatement; he was a spectacle.

In fact, he was still not sure at this time how to make his own entry into the theatre, and his first attempt—al-'Ahd al-wdfi, "The promise kept", a comedy in three acts, Algiers, 1927—was far from being a masterpiece. After this failure, he was luckier the following year with a comedy (Bâ Bóyma), which was warmly received by the Algerian public.

Over the next ten years, al-Kusantini was to compose, stage and act in twenty-five plays, as well as a number of farces, most of which have been lost. In this brief space of time he chalked up a number of important dates in the history of the young Algerian theatre. In fact, his successes were as varied as were the responses of the public and the critics, and the conditions under which the plays were staged. Even the settings varied; sometimes the municipal theatre, sometimes the auditorium, sometimes, in a rural district, a hastily-erected barn. Furthermore, his performances generally gave only a meagre profit to the author and his colleagues, actors, singers, dancers and musicians.

During this same period, al-Kusantini played minor roles in French films like Savoirs le Terrible and Pépé le Moko, alongside Harry Baur and Jean Gabin. After 1938 he practically stopped writing for the stage, but, deeply attached to his profession, he was acting in the plays of his successor, Muhyl T-Din Bash Tarz, almost to his last day. He died in Algiers on 2 July 1944, having lived for close on twenty years the somewhat austere existence of the milieu to which he belonged; he was however, a straight-forward man, generous and sincere, an enemy of all forced pretence and all hypocrisy.

Written in Algerian dialect and almost entirely unpublished, al-Kusantini's work covers a wide variety of genres. But in spite of the diversity of form, the central core is one of powerful originality. His work comprises:

(a) Approximately two hundred satirical songs, for the most part on moral and social themes, often written as parodies of well-known Arabic and French songs. About a hundred have been recorded on disc.

(b) Approximately thirty sketches, composed of series of humorous and entertaining scenes with two or three characters, accompanied by songs, in a realistic setting, that of the Algerian petit-bourgeoisie, whose foibles and vices are energetically satirised. Half of these have been recorded on disc: the peasant before the judge, the rustic and the man-about-town, the drunkard, the old man and the old woman, the old sailor, and the ghost, the mysterious table, the unwavering sparrow, Bashir, etc.

(c) Twenty-five stage-plays, listed below in chronological order:

1. al-'Ahd al-mofî; comedy in three acts, Algiers, 22 March 1928;
2. Zeghrebina ou les deux manges de kaschib et le fils du roi (Zirabbbân), comedy in three acts, Algiers, 15 February 1929; 4. Tânsu al-Qâssar, "Times have changed";
3. Zeghrebina ou les deux manges de kaschib et le fils du roi (Zirabbbân), comedy in three acts, Algiers, 15 February 1929; 4. Tânsu al-Qâssar, "Times have changed";
4. About thirty sketches, composed of series of humorous and entertaining scenes with two or three characters, accompanied by songs, in a realistic setting, that of the Algerian petit-bourgeoisie, whose foibles and vices are energetically satirised. Half of these have been recorded on disc: the peasant before the judge, the rustic and the man-about-town, the drunkard, the old man and the old woman, the old sailor, and the ghost, the mysterious table, the unwavering sparrow, Bashir, etc.

(d) Approximately two hundred satirical songs, for the most part on moral and social themes, often written as parodies of well-known Arabic and French songs. About a hundred have been recorded on disc.

(b) Approximately thirty sketches, composed of series of humorous and entertaining scenes with two or three characters, accompanied by songs, in a realistic setting, that of the Algerian petit-bourgeoisie, whose foibles and vices are energetically satirised. Half of these have been recorded on disc: the peasant before the judge, the rustic and the man-about-town, the drunkard, the old man and the old woman, the old sailor, and the ghost, the mysterious table, the unwavering sparrow, Bashir, etc.

(c) Twenty-five stage-plays, listed below in chronological order:

saw around them every day, in the street as well as within their families, and this is fairly remarkable. Al-Kusantini confined himself in general to making rough drafts, sketching out his ideas, laying down the simple foundations of what was to become a play on the stage. His style also reflects this premature provisory: it is a comedy style, more often than not recommends itself better to performance than to reading. It is admirably suited to its purpose, natural, alive, full of ingenious features and significant images, always pleasing and witty, often provocative.

In his satirical verses, which by contrast were written before being sung, the phrases are short and staccato, punctuated by exclamations and rhetorical appeals; it could be said that they represent an almost breathless approach to the pursuit of emotion.

In conclusion, it is thanks to al-Kusantini that Arabic comedy rose for the first time in Algeria to heights similar to those attained, for example, in Athens with Aristophanes, in Rome with Plautus and Terence, and in France with Georges Courteline.

For his high qualities of theme and of form, in dramaturgy as well as in his satirical songs, al-Kusantini deserves to be long remembered.

KUSAYLA b. LAZAM, or KASILA was, in the tradition of the Massinissa and Jugurtha, one of the most eminent figures in the struggle of the Berbers to preserve their independence. In 55/674, at the time when the mawill Abu ‘I-Muhajir Dinar came from Egypt to replace ‘Ukba b. Nafir as governor of the recently conquered province of the Maghrib, Kusayla was certainly "king" of the Awraba, a broad alliance of tribes of the Barânis group, for the most part sedentary. The territory of the Awraba was centred at that time on the region of Tlemcen, called Pomaria in antiquity, and it probably stretched from west of the Aurès range to Wallia (= Volubilis) to the north of Fez. It may be recalled that Idris [q.v.] was brought to power by the Awraba of Wallia. At the time of the conquest, the majority of the latter were no doubt Christianised. In fact, according to al-Bakri their...
capital Tiemcen maintained, along with the features of its ancient civilization, a large Christian population until the 9th/10th century. It was at Tiemcen that Abu 'l-Muhadjir was confronted by Kusayla. The new governor, preferring a policy of conciliation to one of force, took the opportunity of making an ally of the "king" of the Awarba. Kusayla became converted to Islam and henceforward lived with Abu 'l-Muhadjir at Takerwan which had replaced the capital founded by 'Uqba b. Nafi', and the name of which, by its prefix, symbolized a full scheme of Arab-Berber agreement.

The death of the founder of the Umayyad dynasty, Mu'awiya, led to a change of policy. In 64/681, 'Uqba set out once again for Ifrikiya, dreaming of vengeance and a great déjávù. With him, the policy of subjugating the Berbers by force took on a new hue: vengeance and a great déjávù. 'Uqba found himself confronted by Kusayla. Kusayla, their chief. He—it is not known from where—escaped from detention under 'Uqba, and rallied the forces of Kusayla. The new resistance passed subsequently to the Banū, but with the typical scene, described in all the sources, where 'Uqba, as a means of humiliating Kusayla, forced him to skin a sheep in his presence.

In the early stages, the lightning campaign that he initiated, the more unexpected in that it followed the policy of peace and conciliation of his predecessor, seems to have had the advantage of surprise, which explains, in part at least, his initial decisive success. But resistance soon became organized. In fact, 'Uqba made no major conquest. The Banū, the most romanised of the Berbers, allied themselves with the Byzantines. The Awarba secretly made contact with Kusayla, their chief. He—it is not known from where—escaped from detention under 'Uqba, and assumed leadership of the resistance. Over-confident in his successes, did 'Uqba for his part, as all the sources assert, commit the foolish error of sending the bulk of his troops towards al-Kayrawān, keeping with him only a handful of men, some of three hundred. Was there any reason to think that these were to relieve the capital threatened by the Byzantines? Or was this more simply a question of an act of indiscipline on the part of soldiers exhausted by a long and tedious campaign? Whatever the case may have been, to the south of Biskra, at Tahdta (= Thuburs), 'Uqba found himself confronted by Kusayla at the head of powerful Banū and Byzantine contingents.

Here he found, along with all his men, including Abu 'l-Muhadjir, the epic and spectacular death of which he dreamed and which perpetuated his legend. A mausoleum, that of Sidi 'Uqba, was erected on the site of the battlefield and became a centre for pilgrimage which is still revered today.

At al-Kayrawān, there was panic, which illustrates the importance of Kusayla's victory and especially the strength of his forces. The idea of evacuating the country, proposed by Hanāz al-Ṣan'ānī, finally prevailed over that of resistance, supported by Zuhayr b. Kays al-Balawī. So the army withdrew. But al-Kayrawān did not lose the whole of its Arab and Muslim population. It had already advanced beyond the status of a simple military camp, a fact which deserves underlining. Between the years 64/683-6, it became the capital of a huge Berber kingdom ruled by Kusayla. Ibn 'Uqbarī (Bayān, i, 32) notes that: "Kusayla granted anda to the Muslims who had stayed in al-Rayrawān. He established himself there as sovereign (amir) of all the inhabitants of Ifrikiya and the Maghrib, including the Muslims present in that area." Hence no xenophobia, no persecution, no religious fanaticism. We may underlie this fact, reported by witnesses who had no cause to foster their adversaries. Kusayla himself, we are assured, took care not to renounce Islam after his victory. These measures are sure evidence of a political programme designed to deprive the Arabs of any religious pretext for invading the Maghrib once again.

But the wave of conquest was not yet exhausted. When the crisis which arose in the East with the revolt of Ibn al-Zubayr had abated, Zuhayr b. Kays al-Balawī set out for Ifrikiya with a strong army. Kusayla, who was not sure of the conditions prevailing at his rear in al-Rayrawān, chose to go and wait for his enemy at Mams, 50 km. to the west of the capital, thus in a region where mountains could offer refuge in the event of defeat. The battle, in which he lost his life, went against him. But it should not be believed that it was as decisive as our sources claim. In fact, although victorious, Zuhayr preferred to evacuate the region again, so as not to succumb to the good things of this world, so we are told. In turn, he met his death on the return journey, at Barka where the Byzantines had sectored a landing. Was this supposed to be a combined operation, designed to catch the Arabs in the Ifrikiyan trap, a plan which failed because of poor co-ordination? If Kusayla's attempt to found a great empire governed from the city founded by 'Uqba b. Nafi', had succeeded, the history of the Maghrib would certainly have taken a different turn. But were the Berbers ripe then for such a scheme? With al-Kahina, the torch of resistance passed subsequently to the Butt, but with no more lasting success.

Sa'id was from this time onwards fixed in the
establish relations with the Negus of Ethiopia set off
outlet for Upper Egypt on to the Red Sea.

Remains of works from the period of the Middle
Kingdom and from Ptolemaic times (P. Jouglet, in
Histoire de la nation égyptienne, iii, 94-5) show that
the site was used from ancient times onwards,
although it lost its importance in the Roman period
when, because of difficulties in navigation through
the Red Sea to Suez, landing was preferred on the
coast further to the south, at the port of Berenice.
In the neighbourhood of the future 'Aydhab, despite
the increased distance along the track between the
sea and the Nile thereby required (G. W. Murray, The
Roman roads and stations and the Eastern Desert of
Egypt, in Jnl. of Egyptian archaeology, xi [1923]),
Toward the end of the Roman-BYZantine period,
adequate control of the regions through which this
more southerly road passed probably brought Kusayr
an increased importance, and at the opening of the
Islamic period it served as a port of embarkation for
pilgrims travelling to the Hijāz.

However, when the Fāṭimid caliphate in Cairo
revived the ancient traffic of Greco-Roman times
with the Yemen and the Indian Ocean shore lands,
the security which was re-established in the moun-
tainous desert between the Nile and the Red Sea
favoured the use once more of the southerly route to
'Āydhab, a port which was moreover more or
less opposite the holy places of the Hijāz. From the end
of the 8th/9th century, the installation of the capital
of Upper Egypt at Kūfis nevertheless brought a
certain amount of traffic to Kusayr, even if it was
still much less important than that of 'Āydhab.
While 'Āydhab was over two weeks’ journey from
Kūs, Kusayr is given as only three days’ journey
from the sea to the Nile (about 200 km.).

KUSAYR 'AMRA [See Architecture]

KUSAYY, an ancestor of Muḥammad in the
fifth generation and restorer of the pre-Islamic
cult of the Ka'ba in Mecca.

His genealogy is unanimously given in all sources as
Habalah, with the son or only some more distant
offspring, either after a long struggle with the
Kūfis or Kūayr's b. Khâlid (Ibn al-Kalâbī; Ġamanah, Tab. 1), and his life and exploits are
recorded by our sources in three recessions which
only differ from each other in trifling details; these
now go back to Muḥammad al-Kalîbī (d. 1067/84-5), Ibn
Ishāq (d. 1070/72) and 'Abd al-Malîk b. 'Abd al-Asâr
b. Dihraj al-Malikī (d. 1325/69). Kusayr is
represented, like the usual legendary type of hero who
found a city, as having passed his childhood and youth far from his native land and in obscurity: a
younger son of 'Abd b. Murra, a descendant of the
Kūfis whose supremacy in Mecca had been
replaced by that of the Banū Ḥāshim; he loses his
father soon after his birth and is taken by his mother
Fatīma bint Sa'd b. Sayāl who had married again,
his second husband being a member of the tribe of
Banū Ḥāshim, to that new husband’s tribe in the
north of the Arabian Peninsula (in the neighbourhood
of Ṣurq; according to Ibn al-Kalîbī (Ibn Sa'd, i/1,
30, 46) a place on the Syrian frontier of the Hijāz,
now Tabuk (Yakât, iii, 77), or right into Syrian terri-
tory near Yarmūk (al-Balkhi; 777)); here his original
name of Zayd was changed to Kusayr from the root
h-s-y, "to go far away". Having learned his true
origin from his marriage with Hubba, the daughter
of the Kūfis chief Ḥusayn b. Sa'd, who controlled all the arrangements for the worship of the
Ka'ba and the pilgrimage, he soon acquired an
important position in the city. On the death of his
father-in-law, Kusayr managed to succeed him in
his offices, either after a long struggle with the
Kūfis, or as a less reliable tradition has it by
means of a tricky bargain which he made with (Abū)
Chubayb, with the son or only some more distant

northern part of the province. The beginning of
the Ottoman occupation saw the rise of Kūfis, which
replaced Kūayr as the regional centre of the
region as the main departure point for Kusayr. The greater
part of commercial traffic continued to consist of
corn, continuously despatched to the Hijāz, and of
coffee imported from the Yemen. In the 18th century,
Hawwâra control over Upper Egypt did not harm
the port’s traffic, in fact the reverse, since Kusayr's
situation along the route to the Indies attracted the
attention of the French and British as much as that of
the Beys of Cairo. Bonaparte's soldiers found at
Kusayr an agglomeration essentially made up of
stalls open to the sky, with a very scanty permanent
population (this being also the case with 'Āydhab in
his time), and with Hijāz influence very strong
(Description de l’Egypte, État moderne, i, 203-4). Under Muḥammad al-Saff, buildings for the Egyptian
government were again set up at Kusayr. The small
town became one of the district centres of the
province of Kūfis. The pilgrim traffic remained each
year the main source of activity for the port, but after
1859 the Pilgrimage traffic was deflected to Suez. At
the time of the 16th century, Kusayr had ca. 1,800
inhabitants.
relative of Hulayf (ibn Durayd, al-I'tiqad, 277, 7 with 282, 2). The detailed narrative of the events which brought Kusayy to fame is given in the article Kuz'ayfa.

Becoming master of Mecca and guardian of the Ka'ba, Kusayy rebuilt the latter and organized its worship; he united the clans of the Kuraysh, who were previously scattered, into a solid body which ascertained them the mastery of the town for the future; indeed it is even said that it was on this account that the name Kuraysh (from babaraqba, "to combine") replaced the old name Banu 'l-Nadr; Kusayy is said to have been called al-Mudjarnatun, "the re-uniter". On his death, the sacred offices that had become his perquisites, were inherited by his four sons 'Abd al-Dar, 'Abd Manaf, 'Abd al-Uzza and 'Abd Kusayy, the second of whom through his son Hashim was the direct ancestor of the Prophet. The house which Kusayy had built himself quite close to the Ka'ba was henceforth the centre of the civil and religious functions of the Kuraysh under the name Dar al-Nadwa. To Kusayy is also attributed the discovery and digging of the well of al-Ajjaj (Kufr al-Din = Cairo, Sadi, Melka, ed. Wustenfeld, i, 107, below; Bakri, Futuh, 48; 'Abd ill, iii, 39-20; al-Khalif, 236). For what has been said above, it is evident that the Kuraysh regarded Kusayy as their true founder and the founder of the Ka'ba. The antiquity of this tradition is attested by a verse of al-A'shay (al-Bakri, 489) and by several of Hassán b. Tábíbit. Later historiography has tried to harmonize this old native tradition with the genealogical system which later became established and according to which Kusayy = Fírrr b. Málík b. al-Nadr (Wustenfeld, Geneal. Tabellen, N) as well as with the tradition quite different in origin and character of the Abrahamic cult of the Ka'ba and its vicissitudes under the Džhurn and the Khuza'a. Kusayy is therefore to Mecca "what Theseus was for Athens and Romulus for Rome" (Caetani). In the present state of our knowledge, one cannot, however, say whether such a legend should be regarded as a historical personage transformed into a hero or the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab oniomosticon: a Nahlk b. Kusayy al-Salafiyy (R. Wustenfeld, i, 6o-6, 464-5; Ya'qub, Historica, 1, 273-8; Ms'djisti, al-Bad' wu'l-Tabiyih, 1, 165-7, tr. 118-20; Ibn Kusayy, Ma'arif, ed. Wustenfeld, 34; Ibn Durayd, al-I'tiqad, 13, 97, 'Abd ill, i, 235, ii, 524-5, iii, 625; Bakri, Ma'arif, ed. Wustenfeld, 58; Cassius de Percoval, Essais zur Geschichte der Araber, i, 234-5; Caen, Annali, i, 735, 96-106; M. Hartmann, in Zd., xxvii (1912), 43-9; Lamme, La Mosquée al nb la ville de l'Aigre, in MFOE, ix (1924), 52-5, 268-70; idem, Les sanctuaires préislamiques dans l'Arabie occidentale, in MFOE, xi (1926), 27-33, 412; T. Fahd, Le peulhes de l'Aigre centrale, Paris 1968, index.

(G. LEVI DELLA VIDA)

KUSDAR, Kuzdår, the name of a town in mediaeval Islamic Balkhîstân [q.v.], modern town and district of Kusdår in the former Kalát state [see kâlät] in Pakistan. It lies in lat. 27° 48' N. and long 66° 37' E. at an altitude of 4.905 feet, some 85 miles south of Kalát; the long, narrow valley of the Kohachi River in which it is situated is strategically important as a nodal point of communications, from Karâtî and Lambâla (q.v.) in the south, from Kafâ'î in the east, from Kalát in the north, and from Mârîn and Khârân [q.v.] in the west.

Kusdår was first raided by the Arabs under Sinâmah b. Salma al-Hudhîy, who was appointed governor over the Indian marches early in Mu'sâiya's caliphate by Ziyâd b. Abîth, and then by al-Mundhir b. al-Dârûd al-Abîdî (Bakri, Futuh, 433-4). The 4th/10th century geographers mention it, together with Kîkân or Kîkân [see kîkân] as one of the towns of the region of Tûrán or Tîwârân, which must have lain in the east-central part of Balkhîstân (see Minorsky, H. Art. Tûrân), and as being 80 farasfah from al-Mansûra in Sind. Khîkân is mentioned in the middle years of this century as being the residence by Kusayy in the religion of Mecca. If it is not quite true that he was the object of regular divine worship (the name 'Abd al-Kusayy borne by one of his sons does not necessarily imply the divine character of the father), he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Islamic Arabia, although we know very little about it. The eponymous hero of the people of al-Tahîr, Thahîf, is analogous in character to Kusayy. The latter's memory remained particularly associated with the Dar al-Nadwa [q.v.].

Whatever the origins may be, it is certain that at the beginning of the 6th century A.D. the control of the Ka'ba and of the hadjîf was in the hands of a clan claiming descent from Kusayy and that the Kuraysh were agreed that he was the founder of their tribal unity. It is to be noted on the other hand that even if this clan included among its members some of the recognised chiefs of the Kuraysh, among others the Banû Umayya, it was far from having complete political and financial control in its hands: the Banû Mâdîjân, for example, one of the most powerful families in Mecca, were not descended from Kusayy. It seems probable then that the Meccan "republic" was constituted on the initiative and under the direction of the Banû Kusayy, but that the latter were forced to admit into their social organism other clans having the same rights and privileges as themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banû Kusayy.

of the local ruler, but Kusdār is described as the chief town, with a citadel and a flourishing mercantile quarter, to which traders from Khurāsān, Kirmān and India resorted, and with fertile agricultural lands around it (Ibn Hawqal, 346; tr. Kramers and Wiet, 377; al-Musaddad, 476; al-Hurr ad-Dāhir, 123, 177; Vahāb, iii, 357; Le Strange, The lands of the Eastern Caliphate, 237 ff.). Kusdār was certainly the seat of the local ruler by the later years of the century, the time of the rise of the early Ghurānī, for in 397/977-8 Sulṭān Badr al-Dīn (or Badr al-Dīn) reduced the ruler of Kusdār to obedience. However, his son Mahmūd of Ghurānī had to come once more and attack Kusdār in 407/1016, and make its ruler tributary (Uthān, in Nāṣir, The life and times of Sulṭān Mahmūd of Ghurānī, 74), and his son Masʿūd in 410/1019, also sent his uncle Yūsuf b. Subkītgin, and his son Masʿūd al-Dawādīr, and attacked Kusdār in 402/1013, and made its ruler tributary (Bayhakī, in R. Gellèpe, Sulṭān Masʿūd l., 1, von Donzel). The three earlier rulers of his house (412/1022, 417/1027, 420/1029), Munich 1935, 57 ff.).

Thereafter we hear little about Kusdār. In recent times it fell within the Khilāfat of Kallat. H. Pottenger visited it in 1810 and found it a small town of ca. 300 houses. It being the summer residence of Mir Mnsʿīd ‘Allī of the Brahibī Kanbarān tribe, brother-in-law of Mahmut Kān of Kallat (Travels in Afghanistan and Sind; accompanied by a geographical and historical account of those countries, London 1842, 33-7). C. Masson noted a large tepe north of the town of Kusdār, with the remains of mud walls, presumably relics of the mediaeval Kusdār (Narrative of various journeys in Baluchistan, Afghanistan and the Punjab, London 1842, ii, 14-4). In 1870 a fort was constructed there, a garrison posted in it by Mir Kūshyar b. Miḥyar Kān of Kallat in the course of his warfare with the Dīfân or local ruler of Laš Bāla (362). Kusdār town and district now form a talābit of the District of Kallat Subdivision of the Khilāfat District of Pakistan, with a population in 1961 of 26,726.

Bibliography: In addition to the sources mentioned above, see Imperial gazetteer of India, xv, 296-9, and Population census of Pakistan 1951. District census reports, Kallat, i-24-5, iv-2.

(For Bosworth)

Kūsh, a Biblical personage whose name appears in ch. 6 of Genesis in the genealogical lists of the posterity of Noah (Nūḥ). According to the information in verses 6-7, Kūsh, the eldest son of Hān (Nūḥ), is the brother of Māryām, Pūt and Kūnān (Kanaʿa). The father of Shībā, Hūwaj, Sābīkt, Rāshīd and Sābitka and, by Rāshīd, the grandfather of Sīrāz and Dīdīn Mūṣayrīf is Egypt; Pūt doubtlessly Libya, Khaʿān, the land of Canaan (Palestine and Phoenicia). Most of the names of the descendants of Kūsh are to be attached to the maritime regions of the Red Sea. Sīrāz has been identified hypothetically with the Port of Saba in the Bay of Adulis on the south-west of the Red Sea, which is mentioned in Strabo (xvi, 4, 8, 10); Hūwaj, which is given in Genesis xxv, 18, for the western border of the Ishmaelites' territory, has been associated with the name of the South Arabian tribe of Khāni; is Sābitka the Μαβεντ of Strabo (xvi, 4, 21), the Sabata of Pline (vi, 155, 211, 93), the Sābīnθ of the Periplus of the Erythraean Sea (27)? Whatever may be the case, it is to be located in the Arabian peninsula, as Rāshīd is placed by various authors in Hadramawt, Sīrāz, which is not the Kingdom of Saba, is situated in the north-west of Arabia. As for Dīdīn, this is the oasis of al-Šalā, near Maḍīna (Sūrī), in the north-east of the Hidjār.

Thus Kūsh appears to be linked by this genealogy with Arabia and the Red Sea. But in verse 8 of the same ch. of Genesis, which seems to reflect another tradition, he is presented as the father of Nimrūd (Arabic Namrūd) with whom Mesopotamia is associated.

Indeed, in the whole text, Kūsh, as an ethnic term, in the ordinary way designates neither Arabia nor Mesopotamia, but the neighbouring populations of Egypt, on the south-west borders of the land, i.e. precisely the region which the Egyptians called Kūsh (see also Babylonian kūš, Assyrian kūš, Old Persian kūša), an oracle of Ezekiel (xxix, 10) also announces the destruction of the land of Egypt "from Migdol to Syene (from the extreme north to the extreme south) and as far as the frontier of Kūsh". In 2 Kings xix, 9, the Pharaoh Tirhakah, of the so-called Ethiopian dynasty, is called King of Kūsh. Everything leads us to suppose that Kūsh is the name of ancient Nubia, i.e. of the region which extends as a whole from the first to the fourth cataract of the Nile. The Semitisation translates it in general as Ethiopia, which, because of the value placed on the word "Ethiopian" in antiquity, is at the source of the erroneous interpretation of kūš as "black" or "African".

In the Kūšī the Kūsh is named no more than the sons of Noah, Islamic tradition, which knew his name, however, supplies pieces of evidence which do not agree totally with one another or with the evidence of the Bible. They are all reported by al-Ṭabarānī. According to some, Kūsh, son of Hān, is the brother of Māryām, Kūt (Biblical Pitt) and Kanīn (Anuwalu, i, 232, 237). But elsewhere Kūsh appears as the son, and not the brother, of Kanīn, himself presented as the fourth son of Nūḥ (i, 219, 237). According to fourth sources, i, 229, 237; Ibn al-Ṭahir, 1, 292; Ibn al-Ṭahir, 1, 30). He is given finally as the progeny of Kanīn as king of the universe after the disappearance of the sons of Aḥdar (Chronique, French tr. H. Zotenberg, i, 120). In all the traditions, he is the father of Nūḥ, tyrant (mistajabbī) of Babil, conforming with Genesis, i, 8. But if, in the general way, the paternity of the Hābasha as well as those of the peoples of Sind and Hind are attributed to him, the Nubians on the other hand are never explicitly associated with him. In the genealogy supplied by al-Ṭabarānī (i, 223) on the authority of Wahb b. Munabbīh, it is from Kanīn, brother of Kūsh, and his wife Kūshēyi, great-granddaughter of Yūsuf, that the Nubians are descended, together with the populations of Fausan, the Zangi, the Zagheva and all the blacks (or, according to another passage, the blacks with fuzzy hair). Elsewhere (i, 216), it is Hām who is the only one named as the ancestor of these peoples.

The Kushitic languages.—It is from the name Kūsh that the word Kushitic is derived, under which are grouped a body of Hamito-Semitic (but not Semitic) languages spoken by about fifteen million people, the majority of them Muslims, scattered over a vast territory of almost 2 million km², within which are included the populations speaking the Semitic languages of Ethiopia. The area is constituted basically by the Horn of Africa and spreads in the north into Sudanese and Egyptian territory to around the first cataract of the Nile and in the south into Tanzania, as far as the 4th degree of latitude.

Beqja (l'Bejewiyye) is spoken by Muslims in the north of the area, in the northern part of Eritrea, and stretches between the Nile on the west (where it is in contact with Nubian and Arabic) and the Red Sea (where it is in contact with Semitic Tigre) as far as the environs of Kusayr. It is true that in the northern-
most part, the Muslim ‘Ababbde tribes are today almost entirely Arabised. At the same time, in the south, a part of the Besi Amer (Banu ‘Amir) nomads have abandoned Bedja for Tigre. Between these two groups are to be distinguished, with their particular dialects, in the centre the Bighari and Hadendowa, and in the south the Halenga and Arteiga.

Still further to the south, on the shores of the Red Sea, there is the area of Sao and ‘Afar, other Kushitic languages.

Saho is the language of an almost entirely Islamised population leading a pastoral existence in the south of the Massawa region in Eritrea. The Irob-Shac Christians, who constitute an enclave on the Abyssinian plateau, have partially abandoned Sao in favour of Semitic Tigrinya.

The language of the ‘Afar (Arabic Danakil) is spoken in the south of Eritrea, in the north of the region of Djibouti, and extends towards the west as far as the Awash River.

Somali-speaking tribes who inhabit the extreme shore of the Horn at the mouth of the Tana River are also almost entirely Islamised. The most important dialects are those of the Isak who inhabit the shore of the Gulf of Aden and the Darod tribes at the edge of the Indian Ocean, as far as the north of Kenya and who also inhabit the province of Ogaden in Ethiopia. In the north, in the territory of Djibouti and as far as Dire-Dawa in Ethiopia, it is the dialect of the Hal which is widespread.

In the valley of the Wehi Shebelle as far as Khamar (ancient Mogadishu), it is Hawyja which dominates, while in the south, in the province of Benadir, Digil is spoken, a dialect of the Sab, also widespread in Aden among the emigrant foreigners called Diarabti (see Djarabt).

The Oromo (whom the Europeans, adopting an Abyssinian word treated as pejorative by the natives, call Gala) at present occupy a vast territory from the centre of the Abyssinian plateau as far as the centre of Kenya (to the north of Mombasa and along the Tana River). These are on the whole pagans. Islam, however, has conquered a part of the northernmost populations. Of the dialects of the Oromo, Mara in the south, Tulama in the north-east and Borana in the south-east, are very close to each other. They are opposed to a southern dialect group, so that constitutes the speech of the Fararreta and Kofin in Kenya.

Agaw, in the north of Ethiopia, occupies no more than a limited and fragmented territory, having for the most part given place to Semitic, e.g. Tigriinya and especially Amharic. A northern Agaw dialect, Bilin, is spoken by a small Muslim population. Other dialects still in use are Khamar, Khamta, Kwara, Kaimant and Avngy or Awnya.

To the west, a group of languages relatively close to one another covers the region of the lakes (from Zway to Shamo and Lake Rudolf) and extends into the adjacent mountainous zone (the province of Sidamo). These are Gudella or Hadiya and Kambatta. Generally connected with them, but not as close, are Gidole or Gardulla, Arbora, Galuha etc. On the other hand, these are a tendency today to consider Rendille in the north-east of Kenya, on the edge of Lake Rudolf, and Bayso in an island to the north of Lake Abaya, as projections of Somali.

In the region of Omo, one can distinguish Onneto, Dawro or Kullo, Goba, Walamo, Maruor or Gabbam, Baditti, Zayse, Basasetto, Doko, Cara, Djamadero, Kaffeto, Antillo, Shinasha or Gongga, etc.

In the same region, some languages, which are probably Kushitic, are spoken by Nilotic peoples, e.g. Gimira, Majji and Gunza.

A Kushitic extension in Tanzania is possibly represented by Irakw and less probably by Mbugu.

There may be seen from this simple inventory, although it remains incomplete, the immense linguistic variety of the vast area generally considered as Kushitic. It is still very inadequately explored, and numerous tongues are known to us only by a rare and insignificant documentation. There result from this a serious problem to which lead at times to calling into question the very membership in the group of some of the most anciently recognised languages. There has also been a proposal to detach from the Kushitic ensemble an Omotic group consisting essentially of the languages of the region of the Omo, and from this some authors have come to consider Bedja as a particular division of Hamito-Semitic without any special connection with Kushitic.

In so far as the existing documentation allows one to judge, such questionings appear excessive. The existence of common traits peculiar to a body which can be called Kushitic do not appear capable of being explained by simple phenomena of diffusion. But it is no longer as possible today to admit the traditional division into two groups: Lower Kushitic with Bedja, ‘Afar, Sao, Somali and Oromo, Upper Kushitic consisting of Agaw, Burdji, Sidamo and the western languages. Without attempting here to propose a real classification, for which the state of studies still gives no authority, one may to some extent rely on the characteristics of these languages to discern some particular affinities. The linguistic information which is to be supplied below can justify the following table:

A. Northern Kushitic: Bedja;
B. 1. Eastern and southern Kushitic: ‘Afar, Sao, Somali and Oromo;
   2. Central Kushitic: Agaw and languages of the region of the lakes;
   3. Western Kushitic: languages of the region of the Omo.

The group of Eastern and Southern dialects and that of the Central dialects are closer to one another than each of the two others.

Linguistic characteristics. — These are the principal common traits in the Kushitic languages or in the majority of them.

(i) On the phonetic plane.— The predominant syllabic type is of the consonant + vowel form, at the beginning of a word; closed syllables of the consonant + vowel + consonant type are present especially as final syllables. In the intervocalic position, the best-tolerated consonant groups have a first liquid element or are constituted by a nasal — an oral homorganic consonant (mb, nd, etc.).

The consonant system includes in general "emphatics", most often glottalised in effect, which, if combined at the same point of articulation, the orders formed by an unvoiced stop and a voiced stop, without always participating themselves in correlation of voicing. The majority of the languages also present a post-palatal order: k, g, k, but none opposes a g to a k. However, one must take account of the very frequent present of a voiced cerebral d which can adjoin the "emphatic", unvoiced denti.

Except in some Agaw dialects which are innovative on this point, there is no distinction in the labial zone between the spirants and occlusives. Where there is
The majority of languages are familiar with tonal opposition, in various degrees of development. In a language like Bedja, only a small number of lexemes of the CVC-form seem to bear a tonal descending tone, capable of constituting a distinctive morphological mark, cf. the "mother": "mothers", kynti "sister": kynti "sisters"; but in Awinya and in Mola for example, tones play an important role in the morphological plan as in the lexical one: (Mola) biino "aches"; biino "coffee"; (Awinya) ajgye "I give": ajgye "he gives". Unlike the tonal schemes, the accentual schemes are not generally distinctive, except possibly in some forms where phonetic evolutions have accidentally conferred on them a differentiating role: (Bedja) ha'dab ada "I killed a lion"; ha'dab ada "I killed him".

(ii) On the morphological plane. —Lexemes are constituted in Kushitic by constant radicals with variable incisions, and generally suffixed: (Sidamo) min-inae "be built", min-ed "house"; (Ometo) med- ned-ih "he forms", med-ia "form"; (Somali) deke dekh da "environment", dekh da "to be between, among", dekh-idda "between". Despite some phenomena of asponomy in some languages (Bedja dir "to kill": dar "to massacre", rimid "to avenge": rimed "to be revenged"), the radical vowel may be considered stable in every series of derivation, as may be seen from the preceding examples.

By far the most frequent form of radical is CVC: nearly 90% of the verbal radicals in Kafficho; in Somali. In Bedja, however, and uniquely in Bedja, it yields predominance to radicals of type CVC or CVCC. But analysis reveals that these roots are often derived from Semitic, and particularly from Arabic. The verbal system is based general on the fundamental opposition of two aspects: the incomplete and completed. Conjugation is of two types. In some languages, a certain number of verbs are conjugated by means of prefixed signs. This is the case with 'Afar, where this type of conjugation represents more than a third of all verbs, and especially with Bejiga, where it represents nearly two-thirds; but Somali and Agaw have only four verbs with prefixed conjugation. For all the other verbs and in all the other languages, conjugation is suffixal. Thus the verbal forms are constituted in principle according to one of the following two schemes:

A. Prefixal conjugation: sign of the person + sign of the aspect + root + desinence of the gender and/or number. Example: 'Afar: e-ba-ta-je "you know" (incompleted indicative); e-ba-ta "you know" (completed or perfective)

B. Suffixal conjugation: root + sign of the aspect + mode + desinence of the gender and/or number. For example: Bejiga: idm-ina "you (fem.) eat" (completed indicative); idm-ina "you (fem.) ate" (completed or perfective); tani-2i "(if) you were eating" (modal).

These schemes are capable of minor modifications in various languages. In particular, attention is drawn to newly-developed forms by means of suffixed morphemes. The most frequently used variable morphemes are:

— for the gender and number: f for the feminine singular and n for the plural;
— for the aspect: a as the sign of the incomplete is often opposed to an antecedent vowel (a, e, i) for the completed or perfective, while the modal form is characterised by a; certain languages however, such as Bejiga or Agaw, present some slightly different situations from this point of view;
— for the expression of the persons, the paradigm is the following: Sing. 1. (a) 2. 3., masc. (v), fem. 1.; Plur. 1. a., 2., 3. (v). (The forms between parentheses are often represented by a). The identity of this system of signs with that of Semitic and Berber conjugation, whose very characteristics it presents (the same form in the singular for the 2nd pers. and the 3rd fem., distinct forms for the 1st pers. sing. and plur., the 1st pers. plur. being in addition deprived of the sign of number) has led to the positing of the probable hypothesis that the morphemes of aspect/mode which in the scheme follow these marks, are no more etymologically than short auxillaries conjugated by means of prefixes.

The completed: incompleted opposition, with possibly a modal form, does not exhaust the complexity of the Kushitic verbal systems. Periphrastic forms, constituted by means of auxillaries, often serve to add the expression of different aspect-temporal values, such as the near past, the pluperfect and especially the "continuous-progressiveness" or "concomitant". Examples: 'Afar: kalabah m-oin (incomplete + complete of a to "be") "you were engaged in looking; you were looking"; Somali: saa- "he is engaged in eating".

As regards their conjugation, the languages of the Omo have a separate place in the Kushitic group. The scheme there is also suffixal, but the morphemes used and their modes of combination are peculiar to them. For example, Ometo: and sig, incomplete ed-dsa "you know", complete ed-dsa "you know".

The Kushitic languages distinguish various secondary verbal themes by added signs. A first method of derivation is partial or total duplication of the radical which gives the roots intensive or frequentative value: Agaw (Bilina): daba "to cover": dababa "to cover completely"; Sidamo: hht "to shake": kubbub "to shake strongly"; Bejiga: ba'as "to turn": ba'bas "to turn and turn again"; Oromo: ba'b "to know": bebbe "to know well".

The second method is the fixing of signs to express the orientation of the process in relation to the subject: 'a (as) for the causative, t (at), n, r for the internal reflexive, the passive and the reciprocal. Hence in Bejiga: kipam "to extend" (intrans.), kipam-ad "to extend" (trans.); dir "to kill", se-dir "to have [someone] killed"; lam "to eat", lam-am "to be eaten": min "to shave", (male-fem. "to be shaved".

In Oromo: teb "to break" (intrans.), teba-s "to break" (transs.), beba-"he knew", ba'ba- "he understood"; arg- "to see", arg-am "to be seen". In Ometo: ke "to go out", ke-u- to cause to go out": kse "to sec", kse "to see".

One should also mention a type of verbal composition widespread in the majority of the Kushitic languages and which consists in the juxtaposition of
an invariable element (plain verbal radical, noun, interjection,ObjectName postposition, etc.) and of a verb meaning "to say": "Afar: kô y "to say ho" = "to roar", Sidamo: xwa y "slowly + to say" = to act slowly; Agaw: yik y "down + to say" = "to lower"; Oromo: ol gec "to say + up = to raise"; Oneto: xipi ga "hush + to say = to be silent". The Kushitic languages of the centre and east have various series of pronominal forms. One of them, called "emphatic", is used especially to act as a sub-
ject. Other forms generally suffix al serve to express clearly constituted by an invariable base with per-
sonal suffixal signs added: Sing. i.

He also made several journeys to Egypt, Sind, and other parts of the Muslim world, including Sumatra, Java. Among his students for almost twenty years (1051-701/1602-3) he travelled with his father to the Yemen, where he studied with various of the religious teachers, especially those with whom his father, Muhammad b. Yusuf had studied. An incident not specified in the sources disturbed him deeply, causing him to return hurriedly first to Mecca, and then to Medina, where he continued to study from some of the great mystics of Indian origin, especially al-Shamawi and 'Abd al-Malik al-Hasani, and through them, the works of al-Ghazali and his students. He was affiliated to several mystical orders, including the Nakhshbandi, the Kadiiri and the Naqshbandi. He attracted numerous students, and enjoyed a reputation for extraordinary humility. He is of particular importance because of the character of his transmission of the doctrines of the school of Ibn al-'Arabi [9.17], particularly as reformulated by 'Abd al-Karim al-Dilli [9.16] to various parts of the Muslim world, including Sumatra and Java. Among his students for almost twenty years (1051-701/1602-3) he was the Sunnati 'Abd al-Ra'uf of Singkel, and numerous Dāwī associates of whom we do not know the names. His pupil and successor as 'Aghṣal of the Sharī'īyya mentioned in the Kārānī [9.46], maintained his wide circle of students, and gives much information about him in his al-Amān (see Bibliography). It is worthy of note that Tahir, the son of his greatest student al-Kūrānī, was a teacher of Shāh Wall Allāh [9.46].

His works include Sar interpretations of hadīth, rare among Sar authors, who devote most of their exegetical skill to the Kūran. He was noted for the extent to which he associated Sarī'ī and hadīth quotations with his views, and his skill in presenting the isnād of every hadīth that he cited. A commentary on his own works translated into Portuguese by al-Abi al-Malik al-Sarī'ī's student Idrīs al-Kūrānī entitled Kuf al-Dāwī was rendered into Malay, possibly by his student 'Abd al-Ra'uf [9.46].

His books include hadīth, wa'il and tasawwuf number more than fifty. One has been published al-Simf al-maṣūdī fī wa'il al-dhikr, Haydarābād 1527. Other works, listed by al-Baghdādī, include Ḥādiyya Sar 'l-Insān al-maṣūdī li-'Abd al-Karīm al-Dāwī, al-Kūrānī al-wa'lī fī sharh hikam Ibn al-'Abī', and al-Kandālī al-taṣawwuf. He died at Medina in 970/1660-1, and was buried in the Eski cemetry.
selves, in the wars of conquest in Syria and "Irafc, and Caetani, dates their conversion to Islam (cf. the texts in arrangement with him; it is to this time that tradition against the kings of al-IJIra (cf. the texts in §a'a, especially in those against the Tamlm, the of the tribe of the Banu Sulayrn [...]. During the mother of Rayta bint Kunfudh b. Malik makes them brothers. Their genealogy is Kushayr b. Ka'b b. Rahiba b. 'Amir b. Sa'afa. Tradition makes the mother of Kushayr Rayya bint Kunfudh b. Malik of the tribe of the Banu Sulayn [?]. During the pre-Islamic period, the Banu Kushayr settled in al-Yamama were involved in all the wars of the 'Amir b. Sa'afa, especially in those against the Tamim, the Shayban, whose chief Hadjib b. Zaurâ was made prisoner by Malik b. Salama al-Khayr b. Kushayr, called Dhu 'l-Rukayba, at the battle of Diabala, and against the kings of al-'Irâfa (cf. Nekhède, ed. Bevan, 79, 404-5). After Muhammad's successes in central Arabia, the Kushayr joined with the other tribes of the 'Amir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion to Islam (cf. the texts in Caetani, Ammali, i, 297 [A.H., § 281]. Later they took part, without particularly distinguishing themselves, in the wars of conquest in Syria and 'Iraq, and settled particularly in the eastern parts of the Arab empire. In the Umayyad period they were very numerous and powerful in Khurasan, of which several Kushayr families were governors (among others Zaurâ b. 'Ukba, whose family possessed a very highly esteemed breed of horses). This Kushayr colony has as its founder and common ancestor Hayda b. Mu'fihiyya b. Kushayr, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Hadjar, Isâba, Cairo 1531, ii, 56, No. 1850; Abu 'Ali al-Sulaymî, in Goltzeh, Abhandlungen zur arab. Phil., ii, 97). On the other hand, we find in Muhammad, Kâmil, ed. Wright, 273, a similar longevity attributed to Dhu 'l-Rukayba, the Kushayr chief mentioned above, and indeed almost all the Kushayr families of note in Khurasan were recorded by history, belonged to the clan of Salama al-Khayr to which Dhu 'l-Rukayba belonged, and which seems to have been the aristocracy of the tribe. The Kushayr did not number many poets of note among them; the best known is Yâhid Ibn al-Tahâriyya who lived between the end of the Umayyad period and the beginning of the 'Abbasid period. The genealogical sources, and in particular Ibn al-Kalîlî, also mention other ethnic groups bearing the name Banu Kushayr, two of which belonged to the southern tribes of the 'Umman and the Aws (Ajamî). Ibn al-Kalîlî, in Ibn al-Kalîlî, Casdel, Couducu, Tab tot and Register, ii, 473; Wustenfeld, Genealogische Tabellen, D, 117 [Register, 140-1]; Ibn Dhouray, K. al-'Irâfa, ed. Wustenfeld, 181; Ibn Kutayba, K. al-Mu'afîr, ed. Wustenfeld, 43, ed. Ukasha, 89 and index. (G. LEVI DELLA VIDA)

**AL KUSHAYRî, the nica of two noted Khurâsân scholars.**

1. Abu 'l-Kasîn 'Abd al-'Amîn ibn Hâwazîn, theologian and mystic. He was born in 376/986 in Ustuwâ (the region of actual Kûchân [q.v.] on the upper Atrak), the son of a man of Arab descent (from B. Kushayr) and a woman from an Arab (from B. Sulaymân) dikham family. He got the education of a country squire of the time; adab, the Arabic language, chivâyîn (fortiety) and weaponry (islâm al-silâh). When as a young man he came to Naysâbûr with the intention to get the taxes on one of his villages reduced, he became acquainted with the Shifâ dâish Abû 'All al-Dâshkîl, who became his master on the mystical path. Later on he married Abû 'All's daughter Fatima (born 397/1007). Besides his mystical exercises, he studied fiqh with the Shifâ jurist Abû Bakr Muhammad b. Bakr al-D'lâ (d. 420/1029) in nearby Tâbil; he seems also to have visited the city of Marw n ilâh al-Islâm (Subkî, v, 158). In Naysâbûr he studied hadîm and naâilî fiqih with the Ashâarih scholars Abû Bakr b. Fârak (d. 406/1016) and Abû Dâhâb b. Istarfâmî (d. 418/1027).

After the death of Abû 'All in 405/1015, he seems to have become the successor of his master and father-in-law as leader of the mystical sessions (modâfûs al-tadhkirî) in the madrasa of Abû 'All (built in 397/1007), which henceforth was known as al-madrasa al-Kushayriyya (later on as madrasatul-Kushayriyya, "the madrasa of the Kushayrî family").

At an indeterminate date, al-Kushayrî performed the Pilgrimage in company with Abû Muhammad al-Duraydî (d. 450/1059), the father of the Imam al-Jârâmiyyâ, and other Shï'î scholars; during these travels he heard hadîth in Baghâd and the Hijâz. Probably after his return to Naysâbûr he held his first modâfûs al-imdâdî, i.e. session for the teaching of hadîth, in 437/1046.

After Naysâbûr had passed under the control of the Seldûks in 425/1036, al-Kushayrî was involved in the struggles between the Hâfizî and Ash'âriî-Shâfi'î factions in the city. In 446/1054 he issued a manifesto defending the orthodoxy of Abû 'l-Hâsân al-Ashâarihî, the document (preserved by Ibn 'Asfikî, Tabûsîn, 112-14; cf. Subkî, iii, 374; F. Halm, Der Wesir al-Kundurî, 224 ff.) was signed by the most renowned Shîtî scholars of the city. In 446/1054 the Hâfizî-Shâfi'î conflict broke out into a violent fitna, and al-Kushayrî was involved by his adversaries, but was rescued some weeks later by his partisans by force of arms. As a reaction to these events, he wrote his famous "Complaint", Shâhâyât ul-hîl us-sawma ibnîlm-nâlâm min al-mîrân (preserved by Subkî, iii, 399-423; separately ed. by Muhammad Hasan, see below), by which he defended al-Ashâarihî against the slanderous accusations of his adversaries (analysed in Halm, Der Wesir al-Kundurî, 224 ff.).

In 448/1056 al-Kushayrî went to Baghdad, where the caliph al-Kâhin commissioned him to teach hadîth in his palace. After his return to Khurasan he left Naysâbûr, now dominated by the Hâfizî faction, and emigrated with his family to Tûs, where he stayed until the accession to the throne of sultan Alp Arslân in 455/1063. When the vizier Nâmân al-Mulk re-established the balance of power between the Hâfizî and the Shâfi'î, he returned to Naysâbûr where he lived until his death. He died on 16 Rabî'II 456/30 December 1062 and was buried in his madrasa beside his father-in-law Abû 'All al-Dâshkîl. He left six sons and several daughters; some of his numerous descendants (cf. the pedigrees in Bulletin, Patricianifs, 189-4; Halm, Ausbreitung, 61) officiated as hâfol of the Shï'î Manî's mosque in Naysâbûr.

Even if al-Kushayrî's studies covered the whole scale of the traditional Islamic sciences, his writings...
mostly deal with mystical topics. His great mystical text, the *Lāhāf al-ʿumār*, was composed between 410/1020, the *Tarīb al-ʿulākh* is an introduction to the practice of *tasavvuf*, and the famous *Rāsūl* (composed in 439/1049) is a most important compendium of the principles and terminology of *tasavvuf* (analyzed by E. Hartmann). In all his works (cf. Subki, v, 150; Brockelmann, I, 536 ff.) al-Kūshayrī tried to reconcile mystical practices, suspected by so many scholars, with the principles of the Shariʿa.

His principal treatises comprise the s. *al-ṣūra* and the s. *al-battīj*, as well as an astronomical treatise, the *Uṣul bīḥāb al-Ḥind*. His astronomical tables mark an advance on those of Abu ‘l-Ḥawāf and al-Battānī. Whereas the latter only indicate the values of sines and the cotangent, Kūshayrī also gives those of the tangent, and the values of these functions are given by him to the third sexagesimal.

His other great work, the *Uṣul bīḥāb al-Ḥind*, contains the first description of the “Indian system of calculation”, i.e. of the system of numeration by position (the value of the figures depending on their place in a number), which brought about a revolution in the ways of calculating used in the Near East. The work is divided into two parts. In the first, the author works out logarithms for the four basic arithmetical operations and for finding the square root. Whole numbers are treated within the decimal system, and fractions in the sexagesimal one. The second part deals with this latter system, already used by the astronomers, but set forth by Kūshayrī in a way of numeration by position. He shows how whole numbers can be converted from the decimal into the sexagesimal system, and then sets forth logarithms for the basic arithmetical operations, for finding the square root and for finding the cube root. Finally, he gives a famous multiplication table, called “the table of sixty”, for multiplying within the sexagesimal system. In these various calculations, he already makes use of the elementary rules for multiplying and dividing both positive and negative whole powers. As for the figures which he uses, for calculations made in the sexagesimal system, he uses the Arabic alphabetical characters, the *kurīf al-dīmnal*; but for those in the decimal system, the so-called “Indian” figures, the origin of what were later called “Arabic numerals”. Kūshayrī’s system of logarithms for finding the square root forms the basis for the theory of decimal fractions which was subsequently to be elaborated by al-Karaqī and al-Samaw’al.

KUSHKUSU (K.), a word probably of Berber origin meaning couscouss, a culinary preparation containing semolina which is the national dish of the peoples of North Africa. It appears with the article and with a final *n* in an anecdote depicting an Oriental being advised by the Prophet, in a dream, to treat with al-kūshkūs a sick Maghribī; this anecdote, related by Dozy (*Suppl., s.v.*), is very well known and is probably responsible for leading Moroccan scholars to adopt the form attributed to the Prophet. L. Bauer (*Wörterbuch der arabischen Umgangssprache*, Wiesbaden 1957, 402), heard the Prophet. L. Bauer (*Wörterbuch der arabischen Umgangssprache*, Wiesbaden 1957, 402), heard *harkous* or *kushkous* in Palestine, describing it as *Teigkügelchen in Fleischbraten gekocht*. Couscouss was known in Spain, and the word *kuskous* is provided with the article in the *Kūsh al-Ṭabāk* published by A. Husi Miranda (*Madrid 1965, 84*), but this is a case
of an arabization which is not found in vernacular Arabic, where the word never takes the article; sifaa, kuskus, ksish, kussi, etc., which betrays its non-Arabic origin. The equivalent term among the majority of the Bedouin tribes of Algeria and at Tlemcen is fohn used alone, elsewhere it is 'ayy, wa'dh, or mfr.' all of which illustrate the importance of couscous in the minds of the people, especially those in rural areas, who make it the invariable staple of their evening meal.

The quality and the weight of the grains as well as the presentation of the dishes offer a considerable diversity, which is covered by the generic terms cited above but which is expressed by means of a detailed and extremely varied vocabulary according to regions. We confine ourselves here to a description of the general processes.

Couscous may be prepared at any time, but it is exclusively the work of women: some choose out of the land, etc., to one side, a receptacle containing lightly salted water and a sack in a bod omen; on the contrary, it is the custom to must not see or hear anything that might constitute an evil omen; on the contrary, it is the custom to make an invocation and she makes an invocation and she baraka [q.v.].

To make her couscous, the woman sits on the ground, using, in front of her a wooden plate called disjua, gisja, kbsryia, etc. and, to one side, a receptacle containing lightly salted water and a sack of semolina: in some regions, a little flour is also used and to the salted water are added a few drops of niski water (rain of early May preserved in a flask). The housewife takes a handful of semolina, puts it in the plate, sprinkles it with salted water and a little milk; she puts the couscous in a special receptacle (krsku), a conical vessel made of earthenware or plaited alfalfa, the base of which is perforated, smaller base of which is placed over the cooking-pot and sealed by means of a twist of straw.

Escaping, the steam passes through the bo'cs and the colour rises to the top. The grains, which arc generally finer, are then cooked in steam and may be kept for some time.

In a cooking pot perforated, smaller base of which is placed over the cooking-pot contains only water; once cooked, the grains, which arc generally finer, are then cooked in steam and may be kept for some time.

When they are to be eaten, the housewife cooks them for a second time. In a cooking pot (hashra), she boils water to which she adds vegetables (chick-peas, turnips, wild teasels, etc.) and/or mutton or beef sometimes browned in a little oil; she puts the couscous grains in a special receptacle (kuskas), a conical vessel made of earthenware or plaited alfalfa, the perforated, smaller base of which is placed over the cooking pot and sealed by means of a twist of straw. Escaping, the steam passes through the holes and cooks the couscous. The housewife takes care that no curds are formed, and when the grain is cooked, she turns it into a bowl, garnishes it with a little butter and moistened with a little milk; barbusha, made with barley semolina; this is called sisik in Morocco. The Kitab al-Talibah gives the recipe of fisuun which is prepared by cooking grain in gravy and which is sprinkled with cinnamon; it also mentions couscous with chicken.

Couscous is quite widely known at the present time, especially in France where it is found commercially in food factories and sold "pre-cooked"; conical vessels ("couscassiers") made of metal are also produced. Restaurants serve several varieties of this Mağdibi dish accompanied by a sauce strongly seasoned with pepper (masala herna; harissa).

Kuss r. Sa'da al-Iyadi, a semi-legendary figure of Arab antiquity pictured as the greatest orator of all the tribes (al-Iyadi, Babun, i, 52) and whose eloquence has become proverbial (ahlag min Kuss: al-Mayyad, MAjma'), i, 117-18: Imad al-Din al-Istakhani [q.v.] even formed an adjective rhyming with itadi in the title of his history of the conquest of Jerusalem by Saladin, al-Fath al-kussi (of Hussain inspiration). He is also an heroic figure, described as being also the poet, sage, judge, etc. par excellence of the Arabs of his time. His genealogy cannot be established with certainty, but the nearest to reality seems to be: Kuss b. Sa'da b. 'Amur b. Shurur b. 'Abd b. Mīlīh b. Aydān b. al-Na'mar b. Wālib b. al-Tamājān b. 'Awād Munāb b. Yǎjām b. ilbī b. Yūsuf (cf. Ibn al-Kalbī-Caskel, Tab. 174 and Register, ii, 471). Moreover, his very name poses a problem, since it is unique (cf. however the toponym Kuss al-Nāṭîfī, in Yahşi, iv, 97-8); although it is given without the definite article, it could well be connected with kuss and kussā and point therefore to a relationship more or less close to the Christian clergy. It is not impossible that Kuss had relations with the Christians of Najrān, but it is wrong to take him, as has sometimes been done, as the bishop of that town, perhaps on account of an assimilation brought about by the phrase "eloquent as the bishop of Najrān" (see e.g. al-Dībāj, Bayyān, iii, 88). Legend, which also credits him with a number of miracles, has it that he presented himself at the court of the Emperor of Byzantium, but he seems to have delivered his orations in the regions between Trak (where the iyād [q.v.] had been established, but had lost however their independent existence by the end of the Dīkhiliyya), the Highs and Syria. Nothing is known of the date of his death, which Cheikhho [Shārī] al-Nāṣirīyya, 211] fixes arbitrarily in 660 A.D., and, it is at Rūthīn, one of the dependencies of Aleppo, that his tomb was fixed, becoming the goal of a still much-followed pilgrimage in the 12th/13th century (al-Harasī, Ziyārah, 510; Yahōt, ii, 820; D. Soudrel, in Syria, xxii (1951), 89-107). Interred beside him were supposedly the two friends to whom he is said to have devoted an elegy (inj al-mete, and the rhymed-abadā) which is often
mentioned but attributed to various poets (al-Baghdädi, *Kušäna*, ed. Bäkäk, i, 261-8 — ed. Cairo ii, 66-79, of which *gulul* 92 is taken from this piece of verse, lists the possible authors in his long commentary; see also D. Soudrel, op. *laut.*, 205-11).

In fact, as well as in his eloquence—the specimens which are extant of this, in rhymed prose, being of very doubtful authenticity—tradition further ascribes to him a poetic talent and attributes to him an extensive course whose remnants are equaly suspect (they have been gathered together, with extracts from his homilies, by L. Cheikho, *Sharä' al-Nasä'ithyy*, 217-18).

He is counted amongst those who enjoyed longevity, having allegedly lived between 280 and 700 years, so that in the view of certain people he had even known the Apostles. But we have here the manifestation of a tendency of the traditionists to prolong considerably the lives of certain personalities of the past (see *mu'amman*). Although al-Süürüä (al-*Lahid al-manṣūr* i, 270-1) criticises the legend of Kuss, no-one doubts his historical existence, which seems to be attested by an *hadith* often given on the authority of Ibn Abäh. When receiving a delegation from the Bakr b. Wädi (whom the lyâd had joined), the Prophet is said to have enquired about Kuss, and learning that he was dead, to have received a passage from a speech which he had heard delivered at *Ukuf* and to have had someone (Abä Bakr or another person) reminded him of some lines of the orator-poet's which he had forgotten. He is even said to have exclaimed, "I hope that on the Day of Resurrection, he will return to life and form a people of his own". Al-*Džhir*, who is usually fairly prudent, remarks (Bayän, i, 52) that if the Prophet repeated his words, it was because Kuss upheld the concept of monotheism and believed in the resurrection. This is why he was quickly included in the list of the kanis (see *ratna*) and, even considered as an ascetic (al-*Džhir*, Bayän, i, 365). Ibn al-Abîh (Usä, iv, 204) and Ibn Hägdär (Iṣbä, N° 7340) cite him in their biographies of Companions, and although Ibn Išäkh and Ibn Hägdär do not mention him, "All b. Buçhän pays some attention to him in his *Sirà Halažiyya*, i, 210-12, 216-19.

Finally, tradition attributes to him the merit of being not only the first to believe in the resurrection, but also to have been the first to preach mounted on a camel or leaning on a sword or staff [see *fay khali*, *fay kuš*]. and even considered as an interval [see *fai khali*, *fai kuš*].

No comprehensive study of Kussä's works has yet been undertaken, nor there has been made any detailed evaluation of his contribution, certainly a significant one, to the progress of science. His services as a translator must surely rank at least equally with his original works. The biographers are unanimous in praising his skill as a translator of Greek works into Arabic, and in the light of the surviving translations their esteem seems to be fully justified. For example, although the original of Hero's *Mechanics* is lost, an examination of Kussä's Arabic version (Caëa de Vaux in *FA*, 9th Série [1893], Tome i, 386-472, Tome ii, 252-269, 420-534 = Arabic text and French translation) leaves us with little doubt that this is a faithful and sensitive rendering.

*KUSSÄ* (see 1845).
The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the south-east, north-east and north-west, by deep ravines and connected with the surrounding country on the south-east only by a narrow isthmus. The plateau itself declines rapidly from north to south. The Kasba on its highest point is 2,500 feet above sea-level, while the Marabout of Sidi Rašīdī not a mile away is only 2,700 feet high. Of the ravines which represent the moats of this natural fortress, the most remarkable is that which runs along the south-east and north-east faces of the plateau, at the bottom of which the Rummel (Wādi il-Ramūl) flows. This river runs along a narrow gully, a real cleft, the walls of which rise sheer up to a height of 500 to 600 feet, disappears for 1½ miles under three subterranean passages, through which the water has hollowed out, makes its exit in waterfalls and descends to the verdant plain of al-Hammāma. Across this gorge, above which on the right bank rises the plateau of Manṣūra (2,340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest. Al-Bakri (Description de l'Afrique, ed. and tr. de Slane, Art. text 63, tr. 131-2) mentions it, and al-Idrīsī (ed. de Goeje, in, 23) describes it as one of the most remarkable works which it had ever been granted to see. Consisting of two rows of arches, one above the other, 217 feet high, a road and an aqueduct bringing the water necessary for the town ran across it. It collapsed in the 7th/8th century, was rebuilt in the 18th by order of Sīdī Bahī, under the supervision of a Spanish engineer, and on finally breaking down in 1947, it was replaced by an iron bridge 423 feet long crossing the Rummel at a height of 528 feet. Another bridge is, farther up the river, to connect the plateau of Manṣūra with the quarters previously in existence to the southwest of the town.

This last preserves an originality of aspect which is in striking contrast to that of other Algerian towns. It resembles a great Kabylc village rather than a city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow, tortuous streets, which sometimes descend like stairways to the edge of the ravine, the heights of which are crowned by houses. A few monuments recall the past history of Constantine. The great mosque dates from the time of the first Hafṣids sovereigns (7th/8th century). The mosques of Sīdī al-Qāzālī, of Sīdī Lakhdar and of Sīdī al-Kattānī, all of which were built in the 18th century, belong to the Turkish period, as does the palace built by Ahmad, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by autochthonous peoples. The classical texts mention the existence of a town named Cirta at this place. The origin of the name (Kurti "town" [see Kārya]) would lead one to suppose that the Carthaginians had established a colony there. In any case, Cirta appears in the period of the Punic Wars as the capital of the kings of Numidia; Syphax had a palace there. Masāissā and his successors erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the 1st century B.C., P. Sittius Nucerianus, an adventurer, seized Cirta and on the latter's ultimate triumph received the town and territory. Cirta then became a Roman colony under the name of Colonia Cirta Julia or Cirta Sittianorum. Juba II made it his capital after the restoration of the kingdom of Numidia by Augustus and lived there for seven years (44-47 B.C.), till he was forced to exchange Numidia for Mauritania. Cirta still remained the capital of the republic of the "four colonies", then in the 3rd century A.D. it became that of the province of Numidia Civilis or Numidia Cirtensis established by Maximianus Herculius in 297. In the course of the civil wars which followed the abdication of Diocletian, the inhabitants recognised the authority of the usurper Alexander and gave him asylum after he had been driven from Carthage and thus brought upon their heads the wrath of Maxentius. The latter took Cirta and razed the town to the ground in 311. It was rebuilt in 313 by Constantine, the conqueror of Numidia, and received the name of Constantine which it has retained to the present day. At the Vandal invasion, Constantine was occupied by the barbarians, but given back in 441 by the Emperor. After the destruction of the Western Empire, Constantine remained independent, till the Byzantines, victorious over the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chroniclers are silent as to the date at which it fell into the hands of the Muslims. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the 1st/2nd century at the same time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of Hikāya, Constantine owned the rule successively of the governors of Cirta, the Ashkāls, the al-'Azīzīs, the Zirids, then the al-Mu'aḍīds. The latter retained it even after the Hāmamīds had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hīlāl invasion. The Hāmamīd al-Mu'aḍī made a new start of their troubles to seize the town and include it among his own possessions. The successors of al-Mu'aḍī retained the town for a century in spite of a revolt instigated by the uncle of the amir al-Nāṣir. After the capture of Bougie by the Almohads, Yahyā, the last king of Bougie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to Abī al-Mu'āzīn whose troops took possession of the town. Attacked unsuccessfully by Abī al-'Arīf as-Sāhibīya in 531/1135, Constantine then remained faithful to the Almohads till the final collapse of the empire founded by Abī al-Mu'āzīn.

At this period, Constantine was a very prosperous city: "Kustantina", says al-Bakrī (op. cit., 63, tr. 131-2), "is a large and ancient town with a numerous population; ... it is inhabited by various families who were originally part of the [Berber] tribes established at Mila, in the land of Nafṣīwa in that of Kaṣīfliyya, but it belongs to certain Kūṭāl tribes. It has rich bazaars and a prosperous trade". Al-Idrīsī describes Constantine (Kusantīnāt al-hawāf, "of the air"), because of its position as a populous and commercial town. "The inhabitants, he continues, "are rich; they have agreements with the rural population (al-'Arāḍ) and co-operate with them for the cultivation of the soil and the preservation of the harvests."
Their silos are so good that corn may be kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to the outside..." (loc. cit.).

When the Almohad Empire broke up, Constantine recognised the authority of the Hafsid Abū Zakariyya, who was proclaimed at Tunis in 628/1230 (see n. 995). The history of the town under the Hafṣids (7th-10th/13th-16th centuries) is very confused. The latter, however, took great importance to the possession of Constantine; they frequently lived there and delighted in improving it; they usually entrusted its government to princes of their own family. Nevertheless, in spite of their precautions and trouble they lost it on several occasions. In 681/1282, for example, in the reign of Abū Ishāq, the governor Ibn al-Waṣir rose against the sovereign of Tunis, whom he had to send his son, Abū Fāris, to retake the town by force. In 683/1284, its inhabitants opened their gates to the pretender Abū Zakariyya of Bougie; in 704/1305 at the suggestion of the governor Ibn al-Amīr, they submitted to the Hafṣid sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the king of Bougie, Abu l-Bakr. The latter succeeded in restoring to his own advantage the unity of the Hafṣid kingdom in 709/1309 and for some years maintained peace in the eastern Maghrib. But new troubles were not long in arising. From 712/1312 to 719/1319, Constantine was almost independent under the authority of the vizier Ibn Ghānū, who succeeded in placing on the throne of Tunis a prince of his own choosing, Abū Yāḥyā. In 725/1325 the revolt of another vizier, Ibn al-Kāṭūn, exposed the inhabitants to an attack, which proved unsuccessful, from the Abū al-Wāḍīds. The wars which then broke out in the eastern Maghrib between the Marinids and the Abū al-Wāḍīds, as well as the good government of the governors Abū ʿAbd Allāh and Abū Zayd, son and grandson of Abū Yāḥyā, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with difficulty, was again broken in the middle of the 8th/14th century by Marinid expeditions. Abu ʿl-Ḥasan entered Constantine without striking a blow and supplanted Hafṣid authority by his own in 748/1347. The defeat of Abu ʿl-Ḥasan at Kayrawān brought about a revival in favour of the Hafṣids and one of them, al-Ḥāḍir, took advantage of the occasion to seize the town. He held it for only a short time. The former Hafṣid governor, Abū Zayd, set at liberty by Abū ʿl-Ḥānīn, retook Constantine, then abandoning his protector, proclaimed as Sultan a son of Abu ʿl-Ḥasan named Ṭāfṣīfīn. Soon afterwards, Abū Zayd's brother, Abū ʿl-Abbās, overthrew him and deposed Ṭāfṣīfīn. He in his turn took the title of Sultan, repulsed the Dawwārida and Sadawahkī Arabs, who had laid siege to Constantine in 756/1355, but could not prevent the town being taken by Abū ʿl-Ḥānīn, who came in person against it. He regained it from the Marinids in 761/1359. Becoming Sultan of Tunis in 772/1370, Abū ʿl-Abbās maintained peace in the province of Constantine till his death. His successor Abū Fāris had on the other hand twice to reconquer the province from his brother Abū Bakr, who had seized it with the help of the Arab tribes.

We have no exact details on the history of Constantine in the 9th/15th century. Revolts against Hafṣid rule were, it seems, less frequent than in the preceding century, but its authority was more nominal than real. During this period, the real masters of Constantine were the chiefs of the Awšād Sala, a section of the Arab tribe of Dawwārida. In the town itself the exercise of authority was in the hands of a few families, clients of the Awšād Sala. Such, for example, were the family of ʿAbd al-Muṭṭān of Marabout origin, whose chiefs exercised by hereditary right the functions of ṣāḥib al-Ṭāfarīn and Ṣaḥib al-Rabab (leader of the caravan of pilgrims to Mecca); the family of the Banū Shālīs, whose members had arrogated to themselves the duties of ḥāšī; and that of the Banū ʿl-Faggūn (or Ḥaḍān), famous as legal authorities.

The arrival of the Turks in Northern Africa reopened an era of troubles for Constantine. There were two parties in the field. The one, led by the ʿAbd al-Muṭṭān, was favourable to the maintenance of Hafṣid suzerainty; the other, led by the Lāqūn, invited the Turks thither. According to Vaysset, a first attempt by the Turks to occupy the town was made as early as 929/1520. The submission of the town was only an ephemeral one, however, for in 932/1529 the representatives of the Hafṣid sovereign of Tunis was rejected by the town. It is not till 1634 that the establishment of a garrison definitely marks the occupation of Constantine by the Turks. Their authority was not firmly established without difficulty. The belated partisans of the Hafṣids did not bow at once to the Turkish yoke, but sought to rid themselves of their new masters. In 951/1547 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muḥammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest rigour. The ʿAbd al-Muṭṭāns who had instigated it, were deprived of their privileges, and from that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1652/1652 taking advantage of the difficulties caused to the Turks by the revolt of the Kabylies and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the beylik of the East in the 10th/16th century, Constantine enjoyed complete tranquillity for the half century following the period of government of the Bey Farḥāt (1049-1057). But the intervention of the Algerians in the affairs of Tunisia ended in exposing Constantine to the reprisals of its neighbours. In 1112/1700, Murād Bey of Tunis, victorious in two battles against ʿAy bīdān Bey of Constantine, laid siege to the town and blockaded it for three months. The Bey of Algiers at length received warning of the precarious situation of the town by a messenger, who had succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not dare await.

The 18th century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather than as docile representatives of the Day of Algiers. Such were Kāyān Ḥasan Bey, called Bē Kamya (1713-36), Ḥasan b. Ḥusayn called Bū Nāṣir (1736-54), ʿAlī al-Kālid (1756-71) and above all Śāhī Bey (1771-92). Constantine owes to them many public works and buildings of general interest. Bē Kamya built the
mosque of Sûlî al-Ghazâl; Bî Hanak made new streets and built the Mosque of Sûlî Lakhâdar. Sûlîh Bey rebuilt the bridge over the Rummel and the Roman aqueduct bringing the waters of the Diobal Wâligh to the city; he also built the mosque and madrasa of Sûlî al-Kattâni and commissioned Italian artisans to build a palace adorned with faïences and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Sûlîh Bey himself, deposed by the Bey of Algiers, to whom he had given offence, tried to stir up a rebellion but perished miserably. Seven Beys ruled Constantine in the period 1792-1826. Some of them only held office a few months or even a few days; almost all were distinguished by their cruelty and rapine. Constantine suffered much from this state of affairs. To the internal disorder were soon added attacks by the surrounding peoples. The Kaybîl hordes of the Marabâcit (Ibn al-Arabî Sûlûyâmân Khâyya) rose against the Turks and advanced up to the walls of Constantine in 1804. A Tunisian army commanded by Sûlûyâmân Khâyya besieged the town three years later. It was blockaded for two months (April-MAY 1807) and was once bombarded. The approach of a relieving army from Algiers caused the Tunisians to raise the siege, and in their retreat they lost 3,157 prisoners and all their artillery.

Almah, the last Bey of Constantine, possessed those qualities which were lacking in his predecessors, Intellectual, active, ambitious and energetic, he unfortunately made himself hated by his acts of cruelty and by the exactions levied by him to raise funds to build a palace in Constantine to replace the old Dâr al-Bey. After the French occupation of Algiers, he sought to profit by the disappearance of the qâdî to create an independent princedom in the east, and had the title of Feđhkî given to him by the Ottoman Porte. Deposed by a decree from General Clauzel on 15 December 1830, he nevertheless retained possession of Constantine. The hesitation on the part of the French government, which tried to come to terms with him for his voluntary submission and after the failure of these negotiations did not wish to enter on a dangerous campaign, delayed his fall. But in 1836, Marshall Clauzel, then governor-general of Algeria, obtained permission to undertake an expedition against Constantine. Leaving Bone on 2 November, the French troops arrived without difficulty in sight of the town and took up a position on the heights of the Mansûra and of the Kudîya. Two sorties by the besieged, led by Ibraîîm Khâlîsa of the Bey, were repulsed; on the other hand, two attacks by the French in the night of the 22-3 December also failed. Clauzel decided to raise the siege and returned to Bone after a retreat which was rendered very difficult by bad weather. This check was made good by the French in the night of the 22-3 December also.

The campaigns of the Arabs against Constantine. It is said that the Prophet himself had foretold the conquest of Constantine by the faithful. The Ottoman historians adduce the following hadîth: “You shall conquer Constantinople; peace be upon the prince and the army to whom this shall be granted!” (‘Ali, Khân âl-zâhir, v, 252; Solakzâde, 104; Ewliyâ, i, 32, 73; ‘Allî Sâîfî, Hâdíkat al-jâzîmi, i, 2); Suûyîlîs al-Dîrânîs al-sâghîn is given as authority; older references are wanting. As a matter of fact, the Umayyads set about this enterprise with the energy and vigour that inspired the early warriors of Islam. In the year of the world 646 (beginning 2 September 655), according to Theophanes, 344 a fleet was equipped in Tripolis ‘against Constantinople’, which under the leadership of Khârûn ibn Bûr b. Abî Arfat defeated the Greek fleet at Phoënix (Finolis) on the Lycian coast (see †† 147 AL-SAWâDI in Sâbîl), but did not reach Constantinople; at the same time, Mu‛âwiya had invaded Byzantine territory by land.

In the year 446/654 took place the campaign of †Abd al-Rahmân b. Khâlid, who advanced as far as Pérgamon; the admiral Bûr b. Abî Arfat, according to Arabic sources, is said to have reached Constantinople (Tambîri, ii, 86).

In the course of the next year, Fâdîl b. Ubyad advanced as far as Chalecand, and Yazîd, son of Mu‛âwiya, was sent after him (according to Theophanes, in the year 659 of the world, beginning 1 September 666; according to Eilias of Nisibis, Yazîd
appeared before Constantinople in 53/672; a fleet commanded by Busr b. Abi Arêtái supported this enterprise. In 672 a strong fleet cast anchor off the European coast of the Sea of Marmora under the walls of the city. The Arabs attacked the town from April to September; they spent the winter in Cyzicus and renewed their attacks in the following spring until they finally retired "after seven years' fighting."

A great part of the fleet was destroyed by Greek fire; many ships were wrecked on the return journey (Theoph., 333 ff.). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 47/667 and the fleet to have finally retired in 53/672. The Arab historians vary between the years 48/669 and 52 and place the death of Abü Ayyûb in the year 50, 51, 52 or even 53. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unaccountable.

This siege has acquired particular renown in the Arab world, as the Anjârî Abû Ayyûb Khalîlî b. Zâyd fell in it and was buried before the walls of Constantinople; the finding of his tomb during the final siege by Muhammad II was an event only comparable to the recovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of Abû Ayyûb is first mentioned by Ibn Kûtyûba, 740; cf. Tabârî, iii, 3232, Ibn al-Athlr, ii, 351, Ibn al-Djawzî and Kâzûnî, 408, the Byzantines respected it and made pilgrimages to it in times of drought to pray there for rain (îyûbû); the Turkish legend is given fully in Lemuclavius, Hist. Mus., 43 ff. and in the painstaking monograph by Hâjjîl 'Abd Allâh, al-ATHLR al-madîdiyya fi l-mawâdîh al-khalîdiyya, Istanbul 1257.

There was a truce for over 40 years between Byzantines and Arabs until in 97/157-16 Sulaymân b. 'Abd al-Malik came to the throne. A khâdîjî was at this time current according to which a caliph who should bear the name of a prophet was to conquer Constantinople. Sulaymân took the prophecy to refer to himself and equipped a great expedition against Constantinople. His brother Maslama led the army which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Abydos and surrounded Constantinople. The Arab army attacked partly near the walls on the coast of the Sea of Marmora and partly in the Bosphorus; the Golden Horn was barred by a chain. The siege began on 23 August 716 and lasted a whole year; Maslama then himself forced to retire owing to the attacks of the Bulgars and the scarcity of provisions (Theophanes, 386-99; full details in Ibn Mishkawayh, ed. de Goeje, 24-33; cf. also Tabârî, ii, 1314 ff.; Ibn al-Athlr, v, 17 ff.; cf. the vivid account in Gezer, Pergamum under Byzantines and Saracens, 49-74).

There are many references to Maslama's hazardous march among the later Arabs. Even several centuries later they knew of "Maslama's Well" at Abydos, where he had encamped (Masûdî, ii, 317 = 728; Ibn Khurradûdîbîn, 104) and the mosque built by him there (Yâkıî, i, 374). 'Abd Allâh b. 'AYûb, the first Muslim to lead an attack on the "Gate of Kusânîfînîya" was one of Maslama's commanders (Ibn Kûtyûba, 275). Maslama is said to have made the building of a house near the Imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Constantinople (Mujaddâdî, 147; Ibn al-Athlr, x, 38; Dîmashqi, 227); finally, he is credited with building the Tower of Galata (Dîmashqi, 228) and the 'Arab Qubârî in Galata (Hâджî Khalîfî, Takbîm al-ta'mawirîh, year 97 A.H.). Ewêliyà and his sources have made two sieges out of Maslama's campaign and embellished their narrative with incredible stories. Nurekî (d. 1044/1634) discusses Maslama's campaigns in the fourth section of his Penatîs, following, to he says, Muhûlî 'l-Dîn al-'Arâbîl Mu'ammarî.

Only on one other occasion did an Arab host appear within sight of Constantinople, namely in 165/782. Hârînî, the son of the caliph al-Mahdî, had marched through Asia Minor unsupported and encamped at Chryssopolis (Securî). The Empress Irene, who was acting as Regent for her son Constantine, hastened to make peace and agreed to pay tribute (Theophanes, 455 ff. under the year 652 of the world [81-2]; Baladhûrî, 168; Tabârî, iii, 504 ff.; Ibn al-Athlr, vi, 44; year 165/782-3). Ewêliyà and his authority (Muhûlî 'l-Dîn Dîmashqi, died 957/1550 according to Ricou, Catalogue, 46) have made no less than four regular sieges of Constantinople out of the campaigns of the Arabs under al-Mahdî and Hârinî against the Greeks. After the second, Hârinî gained a quarter in the city by a trick similar to that by which Dîdî gained the site of Carthage (Leunclavius, op. cit., 544; Ewêliyà, i, 81 = Travels, etc., i, 23); the same story is given by Clavijo, 43, of the settlement of the Genoese in Galata, and Ewêliyà, Travels, i, 56, of the building of Rumelî Hisrî by Muhûlî 'l-Dîn.

The Arab accounts of Constantinople date from the 9th/15th century. They considered the Dardanelles, the Younger, and the Bosphorus as a single "canal" (khâdîjî), connecting the Mediterranean with the Black Sea. Iççali and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Constantinople in time of war, that is referred to. The two double walls of the city with their towers and gateways, including the Golden Gate, the Aya Sofya, the Hippodrome with its monuments (notably the Egyptian obelisk), the four brazen horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantine" (really of Justinian, the so-called Augustus) are described by them in many or less detail. Ibn Hawqal and Mukkâdîs devote particular attention to the Praetorium where their countrymen, prisoners of war, were kept under a mild custody and to the mosque attributed to Maslama (Yâkıî, i, 709, s.v. Bâlî, and Constantine Porphyrogenitus, De carmonii, i, 392, 767). The most detailed account is that of Ibn al-Wardî (8th/14th century); he mentions the bronze Obelisk of Porphyrogenitus, the Pillar of Arcadius and the Aqueduct of Valens and also knew that the Golden Gate was closed. Ibn Battîtî (ii, 434-44) described from his own observation the monastic life of his time; the latest notices are given by Frâsûbâdî (d. 917) in his dictionary the Kâmînîs.

Apart from prisoners of war, numerous Muslim merchants and envoys from the caliphs and other Muslim rulers sojourned in Byzantium; the Mamlûk Sultânîs occasionally banished thither troublesome persons with their families; Sâliîjî Sultânîs and pretenders (Kâbid Arslân i, Kaykâwûs ii) repeatedly spent long periods in Constantinople; remarkable details of their life in the capital are given by Byzantine writer and in the Sâliîjî historians.

No definite traces have as yet been discovered of the two sieges by the Arabs and the residence of Arabs and other Muslims in Constantinople; in particular, the mosque of Maslama has not come to
light; it is first mentioned by Const. Porphyri. De adn. ch. xxii (Bonn Corpus, 101, L. 22); it was destroyed in a popular rising in 1200 and plighted by the Crusaders in 1252 (Nicetas Choniates, 469, 211, ed. Bonn). According to Ibn al-Athir, ix, 380, cf. x, 18 (whence Abu 'l-Fida derives his information), it was restored in 441/1049-50 by Constantine Monomachos at the request of the Saldjuk Toghtil Beg. According to Makrizi (i, 177, ed. Quatremer), Michael VIII Palaeologus built a mosque about 660/1261-2 which the Mamall Su1tan Baybars equipped in splendid style. The accounts of the 'Arab Djéfi' and other buildings by the Arabs in Constantinople belong to the domain of fable.

3. AFTER THE OTTOMAN CONQUEST [696 ISTANBUL].

KUSTENDIL, KUSTENDIL (in Serbian: К宁夏иниа - К宁夏иниа), a town of some 35,000 inhabitants in Western Bulgaria. It was in the Serbo-Bulgarian Middle Ages a small fortified stronghold on a hill above the wide plain of Kustendil, serving as a princely residence, and was known as Velbukh. In Ottoman times it was capital of the sandjak of Kustendil, and an Islamic cultural and administrative centre of some importance. The town is the indirect successor of the Roman Pautalia, of which substantial remains have been unearthed.

The Ottoman chroniclers Sa'd al-Din and Mulledjimbashi mention that the ruler of the land of Konstantin (the son of the Serbian nobleman Degan) accepted Ottoman ovelordship in 773/1372-2, after the latter had captured the strategic fortresses of Ilkhan and Samokov. Neshri mentions Konstantin among Murad's vasals during the Karaman Campaign. A Šahkipašažade, Oruç Beg and the Anonymus Giese do not however mention the acquisition of the land of Konstantin. This prince married Helena, the daughter of the Bulgarian Tsar Ivan Alexander (their daughter married Manuel Palaeologus, emperor of Byzantium), and died as a loyal Ottoman vassal in the battle of Beblik in 1355 against the Wallachians (975/1555). He left no suitable heir behind. The memory of the princely couple is perpetuated by the monastery of Poganovo in the ravine of the Ernie north of Kustendil, today just across the Yugoslav border. Konstantin's lands, including the towns and castles of Stip, Radomir, Petrič, Melnik, Vranje and the rich silver mines of Kratovo (places today partly in Yugoslavian, partly in Bulgarian territory), were transformed into an Ottoman sandjak, known as Kostadin-ili, the land of Kostadin. There are some traditions that the Bulgarian population rose in revolt in the difficult years of the Fetret Dewri and around the time of the accession of Murad II. The fortified town had already been retaken, after which it was dismantled. The unreliable population was transferred to the neighbouring villages. Whether true or not, it is at least certain that in the time of Murad II a new open town was founded below the "Castle Hill", grouped around a mosque, a caravanserai and a school. The new settlement became known as Ulîba-yi Kustendil, or Ulîba in Turkish, Konstantinova Banja or Velbukha Banja in Slavic. The Turkish town Kustendil appears to be a corruption of Kostadin-ili.

At the end of the 17th/18th century and the beginning of the 18th/19th century, important groups of Turkish colonists from Asia Minor were settled in the sandjak of Kustendil. According to an Ottoman census from the beginning of the 18th/19th century, these groups numbered 6,460 families. The Christian section of the population then comprised 56,988 families. According to the census of 1829, the city itself consisted of a Muslim population of 293 families and 60 bachelors, as well as 47 Christian families, six bachelors and eight widows, perhaps altogether 1,800 civil, non-administrative inhabitants. In spite of this relatively small size, Kustendil appeared in 1499 to the widely-travelled Rhenish knight Arnold van Harff as "eine grossen schöne Stadt". This source also remarks that "Wruskabalna" (Velbukha Banja) had a palace where the sultan kept a number of his wives. At the beginning of the 20th century, Jordan Ivanov still saw a "Seray Kaliesi", situated next to a fine basin (hamam) built and paved with large slabs of marble. Tower and basin were situated in the "Seray Mahallesi".

In the 19th/20th century, Kustendil witnessed a rapid expansion. In 1863/1559 an anonymous Italian traveller described it as a town with "about a thousand houses, built in the Turkish manner, many mosques and quite a number of baths. The town is inhabited by Turks and some Jews...". We passed the night in a 'Khan, called Imaret, which in our language is an inn. A Sandjakbeg ordered the construction of this very convenient building for the traveller and stranger, for the salvation of his soul." During this century, a number of military commanders and members of the administration erected a considerable number of mosques and caravanserais, and opened up mineral baths. Mehmed-i 'Aşik-i in his Menâsrî'vl-vâslâm (Hafiz Eleni, No. 616, i, fol. 212a) noted in 997/1589 twelve mineral baths, many with stone-built domes over the disrobing section and over the bathroom proper, others even with separate rooms. The most beautiful was the so-called Beg Binjasli. In 894/1489 the beglerbeg of Rumeli, Khâdîm Suleymân Pasha, had erected a large domed mosque and a double bath in the city, and had laid out a water supply system which brought good drinking water from the village of Bogoslovia some 4 miles away and distributed water to the houses. The villages of Bogoslovia received a privileged status as sâ-i-polîdî. The sâ-i-polîdî deyti of 925/1519 also attributes an imaret and a number of shops to this governor. (The mosque, very similar to that built by Khâdîm Suleymân Pasha on the banks of the Tundja in Edirne, was demolished shortly before the Second World War.) Other important buildings were the Imaret Djami, with
caravanserai, madrasa and baths, erected in 937/1532 by Mehmed Beg (the building was often confused with the mosque of Murad II; see Ayverdi, Osmanlı mimarisiye Fatih devri, iv, Istanbul 1974, 806, which enumerates and continues the old mistakes). The mosque was demolished in 1949. Other 10th/11th century buildings, happily preserved, are the Dervish Banya from 973/1566 and the large mosque of Ahmed Beg from 953/1557-8, this last now serving as a local museum.

According to the Ottoman census register of 981/1573, the town then numbered 623 Muslim households, 84 Christian households, 28 Christian bachelors, 14 widows and a Jewish community of four families. The whole population, including the members of the administration and their families, amounted perhaps to 4,000 souls. By then the number of Muslim madrasas had risen from six (in 925/1519) to 21, the number of imams of mosques from seven to ten. An Ottoman Diyet register (Türkî i lüzuri va Edilgârska Istoriya, ill. Sofia 1972, 129-50) from 981/1573 gives a fair cross-section of the composition of the town’s population. A total of 57 Muslim diyebs are registered against six Christians, all given by name, patronymic and profession. Both groups were almost all craftsmen, leatherworkers, smiths, meûids, idécéafs, goldsmiths, shoemakers, soapmakers, carpenters, etc. Out of the number of diyebs in the villages of the kadı of Kustendil, 558 were Christian against 20 Muslims, from which may be concluded that the Bulgarian Christian element continued to be the bulk of the rural population.

In the 11th/12th century, the development of Kustendil apparently stagnated. The city had suffered badly from earthquakes in 993/1585 and 1093/ 1631. Ewliyya Çelebi (Scyafa-hâ-nâmé, vi), who visited it in 1071/1660-1 and left his signature on the front wall of the Ahmed Beg Mosque, counted eleven small madrasas with 1,100 houses, and he further made some important notes on the Islamic buildings of the city, among which he mentions a number of mosques, three madrasas, five tekkes, six schools and twelve mineral baths.

In March 1690 Kustendil was occupied by an Austrian force under Antonio Valerio Zî, which led to a considerable diminishing of the Muslim population. In about or after that year, the entire settlement was surrounded by a wall with towers and gates, and the Castle Hill was again fortified. A picture of these works, made at the end of the 17th century by the Dutch artist Harrewyn, is preserved in the "Fremien Kabinet" of the Amsterdam Rijksmuseum.

In the early 19th century, Kustendil recovered slowly. St. Denis gives the number of inhabitants in 1807 as 7,000. J. Hütz (Beschreibung der europäischen Türkei, Munich 1826, 259-41) gives the same number. Ami Boué (Histoire d’Orient, i, Paris 1826) counted 9,000 inhabitants, Bulgarians and Muslims. The Said-nâmé of the Têma Willkjeti of 1885-1886 mentions 16 mosques in Kustendil, three madrasas and 16 tekkes. When in 1878 Kustendil came within the frontiers of the newly-established Bulgarian state, most of the Muslim inhabitants emigrated. In 1890 Jireček (Das Fürstentum Bulgarien, Prague-Vienna-Leipzig 1891) counted in 1890 10,689 inhabitants, of which only 581 were Turks. Jireček still saw nine lead-covered mosques. Jordan Ivanov noted in 1908 ten mineral baths. Today (1979) only two mosques and one of the baths remain preserved, and the Muslim element is reduced to a handful of families.

Kustendil produced some Ottoman scholars and men of letters, such as Sandûzîzedâ Hâliet (d. 972/1566), Shemî Mehmed Efendi Kustendil, scholar, poet, and calligrapher who was for a long time muftî of the town (d. 1322/1556-5); and especially, Kustendil Mollaüzedâ Süleyman Sheyhi Efendi, for a long time sheykh of the Nağhibbandî convent of Kustendil, who left behind some 26 works including a History of Kustendil. The Nağhib Derşah, built by Süleyman himself, and in the yard of which he was buried, was demolished shortly after Bulgaria became independent.

The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It was at one time thought that this was a dragon, which ended at two opposite points on the globe of the heavens and had the same motion as the nodes of the moon. Eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the name for the crescent and waxing nodes, i.e., the points where the moon passes through the ecliptic, "head, al-nafs" and "tail, al-dzanab", which were retained long after the "dragon" had disappeared. The sign $\Omega$ for the length of the node is a distorted dragon. The astrologers credited this dragon with certain influences on the horse. But Severus Sebokht (ca. 650) (F. Nau, Notes d'astronomie syrienne, in Jaf, Ser. 1, 10, xvi [1907], 15) long ago denied this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Biruni's *Tafhim*, etc., the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates diminution of wealth, etc. The modes. But we still find in al-Biruni's *Tafhim*, etc., the idea comes the name for the crescent and waning nodes, i.e., the points where the moon passes through the ecliptic, "head, al-nafs" and "tail, al-dzanab", which were retained long after the "dragon" had disappeared. The sign $\Omega$ for the length of the node is a distorted dragon. The astrologers credited this dragon with certain influences on the horse. But Severus Sebokht (ca. 650) (F. Nau, Notes d'astronomie syrienne, in Jaf, Ser. 1, 10, xvi [1907], 15) long ago denied this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Biruni's *Tafhim*, etc., the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates diminution of wealth, etc. The modes. observations to be made (on the above scholars, cf. H. Suter, *Die Mathematiker und Astronomen der Araber, in Abhandl. zur Gesch. der math. Wissenschaft, x* (1900)).

To obtain a standard for measuring the amount of the eclipse, the diameter of the sun or of the moon, was divided into twelve equal parts, called “fingers” (tiba‘ or tiba‘ al-kusuf) and the number of these that were eclipsed was calculated. In the West one spoke of “digits”. In the same way, the surface is imagined to be divided into equal parts and it is calculated how many of these are eclipsed. The latter may be calculated from the former which refer only to length. Al-Battâni, for example, gives tables in connection with this. The duplo of Hipparchus was used to measure the magnitude of a lunar eclipse. Two rods are fixed at right angles to a rod. One with a small round hole is fixed and the other with a larger round hole can be moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount a of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, and the magnitude b of the shifting over the whole surface of the moon and their relation expressed as

\[ a : b = g : \frac{\pi}{2}. \]

**KÇT al-‘AMARA**, a place in al-‘Iraq (lat. 32° 30’ N., long. 43° 50’ E.), on the left bank of the Tigris, between Baghdád and ‘Amára, 100 miles south-east of Baghdád as the crow flies. Két is the Hindustani word Kät meaning “fortress” [see sówân] found in other place-names in al-‘Iraq, like Kät al-Mu‘ammar; Kät al-‘Amára is often simply called Kät. Kät lies opposite the mouth of the Shatt al-Hāya, also called al-Gharráf, the old canal connecting the Tigris with the Euphrates, which has several junctions with the Euphrates, e.g. at Náṣiríyá and Súk al-Shuyúkhi. The plains to the north of Kät are inhabited by the Baná ‘Alábá, a division of the great tribe of Baná ‘Alám [g.v.]. Kät is not an old town; it has been proposed to identify it with al-Madhár mentioned by Yākût (I, 275; cf. Le Strange, *Landis, 56*, and H. H. Schaeder in *Islam, xiv, 17*). In the beginning of the century and down to 1860 it was a miserable little village surrounded by walls of terre pisée (Kepple in 1824, according to Ritter; Petermann, *Reisen im Orient*, Leipzig 1860, I, 150). But after Messrs. Lynch obtained a concession for a line of steamers between Baghdád and Basra, Kät became an important station on the river; and the result was a considerable increase in its population. In the last period of Turkish administration (beginning 1865), Kät was the capital of a kâda‘ of the same name in al-‘Iraq. About 1860 the population was estimated at 4,115 (Cuinet), almost all Shí‘is (but including about 100 Sunnis and 100 Jews). The kâda‘ extends northwards as far as the mountains of Luristán [g.v.]. The plain at the foot of the mountains is watered by the river Kâlîd and contains several villages, the Turkish ownership of which was disputed by the Persian authorities. The population of the kâda‘ likewise grew after 1865, and about 1890 numbered 30,000, all Sunnis (except the population of Kät itself).

It was at Kät al-‘Amára during the course of the First World War that several thousand British and Indian troops were cut off by Turkish forces and compelled to surrender on 26 Dinâmáda II 1334/29 April 1916, after a siege lasting five months.

Kät was first taken by the Sixth British-Indian division under Major-General Charles Townshend in Dhu-l-Ka‘a‘a 1333/late September 1915. Continuing his advance northwards, in an ill-judged attempt to occupy Baghdád, Townshend was repulsed at Cressphon in late November by the Turkish Sixth army under Yüsuf Núr ad-Din Bey and forced to retire on Kät. Here he decided to stand, for the ostensible purpose of blocking a Turkish advance down the Tigris to ‘Amára, or by way of the Shatt al-Hayy to Náṣiríyá. In fact, however, his troops were exhausted, he was burdened with many wounded, and the Turks, under their new commander, Khalil Bey (later Paşa), were hard on his heels. If he had not halted at Kät, his division would almost certainly have been caught in the open and destroyed.

Kät was invested by the Turks on 27 Muḥarram 1334/5 December 1915. Townshend’s force consisted of just under 30,000 infantry and artillerymen (he had sent his cavalry south before Kät was encircled) and over 3,000 Indian non-combatants (cooks, drivers, etc.). A quarter or more of the fighting troops were sick or wounded. The Arab population of the town, which Townshend allowed to remain, numbered about 6,000. The besieging force was made up of one-and-a-half divisions (about 7,500 men) of the Turkish Sixth Army, whose total effective strength of something under 30,000 men was mainly disposed between Kät and Sháykh Sa‘d, 30 miles to the east. Its tactical direction lay with Field-Marshal von der Goltz, head of the German military mission in ‘Iraq.

Desperate endeavours were made by the main body of the British expeditionary force between January and April 1916 to relieve the garrison at Kät. In a series of severely fought actions, notably at Sháykh Sa‘d, Hama and Dujiyála, the British and Indian troops suffered 23,000 casualties, while Turkish losses were estimated at 10,000. The British efforts were in vain, and in the last week of April Townshend asked Khalil Paşa for terms. When the Turkish commander indicated that he would not be content with anything less than unconditional surrender, Townshend suggested, with the concurrence of the Cabinet in London, that the Kät garrison be freed on parole in exchange for its guns, stores and one million pounds sterling. On the orders of Enver Paşa [g.v.], the Turkish Minister of War, the offer was rejected, and the fact of its having been made was afterwards used to good effect by the Turkish government to discredit Britain’s reputation in the Middle East. A last-minute attempt to persuade Khalil Paşa to change his mind was made by Colonel W. H. Beuch, head of military intelligence in ‘Iraq, and Captains Aubrey Herbert and T. E. Lawrence of military intelligence, Cairo, who were authorised to double the ransom offered. The attempt failed, and twenty-four hours later, after destroying his guns and stores, Townshend surrendered, under a solemn guarantee from Khalil Paşa, which was afterwards reaffirmed by Enver Paşa that his troops would be treated as “the honoured guests of the Turkish nation”.

During the siege, the garrison at Kät had suffered
casualties of 1,818 men killed or died of wounds (278 of them Indian non-combatants) and 2,500 wounded. Nearly 250 of the Arab inhabitants had been killed and over 600 wounded, though more were to die after Turkish forces had re-occupied the town. The Turks allowed the worst cases among the British and Indian wounded, 1,475 in all, to be sent down to Basra in exchange for Turkish prisoners of war. Nearly 12,000 British and Indian troops, along with their Indian camp followers, went into captivity in Anatolia and elsewhere. By the end of the war more than 4,000 of them, including 70% of the British rank and file, had died from disease, starvation and inhuman treatment at the hands of their Turkish captors.

Küt was retaken by the Mesopotamian expeditionary force in Dien quy 53 (1917), opening the way for the occupation of Baghdad a fortnight later. After the war, in the administrative reorganisation that accompanied the institution of the mandate, Küt was made the principal town of a new Îlahi District.

(J. H. Kramers - J. B. Kelly)

KUTADGHU BILIG ("Knowledge that brings happiness"), the first long narrative poem in Turkic literature as well as the oldest monument of Turkic Islamic literature. A relatively long (6,645 strophes) didactic work, it is in Karakhand, the earliest variety of Eastern Middle Turkic and the first literary language of the Muslim Turks. Its author, Yaşıf Khoşâ Yusufu, was a self-made scholar and a leading figure of the early Turkic Islamic literature. The work is in the form of a dialogue between the king, the ruler of an imaginary country, and his wise minister, who offers advice on various aspects of life. The author presents his views in a series of dialogues, in which the chief participants are a king, Küt Togdû; his ministers, first Ay Toldî and, after his death, his son Ogülûmî; and the ascetic Odghûmî, a relative of Ogülûmî. The author uses these characters symbolically: Küt Togdû represents the true path; Ay Toldî, happiness; Ogülûmî, reason; and Odghûmî, destiny.

No one source or model for the Kutadghu bilig has been discovered. Frequent references in it, however, indicate a broad spectrum of still-unidentified sources: poetic works (sülübâ sâsî); sayings of elders (ibnîn bânilk évâ, bânilk xandur); the learned (bîlîk, bîrîk, bîlûk), and notable figures (hûlûk, hûlûk, hûlûk); as well as proverbs (hûlûk xandûr). Some of these references appear to be direct quotations, especially those in the form of quatrains.

The Kutadghu bilig follows the rules of Arabic-Persian prosody, but also includes a few elements of the traditional Turkic syllabic versification. It is in the mâyâwi form and in the mülêkârîb metre (–/–/–/–). The quatrains (rubûs or tusağã) embedded in the poem are all in the same metre, and all have the rhyme pattern anba. Alliteration and rhythmico-syntactic parallelism, features of pre-Islamic Turkic prosody, occur quite frequently. The author's style is concise and expressive. He favours such stylistic devices as epithets, apostrophes and rhetorical questions, and he often indulges in word-play and folk-etymology.

The language is very closely related to Late Uygur, although the Persian language—colloquial and classical—has left an imprint in the form of loan-translations and direct borrowings, both on its grammar and vocabulary.

Philological research on the Kutadghu bilig is at a fairly advanced stage. The three extant ms. have been published in facsimile. There is also a good critical edition, translation into Modern Turkish and thorough philological analysis by R. K. Arat (Kutadghu bilig t. Meşhur İ. Meriç, Istanbul 1947), Ankara 1958). Its language has been described, very sketchily, by M. Mansuroğlu (Das Karakhandische, in Philologische Tatsachen Fundamenta, i, 87-112). Most of the lexical material of the Kutadghu bilig, with illustrations, has been included in the Old Turkic dictionary, prepared by Nadelman and his team (Drodmyrâhâsib stêvur, Leningrad 1969). The best context analysis of the work to date is that given by A. Bombaci in his book on the history of Turkish literature (La letteratura turca, Milan 1969, 83-90).

KUTAHYA, modern KUTAHYA, a town of north-western Anatolia, lying at an altitude of 3,351 feet (922 m) in lat. 39° 25' north and long. 29° 59' east. It is in the south-western corner of the well-cultivated plain of the Fosrak Çayı, which eventually runs into the Sakarya river; the old town nestles on the slopes of the hill called Ağlum Dugh, which is crowned by the ruined citadel. In classical times it was Cotyaeum, the city of Cotys, and the largest city and runs into the Sakarya river; the old town nestles on the slopes of the hill called 'Afljem Dagh, which is 25' north and long. 29' 59' west of the hill. It is in the south-western corner of the well-cultivated plain of the Fosrak Çayı, which eventually runs into the Sakarya river; the old town nestles on the slopes of the hill called Ağlum Dugh, which is crowned by the ruined citadel. In classical times it was Cotyaeum, the city of Cotys, and the largest city and capital of Phrygia Salutaris, an early centre of Christianity and then in Byzantine times the seat of an archbishopric.

Kutahya was taken by the Turkmen Solyamyk b. Kutumulm in ca. 472/1080, in the aftermath of the battle of Manzikert or Malazgirt (see), and until the battle of Dorylaeum remained under Seljuk control. It then reverted to the Greeks for a brief while as a frontier fortress subject to Turkmen attacks, and was retaken in 571/1175 by the Seljukts under Kılıç Arslan II (see). It later passed once again to the Byzantines but was finally regained by the Seljukts in 631/1234-4. In the 5th-14th century it formed the centre of the beylik of the Germiyan-öğullar (see). Süleyman Şah Celebi (ca. 765-901/1363-98) transferred Kutahya, with others of his towns, to the Ottoman prince Bâyazîd Yıldırım when the latter married his daughter Dewlet Khâtun. Süleyman's son Ya'qûb Celebi tried to recover it on the death of Murâd I (791/1390), but it was regained by Bâyazîd in the following year. After the Ottoman defeat at Ankara (801/1402), Kutahya was taken over by Tâhir, who installed his son Şah Rukh as governor whilst he himself went on towards Ephesus. In the subsequent period of succession squabbles in the Ottoman ruling house, Kutahya fell briefly into the hands of the Karâmanlı Mehmed I [see KARMANLI-OGULLAR] (814/1413), but was recaptured by Ya'qûb Germiyanî with Ottoman help. When Ya'qûb died at Kutahya in 832/1429, the principality of the Germiyan-öğullar was divided, according to his bequest, to the Ottoman Murad II.

Under the Ottomans, Kutahya was the capital of a sandjak of Anadolu, and then in 1461 a sandjak of the province of Kudâvendâlik (see), in 1461 it comprised the kudâs of Kutahya, Eski Şehir (see), Üskûk (see), Redas or Gediz and Sinâûn. Kutahya was the farthest point reached by the Egyptian army of Ibrahim Pasha b. Muhammad Pasha (see), in its advance on Istanbul (1634), and his camp at the nearby hot springs of Yenidje was the scene of diplomatic negotiations which followed the intervention of European powers. In ca. 1660. Coguzzo numbered the population of the town at 22,206, including 4,000 Greeks and 3,000 Armenian; there were 24 mosques, 21 madrasas, 16 dervish tekkes, 4 churches, 9 caravanserais, 11 baths and 12 potteries. Kutahya was indeed formerly an important centre for the production of glazed, polychrome pottery with floral decorations, the so-called Rhodian ware, and this is still produced today in a somewhat cruder form; carpet weaving has also been an important family craft. A standard-gauge railway runs from Bâlekesir to Kutahya and joins the Eski-Şehir-Ayvon Karahisar line a few miles further on. Kutahya is still today: the capital of an ili (formerly vilayet) of the same name; its town population was 82,442 and that of the ili 470,413.

The monuments of Kutahya, from the Germiyan and early Ottoman periods, are significant, and include the Kutschnu Dîjâmi (777/1375-6), the Ulu Dîjâmi (814/1413-4) and the Karâşah Ahmed Dîjâmi (915/1508); notable is the use of tiles for roofing rather than lead. There are also some interesting old houses remaining. Bibliography: Hâçdî Kâfîî, Dîjavvamandî, 632; Sâmil Bey, Kâtûm al-âdâm, v, 3910; J. von Hammer, Histoire de l'empire ottoman, i, 248; V. (K. E. BOSWORTH)

KUTAHYA, now a kabupet (regency) in the Kütahya province of Kütahya-Timur (East K.), the modern town of Kutahya, lies on a highway stretching along the Mahâkam river. It covers 40,000 km² and has 250,492 inhabitants, among them 34,729 Muslim (1971). It is rich in oilfields (near Balik Fapan), gold, and timber.

The population consists of: Kutânine, probably originally Malays who immigrated as pagans, and whose Malay language now bears the influence of Javanese, Buginese and Banjarise; Buginese, from South Sulawesi, and especially from the old kingdom of Wajo, who appeared as sailors, shipbuilders and traders since the first half of the 17th century; Banjarise, who may have participated already in the colonisation of Kutai by Hindu-Javanese from Banjarmasin, which later on kept close contacts with Kutai; Bajau, who originate from the Sulu Islands and who came first as sea-
of time moved more to the interior, obviously Tunggang Parangan extensively used magical means, Hindu relics in the archipelago, have been discovered—century A.D., which belong to the oldest known up-river areas; and some 245 Chinese and 246 Datak tribes, living mainly in the interior and nomads until they finally settled on the coasts; several 540 court at Tcnggarong, was to a large extent the old, ’Ada, law (see adat it gives the impression that the stronger here than in other Malay chronicles. It tries narratives.

According to the Salasila rajaraja di dalam negeri Kutai Keria Negara, or Chronicle of Kutai, Islam was first introduced during the reign of Raja Makota by Tuan di Bandang (in Buginese sources known as Dato‘i ri Bandang), who only stayed for a short while, and Tuan Tunggang Parangan, both of whom arrived from Makassar, most probably in the first years of the 17th century. In his efforts to spread Islam, Tuan Tunggang Parangan extensively used magical means, as the Salasila, composed under the reign of Raja Makota’s grandson Pangeran Adipati Sinum Panji Mandapa ing Matapura before 1655, eloquently narrates.

This Salasila reveals a still-existing attachment to the animistic and magical mentality which is stronger here than in other Malay chronicles. It tries to avoid anachronism, such as the mentioning of Islamic terms or customs in its narratives about pre-Islamic events, and although it shows a remarkable familiarity with the moral and legal prescriptions of the Tadj al-salatin, or Makota segala raja-rale, and the Javanese Panji narratives as well as the wayang, it gives the impression that the adat law [see ADA, iv. Indonesia] which remained in use even at the sultan’s court at Tenggarong, was to a large extent the old, indigenous one.

An important role in the history of Kutai was played by the Buginese settlers, most of whom originated from Wajo, and who were centred on Samarinda, forming the strongest “foreign” colony and enjoying some kind of internal autonomy under the Pua Adu or Matoa elected from among their own nobility, but reconfirmed by the sultan (until 1860). In 1726-7, prince Aru Singkang from Wajo conquered the best-known of these was J94ar b. SHAYH b. ‘AMIR, who probably came from the Djumsh b. Bahar of Tabghib (see Ibn al-Kalbi-Cakel, Register, 474). On account of one of his verses, he was also given the name of Sa‘di al-Shawwâ‘i “the one felled by beautiful maidens”. Like his fellow-tribesman and maternal uncle (?) al-Akhtal Bakr of Tagfib (see Ibn al-Kalbi-Cakel, Register, 474); see al-Amidi, Mukhtar, another from Kalb; see al-Amidi, Mukhtar, 166); the relations with the Dutch, who first appeared in 1635, were generally speaking, smooth, and these preserved to the sultan a considerable degree of internal jurisdiction based on Islamic and adat law.

AL-KUTAMI (“the falcon”), the name of several poets (including one from Durbah b. Rab’is and another from Kalb; see al-‘Amidi, Nahj al-baladh, 166); the best-known of these was Shuyukh b. Shuyukh b. ‘AMIR, who probably came from the Djumsh b. Bahar of Tabghib (see Ibn al-Kalbi-Cakel, Register, 474). On account of one of his verses, he was also given the name of Sa‘di al-Shawwâ‘i “the one felled by beautiful maidens”. Like his fellow-tribesman and maternal uncle (?) al-Akhtal Bakr of Tagfib (see Ibn al-Kalbi-Cakel, Register, 474); see al-Amidi, Mukhtar, another from Kalb; see al-Amidi, Mukhtar, 166); the relations with the Dutch, who first appeared in 1635, were generally speaking, smooth, and these preserved to the sultan a considerable degree of internal jurisdiction based on Islamic and adat law.

(O. SCHEUMANN)

KUTAMA or KUTAMA, one of the great Berber families; when Islam was introduced into North Africa, they occupied all the northern part of the region of the Constantines, between the Auras [q.v.] and the sea, that is the region containing the towns of Ifrug, Seth, Blegia, Naga (Nigawr), Tigit, Tisna, Mila, Constantine, Skikda, Diggeli, Belzema, and also Lesser Kabylia. One legend flattering the national pride makes them to have been descended from the Hajjariyait, brought there by ‘Afif, the eponymous ancestor of their race, was said to be the son of Berenice. He had two sons, Charsen and Iassida, from whom are descended all the tribes of the Kutama. They do not seem to have played a part in the civil and religious wars which desolated North Africa from the time of Uqba to the days of the Aghlabids; we do not find them among the Kharijites. When Ubayd Allah gave himself out to be the Mahdi, his emissaries met some Kutama pilgrims in Arabia and converted them to Isma‘ili doctrines. The principal convert was Mus‘af chief of the Sakya, a branch of the Djamila whose name survives in the town of this name. The missionary (‘a‘ib ‘Abd Allah al-Shif‘i) settled in Ifrug and succeeded in maintaining his position there in spite of the efforts of the Aghlabids. From there he was able to extend his conquests and to deliver the Mahdi, who was a prisoner at Sijilmassa.

The empire of the Fatimids was thus founded with the help of the Kutama. It was they who furnished its main strength and supplied the means of conquering Egypt. But these continual efforts exhausted them. Those who remained in the Maghrib after the departure of al-Mu‘izz were forced to submit to local rulers, as Ibn Khaldun tells us. In our day the principal representatives of the Kutama are the Zuwarah of the Djamila and the population around Diqljeli and in Lesser Kabylia. Whether the Kutama origin, renounced oil connection with this region are Sunnis.

(R. Basset)
mentary, and has also been the subject of a somewhat enlarged edition by I. Sama'ari and A. Majid (Beirut 1960). The first edition contains 35 pieces of varying length (the longest of 100, 71, 66 and 58 verses) and 9 isolated verses, making a total of 764 verses, varying length (the longest of 70, 66, and 58 verses) and 9 isolated verses, making a total of 764 verses, which to should be added 52 hemistiches of radjas.

Al-Kutabani was a Bedouin poet who detested the townpeople, and who hymned his own military exploits and those of his tribe, together with the virtues of ziyadides like Zufar b. al-Harith. According to Hadi al-Khalaf (ii, No. 5629), he died in 1073/720.

(II. H. B. R. [Ch. Pollitt])

**KUTAYBA b. MUSLIM, ABD AL-RA'ISH KUTAYBA b. AHI SHUH MUSLIM b. 'AMIR AL-BASHTI, ARAB commander under the Umayyad caliphate. He was born in 49/669 into a family influential at the court and with extensive possessions in Basra. His father, Muslim, was the boon-companion of Yarad b. Mush'iyah, and during the revolt of al-Muktahir (q.v.), he was in charge of the prison at Basra; but he later sided with Musab b. Zubayr and was killed in 72/691-2 when Musab's dominion in Fars was ended, after having failed to secure a pardon from 'Abd al-Malik. The family nevertheless continued to be important in Basra, and a tribal mosque of their branch of Bahlil, the masjid Banu Kutayba, is mentioned (see Balaghshireh, Arab, iv, 11, 87, 92-4, v, 342-4).

Kutayba himself attracted the attention of the governor of Fars and the chief, al-Haddad b. Yacub, after participating in the warfare against the rebel Abd al-Rahman b. As 'Abd (see Ibn As'Am). He was given the governorship of Rayy in 83/701: after he had expelled from there the rebel 'Umar b. Ali Salit (see J. C. Miles, The numismatic history of Rayy, New York 1933, 9). Then at the end of 83 or beginning of 86/705 he was appointed by 'Abd al-Malik to succeed al-Mu'adhid b. al-Muhallab as governor of Khorasan under al-Hajjaj, thus reversing the position in Khorasan, where the Yamani Muhallabs had previously been dominant, for the Bahlil tribe (q.v.) generally allied itself to the Kaysi or North Arab interest in the Murabit period.

There thus begins the ten years' governorship of Kutayba, which contributed much to the extension of Islam in what is now Afghanistan and Central Asia, and which forms one aspect of the wave of Arab expansionism which characterised al-Walid's caliphate. Kutayba's administrative talents, backed by the authority of al-Haddad, had full play in the consolidation of Arab rule in Khorasan, although the momentum was not maintained after his death. An appreciable factor in his success here seems to have been some recognition of the position of the indigenous Iranian population, and some care to use their administrative talents. There were in his time perhaps as many as 7,000 professionals in the qa'idah and receiving regular pay, and in addition to these regular forces, Kutayba required ad hoc levies of soldiers from the towns of Khorasan for his spring and summer campaigns into Central Asia; in Tabari, ii, 1245, the contingents from Bukhara and

Khurāzim besieging Samarkand in 93/712 are described as "the slaves" (al-'abid). Also, he left the local Persian dākhilān in power on payment of tribute, apart from the planting of Arab garrisons in Buhārā, Samarkand and probably Kāf in Khurāzim. With regard to the Arab tribesmen in Khurāzim, Kutayba organised them, on the Bāṣra model, into the five groups of the Azd, Tamīn, Ahi al-Valiyah, Bahr and 'Abd al-Kayy; at least, it is in his time that such a division is first mentioned. (See for general reviews of Kutayba's political and social policies, Gibb, The Arab conquests in Central Asia, 29-31, and Shaban, The Abbāsid revolution, 63 f.)

The military campaigns of Kutayba's governorship have been divided by Gibb, op. cit., 31 f., into four periods: firstly, the recovery of Bākhīz and Tukhristān in 86/705; secondly, the conquest of Baykand and Bukhārā from the local Sogdians, 87/706-9; thirdly, the consolidation of Arab authority in the Oxus valley and the securing of Khurāzim and Samarkand, 91-91-14; and fourthly, expeditions into the Jaxartes valley from Shishān against Isfīdān and Faridān, 94-1/712-13. Many of these undoubtedly remarkable successes were achieved through Kutayba's own blend of military skill and ruthlessness, mingled with a willingness to use treachery, if need arose, and to exploit local divisions, as amongst the princes of Tukhristān and Sogdān and amongst the rival claimants to the throne of Khurāzim.

In 86/705 Kutayba moved against the princes of the upper Oxus valleys of Shām, Akhrūn and Cāghāniyān, and he also persuaded Taḥābān Nizāk, ruler of the northern Hephtalite principality in Bākhīz [see NAYIRIJA], to submit to the Arabs and accompany Kutayba on the ensuing campaign against Bukhārā. The campaigns of 87/706-9 against Baykand and Bukhārā were long and arduous. Kutayba's savage sacking of Baykand stiffened the resistance of the Sogdians under Wadān Khudāh, but Bukhārā was in the end stormed against fierce local resistance, apparently backed up by Turkish help. A tribute of 200,000 dirhams was imposed on the city and an Arab garrison placed in it: in 94/712-13 Kutayba built a mosque inside the citadel, but had at the outset to pay the local people to attend the worship. In 91/709-10 Kutayba and his brother 'Abd al-Rahman b. Muslim were occupied with suppressing the last rebellion of Nizak, now in collusion with the Fāghku (Arabic form Dhahbāya) or local ruler of Tukhristan. On capturing Nizak, Kutayba had him killed, despite his earlier promise of aman or quart; and although in the poetry quoted by Tabari, ii, 1245, we find Naḥr b. Tawās praising Kutayba's behaviour as salutary for the interests of the Islamic, like that of the Prophet towards the Jews of Medina, we also find a verse by Thabit Kutna warning against calling perfidy "resolute action". However, for the first time, Arab rule became reasonably secure in lower Tukhristān, and Bukhārā now develops as a centre of Arab power and Islamic culture; a subsequent governor of Khurāzim, Asad b. 'Abd Allāh al-Kas; was to move temporarily the provincial capital from Maw to Bukhār (118/736).

In 92/711 Kutayba was in Statān, which was at that time under the subordinate governorship of his brother 'Amir. Here, the Arabs in their strongpoints of Zarang and Būst faced the powerful ruler of the southern Hephtalites, the Zumbils of Zabulistan [see ZABUL]. Kutayba's presence scared the Zumbils into temporary submission, but as always happened, once the Arab forces departed, all obedience was
renounced. The conquest of Khwarazm in 93/712 was a spectacular feat of Kutayba's, and it led to the tentative implanting of Islam there, though it was several decades before the people of the province or their šâhs were fully converted; for details, see Khwarazm. In the last years of his governorship, Kutayba's attention was focussed on Soghdia again. In 93/712, on the way back from Khwarazm, he attacked Samarqand and imposed a fresh peace treaty on its ruler Chirâh; the breaking thus of an earlier agreement considerably tarnished Kutayba's reputation in Soghdia amongst the Iranian population. It may be that it was at this point that the Western Turkic or Turgesh intervened in Transoxania at the request of the Soghdian princes; at all events, Kutayba endeavoured to secure the regions of the Jaxartes adjacent to the steppes of Turkistan, moving into Shâh and Usbûnsana, and in 94-5/713-14 he led a series of raids into Farghânâ. Whether Kutayba had expressly in mind the securing of the trade route through Central Asia towards China is uncertain, and the report in Tabârî, ii, 1276, that his troops crossed the Tien Shan Mts. to Khog'har was rejected by Gibb as a fabrication, see his The Arab Invasion of Khaškar in A.D. 715, in BSOs, ii (1925), 436-7.

The fall of Kutayba in 96/715 was ultimately the result of the change of régime in Damascus from al-Walîd to Sulayman, the death of Kutayba's patron al-Hâdîjâdî, and an expected reversal of the favour previously shown to the Jâbars in the empire. Kutayba was campaigning in Farghânâ when he heard the news of al-Walîd's death, and though the new caliph confirmed him in his governorship, he feared an imminent change of attitude. He therefore proclaimed rebellion against the caliph's authority, but was supported only by his own family, the inadequate power-base of his fellow Bâhhî tribesmen, and his bodyguard of Iranian archers; the mass of the Arabs mutinied and refused to support him, as also the Persian mawdry troops under Hâyân al-Nabati, formerly his faithful supporters. He and several of his family were therefore killed by their soldiers in Dhu l-Hijjah 69/September 715, or according to some sources, later in that autumn at the beginning of 716, and Wâlî b. Abî 'l-Sâda al-Tamînî assumed power in the east in his stead.

Kutayba's death meant a halting for several decades, and indeed, a definite regression, in the momentum of Arab conquest beyond the Oxus; the Soghdians and their Turkish allies were now able to mobilise their forces for counterstrokes. He is understood to have been the first Arab governor of Transoxania to claim the title of king or shâh for himself and his successors; the title was assumed to be in the middle of the figure of a fish (amakta: al-Birûnî has instead; qabla hâlilât, "an elliptical figure") formed by two curved lines of stars, one consisting of the five stars β, γ, δ, ε, ζ of Ursa Minoris, and the opposite one of very small and faint stars (most of them not registered by Ptolemy in his Almagest), among which Fl. 5 and 4 Ursae Minoris, near one of the small stars in the curved line of faint stars, (al-Marruq, Ibn al-Ajdâbî, al-Sâsî, loco cit.). This difference in location obviously reflects the effect of Arabic 766 was twice governor of Basra, and his grandson Âbu 'Amr Sa'd b. Sâmî (d. 212/828) was governor of Armenia, Maw'sî, al-Qiṣâra, Sîstân, Sînd and Tabaristan.

of precession, due to which the place of the north pole was near the star α21 H Camelopardalis in A.D. 1000, and still more southwards in A.D. 500. It was also observed that the opposite point of the sky, the place of precession, due to which the place of the north pole was invisible in the lands of the Arabs (Ibn Kūtayba, loc. cit., 122; Ibn Manṣūr, op. cit., 172).

After the introduction of scientific astronomy, it was known that this pole belonged to the equatorial system, hence it was occasionally called ḫuṣṭ maʿaddil al-nāhār, "pole of the equator." Besides its other designations, such as simply ḫuṣṭ, or ḫuṣṭ al-ṣamāli (and al-джdhāri, respectively), ḫuṣṭ al-idhārī, ḫuṣṭ al-falāk, ḫuṣṭ al-h拱, etc. Al-Būrīnī seems to be the first to declare a Ursae Minoris ("Polaris") to be the nearest bright star to the [north] pole, at his time, and hence to serve as a substitute for the pole wa-yāminūn taʿnī the [North] pole (al-iṣnaʿ al-ṭabāstūn l-ayyāḥī l-nāfūṣ). In the same time, the ecliptical system was assigned two poles, as well, which were called ḫuṣṭ al-ṭābāṣār and ḫuṣṭ al-ṭāṣār ḫuṣṭ [the poles of the ecliptic] (al-Ṣufi, loc. cit., 23 ff.; al-Būrīnī, Taṣrīḥ, 55 i: [§ 139], idem, Rūḥān, iii, 993, 995 ff.; al-Kazwini, op. cit., 27, tr. 59, and 52 cf.).

North and south pole because of actual value for the Islamic navigators of the Indian Ocean (ca. A.D. 1500), who used both of them for altitude measurements in order to fix their position and determine their routes. In their terminology the north pole was generally called al-ḍāhīk (a word of Persian origin, used both for the pole itself and for the Pole Star). Travelling south of the equator, they also acquired two poles, ḫuṣṭ swaḥāl ("the pole [in the region] of the star Carinae") or simply al-ḥib (as opposed to al-ḍāhīk), which they observed—contradistinction to the north pole—not to be marked by a bright star near it, but having the two Magellanic Clouds at some distance (Ahmad b. Māṣūd and Sulaymān al-Mahrī; in English tr. see C. E. Titcomb, Arab navigation in the Indian Ocean, London 1971, the pole and its indexes, 518 and 547 (s.v. al-ḥib), 538 (s.v. ḫuṣṭ), 609 (s.v. Polaris, Pole, Pole, North South).

The poles also seem to have excited the fantasy of astrologers, for two lists of magic virtues (khawāṣ) appertaining to both of them are repeated by Ibn Mānṣūr (op. cit., 146-153; partially also in al-Kazwini, op. cit., i, 30 cf. tr. 64 f. and 40, tr. 83 f. cf.). In modern terminology, the terrestrial poles are also called ḫuṣṭ (with adjective ḫuṣṭ, "polar"). Apart from this, in the construction of the astrolobe al-ḥib signifies the central pivot, or axis (elsewhere also called al-mibaran, which keeps together its differences and the rule (al-hidāda), latinised (since the 10th century) as Alciato, Alciato, Alcatoth, etc. See Arūmān, al-Ku ʿArāz, Muḥāfiẓ al-Sūrī, 235; al-Battānī, Opus astronomi- cum, ed. Nallino, i, Milan 1903, 141 and 159; al-Būrīnī, Taṣrīḥ, 155 i: [§ 325], etc. Latin: J. M. Mill Villarrosa, Asis de historia de les idees fisiques i matemàtiques a la Catalunya medieval, i, Barcelona 1931, 278, 56; 286, 4; 289, 25; 32, 36; N. Eubner (ed.), Gerberti Persica Silicensis ii Epistae opera mathematica, Berlin 1899, 125, 10; Hermanus, De mensura astrolobi, in Nigro, Patrologia latina, exlibri, Paris 1884, 587 A; (Ps-) Messahalla (Māṣāḍaʿallāhī), De temperature astræobi, ed. (P. KUNTZE)

2. In mysticism

In Islamic mysticism, this term (lit. "pole," "axis") denotes either the most perfect human being, al-insān al-khāmil (q.m.), who heads the saintly hierarchy [see al-quatayn and wali] and is also referred to as al-ḥib al-khāmil ("the [temporal] phenomenal heaven") or else al-hākim al-muḥammasiyā (see nāṣīna), which manifests itself in al-insān al-khāmil and is sometimes referred to as al-ḥib al-muḥammasiyā ("the cosmic nunnal heaven"). Both meanings of the term are covered by Abū al-Raṣṣāb al-Khāṣṣānī's definition: "the place of God's appearance in the world at all times" (Kamāl al-Dīn Abī l-Ḡanāmī Abī al-Raṣṣāb b. Dīmāl al-Dīn al-Kāshī [al-Kāshānī] al-Samārjandī, Kūṭb iṣlaḥātār al-sūṣīyya, ed. A. Sprenger, London-Calcutta 1845, 141; cf. Muhly I-Dīn b. al-ʿArabī, al-Futūḥāt al-makhṣūya, Būlāk 1274/1857, ii, 6).

The conception of the temporal ḫuṣṭ (A. ḫuṣṭ al-waḥīd, sūhī al-waḥīd, sūhī al-zamān; P. wāḥi-d saḥī) referred to by some authors as al-ghaṣṣā ("the helper") (q.v. in Suppl.), which by virtue of the cosmic ḫuṣṭ or ḫuṣṭ al-ḍāhīk, manifests in him, has been traced back to al-Hājj (q.v.), whose name (unlike that of its image with all his attributes) (q.v. and ṣūfī (q.v.) in Adam) may be considered as the prototype of the conception of al-insān al-khāmil (cf. A. E. Affī, The mystical philosophy of Muḥyīʾ al-Dīn ibn Arabī, Cambridge 1939, 79, 189), and also further back to pre-Islamic ideas, in particular to Iranian, Neo-Platonic and early Christian thought (see T. Andrae, Die Person Muḥyīʾ al-Dīn in der Lehre und glauben seiner gemeinde, Upsala 1917, 333 ff.; and H. H. Schneider, Die islamische Lehre vom Volkomm- men Menschen, ihre Herkunft und ihre dichterische Gestaltung, in ZDMG, N.F., i: [§ 92], 120-256).

The notion of the ḫuṣṭ as head of the saintly hierarchy is found in the teaching of al-Ḥākim al-Tirmīdī (q.v.) outlined by ʿAbī b. Uṯmān al-Hudžwī in his Kitāb al-mahṣūm (see R. A. Nicholson, tr., The Kāshf al-Mubīḥ. The mystical thought of al-Ḥākim al-Tirmīdī, creative on Śūṣīm, Leiden-London 1921, 214, 228). The scriptural justification for the belief in this hierarchy, of which the different forms mentioned by a variety of authors are discussed by E. Blochet, Études sur l'esthétique musulman, in JA, xx (1902), 77 ff. (in addition, see Ḥasan al-Qdīwī al-Ḥamāzī, al-Nafāfī al-Shāfiʿiyīa fi Sharḥ al-Burda al-Bāṣīriyya, Cairo n.d.; Sayyid Ḥaydar Amūlī, in La philosophie Shiʿite, ed. H. Corbin and O. Yahia, Bibli.-iranien 16, Tehran-Paris 1969, 146, and H. Corbin, En Islam iranien. Aspects spirituels et philosophiques, Paris 1972-1, i: 181 ff.), is a ḫuṣṭāt attributed to Ibrāhīm b. Ṣawād (see Abū Muhammad ʿAbd Allāh al-Yāʾīnī, Raud al-raydān fi fiqih al-ḥāṣad, Cairo 1860-80, 90; ʿVāyā b. Ismāʿīl al-Nabhānī, Šulūk al-kabd fi l-ʿtāṣalūq bi-sawāyd al-ḥāṣad, Cairo 1232/1815-16, 10; ʿYāūsū b. Ismāʿīl al-Nabhānī, Šulūk al-kabd fi l-ʿtāṣalūq bi-sawāyd al-ḥāṣad, Cairo 1232/1815-16, 10; Dīlāl al-Dīn al-Sūyūṭī, al-Kādir al-dālī šulūk al-ḥāṣad wa al-ḥāṣad (q.v.), Cairo 1351/1932-3; 27). The relativity of the form of this ḫuṣṭāt was discarded by Muhammad Rashīd Rūḵā (al-Murādī, xl (1909), 50 ff.). Other ḫuṣṭāt, all without isolated, mentioning the existence of a saintly hierarchy headed by the ḫuṣṭ, are listed in al-Yāʾīnī's Raud al-raydān, 10 (see also al-Zamān al-Ṣāḥīb, al-Abūd wa l-ḥāṣad wa l-akhāyīr fi l-ḥāṣad sayyīdāt al-ṣūfīyya, in al-Musām, i/o (Cairo, September 1952), 18 f.), including the most frequently cited one attributed to Ḥūn l-Nūn al-Mīṣrī (q.v.). The tentative suggestion by R. A. Nicholson (The
Each of the various ranks in the saintly hierarchy has also been conceived of as being headed by a kibd. From these kibd the saints who belong to these different ranks receive their knowledge, which they owe in the last resort to the supreme (temporal) kibd (cf. Ibn al-'ArabI, Fatwdd, ii, 7; Ahmad Diya al-Din al-GhulamkhAn, Diijis al-asal fi l-'Ushiyah, Cairo 1328/1910, 4; 'Ali Salim Ammar, Abu 'l-'Hasan al-Shaddii, 141, 192; Farhat, wa't-Rikhsitu, wa't-llamu, wa'ttaframekh, Cairo 1951, i, 192: Ahmad b. Muhammad b. Ayyd, al-Masfrkhar al-siyra fi 'l-mahZfgh al-Shaddiiya, Cairo 1964, 20 ff.).

For Muhyi 'l-Din b. al-'Arabi (g.n.), the universal rational principle, the metaphysical essence of all existence, was headed by a kibd, through which Divine knowledge is transmitted to all prophets and saints, finds its fullest manifestation in and is identical with the kibd, who is al-insin al-khamit. He is the cause of creation, for in him alone creation is fully realised. He is al-barzak (g.n.), the hikmat al-kaqith, or in other words he is Muhammad as the inward aspect of Adam, i.e. the real Adam (Mankind) or al-kibd (g.n.), which is forever manifesting itself on the plane of al-masas (g.n.) in prophets and saints (i.e. in ajd), who come within the category of al-insin al-khamit, since they are perfect manifestations of God and have realised, in mystical experience, essential oneness with Him. This makes ajd infallible, and since there is only one kibd at a time (al-kibd al-masafi), he is God's real khalifa (g.n.), who is the preserver and maintainer of the universe, the mediator between Divine and human, who passes on knowledge of the manzal (degrees of mystical perfection [see manzal], which cannot be entered by anybody else except by him, through virtue of his being in the manzal tamal al-tawhid (absolute transcendence of God); cf. Ibn al-'ArabI, Fatwdd, i, 168 ff., 201 ff., 253 ff.; ii, 7 ff., 77, and in particular iv, 80 ff.).

These ideas were further elaborated by 'Abd al-Karim al-Durra (cf. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 86 ff.). They were rephrased and/or simplified by other authors (cf. Blochet, 86 ff.) and have remained part of the mainstream of Islamic mystical thinking since.

An idea of the succession of kibd as the active principle (or interior, biih; cf. al-Khasb, 244) in all inspiration and revelation, comparable to the 1923 in Neo-Platonism and manifesting itself in the form (khwara) of a prophet, is found earlier with 'Umar b. al-Farid (cf. Muhammad Muwafaq Hilmi, Ibn al-Farid ra 'l-bubb al-slih, Cairo 1945, 275). This idea is noted by Hilmi, ibid., 277, has a striking similarity to the Ismaili (g.n.) belief in the personification of al-nab al-awwal in al-inma' al-na'id. Other authors have equally drawn attention to the similarity between the Shi'i conception of the Ismail in a manifestation of the Divine Logos and the conception of the cosmic kibd in Islamic mysticism, or the possible identity of both concepts (see e.g. Kamil Muwafaq al-ShaybI, al-Siha bayan al-tasarruf wa 'l-nuzajayyin, Cairo 1959, 463, and Corbin, En Islam iraHien, i, 95). Several authors have noted the analogy between the Ismaili (Fatimid) da'wa hierarchy and the mystical hierarchy under the kibd (see e.g. al-ShaybI, 457 ff. and Y. Marquet, Des Ispahani al-Sa'fI d'al-Hass 'Omar (b. SallT Tall), marabout et conférent toulonais, in Arabic, sv [1968], 27) or have regarded the mystical hierarchy as derived from it. The historical possibility of such a derivation was discarded by W. Ivanov, An Al-I'Iah Fragment, in Collectanea, i, The Ismaili Society, Series A, No. 2, Leiden-Bombay 1948, 166.

Among the Shi'i scholars, some have stated explicitly that kibd and Imami are terms which have the same meaning and which refer to one and the same person (Amoli, La philosophie shiite, 223; 'Allama Sayyid Muhammad Husayn Tabarrq, Shi'ite Islam (tr., ed., introd. and notes by Seyyed Hessem Nasr), London 1975, 214; Corbin, En Islam iraHien, ii, 76). The notion of the saintly hierarchy headed by the kibd is considered by Corbin as basically a Shi'i idea which has been appropriated by Sunni mysticism (see e.g. his En Islam iranien, i, 229, ii, 270; cf. al-ShaybI, 233). Several of his publications contain phenomenologically-inclined analysis of the historical development in conceptions of kibd in a perspective of Isra'ili (see e.g. his En Islam iranien dans le soufisme iranien, Paris 1971, passim, and his En Islam iranien, i, 186 f.).

Conceptions of a saintly hierarchy headed by the kibd and distinct from the hierarchic system headed by the Imam are found in the works of 'Aziz al-Din Nasafi (cf. M. Mo'd, "Asadoddin Nasafi, Le livre de l'homme parfait (Kitab al-insin al-Kasimi), Bibl. Iranienne xi, Tehran-Paris 1962, 20, 261; and 'AlI' al-Dawla Simnani (idem, Les Kubrawiyya entre Sufisme et Shiisme aux huitiéme et neuviéme siècles de l'Islam, in REL, xxix [1961], 197 f.; cf. Corbin, op. cit., ii, 74). Similar conceptions are held in contemporary Shi'i mysticism (cf. R. Gramlich, Die Schiitischen Denkerkunden Persiens. Zweiter Teil: Geist und Leben, Wiesbaden 1975, 160 ff.). Shi'i mystics have referred to the twelfth Imam as kibd al-'ashid (Corbin, En Islam iranien, ii, 74-5, iv, 357) or kibd-ibn-Nasafi (Gramlich, op. cit., 178), and to the head of a jarid (g.n.) as kibd, kibd-i-barnat and kibd-i-zamun (idem, 135 f. for further references and additional detail).

In the existence of ajd and in the whole saintly hierarchy was denounced by Ibn Khaldun (cf. Ibn Khaldun, ed. de Slane, ii, 164; iii, 24, 104-5; Ibn Khaldun, Sijill Sai's-Sam'al ittekhaf al-Mawali, ed. M.B.T. al-TanJ, Istanbul 1958; H. S. Nyberg, Kleine Schriften des Ibn al-'Arabi, Leiden 1919, 113 f.), and has been under attack by those adhering to a non-mystical conception of Islam up to the present day (see e.g. Ibn Khaldun, Al-Wali, Hadhdh biy5, "Ushiyah, Cairo 1937/1955, 124 ff.).

The kibd is regarded as being able to perform distinct haratim, which reveal his ma'bad (cf. Ibn 'AtB Allah al-Sakandari, Lajla'i al-mawin, Tunis 1964/1886-7, 57 f.; and Ammar, i, 193), to know the meaning of the letters at the beginning of the qur'an, which he has received from God directly—this qualifies him for al-arad (al-idwi, op. cit., ii, 98), which is known as khadidjat al-ta'ifat (see e.g. 'Abd Allah b. 'Ali al-Hasan al-Atiq, Zikhr al-hakim fi bayan al-jarad, Bombay 1932/1904-5, 265; Muwafaq Hilmi, Al-Mulqfi al-dalal al-nabid [al-adad min al-Ismailiyyah Abi Shadi], Cairo 1930/1932-3, 270)—and to incorporate the sifat of the mahd, the na'b, the abdul and all those who belong to the saintly hierarchy (al-Guhlammii, "Ushiyah, al-wafi al-ma'bad, 4; Ammar, i, 194).
in consequence of the fact that he is the means by which al-kabh sees his own names and sifat (cf. 'Abd al-Karim al-Dilli, al-Ina'iq al-Kâmil fî ma'rifat al-sifat al-qâlimiyya wa 'l-lawâdîl, Cairo 1328, ii, 48). All secret beings and every animaté and inanimate body have to give them their pledge (bay'a) except for the following three classes of beings: al-af'fâd, who belong to the independent intellect in the kufb (cf. Ibn al-'Arabi, Falsafat, i, 223); the djinns who are under the authority of al-Khadir (cf. cf. Mubârak al-Bannânî, Mudânfa al-suluk la jil'tik, Cairo 1330, 1939, i, 434-5). This scholar, however, expresses himself in a fâdil to the effect that the orthodoxy of the belief in the kufb al-qâlimiyya cannot be established (cf. Mubârak al-Bannânî, Mudânfa al-suluk la jil'tik, Cairo 1330, 1939, i, 434-5).

In another treatise, Ma'dâr iqtisi'd al-hilâm, al-Kayyâm states that al-Khadir was the kufb in secret at the time of Mubârak before the latter became the kufb al-akfâb on the plane of manifest being (see Anduc, 345).

Belief in al-Khâdir as a mortal being identical with the temporal kufb is reported as being held by the vassals of Cairo (sec E. W. Lane, J. 168; according to Ibn 'Azûz, 75; al-Sakandarî, 68); 'Abd al-Kâdir al-Pîlînî writes that the kufb is a servant under God on earth to whom the pîhâr fâdil of his spirit is a servant under him and which was claimed by thou of his descendants (cf. A. A. Rizvi, Muslim renovist movements in Northern India in the sixteenth and seventeenth centuries, Agra 1965, 266 ft.). This belief seems to have influenced the teaching of Mir Dard (cf. A. Schimmel, Paix and grace. A study of two mystical writers of eighteenth-century Muslim India, Leiden 1976, 51); and Tijânî doctrine centred upon the belief that Ahmad al-Tijânî (q.v.) was khâmî al-wîlîya and kufb al-qâlimiyya simultaneously (J. M. Abun Nasr, The Tijânîyya. A Sufi order in the modern world, London 1965, 27 ff.). Before and after Ahmad al-Tijânî, Sûfîs claimed or were considered to be al-qâlimiyya. Some examples from among the earlier mystics are listed in Gramlich, 158, n. 910). Other notable examples among the later mystics are Abû Sa'id b. Abî 'l-Khayr (see Muhammad Nûr al-Dîn Munawwar b. Abû Sa'id Asâ'ûr, Abû le-ta'lid fî ma'rifat al-sifat al-qâlimiyya, Abû Sa'id, cf. Dâbîbî Allah Sa'id, Tulun 1346, 352 ff.); 'Abd al-Râbi al-Jâînî (cf. Ahmad Husayn Dabâhar, Kâlima muwâdâî'a 'an kufb khâmî 'alî 'abd al-Râbi al-Kânî, n.p. Kûnî, 1388/1968); Abu l-Hadîdî al-Uskari (see Ibn 'Ayyûd, 35); Abu l-'Abbâs al-Mursî (see al-Sakandarî, 68); Abu l-'Abbâs al-Mursî (see al-Sakandarî, 68); Abu l-Kâdir al-Dîlînî (q.v.), Ahmad al-Râbi, Ahmad al-Badawî (q.v.), and Ibrahim al-Dasgî (q.v.). The last four of these are referred to as al-qâlimiyya (see Muhammad Mubârak al-Sulûbî, al-Taşwirî al-ma'sîlî, 55 ff.). In some mystical cosmologies they are presented occupying a position of pre-eminence in the successive stages of pre-creation out of al-nur al-muhammadi before their birth, as successors to the four khâmîs al-ra'âihilation during their lifetime, and as continuing forces in the world of the unseen after their death.

Encyclopaedia of Islam, V

Mawallî, in MW vili (1918), 141-4), which was a site for generation and votive offerings (cf. J. W. McPherson, The Mawls of Egypt, Cairo 1947, 141). In contemporary Islamic mysticism, the dominant view seems to be that only his spirit is seen at Mecca, i.e. at the Ka'bah, which is the makâm (q.v.) of his spirit and the throne of his heart (see Muhammad Zakî Ibrahim, Kâyâmât nûmâmu'dî II-muqaddas al-kubb, in al-Masînî, x 1) [June 1965], 8). A few cases are found where a farâbî teaches explicitly that the kufb will always belong to this particular farâbî. Examples are al-'Azzâziyya (see the relevant section in F. de Jong, The Sufî orders in post-Ottoman Egypt, forthcoming) and al-Shâdhîliyya (see Ibn 'Ayyûd, 105). The latter farâbî teaches that God gave Abu l-Hasan al-Shâdhîlî the bay'a at al-kâmil liyya after the death of Abu l-Ma'thîddîl al-Usgâî (b. 'Ayyûd, id., 35). The siâla of the farâbî is referred to as the siyâla at-al-kâmil (Abû Bakr b. Muhammad al-Bannânî, Muwâdâî al-nûmâ fî Mâsh al-Mukhtâr, Cairo 1330/1972, 90) going back to 'Abî al-Tâlib through his son Hasan, who is considered the first kubb (al-Sakandarî, 59; Ibn 'Azûz, 75; al-Kusânî, 181).

Distinct cosmological systems revolving around a conception of the kufb and derived from the ideas outlined above, and presenting or incorporating a modified version, have been developed and have gained some degree of significance at distinct times and places. Notable are, in chronological order, Abu l-Fadl 'Allâmî's (q.v.) presentation of the Mughal emperor Akbar (q.v.) as inäd al-kâmil or temporal kufb around whom the world revolves in his Akbarnâma; Ahmad Sirînî's (q.v.) conception of the bay'a at of God on earth to whom the kufb is a servant under his rule, a rank which he ascribed to himself and which was claimed by others in his descendants (cf. A. A. Rizvi, Muslim renovist movements in Northern India in the sixteenth and seventeenth centuries, Agra 1965, 266 ft.). This belief seems to have influenced the teaching of Mir Dard (cf. A. Schimmel, Peace and grace. A study of two mystical writers of eighteenth-century Muslim India, Leiden 1976, 51); and Tijânî doctrine centred upon the belief that Ahmad al-Tijânî (q.v.) was khâmî al-wîlîya and kufb al-qâlimiyya simultaneously (J. M. Abun Nasr, The Tijânîyya. A Sufi order in the modern world, London 1965, 27 ff.). Before and after Ahmad al-Tijânî, Sûfîs claimed or were considered to be al-qâlimiyya. Some examples from among the earlier mystics are listed in Gramlich, 158, n. 910). Other notable examples among the later mystics are Abû Sa'id b. Abî 'l-Khayr (see Muhammad Nûr al-Dîn Munawwar b. Abû Sa'id Asâ'ûr, Abû le-ta'lid fî ma'rifat al-sifat al-qâlimiyya, Abû Sa'id, cf. Dâbîbî Allah Sa'id, Tulun 1346, 352 ff.). 'Abd al-Râbi al-Jâînî (cf. Ahmad Husayn Dabâhar, Kâlima muwâdâî'a 'an kufb khâmî 'alî 'abd al-Râbi al-Kânî, n.p. Kûnî, 1388/1968); Abu l-Hadîdî al-Uskari (see Ibn 'Ayyûd, 35); Abu l-'Abbâs al-Mursî (see al-Sakandarî, 68); Abu l-Kâdir al-Dîlînî (q.v.), Ahmad al-Râbi, Ahmad al-Badawî (q.v.), and Ibrahim al-Dasgî (q.v.). The last four of these are referred to as al-qâlimiyya (see Muhammad Mubârak al-Sulûbî, al-Taşwirî al-ma'sîlî, 55 ff.). In some mystical cosmologies they are presented occupying a position of pre-eminence in the successive stages of pre-creation out of al-nur al-muhammadi before their birth, as successors to the four khâmîs al-ra'âihilation during their lifetime, and as continuing forces in the world of the unseen after their death.
moved from Dihli to Lahore, where he is said to have become the builder of the city, which was completed under Aybak's regime that Hasan Nizāmī [q.v. in Suppl.] began writing his florid Tāj al-mašā'īl, which was completed under Ilutmish. Both are important sources for the early period of Muslim rule in Hindūstān.

**Bibliography:**

KUTB AL-DIN BAKHTIYAR KĀRĪ, a Sūfī who settled at Dihlī during the reign of Ilutmish [q.v.].

Kbā'ja Kutb al-Dīn Bakhtiyar (Ahmad b. Mūsā b. Kākī al-Uṣb) was a native of Uṣb, a town in eastern Farghāna. The *lāḥḏūbi* literature depicts him as the disciple of Mu'in al-Dīn Či-Qāhīrī (d. 633/1236), the founder-figure of the Čishtī affiliation in India. The accounts disagree as to whether the two contemporaries first met at Uṣb, or at Isfahān, or in the *sūfī* circle of Abū Hāfīz Umar al-Sulhārvardī (d. 628/1234), or in the mosque of Abu 'l-Layl al-Samarkandī at Bāghdād. After years of wandering, Kutb al-Dīn came to Multān early in the 7th-8th century during the rule of Nasīr al-Dīn Kabīdā (d. 625/1228). There Farid al-Dīn Mas'ūd (d. 654/1256) sought his company, while Bābā al-Dīn Zakariyya (d. 660/1268) seems to have encouraged his departure for Dihlī. Kutb al-Dīn settled outside the walls of Dihlī near the tank, ḫawd-i shahrist, during the reign of Ilutmish (607-53/1211-16), but declined the office of Shaykh al-ţābīn offered to him by the Šulṭān. Kutb al-Dīn was well-known for his Šūfī practice of listening to music (zamān), and is said to have died during a zamān performance on 14 Rabī‘ I 633/27 November 1235. His tomb is in the vicinity of the Kutb Mīrzā at Multān, near the city of Mīrāwāli. The Kutb Mīnzār [q.v.], completed by Ilutmish in 629/1236, is believed to derive its name from Kutb al-Dīn Bakhtiyār (not from Kutb al-Dīn Aybak).

The Čishtī affiliation venerates Kutb al-Dīn as one of the outstanding members of its founder-generation in India, and records him in its *sīstān* as the link between Mu'in al-Dīn and Farid al-Dīn. Kutb al-Dīn is the alleged compiler of the apocryphal *maṭn-i lāḥḏūbi* of Mu'in al-Dīn, entitled *Daulāt al-ţārif* (Lucknow 1868), whereas his own sayings supposedly have been collected by Farid al-Dīn in the spurious *Fawādīt al-sulhārin*. A more reliable source, however, appears to be the *Miftāh al-ţābitin*, which was compiled in the immediate circle of Kutb al-Dīn's associates at Dihlī.

Kutb al-Din Bakhhtiyar Kaki — Kutb al-Din Shirazi

Kutb al-Din al-Iznīkī, Muḥammad al-Rumū, early Ottoman Hanafi scholar and father of Kutb al-Din-īz̲ād̲ Muḥammad [q.v.]. He was born at Iznik [q.v.] and died thereon 8 jihār ' early Ottoman Hanafi scholar and father of Iznīk. He next sought instruction with the conqueror Timūr when the latter occupied Anatolia, [q.v.]. Of Ibn Sīnā. He then travelled in Khurasan, where he sought the acquaintance of scholars. It was probably Naṣīr al-Dīn al-Tūsī, his teacher. But he distinguished himself also in astronomy, mathematics, and the treatment of religious problems. This versatility induced Abu 'l-Fidā'ī to give him the name al-muṭāfāfīn 'experienced in many fields'. He received his medical training with his father al-Dīn Mas'ūd al-Kāzarūnī, i.e. of Kāzarūn (to the west of Shirāz), in the hospital of Shirāz. He lost his father at the age of 14 and then became a pupil of his uncles Kāmil al-Dīn Khayr al-Kāzarūnī and Shārāf al-Dīn al-Za'kī al-Rūshdī (Sīyūṭī has Rūshdīwī) and Shāms al-Dīn al-Kitbūrī; he then went to Naṣīr al-Dīn al-Tūsī, studied with him and surpassed everyone. It was probably Naṣīr al-Dīn who stimulated him to study astronomy. While still young he conceived the idea of editing the Kulliyāt, the first theoretical part of the Kāmil of Ibn Sīnā. He next sought instruction with the physicians in Shirāz and then studied deeply the works of earlier scholars. He then travelled in Khurāsān, the two 'Irāq, Persia, Anatolia, and Syria. Everywhere, as he tells us in the introduction to the commentary on the Kulliyāt, he sought the acquaintance of scholars. It was probably Naṣīr al-Dīn who stimulated him to study astronomy. While still young he conceived the idea of editing the Kulliyāt; he must have played a part in politics, as Ahmad sent him with his uncle Kāmil al-Dīn to Egypt to the Mamlūk Sultan al-Manṣūr Saif al-Dīn Khalīwān (672-98/1272-99 [q.v.]). He was sent to defend the former's conversion to Islam and to cast doubt the result of Kutb al-

Dīn's influence, and to conclude a peace between the Muslims and the Mongols. The latter part of his mission was a failure. In Egypt also he collected material for the Kulliyāt. He dedicated the work, probably finished shortly after his return from Egypt, to Muḥammad Sa'd al-Dīn, Ahmad Khān's vizier, and called it al-Tābīf al-Sa'dīyya, 'the present to Sa'd', or Naṣīr al-bukhārī, wa-nawādat al-asībābī, 'the delight of the wise and garden of the physicians'. In his later years Kutb al-Dīn retired to Tabrīz. Towards the end of his life he ardently studied Naṣīr al-Dīn's al-Iṣrāfīrā ("Encyclopedia of principles") and to the Sharh al-Sunnāt ("Commentary on the Sunnah"). Ibn Shīhba and al-Suðībī give a sketch of the character of Kutb al-Dīn. He had a brilliant intelligence, combined with unusual penetration; at the same time his humour was innocent; he was known as "the scholar of the Persians". It is evidence of his efforts to preserve his independence that, in spite of his prestige with princes and subjects, he lived remote from the court. He also led the life of a Sūfī. It is emphasised that he had many pupils; among these was Kamāl al-Dīn al-Fārisī (see below), who cannot praise him highly enough; he also induced al-Tabātābāy (d. 760/1364; see Broekhuisen, II, 371, S II, 293-4) to come to critical decisions (manāhīj) on the Iṣbātāt of Ibn Sīnā on points disputed between Naṣīr al-Dīn and Fakhīr al-Dīn al-Rūshdī (Hājdī Ghūṭā), No. 743. He neglected his religious duties; nevertheless, al-Suyūṭī mentions that in Tabrīz he always performed his salāt with the congregation. He loved wine and sat among the scorners. He was a brilliant chessplayer and played continuously; he was also skilled in the tricks of the conjurer and played the small viol (rabābā). His commentary on the Ithnān al-isrāfīrā ("the philosophy of illumination") of Suhrāwārī is undoubtedly connected with his religious attitude. Nevertheless, as Hājdī Ghūṭā (No. 745) emphasises, Kutb al-Dīn distinguished himself in theology. He annotated the Kurān very thoroughly and in a fashion that won recognition in his Fakh al-namānī fi ṭaḥrīr al-Kurā (in the Fārūqī al-kāfī al-kāserī al-Maṣūbī al-kashfī). In the Muṣkāhāl al-Kurān he also dealt with passages in the Kurān difficult to reconcile with each other. He wrote a commentary on al-Kalābshīn hadīth al-dawātī al-Maṣūbī al-Makhdūmī. Kutb al-Dīn played a special part in the history of optics, because he called the attention of his pupil Kamāl al-Dīn al-Fārisī [q.v.] (d. ca. 720/1320) to the Optics of Ibn al-Haytham [q.v.], with which he had become acquainted on his travels, and procured a copy for him. Al-Fārisī wrote a commentary on it and extended it by his own observations. It is noteworthy that Kutb al-Dīn so completely forgot Ibn al-Haytham's expositions that he based his observation not on rays of light like the latter, but on rays of vision.

In the two comprehensive astronomical works Niṣāriyyat al-asrāfī fī dirāsiyat al-asrāfī, the "highest intelligence in the knowledge of the spheres", and al-Tufāsir al-asrāfī fī lāalihiyyat al-asrāfī, which are very similar to each other, Kutb al-Dīn shows the excellently the best Arabic account of astronomy (cosmography) with mathematical aids. It closely follows the al-Taqdīb al-nasīriyya, the memorandum of Naṣīr al-Dīn al-Tūsī, his teacher. But Kutb al-Dīn's works are very much fuller and deal with many questions which Naṣīr al-Dīn did not touch; they are therefore much more than commentaries. The
Nihāya discusses, for example, details of the cosmo-
graphy of al-Qāhira or Ibn al-Haytham, which are
again found in Roger Bacon. Passages from these
works are discussed by E. Wiedemann in: "Zur den
optischen Kenntnissen von Kūtb al-Dīn al-Schirāzī,
in Archiv für die Gesch. der Naturwissenschaft", etc., iii
(1912), 187-93; über die Gestalt, Lage und Bewegung
der Erde, sowie philosophisch-astrologische Betrach-
tungen von Kūtb al-Dīn al-Schirāzī, in ibid., 395-422;
Beilage, xxvii, Auszüge aus al-Schirāzīs Werken über
Astronomie, in SBPMS Erl., xlv (1912), 27-35, reprinted in Aufsätze zur arab. Wissenschaftsgesch.,
Hildesheim 1970, i, 802-10; Erkenntnisse der der
Dämmerung und bei Sonnenfinsternissen nach arabi-
sehen Quellen, in Archiv für Gesch. der Medicin,
xv (1923), 17-57; Inhalts eines Gesächses in verschiedenen
Abständen vom Erdmittelpunkt, in Zeitschr., für Physik.,
xiii (1923), 59-60.

"Every work is entitled Shahr al-šādīkha al-majširīyya.
As an appendix to the Niṣāya, Kūtb al-Dīn wrote the
Fi ḥarakāl ḥarrakā ṭabīb wa-l-nisba bayn al-mušshārī wa-l-
munīkāni, "On the motion of rolling and the
connection between the straight and the crooked". Other works are al-Tabyr va-l-hayya and a work with a very peculiar title, Kūtb al-
fi ḥakīma wa-l-hayya’a, "Work on astronomy; I have composed it but blame it not."

Besides the works by Kūtb al-Dīn already men-
tioned, there are also recorded a treatise on diseases
of the eye and a commentary on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,
written for one of the lāhāqī wa-l-dābī al-sātibā wa-
wayyidhārum; commentaries on the work, mainly grammatical
of al-Sakkālī and on a work of Ibn al-Hādjīb, and an encyclopaedia of philosophy, the Durrat al-tādīq,

wayyidhār
of the most beautiful buildings of its kind in the world.

It is situated about 11 miles from the modern city of Dihl [q.v.], in the ruins of the first city of that name, and about 160 feet from the great mosque which was erected by Kutb al-Din Aybak [q.v.] in 768/1368, just after the capture of the city by the Hindu king, Prithviraj. Like the Minâr at Ghazna [q.v.] and the Minâr at Koyl [q.v.] [no longer in existence], it is an isolated structure, from which the mu'alladhim gave the call to prayer, and is 236 feet in height; it is not attached to the mosque, but stands in the southeastern corner of the southern outer court, which was added in 922/1225 to Aybak's mosque by Iltutmish [q.v.]; it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement storey appears to have been built while Aybak still recognised the overlordship of Mu'izz al-Din Ghur [i.e. before 601/1205]; the second, third and fourth stories were built by Iltutmish, [q.v.], but during the reign of Firuz Shâh Tughlî [q.v.] the building was struck by lightning, and this in 795/1393 it was struck again and added a fifth storey. The two uppermost stories, both of which in their present form are probably the work of Firuz Shâh, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the outer court, which was added in 622/1225 to Aybak's mosque by Iltutmish [q.v.], it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement storey appears to have been built while Aybak still recognised the overlordship of Mu'izz al-Din Ghur [i.e. before 601/1205]; the second, third and fourth stories were built by Iltutmish, [q.v.], but during the reign of Firuz Shâh Tughlî [q.v.] the building was struck by lightning, and this in 795/1393 it was struck again and added a fifth storey. The two uppermost stories, both of which in their present form are probably the work of Firuz Shâh, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the outer court, which was added in 622/1225 to Aybak's mosque by Iltutmish [q.v.], it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement storey appears to have been built while Aybak still recognised the overlordship of Mu'izz al-Din Ghur [i.e. before 601/1205]; the second, third and fourth stories were built by Iltutmish, [q.v.], but during the reign of Firuz Shâh Tughlî [q.v.] the building was struck by lightning, and this in 795/1393 it was struck again and added a fifth storey. The two uppermost stories, both of which in their present form are probably the work of Firuz Shâh, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the

KUTBH SHAH, the name of an Indo-Muslim dynasty that dominated the eastern Deccan plateau as one of the five successor states to the Bahmanâi kingdom. Basing their power on the city and hill-fort of Golkonda [q.v.], the Kutb Shâh kings achieved de facto independence with the decline of the parent Bahmanâi kingdom in the early 10th/16th century, maintaining effective rule until Moghal armies under Auranâq conquered and annexed the kingdom in 1562/1687.

The founder of the dynasty, Sultan Kull Kutb al-Mulk, was a Turkoman adventurer of the Karâ Koyunlu clan [q.v.] who, having migrated from Persia to India as a youth, rose in Bahmanî service until in 901/1506 he was appointed governor over the easternmost Bahmanî dominions. Although he never claimed legal sovereignty during his long rule, Sultan Kull managed to carve out for himself and his descendants the broad territorial outlines of a kingdom over which they held effective sway for nearly two hundred years. He also gave the dynasty ideological definition by declaring Shâfî as the official creed, following the precedent set by Shâh Isâ'îî of Persia in 907/1501. This orientation, continued by all of Sultan Kull's successors, caused the dynasty to identify ideologically with Persia as its link with Dîr al-Islâm, rather than with the Ottoman or Moghal empires, which were Sunni. The sequence of Kutb Shâh kings is as follows:

Kull Kutb al-Mulk 901-50/1500-1553
Dinmahsh b. Kull 950-7/1543-50
Subbân b. Jâmshîd 957/1550
Ibrahim b. Kull 957-8/1550-60
Muhammad-Kull b. Ibrahim 985-1017/1578-1612
Muhammad b. Muhammad-Kull 1020-35/1612-26
'Abd Allah b. Muhammad 1035-9/1626-92
'Abd Allah, son-in-law of 'Abd Allah 1083-9/1672-37

Through most of the 10th/16th century and the early 11th/17th century, the Kingdom of Golkonda was engulfed in constant warfare either with the most powerful two of its sister successor states to the west, Bijâpur and Ahmadnagar, or with the Hindu state of Vijayanagar to the immediate south. These conflicts were sustained by mutual jealousies and petty intrigues, resulting in constantly shifting military alliances among these four principal states of the Deccan. Thus, although Golkonda, Bijâpur and Ahmadnagar were able to band together in 972/1565 to crush Vijayanagar and sack its wealthy capital in the battle of Talikota, immediately after this battle the three Muslim states resumed their mutual hostilities. This situation prompted increasing intervention in Deccan affairs by the Moghal empire, which was expanding its imperial interests in the area in the 16th/17th century, and in 1530/1626 Shâh Jîsûm forced 'Abd Allah Kutb Shâh to recognise the Moghal government's ultimate suzerainty over Golkonda in a "Deed of Submission." By clarifying Golkonda's relationship to Dihl, however, this arrangement relieved 'Abd Allah of further anxieties about Moghal aggression so long as tribute was paid, and freed him to expand Kutb Shâh arms southward as far as the Pellar river [near Madras], absorbing a number of petty Hindu principalities formerly dependent upon Vijayanagar.

But the reign of 'Abd Allah's successor, Abu I'lîsâfis Kutb Shâh, witnessed a dramatic transformation in the internal ruling structure of the kingdom as a number of Brahmins, especially the brothers Madanna and Akaamma, acquired the reins of central authority. This development, combined with the
1. Dillī, Kūṭb Minār (562/1166) and 'Alī' Darwīṣā (705/1305). (A. Volwahsen, Inde islamique, Fribourg 1971, 27)
state's official Šahi ideology, arrears of unpaid tribute to the Mughals, the general chaos in the Deccan prompted by the rise of the Marathás, and renewed expansionist sentiment in the Mughal government.

In 1636, the Mughal emperor Aurangzeb, led a determined Mughal effort to end Golconda's subordinate status and annex it to the Empire. In 1656, after a protracted siege of Golconda fortress, the Mughal conquest and annexation of the kingdom was accomplished.

In its two centuries of rule, the Kuth Sháhi monarchy sank roots deep into Indian society and culture by successfully integrating multiple groups into its political fabric, by founding an efficient economic basis for the kingdom, and by forming a distinctive Indo-Muslim culture that accommodated itself in important ways with the pre-Hindu culture. On the political level, the dynasty, faced with the choice of dislodging or absorbing the indigenous class of Hindu warrior chiefs (náyaks) already dominant in Telugu society, adopted the latter alternative, employing náyaks in garrisons throughout the kingdom and even in the royal guard at the capital. The other indigenous elite group, the Brähmins, were likewise absorbed into the dynasty's political structure, especially in the central revenue administration as clerks, accountants, and even chief administrators. On the local level too, virtually the entire revenue system was entrusted to Brähmins who functioned as agents, brokers or accountants. In fact the more important members of this rural gentry received royal orders guaranteeing their tenure, frequently hereditary, and assuring them of royal support against rivals.

By far the greatest share of the kingdom's revenue was derived from the land tax, collected in each through a highly-organised and ruthlessly efficient revenue bureaucracy. Further contributing to the kingdom's economic stability, and also its notorious wealth, was the successful exploitation of a number of diamond mines discovered in the Krishna river valley during the early years of the dynasty's history. The diamond enterprise became a vast state monopoly that involved several hundred thousand labourers, officials, and merchants, and made Golconda the world's most important diamond market in the 17th/18th century.

A distinctive aspect of the dynasty was its composite culture that combined Islamic and Indian styles, as reflected in the nature of its rule, in the flourishing of Telugu, Persian, and Dakhini literature, and in painting and architecture. Having lived seven years in exile in Vijayanagar, where he learned Telugu and acquired a Hindu wife, Ibrahim Kuth Sháh set the tone of this syncretic culture. He adopted not only the usual symbols of Muslim sovereignty (sákka, lyākha, etc.), but also the style of a traditional Hindu rajah, reserving tax-free lands for the support of Brähmins and temples, erecting pillars on which the sūtra of Bhakti was inscribed, patronising Telugu poets, and reviving the ancient Telugu monarchical tradition of building large irrigation works. Moreover, extensive contact between Hindus and Muslims in the Deccan gave rise to a new language, Dakhini, which achieved its first literary expression in Golconda in the 10th/110th century, with Sultan Muhammad-Kuli himself being one of the foremost writers in the language. A blending of Hindu and Muslim styles is similarly reflected in contemporary painting and architecture, especially the architecture of Hydardáráb. Planned in 1596/1597 by Muhammad-Kuli Kuth Sháh as a suburb of Golconda fort, the city of Haydardáráb [gpr], with its gardens, barracks, palaces, and such architectural masterpieces as the Cárínár, has indeed remained the dynasty's most lasting legacy.

him birth, she had to take refuge from Nimrod in a cave outside the town. Later, Nimrod threw her into a fiery furnace; therefore, in the time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kūthā is also the name of the fassādīq around the town, which comes within the district of Ardestāghī Pāpakhlān and is in turn divided into 20 mādī. According to al-Marzubān (Tashk. B.GA., vili, 79), al-Kabīrī (the Biblical Ör Kasānān) from which Abrahām migrated is a place min bālā Kūthā. The miṣbā from Kūthā is Kūthā or Kūthānī.

Besides Kūthā in Mesopotamia, Yālkāt and al-Bakīr also mention a place of pilgrimage of this name in Mecca.

KUTHAM B. AL-'ABBAS B. 'ABD AL-MUTTALIB AL-Hashimī, Companion of the Prophet, son of the Prophet's uncle and of Um'm al-Faqh Līhāba al-Hilāyya, herself Muhammad's sister-in-law. Al-Mas'ūdī gives the date of his birth as 22 or 23/643 or 644 (since he lived 80 or 81 years (Mu'djam, Cairo 1960, 242), then 24/645), and the next year, when menaced by his rivals for the caliphate, Talba, al-Zubayr and 'Aisha, he made him governor of Mecca and al-Ṭā'īr. He seems to have retained this office all through his cousin's caliphate, leading the Pilgrimage in 30/659 (ed. Ibn Ḥāshim, iii, 1078, 1020, 107, Guillaume, 667; A. Śad, i/2, 70, i/1, 2, 22, viif, 100; Balādhurī, Ansībil, i, ed. Hamdullāh 447, 569, 577; Tabarī, i, 383, 1333, 3092, 3105, 3399, 3343; Muhammad b. Ḥallīb, al-Muhābbār, 17, 40; Ibn Khālidān, ed. Ibad (Abbās, vi, 381, etc.).

After this comparatively undistinguished career, Kuthām achieved fame through the manner of his ostensibly death. He was with the army of Khurāsān under Sa'd b. 'Uḥayya b. 'Affān when the latter in 29/651 defeated the Muhāsunas in 29/651 (cf. Gibb, The Arab conquests in Central Asia, xix-20), and was allegedly killed (thus in Muhammad b. Ḥallīb, 107, and Zubayrī, Nashī Kūra, 47, or died a natural death (thus in Balādhurī, Fudalā, 412) at the siege of Samarkand in 37/657. Tabarī makes no mention of Kuthām's death in his account of this campaign, and Ya'qūbī, Boddān, 298, tr. Wiet, 119, and Narsūkhā, Ta'rikh-i Fudalā, tr. Frye, 40, state that he in fact died at Marw.

Whatever the truth of the matter, the supposed tomb of Kuthām at Samarkand subsequently became a shrine and pilgrimage place; Barthold plausibly surmised that this cult was probably built up by his family, the 'Abbāsidī, when they came to power. It is, however, equally possible that some existing pre-Islamic cult of Soğdiana was Islamised and transformed into the cult of Kuthām. In the inscriptions of the later buildings making up the shrine complex of Afrosiāb, the citadel area of Samarqand and the heart of the pre-Mongol invasion city (see Samarqand), Kuthām is generally referred to as the Shīk-i-simādān "living prince" or Shīk-i-dīmānān "prince of the youths", and I. E. Rempe has suggested that Kuthām is a syncretistic figure incorporating elements of the Islamic prophet Khidr (see al-Khajā) and of Sūyūsh and other ancient Iranian heroes (in G. A. Pugachenko, ed., Istoriia velikogo goroda, Tashkent 1972, 36-35).

The shrine flourished greatly and was added to in Karakhanid and Ṣa'dīid times, so that a whole complex was formed there, and during Sanjār's sultanate, probably in the 520s/1130s, a Madrasa Kuthāmīya was founded. When Ibn Battūta visited Samarqand two centuries later, in the reign of the Qaghatayid Allī al-Dīn Tarmashīrīn (347-54/1347-54), he found the shrine opulently appointed and much visited by the local people of Samarqand plus the Tatars of the region. It had a ūmsāna (q.v.) or hospice attached to it for pilgrims and travellers, and a dormitory for endowments: the grand vizier Muhammad b. 'Abd al-Qādir, great-grandson of the penultimo Bagkīl al-Mustanibīr (649-1252), who had migrated from Trak to Transoxania, acted as nāsir or superintendent of the shrine (Kūthā, iii, 52/4, tr. Gibb, iii, 568-9).

The shrine continued to attract royal patronage, including from the Timurids; a mausoleum, possibly to be ascribed to Kuthām Allī, one of Timur's wives, was built in 762/1361, and in the next century, Ulugh Beg (q.v.) added to it. Alterations were, indeed, made to it up to the early 19th century.

KUTHAYYIR B. 'ABD AL-RAHMAN (better known as KUTHAYYIR 'AZZA and often called al-Mulābi after Mūsāji, a sub-tribe of Khuzā'ī, or Ibn Abī Diuma, after his maternal grandfather), a poet of the Udhri school of the Umayyad period. Like other poets of the same school, his life was a favourable field for the imagination of story-tellers who wrote entertaining ašurū literature. In such cases, legend plays such havoc with history that it becomes almost impossible for later critical studies to separate one from the other. Legends were introduced to suggest pseudo-historical occasions for some poems, and some poetry was made to suit stereotypes of the ideal lover. Other factors, both political and sectarian, made it easy for the rural to shroud Kuthayyir's character with ever thicker layers of legendary material. Nowhere else does authentic poetry stand in sharp contrast to the alleged character of its writer as it does in the case of Kuthayyir. When stripped of such accretions, the biography of such a poet becomes a mere skeleton.

Kuthayyir's parents were both from Khuzā'ī, and lived in Medina or in the adjacent hills to the east. If we believe al-Mazzubān, who states that the poet lived 80 or 81 years (Mūṣājam, Cairo 1960, 212), then he must have been born ca. 23 or 24/643 or 644 (since...
there is no doubt that he died in 105/723). This date of birth seems very early if we consider that there are no traces of his poetical activities before 80/699, a fact which makes one think that he could not have been born earlier than 40/660. Although Kuthayyir's father died when he was still in need of a guardian, he is nevertheless accused of being an undutiful son (this is more likely a reflection of much later sectarian prejudices). When his father was afflicted with a sore in one of his fingers, Kuthayyir considered that as a heavenly punishment for the father, who used to raise that same finger whenever he spoke falsely. The piouc interpretation here is ignored, and the sharp comment is taken as indicating an unfaithful attitude.

Kuthayyir's uncle became a watchful guardian who, to keep the boy away from the vices of urban life, sent him to tend a herd of camels in the outskirts. At that stage, so the legend says, a brass figure trudging heavily appeared to him and ordered him to begin to recite poetry. Thus his inspiring djumif disclosed him to the stage, so the legend says, a brass figure trudging heavily appeared to him and ordered him to begin to recite poetry. the poet to preserve much of his dignity. But when such a feeling is exploited in love-poetry, it reduces the quality to a minimum. The lover even, in moments of self-esteem, admires the sovereign when he describes how admiring women feel towards him and how he enjoys the sight of entrancing "subjects". It is true that this is not always the case, but, being there for once, it can outweigh all his other expressions of total absorption in love.

Kutb-ud-Din was a prolific poet. During his long life, he appears never to have stopped writing poetry except for a certain period, after the death of Azzah and Abbâd al-A'zâz (86/925-71); the poet's use of a simple and direct style of composition helped that prolixness. When writing on love or praise, or combining both themes in one poem, his vivid descriptions of the scenes from the Hûlây to those on the route to Egypt or Syria add much to the length of his poem. It is said that, of lâminiyât, he wrote so considerably as to make them could not be granted letters, according to the Seljuq Sultan who gave them to his vizier, although he had not been well disposed to the Tadjiks and men of Kirman. Kutb al-Din was authorized by the Khâ'ân to put Rûk in al-Din to death as he was suspected of intriguing with the caliph. He soon suppressed a rising by a pretender who claimed to be the Khâ'ârîm-Shâh Djââl al-Dîn. He severely punished the Kûcâ and Bând (see BALGÜSTAN and KARAT). His successes were attributed to the advice of his wife, Kutlugh Türkân Khâ'tûn, whose wisdom is highly praised by the historians. Some doubts exist as to her origin; according to the Ta'âfîk-ûz-gudia she had been the concubine (surra'iyah) of Burâq (according to the last of the Khâ'ân, brother of the Khâ'ârîm-Shâh Djââl al-Dîn) and would thus be a different person from Khân Khâ'ân. The son of Burâq, this fact might explain her feud with the sons of Kutb al-Dîn.

Kutb al-Dîn died in 655/1257. His son Hadîdîdî, when he grew up sought to get into touch with the sons of Ogedey and acted with little regard for Kutlugh Türkân, but the latter, strong in the support of her daughter Pâdshâh Khâ'tûn, married to Abâka-Khân, forced Hadîdîdî to retire to Dihîl in 666/1267. Then the other son of Kutb al-Dîn, Suvarqaratâbakl, successfully disputed Türkân's power and she went to Tabriz, where she died in 671/1272. Her daughter Bibî Khâ'tûn, who had married the assâl 'Adud al-Dîn Hâdîdîdî, removed her remains to Kirman. Marco Polo went through Kirman (ca. 1272) in the reign of Kutlugh Türkân. Djââl al-Dîn Abbâs Mu'azzaf Suyûrgâhatmah (679/1280-9-2) received his investiture from the Il-Khân Ahmad, but could not agree with his sister Pâdshâh Khâ'tûn. She had been brought up among her brothers under the name of Hasan Shâh (cf. MOGUNDI) to enable her to escape compulsory marriage with a Mongol prince. She became, however, the wife first of Abâka and after his death, of his son Gayhkhât. The latter on coming to the throne in 690/1292 gave Kirman to Pâdshâh Khâ'tûn. The princes, who was a poetess of talent, was of a vindictive and passionate nature. At first, Suyûrgâhatmah governed the province in the name of the Pâdshâh, but she later threw him into prison. He was freed by his wife Kûdâvâvân-zâda Kârdûgûn, daughter of Mengü Timûr b. Hûlây and the Salghurids (q.v.) princes Abâsh, ruler of Fars, and his daughter Shâh 'Ali Min. Gayhkhât, however, handed him over to Pâdshâh Khâ'tûn, who had him strangled. His death was followed by the execution of his vizier, who was captured by stragglers. In 694/1295 Bayâd,
husband of Qamal Khâtun, became king, and Pâdshâh was handed over the vengeance of the wife and daughter of Suyurghâtmlâ. In the reign of Pâdshâh Marco Polo (ed. Yule-Cordier, 23, 91) passed through Kîrmân on his return journey (ca. 1293).

In 695/1296 Muzaffâr al-Dîn Abu 'l-Hârîfî Muhammad Shâh Sultan b. Hâjîdîlâr succeeded his aunt by command of Ghâzân Khan, but his brother slew his vizier and rebelled in Kîrmân. The troops of Fârs and 'Irâk besieged Kîrmân for 48 months. Muzaffâr al-Dîn came from Tabrîz, forced the town to surrender and executed the ring-leaders. His methods must have been summary, for his new vizier left him in terror. Muzaffâr al-Dîn, who loved wine, died in 703/1303-4 as a result of his excesses.

His nephew Sultan Kûtb al-Dîn II Shâh Dîjahân b. Suyurghâtmlâ succeeded him and ruled for two years and a half (until 706/1306-7). As he was very cruel and did not pay his dues regularly to the Mongol treasury, Oldjeytâ déposed him and appointed a simple governor in Kîrmân, Nâ'îr al-Dîn Muhammâd b. Burhân. Kûtb al-Dîn II retired to Shiraz to build the madrasâ to which she brought a water supply. Suyurghâtmlâ, wife of Mubârâz al-Dîn Muhammâd, the real founder of the Kîrmân shaykhî dynasty who later took possession of Kîrmân (in 711/1312-3).

Before the earthquake of 1896 there still existed in Kîrmân the Kubbâ-yi sâdâ (remains of the madrasâ of Turkmânâbâd) bearing the date 629/1231-2 (i.e. contemporaneous with Rukn al-Dîn). This "green mausoleum" was the family tomb for the dynasty (cf. P. M. Sykes, Ten thousand miles in Persia, London 1902, 194, 264). Turkân Khâtun founded the little towns of Sarâsîyâb and Caturîd, to which she brought a water supply. Suyurghâtmlâ built the madrasâ of Darb-i Naw, where she was buried.

Bibliography: The special history of the Kût˘ludging Khânîds is the Siyâq al-Salîd in six volumes (after the name of Marw). It seems to have been written in 716/1316-17, cf. Storey, i, 358, 1297. The author Nâ'îr al-Dîn was the son of Kûnu Muntâqân b. al-Dîn Yâhî, the trusted advisor of Kût˘ludging al-Dîn (cf. the Paris ms., B.N. Persian No. 1777, i, 129). On Burhân, Rukn al-Dîn and Kût˘ludging al-Dîn, cf. Dîwanayî, ed. Kâzîmî, ii, 211-18, tr. Boyle, iv, 472-82. On the whole dynasty: Târîkh-i guidâ, cf. Browne, 527-35, 625; Mîrkhân, Kânafat al-safâ', Bombay 1266, iv, 128-31; cf. E. A. Strandman, Chauandii's authorities and the Geographical Records of Turkmânî, Kabul 1890; Körânli, Hâyib al-'arab, Bombay, ii, 10-12; Münzefî-with, Turkish tr., Istanbul 1937, ii, 537; Rieu also quotes Wâsî, ii (to the year 699), which seems to contain full references. Cf. also D'Herbelot, Histoire des Mongols, ii, 19, 53, 253-5, 396; iv, 90-3, 269, 485; Zambour, Mânûd, 227; Boyle, in Camb. Hist. of Iran, v, 233.

The title Kût˘ludging Khân was conferred in 699/1299 by Qâlam b. 'Abî Bakr b. 'Abd al-Salîm. (V. Minorsky)

KUTLUGH-SHÁH NOYAN, a notable Mongol amir in Ilhâmid Persia, especially during the reign of Ghâzân Khân and Oldjeytâ (941-766/1295-1316). He was a member of the Manqut tribe, and a descendent of Chingiz Khân's general Dîiedy Noyan.

After the accession of Ghâzân, Kût˘ludging Shâh led the pursuit of the amir Nawrûz, besieged Harât, where Nawrûz had taken refuge, and captured and executed him in 696/1297. He was also charged with the execution of the fallen amir Sadr al-Dîn. In 698/1299 he was sent by Ghâzân to Rum to suppress the revolt of prince Sârîmâsh. In 699/1299 he accompanied Ghâzân's invasion of Syria, and was subsequently appointed by him shânîna of Damascas. He commanded the right wing of the Ilkhanid army when the Mâmlûk forces were defeated at Hîmâs. During the Syrian campaign of 703/1303, Kût˘ludging Shâh was less successful; he was defeated by the Mâmlûks at Mârjî al-Sûfâr. He among others was held responsible by Ghâzân, and together with his fellow-general Cûbân he was crucified with rods at the judicial enquiry (yârdqâ) which followed his precipitate return to Persia. Any eclipse that Kût˘ludging Shâh may have suffered as a result of this defeat was only temporary, however. On his accession in 704/1304, the Ilhâkim Oldjeytâ appointed him commander-in-chief. But in 707/1307 Oldjeytâ's armies invaded Ghîlân, and during the campaign Kût˘ludging Shâh was defeated and killed. His death cleared the way for the later ascendancy of Cûbân in the Ilkhanid state.

Kût˘ludging Shâh's eminence among the amirs of his time is amply attested in anecdotes concerning him. Râshîd records that during a dispute at court between Harâtî and Shâh Shâh Mubârâz al-Dîn, the successor of Oldjeytâ, Kût˘ludging Shâh urged in his exasperation that the Mongols should abandon Islam—of whose tenets he is represented as having a very curious conception—and return to the yâsîk and yâsûn of Cîngiz Khân (Târîkh-i Oldjeytâ, ed. M. Hambly, Tehran 1969, 58 = Aya Sofya MS 3019, f. 72a). On the other hand, in Ibn Bazzâz's Sâfâst al-saftâ, a near-contemporary life of Shâh Shâh Safâ al-Dîn of Ardabîl, he is shown as a devotee of Sûfî shâyâks, and there is an entertaining account of how in a contest of piety and abstinence, Kût˘ludging Shâh's favoured shâykh was beaten by Cûbân Khân's candidate, Shâh Shâh Zâhid Gilânî (ed. Abjam b. Kühmînî, Târîkh-i Oldjeytâ, ed. Khânîsâ, 2nd ed., Tehran 1969, 38-9 = Aya Sofya MS 3009, f. 28b).

KUTN, KUȚN (A.), cotton.

1. In the medieval Arab and Persian lands.

In the period of the Arab conquests cotton had already been propagated from India to eastern Persia and the neighbouring lands. It was cultivated everywhere and a flourishing industry produced cotton goods as far as China. Marw and Nishapûr were the most important centres of the cotton industry in Khorasân. The province of Marw also exported large quantities of raw cotton, much appreciated for its softness. The cotton materials produced at Marw, especially mulbaar, a cotton and silk fabric, were so renowned that, according to al-Thâwilli, in all countries fine materials originating from Khorasân were called shakhânâ (after the name of Marw).
The industry of Nishapour was known for the material called halâf. The cotton goods of these two towns passed in the caliphal empire, according to an observation of al-Dâjîn cited by al-Thâfâlî, as the best in the world. Transoxiana also produced large quantities of cotton. From the province of Shâhî it was exported into the Turkish lands. Samarkanâd, the small town of Washân not far from it, Buhârâ and Tawâsî were the most important centres of the cotton industry there, whilst Buhârâ was renowned for its heavy cotton goods, whose firm fabric was praised. The cotton plantations had even been introduced into cold lands such as Êfârâzam. Factories for cotton goods were also developed there, whose products, such as those called araqqûf and umirî, enjoyed a great reputation.

Dhîbâl itself produced cotton and had factories which worked it, although on a smaller scale than those of Khorassân. The Arab geographers of the 4th/10th century relate that the cotton of the province of Rayy was exported as far as 4Trâk and Aðharbâyjân. Speaking of irrigation by means of subterranean canals in the province of Iṣfâhân, Ibn Hâwîk remarks that it served for the cultivation of cotton. In Kirmân, there was a flourishing cotton industry at Bûnûm which doubtless used the raw material produced in the province. As for the province of Fârs, there was no room for doubt about its presence there, for Ibn Hâwîk points out as to the rate of tax levied on the cotton plantations in the district of Shâhêz. Yazd and Abarbakhsh themselves had factories which certainly worked the cotton cultivated in their provinces. However, in this part of Persia, the cultivation of flax and its manufacture prevailed over that of cotton.

At the end of the 3rd/9th century and beginning of the 4th/10th century, there were already cotton plantations in Upper Mesopotamia, Syria and Palestine, but in these lands they constituted a new sector of agriculture. Al-Iṣâfîkhânî, writing in the first half of the 4th/10th century, relates that in most of the lands of Râs al-Ayn, in Upper Mesopotamia, cotton was cultivated, and Ibn Hâwîk speaks of the cotton plantations and cotton goods production in the town of Arahân, in the same province. Al-Muṣaaffâdî, for his part, mentions cotton plantations in the district of Ḥarrân. Later on, 4Yâkût mentions cotton goods' production at Ḥaza, a small town near Râs al-Ayn. In the 4th/10th century much cotton was also planted in the province of Aleppo and in Palestine, in the region of the Ḥâla and in the Diwâlân, near Bâniyâsid. To judge by the description of Palestine by al-Muṣaaffâdî, it was also cultivated near Jerusalem. A passage in the description of Upper Mesopotamia by Ibn Hâwîk reveals that the cotton plantations increased considerably in the 4th/10th century in this land, when the new lords, who had replaced the caliphal régime, established large estates and introduced the cultivation of industrial plants such as cotton. Ibn Hâwîk speaks of the Hamânids, but there is reason to suppose that other dynasties were also involved. Whatever may be the case, the cultivation of cotton as yet only played a modest role in this period within the total agricultural production of these lands. Indeed, Ibn Hâwîk specifies that cotton goods were imported from Upper Mesopotamia into Syria.

In Egypt, the cultivation of cotton constituted, in this period and also later, under the domination of the Fàṭîhûn, a still more limited agricultural sector. Several papyri, it is true, testify to the cultivation of cotton in Egypt, in the 2nd/6th-3rd/9th centuries, and other documents refer to cotton plantations in Egypt under the Fàṭîhûn. According to al-Iṣâfî it was even exported in this period from Egypt to Libya. On the other hand, numerous Judaeo-Arabic documents preserved in the Cairo Geniza from the second half of the 5th/11th and first half of the 6th/12th century show that cotton and cotton goods were imported from Sicily and especially from Syria and Palestine.

The same observation will be made as to the cultivation of cotton in the Maghrib in this period; it was planted almost everywhere but on a relatively small scale. Ibn Hâwîk mentions the cotton plantations in the districts of Tunis and Mâṣîla in Algeria. Abî ʿUbâyî al-Bâkî mentions too the cotton plantations in the province of Mâṣîla and speaks of them further in his description of Mostaganem in western Algeria. In Morocco, cotton was planted, according to the reports of the Arab geographers, in the districts of Fès, Tâdla, Basra and Kûrt. In Islamic Spain it was cultivated, in the 4th/10th century, in the province of Seville and also in the district of Guadix, to the east of Grenada.

In the period of the Crusades, the cultivation of cotton developed to a great extent in Syria, especially in its northern provinces. Several treaties concluded between Venice and the Ayyûbîd princes of Aleppo and Salâmûn export the export of cotton from their states. However, the great rise of cotton cultivation in Syria was to begin later, after the fall of the Crusader states. When the farmers lost the great markets provided by the Crusaders' towns, there was a glut of cereals and they went over apparently to the cultivation of cotton. Already in 1239, some Venetian emissaries went to visit the Mamûl governor of Sâfâd, doubtless to negotiate with him concerning the trade in cotton, the plantations of which had increased considerably in his province. The depopulation following the Black Death and the still further diminished demand for cereals accelerated this development, so that the export of Syrian cotton became an important sector of the Levant trade.

The connection between the reduced demand for cereals and the increase in cotton production emerged clearly from the reports of mariners in Upper Mesopotamia and Armenia. Marco Polo relates, at the end of the 13th century, that the provinces of Mûsh and Mârdîn produce enormous quantities of cotton which was worked there. Hamâd Allâh Mustâwîfî, writing in the first half of the 8th/14th century, also speaks of the cotton plantations in the district of Mârdîn and still others in the districts of Bânâbû, Bâûtâlû and Irbî in Upper Mesopotamia and in the environs of Walasgîrîd in Armenia. The Venetian ambassador Girsafa Barbâro, who travelled across these lands in 1474, also mentions the cultivation of cotton and the cotton goods' factories at Mârdîn as well as plantations in the district of Ḥân Kûyîtî. The fiscal regulations of Uzun ʿHzan, then lord of this country, refer to the cotton industries of Urfa, ʿArabîq and Erzîngânî, towns today forming part of Turkey. In 4Trâk cotton was cultivated there in the districts of Baghdad, Kûfî and Hîlî. The accounts of Hamâd Allâh Mustawîfî of the agricultural production of several provinces of Persia are particularly significant in this regard, in so far as they mention cotton plantations in some districts which do not figure as producers of cotton in earlier sources. He speaks of large harvests of cotton in several districts of Aðharbâyjân, Dîbâl, Kûhîstân and Kîrnân. There is no doubt that the diminution of the population and consequently of the demand for
The Irish pilgrim Simeon Simconis, who in 1323, cotton was planted in the district of 'Arfol. According to Manuel Piloti relates that cotton is the most important product of the province of al-Gh rawiyya. Arnoud von Harf, a German traveller of the end of the 9th/10th century, saw cotton plantations on his way from Kalya to Ghazza. In the late Middle Ages, Egypt was also able to export cotton to Europe.

Nevertheless, in no other country of the Near East was the role of cotton, in the late Middle Ages, as important as in Syria, nor was the volume of its production as considerable in relation to other crops. Syria exported large quantities of cotton to Europe, where it served as the raw material for the flourishing textile industries in Lombardy and southern Germany. The most important centres of cotton plantations were the region of Aleppo, the province of Hamadi and the northern districts of Palestine. In northern Syria, cotton was cultivated especially in the districts of Dharahala, 'Arif and Sarrin (called Siamo by the Italians, by confusion with al-Samn), and in Palestine in the environs of Acre and in the valley of Jizreel. But cotton was also planted in the province of Tripoli and on the coasts of Lebanon, near Byblos, Saida and Tyre. In the travel books which pilgrims in the Holy Land have left for us, there is mention of cotton plantations near Jaffa and Ramla. In Transjordania cotton was planted in the district of Ajlun. According to the Merchants' Guide of Pegolotti, the cotton of Hamadi was considered the best, and this statement is corroborated by numerous price lists of the Venetian market. But all varieties of Syrian cotton were more appreciated in Europe than the cotton originating from other countries, such as Turkey, Cyprus, Egypt or Malta. It was appreciated for its finer fibres and for being more flexible. Part of the Syrian cotton fed the cotton goods' industry, especially in Italy. One branch of the Nile and in the provinces of Samman and Mustafa, on its eastern branch. But these plantations were not of great extent. Thus, in 1588 or 1589, the French engineer Louis Alexis Jumel discovered in Cairo a species of cotton which was distinguished by its long, strong fibres and began to cultivate it with the help of Muhammad 'Ali. As the new species fetched a much higher price in Europe than the others, it was cultivated from 1822 on a large scale, principally on the eastern bank of the eastern branch of the Nile. Always under the sponsorship of Muhammad 'Ali, experts on cotton cultivation were invited to Egypt and in 1836 a type of agricultural code (Ibn al-Thir al-falafel) containing detailed instructions for the cultivation of cotton was published. However, the great rise of its cultivation in Egypt only began in the 1860s, when the Civil War in America made the price of Egyptian cotton rise and the plantations were greatly enlarged.

It is from this time that cotton has come to occupy a place of the first rank in the agriculture of Egypt.

In western Turkish dialects, "panmi/dabab, pamab, bamab or namab" (see G. Clausen, An etymological dictionary of pre-thirteenth century Turkish "cotton" is derived from Middle Persian "panahb", while in eastern dialects cotton is "paabga, baabga, or baabk (Radlolf, Versuch eines Wörterbuchs der Türkidsich, iv) and cotton cloth "hebhehki (Nahmcd Kâğızçî, Etabl. Lit. it-Türk, fasc. ed. B. Atalay, 557; in Chinese "piti" see J. R. Hamilton, Les Oeuvres, Paris 1955, 57-8). In Uyghur, "baab" designated cotton. The word "bas (bas) is a common word for coarse cotton cloth in various dialects (also in the forms of "bas, bas, or bas", with a theory of its derivation from the Greek βαστός, Assyro-Chaldean, B. Wang, Von Kûtûrkiscben zum Osmanischen, Berlin 1921, 14 u. 2, now challenged; see G. Doerfier and S. Tescan, Wörterbuch des chaldaischen, Budapest 1980, 91; H. Esedy, Dö, an exotic cloth in the Chinese imperial court, in Asienorientalische Forschungen, iii, 145-63).

Continuing a long tradition of cotton growing and industry in Central Asia, the Uyghur Turks produced cotton and exported cotton textiles to China, as recorded in the Chinese sources of the 9th century (Hamilton, op. cit., Index, s.v. "piti"). Under the Seljûqs (q.v.), cotton production and manufacture had already been a considerable development in Asia Minor, in which principal towns had cotton bazaars (for instance, "panab jaranab in Konya, Afşâk, Manâch, 618) and caravanserais of cotton textiles (for al-Khan al-Bazzâzî in the 8th al-Bazzâzî in Kâişhî, see A. Temir, Coca oglu Nêr e-Dîn, 23). "Cotton fabrics edged with gold embroidery" of Laâbî (Laâdâch-yn-Lykos, today Denizli) noted by Ibn Battîta in 733/1332 (tr. Gibb, ii, 425) were famous all over Anatolia and referred to as late as the 9th/10th century (see Sâlûq-Pashâzâde, ed. Giese, 52).

Although European markets preferred better-quality northern Syrian types (Hâmi, Aleppo) and those of Cilicia and Cyprus (in the t.300s, Pogolotti; cotton; Heyd, Histoire du commerce du Levant, ii, 458), a substantial part of the cotton imported into Europe in the 8th/9th and 9th/10th centuries came from western and southern Anatolian ports—Ayasouk (Ephesus), Bâlêt (Patara), Alanya (Aâlouss, Candelmère), Antalya (Satâla), and Ayas (Lajazo) (Heyd, ii, 463; H. Wesscher, 3357; M. Mazzoni, ch. 2). Cotton was grown in the immediate hinterlands of these ports. The island of Cyprus became the most important of the Anatolian cotton exported by the Genoese in this period. In the mid-15th century, the value of the annual export of cotton via Chios was estimated at 600,000 ducats. Turkish cotton was re-exported by the Genoese to other European countries and even to the Maghrib (J. Heers, 391).

Over the course of time, Venice tried to monopolize the import and distribution of imported cotton in the West. Venetian annual cotton trade with Lombardy alone was estimated to be worth 250,000 gold ducats in the 9th/10th century (Wascher, 2357; M. Mazzoni, ibid.). By the end of the 10th/11th century, Venice imported an average 4,000 tons annually from the Levant (8,000 sacks from Cyprus and 6,000 from Iznar). The expanding Swiss and German fustian industries were dependent on the cotton imported from the Levant.

Although first known in Germany in ca. 925/1570, cotton from Brazil and the West Indies became a serious competitor only after the mid-18th century. At that time, the cotton industries in France and England began to experience rapid growth. Favoured by special trade privileges (see "imperial"), granted by the Ottomans, France, England, and the Netherlands were then directly importing cottons from the Levant, and superseded Italy in cotton industries cotton 10th/13th century. The war of Cyprus (1570-1) can be taken as a turning point for the Venetian decline.

Cotton-producing areas in the Ottoman Empire before 1698/1699. Ottoman survey books, customs registers, guilds and price regulations, as well as hâshî court records, attest to a very active cotton manufacuring industry with export capacity in Anatolia, both in the small towns near main cotton producing areas as well as in the large cities with extensive dye-houses in the 9th/10th and 10th/11th centuries.

Apart from a growing demand by the Europeans and from internal trade, the state's need of cotton products for the navy and army too appears to have become one of the factors contributing to the extension of cotton production and that of certain kinds of cotton fabrics. According to the tax regulations of the 10th/11th and 11th/12th centuries (see C. L. Barkan, Asian, Index, s.v. "panabuk, penâke"), the annual cotton produce were collected in the provinces of western Anatolia (Kudîwêndêgä, Karasî, Kütâba, Aydîn), of the Aegean Sea and Greece (Trisça, Kene, Euba, Chios), of southwestern Anatolia (Karâmû, Hamlî-îlî, Nîl, Adâna, Sîs, Özer) and south-eastern Anatolia (Maliya, Behiszê, Ärînî, Kâmî, Ergani, Mârdîn, Cissa, Diyarbâk, aq, Mawjî). Northern limits of cotton cultivation on the southern Mediterranean coast reached as far as north as Egoifal lake (X. de Planhol, De la plaine pamphylienne, ng, 7). Today, the cotton cultivation is concentrated in the valleys of Gëzd and the two Menderes rivers, and in the Cukurova (Cilia), and to a lesser degree, in the Antalya, Hatay, Muratç, and Diyarbâk areas (Atlas of Turkey, map no. 75).

The Ottoman survey of the Aydin province dated 859/1455 (Bovkeydët Arşiva, Istanbul, No 1/21), which included the Kudîwêndê-Menderes and Bıyîk-Menderes valleys with the Ixzar (Smyrña) area, attest to extensive cotton cultivation in the region. In many villages (Adakîtil, Yûrsûlî, Bozdehgan, Hâyarda, Orta-Seyid, Cila, Kâlu-begû, Kuîllî, etc.) cotton production was near or sometimes exceeded wheat production. Kulu-begû, for example, where two Turkmen nomad groups had settled, produced about 3.44 tons of cotton against 5.63 tons of wheat in 858/954-5. These were flooded lands and mostly settled by Turkmen nomads by the mid-15th century. Obviously, the major production in this area was oriented to supplying distant markets as well as to supplying towns and cities exporting cotton goods in the region.

In the interior, the beykazalî-Mikhaîâlkî area in the Sakarya-Kirîm valley, a number of villages (Celtik, Karalîsî, Süremlî, Kayalar, Sobran, Kîldîla-vêrîn, Bash-vêrîn, Yûrdîna-Aslâl, Çay, etc.) showed a different structure with a much more limited production of cotton compared to other crops—wheat, barley, and rice (see the hâshî registers of Kudîwêndêgä province, ed. O.L. Barkan). Apparently, this area supplied cotton to the nearby towns as well as to Ankara, the important centre of fustian industries in this region. The area of Tokâl, another important centre of cotton industry, displays a similar situation. Here, Vexn, Karabîsîr, Nilzîas, Fels, etc.
Katar, and Karakush in particular, cotton cultivation constituted only a small percentage of the overall agricultural production (H. İslamoğlu, Dynamics of agricultural production, ch. 2). The general trend, however, showed an increase in cotton production, over ten times in some areas. In no case is there a shift to monoculture in the period before the 13th/19th century.

According to the Ottoman surveys of the 10th/16th century (Soyasal, 32), 6,506 hectares or 20% of the cultivated land in the zandjaş of Adana was devoted to cotton, while barley and wheat cultivation took an area four times larger. By the middle of the 12th/18th century, the cotton production of the Çukurova appears to have been quite important. O’Heegarty (200) tells us that in the good harvest years, ‘cotton of Adana’ was exported from İzmir.

Varieties of Indian gossypium herbaceum, the so-called yerli (‘native’) cotton, were well suited to the climate and soil conditions, and were known as the only varieties cultivated in Asia Minor until the 13th/19th century. Yielding a coarse fibre, thick, short, and of unequal length and curl, this variety was considered unsuitable for fine cotton fabrics. However, in the Kırkagah area in the Bakırçay valley, in the Hamidi-ıli, Gellibolu (Gallipoli) the Çukurova (Adana, Cilicia), and Tokat areas, superior varieties were produced for making fine boghâş fabrics.

It was in the second half of the 13th/19th century that American and Egyptian varieties were introduced and cultivated in Asia Minor and the Balkans. In 1333/1914, however, 90-95% of the cotton production in western Anatolia and the Adana region still came from the yerli varieties (W. F. Brück, Türkische Baumwollwirtschaft, tr. C. Issawi, The economic history of Turkey, Chicago 1980, 244-6; Türk sütun tarihi, 135-35)

At the exhibition of İstanbul of 1279/1863, many qualities of cotton from various parts of the Empire were displayed: 24 varieties from western Anatolia, 4 from Ispil (Ilıslı), 3 from Adana, 2 from Marâş, 1 from Mardin, 1 from Diyârbakır, 7 from Amasya, 6 from Serez, 4 from Filibe, 3 from Edirne, 3 from Drama, 1 from Trikkala, 1 from Rhodes, 9 from Syria, and 4 from Egypt. Egyptian cottons were considered the best quality, while those of Aydın, though of short fibre, were preferred for their colour and strength (Türk sütun tarihi, 166). Of the varieties of western Anatolia, that of Subîcî and Kırkagâh were rated first, with those of Akbûrî, Koşağa, Klâk, and Bayindir coming next. Kırkagâh and Akbûrî, as well as Gelibolu, were the chief suppliers of the Istanbul cotton industries in the 13th/17th century (Ensât nisâburi, in the Miftâh al-Ascî, İstanbul).

In cotton-producing lands were listed among the best quality lands, and a higher land tax was imposed (Ulûqay, doc. 41). Tithe on cotton was, as a rule, one-tenth, while in grain it was one-eighth.

Irrigation works for cotton growing were carried out only on large farms organised and created by the elite (see Vahşi dergisi, ii, 364-5). On big farms, orâbûsâs, sharecroppers, were usually employed, and one-third of the crop went to the landowner (at Turguthu in Sarûkhan, see Ulûqay, doc. no. 33). Such farms of the elite were almost always converted into orâbûsâs. On lands under the timâr (çav) system, cotton was grown by individual peasants using primitive means, and often with no irrigation. Disputes arose when cotton prices were low and the timâr-holders tried to lease the tithe to the peasant and ask instead for cash (examples in Ulûqay, docs. 33, 41).

In Ottoman Egypt, cotton was grown on irrigated land in parts of Middle Egypt and the Delta. Egypt, however, had to import cotton from Syria to meet the needs of its cotton industries. By the end of the 12th/18th century, the imports of Syrian cotton reached 2,000-3,000 bales (Raymond, i, 160, 250, 273, 317-38). A special musâka'a (q.) was established on the cotton trade in the ports of Rosetta and Bûlûk in 1731/1720-1 and 1763/1754 respectively, which provided evidence of the growing importance of cotton in the Egyptian economy. During the same period, the cotton markets at Bûlûk, Daniëtta, Rosetta, Mahâliât al-Kubra, Mafrûra and Semnân, united under one musâka'a, brought 2,195,000 paras per year in tax revenues collected on cotton grown in Egypt or imported from Syria. The total amount of this cotton was approximately 24,000 bales (1 bale = 325 mafûa or 143,9 kg). The musâka'a figures show an eight-fold increase in the period 1165-82/1753-68, falling to half that amount in the following period 1183-1173/1769-98 (see S. Shaw, Ottoman Egypt, Index, s.v. cotton; for the period following, see E. R. J. Owen, Cotton and the Egyptian economy, Oxford 1979: 127). Already in the 9th/15th century, the coastal plains between Drama and Karâşefere (Verrück) and Vedena formed an important cotton producing area in Rumîli. In 1163/1751, the Venetian consul Choidas estimated the total amount of raw cotton exported from this area to be 15,000 bales (7,000 for France, 4,000 for Venice; in Salonika, 1 bale was equal to 110, sometimes 100 ohkas, see Svoronos, 249), while in 1212/1776, Felix de Beaujour’s estimate was 60,000 bales of both raw cotton and cotton yarn exported (30,000 to Germany, 10,000 to France). In 1212/1776, de Beaujour gives a record 95,000 bales for the total export of raw cotton (30,000 to London and Amsterdam, 30,000 to Germany and 12,000 to France). De Beaujour that only 10,000 bales were consumed in the area itself.

The cotton boom in the second half of the 12th/18th century was apparently responsible for the structural changes in the area, i.e. the shift from rice cultivation to cotton, the reclamation of new land for cotton agriculture, the extension of big cifîlsâhs and commercialisation of agriculture, and the growing prosperity of the big âydâhs, with increasing control of the land and peasant labour.

The organisation of cotton trade and industries. The hâdi court records and market regulations provide us with quite detailed information on the processes of cotton trade and manufacture in the Ottoman towns (see İhsâb regulations in Tarih resedâri, nos. 3, 5, 7, 9; for court records see Ulûqay).

In cotton producing areas, hayâk, i.e. cotton bolts, and cotton cleaned from its seeds, was brought to nearby town markets, usually by camels (Ulûqay, doc. 22). In towns, special markets, penke pazâri, were reserved for cotton sale. Most of the crop was purchased in small quantities by local djûlûhs or cîlâhs, spinners who were poor townsmen, mostly women. Usually, foreign merchants from the port cities tried to reach producers or local markets through their agents. In order to get the best grade cottons, the merchants, in keen competition among themselves, used a system of advanced payment for a crop directly to the producers through their “factors”. The system of a future contract was bitterly denounced by the French, since they said it caused scandalous competition, resulting in higher prices (Masson, ii, 435). Also, native middle-men or speculators in the cotton trade, mostly consisting of members
of the Ottoman elite along with Jews and Armenians in the Ilemc area, bought the next season’s produce in advance. Such contracts, called salam, widely practised in Islamic countries, were strictly regulated in Islamic law because of the uncertainty about the subject of contract (see Al-Tahawi, Kithb al-Shar‘iyy al-habib, ed. J. A. Watkin, New York 1972) (see also al-Rawandish, J. A. Wakin, New York 1972).

The customs registers provide definite evidence that there was a group of Anatolian merchants who specialised in the cotton trade and who took their cotton goods as far as the northern Black Sea ports (Izmir, The Black Sea, 92-107). The cotton in bales or bales were taken in caravans into centres such as Kayseri, Ankara, Bursa, Kastamonu, Tokat and other parts of the Empire or by sea to Europe. Public regulations provided that all cotton imported for sale in the large cities had to be brought into a special building, called the pambuka kabind. Cotton was to be weighed, taxed, and distributed there. For accommodating caravan merchants with their cotton goods, special caravansaries (pambuka kabind, wakilat al-‘ulun in Egypt) were built (Raymond, II, 640).

In the pambuka kabind, each member of the guild of halldad used his share of cotton at the officially-fixed price (marki-i disir) under the supervision of the kadiyya and yigil-bash (of the guild). The halldad, or carders, separated the fibre from the seed by beating (luma or ‘alma) the cotton with a kemân or yay, a bow-like instrument, to make the cotton clean and fluffy. The halldad were also cotton dealers in the cities. According to a regulation dated 1138/1727 (Istanbul 1726 nizâm- name), there were 104 halldad in Istanbul, 15 in Galata (Pera), 9 in Plugj and 4 in Egypt.

Each group of artisans was responsible for a stage in manufacturing. They were organised in birets, guilds, and their shops occupied the same street or kadkhudd. In Magnisa they were included in the group of 14 crafts connected with the guild of the chief tailor.

For example, in Magnisa, a relatively small town but an important centre of production of cottons, we find pambej Galiger (cotton dealers), deejaldir or hajji (weavers of coarse cotton), baghsêdijlgar (weavers of fine cotton), and bessad (dealers of cotton stuffs) directly involved in cotton trade and industry, while boysadindar (dyers), ‘alma (cap-makers), yigil-bash (quilt-makers), and terziler (tailors) were considered as related crafts. In 980/1572, there were 908 baladi, 120 dyers, and 150 bessads in Magnisa (Ulucay, doc. 64). Each craft guild elected its governing body, a skahb, a skahhudd, a yigil-bash, and a committee of experts (khukhbar) responsible for the supervision of the guild regulations, called nizâm or nizâm-‘ulûm. Dijeddav in Magnisa had an adil bâke [see above] as the head of the mawla, dated 1238/1628 (Bursa ihtisâb, II 7, 33, 34).

In important cities, these men obtained through local badijs the Sultan’s diploma empowering them to exercise authority over their guild members and to get the support of the local law-enforcing bodies. In Istanbul, the guilds using cotton goods were hajîyîn (tailors), bâhiyyîn (makers of wadded headgear for men), tâhîyîn (makers of headdress for women), yeghndiyyîn (quilt-makers), gomelîyîn (shirt-makers), dulbadojlyîn (dealers in Muslim turbans), yeghndîjîyîn (dealers of napkins and handkerchiefs), and ceşmejojîyîn (tent makers); for Cairo, Evlîya Celi (x, 370-1) gives a similar list of crafts and dealers. In both cities, guilds dealing with cottons were included in the group of 14 crafts connected with clothing or home furnishings, headed by the chief tailor.

Bessads (in Turkish bessad), textile dealers, can be classified into two groups: big merchants of international or interregional connections; and local traders (see Edime azeri bessad, ed. Barkan, 4-23, 261, 303, 306, 308, 325, 342, 406, 421). The former dealt with costly goods, cottons, silks, and woollen products of Anatolia, Aleppo, Damascus, Yemen, Egypt, Baghdad and India. Their stocks and credits amounted to big sums, sometimes over one million akas or about 16,000 Venetian ducats in the 16th-17th century. They supplied the local guilds of dreamakers, cap makers, etc., with imported materials or re-exported them to distant areas usually on credit. These big merchants usually had their shops in the bazaar or bâshîk (in Turkish, bazaar or bâshî) in the cities (see Inalcik, The hub of the city: the Bedestan of Istanbul, in International Journal of Turkish Studies, 1, 1-17), and were the wealthiest and most respectable members of the society. As far as their social background was concerned, many of them came from the ruling elite (ibid.).

The second group included those dealers of modest capital, dealing only in local trade in the city. Their stocks usually consisted of cheap cottons, and a large variety of textiles in small amounts. In Edime, we find former Janissaries among their ranks (Barkan, op. cit., 306, 308), but also a big merchant of Janissary origin (ibid.).

Some of the big bessads specialised in importing or selling particular kinds of cotton goods.

Market dynamics. Artisans and dealers in cottons had a variety of difficulties as a result of shortages of raw materials, competition from other centres of production, and intrusions by related guilds in procurement of raw materials and marketing. It was in large cities or export-oriented production centres with a dynamic economy that strains and conflicts were particularly acute and recurrent. There was a kind of delicate balance established by custom and regulation among the guilds which performed successive stages of manufacturing. If one guild in cotton crafts or some members of it diverged from the standards or marketing rules laid down in the regulations, the other guilds were disturbed and the whole system was affected. Consequently, the government was usually scrupulously conservative in keeping the old standards and regulations, and often intervened authoritatively to restore the established norms. However, should the public interest require modifications, the innovations were accepted and introduced into the regulations. It was usually through the local bâdi (q.v.) that the government changed the regulations; he consulted with the guild officers and elders in making these changes.

In the regulations, the quality and measures of each product were laid down. Prices were fixed periodically, every three or six months, by the bâdi in consultation with the representatives of each guild. Dijeddav, for example, were required to make coarse cotton fabrics called baladi, three arsig or 2.04 metres long, and buceh or qalb or 49.5 cm wide, with 1,600 threads at warp (Bursa ihtisâb, II 7, 33, 908/1509).

It was the duty of the officers of the guild, yigil-bash and ahb-i skahb, in particular, to supervise the standards during the process of manufacturing. The goods were also inspected by the mutassib (see usma) when marketed. Periodically, the government conducted inspections using special inspectors (mujettis) sent from the capital (see Bursa ihtisâb, loc. cit.). In larger cities, growing demand and the
import of cheaper grades of cottons caused difficulties for the town handcrafters under regulations with strict standards. Despite the periodic inspections, the regulations and standards for town handcrafts were often ignored in order to produce cheaper products so as to compete with imports (see below). Not being organised as a guild, spinners of cotton yarn in cities came from among the poorest segments of the population, mostly poor women and children. They purchased cotton at the cotton market directly from the peasants or from the kulađrts. This group of spinners, the real proletariat in the Ottoman cities, was particularly vulnerable to the speculation which caused unfair competition and unemployment among them. They often claimed that the merchants caused shortages and high prices by purchasing and re-exporting the imported cotton. Also, since too many spinning wheels depleted quickly the cotton supply at the market, the government restricted the number of the wheels in a town so that hand spinners could find enough raw cotton for their use (Ulucay, doc. 25). Sensitive to the complaints of the poor masses in the towns, the government repeatedly ruled that no merchants could purchase raw cotton until after the town spinners and weavers had completed their purchases at the cotton market.

Cotton manufacturers in large cities distant from the cotton producing areas were usually supplied with imported cotton yarn (Bursa ihtisâb, II-7, 53) as opposed to bulky raw cotton with high transportation costs. Under regulations, imported yarn was to be available to the weavers directly from the importers. The regulations forbade the dealers of cotton yarn of the city to re-sell imported yarn to merchants—a measure taken to prevent the prices of yarn of the city to re-sell imported yarn to merchants. The regulations forbade the dealers of cotton yarn of the city to re-sell imported yarn to merchants—a measure taken to prevent the prices of yarn of the city. Both weavers in the city or merchants from outside (in Magnisa, native Armenians or those of Persia) sometimes sold their wares in the bazars of kâbus (caravanserais) or as peddlers in the back streets. All finished goods, however, either locally made or imported, had to be sold under regulation to the dealers of cotton in the city (Ulucay, docs. 16, 44, 41, 48, all belonging to the 11th/17th century). In Magnisa the bezdes obtained the Sultan's order, which protected their monopoly and banned Armenians of Persia from having shops and competing with the town dealers (Ulucay, doc. 61; cf. A. Refik, Istanbul 1700-1200, 98).

Thus the state or the members of the ruling elite became instrumental in constructing 'kâbus' (karhâsesi) or workshops which brought together the artisans of the same manufacture in one place. The confessed purpose for it was to serve the public by making goods abundant and cheap (esnâf ve râhhât). The leases for the shops included the provision that the lessees acquired the monopoly of the manufacture of a specific product. In 1801/1800 the bezdes obtained such a monopoly in an area from the Black Sea mouth of the Bosporus down to the mouth of the Dardanelles on the Aegean. Also, the Ottoman government sent orders to the main production centres for large quantities of sailcloth for the navy (Uzunöarjili, Bahriye, 515) and coarse cottons for lining and underwear for the soldiery in Istanbul (Uzunöarjili, 1, 252-4).

Government orders involving the output of large quantities of cotton goods in a limited period of time appear to have generated changes in the volume, prices, and even in the organisation of manufacturing in the centres of cotton production. The areas most affected by this situation were those closest to the Ottoman capital or those connected with it by sea—Geïbulu, Bergama, Cyprus, Livadia, Athens, Euboea, Sîfa and Aleppo (Uzunöarjili, Bahriye, 515; Faroqi, Şehrolume, 65-73).

Export centres. It can safely be said that, next to leather manufactures, the cotton industry with a large export capacity was the most important of all the industries in the Ottoman dominions, particularly in western Anatolia, Syria, upper Mesopotamia and southern Macedonia. It constituted the foundation of economic prosperity and urban development in the empire until the 13th/19th century. The high cost of transport of the bulky raw material accounted for the concentration of cotton industries in districts near cotton production areas, whereas finished goods, costly cotton textiles, baghast and durbell, as well as cheaper cottons, kirbas and astar, and cotton yarn were sent by sea or land to all part of the Empire and to Europe.

First among the main areas of cotton industries with large export capacity was western Anatolia during the 13th/19th and 14th/18th centuries. The most active towns in this region at this period were Bergama, Mâzma, Memenmen, Tire, Uskûl, Çários and Denizli. Tire specialised in making pillows and mattress cases, astar, as well as cotton thread, called...

Ottoman types of cotton or cotton and silk fabrics became popular in Turkey—*aladja* and *hundi*—in the 10th/11th centuries (al"ifjas and *akku"us* in the English East India Company documents), see Chaudhuri, 505, 506). *Aladja* and *hundi* were varieties already popular in Turkey before 950/1500 (Customs Registers of Kaffa, Akkerman and Kandahar).

Indian textile imports to Turkey go back to the 9th/10th century. In 875/1470, Mahmud Gawan [96] sent his agents from India to Bursa “with *ahmadia* (cloths) to trade there and in the Balkans (Bilidin, xiv, 69, 73, 83). The list of the Indian textiles, as found in the court records of Edirne, includes Indian dark-blue *kulli* (*kulli i Hindî baxshus*-ward [960/1553]), Indian malmipes (*pekki"s-i frisidi* [977/1569]), Indian kerciefs (*mahramna i Hindî* [970]/1572) and 1587/1588), kerciefs of *ser-badaw* and *bi-Har* and Indian *bhagsta* turbans, quilts, and girdles (*Edrine askeri kasam*, ed. Barkan, 120-3, 138, 147, 244, 335-8, 431). Home made *siga* and *hufsa* were used in Turkey in much earlier times than in Europe (*phutras* and *bajfas* in English, see Chaudhuri, ibid.)

It is possible that while the Indian textiles applied to the Levant market, made necessary adjustments in fashion and varieties (Chaudhuri, 295-40, 247), the original Indian luxury fabrics became popular in the Ottoman lands, as in Europe, particularly from the mid-11th century onwards. The fashion and use of Indian textiles became so widespread in the Ottoman lands that an Ottoman historian, Na*luia (iv, 293) claimed in the 1112/1700s that bullion sent to India to pay for Indian luxury textiles, had reached an alarming point for the whole economy of the Empire. He recommended the use of home-made products instead. At any rate, it was before European cottons dominated the Ottoman market in the 13th/14th century that Indian cottons, fine muslins, prints, *aladja* and *hundi* types, as well as Indian cotton yarn, invaded and apparently threatened the Ottoman native cotton industries. It was during the period 1312-1399/1500-1583 when bullion, cotton and coarse fabrics, were chiefly imported into France. Persecuted (Traill, i, 31), the French consul in Izmir and the Crimea in the mid-14th century, the fashion and use of Indian textiles became fashionable, beginning with the women of the upper class (Glamann, 133; Chaudhuri, 280-3; Masson, ii, 195). The fashion spread to lower classes, and initiated a dramatic increase in demand for cotton fabrics, despite the government prohibitions of the use of imported cottons which were brought about under pressure from the domestic industries of woollens and linen (prohibitions in France in 1098/1688, 1112/1700, and 1221/1770; in England in 1112/1700 and 1221/1770; cottons banned by the Church as “the manufactures of the in"fidsels”, see Chaudhuri, ibid.), and Masson, ii, 277-8). The French imports of coarse cotton cloths from the Ottoman lands rose to about 5 million French livres in 1811/1753. The imported cotton cloths were dyed and “printed” in Marseilles and an important part of them re-exported to Spain and Italy (Masson, 198-9). Thus the Levant shared with India the boom in the production and export of cotton textiles to Europe. This boom reached its maximum in the period 1222-6/1700-4. With their superior quality, the Indian textiles, however, dominated western markets through the East India Companies of Holland and England, while Levantine products, cotton and coarse fabrics, were chiefly imported into France. Peyssonel (Traill, i, 31), the French consul in Izmir and the Crimea in the mid-14th century, found that the export of French textiles to the Levant was limited mainly by the successful competition of the native cotton manufacturers. The French export of cotton to the Levant in 1204/1789 was only 42,000 livres’ worth (Masson, ii, 495; then 3 French livres = £). Red cotton yarn from western Anatolia and Divyarba"ki exported from Izmir always found a ready market in the West, due to its high quality in dyeing and its low price. It was exported in great quantities to the Netherlands (O’Hegucrty, 304) and to France.

By the end of the 12th/18th century, the annual cotton yarn production of Thessaly and Macedonia reached one and a half million kg., of it dyed (F. de Beaujour, cited by Svoronos, 248). The Austrian firm of Starhemberg, established in Salonica in 1190/1767, became a spectacular success. By 1204/1789, it had opened several factories which produced cotton yarn in Serres and Larissa (Svoronos, 182-5). Importing cotton and cotton yarn mostly through Marseilles, Switzerland too developed a cotton textiles industry, and in 1174/1760 a Swiss consulate was established in Salonica with the main purpose of promoting the cotton trade (Svoronos, 165, 252).

Cotton yarn and textiles from Egypt to Europe, i.e., France, Lefkorn and Venice, consisted of only a small part of Egypt’s total exports (Raymond, ii, 180). However, 600,000 Attles from Cairo, Masbahat al-Kubrâ and Rosetta, called Amârâs (amârâs bi-‘ajnâ), and melâbâs (Maḥallâtun), which were mostly exported to France, increased rapidly from 1133/1720. These exports reached their peak in the period 1143-52/1730-9 with an average of 669,562 livres, or 50.3% of total export. They then experienced a decline, to 291,708 livres in 1766-9 (the figures include exports of fabrics of flax, which made up one-third of the total in 1798). The decline was explained by the deterioration in quality, possibly a result of competition with western cottons (Raymond, i, 230).

England’s share in the import of Egyptian issues was less than 10% during the same period (Raymond, i, 174, 180-2). On the other hand, Egypt itself imported cotton fabrics from Syria, Izmir, Bursa and Istanbul. Syrian cottons or silk and cotton fabrics, such as Anâhâtk, Nîlâ’bât, qabîn, alâq, and ǧhârîn, were an important part (about 43 million paras by the end of the 12th/18th century) of the Egyptian imports from that country (Raymond, i, 190). Before the English cottons invaded the area, Cairo was the main emporium of Indian textiles imported via the Red Sea. The total value of the Indian, European, and Syrian cloths imported was estimated at 900 million paras. The growing imports had a disruptive effect on the domestic textile loom crafts in Egypt as early as the turn of the 12th/18th century (Raymond, i, 191, 193, 199).

European competition. It is generally accepted that the reversal of the roles in cotton manufacturing and export between East and West occurred in the period 1164-84 (1750-70). After 1184/1770, England, France, Germany, Austria and Switzerland began to export their cotton textiles to the Levant markets in growing quantities. Already by the mid-18th century, Western governments, changing their policies of prohibition, permitted the expansion and protection of their domestic cotton manufactures.

Note the first-place ranking of the British in the export of cotton goods already at this time, and the dominance of the French woollens in the Levant market.

It is said that while the British cotton industries developed under the impact of Indian trade, the French developed under the Levantine one (Masson, ii, 434, n. 3). From 1133/1720 onwards, in order to protect national industries and those of its colonies in the Antilles, the French government imposed a heavy duty (60 livres per quintal) on the cotton yarn imported from the Levant (Masson, ii, 201). Already by 1143/1729, the French noted with pride that French imitations of Indian cotton prints found an outlet in Istanbul and were expecting even to manufacture the white cotton cloths themselves, thereby reducing their import from the Levant and Holland (Masson, ii, 436, 456).

In the second half of the 18th century, of the great variety of imports from Germany (Leipzig) and Austria to the Ottoman Empire, cotton textiles, muslins, and the so-called indicéens, were at the top of the list. German cotton goods had quite a large market at Izmir (55-60,000 pieces annually) and Bursa (30,000 pieces) (C. Aubin’s report, ed. A. Cunningham) English cotton products exported to Germany also reached the Balkans through the Leipzig fair. Along with Leipzig, Vienna was another important centre for the Ottoman trade. Here we find 268 Ottoman resident merchants by 1161/1752, including a number of Muslim Turks (a certain Molla Huseyn owned six storehouses and Molla Hasan four). During the period 1204-1227/1725-1741, when Austrian-Ottoman trade showed great development, raw cotton and cotton yarn became the principal exports from the Serres area to Austria and Germany (V. Paskaleva, 40-56).

However, the Eastern cotton yarn still had the advantage of lower prices due to the cheaper food and lower wages in the Levant (Masson, ii, 456-7). The cotton yarn imports from the Levant continued. By the 1195/1780s, while French cotton industries found markets, first in Spain and then Italy for their products, whose designs appealed to the taste of the populations there, the Muslim population of the Levant did not favour the imitations of the West. Western cotton industries would definitively conquer the Eastern markets only when they succeeded in solving the problem of price differential (by using machines) and when they imitated or created designs and colours which attracted an eastern clientele.

The introduction of dyeing methods from the Levant was a crucial factor contributing to the success of western cotton industries and exports. The Dutch and the French finally succeeded in learning the special technique known as Edinme dyeing. Consequently, Turkey’s export of red cotton yarn was reduced (O’Hegarty, 204; Masson, ii, 439-40). This reversal of the situation was apparent in the rapid growth in raw cotton imports and the diminishing proportions of cotton textiles and yarn from the Levant. Between 1121/1700 and 1203/1788, the French imports of raw cotton increased ten times, representing 39% of the total imports from the Levant, while cotton yarn did not make the same progress.

As has been seen above, change was rather long process and often achieved in stages. For some time the Levant continued to export its cotton cloths, now in a raw state, undyed; then mainly its cotton

British supremacy and impact of the industrial Revolution. It was to the cotton imported from the Levant that the first cotton industry in England owed its foundation. First, justians, made with a cotton weft and a linen warp, were produced in Lancashire under Elizabeth I at some time before 1584. By the middle of the 16th century, the cotton industry was considered to be a well-established industry in England, although it depended upon a regular import of raw cotton from the Levant, Izmir, Cyprus, Acre and Sidon (A. C. Wood, 74). During the period 1591-1624/1669-1770, the Levant suffered a decline in its exports of cotton and cotton goods to Britain. This was mainly due to the overall decline of the English trade in the Levant, as well as to the English domestic policies against the use and manufacture of cotton goods (R. Davies, Devonshire Square, 29-31). Another factor, a more enduring one, was the competition of colonial supplies to England from the West Indies and India. After the mid-18th century, when British cotton industries were encouraged, the cotton trade experienced a revival from which western Anatolia emerged as one of the main sources of supply.

Cotton imported from the Levant was approximately 350 tons in the years 1111-13/1699-1701, 350 tons in the 1123/1720s and 1123/1720s, and over 500 tons in the 1114/1730s (Davies, op. cit., 273). Also some Levant cotton was imported to England through the Netherlands (Wood, 16c). In the 1118/ 1770s, large cargoes in British ships from the Levant consisted of cotton and fruits. The “cotton boom” was responsible for the revival of the British trade in the Levant in the period after 1129/1758, when the English industry made its tremendous advance (R. Davies, op. cit., 187, 241-2).

British cotton manufactures had to compete in the Levant not only with the Indian fine cotton textiles—muslins and calicoes in particular—but also with Indian cotton yarn. The Ottoman consumer did not at first favour the British imitations of Indian cottons, but price became a key factor, and by 1124/1800, he came to prefer the cheaper British manufactures (Aubin’s report). For the manufacture of fine cottons, Indian yarn was imported into the Levant until 1800, when it was replaced by British “twist”, a strong thread used mostly for the warp (Aubin). “Twist” invaded Ottoman markets as far as the cotton production centre of Diyarbakir via Trebizond, and Central European markets via Salonica (Aubin). The demand of the Istanbul weavers alone was estimated at 20,000 okkas and that of Izmir and its hinterland at 400-500,000 lbs. Also, British imitations of Indian muslins, widely used in turbans, veils, and headgear for women, superseded the Indian imports in the Levant. By 1227/1812, other more popular English cotton textiles, all of them imitations of Indian cottons, were printed calicoes (with a consumption estimate of 37-40,000 a year in Izmir), chintz (Hindal Shind, Persian and Turkish cloths, shawls and “shirtilaghs”, etc. (Aubin gives a long list in his report).

Cheap, durable, bright in colour, the English cotton goods thus enjoyed a “prodigious demand” over the Levant from Cairo to Istanbul. This was considered to be a trade of the “highest importance” for England (Isaac Morcer’s report dated 1814, cited by Wood, 102-3). Although raw cotton imports from the Levant showed a great increase during the same period, their value was not significant when compared to that of the manufactured cotton goods exported to the Levant. Turkish cotton was only one-twelfth of the total imported by Britain.

After India, Germany too experienced losses at the Levant market for cottons in favour of British manufactures. During the Napoleonic Wars, the British took advantage of the rising prices in Germany and the closure of Trieste and Flume, principal transit ports for Austrian-German exports. Great Britain’s interest in the Levant as an important market for British manufactured cotton goods grew particularly from 1224/1825, when the full impact of the Industrial Revolution was felt at home. Taking advantage of its role as a protector during the Egyptian crisis, Great Britain had the Ottoman government sign the commercial treaty of 1225/1838 which awarded Britain favourable conditions and turned the empire into an open market for its cotton industry (V. J. Purrey, International economies and diplomacy in the Near East, repr. Archon Books, 1956, 197-209; P. E. Bailey, British policy and the Turkish reform movement, Cambridge 1942, 39-178; Mubabat Kitükoğlu, Osmanlı-Türk Bagilarinin İmalatçılığı, 1828-1836, Istanbul 1996). The principle of free trade was virtually introduced into Turkey before it was accepted in Great Britain (Purrey, 147). From 1225/1838 to 1226/1852, British imports of cotton textiles tripled and those of cotton yarn doubled, 63,9 to 183,8 million yards and 5,6 to 11,9 million lbs. respectively (Kitükoğlu, 82, 86). The value of the British cotton imports to Turkey rose approximately from one thirty-eighth in 1224/1825 to one ninth of the total production in 1227/1855 (Bailey, 86).

Sources: Bailey, 74; O. Kurmuş, Empiryalism, 49.

The Ottoman trade occupied third place in Great Britain’s foreign trade in 1226/1850 (Bailey, 82-3). In the Ottoman Empire, the break-down occurred first in the cotton yarn production, which directly affected spinners, the poorest section of the population in rural and urban areas. In 1249/
1833 D. Urquhart tells us (Turkey and its resources, 184) that "their own yarn being unequal, heavy in weaving and liable to break, the weavers prefer much the English yarn." Also, the first serious crisis in cotton loom industries appears to have occurred in the period 1821-1833 (Urquhart, 47-54; Ö. C. Sarı, in Ch. Issawi, Econ. history of the Middle East, 48-9). At a later date, in 1279/1862, another Englishman, Lewis Farley (The resources of Turkey, 59-60) observed that "Turkey is no longer a manufacturing country. The numerous and varied manufactures which formerly sufficed, not only for the consumption of the empire, but also stocked the markets of the country. The depredations of the received a 1254-1838, "five thousand weavers in Scutari were without state, and reduced to the most deplorable beggary. The fast colors and firm material of Dijbekir disappeared, ... and Barsa towels came from Lyons and Manchester. ... Thus, all the industries of Turkey have perished." Apparently, all these figures given are simply rough estimates, sometimes grossly exaggerated. In Aleppo, for example, in the period before 1273/1856, only 1,000 looms with an annual output of half a million pieces are mentioned in John MacGregor, Commercial statistics, no. 544; Istanbul tarif miyârîlari, Istanbul şerîye siçcileri arşivi, Istanbul Mûttalıqû, ihtisâb ve malik-i ceddât-i defterleri, nos. 5. 7. 9; provincial laws and regulations ed. KUTRABUL, a place name of Slav. Also given as Katrabbul, the name is regarded as Persian in origin. (1) Yâbûl lists a village (karya) of that name which was situated between Baghad and Câlabûr. This Kutrabbul was reportedly frequented by pleasure seekers, who recognised the quality of the local wine. As a result, the village is often mentioned by such persons as Abû Nuwâs and in tales comparing the virtues of different wine-bearing locations. (2) Kutrabbul also refers to one of the four major administrative subdistricts (hâsûdâ, and in Yaâkût, also hâra of the greater urban area of Baghadh. The subdistricts, which also included Baddârayâ, Nahâr Bûq and Kalwâdhâ, were in existence before the Islamic occupation of the area and may have continued to serve some administrative function after the construction of the Islamic city. Kutrabbul and Baddâraya occupied the lands west of the Tigris River with the Sarat Canal serving as a boundary between them. The geographers speak of Baddâraya being east of the Canal and Kutrabbul to the west, though it would perhaps be more correct to speak in terms of south and north. Kutrabbul thus came to represent the area which comprised the Round City of Al-Mumûnî (en) and the northern outskirts including the military cantonments of al-Harbiyya. KUTRUB, the werewolf. The Arabic word goes back to Syriac kaftúfopos (or kafúfopos), which was subsequently transformed into the Arabic kufirub which in the same way as other names of animals, like jundub "locust" or kufirub "bedehog". Kaftúfopos itself is the Syriac transcription of Greek kúttápfouxou. The saga of the werewolf is by itself indigenous to Arcadia in the central Peloponnesus (see Pausanias, viii, 2), but has many parallels amongst the Romans, Celts, Teutons and Slavs. Originally it was unknown to the Orient, and the Arabs came to know the figure of the werewolf in the 2nd/3rd century at the earliest. According to an oft-repeated anecdote, Sinbad once described his pupil Muhammad b. Al-Mustanî as kufirub (kafirub, kufirub) to the latter, which was subsequently known by the nickname of Kutrub (see following

KUTRUB means in Arab geometry (1) the diameter of a circle or of any section of a cone and the diameter of a cone; (2) the diagonal of a parallelogram or of any quadrilateral; (3) in trigonometry, the hypotenuse of the right triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the first case it is called hâr al-sâli al-aswâq ("hypotenuse of the first umbra"), in the second case hâr al-sâli al-îfîn ("hypotenuse of the second umbra").

KUTRUB — KUTTAB

KUTRUB, the cognomen of Abd Allah b. Muhammad b. al-Mustahin, grammarian and lexicographer of Basra in the 2nd/8th century, the freedman of al-Sa‘ib b. Ziyad. He was born in Basra, where he studied not only grammar with the founders of that science, ‘Athir b. ‘Amr, ‘Umar b. ‘Abd Allah b. Sibawayh (who is said to have given him his nickname), but also theology with the famous Muslim authority al-Nasafi. He became the tutor to the son of the military commander and minister ‘Abd Allah Dulaf al-‘Adli [see: Al-Kasim b. ‘Umar, ‘Abd Allah Dulaf], and died at Baghdad in 206/821. According to Ibn al-Sikkit, his pupil, he was not to be regarded as a reliable authority for lexicography.

Kutrub holds a very important place in the history of Arabic grammar, as the first grammarian known to have written a work on the following topics: (1) words with two opposing meanings (‘addal [qalal]); (2) words with the same consonant skeleton capable of having three different meanings (mu‘tala‘) according to whether they have one or other of the three vowels; and (3) the explanation of the causes and occasions (‘ilal) of grammatical phenomena. Furthermore, Kutrub seems to have held original ideas about syntax. Al-Zanjiju‘di in his K. al-Idqah (ed. M. al-Mubarak, 70, 77) states that Kutrub, as opposed to all the other Basran grammarians, did not believe that the ‘arba‘ affixed nouns in order to show their different functions and to distinguish them from each other; he averred that there are nouns with the same ‘arba‘, whose function differs, and nouns with different ‘arba‘ but with the same function, and accordingly held that ‘arba‘ only affects a noun in order to distinguish two grammatical states, e.g. at the end of a speech unit, without a final vowel, to mark pause (wa‘af), and within a speech unit, with a final vowel, to mark liaison (‚asal) with the succeeding word.

KUTTÅB (pl. kuttab), itself probably plural of kuttab (‘scribe’), a type of beginners’ or primary school. The term is frequently synonymous with maktab in Arabic and Persian and mekteb in Turkish. In Ottoman it was also called mekteb-i şeyh or mekteb-i şeyh-i sâbîn or şeyh mektebi, (‘children’s school’); later, in the Tanzimat era, it was more generally referred to as ihtidâ‘i mekteb (‘beginner’s school’) and then as âile mektebi (‘primary school’). European writers have often called it “Kurra‘ie school”.

The kuttab was formerly widespread in Islamic lands. Although the appellation was almost universally applied to Muslim beginners’ schools, kuttab has also been known to designate Jewish hadar-type schools in Arabic-speaking countries. While there are no precise indications as to when they were first established, they spread during the Umayyad era in the wake of the conquering armies (G. Thoenes) and by the 8th/14th century the system was already widespread in early Abbasid times. There is some evidence that the structure and teaching methods of the kuttab were modelled on the Byzantine primary school (Lecomte, in Arabica, i (1934), 324 ff.), but its curriculum was purely Islamic and Arabic. The early kuttab was an important agent for socialising different ethnic groups into the Islamic faith and its way of life. Later, in the Ottoman Empire, it served as vehicle for transmitting the values of the Ottoman Islamic society from generation to generation. The kuttab provided a common educational basis for all who attended it. It was homogeneous in its aims and methods, and thus differed from the indigenous tradition of education, which displayed remarkable diversity. Until the penetration of Western models of education in modern time, the kuttab was the only vehicle of public instruction for young Muslim children. Even up to the present, it has played remarkably staying-power by continuing to compete tenaciously with other educational institutions in many Islamic countries.

Since basic education [see TARBÂY] was usually imbued with a religious spirit, and its professed goal was to produce a true believer, much of it was closely connected with the mosque [see MASJID]. Consequently, the kuttab was frequently attached to a mosque, whose officials also provided further instruction.
The kuttab itself was located in any sort of room available, a tent in the desert or even (as in Uganda) in the open. If specially constructed, a kuttab consisted (in the Ottoman Empire, at least), of a large domed, unadorned hall in which all the pupils sat crouched over mattresses in a rough semi-circle, usually next to low desks. Such buildings were generally used by the buranusha (through a madrassa otherwise) or by the pupils' parents, who also provided the teacher's fees (in money and food). In the Middle Ages, wealthier families sometimes set up a private kuttab for their children. The state hardly intervened until well into the 19th century, so that fees, physical arrangements and the curriculum were agreed upon between teachers and parents alone.

There are even recorded instances of teachers volunteering their services without pay, though in many other cases they were underpaid, and some had to send their pupils to collect alms for them (as in other cases they were underpaid, and some had to set up a private kuttab for their children. The state Ceylon; and mu'allam (from the private tutor); in Turkey; in maktabdar khbdja in the Arab lands (in some cases, the later attended in the late 19th century. The state

sion required for the formation of a good Muslim—there were obvious qualitative differences between the towns and countryside, as well as substantive variations in emphasis in the curriculum. The Kur'an was studied in all the kuttabs, with stress laid on memorising and absolute accuracy. The teacher began with the Fatiha, then proceeded to the shortest, the 14th, sura (al-Nas) and continued back until the class reached the longest, the 2nd, sura (al-Bakara). When a pupil had mastered all this, he began to practise his recitation in the correct order. As a general rule, the early-morning hours, considered the best time of the day, were earmarked for studying the Kur'an. At other times, prayer and religious rituals were imparted regularly. In the eastern Arab lands (Egypt, Palestine, Syria and 'Irak), Arabic grammar and poetry were usually studied as well. This was likewise the case in Muslim Spain, where composition was also added to the curriculum. While in Algeria, Morocco and among the Muslims of Africa south of the Sahara, little was learned besides the Kur'an. In Tunisia kuttab was generally included as well. Some calligraphy and a smattering of arithmetic were added in some kuttab in Turkey as well as in Iran, where Islamic history and fragments of Persian poetry (e.g. from Sadi's and Hafiz) were occasionally included, from the 7th/13th century onwards. A little Persian poetry was also taught in the kuttab of Afghanistan and the parts of Central Asia ruled by Imperial Russia. In some kuttab in Ceylon, Arabic grammar, elementary arithmetic and the writing of Tamil in Arabic characters was practised in addition to the Kur'an. All considered, one may surmise that although the kuttab's curriculum laid a basic foundation for further study, many of the pupils who ended their education at this level had to put to use it profitably, except for prayer.

Since the mid-19th century, the kuttab has exhibited signs of change. Some reform has been promoted from above, as in the Muslim parts of the French possessions south of the Sahara, where the authorities initiated a campaign to supervise these schools and improve their quality (their success has not always been evident). Elsewhere the kuttab stood in competition to the newly-imported Western-type primary schools, which also imparted a Muslim education but in more efficient ways. The kuttab has held its own in Egypt, partly because this was the first Arab country that attempted to adapt it to modern requirements and integrate it into the state system.
An inspector of these schools (Mufattish al-makdisb) was first appointed in 1835; since 1867, the Ministry of Education has been officially empowered to inspect these schools regularly (in the Ottoman Empire, a Ministry of Education to supervise the kuttdb and other schools was established by an irade in 1846). By 1890, official supervision of kuttdb was fairly widespread in Egypt, and its effectiveness was increased by governmental grants-in-aid. Later, Muhammad 'Abduh (q.v.) was instrumental in expanding their curriculum (which today includes object lessons). Indeed, there are recorded cases of children attending an elementary school in the morning and the kuttdb in the afternoon, or going to the kuttdb in the early morning before school.

The fortunes of the kuttdb in the 20th century have accordingly varied. In the Sudan, it has coexisted with the more general schools introduced by the British soon after they had defeated the Mahdist (q.v.) forces. In Zanzibar, in 1907, the British director of education decided to make the Kur'an a basic component of the general curriculum and to integrate the kuttdb into the school network. In India (e.g. in Bengal) the British rulers tried to increase the number of kuttdb and raise their standards by introducing secular studies (The Reform Scheme, 1914). The same trend was evidenced in the British administration of Arab education in Palestinian after the First World War. In Syria, in the 1923-24 school year, there were still 1,229 kuttdb, with an enrolment of 34,440 children; more recently, however, the bulk of Islamic education is carried out in secular government schools. Although in Iran western influences began to affect the kuttdb adversely in the 1920s, and a Ministry of Education was set up in 1910 to foster modernism, as late as 1930 there were still 2,536 kuttdb, compared to 1,218 state primary schools.

In recent times, the fortunes of the kuttdb have as a rule suffered wherever Muslims are in a minority, e.g. in the Soviet Union, where all these schools were closed by the authorities in 1928. Much the same occurred in Yugoslavia in 1946. In India, however, they made a comeback after Partition, sponsored by active Muslim organisations. The kuttdb is on the decline (although no detailed statistics are available) in countries undergoing modernisation, especially in urban areas. The extreme instance is Republican Turkey, which disestablished these schools in 1924 and closed them down in 1926—although some have continued to function surreptitiously in remote villages. The opposite case is to be found in theocracies like the former monarchsal Libya or in Saudi Arabia, where the kuttdb (sometimes under other names) has long provided the only type of basic instruction in both the desert and rural areas; modernised primary schools have gradually been introduced there only recently.

In some other Islamic countries, the kuttdb has survived thanks to efforts towards raising its level and enriching its curriculum and to the generosity of various philanthropists. In yet others, the kuttdb flourished for a while due to the impact ascribed to it by anticolonialist movements. In Morocco during the 1930s, the prestige of the kuttdb (called madr, from maqdis, the Holy City) increased because it served as a focus for nationalist propaganda against the French Protectorate. In Algeria during the 1930s, an Association of ulama set out to revive the kuttdb and increase their number as a means of protecting the younger generation against the modernising influences of the French. Later, in January 1964—less than two years after independence—a decree reorganised basic Muslim education to suit the new situation. Elsewhere, too, kuttdb instruction still continues to have current relevance; in 1962, for example, an Upper Volta politician in search of Muslim votes claimed that he had studied in such a school.

Practically all newly-independent Arab states, as well as Pakistan, Malaya and Indonesia, have attempted to incorporate the kuttdb into the national school system, to supervise them and to provide them with a better-organised curriculum, including regular class hours, examinations and grades. While the integration of the kuttdb into the state systems of education may well ensure their continued existence, particularly in rural areas, state supervision is gradually altering their original character. This is especially so since in all Islamic lands the study of the Kur'an and of Islam has become a standard part of the core curriculum of basic instruction.

AL-KUTUBI, Abdul-Aziz Muhammad b. Shaker al-Darazi al-Dimashqi (680/1281-1363), Syrian historian. The date of his birth is uncertain, although the majority say 690/1291 for Ibn Hazm's Durar. It has been little studied and not yet been edited, possibly because there is practically nothing known about his life, and because there seems to have been little use of his works. He had personal fortunes and was very poor, and he had a great influence in the Middle East, but he never became a great scholar. He had the personal fortune of being a close friend to his master, the famous scholar of the Middle East, and he spent all his later life in Damascus. He had personal fortunes and was very poor, and he had a great influence in the Middle East, but he never became a great scholar.
forces to combat a Mongol invasion of Syria. In addition, claiming that al-\textit{Manifest} \textit{All} was too immature to defend Muslim territory, Kutuz deposed him and had himself proclaimed sultan. Thus Kutuz was the first of many Muslim leaders to depose the sons of his \textit{usuli}, in order to make himself sultan, thereby setting, according to Ibn Taghribirdi (Cairo, vii, 56) "an evil precedent which led to the decline of affairs in Egypt".

Kutuz promised those \textit{amirs} who protested against this act of usurpation that he would step down from the sultanate once the Mongols had been defeated. To secure the co-operation of the Ayyubids of Syria, Kutuz proffered his allegiance to al-Malik al-Nasir of Damascus and Aleppo and volunteered to defend him against the Mongols. To Hulegu himself, however, Kutuz offered only defiance and in 658/1260 put to death the envoys whom Hulegu had sent to demand his submission. Proclaiming a \textit{diq\textit{\textipa{d}}, Kutuz led an army from Egypt into Palestine. Although the Mamlik \textit{amirs} were reluctant to join battle against the Mongols, Kutuz succeeded in persuading them to march with him and sent Baybars al-Bundukdari, the future sultan, at the head of an advance force. Kutuz first secured the neutrality of the Franks at Acre and then met, and defeated, the Mongol army at \textit{Ayn Djalut}. After the battle Kutuz marched to Damascus, which he used as a base from which to clear Syria of Mongol troops and to establish Mamlik rule in the province, appointing his own \textit{amirs} to some key posts and retaining Ayyubids in others. During the march back to Egypt, Kutuz was murdered at al-Kusayr, near al-S\textit{\textipa{lah}}yya. Though the court historian Ibn \textit{Abd al-Zahir claims that Baybars was the sole assailant, it is clear from other sources that this historian was attempting to establish Baybars' unique claim to the sultanate according to "the law of the Turks" which states that one and only one \textit{hunu} al-malik. (\textit{Shaf\textit{\textipa{i}}, b. \textit{All}, quoted in al-Rawd al-zahir, ed. al-Khowariz, 31).

There is also disagreement over the motivation for the assassination. Several historians claim that Kutuz reneged on his promise to award Baybars the viceregency of Aleppo after \textit{Ayn Djalut}, but Ibn al-Dawd\textit{\textipa{arih} says that Kutuz had already aroused Baybars' enmity by rebuking his brother \textit{amirs} for cowardice during the battle. Ibn \textit{Abd al-Zahir claims that Kutuz offended Baybars by refusing to share the glory of the \textit{djibad} with him. In any event, it is clear, as Baybars al-Man\textit{shar} points out, that the enmity between Kutuz and the Bahriyya was of long standing, and Bahriyya ambitions for the sultanate were undoubtedly a factor. The disposition of the body of Kutuz is also a point of dispute, with Ibn Taghribirdi claiming that Baybars transferred it from the original grave when it became a site of pilgrimage, while others merely say that it was buried in Cairo. Be that as it may, the sources are virtually unanimous in hailing Kutuz as a hero of Islam for the victory at \textit{Ayn Djalut}.

**KUSAD (A.), the verbal noun Ka'ada "to sit," which developed into a technical term.** (1) In the qa'd [qa'd] it indicates the sitting posture which is the penultimate component of a raka'a [rak]. For descriptions and illustrations, see Lane, Manners and customs of the modern Egyptians, 3rd edn., London 1843, i, 107, postures 7 and 13, and T. P. Hughes, A dictionary of Islam, London 1885, 457. (2) In early Islamic history it is the designation of the political attitude of a faction of the Kharijids, the ka'ada (also called ku'da, ka'didun and simply ka'ad) after the analogy of haris, pi. hara\(\). This designation is sometimes taken to refer to "self-declared non-rebels." (M. A. Shaban, Islamic history A.D. 500-750 (AD. 161), Cambridge 1971, 251), although the generally accepted notion is "quietism." This notion may have been derived from the pre-Islamic custom with the Arab tribes to "abstain from" warfare, raiding, etc. (in Arabic: ka'ada 'an) during Dhu al-Ka'ada, one of the four sacred months.

The quietist is extolled in a probably spurious tradition dating possibly from the end of the first century A.H.: "There will be a turba [turba], he who does not take an active part in it (ka'ad) is better than he who does (ku'da)". cf. Concordance, v, 439, left column, first trad., where Ibn Hambil, i, 269 and 163, may be added to the list of references. (G. H. A. JUVENBOL)

**Al-KUWAYT (conventionally spelled Kuwait), the capital city, situated in lat. 29°20' N and long 47°59' E. of an amphite of the same name situated on the Arabian shore at the head of the Persian Gulf. The mainland state is bounded by the Persian Gulf to the north and west and by Saudi Arabia to the south. Kuwait also owns a number of islands and islets, the largest and most important of which are Bubiyin, Warba and Faylaka. The total area of the state is approximately 6,000 sq. miles.**

1. Geography and economy

At least two explanations have been suggested for the origins of the name; one is that it is a diminutive form of Bub ("fort"), and this in turn is said to refer to the existence of a small Portuguese defensive settlement there in the late 16th century. The other less general derivation suggests that in local usage Kuwait means "a number of small wells," and that these exist near the low sandstone ridge called Ra'a's Aqara, which is where the modern town was founded in the early 18th century. European sources usually refer to this settlement as Grane or Granne, which is probably a corruption of al-Kurayn, an islet in the bay about four miles west of the modern town, near to which there was a good anchorage.

The bay is the largest in the Persian Gulf, with a maximum length of 20 miles (east-west) and a maximum breadth of 10 miles (north-south). It is the only good natural harbor near the head of the Gulf. The terrain is mainly flat and arid with occasional low hills; the highest point in the country, less than 1,000 ft. in elevation, is in the southwest. The coastal lands are low and sometimes marshy. Natural vegetation is very sparse and consists of scrub and stunted bushes. Spring rains sometimes produce a short-lived cover of grass. Oases are few; the largest is al-Dhahir, some 18 miles west of the capital city. Permanent surface water does not exist, neither do springs. In the past drinking waters was drawn from wells which were often brackish, and it was also brought by boat from Basra. Some drinking water now comes by pipeline from the Shatt al-Arab, but a large sea-water distillation plant is the most important source of supply. The underground water table near al-Rawdatayn in the north is also tapped for additional supplies.

The climate is hot, but often less humid than at other places in the Gulf. Summer daytime shade temperatures usually reach 105° F. to 110° F., but temperatures of over 120° F. have been recorded. The coldest month is January, when the daily maximum shade temperature is usually about 60° F. to 65° F. but temperatures as low as 24° have been recorded inland. Pross sometimes occur in the desert but are almost unknown at the coast. Rainfall occurs chiefly between October and March and is slight; the average is under 5" per year. Winds in winter are generally from the north-west and are relatively cool. Southerly winds in the spring and early summer are generally hot and dry, those from the south-west later in the year are also hot but are often damp. Sandstorms more often occur during the winter than during the summer.

Before the discovery and exploitation of oil, the chief coastal occupations were trading, pearling and other fishing, and boat building. In the interior, nomads herded sheep, goats and camels and there was a little settled cultivation. The port served much of north-eastern Arabia, as well as acting as an entrepôt for trade with the south of Iraq and southern Persia. Horses, animal products, fish and pearls formed the major traditional export items. Imports were chiefly foodstuffs and piece goods. In 1904, some 450 pearling boats worked out of Kuwayt and their crews numbered about 9, 200 men. In the winter, about a third of those in Kuwait and of the total from Arabia. The world-wide expansion of the industry which began in 1925, and the introduction of cultured pearls from Japan, greatly reduced the demand for Gulf pearls. Boat-building using wood and fibre from India employed about 300 men in 1904, but this number obviously increased, for in 1912-13 as many as 120 pearling boats were reported to have been built. In 1904 the population of the town was estimated to be about 35,000. Of that number, about 1,000 were Persians, up to 200 were Jews and the Negro population was said to be about 4,000. By 1932 the population of the state had risen to about 150,000. Since that date it has grown very rapidly, because of changes which spring from the development of the oil industry. According to the census of April 1935, the population of the state was over 900,000. This very sharp rise was due chiefly to immigration, but the native birth rate is also very high. The same census reported that non-native-born residents made up 52.6% of the population; many of these were Palestinians or other Arabs, but immigrant workers have also entered Kuwayt in large numbers from Iran and the Indian subcontinent. There is a significant European and American community.

**KUTUZ—AL-KUWAYT**
The first oil exploration concession was granted in December 1934, and oil was discovered in 1938 at al-Burkan, but the Second World War halted the development of these fields. The Kuwait Oil Company, which held the concession, was owned jointly and equally by the Anglo-Persian Oil Company (later the British Petroleum Company) and the Gulf Oil Corporation of the United States of America. Production began in 1946, and in that year approximately six million tons of oil were exported. The Ahbadin crisis of 1951 and the resulting embargo on oil supplies from Iran gave much impetus to the development of the oil industry in Kuwait. In 1956 production exceeded 54 million tons, and Kuwait was at that time the largest oil producer in the Middle East. By 1972 production had reached 148 million tons, but Kuwait was no longer the leading regional producer, having given way to Saudi Arabia and Iran. In January 1973 the Kuwait Oil Company and the Government of Kuwait reached an agreement under which the state was to acquire immediately a 25% share in the Company, and by 1982 this would have risen to a 51% controlling interest. The Kuwaiti National Assembly has, however, expressed strong disagreement with these terms, and there were demands for the immediate nationalisation of the Company. Further negotiations were held and in December 1975 a new agreement was signed which transferred full ownership of the Company to the Government with retrospective effect from March of that year. During the War of October 1973, Kuwait joined other Arab countries in restricting production, and for the first time since oil had been produced output showed a decline. The sharp increase in oil prices in 1973 encouraged the authorities to give increased attention to the question of conservation in order to extend the life of the oil reserves, the country's only known natural assets. A limit on production has been established of two million barrels per day, equivalent to about one hundred million tons per year; at this rate, it has been estimated that the state's known reserves should last at least until the middle of the next century. Kuwait was a founder member of both the Organisation of Petroleum Exporting Countries (established in 1960) and of the Organisation of Arab Petroleum Exporting Countries (established in 1968). The latter institution has its headquarters in Kuwait and the Kuwaiti authorities have taken an important and active part in the work of both bodies.

The recent development of the oil industry has had some striking economic and social effects. From being a relatively poor society of traders, fisherfolk, boatbuilders and herdsmen, the country now (1976) has one of the highest levels of income per capita in the world, and the state provides an impressive array of social services. Kuwait has become, despite its harsh environment, one of the most highly-urbanised states in the world. The dependence on oil is overwhelming, with over 90% of government income currently being derived from oil production. The pearling and boat-building industries are no longer of economic importance. Fishing has been modernised and batches of shrimp are sold in Japan, Western Europe and the United States of America rather than locally. Agriculture is of little significance; less than 3% of the land is regarded as cultivable and only about 1% is actually in use. Imports now consist of construction materials, consumer goods and industrial equipment as well as foodstuffs and textiles. Exports, apart from oil and related products such as petrochemicals and fertilisers, are negligible. Ships of all the major maritime nations now use the port; the airport is served by many daily international flights; and the most modern means of international telecommunication are widely available. Oil revenues have enabled the government to offer significant amounts of financial aid to poorer states, both Arab and non-Arab. By 1977 loans worth over US $1,500 million had been provided.

2. History

Archaeological excavations on Failaka island have revealed traces of settlements dating back to 2500 B.C., but relatively little is yet known of the history of Kuwait prior to the 18th century and the assumption of power by the first members of the present ruling dynasty of Al Sabah in about 1707/1706.

The Sasanid King Shapir I is said to have had a great ditch dug from Hfi on the river Euphrates to the northern shore of Kuwait bay to protect the Sawai (g.v.) from Arab raids, and it was in the neighbourhood of Kuwait that Khalid b. al-Walid is reported to have defeated a force of Persians in 625/626. The first production of the modern state dates from about the end of the 17th century when a group of 'Utub Arabs, who claimed to be a branch of the 'Amaza confederation, migrated into the area. According to local tradition the three clans—the Al Sabah, the Al Khalifa, and the Al Djalalima—were expelled from their previous settlements near Umm Ka'ar by the Ottomans because of their acts of brigandage and piracy. By the middle of the 18th century, the Al Sabah had achieved a position of local dominance. The Al Khalifa (g.v.) left Kuwait in 1785-86/1786 and migrated to Zubara in Katar after taking control of Bahrain in 1785-1786. The Al Djalalima left Kuwait later and they too went to Katar.

The first mention of Kuwait by a European is that of E. Ives, who refers to it as Graha, but he does not give the name of the ruling khanqah at the time of his visit in 1758. Niebuhr refers to the town as having a population of 10,000, but he noted that during the hot months the number declined to about 3,000. He reported that the harbour contained 800 ships and that the inhabitants were employed in fishing and pearling; but like Ives, he does not give the name of the ruler.

Kuwait grew in prosperity after Karim Khan Zand had seized Basra in 1190/1776, for during the three-year Persian occupation, the East India Company used Kuwait and Basra as the terminal point for its caravan route from Halab (Aleppo) to the Gulf. According to Capper, who did not visit the town, the ruler of Graha was very friendly towards local British officials in 1195/1779; and in 1207/1793, after a quarrel with the Ottoman authorities in Basra, the East India Company's Agency was moved from there to Kuwait. The Agency returned to Basra in 1220/1795. It was at this period that Kuwait was often threatened by Wahhabi raiding parties.

The next century-and-a-quarter of Kuwait's history was to be shaped by three sets of circumstances and by the relations between them. Those circumstances were threats from Northern and Central Arabia, the uncertain and varying nature of the relations between Kuwait and the Ottoman Empire, and the emerging interest of first Great Britain, and later of other European powers, in this large natural harbour at the head of the Persian Gulf.

The temporary eclipse of Wahhabi power in Najd and al-Hasa after their conquest by Muhammad b. Ali in 1323-4/1807-9 reduced the threat to Kuwait for a
time. When a British officer visited Kuwayt in 1852/53, he found that Egyptian envoys were present in the town, and that entry of Muhammad Al’s forces into Eastern Arabia shortly afterwards increased British suspicions about the extent of Egyptian ambitions. An officer of the Indian Navy surveyed the island of Fuyshak in 1852/1853 as a possible base for British military forces, but it was concluded that the island was unsuitable. The harbour at Kuwayt was also surveyed at this time. The withdrawal of Egyptian forces in 1269/1854 meant that British interest began to wane. The fact that Kuwayt had not been heavily involved in piracy meant that the principal system of relations, which had been established by Britain from 1830 with Bahrain and the other sheikdoms of the lower Gulf, was not extended to Kuwayt. Although Kuwayt was involved in the slave trade, the anomalous nature of her relations with the Sublime Porte meant that the British government were reluctant to seek engagements for the suppression of that trade from Kuwayt similar to those which had been secured from the Arab rulers of the lower Gulf.

The economic fortunes of Kuwayt fluctuated throughout the 19th century. Stoecker, who visited the town in 1248/1861 estimated that its population was only about 1,000. Some revival appears to have occurred, for Palgrave, who was in Arabia in 1278-9 and intense family rivalries threatened the position of the Shaykh of Kuwayt, and the town was then used briefly as a staging post for the Ottoman annexation of that region in 1280/1864, reported that many horses were exported from there to India via Kuwayt. The possibility of building a railway line from the Eastern Mediterranean to the Euphrates and onwards to the head of the Persian Gulf had been suggested as early as 1866, but the construction and opening of the Suez Canal in 1869 put a temporary end to such plans.

The relationship between the rulers of Kuwayt and the Sublime Porte had varied ever since the Al Sabab had established themselves in Kuwayt, but it was rarely anything other than vague and nebulous. Occasionally, as in 1871, the Ottoman authorities in ‘Iral were engaged in open rivalry with the Al Sa’ud, and among other reassurances the ruler was informed that the British government recognised Kuwayt as an independent government under British protection.

The Ottoman authorities were not the only threat to the independence of Kuwayt at the end of the 19th century. The value of that port as an outlet for the trade of Djabal Shammar attracted the attention of the rulers of the Al Rashid, and that clan was engaged in open rivalry with the Al Sa’ud. Much turbulence was caused in Northern Arabia in the late 19th and early 20th century by that contest for power. Abd al-Rahman b. Faysal Al Sa’ud and his son Abul’Aziz took refuge for a time with Shaykh Mubarak, and a raiding force from Kuwayt was defeated by the forces of Abul’Aziz b. Rashid near Hail in March 1901. The capture of al-Riyadh by the Al Sa’ud and the curbing of the power of the Al Rashid reduced the immediate threat to Kuwayt, but as the power of the Al Sa’ud increased it looked as if they rather than the Al Rashid would now pose a danger to Shaykh Mubarak.

In 1913, ‘Abd al-‘Aziz b. ‘Abd al-Rahman Al Sa’ud succeeded in expelling the Turks from al-Hudaydah and in gaining an outlet to the Persian Gulf. This meant that Kuwayt was now encircled to the west and the south by the territory of the Al Sa’ud. In December 1915 the British authorities signed a treaty at al-Ukhayr with ‘Abd al-‘Aziz b. ‘Abd al-Rahman Al Sa’ud, among the provisions of which was a promise by the latter not to attack Kuwayt. Shortly before the signature of this document, Shaykh Mubarak had died and there was renewed family rivalry over the succession. Mubarak’s eldest son Jibir became the shykh, but he died in February 1917, and was succeeded by Mubarak’s second son Salim. Salim was by no means as prudent as his father had been in his relations with either the British or with the Al Sa’ud. He allowed the harbour of Kuwayt to be used for the transport of supplies to the Turkish army and from February 1918 the port was blockaded by ships of the British navy. This blockade was lifted in the autumn after the cessation of hostilities between the Allied Powers and the Ottoman Empire.

The lack of a defined frontier meant that relations between the Al Sabab and the Al Sa’ud were unlikely to be easy or harmonious, but the activities of the Ikhwan [B.B.I.] and particularly their building of a hidjra at Karya al-Ulya, made matters worse. In 1920 ‘Abd al-‘Aziz b. ‘Abd al-Rahman Al Sa’ud
imposed an embargo on trade with Kuwait and this ban lasted until 1937, doing much harm to the prosperity of Kuwait. Fear of an Ikhwan attack prompted the building of a defensive wall around the city and in October 1920 a force of Ikhwan led by Fayṣal b. Sulṭān al-Dawāiṣ, the leader of the Mutayr tribe, attacked the nearby oasis of al-Dhiyarah. This attack did not succeed, but Ikhwan raids continued to pose a threat to the security of this part of north-eastern Arabia until the movement was finally suppressed by ʿAbd al-ʿAzīz b. ʿAbd al-Rahmān Al Ṣafīd in 1930 after it had rebelled against his authority.

Shaykh Alīn died in February 1921 and he was succeeded by ʿAbd al-Muṭṭahar b. ʿAbd al-Rahmān Al Ṣafīd in 1930. The new territory of Kuwait was very much smaller than that which had been allotted to it in the draft Anglo-Ottoman convention of 1915, and Shaykh Alīn believed that the British authorities had not supported his claims against those of ʿAbd al-ʿAzīz b. ʿAbd al-Rahmān Al Ṣafīd as strongly as they should have done. This belief was an important factor in Shaykh Alīn’s reluctance to grant an exclusive oil concession to the Anglo-Persian Oil Company, and it strengthened his later determination to secure the involvement of an American company in the development of Kuwait’s oil resources. (The growth of the oil industry has been treated in section 1 above.)

In 1920 Great Britain had been awarded the Mandate over ‘Irāq by the League of Nations, and in April 1921 the British High Commissioner for ‘Irāq recognised the frontier between Kuwait and ‘Irāq as being that which had been laid down in the Anglo-Ottoman draft convention of 1915. Thereafter, however, there were disputes about this boundary. The most serious occurred in June 1921, when the 1899 agreement between Great Britain and Kuwait was terminated and Kuwait became a fully independent state. The Government of ‘Irāq immediately claimed that Kuwait was rightfully an integral part of ‘Irāq, and it strengthened its later determination to secure American involvement in the development of Kuwait’s oil resources. (We refer to ‘Alī Salāḥ’s Vienna peace mission in 1899.)

(R. M. Durell)

KUWWA (pl. Kawa), Arabic term denoting "strength, power".

1. Lexicographical study. Ibn Sida defined the word kuwwa as the opposite of weakness (kiidat al-de'ef), cf. Kur’an XXX, 54: "It is God who has created you from weakness (mi'ad day) and who then, after weakness, has given you strength (kawa)". It is thus the concept of strength and of vigour which is paramount. A man is described as kwaa when he is strong in himself, and as muqit when he owns a robust mount. On the other hand, like the word kauri is paramount. A man is described as kwaa when he is strong in himself, and as muqit when he owns a robust mount. On the other hand, like the word kauri is paramount. A man is described as kwaa when he is strong in himself, and as muqit when he owns a robust mount.

2. kuwwa in the Kur’än. A quite frequent use is that which gives this word the meaning of power in the sense of capacity to act, to fight, to win, and which applies it either to communities or to individuals. Thus in IX, 69, there is reference to "those who before you were stronger than you in power (agaddad minhum kuwwaa) and were richer in goods and offspring". Speaking of man at the Day of Judgment, God says (LXXXVI, 10): "He will then have for himself neither strength nor success". A second use of a more moral nature is to be found in verses where there is the injunction to "take" the Revelation "with strength" (bi-kuwaa) (cf. among other verses, II, 63 and 93; VIII, 145). Al-Zamakhshari explains the word with the expression: "with effort and firmness" (bi-jidda wa-‘azma). Finally and most importantly, kuwwa is attributed to God with the sense of kuwaa; for example in I, 38, where it is said: "God is the Provider of all good things: He is the unshakeable Master of power (gu'a kiwaa wa-tmayin)" and in XII, 15: "God, who has created them, is stronger than them in power (agaddad minhum kuwaa); elsewhere we find "There is no power but through God (la kwuwa ista bih-I"") (XVIII, 39).

3. Kuwaa in theology. In the discussion by the Mu'tazilists concerning the attributes, and with regard to the doctrine of ta'fil which stripped the divine essence of all its attributes, by reducing them to this very essence, or to simple names, it was necessary to stress that the revealed Book speaks of the power (kuwaa; cf. above), as well as of the knowledge (ilm) of God. In the Maktab al-Islamyyin, al-Ash'ari notes that one group of Mu'tazila, on the basis of XLI, 15, "claim that in saying that God has power, we are led to say that He is powerful (kudd). They take kuwaa purely and simply as a synonym of kuwaa. But they maintain this point of view only in regard to kuwaa and 'ilm, being two substantives which occur definitively in the Book of God, and not in regard to the other attributes of the essence such as life (hayat), sight (bayan) and hearing (sam'). This is, according to al-Ash'ari, the doctrine of al-Nazariyin and the majority of the Mu'tazila of Baeca and Beghdad. A second group understands "knowledge" in the sense of the object of knowledge (ma'lid), and "power" in the sense of the object of power (ma'ad). To say that God has a power (kuwaa = kuwaa), therefore signifies, not that there exists in Him such an attribute, but that created beings depend on Him in such a fashion that they could be called ma'adiyin. This is why, when Muslims see rain, they say: "That is the power of God", meaning that it is a ma'adi. These theologians reserve this interpretation, among the attributes of the essence, for knowledge and power, for a purely scriptural reason, as has been seen in the case of the preceding group. A third group asserts that God has a power which is identical to Himself (badra biya kuwaa), and the same applies to His knowledge: but they extend this interpretation to all the other attributes of the essence: this is the thesis of Abu 'l-Husayn and his disciples. A third group comprises the disciples of Abdal B. Sulayman, who is known to have sacrificed the texts to the requirements of reason: it can neither be said that God has knowledge and power, nor that He does not have them. This contradicts the formal declaration of the Kur'an. Ibn Hazm, in addition to the verse XLI, 15, quotes a hadith: When instructing his Companions to go forth to obtain a favour from the Prophet (nabi), the Prophet says: "O my God! I ask You for this favour through Your knowledge: I ask You for it through Your power" (kuwaa = kuwaa). Then Ibn Hazm puts power on the same level as knowledge: kuwaa and kuwaa, like 'ilm, belong to God really and not metaphorically; they are nothing other than He, although it cannot be said that they are God, because if power were God, God would be power, which is false. The same applies to knowledge. These terms play the same role as the word say's (soul) in the verse VI, 17: "It is He Himself (his soul) that ordains mercy", The expression "soul of God" is a "description of Him (abbad anshu)", but indicates nothing at all other than Him.

4. Kuwaa in philosophy. In his Ittihad al-ulam al-islamiyya, al-Tahanawi gives a panoramic
survey of the question. *Kuwa* is the origin of the act (muhba'ah al-f'al), whether or not it is differentiated, and whether or not it is accompanied by awareness (ghasab) and by will (inida). In this general sense, *kuwa* is dependent on the same time on nature (hadi'a), the principle of involuntariness, movement, and on the soul, the principle of voluntary movement.

There is thus a distinction between the power of the spheres (al-*kwawaa al-falsahiyya*) which produces a unique act, and the power of the elements (al-*kwawaa al-basariyya*) which produces acts that are differentiated in terms of the various combinations of elements, and which has also been called al-*kwawaa al-subhaliyya*—executive power of imposed labour, as a way of recalling that all power to act comes from God, taking inspiration from, among others, the verse XXII, 65: "Have you not seen that God has pressed into your service (saharakara falhun) all that is on the earth?" Nevertheless, in the *Kuwa*, this term also applied to the stars, as in XIII, 4, since the Book makes an ontological distinction between the firmament and the sublunary world. After elementary power comes vegetative power, the faculty of the vegetal soul, and animal power, the faculty of the soul of animals. Finally, the term *kuwa* is also applied to the origin of the change that is produced in one thing, transforming it into something else (muhba'ah al-tazkyara; fi *yaw* `abhar min hadhii kuma `abhar).

By origin is understood the cause (saab), whether it is efficient (fita) or not. In effect, the power can be active or passive, engendering qualities or receiving them (hadi'a). As the origin of the change, it can be applied solely to its receptacle (musha'), as is the case with the form (`irah) of the air which demands the production of both terms of the matter which forms it, but which can also be the origin of change in its receptacle first, then in another thing: this is the case with the form of fire which produces heat and dryness in its matter and transmits these features to neighbouring objects. But the power of change can act from the start in something other than a receptacle: this is the case with the rational soul which acts immediately on a thing other than itself in producing a change in the body.

According to Fakhr al-Din al-Razi, some powers have substantial forms (jawara *falkahariyya*), such as the power of fire; others have a basis in accidents which happen to the substance. Consequently, there is no generic notion of *kuwa*, as it is impossible to unite substance and accidents in a single sense.

5. *Kuwa* in medicine. As an extension of its philosophical usage, this term is frequently employed in medicine. Al-Tahawi indicates that the physicians introduced three divisions: natural power; animal power; and psychical power. The natural and animal powers include powers served by others (muhba'ah al-`abhar) and powers which serve them (muhba'ah al-sabhar). The first are, in the realm of the living, those which operate with a view to the preservation of the individual, the faculty of nutrition and the faculty of growth, or with a view to the preservation of the species, generative power (muhba'ah al-subhaliyya) and plasmatic power (muhba'ah al-subhaliyya). The second are four in number: the power of attraction (*falkahariyya*), the power of retention (*falkahariyya*), the power of digestion (*falkahariyya*), and the power of repulsion or of evacuation (*difaa').

These four faculties are served in their turn by heat and cold, dryness and humidity. As for psychical powers, they are divided into two types: the power of perception (muhbaha) and the power of motion (muhbaha). Perception are external (takhrija), in the case of the five senses, or external (takhrija), in the case of the senses of imagination. The power of motion comprises on the one hand the power that incites movement (muhba'ah li l-tahreb) with the faculty of desiring (muhba'ah li l-farid) and on the other hand, the power responsible for the setting in motion (muhba'ah li l-kohab).

6. *Kuwa* in human psychology. This is the faculty of deliberate voluntary action. It operates in accordance with a certain order; first there is a representation of the movement to be executed, then a desire, then a will to achieve the end envisaged, and finally the realisation of the movement and the act. Certain philosophers introduce an intermediary between the faculty of desire and the active power: they call it *fita*, a term which seems to correspond to the *dunuriyya* (consent) of the Stoics. It is the decision (*farka*) which follows after a hesitation (*muhradah*) between action (farka) and non-action (tark), as a result of which one or the other party prevails (yataradah). According to others, there is no intermediary, but a desire which may continue to grow until the decision and the act are put into effect. *Fitah* is nothing more than this desire at its maximum intensity. As for the followers of Ibn Sinâ, they reckon that *fitah* depends on will and that there is a great difference between desire and will.

A position of eminence is given to the power of the intellect (al-*kwawaa al-sabhar*). All theories concerning the intellect, from the end of Antiquity, throughout the Hellenistic period and until the time of the *falshiyaa*, depend on interpretations of the third book of Aristotle's *Treatise on the Soul*, or the *Kuwa*.

7. The name of *kuwa* appears in Greek and Hebrew influences on *falshiyaa*. The numerous meanings applied to the term *kuwa* in philosophy may be examined, with a view to comparison with Greek thought, from two points of view. The concept *dunuriyya* has two opposites in the writings of Aristotle: 1. *dunuriyya* (li *kwawaa or *farka, inability or weakness; 2. *farka* (fark, activity, reality). *Kuwa* in the former sense is dealt with in the *Categories* and *Metaphysics* (v. 12), in the latter mainly in the *Metaphysics*, viii. ix. It may be here observed that inability is to be distinguished from impossibility (dunuriyya = musani* or *mustashh).

A. *Kuwa*, to be more accurate *kwawaa talabiyya* (productive ability), being the second species of the category of quality (modiy [cf. modiyya]) is defined, with Aristotle, as that arrangement by which some one or some thing comes into action quickly and easily, while *li *kwawaa predisposes to undergo something easily and quickly. Activity and passiveness are here to be conceived as opposites, which exclude one another. They cannot be present at the same time in one and the same subject. *Kuwa* in this sense is the positive capability for a definite activity or, as the Stoics expressed it: the qualities of things are active forces, agencies. The orthodox kalâm referred this doctrine only to the activity of God. Muslim theologians said for example—cf. Christian dogmatists—that God's qualities (sifat) are the sources (masfah) of his actions. The philosophers, however, referred it to the first place to the workings of nature. Nature is endowed with many forces and abilities and each ability has a corresponding inability. Inability, however, is nothing positive but a deprivation (sifata', *'adam) or a decay (afla', *fasad). *Li *kwawaa is not an absolute nothing but a non-existing of what according to Aristotle
belongs to a thing from its nature. It is especially emphasised that the transition from ƙwana to ḥarama (or from active to passive) takes place not continuously but without intermediary, i.e. suddenly, timelessly. The Muslim philosophers are, for the rest, usually content to explain these sometimes very questionable assertions with the examples given by Aristotle. In the Logic (Categories) these are without exception lacking beings health (ability) and sickness (inability), and in the organic world, hardness and softness. In addition, in other branches of knowledge, rest is sometimes defined as deprivation of motion, blindness as a want of ability to see, wickedness, rest is sometimes defined as deprivation of motion, blindness as a want of ability to see, wickedness, rest is usually content to explain these sometimes very questionable assertions with the examples given by Aristotle as accidents of matter. Hence the practice (at least since Ibn Sinâ cf. Tis' rasâdi, 64) who probably follows a Greek exposition of distinguishing ƙadim as accidental principle from the essential principles: matter and form.

Al- Федерации (Abhandlungen), ed. Dieterici, 87, fr. 21) first discussed the question whether suffering (πάθος), as the term is used under the category of quality, is the same as quality or the highest lot of the categories. Perhaps he was led to this by a passage in Aristotle (De anima, 427b) in which “suffering” is said to have two meanings: 1. It is a kind of decline (πειρασμός) through the opposite (see above); and 2. the preservation (σωτηρία) of the possible through what is active, and in this way that thereby a natural basis is evolved for its own being. Instead of a decline we have here a question not only of a mere survival but also of a higher development, a suffering in bonam partem, an endurance (passive, receptive, contemplative) of higher influences [see ṣanā'i].

B. More important than the contrast between ƙwana and ƙwama for the history of philosophical terminology became the distinction between ƙwana and ƙwani, or, to use the language of the schools, power and action, commonly found in the formula ba ƙwana (daṣa'udu) and ba ƙwani (daṣa'udu). Both expressions are closely connected with the fundamental conceptions of Aristotelian philosophy, matter and form. Power is peculiar to matter, action to form. Power and action are called ƙutumaci (Arab. kutubik, attributes) of matter and form. Aristotle sought in this way to reconcile a static with a dynamic consideration of the world. Matter and form [see sabābi] are names for the constituents of the existing, power and action for the stages of development of the becoming. These fundamental conceptions cannot be defined more exactly. Like Aristotle, the Muslim philosophers endeavour to illustrate them by examples.

The development from power to action presupposes a continuous world of becoming, time and change. According to one principle of Aristotle, which was taken over by the Muslim thinkers, at least with reference to the world, the infinite cannot be real. But in time, especially if it is conceived without beginning and without end, lies the unending possibility of all that possesses its limited reality in any particular moment. Under definite conditions, if there is no obstacle in the way, the possible advances to full realisation by stages. Possibility and realisation are to be regarded as termini of a development taking place within time. This process, the development from power to action, is called by Aristotle motion (ƙutumaci, ḥaresha) which is defined as the realisation (daṣa'udu) of the possible as such.

The end (to be ba jabi) is called in Arabic also ƙadim (perfection) just as Aristotle uses ḥayya and ḥayya synonymous.

The concept of an originally pure (i.e. without quality) possibility which can in course of time become everything, is according to Aristotle a conceivable abstraction. Everything becoming is already more or less formed, realised; deprivation is an accident of matter, not as the neo-Platonists asserted, matter itself. Aristotle himself did not succeed in carrying through logically his distinction between the principle of deprivation (ƙadim) and matter as pure possibility. The Muslim thinkers who were under neo-Platonic influences were naturally still less able to do so. They often identified ƙadim and ƙwana. Usually however, they endeavoured to represent our world of becoming as a hierarchy of positive forces or powers. The process of becoming is then to be conceived as a co-operation, a working into one another of active and passive. With Aristotle, the Stoics, etc., they talk of active and passive, moving and moved, ruling and served forces, which by no means rule one another out. Two aspects of one and the same process are thus described. One and the same cause is understood as both ruling, ruling with respect to what is below it, and the order of stages of being, but passive, receptive, contemplative with respect to those above it. In other words ƙwana and ƙwai are used in the correlative sense exactly like matter and form. A material more or less formed, e.g. clay, is matter for bricks and the formed brick is material for a building. Similarly, in the sperm there is the potentiality to become a boy, in a boy a potentiality to become a man. In other words, the sperm possesses the immediate potentiality for a boy, a remote potentiality for a man.

Amongst the Ismā'īl thinkers, the problem of power is equally put forward in another form, in the shape of the idea of receptiveness (ṣubā'il). Whilst the Primal Intellect receives at a single stroke (daṣa'udu ṣubū'atika) everything which rightfully makes up its being, the "creatures" inferior to it are incapable of this. Hence they receive successively in the course of time the characters and qualities which belong rightfully to their essence and which make up their secondary perfection. This explains why these latter gradually become transformed according to the different kinds of movement. It is through this that the power of generation (kawān) is explicable. But when they have reached their perfection, certain beings tied down to matter are unable to keep it and decline into final corruption (fadāl); in this way, the force of destruction may be explained. The whole theory is closely connected with the dynamic view of the existence of the world. Thus as in Aristotle, in the Muslim philosophers physics, including psychology, are developed into a hierarchical system of natural forces and faculties of the soul. In place of faculty we sometimes find parts of the soul (muṣāra, adhikār; Platonistic terminology, also used by Aristotle). Galenic influences may be traced, in the doctrine of the faculties of the soul especially and their localisation (in al-人生的, Ibn Sinâ and al-Ghazzâlî). Al-人生的 deals with this in his Fudūs (i.e. Abhandlungen, ed. Dieterici, 72 ff.; wrongly ascribed to Ibn Sinâ in Tis' rasâdi, 42 ff.); cf. his "Model State" (ed. Dieterici, 34 ff.). Ibn Sinâ (Kitâb al-Nâfisat, Cairo 1913, 256 ff.; cf. Tghādāli, ed. Forget, 123 ff.) enumerates some 25 ṣubū'î from the highest faculty of the reasoning soul to the powers of the simplest bodies. Al-Ghazzâlî (Tahdīf, ed. Bouyges, index) is acquainted with over 30 ṣubū'î; but some are synonyms.
As briefly explained above, in the world of becoming *huwma* is earlier in time than *jāh*, but *jāh*—so his Muslim successors teach following Aristotle—is always the earlier in the sense of the higher. What is potential cannot of itself devolve into actuality. God who is the perfectly real, according to the Muslim philosophers, brought the world from non-existence (*adīm*) to existence (wūjdāl) or from *huwma* to *jāh* (*thārjāj*). The spirits (wāhiṣ) which act as intermediaries between God and the world are usually called real. It is the activity of the last heavenly spirit, the *wālī falsāl*, which as Ibn Sīnā, following al-Fārābī, expresses it, gives everything earthly its form (*wāhī al-sawār*; cf. for this expression *Enneads*, v. 9, 3), or, as Ibn Rushd prefers to say, brings everything potential here into actuality. This is however not a distinction in principle between the two philosophers: with Aristotle they regard matter and form as substances, potentiality and activity as their attributes (*tamākh*).

C. In the *Theology of Aristotle* (ed. Dieterici, 94) is the following remarkable passage: "In this (sensual) world, action is preferable to potentiality, in the (higher) intelligible world, however, potentiality is preferable to action". This pregnant sentence is not found in the *Enneads* but corresponds completely to the utterances of Plotinus (Enn., v. 1, 6 f.; 3, 15 f.; 4, 1 f.; 5, 13 f.). According to a general principle of Plotinus—not however always logically carried through—the categories and main conceptions of Aristotelian philosophy are only to be referred to the sensual world, if they are applied to the spiritual world, they have another but higher meaning. The higher *huwma* is an intensification of the preceding faculty discussed under A. In addition, there is an exchange of value in the factors potentiality and actuality.

According to Plotinus, the first and only principle of all things (in the *Theology of Aristotle* = God) is raised above the logos of the Stoics (*kalós*, active force) and above the energia of the Peripatetics (*jāh*). It is true that one can say of the *wālī falsāl*, the first created thing, it is *lōgos* kal enérgēs of the First, but the First himself is from his nature *dōmu*, i.e. power, all-power. With the uniqueness of the First (also called, as e.g. by Plato, the absolute good) only one quality, that of omnipotence, is compatible. All activity however, whether it is thinking or acting, presupposes multiplicity and effort, which cannot be ascribed to the absolutely simple Being. On this definition of the First as Dynamis, cf. Plato's utterance (Sákhh., 247 E): "I define the being of the existing in this way, that it is nothing but a Dynamis".

Excluding the Muʿtazila, it may be said that this emphasis on the omnipotence in the being of the Unique (God) must have been much more natural to the Muslim theologians—although traditionally they deal with God's knowledge before his power—than the Aristotelian view that God is pure Energeia, which manifests itself only in thinking.

**KUZAH** [500 KAWS KUZAH]

**KUWAAH** (self-designation—Kuwaiti) has been used by Kuwaitis as a linguistic and cultural marker for Kuwaitis. It is the standard Arabic dialect spoken in Kuwait and is closely related to other Arabic dialects spoken in the Arabian Peninsula and the Gulf region. Kuwaitis use a variety of KUWAAH in their daily lives, which includes Kuwaiti Arabic, English, and other regional dialects. The use of KUWAAH in the media and government documents is also significant, with the Kuwaiti government using it in its official communications. However, the Arabic language is still the dominant language in Kuwait, and the use of KUWAAH is often associated with the Kuwaiti identity and culture.
they were incorporated in the Mughal empire. The Afghan, or Afghan, tr. H. S. Jarrett, ii, Calcutta 1849, states that the Quetta-Pishin region supplied the Emperor Akbar with 2,500 cavalry and 2,500 infantry, plus grain, sheep and 30 bales in money. After 1351/1892 it came under Safavid control again, and Shah 'Abbás I [q.v.] conferred Shāh Mushtāq and Sīdī on the Pathan chief Shāh Khān Tārīn. In the 18th century, the Quetta-Pishin region was disputed by Ghilzay Pathans and the Brahuis of Kalat, but after 1112/1758-9, Ahmad Shāh Durrah [q.v.] left Nāsir Khān of Kalat as ruler in Quetta in return for a contingent of troops, at a time when the Afghan ruler's position in India was being threatened by the Mahrājās. Henceforth, Quetta was controlled by the rulers of Kalat, whose seat was the town of that same name, 103 miles [162 km.] to the south [see KLR]; Pishin and Shorarād, however, remained in Afghan hands till 1879 (see below).

The importance of Quetta in recent times has arisen from its commercial role as an emporium for trade between southern Afghanistan and the lower Indus valley, but above all, from its strategic position. It lies at a point where a north-south route runs from Kandahār and the southern Afghanistan frontier via Quetta and the Bolan Pass to Jacobabad and the Indus at Shāhpur in Sind, and where a transverse route comes from the middle Indus at Dīrā Shāh Khān in the Pashtun (see DERĀGĀT) and runs westwards through Quetta to the Persian border. These factors became especially operative in the 19th century after the annexation by Britain of Sind (1843) and the Punjab (1846). During the First Afghan War (1839-42), when Shāh Shujāʿ al-Mulk was placed on the throne in Kabul [see AFGHANISTAN, v. History], Quetta was occupied by British forces during those years; the town was used as a forward base for operations in the Kandahar region, and a political agent, Capt. Bean, installed there. It was, nevertheless, still only a small place, with a mud wall pierced by two gates and the governor's fort or mīrī on artificial mound; C. Masson in the late 1820s said that "Shāh" possessed "about 300 houses and a fair bazaar" (Narrative of various journeys in Baluchistan, Aghanistan and the Punjab, London 1842, i, 327-30); and W. Hough described it in 1839 as "a most miserable mud town, with a small castle on a mound, on which there was a small gun, on a rickety carriage" (A narrative of the march and operations of the army of the Indus in the expedition into Afghanistan, London 1849). Three decades later, A. W. Hughes still estimated its population at only ca. 4,000 (The country of Baluchistan, its geography, topography, ethnology and history, London 1877, 67, 73-4).

After 1842, when Quetta reverted to the Khān of Kalat's control, voices in the Government of India, such as that of General Sir John Jacob in 1856, urged its permanent occupation as a vital strategic point and also its being linked with Sind and Kārádī by railway (The views and opinions of General John Jacob, ed. L. Pelly, Bombay 1858, 346). It was, however, feared that such a distant post, so it then was, in the heart of the tribal area of northern Balochistān, would be difficult to hold in times of crisis, and the proponents of "mastery inactivity" carried the day until the 1870s. Fears arising from the Russian advance against the Central Asian khansates and possible pressure on Afghanistan led, however, to the adoption now of a "Forward policy", and in 1876 a decision was made to send troops into Kālāt territory in times of stress and made Kalat into a protected native state. Quetta was occupied, and Major (later Sir) Robert Sandeman became the first Agent there to the Governor-General.

Quetta's military value was soon proved in the Second Afghan War (1878-80), when troops were moved through the Bolān Pass and via Quetta into the Kandahār region. By the Treaty of Gandāmāk of 1879 with the Afghan Amir Ya'qūb b. Shīr 'All, Shīr and Pishin, with the land up to the Khāndān Ajam, the so-called "assigned districts", were ceded to Britain, to form with Quetta in 1877 the nucleus of British Balochistān; in 1883 Quetta was formally leased to the Government of India by the Khan of Kalat in return for an annual payment of 22,000 rupees. It was at this time that the administrative District of Quetta and Pishin was formed. After 1879 a broad-gauge railway was built from a point near Sukkur to Pishin via the Harnai Pass, and Quetta now became linked with the North-West Railway system of India. Later, during the First World War, a lengthy branch (441 miles/709 km.) was constructed through British Balochistān westwards to a railhead in Persian territory at Šahrābād.

Quetta town is situated in lat. 30°10' N. and long. 67°10' E., and lies at an altitude of 5,508 feet/1,700 metres at the northern end of the Šāh-i-valley. Under British rule, it became a very important military centre, the headquarters of the 4th Division of the Western Command, and the seat of the Staff College. In 1885 it became a municipality. Quetta lies in an earthquake zone, and was severely hit by the earthquake of 1953, when tens of thousands of people died; buildings subsequently erected there have had to be earthquake-proof (see R. Jackson, Thirty seconds at Quetta, the story of an earthquake, London 1963). It now possesses a good amount of local industry, and in 1972 had an estimated population of 139,800 (swollen in summer-time by temporary residents), comprising the cantonment and the civil area. The population of Quetta itself is now somewhat mixed, though still largely Pathan. The surrounding areas are, to the north, overwhelmingly Pathan and Pashhto-speaking [Kāšīr, Tārīn and Ačākzāy]; this Pashto is close to that of Kandahār, i.e. of the southwestern group (for specimens of the Pashto of Kandahār and Pishin, see Linguistic survey of India, 2, 105-12). To the south of the town, the Brahui area begins. Quetta accordingly straddles the ethnic and linguistic boundary between Pathans and Brahuis-Balūch.

In the present administrative organisation of Pakistan, Quetta is the centre of Quetta-Pishin District, continuing the former British arrangement here (area 5,314 sq. miles/13,763 km²), and also, since the reorganisation of 1955, when Balochistān was merged into the single western unit of Pakistan, the centre of the Quetta Division, comprising the Districts of Quetta-Pishin plus those of Zhob, Loralai and Sibi to the east, and Chagai to the west (area 53,815 sq. miles/137,509 km²).

LA‘AKAT AL-DAM "liquors of blood", the name given to a group of clans of Kuraysh. According to tradition, Kaṣṣayy [i.e.] had allocated to the different subdivisions of Kuraysh the quarters which they were to occupy in Mecca and had entrusted to the Banū ‘Abd al-Dār various local offices: administration of the water supply and bearing the standard (tajaddud), the furnishing of provisions (rifāda) and drink (ṣubh) to the pilgrims, and custodianship of the Ka‘ba (ṣab‘a jāba [see KAWT]). However, the Banū ‘Abd Manāf thought themselves more worthy of these privileges, and Kuraysh (with the exception of the Ka‘bā), it relates that the Banū ‘Abd al-Dār brought in a vessel filled with blood and dipped their hands in it, swearing, together with the ‘Adī b. Ka‘b, to fight to the death; it was at this time that they became called la‘akat al-dam, but the Sīra does not say whether other clans joined with the ‘Abd al-Dār and the ‘Adī nor anything about the licking of fingers. In any case, it was a member of Mālikīn who advised the two opposing sides to submit to the arbitration of the first person who entered the Ka‘ba by the door of the Banū Shayba, and as is well-known, this was the Prophet. We find exactly the same version as the Sīra’s one in al-Tabari, i, 1138.

A little later, al-Mas‘ūdī (Mūlahū, iii, 115–27 = §§158–201) enumerates the factions making up the Ahlāf and Muţayyabūn, but gives the name of la‘akat al-dam to the ten clans belonging, in his view, to the Kuraysh al-Dātān and made up, apart from two exceptions, of the united body of the two factions involved. It appears clearly from all the pieces of evidence mentioned here and agreeing about the Muţayyabūn and Ahlāf of Mecca, but disagreeing about the episode of the la‘akat al-dam, that we have such a vague tradition that one wonders whether the story of the hands dipped in blood and licked has not been invented in the interests of symmetry by traditionists anxious to find a parallel with the perfume of the Muţayyabūn. It is furthermore the only attestation of a practice involving the taking in of a few drops of blood (see dam in Suppl.) which we possess, and the LA makes no allusion to it when it cites, in regard to the oath called ghanān (s.v. gh. m.), the ashes, perfume and blood in which the oath-takers steeped their hands.

LAB’ [see LAVR].

LABĀB (from Pers. lavāb āb “riverside”), the irrigated region along the banks of Amū Daryā [g.v.] in its middle course. The name, though of Persian origin, became known apparently only in modern times, when this region became one of the main centres of the settlement of the Turkmen. The exact limits of the region have never been defined; it seems that it extended as far as Dargān (the southernmost town of Khwāzān [g.v.]) in the north and as far as Kulīf [g.v.], in the south. In pre-Mongol times a narrow tract of cultivated land stretched along both the left and the right banks of the river, though on the left bank conditions for artificial irrigation were better; the uniformly cultivated tract began to the north of Amū [g.v.].
In the post-Mongol period, the irrigation system fell into decay, and both bases of Amū Daryā were inhabited by nomads, except for several townships with their surroundings. After the middle of the 17th century, a number of Turkmen tribal groups began to move to Labāb from Western Turkmenia through Khiva, and in the 18th century the region was inhabited mainly by Turkmen, who became sedentarised and built a network of irrigation canals. In the 18th and 19th centuries, Labāb belonged to the Khānāte of Būkhārā and was administratively divided between two vilayets, Ğardǰūy (former Ārūn) and Kerḵ. In the 19th century, Labāb was the most densely populated region among all those inhabited by the Turkmens, and lack of irrigated lands brought about considerable emigration to Afghanistan and Eastern Būkhārā. The most numerous among various Turkmen groups of Labāb have been the tribes Salur [q.v.] on the north-west of Ğardǰūy, Sakar to the southeast of Ğardǰūy, and especially Ersarī [q.v. in Suppl.] further to the south, up to Kālīf. Besides them, there have been in Labāb almost 30 other tribal groups of Turkmen interspersed with each other and, in the vicinity of Ğardǰūy, with Uzbek. Now Labāb belongs to the Turkmen Soviet Republic of the U.S.S.R., forming the core of the oblast’ (province) of Ğardǰūy.

LABBAI (Tamil sarāppa, thought by Tamil Ulama [see Labbaik, the pilgrims' cry [see TALBAYA]), a community of Tamil-speaking Muslims residing in or originating from Tamilnadu State, South India. Labbai is a generic term incorporating four subdivisions, the Marakayar, Kayalar, Rawther, and Labbai. All four groups are Sunnis, the first two predominantly of the Shāfi‘ī school, while the latter two are Ḥanafī. The Marakayars and Kayalars predominate in the southern coastal regions of Tamilnadu, while Rawthers and Labbais reside in greater numbers in the state's north and its interior. Urbanisation has led to the geographic mixing of these communities, but in the countryside usually only one group lives in a particular location.

Each subdivision is associated with a distinctive tradition. The Marakayar claim to be the descendants of Arab sea traders and have a reputation as dealers in gems and pearls and as smugglers. Kayalars are said to originate from Kayalpatnam, once an important port on the southern Coromandel coast. These two groups once published books and newspapers written in the Tamil language and using the Arabic script. The Rawthers claim a heritage as cavalrymen and horse-traders, while the subdivision of Labbais are said to be the descendants of Karāffī scholars. In Madurai District, Rawthers refer to the employees of their mosques as Labbais.

The four Labbai subdivisions are effectively endogamous, although they accept no ideology that would dictate this. On the contrary, they are adamantly egalitarian and do not accept any caste distinctions. In several localities, marriage is dictated by caste Hindus. The small amount of intergroup marriage that does occur in the cities substantiates this egalitarianism, since these marriages are considered socially acceptable.

The Labbais are more urban than rural, and consider mercantilism to be their occupational forte. In 1951 approximately 53% of the Muslim population of Tamilnadu was urban compared to 26.7% of the total state population. This latter figure is commensurate with a society based on an agricultural economy. The 55% figure is high and reflects the non-agricultural basis of the Muslims' livelihood. Throughout the state they are recognised as astute businessmen and traders. A few families have achieved wealth, but most operate petty businesses.

In search of a livelihood, Labbais have travelled over much of the Asian world, especially over Southeast Asia. For centuries they were an important economic and political force in Malacca, and they are found in numbers in Malaysia, Thailand, and Singapore. Prior to World War II, some had had business in Japan. Wherever they go, they are primarily merchants.

Despite the Labbais' far-flung wanderings, India remains a homeland for them and ties are maintained with kinmen in India. Often, overseas Labbais maintain households and families in India to which they periodically remit money and return home. It is clear that, despite their wanderings and attachment to Islam, they identify themselves as Tamilians.

The Labbais identify strongly with Tamil culture and society. For most of them, Tamil is the language both within and without the mosque. The Tamil-speaking Muslims are proud of their contributions to Tamil literature, the sine qua non of Tamil culture. The Labbais of the countryside dress in a fashion which is more similar to the Hindu mode than do most of their urban fellows. Their celebration of the 'Abd al-Kadir Dīlīlā Urs commemorating the death of 'Mohaiyadeen Abdul Kadar Andakai Jillān" is in many features similar to the Hindu cart festivals. Saint worship centred around this 'Urs forms an important popular current to the strict orthodoxy of urban religious leaders. Many Labbais do not eat beef because they have been socialised to Hindu custom, but not to Hindu religious ideology.

In the northern part of Tamilnadu and in Madras City, the Labbais have undergone a process of Islamisation with a stress on Sunni orthodoxy. Saint worship is crowned upon as gurkh by religious leaders, and when it occurs is much less flamboyant than the gala events of the countryside and is accompanied by conscious attempts to avoid gurkh. Labbai dress is distinctively Muslim, and many have acquired Urdu as a second language because they consider it the language of Indian Muslims and akin to Arabic, if only in script. Some mosques in this northern part of the state recognise the importance of the Dār al-‘Ulām at Deoband as a centre of religious learning, and hire hāfīzs from there during Ramadan. The impulse towards Islamisation is part of a process of de-parochialisation. As Muslims have become urbanised, their desire to become
recognised as good Muslims as well as good Tamilians has increased.

LABRAYKA [see TALIBAYA].

LABBI, the pen-name of a Persian poet who lived at the end of the 4th/11th and the beginning of the 5th/12th century. His personal name as well as almost any other particulars of his life are unknown. The Tadhjam-al-balagha has preserved an elegy by Labbi on the death of Farrubhi (rav.), which means that the former was probably still alive in 420/1029-8. A kasida attributed to him by 'Awfi is addressed to a manmadh by the name of Abu l-Muzaffar, who in that source is identified with a younger brother of the Ghaznavid Sultan Makhmud. But it is more likely that he was a member of the Abu-Mahfudh, the rulers of Caghaqyan, who was also a patron of Farrubhi's poetry (see C. E. Bosworth, The rulers of Caghaqyan in early Islamic times, in Iran, [JIFS], vix (1981), 11–22). In the Madfma al-fuqaha' (ii, 445) the poem is in fact presented as a work of the latter, but it also occurs in manuscripts of the Divan of Manuchiri and in the works of other poets. The attribution to Labbi was rejected by Rypka and Borecky, but is defended by most modern Iranian scholars. Apart from this poem, the remaining poetry of Labbii consists of fragments only, mostly single lines quoted in evidence by lexicographers. Some of these lines belonged to madnawie-poems, the subject of which can no longer be ascertained.

Though his work fell into oblivion quite soon, Labbii must have been a poet of some distinction in his own age. Bayhaqi, writing about 450/1058, appreciated him as an asalq-i sulhun; and so did Mâfiqal-Sad'd al-Salmanî, who also styled him asalq ':'alâsâ'ar' and imitated one of his kasidas (Dinâra, ed. R. Yâsînî, Tehran 1339/1960, 373). The many quotations contained in the Lughat-i Fars of Asadi prove that his poems were still circulating in the later part of the 5th/11th century.

LABÎB b. RABÎ'Â, ASÎ'D ÂL, Arab poet of the muhâjadun. He belonged to the family of Banu Dâ'far, a branch of the Khattb, who belonged to the Banû 'Amir b. Sa'da' (see Ibn al-Kalbi-Geskel, Tab. 93 and Register, ii, 374–5).

According to Ibn Sa'd, vi, 21, he died in 89/693 in the night on which Mu'awiya arrived in al-Nuhayla to conclude peace with al-Hasan b. 'All. Others, like Ibn Hâjir, iii, 657, whom Nûmeke (Pâshâ Mozaffâli, ii, 51) thinks ought to be followed, give 44 or 45. Others again 42. He is said to have reached an unusually great age (al-Sijistânî, K. al-Mu'mâmûr, ed. Goldzâher, § 61). In fact, he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 800 A.D. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man, he is said to have accompanied a deputation from his tribe to the court of king Abû Râbûs Nu'mân of al-Hîra (ca. 580–602), and when the latter was invited against the Banû 'Amir by his friend Abû Râbû b. Ziyâd al-'Abîs (of the tribe to which Labbî's mother belonged), Labbî succeeded with a satirical ragah poem (Divan, no. 33) in so ridiculing him to the king that he restored his favour to the Banû 'Amir. A verse from Nu'mân's answer to his courtier, who sought to defend himself from the lampoon on him in this ragah poem, became proverbial (cf. Mafâdî, Fûkhrî, i, 87–2; al-'Askarî, Amâdûlî, on the margin of al-Maydâni, ii, 177, 7–18: al-Maydâni, ii, 33; K. al-Ahâlî, xv, 94 f.; xvi, 22 f.; 'Abd al-Kâdir, Khâninat al-adab, ii, 70 f., iv, 171 ff.) In his later poems Labbî often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet, and scorned the profession of a wandering singer, practised by his contemporary al-'Ashâ. But the coming of the Prophet Muhammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as 244/862–3, the chiefs of the tribe of 'Amir b. Sa'da' (see 'Amir b. 'Ubayd, ed. Baghdad 1301/1922, 90 ff.), Beta men are said to have seen afterwards come to an
Labid's verses were highly esteemed by the Arabs. Al-Nābiṣa is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hāwāṣim, on account of his Ma'sālakah. He himself is said to have claimed third place after Imrā al-Kays and Tārāfa. Al-Djurmahī (Tabakāt al-i‘gā’ār), ed. Hell, 29-30 places him in the third class of pagan poets along with al-Nābiṣa al-Di‘ādī, Abū Dhū’ayb and al-Shamsīsī. Labid showed himself equally master of the ādīaath, the maṣāfīṣa and the ḥāṣidah. One of his ḥāṣidahs was adopted into the collection of Ma‘alāমahā and is thought by Nöldeke (Fünf Mo‘alāqāt, ii, 31) to be one of the best specimens of Bedouin poetry. Labid uses the traditional pictures from the animal world—wild asses and antelopes fleeing before the hunter and fighting with his dogs—as charmingly as the usual compleancies about drinking bouts. He seems, on the other hand, to have cultivated the nasīb only because it was traditional. He deals far less with the subject of woman's love than with the description of the ādīaath, which he likes to compare with artistic calligraphy. He is also fond of recalling memories of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhayr, for example, still expresses a belief already widely disseminated in Arabia, in him, rather, we find the belief in Al-lth as the master of human life; besides the Kurān, he may of course have been influenced by the Christian preaching in the works of ʿAbd b. Zayd. He also follows older models in this connection when he combines admonition with the avverting of blame from a woman in no. 14, as in Tārāfa’s Mu‘alāmākh, vv. 56 ff., 63-5 (cf. Caskel, Das Schicksal, 9), where this is, however, only an episode in the ḥāṣidah.

Labid's Divān was edited, according to the Rihārī, 158, by several of the greatest Arabic philologists, ʿAbū ʿAmīr al-Safīwī, ʿAbī al-Ḥasan'ī al-Aṣmāwī, al-Mu‘tašim and Ibn al-Saabī. Of these, the only one by which Labid's ḥāṣidah is influenced by the Christian preaching in the works of ʿAbd b. Zayd. He only follows older models in this connection when he combines admonition with the avverting of blame from a woman in no. 14, as in Tārāfa’s Mu‘alāmākh, vv. 56 ff., 63-5 (cf. Caskel, Das Schicksal, 9), where this is, however, only an episode in the ḥāṣidah.

LABIN or LABIN (coll.; singular latina, lîbna) designates in Arabic the unfired brick whose use in building dates back to the earliest antiquity; to speak only of the present domain of Islam, some traces have survived above-ground on the Iranian plateau, in Mesopotamia, Palestine and Egypt, where this material was used in the Pharaonic period to build palaces and royal tombs as well as poor hovels; it is certain that it was also in use in the Arabian peninsula and North Africa. The hog-backed bricks of Mesopotamia appear to be no longer used, and the labina generally has a geometric, fairly regular shape, that of a parallelogram or rectangle, whose variable dimensions are at the largest those of a bond-stone and often have the ratio 4 x 3 x 1 (e.g. length 56 cm., width 28, thickness 14, 42 x 21 x 10, 5.
36 x 18 x 9, 32 x 16 x 8; but 43 x 35 x 5 in South Arabia). This unfired, rough and fairly economical brick is composed essentially of dampened, shaped clay, which is then turned into a wooden mould (malab) without a bottom or cover, packed tightly and finally dried in the sun; the clay is lined down, depending on the region, with sand, gravel, chopped straw, and potsherds in fixed proportions to prevent its crumbling and cracking. Once taken out of the mould, the bricks are left for a while longer in the sun and sometimes stockpiled before being used in the construction of buildings which can reach a considerable height; this was notably the case of the ziggurats of Mesopotamia, and it is still that of the houses, several storeys high, which are built in South Arabia (the technique of manufacture and construction is explained by M. Balagh and J. Chelhod, *Notes préliminaires sur l'architecture de Shibam*, in *St. Isl.*, II [1980], 195-6). At Shibam, the foundations to a depth of 3 m. are of stone; however, the trench intended for them, usually wider than the wall, may only be filled up with beaten earth and ballast. In low houses and enclosures, the walls are sometimes supported by wooden posts driven into the ground with regular spaces between them. The building can be strengthened, at least in its lower part, by means of two thicknesses of bricks placed alternately longwise and crosswise; the walls erected are generally thicker at the bottom than at the top, which, on the outside, gives the impression that they are leaning dangerously. Houses of unfired brick have the advantage of being warm in winter and cool in summer, and there are countries, such as Egypt, where labin is preferred to fired brick. But the large buildings form great masses of thick walls (as long as 10 m. in antiquity), pierced with a few narrow apertures.

This material is in current use, either because of its low cost, or because, in the region, clay is readily exploitable, and stone is rare, hard to extract or too heavy; but rainfall must not be very plentiful, for heavy rains cause severe deterioration of the walls to the point of making them disintegrate, even if they are lined with a coating of earth mixed with lime or plaster. The ancients took some supplementary precautions against erosion, by providing gutters, drains, reed beds, etc.

Unfired bricks are pointed with a mortar made of earth with an admixture of lime or ash (the use of Bitumen, as in ziggurats, does not seem to be current). This mortar, like the coating mentioned above, is called madar (see *LA*, s.v.) in Classical Arabic, but this term (which one hesitates to connect with *matter*) seems clearly to be applied also to construction of earth and labin, to judge at least by the expression *ahl al-madar* which designates the sedentaries as opposed to *ahl al-wabar* "the people of the camel skin" = tents, i.e. the nomads, even though the trench intended for them, usually wider than the wall, may only be filled up with beaten earth and ballast. In low houses and enclosures, the walls are sometimes supported by wooden posts driven into the ground with regular spaces between them. Houses of unfired brick have the advantage of being warm in winter and cool in summer, and there are countries, such as Egypt, where labin is preferred to fired brick. But the large buildings form great masses of thick walls (as long as 10 m. in antiquity), pierced with a few narrow apertures.

This material is in current use, either because of its low cost, or because, in the region, clay is readily exploitable, and stone is rare, hard to extract or too heavy; but rainfall must not be very plentiful, for heavy rains cause severe deterioration of the walls to the point of making them disintegrate, even if they are lined with a coating of earth mixed with lime or plaster. The ancients took some supplementary precautions against erosion, by providing gutters, drains, reed beds, etc.

Unfired bricks are pointed with a mortar made of earth with an admixture of lime or ash (the use of Bitumen, as in ziggurats, does not seem to be current). This mortar, like the coating mentioned above, is called madar (see *LA*, s.v.) in Classical Arabic, but this term (which one hesitates to connect with *matter*) seems clearly to be applied also to construction of earth and labin, to judge at least by the expression *ahl al-madar* which designates the sedentaries as opposed to *ahl al-wabar* "the people of the camel skin" = tents, i.e. the nomads, even allowing for the Arab taste for paronomasia: a fairly strong indication is supplied by the meaning of madar "a village built of labin*. However, the ambiguity of the vocabulary does not always enable us to distinguish clay or mud from unfired brick, for Arabic texts give the impression that the same term was used for the different techniques; but it is probable that the Prophet's house in Medina was actually of unfired brick, as the *ahl al-madar* lived in dwellings of the same kind, while the expression is also applied, by extension, to some citizens living in stone houses.

Another difficulty arises from the uncertainty of the terminology. Although Ibn Manṣūr (*LA*, s.v.) classifies lab in as a synonym of *dā‘īrur* "fired brick" (see below) and this word still has this meaning in Egypt for example, it designates in the Muslim West a lump of earth or an unfired brick, and it is furthermore in this latter sense that it has been adopted and preserved in Spanish in the form labín. But Ibn Khaldūn uses lab in (a synonym of *labīn*) as the *jawāb* is the mason who builds a wall in clay. At first sight, this craft name appears to be derived directly from lab in with the meaning of "clay", but it is quite possible that a telescoping may have taken place with *λαβίν* (see *λάβινον* "clay, mud" which, on the other hand, comes from the Spanish *tapía* (see Dozy, *Suppl.*, s.v.). This borrowing leads us to think that the clay technique, well-known in antiquity, notably in Mesopotamia, was imported into the Maghrib from Spain. *Tābiya*, which is still in use today in Algeria and Morocco, is used by Ibn Khaldūn, when he speaks (loc. cit.) of *binda* (or *Yurab*) and describes in detail the way a clay wall is built, according to a process which has not changed since then (cf. a description in Berber of E. Lacoste, *Mots et choses berbères*, Paris 1920, 24). The masons, generally specialists belonging to particular tribes, use a frame made of two boards (labin) of variable dimensions, but on average 150 to 250 cm. long by 80 wide, which they place face-to-face at a distance equal to the width of the wall under construction, the frame is held in place by cross-pieces and ropes and closed at both ends. The earth, prepared as for unfired brick, is mixed with lime, gravel etc. and carried in baskets; as soon as it is ready to be turned into the frame, it is beaten with a kind of rammer (*rabbiya*, pl. *marābit*). The workmen generally arrange several frames so as to be able to carry out their work horizontally, then vertically with superimposed coats until the kiln is completed. Which form a really solid concrete, is used for the construction of all kinds of buildings, which can reach a great height and be very long-lasting. This is the case particularly with ramparts and military works; near Fès a bridge was built of very hard clay reinforced with fired bricks on top of the arches.

The kiln-fired brick is designated in Arabic by the collective *dā‘īrur*, but to judge by the multiplicity of forms which this term assumes (*dā‘īrur*, *dā‘īrur*, *yā‘īrur*, *dā‘īrura*, *adīrura*, etc.; noun of unity *dā‘īrura*, *dā‘īrura*, etc.), it is clear that the Arabs did not possess either the term signifying or the object signified; nor is it known in what period there took place the borrowing from Persian *ā‘ur* which Arab lexicographers freely recognised. It is a fact that fired brick, whose use is widespread throughout the Islamic world, was used particularly in Persia and the lands which fell directly under its influence. It will be recalled, for example, that the Muslims who founded Basra first demarcated the mosque by means of a reed enclosure, then built it in labin and rebuilt it in fired brick a few years later. All the same, a Roman and Byzantine influence was felt to an equal extent in the regions situated further west. The word which is used today with the meaning "tile", *karānīd*, is a sing. made from karānīd, of which the L.A asserts (v.r.m.d.) that it designates in Syria the fired bricks (*dā‘īrur*) of the baths and comes from the roman word *isorod* (sic; *isorod*, "brick, tile", rather than *isorod*).

The kiln (*sūf*) is similar to that of the potters, and consists of a furnace with a firing-room on top of it. Of smaller dimensions than the labin, the fired brick is not nearly so thick (3 to 6 cm.). Buildings
In 284/897 occurred another rising, whose suppression the amir of Cordova entrusted to his son Abán. Between this date and 324/937 it must have risen yet again, for on 20 Ramadán 304/17 March 917 the ḥājīs Badr b. Ahmad occupied it when it was in the power of a certain ʿUṯmān b. Ṣayr. At the fall of the caliphate, it became a fī mata principalità, actually set up in 312H/924 when Abu ʿAbd Allāh Ahmad b. Yāḥyā al-Yaṣṣubī, ʿTālī al-Dawla, rose up and was proclaimed ruler, this being recognised by the people of Gibraleón. His brother and successor (in 433/1042-3) had difficulties with al-Muʿtaḍīd of Sevile. For some time, al-Muẓaffar of Badajoz provided the ruler of Labla with help, but in the end the latter had to shelter under the protection of Abu ʿl-Walī b. Ḥayr (see MAHARĪ, 93/712 by Musi b. Nuṣayr or, more feasibly, by his son ʿAbd a-Malz in the next year. Niebla was the seat of the old seat of the san of the province of a certain ʿAbd Allāh ibn ʿAmir, and these, plus hunting and fishing, were sources of wealth. It was inhabited by some Berbers and the descendants of the Hispano-Musulm, and was a great producer of ginger and raisins. Excellent safflower (ṣaḥra, carthamus tinctoria) was grown which, together with other dyestuffs like cochineal (carmin), was used for dying leather and skins. Boats and horses were reared, and these, plus fishing and hunting, were sources of wealth. It was a lively commercial centre.

Niebla still retains ancient remains and solid walls from its original foundations. There were dependent on the madrasa towns and a fortress, notably for a certain period. Hülas (Ovhab, Chaba or Wamada), Tajada (Talycata) and Gibraleón (Dijbal al-Yūn) on the Odiel.

According to Ibn al-Shabbāb, it was conquered in 93/712 by Mūsā b. Ṣayr or, more feasibly, by his son ʿAbd al-ʿAzīz in the next year. Niebla was the seat of a part of the ʿamal of Himm. In 149/766 there was the rising of Saʿd b. Ṣalāḥ al-Ṭamārī b. Yaṣṣubī. In 340/944, after having occupied Isbiliyya for some time, the Northmen and Majdūs (q.v.) went on to Labla, sacked it and carried off the inhabitants.

In 153/772 some Berbers and the descendants of the Hispano-Musulm, and was a great producer of ginger and raisins. Excellent safflower (ṣaḥra, carthamus tinctoria) was grown which, together with other dyestuffs like cochineal (carmin), was used for dying leather and skins. **LACCADIVES**, a group of coral islands in the south-eastern, Arabian Sea lying off the Malabar Coast of India between lat. 8° and 12°35’ N., and between long. 71° and 74° E. Under British Indian rule these were formerly the Laccadive Mincoy and Amindivi Islands, but in 1956 the group was brought under a single administration to form the Indian Union Territory of Lakshadweep (Sanskrit: Lakshadweep “the hundred thousand islands”). There are in all 27 islands and islets of which ten—Maliku, Kalpeni, Kavarthi, Androth, Agathi, Amini, Kadmat, Kiltan, Bitra and Chetlat—are inhabited. Maliku, which is separated from the rest of the group by the 114 mile-wide Nine Degree Channel and from the Maldivian Islands by the 71 mile-wide Eight Degree Channel, is attached to Lakshadweep politically, but belongs ethnically and culturally to the Maldives. In this article it is considered separately from the “Laccadives Proper”.

The Laccadives were originally settled (possibly as early as the 2nd century A.D., but certainly by the 1st/7th century) by Hindu groups (Nambudiri, Nayar and Tiyyar) from North Malabar. Little is known of the early history of the islands. They were conquered by the Chola Rajas of South India in the 4th/10th century. By ca. 500 they had passed under the rule of the Kolathiri Rajas of Kollam (North Malabar), by whom they were given in gift (940) to the Ali Rajas of Kannur (950) in the mid-10th/6th century. The Ali Rajas were the leading family of the Malabar Muslim community or Mappilas (960), and under their rule the Laccadives’ soor trade became the monopoly of the Kannur Mappilas.

In 1786 the inhabitants of the northern (Amindivi) islands of Amini, Chetlat and Kiltan rose in protest against the soor monopoly and the harshness of Kannur rule. They appealed for protection to Tipu Sultan of Mysore (960), and as a result were transferred to his rule in 1787; they passed to the East India Company after the fall of Seringapatam in 1799. The Southern (Laccadives) group remained under Kannur until they were finally sequestrated by the British in 1857 (though the Bibi of Kannur retained a nominal sovereignty until 1908). Both groups of islands remained under British rule until India attained independence in 1947. Today the capital of the Union Territory of Lakshadweep is Kavarthi Island, and the population (including Maliku) is 31,810 (Census of India, 1971, Series 29 (Laccadive, Mincoy and Amindivi Islands, part 1/A, 5/).

The people of the Laccadives are linked ethnically and culturally with the Malayalam-speaking Dravidian people of Kerala, especially with the Mappilas of North Malabar. There has also been a sustained Arab—particularly Yemeni—influence on the islands which lie in the path of the direct sea route between Arabia, South India and the Far East; certainly the medieval Arab navigators were familiar with the Laccadives, which they knew as the Dimur al-fali, Dimur al-falidi or (collectively with the Maldives) the Diobadji (G. R. Tibbetts, Arab navigation in the Indian Ocean before the coming of the Portuguese, London 1972, 438-56). As a result of this Arab influence, the islanders speak Malayalam with an admixture of Arabic, and write in the Arabic script.

The Laccadives were converted to Islam in the 7th/8th century, according to legend by one "Ubayd Allah, an Arab castaway whose tomb on Androth island is particularly venerated. The islanders are overwhelmingly Sunni Muslims of the Shafi’i madhab, but there are also followers of the Rifa’i and Kuduri tariqas, and of the Wahhabi-oriented Mudjahid movement (which is active in Kerala). The women do not observe purdah and may (as in the neighbouring Maldives) have their own mosques with a female imam (Ellis, A short account of the Laccadive Islands and Mincoy, Madras 1924, 66).

Unusually for an Islamic society, the Laccadives are predominantly matrilineal. The people follow the Malabar system of matrilineal descent (Malayalam: Marumakathayam). The community is organised in exogamous matrilineal groups known as taravads. There is a duolocal residence pattern (i.e. after marriage the wife remains in her maternal home and is “visited” by her husband). Descent is traced through the mother, and family (taravadi) property is passed on through the mother’s line. The self-acquired property of the father is passed on according to the Islamic family law. Monogamy is usual, but divorce is common.

The Laccadive Islanders are divided into three caste-like endogamous groups, in hierarchical order the Koyas (the land-owners); the Melas (from the Arabic marullin, traditionally the sailing class); and the Melacheris (the coconut workers—originally the agricultural serfs of the Koyas). Today both the traditional caste-structure and the marumakathayam system are breaking down under the impact of modernisation.

Maliku (corrupted by Europeans to Mincoy, perhaps from the Arabic Mahli), is an isolated island within the Maldivian cultural sphere which is of the mid-10th/6th century had fallen under the control of the Ali Rajas of Kannur. Maldivian political control has never been re-established. The inhabitants are Indo-European, speak the Maldivian language Dhivehi (though it is known on Maliku as Divihi), is an isolated island within the Maldivian cultural sphere which is of the mid-10th/6th century had fallen under the control of the Ali Rajas of Kannur. Maldivian political control has never been re-established. The inhabitants are Indo-European, speak the Maldivian language Dhivehi (though it is known on Maliku as Divihi), and use the Maldivian script Tama. Originally Theravada Buddhist, the islanders are today Sunni Muslims of the Shafi’i madhab. They were probably converted in the mid-6th/12th century. Descend is patrilineal, but women occupy a respected and powerful position in society. They do not observe purdah, but sometimes wear a head veil called the burqa. As in traditional Maldivian society the people are divided into four hierarchical, caste-like groups; see MALDIVES.

LADAKH, a region of the extreme north of
India. It lies between lat. 32° and 36° N. and long.
70° and 80° E, and is bounded on the north and east
by the Chinese territories of Sin-kiang and Tibet,
on the south by the Indian province of HiuiafM
and by Kashmir, of which it now constitutes a
province, covering an area of 30,000 sq. miles.
Its capital is Leh.

Ladakh is known to the Tibetans as Mangyal or
Máuryul. The population may be divided into four
racial groups, Cápado, Ladakhis, Baltis and Dáhrs,
of whom the first three are of Tibetan stock and
the last Aryan. There is a small Muslim community,
but the majority are Buddhist, whence the name Bhottas
traditionally given to the inhabitants of Ladakh by
their neighbours.

The indigenous chronicles furnish little more
than a list of rulers with the nearest sketch for each
reign (see K. Marx, Three documents relating to the
history of Ladakh, in JASE, ix (1891), 97-133;
bxi (1894), 94-107; bxi (1902), 21-34), but from
time to time references in external sources provide a
valuable landmark. In the 8th century A.D., through
the medium of Kashmir, then vassal to the Triang,
Ladakh was briefly drawn into the Chinese sphere of
influence, after which there is a long gap until
around 1300, when Leh received an embassy from the
great Tibetan reformer Tsong-kapa. At this time
there were two main principalities in Ladakh,
but in the mid-9th/10th century we find the country
reaching its greatest extent and united under one
ruler. Its size was temporarily reduced through
successive wars with its neighbour 'All Mir [see BALTISTAN],
and late in the 11th/12th century it was invaded from Tibet by the Dzungarian Mongols
[see KAMU]. This threat Ladakh withstood by
calling in the aid of the Mughal Emperor, who made it a condition that the ruler should become a Muslim.
His successors were again Buddhists, but from this
time dates the penetration of the country by Islam.
In 1834 it was invaded by Zurráwar Singh, the
general of Mahárdája Gálábir Singh of Dijmán,
and was obliged to pay tribute. There ensued a
series of risings and intrigues until 1842, when
Ladakh was at last forced to pay tribute to Dúngárí-Mongol
Empire, and was subsequently captured for the first time by the Turk? before
1119 (Cinnamus, Boon ed., 5), this date saw the
defeat of the Dúngárí in Tibet, but was soon crushed
by a fresh army from Dijmán. It was now defi-
nitively annexed to Diamán [q.v.], thus becoming
in 1846 part of Kashmir. For its subsequent history,
see KASHMIR.

(P. Jackson)

LADHÍK, the name of several Anatolian
towns, and the Turkish form, phonetically identical,
of the name of Ladoice (Δαδίθα), which, since
the imperial period often appears in inscriptions
with the form Δαδίθα, is attributed to the
second syllable (cf. Robert, Villes d’Asie Mineure, i, Paris
1962, 283); Modern Turkish orthography Ládik.
L. Ládik near Denizlí, Lodoicéa of Lycos,
or Ladoicea of Phrygia. The ruins are located at
a place called Eski Hisar, 8 km. to the north of the
centre of Denizlí, the acropolis standing on a
hill which dominates the valley of the Lycos (Çürük Su), a left-bank affluent of the Great Meander.
Captured for the first time by the Turks before
1193 (Cinnamus, Bonn ed., 3), this date saw the
restoration of the town’s defences by John Comnenus
(Nestor, John Comnenus, Bonn ed., iv, 17), but the
town was abandoned before 1216, at which period
its population was dispersed into the surrounding
countryside (Ivdon, Manuel Comnenus, iii, 163).
It survived, however, for some time, following a
shift in location, transferring to a more remote and
more defensible site close to the foothills of the
Baba Dağ (in pede altissimi montis, Amstert, Historia
de expeditione Frederici imperatoris, in Fontes rerum
Austriae (Scriptores, vi), Vienna 1863, 58),
where the fortified strongholds perhaps survived
until the end of the 13th century. But a parallel
development was the growth in the immediate
neighbourhood of the Turkish urban settlement of
Denizlí, where the first epigraphical datings go back
to the second third of the 13th century. The latter
had no direct connection with Ladoicea, but never-
theless bore the name of Ládikiconcomrantly with
the extremity of the Phazimonitis of antiquity, subsidiary to the vilayet of Samsuu. At an altitude of 207 m., the town is in the subsidiary district of Konya (tr. M. N. P. Norberg, Lund 1938, II, 331), which should be interpreted as Yurikın Ladhik ("Ladhik of the Yurük or nomads", with Persian suffix). The form "Ladhik-el-Tchau", also given by Leake (loc. cit.) appears incomprehensible. The village, which Ewlyia Celebi (Seyyid-namin, ed. Zuhur Dani?man, iv, Istanbul 1976, 87) describes as having suffered ravages on the part of the Djellâ in Suppl., is cited by Kebitz Celebi as a small town which is nevertheless the administrative centre of a subsidiary district of Konya (tr. M. Norberg, Lund 1828, ii, 85-84), with numerous shops, and Leake (loc. cit.) calls it "a large place". Decline must have set in in the 19th century [cf., for a comparison of the population in the 19th and 20th centuries, the figures of W.-D. Hütteroth, Ländliche Siedlungen im südlichen Inneranatolien in den letzten vierhundert Jahren, Göttingen 1968]. It had no more than 1,785 inhabitants in 1941 and had no administrative role of any kind.

3. Ladhik near Amasya, a large village 40 km. north of Amasya, currently centre of a "kaza" (district) subsidiary to the vilayet of Samsuu. At an altitude of 930 metres, it stands on the edge of a plain, at the extremity of the Phamontus of antiquity, the base of which is occupied by a lake (formerly Lake Stefiu, currently "Lake of Ladhik") 9 km. to the east of the town, reduced to a shallow swamp in summer but considerably augmented to the point of overflowing in spring, its waters, at this time, spreading, via the Terekalca Çay, into the Yeşil Irmak. According to Ewlyia Celebi, who has left us a detailed description of the place (iv, 87-91), the urban area comprised, in the 17th/18th centuries, 3,000 houses and 400 shops. Its prosperity was owed in particular to the fact that Bayezid II, when he was governor of Amasya (known to be residence of hereditary Ottoman princes in the 9th/10th and 16th/17th centuries; cf. F. Keppe, Die Osmanischen Provinzen und ihre Residenz Amasya im 15. und 16. Jahrhundert, Istanbul 1976), chose it as a summer resort, spending six months of the year there, and embellishing it with numerous monuments and gardens. Important meadows were constituted there and the village, in the 17th century, still lived practically independently of provincial authority. Being off the main route, it declined when it lost its status as a princely residence. J. Hamilton, Researches in Asia Minor, Pontus and Armenia, London 1842, saw only "a small and miserable place, but called a town because it possesses a royal mosque with two minarets". It had no more than about 1,500 inhabitants at the end of the 19th century, rising to a population of 3,094 in 1950. 4-5. Two other localities, in the same region, currently small villages of a few hundred inhabitants, also bear this name: Ladhik near Çekerek, in the vilayet of Kadi-Sehri, Kaza of Çekerek, 28 km. to the south of Zile, on the southern flank of the Deveci Dağ, and Ladhik near Niskar, 40 km. to the west of this town, to the south of the valley of the Kelkit, on the northern slope of the Kemer Dağ.

All these three localities must correspond to ancient "Laodiceas". Only one is attested in the region: Pontic Laodicea (Asözëkeke Povtviciv), whose existence is, in addition, known only from the coinages of Mithridates Eupator. Although E. Honigmann, in EL, wanted to locate it at Ladhik near Çekerek, it should almost certainly be sought at Ladhik near Amasya, in accordance with the opinion of Rupe, in Panay-Wissowa, Realencyclopdia, on the basis of the text of Strabo (i, 360) which identifies near the lake a ruined fortress (ikizari) and a royal place (cf. J. G. C. Anderson, A journey of exploration in Pontus, Brussels 1903 (Studia Pontica, i) 28). 6. Finally, "The Blind Ladhik". (Kor Ladhik) is known exclusively from the works of Ewlyia Celebi (loc. cit., 87), who mentions it as a saugat of the province of Van. This locality is cited in no source and it may be an error on the part of Ewlyia.

Bibliography: On the overall subject, see the article Ladhik by Besim Darkot, in IA, vii. (X. de Planhol)

AL-LADHIKIYYA (European transcriptions: Latquié, Latakia), a major Syrian port, was known by the Greek name of Λαοδίκια ή ἐπὶ θάλασσαν and later by the Latin name of Laodicea ad Mare, whilst the Crusaders called it La Lice. In the second millennium, the settlement bore the name of Ramilith the Phoenicians and was dependent, before taking its place, on Ugarit, a powerful metropolis lying 8 miles/12 km. to the north. It was in 297 B.C., or six years after the death of Alexander that Seleucus Nikator (310-286 B.C.) founded on this site
Abd al-Aziz organized the restoration of the buildings and the fortifications and ransomed the prisoners. After the death of the Unayyad caliph, his successor and cousin Ya'qub b. 'Abd al-Malik completed the reconstruction of the city, improved its fortifications and reinforced the garrison.

In the golden age of the 'Abbasid caliphate, Ladhikiyya did not seem to have played a particularly distinctive role. In 357/968, Niepoivre observed how the Byzantines appeared in northern Syria; two years later the city, which was the port of Apamea, was taken over from the Hamdanids and became Byzantine. According to Yahiya b. Sa'id (d. 458/1066), the emperor Basil II appointed as governor of Ladhikiyya in 980 a certain Karmarik, who distinguished himself in an expedition against the Fatimid province of Ṭabarūs. When the city was attacked by Nasir, governor of Ṭabarūs, Karmarik was taken prisoner in the course of a sortie and later beheaded in Cairo. In 374/985, Ladhikiyya belonged to the ḍiyyad of Hims (q.v.). Ibn Butlān gave a description of the Byzantine city in 440/1049.

In 479/1086 it belonged to the Banū Munṣīd (π) of Shāyār, who then ceded it to the Sa’dīl al-Jund al-Andalus. On 8 Ramadan 490/19 August 1097 a fleet of twenty-two ships from Cyprus penetrated the harbour and sacked the town. In 491/1098, Raymond de Saint-Gilles in the course of his journey to Jerusalem left a garrison at Ladhikiyya and returned to establish his base there following the success of the First Crusade. In spring 1100, Raymond set out on the Antiochan crusade; returning to the coast in 1101, Raymond was obliged to renounce his claims to the city, then occupied by the Byzantines. Tancred took control of the city in 1105, after a siege lasting eighteen months, with the aid of a Genoese fleet of forty ships. Ladhikiyya was integrated into the principality of Antioch and at that time was one of the most active ports of the eastern Mediterranean. This port, called by the Crusaders La Liche, used to export the commodities brought by the caravans from the Far East. For a number of years the city was the object of rivalry between the Franks and the Byzantines. In 1104, a fleet commanded by the admiral Cantacuzenus succeeded in forcing the Franks to capitulate. Tancred succeeded in forcing the Franks to capitulate. Tancred succeeded four years later, after Bohemond had promised it to Alexis Comnenus, in recapturing Ladhikiyya with the aid of the Pisans; the latter, like the Genoese before them, were granted an enclave in the city, as well as freedom of trade in the ports and markets of the Principality.

In 1134, the princess Alice donated a house to the Knights of the Order of the Hospital [see DAWĪYĪN and ISHANĀNĪYĪN, in Suppl.], which made it their headquarters in Ladhikiyya. In Radjab 350/April 1136, the amir Sāwār who governed Aleppo on the authority of Zanjī, mounted a raid against Ladhikiyya and devastated it. In 555/1164, Nūr al-Dīn (q.v.), in his turn, invaded the region and attacked the port.

On 25 Dhumād I 584/22 July 1188, after a rigorous siege, Salādīn captured Ladhikiyya; the most beautiful city of the coast, according to Ibn al-Muqaffal al-Sa‘āhib, was pillaged, and the marble façades of the houses were ripped off and carried away. The Ayyūbī prince appointed the amir Sānurf al-Khrāṣīf as governor of the city, which was given a strong Muslim garrison. This was the end of the Frankish occupation. In 1190, at the approach of Frederick Barbarossa, Salādīn had the ports of the
Syrian coast dismantled. In October 1191, Bohemond III tried in vain to recapture Lādishīyya. He renewed the attempt in 1197, but al-Malik al-Zahir Ghāzī had given the order to make the port unusable; seeing the damage, the prince of Antioch withdrew and shortly after, al-Malik al-Zahir of Aleppo restored the citadel.

Under the Ayyūbids, the district of Lādishīyya was part of the province of Aleppo. In 601/1204-5, the Franks of Tripoli and the Hospitallers attacked the town, which was also an embarkation base for expeditions against Cyprus. In 1207 the Venetians, with the support of the Hospitallers, took possession of the town with the help of the Ayyūbids, to whom he awarded half of the city and of the surrounding area. The Genoese re-established themselves there at the expense of the Venetians. In 633/1237 there was an exchange of correspondence between Baybars [q.v.] and King Hugo III of Antioch-Lusignan on the subject of Lādishīyya. On 4 July 1275 the Franks obtained from the Sultan the direction of the city in return for an annual tribute of 20,000 dinars, and continued to exercise authority, but the town was in a state of constant decline to the benefit of Tripoli, Alexandretta and Payas, which was diverted following the fall of the Principality of Antioch. In 1287, a severe earthquake caused damage to the fortifications and a number of towers, including the Pigeon Tower, the Fier and the lighthouse collapsed; without delay, the sultan Kalawwān [q.v.] sent the amir Turmātay, one of his lieutenants, to attack Lādishīyya. The siege machinery completed the destruction of the fortifications; to capture a massive tower built by Bohemond III in the centre of the city, Turmātay was obliged to enlarge the embankment linking the city to dry land. On 5 Rabī‘ I 666/20 April 1287, the city fell, putting an end to the presence of the Franks in northern Syria. Lādishīyya soon became the centre of one of the māzābas of the new province of Tarībūlūs, its naẓīb being an amir of ten with military responsibilities. When Ibn Battūta visited the city in 1355 he was impressed by its size and by the number of its inhabitants, as well as by its fine anchorage. But the city was not slow to decline. In 1366, arriving from Cyprus, Pierre de Lusignan attacked Lādishīyya, pillaged and razed it. In 1370, the sultan Barsbāy [q.v.] expelled the Venetian merchants from the town, and in the middle of the 15th century it was less populated than before it and Tripoli, and much of it was in ruins. It exported cotton and luxury fabrics (saffis) as well as Arabian manus to Europe, and in 1491 was importing its sugar from Cyprus. Until 1516, Lādishīyya was apparently subject to the viceregu of Hamāt.

Ancient and mediaeval monuments. Arab historians and geographers mention a large number of ancient buildings in Lādishīyya. Ibn al-Athīr and Abū Shama praise the 'high and beautiful houses and the perfectly straight streets paved with slabs of marble'. The baths, the amphitheatre, the hippodrome and the sanctuaries built by Septimius Severus existed at the start of the 5th/6th century only in the memory of the inhabitants. However, thirteen monolithic columns still mark the location of commercial streets covered in by porticoes of the Roman period. A number of cisterns in use at the beginning of this century and the remains of an aqueduct to the east of the city bear witness to the ancient hydraulic system. The city's ramparts have finally disappeared as a result of earthquakes, innumerable sieges and successive demolitions. The anchorage was designed according to the relief plan which is unconnected with the external shape of the built surface. The gates of the city were situated at the ends of the main arteries, each one flanked by two crenellated towers, if we are to judge by the mural crown worn on Roman coinage by Tyche, the tutelary goddess of the city. There were two gates, that in the east which was the starting point of the road to Aṣāmiyya [q.v.] and which passed by way of the pass between the hills dominating the town, and the north gate which stood at the end of the colonnaded avenue which passed by the foot of the citadel and continued beyond the walls as the road towards Antīkiyya [q.v.]. Among the best-known towers are the Tower of the Pigeons that provided the postal service, and the Pier which, in the Middle Ages, protected the narrows of the harbour on the site of an ancient lighthouse, probably the new tower constructed by Bohemond in 666/1266. On the northern causeway, at the site of the modern lighthouse, the Fārus marked the entry to the port. This was, judging by the evidence of numismatic iconography, a round or polygonal tower built on a base of two levels with a second smaller tower bearing a tall, draped statue at its summit. This monument existed in the reign of Domitian (1st century A.D.). The Fārus gave its name to a famous convent, the Dayr Fārus, which was held to be the most beautiful in Syria; situated outside the town according to Ibn Battūta, it was much visited by Christians and also attracted large number of Muslims.

At the perimeter of the ancient town there stands an important monumental arch, the Tetrapyle, with its four fully-rounded arches placed between four strong pillars, but its construction stopped when it reached the boundary of the town in 1287. At a distance of 500 m. from the Tetrapyle there remain four Corinthian columns of a peristyle—doubtless the remains of a temple dedicated to Bacchus which was converted into a church (Kanisat al-mu'allaqa).

All the authors speak of two twin castles linked together and built on a hill overlooking the town to the north-east. Röhricht (in ZDPV, x, 330) has prepared a list of the buildings that are known to us from the Frankish sources.

The Ottoman period. In the middle of the 15th century, the port of Lādishīyya was part of the district of Ḥablā; cotton and olives were cultivated in the region; walnuts and mandarin trees were of high quality, while vine-growing retained its ancient reputation. In the first half of the 18th century, Lādishīyya was subject to Tarībūlūs, and was governed by Yāsīn Bey, son of Ibrāhīm Pasha al-Atmī. In Rabī‘ I 1345/September 1726, there was a major uprising; the rebels were joined by the troops sent to rescue Yāsīn Bey, and when a few months later fresh troubles broke out, the ‘Āms were removed from all their positions of authority in Syria.

The modern period. In 1914, Lādishīyya, with a population of 7,000, was nothing more than a small town belonging to the vilāyet of Beirut and administered, according to the Ottoman law of...

LADJ (literally "refuge") is the largest, geologically-recent lava-field in the south of Syria, comprising a plain of ca. 900 square km. It has roughly the form of a triangle, the base of which is formed in the south by the line Izza-Shahba (ca. 45 km.) and the apex of which lies ca. 48 km. to the north near Burra (ca. 50 km. south-east of Damascus). In the north, the area is limited by the Wadi al-`Ajam, in the east by the Arq al-Bathaniyya [see Al-Bathaniyya], in the south-east by the Djabal al-Durqa, in the south by the Nukra of Damascus, in the south-east by the Nukra of Sanamayn, see Dussaud, Topographie, 331). The area has borne its contemporary name since the 13th century. The Islamic geographers emphasise its location on the population to the east of Syria. There is no northern Palestine.

(L. GAUBE)
When the Mamluks, after the expulsion of the Frankish Crusaders from Bīlād al-Shām (Greater Syria), reorganised the country into a number of manlikūs or provinces, the old Ḍūnūd al-Urdum was incorporated into the new province of Śafād. Al-Ladidjun and Dūnaš constituted the seventh āmāl or district in this province. Shaykh Ṣadr al-Dīn Muḥammad b. Ṣād al-Ramūnī, better known as al-ʿUthmān (d. 789/1389), states that Ladidjun's inhabitants and those of the Eṣraelān plain belonged to the Yamānī faction (see kays ʿaylān). Kays and Yaman in the Ottoman period) and are most likely the descendants of the B. Ḍūdām (p. 92) mentioned in earlier sources as living in that neighbourhood. During the late Mamlūk period and during the 16th and 17th centuries, an indigenous Bedouin clan by the name of the Āl Tarābāy, sometimes called Āl Ḥārītā, emerged in that area. The Mamluks, as well as the Ottomans, entrusted this family with administrative and fiscal duties.

Ladidjun owed its prominence to its excellent location in a fertile plain with abundant water supply, to the influence of the Al Tarābāy and to the sanctity of a shrine, attributed to Abraham, which attracted pious people and on the site of which a domed shrine was set up in northern Palestine, where the Mamluks, as well as the Ottomans, entrusted the third family with administrative and fiscal duties.

In 1425/1525 the town of Ladidjun, mentioned as a karya or village in a tapa defter, had a population of 23 Muslim households. One-fourth of its revenue amounted to 4,670 ağače and formed part of the sancāfī of Tarābāy. From the list of revenues, it appears that wheat, barley and sesame were grown there, and it had its own two-stone water mill paying a tax of 1,000 ağače. The protection-money tax (bālīd qáfirāt) yielded 20,000 ağače, collected annually at the above-mentioned kāhin. As late as 1696, when the English traveller Henry Maundrell was passing on his way from Aleppo to Jerusalem, he paid a local Bedouin chieftain “two caphars, tapu defter, or village in a kūṭiya, or umayqah, or caravansaray to accommodate travellers and merchants, referred to by Ewliya Celebi.

In the second half of the 18th century, a new sandag consisting of four nāḥiyās, that of Ladidjun, was set up in northern Palestine, where the village of Ladidjun formed part of the Ḍūlāsī Pādīqārī. The number of its inhabitants had now risen to 42 Muslim households and one-fourth of its revenue amounted to 13,500 ağače yearly. The extant imperial firmāns addressed to the various officials in both Baghdād and Laylatān (the Province of Damasīq), exhibit the sultan's interest in maintaining law and order and in restoring fortifications in the area.

The decline of Ladidjun is associated with the eclipse of the Al Tarābāy in 1577, and the rising importance of the Syrian constabulary, following the creation of the new province of Sidōn in 1660 and the benefits arising there from the growing trade with Europe. This fact was recognised by the Bedouin clan of the Āl Zaydānī, who replaced the Al Tarābāy and made Acre their principal town. Ladidjun remained a centre of the sandag and had its own mutasāfin (provincial governor), but nevertheless it continued to lose importance to the coastal villages of Ḥaṭl and Acre. In 1940, the village had 1,103 souls; nine years later, after the establishment of the state of Israel, a Jewish settlement was established in its environs reviving the old name of Megiddo.

Ladidjun is further a name of a place to the east of modern al-Qarāq (q.v.) in Trans-Jordan, described by several geographers as a halting-place on the route to Mecca.

remained of Kâlidân’s reign made him one of the most powerful magnates in the realm at the accession of al-Malk al-Âshráf Khâill in 699/1299 and the two regarded each other with mistrust. Lâdîn headed the Damascene contingent at the siege of Acre, during which he was arrested and sent to Safad (Dubnic 14 May 1291). He was restored to favour, but in Shawwâd 699/September 1292 he fled, fearing arrest, was captured by Arabs, and sent a prisoner to Cairo. Again released, he conspired with the viceregent (nâthîh al-salâmâ) Bayyâr al-Mansûrî and other malcontent amirs against the sultan, who was murdered during a hunting expedition (Muharram 699/December 1293). The conspirators failed, however, in their further aim of placing Bayyân on the throne; he was killed, and Lâdîn absconded.

Khilî’s infant brother, al-Malk al-Nâsr Muhammad, was installed as sultan with the viceregent Kübbâhî al-Mansûrî as de facto ruler. In Ramadan/August, Lâdîn emerged from hiding. Under his inspiration, Kebâbghâ instigated the amirât (Muharram 699/December 1293) and Lâdîn himself was invested as viceregent. Kebâbghâ’s short reign was marked by death and famine in Egypt, and by the settlement in Palestine of numerous Oraít warriors with their families, fugitives from the Khân Gâhân after his overthrow of Bayyân [C]. Since Kebâbghâ was himself a Mongol, the Turkish and Circassian amirs may have seen this immigration as a threat to their ascendancy. A faction headed by Lâdîn deposed Kebâbghâ and installed Lâdîn as sultan in Muharram 699/November 1296.

Recurrent crises of the Mâmûk sultanate arose from the invertebrate hostility between the mamlûk of the reigning sultan and those of his predecessor, who was in many instances seeking to displace in order to reward his own household and to secure his own position. In an attempt to safeguard themselves, Lâdîn’s co-conspirators made an accession compact with him by which he undertook to renounce the absolute discretion, the essence of the royal autocracy, and not to give his own manâlîks power over them. The absence of institutional sanctions for this compact soon rendered it null. In Dhû’l-Khâdî 699/September 1297, the sultan removed his fellow-conspirator, Kârâî Sünkîr al-Mansûrî, from the viceregency, which he bestowed on his own manâlîk, Mânkûtâmûr. The tactless exercise of plenary powers by the new viceregent antagonised the amirs, who had still more reason to be alarmed by the sultan’s fiscal reforms. A cadastral survey and redistribution of jîfâ’s in Egypt (al-nakîk al-husâmi) was carried out in Dhu’l-Qa’dâ 697/March-April 1298, the first measure of this kind since Salâdìn’s time (572/1176). The survey retained the previous categories of beneficiaries, i.e. the privy purge (al-hâlîs), the amirs and the fâlka [q.v.], but whereas the allocation to the privy purge was unchanged, the other two categories were combined and given a smaller total assignment. The sultan was thus left with a surplus, free of the charges on the privy purge, on which he could maintain a new military force—an obvious threat to the power of the amirs. In the following months their resentment led to a conspiracy, and on the night of 31 Rabî’ II 699/15 January 1299 Lâdîn was murdered and Mânkûtâmûr put to death. After some days of uncertainty, al-Malk al-Nâsr Muhammad was restored as titular sultan.

Zbān and the Biskra, to the south towards the Mzāb (Hādj territory), then towards the oilfields (Hākj Mas'ūd) on the one hand, and towards the main highway for penetration of the African continent, the "Trans-Sahara", on the other. Laghouat is at the centre of a considerable network of communications.

History. In the 4th/10th century, there already existed on the banks of the Wādi Māsri a locality whose inhabitants, after acknowledging the authority of the Fātimids, took part in the revolt of Abi Yazīd al-Nukhkārī [g.v.]. The neighbouring region was overrun by Berber tribes belonging to the family of the Maghrāwa [g.v.] (cf. Ibn Khālid, Kutāb al-'Ya'zī, Algiers 1851, i, 64, Beirut 1956-9, vii, 95; Baron M. G. de Sane, Histoire des Berbères, ..., iii, 273).

The Hilālii invasion brought into the region other tribes of the same race, notably the Ṭṣel, fugitives from the Zāb, who founded a village called Ben Ḫija (the nisba "al-Dīlī") in use in Laghouat. Several other ṣaṣūr (Bu Mardala, Nādīal, Shīl Mīnūn, Badla, Kaṣbat Fītūb) were built by other emigrants, some of Arab origin (Dawāda, Awlād Bār Ḫayyān), others from the Mzāb. This collection of urban centres was known by the name Lagḥuṭ/ Lāḥūṭ, the latter orthography being the only one which corresponds in reality to the current pronunciation in the Laghouat dialect. The modern form al-Ǧāḥwāt indicates a concern for conformity with the paradigms of Classical Arabic (cf. the model ḥālī). Now the classical form Ǧaḥwāgu, plur. Ǧāḥwāt, is totally foreign to the linguistic usage of Laghouat and its surrounding neighbourhood. In spite of the feeling of Arabism which is a feature of the collective consciousness, there is still evidence of an ancient Berber stock, in various forms: personal names: numerous patronyms cited by Ibn Khālidūn (cf. above) are still borne in Laghouat and its surroundings; toponymy: place-names of Berber connotation in the Laghouat region are too numerous to be mentioned (see the detailed maps); agricultural sphere: the technical vocabulary of palm cultivation includes terms of Berber pedigree, particularly to denote fine varieties of dates (ṣaddat, ḥajarat, ṣawāt, tālīdqa, etc.); social sphere: the tribe (Berber ḥaqqi) has for a long time been a form of ritualised collective mutual aid (domestic tasks, weaving of wool, seasonal work in the oasis or the fields); and folklore: the old antagonism between sedentary Berbers and Arab tribesmen is still expressed in the form of a satirical folklore which perpetuates a more or less caricature image of "Arabs" (meaning Bedouins).

Little is known of the social and political history of Laghouat until the 18th century. At the end of the 18th century, it paid tribute to the king of Morocco. In 1698, a holy man, a native of Tlemcen, Sidi Yāḥībi, took up residence in Ben Ḫija and sought to reconcile the rival factions. His moral authority extended to the people of three other ṣaṣūr as well as to the neighbouring tribe of the Larbāʿ. Under his leadership, the people of Laghouat defeated the inhabitants of the ṣaṣūr al-'Asafiyya, but found themselves obliged to pay tribute to the sultan of Morocco, Mawāli Ismāʿīl (1672-1727 [q.v.]), who came and camped under the walls of the town in 1708. After the death of al-Ǧāḥdī, the patron of the town (1712/1783), the history of Laghouat was reduced to that of confrontations between two parties who competed for political and religious superiority: the Awlād Serkīn, inhabitants of the south-west quarter, allied to the Tijāniyya [q.v.] and the Ablāf, the majority of them affiliated to the Ḫāriyya [q.v.]. In the course of these interminable struggles which periodically brought bloodshed to the oasis, the Turks succeeded in having their supremacy recognised. From 1727, the Bey of Titri had, in effect, imposed an annual rent on the people of the ṣaṣūr. On the other hand, the Mzābīs, expelled from the oasis where they had acquired a share of the plantations, formed a confederation with the nomads of the south, over which the Laghouatīs triumphed thanks to the support of the Larbāʿ (1758). This inconsiderable episode seems to have put an end to a prolonged religious war, through the definitive elimination of Ḫabīdiyya from an oasis whole-heartedly attached to Ǧāḥiī orthodoxy, over and above its ancestral discord. Towards the end of the 18th century, the Turks made an effort to reassert their supremacy, from which the Laghouatīs had been gradually freeing themselves. Military expeditions were undertaken for the annual collection of taxes, with varying degrees of success, by the Bey of Medea, then by the Bey of Ora (1784 to 1802). In turn, the Ablāf and the Awlād Serkīn were the object of favours or reprisals on the part of the Beys.

The two parties were not slow to re-align themselves with their respective allies, and the confrontations resumed with even greater severity, until the day when the chieftain of the Ablāf, Ahmad b. Sālim, having allied himself through marriage with one of the leading Serkīn families, became master of Laghouat and of the neighbouring ṣaṣūr (1828). After a period of tranquillity, Laghouat became involved in the struggle of the amir ʿAbd al-Kādis against the French. The chieftain of the Awlād Serkīn, al-Ǧāḥdī al-ʿArbi (descendant of the patron saint of the town) was appointed Ǧāḥiī by the amir. But he was unable to maintain his position and was obliged to flee to the Mzāb. His successor, ʿAbd al-Bāqī, was no more fortunate, although he had a force of 700 regular soldiers and a piece of artillery. His policies met opposition from the civic leaders who summoned a riot; he was forced to leave Laghouat (1839). Al-Ǧāḥdī al-ʿArbi was appointed Ǧāḥiī for the second time. The same year, when the amir was forced to raise the siege of ʿAyn Māḏī (after eight months) to regain control of the Tell, Ahmad b. Sālim and his partisans took the opportunity to rally their troops. The Ǧāḥiī al-Ǧāḥdī al-ʿArbi was overthrown and then captured, at Ḫsar al-Bārān, where he was killed (1839). Thus restored to power in Laghouat, Ahmad b. Sālim entered into negotiations with the French (Col. Marcey-Monge) to ask for recognition of his authority over southern Algeria (March 1844). This protectorate constitutes the first stage in the process of annexation of Laghouat, a process too long to be described (cf. R. Le Touzou, Occupations de Laghouat par les Français 1844-1859, in Études Maghrébines. Mélanges Ch. A. Julixen, Paris 1964, 111-39). Following several expeditions (1844, 1847, 1852), the town was taken by storm on 4 December 1852, at the cost of heavy losses on both sides (more than 2,500 dead). The taking of Laghouat (on the orders of General Pelissier) was one of the bloodiest episodes in the conquest of Algeria. On the Algerian side, the memory of the martyrs never ceased to be honoured, in the guise of a semi-folkloristic, semi-religious ritual, until the time of independence. After its conquest and fortifications, Laghouat received a permanent garrison and became the operational base of the French in the south.
In its various phases, from the beginnings (4th/5th century) to the eve of the contemporary period, the dramatic history of Laghouat has been a microcosm of the general history: (a) of the Central Maghrib, as depicted by the historian Ibn Khaldun: chronic anarchy, with no respite for the population, exhausted by a perpetual struggle for survival independent of any aspiration for national unity or progress; (b) of the population, suffering from famine, pestilence, and warfare; (c) of the town of Laghouat, which was conquered by the Turks in the 11th century and then by the Berbers in the 12th century, who built a fortress there and allegedly renamed the city Mahriya, in memory of Ahmad ibn Mahri, son of Rama, and the forms Lohawar (cf. Peshawar) and Lohawara have both been hypothesised by scholars, Cunningham (Ancient Geo. of India, i, 197-8) identifying it with the place Labokla (L. Labalika) mentioned by Ptolemy. Yet another possibility, Laghouat, may have been preserved in the spelling Lahanur which appears in the 7th/8th century Kiran al-sa'afan of Abul Khusraw. It has also been identified with the anonymous flourishing city which the Chinese pilgrim Hsuan Ts'ang came upon around A.D. 650 on his way to Dhamadhar.

At one time confused with Lohara in Kashmir (see Sir M. Aurel Stein, Kulhara's Rajatarangini, Westminster 1900, ii, 293, 296, 363-4), Laghouat is actually first mentioned in 372/982 in the Suhd al-'IYAM (The annals), where it is described as a city populated exclusively by Hindus, to the Ku-shahite forces in 613/1217, although al-Dln Iltutmish (see Kalhami's Rajatarangini) found a son of Iltutmish in revolt against his father at Lahawr in 452/1063-4. Lahouat was subjected to a long and unsuccessful siege by an oncidary of Hindu princes. But it remained firmly in Ghaznavid hands, serving, after the loss of Ghazna itself in 356/966, as the capital until its capture by the Ghiyrids (q.v.) in 583/1187 as a result of a conflict between the two dinasties.

On the murder of the Ghiyrid Mu'tiz al-Din Muhammad b. Samd in 822/1226, Lahouat became temporarily the capital of the Indo-Muslim realm ruled by his slave Kuth al-Din Aybak (q.v.), but after his death it was disputed for some time among the other former Ghiyrid officers Kubiya, Vildiz, and Shams al-Din Bittin (q.v.). Afterward, it was included in the republic of Pakistan, of which Lahouat was the capital in 1947, in the course of the partition of India. Lahouat, the principal city of the Pandjab (q.v.), which was invaded by the Mongols a few years later, found a son of Kubiya in revolt against his father at Lahouat (Nasawi, ed. Hodous, text 90), and it probably fell definitively to Ilutmish shortly before Kubiya's overthrow in 653/1258.

Under Ilutmish's weak successors (see Mni Sultani), the governors of Lahouat were frequently in rebellion, and Kuli Khan Ayaz was virtually independent there in 639/1241, when Lahouat was taken and sacked by the Mongols. They did not follow up their victory, abandoning the city immediately, but around 651/1253, in the course of another invasion, they installed at Lahouat the renegade prince Bittin al-Din Mas'ud b. Itutmish. Sub-
sequently, however, it appears again as part of the Dūhl Sultanate under its governor Shāh Khān, who is credited by the historian Barānā Tārh-i Firdaw-"sānī, ed. S. A. Khān, Calcutta 1860-2, Bibl. Indica, 65) with numerous military successes against the Mongols. The city was restored by the Sultan Chiyāvī al-Dīn Balbān [q.v. in Suppl.] soon after his accession in 694/1296, but Lāhawr was to remain, for some decades a frontier region subject to regular Mongol attacks and seems to have been replaced as an administrative centre by Dēdālpārī. It attained to a temporary prominence once more early in the 8th/14th century under the governorship of Ghāzī Malik, who in 720/1320 as Chiyāvī al-Dīn Tughluq [q.v.], in the reign of his son Muhammad [q.v.], however, the district was ravaged by the Caghatay Khān Ṭarfār in around 729/1329, and a few years later Lāhawr was occupied by a Mongol chief named Hūlūlī [see hūlūlī], in alliance with the Khokhars [q.v.]; the brutal reprisals against the populace by Muhammad's forces are mentioned by Ibn Baṭṭūta (li, 333). After this, its history is again obscure until the turn of the century, when Shāh Khurshāh Khokhar, who had been appointed governor of Lāhawr by Mughni Shāh Tughluq, made a timely submission to Timūr (683/1285), but on showing signs of disaffection was suppressed by an army under the conqueror's grandson Fīrūz Mūhammad b. Dāhāngir.

Lāhawr was included in the territory ceded by Timūr upon Khīd Khān, who in 817/1414 seized power in Dūhlī and established the Sayyid dynasty. Under his successor Mubārak Shāh, the city was twice attacked by the Khokhars, now led by Shāh Khokhara son Dījasrat, while at the same time the Afghan Lodīs [q.v.] were beginning to encroach upon the Pandjāb. In 833/1427 Muhammad Sayyīdī, in an effort to curb the power of the Khokhars, granted Lāhawr to Bahūl Lodi, who repaired the Sayyīd's garrison by supplanting them at Dūhlī ten years later. During the Lodi era, the province continued to enjoy a quasi-independence. It was the sultan's kinsman Dāwūd Khān Lodī, governor of the Pandjāb, who encouraged the designs of Bābur [q.v.] on Hindūstān, leading to the occupation of Lāhawr by the Mughals in 930/1524. On the outbreak of the rebellion of Shāh Shāh Tūr, Bābūr's son and successor Humāyūn fled to Lāhawr, which he had been compelled to relinquish. The two Mughal princes were unable to hold the Pandjāb, and abandoned it to Shāh Shāh (947/1540), with the result that Lāhawr once again enjoyed a period of Afghan rule. Shāh Shāh is said to have regretted his decision before he could achieve his object. The struggle for the succession between Dījasrat Shāh and 'Abī al-Samad Khān and his son and successor Zakariyā Khān, the activities of the latter winning Lāhawr the nickname of Shāhīgān, Zakariyā's submitted to Nādir Shāh [q.v.] in Shāhwāl 1501/January-February 1773, but recovered his independence once the Persian monarch had withdrawn from India. After the governor's death in 1165/1754, however, his sons engaged in a struggle for power, as a result of which the Afghans Ahmad Shāh Durrāk [q.v.] was able to launch his first invasion of the Pandjāb and occupy the city in Mubarram 1164/January 1748. On his departure, the court of Dūhlī entrusted Lāhawr to Muḥī al-Mulk, named Mīr Mānān, son of the ważīr Kāmur al-Din, but he was shortly obliged to submit to the Afghans; and following a further invasion by Ahmad Shāh in the winter of 1165/1752-3, the Mughal emperor signed a treaty whereby Lāhawr passed into the Afghān sphere of influence. This did not prevent the Dūhlī ważīr Shāhī al-Dīn 'Inād al-Mulk from invading the Pandjāb in 1169/1756, seizing Lāhawr from Mīr Mānān's widow, who had endeavoured to secure recognition from both Dūhlī and Kabul, and installing as governor Adīna Bāg. Ahmad Shāh was thereby compelled to recognise the city in the following winter and establishing there his son Timūr Shāh. During this time, the Sikhs are found assisting Adīna Bāg and his allies the Marāthās against the Afghans. Together they expelled Timūr in 1171/1758 and repulsed another Aīgān attempt on the city in 1172/1759. When Ahmad Shāh decisively crushed the Marāthās at Pandāpat [q.v.] in 1174/1761 and again took Lāhawr, it was the Sikhs who were the ultimate beneficiaries of the victory. On his withdrawal, they simply reoccupied the city, and did so again after each of two further Afghan invasions, finally securing it in 1181/1767. For the next thirty years Lāhawr was governed by a triumvirate of Sikh chieftains, whose rule was disturbed
only by two temporary Afghan occupations under Ahmad's grandson Zaman Shah in 1311/1776 and 1320/1785. During the second of these invasions, the Sikh chief Ranjit Singh negotiated with the Afghans for the office of mubāhār of Lahawr, but it was not until Safar 1244/July 1829 that he was able to wrest it from its three Sikh lords, who had meanwhile taken it in the wake of Zaman Shah's retreat.

Under the rule of Ranjit Singh, proclaimed mubāhārād of the Panjāb in 1801, Lahawr, as his capital, recovered something of its lost prestige. He repaired its walls, and embarked upon a programme of construction works which did much to reha -

(P. Jackson)
carved surfaces of Mathurā stone; the 7amādūdī brackets with their profusion of elephants, lions and peacocks owe much to Hindu timber-work. The architect responsible for this complex, Abū l-Karim Mafrūr Khān, appears also to have carried out the remarkable and unorthodox cladding of panels in mosaics of cut glazed tiles, on the north, and later on the west walls, with the semi-octagonal Shāh Būrj, between 1034/1624-5 and 1041/1632-3. Their brilliant colours, which extend the range previously used in the Fandābād from dark blue, azure and white to include yellows, brown and green, depict courtyards, scenes of hunting, elephant fights, battle and myth.

The Divān-i Amīr of fort was ordered by Shāhji Khân in 1037/1628 follows the pattern of its contemporaneous at Āgrā; its present form was reconstructed by the British in 1819, but fragments of two ceremonial ratings survive. Shāhji Khân, dissatisfied with the existing scheme, raised the level of the earlier work, and built a new group of private apartments inside the Shāh Būrj, including the Shāh Māshāl of white marble set off with pīdnot dura inlay of floral motifs, opening onto the court through five bays with paired columns supporting engraved arches in the fully-developed marble style: its rises to double height, with a ceiling of conves glass set in gypsum plaster (āįjīnā-ḳūt), the walls now being of solid stone. To its west is a marble pavilion, the Bāŋgī (Nawālkhā), that reproduces a Bengali but with its gridwork walls and arching roof, again inset with semi-precious stones (pārīīītā-ḳūt). In 1043/1633 he had the Diwān Khās and Khūbābādī replaced, the former with a marble hall five bays by five, anticipating that at Dīlī (p. 137) in layout, with open arcades surrounding an inner hall, and a parapet infill to simulate merlons. The Motī Masjīd (ca. 1645) makes finely restrained use of marble as the first of the three Pearl Mosques (cf. Āgrā 1648-54, Dīlī ca. 1660); its pīdnot dūrā frames a four-centred arch that contrasts with the cusped ones on either side, and the three domes rise from strong cavoetto mouldings in a round-shell frame. It is even crowned with a small pointed lotus. The round tower of Awti Khand (1083/1673-4) rises vigorously from a swelling lotus-petal base in broad gadroons to leaf-like merlons, and each is capped with a light chātri to counter the upthrust.

The Mosque of Maryam Zamānī, built for Shāhjāhān's mother in 1023/1614, follows the established scheme of a five-arched prayer hall, with a tall semi-domed pīdnot dūrā, and five domes supported on massive brickwork piers. Square towers at the angles carry domed lanterns. The utilised central dome, less overpowering than that at Pathpur Sīkri, has an inner shell of stone; extensive use is made of squinch nets and honeycomb squinches, and the interior has the finest floral painting in Pakistan on incised plaster. The prayer hall of the Masjīd-i Wazīr Khān (1044/1635) is of the same type, with four-centred arches, double-shelled Lōdī domes—albeit of an improved shape—and deep piers separating the façade from the domes. The courtyard is much longer and arcaded with stout octagonal minarets, capped with chātris and set on squared bases: the first use of such towers, it seems, for a Mughal mosque. The main gate is enlarged to house the domed, octagonal central chamber of a bazaar street. The brickwork is extensively panelled, and its grid floors flat panels of cut mosaic tile (see fig.) on the surfaces of the gates, prayer-hall and minarets, with flowers, trees, tendris and inscriptions in an inventive but strongly Iranian display. The building achieves great distinction in contrasting this vivacious decoration with the robust composition of the structure. Inside, the mosaic is replaced by paint. A šamānā of the same date, and Islamic in type, still exists near the Dīlī Gate. These elements are redrafted in the much smaller mosque of Dāṣī Angā (1045/1635), where the three frontal arches are engraved, the domes articulated with cavoetto mouldings well above the parapet, and the hall is limited at either end by the massive square bases for minarets with lanterns that have been rebuilt this century; exceptionally, the mosaic is used inside as well as the usual revetment of the walls of the mosque and its counter-image flanking the Tāqī Māshāl (ca. 1632-47). The mosque of Mubārak Sālīh (p. 1647), built for the historian and calligrapher Abūl Kalamān (1070/1660) is also tiled, and remarkable for its inscriptions. The Bādšhāhī Masjīd (1084/1673), Awti Khand's finest building, combines local tradition with experience from the Dīlīsī Masjīd at Dīlī (1095/1689) (see p. 138). From the former come the octagonal minarets at the courtyard corners, the smaller ones at the angles of the prayer hall, and the recessed paneling; from the latter are drawn the plan, the raised plinth with steps and gateway, the bulbous domes, and the handling of the façade. The brick structure is faced throughout in red sandstone, and white marble for the domes. The interior is decorated with floral reliefs in line plaster (mustahbat-ḳūt), and painted, with almost Rococo delicacy.

Tomb. The tomb of Shāykh Mūsā Āḥangār (ca. 1560?) whose squat dome on a cylindrical drum rests on a square, panelled cell, provides unique evidence of earlier tilework in the city: the dome is tiled in green horizontal courses, and the upper part of the walls in square tiles set diagonally, with floral motifs in blue and white. The squared mass of Shāhjāhān's Tomb at Shāhjāhān (completed ca. 1049/1639) is derived from the base of Akbar's tomb (see p. 137), with the same number of arches and projecting angles. In the octagon the red stone façades are inlaid with white and black marble in magpie elegance within the usual grid, and the tall octagonal corner towers are patterned in chevrons of white and yellow between four balconies. The absence of a central pavilion on the roof destroys the composition: the original arrangement is uncertain. A finely inscribed cenotaph lies in an octagonal central chamber with floor and walls all in superb pīdnot dura. This single-storey form is repeated at half-size in the tomb of his empress Nūrjāhān (d. 1053/1643) nearby, built by herself; no vestige of its original surface remains on the brickwork core. Shaikh 'Alī Angā's Tomb (1082/1672-3) in the Gulābī Bagh is also square, with gridwork walls and a square chātri on each corner; the plan however incorporates a cross-shaped tomb chamber, with calligraphy by Muhammad Sālīh in the coving, and an ambulatory with octagonal corner cells. A central dome shaped like those of Wazīr Khān's Mosque is patterned in chevrons of white and dark blue tiles, and its tall drum with floral motifs. A series of octagonal tombs begins with that of Anārkālī (1042/1635), built by Shāhjāhān for a former love. It has octagonal, panelled corner towers with chātris at roof level, arched walls rising through two stories, and a dome of this same profile. It suffered various alterations when adapted for a church in 1851. Entrances formerly alternated with octagonal corner cells around a central octagon,
with the cenotaph, carved in bold relief, at the middle. The tomb of Ayat Khan (d. 1051/1642 [f.v.]) at Shahdara has a single octagonal chamber, and a semi-domed arched recess on each external face around it. The reveals once had dados of square painted tiles, unique in this reign, and the squinch arches are bracketed with flat capitals. The dome, now stripped of its white marble, was contemporaneous with that of the Tadj Mahal. The cenotaph is modelled on that of Djahangir, below a muskab-bârâi vault. AlI Mardân Khan’s tomb (ca. 1650), built for his mother, is similar in plan, but is crowned with a dome of the earlier type on a tall drum, balanced, Sîrâ-al-styie, by a châlîni set above every angle of the octagon. Once more the veneers have been stripped by the Sikhs, but there are traces of a floral marble inlay on the dome. The mausoleum of Shâhâl al-Nisâ Begam (d. 1158/1745), called Saw-wâlil Maqbara, is a low tower, square in plan, whose walls are relieved by a frieze of cypress trees (sara) 2.2 m high in glazed tilework around a tomb chamber at the upper level, surmounted by a bâdghâl and a stepped square come. That of Sir Muhammad Iâlîkâl, designed by Nawwâb Zayn Yârdjaug Bahâdur in 1557, is a severe orthogonal cell with battered walls, set off by mouldings around a strong plinth and châlîni, and deep openings, reminiscent of Tughluk building yet somewhat Germanic; the white marble interior is carved in ornamental relief and lines from his Zabir-i Âcpiy.

The gardens associated with these buildings, all but obliterated and requiring extensive restoration on Lord Curzon’s initiative, have lost their original planting, but still display the bâdghâl layout, with causeways patterned in local brickwork set between regularly-spaced cypresses. The first, planted by Mirâz Kâmârân on the banks of the Râvi (ca. 1530-40) has disappeared, but its summerhouse, a bâdârâ, survives in midstream. Nûrgâhân’s Bâg-i Dilkâsh, adapted for her husband’s tomb at the centre, has each of the four quarters subdivided into four square plots, with canals and tanks at the intersections, within a huge walled enclosure. The Bû'îî Shâlîmâr (see a.v. X); completed in 1622/4, and like its namesake at Dîlîdî inspired by the eponym in Kâzghur (va.d.) was originally entered at the lowest terrace, allowing movement, as in the palace, through successively more private areas, past cascades backed by lamp-niches, a bâdghâl set in a tank, and 450 fountains. The Bâdârî Bâgh, formerly a sândî built by Avârangêh, is apparently Sikh work.

Three gateways and in mosaic tile have survived, each terminating at which they once led. The Cawburghi (1056/1646), with four corner towers like those of Wazîr Khân’s mosque, but more attenuated and missing their bâdghâls, has cleanly-cut archways set in a gridded surface. The Gulâbî Bâgh Gate (1066/1655) follows a similar scheme, but with angle-shafts in place of the towers, and with capping of the upper arches. The unadorned gate at Nawânlâc (ca. 1560) has the panelled corners left unbroken as support for its twelve-pillared châlîni, remarkable for their graduated, green-tiled domes.

Fig. 2. Plan of the Masjid-i Wazir Khan. (From M.A. Chaghatai, *The Wazir Khan Mosque, Lahore*)
al-Hawta, lies between the two tributaries of the Wādī Toban, al-Wādī al-Kabir and al-Wādī al-Saghīr, about 25 miles northwest of Aden. The town is surrounded by a fertile area which is cultivated by means of an elaborate system of irrigation using the water of the wadis and also of wells, date-palms abound, as well as cereal crops and vegetables. In fairly recent years too, cotton has become an important addition to the local agricultural economy.

Definition. In early Islamic, medieval and later times, Labdij comprised a whole area to the north and north-west of Aden and formed a joint city with Abyan which at that time must have extended much further westwards to the north and north-east of Aden than the present-day area of the same name. Perhaps Labdij and Abyan in those times might have been divided by a line drawn due north from Aden, with the former on the western side and the latter on the eastern. It seems that the area of Labdij remained as described above until the late 10th century, when the then sultan of Labdij occupied the territories of the Subayha, the tribal group inhabiting the territory between Labdij proper and Bab al-Mandab. Thus the Labdij sultanate was composed of historic Labdij and Subayha territory.

After the Yemen had been won for Islam, Labdij shared the fortunes of this extensive province of the Arab empire. Labdij thus passed with the Yemen to the Umayyads and then to the 'Abbāsids, though in early times governors in Sunnī and Hadramawt must have had little control in the area. In 203/818-19 the caliph al-Mu'tamīn appointed Muhammad b. 'Abd Allah b. Ziyad as governor of the Yemen. He was the founder of the Ziyādī dynasty and the city of Ziyādī al-Himyar, which was to be his capital until 402/1011-12. Labdij, with Abyan, Abyan and al-Shībī, passed into the hands of the Banā' Mān in the time of the Abys- Bian slaves who ruled Ziyādī and the Subayha territory. Thus the dynasty came to an end. In 454/1062-3, Aden came under the control of the Band Ma'ān and the time of the Abys- Bian, Hadramawt and al-Subayha. passed into the hands of the Ismā'īliists and the latter was ceded to the Government of Bombay. As already mentioned, the vast area of the Subayha fell under their sway in the late 10th century. By the time of the formal signing of the agreement with the British Government to inaugurate the Federation of the Amirates of the South in 1959, the Labdij sultan Fadl b. ʿAll, as ruler of the senior state in the Western Aden Protectorate, held the key portfolio of Federal Minister of Defence and continued in that post until the collapse of the Federation and declaration of the new Republic in 1967.

LAHIDJAN, r. A town in the Caspian coastal province of Gilan [q.n.] in north-western Persia, in long. 50° 30′ E. and lat. 37° 32′ N. It is situated on the plain to the east of the lower reaches of the Safid-Rud and to the north of the Dulk Elk mountain, and on the small river Con-iheja or Purdeh, some 14 miles/20 km. from the Caspian Sea shore.

Lāhibdijan does not seem to have been known as such to the earliest Arabic geographers, though legend was to attribute its foundation to Lāhibdij b. Sām b. Nābī. It does, however, appear in the Persian Ḥudud al-Samn (372/982) as Lāhibdij, one of seven "large districts" (i.e. it was not yet a town) of the Subayha cause in the Yemen on behalf of the Subayha. The Zaydīs remained in power until the entry of the Ayyubids from Egypt into the Yemen in 509/1173. Labdij, with Abyan and indeed the rest of the Yemen, thus came under the control of the Ayyubids (569-629/1173-1228) and their successors, the Rasīlīds (626-958/1228-1454), who were followed by the Tāhirīs (958-1454).

The expeditionary force led by Husayn al-Mushrif the Mamlūk Sultan Kānsāw b. al-Gawālī sent at the request of the Tāhirī Sultan Sāmīr b. ʿAbd al-Wahhāb to prevent the encroachment of the Portuguese in the Red Sea, and which conquered a great part of the Yemen, only paved the way for the Turks. In 943/1536 the Turkish governor of Kulzum, Sulaymān Pāsha, set out with a fleet and took Aden, which thus belonged to the Turkish empire until in 1543 the Turks had to leave the Yemen to the Zaydī Imāms. In 1720-1725, however, the ʿAbbādī tribal leader, Fadl b. ʿAll b. Fadl b. Sālī ib. Sālīm, made himself independent of the Zaydīs and made Labdij the capital of his territory. Thus the area remained under the ʿAbbādī house down to the evacuation of southwestern Arabia by the British in 1967. With the arrival of the British under Captain S. B. Haines in 1839, when the Labdij sultan also controlled Aden, the latter was ceded to the Government of Bombay.

During the middle years of the 3rd/6th century, Lāhibdijan district formed part of the dominions, straddling Gilān and the mountainous hinterland of Daylam [q.n.], of the Dīstānīd or Dūstānīd Wāhsūdān b. Dīṣṭān (still alive in 259/873, according to al-Tabarī, iii, 1880; see also Sayyid Ahmad Kasrāvī, Shukhrūyārī gum-nīm, Tehran 1335/1956, i, 29; the rulers of Bīya-pahl were generally able to extend...
their power up from the plain into the mountains, and even at times over them to the south of the Elburz (as was to be the case with the Kar-Kiyāʾ Sayyids, see below).

There then arose in Biya-pāsh a family ruling from Kātūm or Hūtam in the Rānī Khan district, whose centre is Langarān to the east of Lāhīdān. This line was founded by the ʿArīḍ Māṣīr al-Dīn al-Ḥusayn b. ʿAlī al-ʿArrāsh (d. 730/1330) (see above), who introduced Zaydī Shiʿism into the Caspian region: the eastern part of Gīlān, sc. Biya-pāsh, thus became strongly affected by Shiʿism, whereas Sunni doctrines, including Ḥanbalism, remained dominant in Biya-pāsh. The wider political authority of al-ʿArrāsh's family shrank during the middle decades of the 4th/10th century, and became concentrated more on Tābārtisān or Māzandārān to the east, but the Nāṣīrī Sayyids remained influential in the Caspian region because of their religious prestige. The history of Lāhīdān in the succeeding period is obscure; but it is probable that the Diastandīks re-asserted their authority there after the highland region of Daylam had passed into the hands of the Muslihīds or Saʿīdīs and Lāhīdānīs (the latter form better than "Kangarids") of Tārūm (see above), and that it was the Diastandīk "king of Daylam" who submitted to Kāzvin in the incoming Sādīqī Ṭoghrī Beg in 544/1147-8 (Ibn al-ʿĀthrī, 140, 314).

Subsequently, we find a family of local origin called the Nāṣīrīwands ruling Biya-pāsh from Lāhīdān. The story of their origin from Mahmūd of Ghazna's brother Nāṣīr al-Dawla b. ʿAbd Allāh Ṭafsīrī, retailed by Abū ʿl-ʿAlāʾ Abī Allāh b. Abī Kāṣānī in his Taʿrīkh-i Qadīyānī, is wholly fanciful, and the name Nāṣīrīwand obviously relates to a connection, real or supposed, with Nāṣīr al-Dīn al-ʿArrāsh's tenure of power there. In the time of the Mongol Ulugh Beg, the Nāṣīrīwand Sālāḥ al-Dīn Sālāḥ b. Ṣālāḥ was ruler in Lāhīdān; some decades later, in ʿOḍīyūtī's reign, the family was divided into two branches, that of Ṣālāḥ b. ʿAbd Allāh in Kātūm, and that of Naw-Ḥāfīdī b. Ṣāḥīb in Lāhīdān. The latter submitted to the ʿOḍīyūtī that when he appeared in Gīlān and at Lāhīdān specifically in 706/1306-7, receiving in marriage the daughter of a Mongol commander and being granted suzerainty over the other local princes of Gīlān; Rashīd al-Dīn also testifies to Naw-Ḥāfīdī's riches and prestige at this time. Lāhīdān itself flourished, and Ṣāhīb Allāh Mustawfī describes Lāhīdān and Fīrūzābād as the two chief towns of Gīlān; in the vicinity of Lāhīdān silk cultivation and weaving were actively pursued, and corn, rice, oranges and other sub-tropical fruits were grown (Nisāṃ al-ḥaṣāb, ed. Le Strange, 162-3; tr. 158-9; R. B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 71).

Biya-pāsh was racked by warfare between the various local chiefs during the course of the 8th/14th century, and by 709/1309 the rule of the Nāṣīrīwands, already once interrupted in Lāhīdān, foundered completely, and Sayyid Ḥādī Kīyā became master of Biya-pāsh. The Kar-Kiyāʾ Sāvyds ruled there from 709/1309-8 (with a brief respite shortly after this by the last Nāṣīrīwand) till 1000/1592, the first of the family to make himself completely independent being Sayyid Amir Kīyā (for a genealogical table of the family, see H. L. Rabino, in J.A., ccxxxi [1949], at pp. 352-3). His son Sayyid ʿAll Kīyā, with the help of the Marāḡānī Sāvyds of Māzandārān, made himself master of all Biya-pāsh, and extended as far as Kāzvin, Tārūm and Shārnārān; and Sayyid Rādī Kīyā (d. 829/1429) chased out of the mountains south of Lāhīdān the local family of Ḥazārāspīds and the Ismāʿīlīs. Likewise, Mīrzā ʿAll b. Sulṭān Muḥammad Kīyā (883-914/1478-906) at the zenith of his power controlled Kāzvin, Tārūm, Suḵāniyā, Shāwa, Zandānān, Fīrūzābād, Tehran, Rayv and Waḥūmān.

From the end of the 9th/15th century, the information of the local Caspian chroniclers like Šāhīr al-Dīn Marāḡānī may be supplemented by that of the Safawī historians, the interest of the latter being focussed on the region because of the crucial role played by Mīrzā ʿAll Kīyā in sheltering the young Safawī Ismāʿīl b. Ṣaydār (see Ismāʿīlī i). The future ruling family of Persia already had close links with the Lāhīdānī district, for in the village of Shaykh-Ibrāhīm (d. 714/1314) the pīr and mujtādī of Shaykh Sālī ʿAllī Sāfawī (see Sylvia A. Matheson, Persia: an archaeological guide, London 1972, 71). When Ismāʿīl was a fugitive from the Ak Koyunlu in 895/1491, he fled eventually from Ardabīl to Lāhīdān (K. Hammer, Provinzen und Zentralgebiete Persiens im 16. und 17. Jahrhundert, Berlin 1968, 19, 44, 83, 87, 93, 105, 221). Since then, Lāhīdān's history has been told only sporadically enough. Under Shāh Sulaymān I there took place in South Russia the Cossack revolt of...
Stepan Razin (1668-71), with raids expected against Persian territory along the Caspian coasts; hence troops were mustered in Biya-pish, the Qa[h-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i-i prior to his master's death; a pilgrimage to Mecca in 882/1477; and a short sojourn in Yemen, where, in the course of his way back home from Mecca, he made an investiture of Nūr al-Dīn Māhānī to a couple of disciples—a father and son—in Zabīl, for whom he also wrote a concise ījāfīn in Arabic, with traditional Sūfī instructions. His death, according to an oft-cited chronogram (= Madda al-tārīkh), occurred in 912/1506. Other dates, including 890/1482 (cf. Firisch, Persische Handschriften, 830) and 892/1486 (H. Corbin, Trilogie ismaïlienne, Tehran-Paris 1961, index) are definitely incorrect.

Lāhīdī's literary output, including his Dīwān, with Aṣāfī as his pen-name, and a dedicated mathnawī called awārū al-ghawdād, contains a theological prose work called Ma[fātifi al-ta'wil (an extensive commentary on the well-known Gulūg-i rāz of Mahmūd-i Shabābūrī, J. W. Z.)], together with a number of shorter tracts with comments on the difficult verses of some old poets. His own poetry, although of considerable theosophical value, is of rather mediocre literary quality. His son Fīdā'yī Lāhīdī (d. 927/1521), better known as Shavkhūshdī, was also a poet and reportedly a Nārubakhshī.

2. Ḥabīb Lāhīdī, Lāhīdī, theologian, philosopher and poet of the late Safavīd period and a leading master of the so-called philosophical school of Isfahan. Although a favourite pupil and a son-in-law of Mulā Sādrī Shīrāzī, he did not share his master's philosophical teachings over several topics. Among these one may mention Mullā Sādrī's belief in the movement of substances (al-barakat al-dawwahīyya) and his opinion on the basic tenets of belief (āṣāfī al-walādī). Lāhīdī spent the latter part of his life in Kumm, where he died in 1072/1661, leaving behind him a considerable literary output. His own philosophy was of a rather eclectic character, owing much to Ibn Sīnā's and Naṣīr al-Dīn Tūsī's thought. His works include the Ma[fātih-yī Ki[tāb-i Idrāk, being1488/1932a hich is an extended commentary on Naṣīr al-Dīn Tūsī's Ta[dīrī al-ṣulūk. He wrote also a commentary on al-Sha[fārī-yī al-tābrīzī, a concise but original commentary on Naṣīr al-Dīn Tūsī's Ta[dīrī al-ṣulūk. He wrote also a commentary on Shībī al-Dīn Yahyā Suhrawārdī's Hayāḥīl al-nūr, along with other theological works. Among these are two Persian books discussing the elements of Sūfī theology: the Gardar-i mutāla, which he dedicated to Rūhānī, and the Shabābūrī, which he composed in 1358/1938 at the request of a friend. Lāhīdī's poetical pen-name was Fāyūdī, under which he composed a divān of no less than 5,000 verses. He is said to have had personal connections with contemporary poets, such as Ḥabīb-i Tabībī and others. His own poetry contains gnostic ideas, though Lāhīdī had no sympathy for the Sūfī shaykhī of his time. Although equally critiqued by some fanatical ījāfī of his epoch, Lāhīdī has been considered as in general more acceptable to orthodox Shīhī than his teacher Mullā Sādrī was. Lāhīdī's sons Mīrāż Ibrāhīmī and Mīrāž Ḥasanī were also theologians of some repute. The latter who died in 1121/1709, left behind not less than twelve books on theological problems.

Bibliography: later authors have sometimes confused Shams al-Dīn Lāhīdī and Abd al-Razzāq Lāhīdī, so that they have called the commentator of the Gulūg-i rāz Abd al-Razzāq (see e.g. E. G. Browne, LHP, iv, 148), or Muhammad Abd al-Razzāq, which is but a forged name (see Corbin, Histoire de la philosophie iranienne, Paris 1964, 36). Concerning the philosophical school of Isfahan, see Corbin, En Iran, Paris-Teheran 1972, 9 ff.; A. Bazarnāz, La Perse religieuse, Milan 1959, 386 ff.; S. H. Nāṣr, in M. Sharī's A History of Muslim Philosophy, 1966, ii, 904 ff. For an analysis of the philosophical teachings of 'Abd al-Razzāq Lāhīdī, see S. Dja†ī's Anthologie des philosophies iraniennes, textes persans et arabes, Introduction analytique par H. Corbin, Tehran-Paris 1972, i, index. For his life and works, see Brockelmann, ii, 55; C. Rich, Cat. of Persian manuscripts, Suppl., 205-6; Browne, LHP, iv, 408-9, 435; Mudariss-i Khayyābī, op. cit., iv, 361-3.

LAHN AL-ÅMMA, "errors of language made by the common people", is an expression which characterizes a brand of lexicography designed to correct deviations by reference to the contemporary linguistic norm, as determined by the purists. The treatises which could be classed under this heading, correspond, broadly speaking, to our "do not say..." the incorrect form generally being introduced by "you say" or "they say..." or "one says..." (labād, yahbād), and the correct form by wa 'l-sālihīnd;... whereas the norm is..."; they are most often entitled Kitāb Lahīn al-Åmma or Kitāb ma tābalghāwhi ûfhū 'l-Åmma, but may also be Kitāb ma tagallāf ûfhū 'l-Åmma, Kitāb ḡalāthū 'l-Åmma, Kitāb Taḥāshī al-adān, etc., although this range of titles does not necessarily imply a significant difference in the manner of presentation of linguistic facts or a particular method of choosing the material to be considered. These works give evidence of the development of current usage and can, to a certain extent, serve as a means of tracing the history of the language, especially from the time that a standardization of the 'arabiyya [see] came into operation through the efforts of the philologists.

Under the heading al-Åmma wa 'l-Åmma, reference has been made to the Åmma of the grammarians, without any attempt to define it and determine its limits. 'Abd al-Aʿzīz al-Ahwālī, who has considered this point (in RIMA, iii, 133 ff.), relies quite rightly on a passage of al-Dāhirī (Bayān, i, 137) who writes: "When you hear me speak of the Åmma, I do not refer to the peasants, the lower orders, the artisans and the tradesmen, nor the Kurds of the mountains or those who dwell on the islands in the sea... the Åmma, who belong to our nation and our religious community and who imbue our language and moral culture with a class endowed with intelligence and qualities superior to those categories cited above, without however attaining the level of our ḥāṣaṣa. It should be noted, in addition, that the ḥāṣaṣa is also divided into hierarchical strata." It will be seen from this passage that al-Dāhirī, without making a decisive contribu-
often substituted, in the titles of treatises, for
shall attempt a fully inventory in due course

a medium social class which, at a tin when literary Arabic and dialectal Arabic, as we
call them, had not been irretrievably divorced,
usages have infiltrated into the works of poets, and
In the course of the last hundred years, more or
less detailed inventories of these works have been
compiled, completed, and corrected by both Eastern
and Western scholars who have taken a particular
interest in this branch of philological study. The
earliest is that of H. Thorbecke who, in his introduction
to the Durrat al-ghawâsîd of al-Harîrî (Leipzig 1821, 7-12) supplied a preliminary list which was
to be enlarged by I. Goldsche (in ZDMG, xxvi [1873], 153-6); a few years later, the latter
devoted an article to the question, Zur Literaturgeschichte des Chaîa al-dmm (in ZDMG, 6 [1853], 447-56). In publishing his dictionary of the
Arabic language, of Berlin (vi, 1840, 319), Abrahâm was to put a considerable store of useful information at the disposal of Arabist scholars. Although two books on the lahn al-dmm were written, lapses
in the disposal of Arabist scholars. Although two books on the lahn al-dmm were written, lapses

The following year, 'Izz al-Dîn al-Ta'amîjî was to put forward, in the introduction to his edition of Tolkien's Dâr edit al-Mu'addîlî (in MAI A, xix, 1935), xvi, 226-28 a brief list, later to be completed by Salîb al-Dîn al-Munajjîdî (in MAI A, xvi, 1944), 287-97.

concerned with the genre being studied here; this work, with its object of establishing the norm, has given rise to a series of commentaries and supplements such as the Fad'il al-Fath of Ghulam Thahab (d. 343/957 [q.v.]), the Tathkif al-Adhram of Ibn Fadlan (d. 395/1004 [q.v.] ed. by A. J. Arberry, London 1951), the Fadhilat al-Fath of al-Sharif al-Dhahab (d. 442/1050), the Sharh al-Fad'il of H. ibn Makki (d. d. 377/987 [q.v. in Suppl.]), the Fadhih al-Fadli Thahab of Abul-lafit al-Baghdadi (d. 629/1231 [q.v.] ed. with the Tarikh al-Fadil of al-Harawi, etc. (see Brockelmann, S. I, 181).

Abu l-Hasayn (d. after 300/913) is likewise credited with a K. al-talham fihi "I-sama" (Ibn al-Nadim, 122; Irshid, vi, 209 = Udab, xvii, 21; Bughya, 382; Haddli Khalla, v, 357; Rizzitano, no. 3). Ibn Durayd (d. 527/1034 [q.v.]) wrote a Tashih al-lsma, composed in imitation of Ibn Kutayba and left incomplete (Irshid, vi, 89 = Udab, viii, 136), but his K. al-Malikin (Brockelmann, I, 172, S. I, 173; Rizzitano, no. 19) is not to be taken into account in this context, since it deals with words of double meaning and not with errors (cf. Krotkoff, I, a. 13).

As Krotkoff (14) quite correctly points out, reference to mistakes is made in a vast number of works, so that it is difficult to select those which belong to the category of I-sama without bearing this specific title or one of the equivalents so far encountered. As far as it is possible to judge, the preceding treatises are concerned essentially with oral usage and its more or less accidental repercussion as they affect the written language, but it is legitimate to include in the present inventory works which draw attention to faults of orthography and errors of transmission or reading which threaten to be repeated on a lasting basis and to damage the integrity of the text. Reference to errors in which the object is undoubtedly to correct what they call the I-sama do not neglect to devote a chapter to Tashih and to Tashih fihi [q.v.], and it will be noted that even Ibn Makki puts the hab al-tashih at the head of his book. It will therefore be appropriate to mention here al-Tabiib al-dhahab al-tashih (ed. A. Talas, Damascus 1968) of Hamza al-Ishafani (d. after 350/963 [q.v.]), which deals largely with erroneous transmitted verses (cf. Brockelmann, I, 145, S. I, 221; Rizzitano, no. 20) and al-Tashhid al-sakik al-ajnali al-ruwat of Abu l-Kasim al-Basri (d. 375/985), which deals with errors and inaccuracies of one stratum of the intellectual Bhsya (see the notes, see Brockelmann, S. I, 176.7). Also belonging to the same category are the K. al-Tashih al-Tashih wa l-Tashih fi al-Darqatin (d. 352/962 [q.v.], mentioned by Krotkoff (14), and the Sharh ma yaala fihi 'l-tashih wa l-tashih fihi [ed. Abul-Aziz Ahmad (Cairo 1905)] of Abul Ahmad al-Asfari (d. 352/962), see al-Akbari, under which there are studies of words whose similar diction leads to errors of reading and pronunciation among the Bhsya as well as among the I-sama. Also deserving mention perhaps is the Istidhr al-ghalfah al-lzubadi (d. 375/985 [q.v.]) which corrects the errors of the K. al-Izayn of al-Khali (ed. Gudin, in Mem. Acc. Lineae, vi (1890), 417-547).

We return to the subject as such with the K. al-Lim al-Istafthaw bi-khazin al-Fadil or K. al-Tawdhib al-Azadi al-lzubadi, which treat al-Azadi of the same Zubaidy; this work has been analysed by G. Krotkoff (op. laud.) before being published successively by R. Abul Al-Tawdhib (Cairo 1931) and Abul-Aziz Malar (Cairo 1966, with the Festschrift Fleischer, Leipzig 1875, 176-66, under the title K. Khdth al-sam 'I-sama), then by Isaa al-Din al-Tanukhi (in MM., 1896, 163-226, under the title Talhimat ulm al-ma'tad fihi [I-sama]); this is a supplement to the Durrat al-zubadi of al-Hariri (see introd. of Tanukhi, 166-72) which al-Suyuti (Bughya, 402; ed. Rizzitano, no. 25) entitles in fact Festschrift Fleischer, Leipzig 1875, 167-66, under the title K. Khdth al-sam 'I-sama), which must be the same work. Besides the commentaries and supplements to which reference has been made above, the treatise of al-Hariri gave rise to several retumations, among which that of Ibn al-Madrid (d. 507/1717), the Radil al-Durrat al-zubadi (Bughya, 376-7) is preserved in the Dir al-Kutub (Madrid, 1898). Al-Djawali (Tanukhi (Tanukhi, ed. O. M. S. M. al-Mayd, 1898), mentions the lah. al-lzada of Abu l-Husayn B. Ahmad al-Halabi (d. 572/1272) also noted by al-Suyuti (Bughya, 406; ed. Rizzitano, no. 13).

Ibn Higham al-Laihimi (d. 572/1272 [q.v. in Supp.]) revises the Lajh al-izhada al-zubadi and the Tashih al-lzada of Ibn Makki in searching out the ancient attestations of terms rejected by these authors and also corrects faults current in Spain in a work in two parts intitled al-Radd al-Durrat al-zubadi fi lala al-izhada al-lzada, which deals with the lala al-lzada of Ibn al-Djawali and the Tashih al-lzada of Ibn Makki (see below); for the first time, we encounter
treatise and the successive summaries which have been made of it, see below and Ibn Hisham in the Suppl.; in addition, al-Suyuti (Bugaysi, 20) cites a Sharh al-Faqih (of Tha‘lab) by the same author, considered to be of high quality.

Ibn Barri (d. 582/1187 [g.e.]) takes issue in his turn, with the juz‘ah, but not without taking precautions. He refers to the editor of the Rihla

... 

Abd al-Wahhab’s... al-Qawma fi-ta‘lab is a revision of the... by H. H. ‘Abd al-Wahhab (d. 1953/153). Cairo, ix, 1953). PIFAO... Hespfris, xii (1931), 1-32). to which one refers is not intangible and that sense, L. may be quite properly be distinguished linguistically for a group of dialects. In the latter into “Outer” and “Central” groups to find much had come to overlay territory formerly occupied by xvi [1978J, 43-63)*

To judge by the way that the language has been degraded, works of lahndá, whether ancient or modern, do not seem to have been fruit, and the efforts of the purists continue to be vain in confrontation with the development of the written and oral usage of so-called “literary” Arabic, which hardly allows interested parties the time to polish oral usage of so-called “literary” Arabic, which
draws attention to deviations from Arabic caused by the Turkish domination.

To the north of Sir., in and above the Salt Range, including Multán and Baháwalpur, also the districts of Dérá Ismâtí Khán and Dérá Ghání Khán. Apparently as the result of earlier Balú migrations from the latter areas, it is also widely spoken in eastern Balúkhtán and upper Sind.

The main group is that which covers the southwestern Pandjáb on either bank of the Indus below the Salt Range, including Multán and Baháwalpur, also the districts of Dérá Ismâtí Khán and Dérá Ghání Khán. Apparently as the result of earlier Balú migrations from the latter areas, it is also widely spoken in eastern Balúkhtán and upper Sind.

In Sind it is called Sirákí (< Sindhi sîr “up-river, north”), and this term has recently come to be generally current in the Pandjáb also, replacing such local terms as “Múlthán”, etc. The absence of corporate enumeration in the censuses and the settlement of large numbers of P.-speaking Muslim refugees from India since 1947 in the area makes the number of Sirákí-speakers impossible to estimate accurately, though a figure of 15-20 million is often suggested. Both the number of speakers and the fact that Sirákí (Sir.) is the only variety of L. to have been seriously cultivated as a vehicle for literature (see § 2. below) go some way to support its claim to be considered a separate language.

Linguistically, Sir. is the variety of L. most distinct from L., but become implosive in Sir., as in Sindhi, and are in phonemic contrast with the corresponding explosives (often as a result of Perso-Arabic loans, which are very extensive). historical aspiration, whether as or in the voiced aspirate series, is retained as such in Sir., where it has been reduced to tonal realisation of the adjacent syllables in P.; and, while L. is collectively distinguished from P. by the retention of ir- as an initial cluster (L. trull, írir- “break”, P. tult, lâhil), Sir. is further distinguished by retention finally also, without anaptyxis, so Sir. puts “son” (< fustān), but northern L. putsr, Pl. putur. Three main dialects of Sir. may be distinguished, although the differences are not particularly marked: these are the northern Thál, the central Multán, and the southwestern Baháwalpur.

To the north of Sir., in and above the Salt Range, a number of related dialects are spoken, which only Ayálákår has been properly described. This group of dialects is distinguished phonetically by the retention of historical aspiration, or its realiza-
tion as a high-falling tone, but normally without the low-rising tone of P., and morphologically by the use of extension in -e to mark the singular oblique of unextended masculine nouns. Immediately to the east of this "northern L." group (of which the Hindko of Peshawar may be regarded as a member having many innovating features) is found Pathnihat, the speech of the Rawalpindi area, which appears to have the intermediate discourse between it and P. Finally, to the south of this, in the Shahpuri area, a complex group, containing features of P., northern L., and Sir. is encountered. This is clearly a linguistic frontier area, and it is unfortunate that Grierson should have chosen it as his standard for the description of L. The number of all speakers of varieties of L. other than Sir. is impossible to estimate accurately, but may amount to about 7 million.

a. Muslim literature. While the L.-speaking region was one of the first in the sub-continent to fall under Muslim political dominance, and the area has long had a large majority of Muslims in its population (now almost total, since 1947), the predominant literary language was naturally always Persian until its replacement by Urdu in the last century. Sir. has, however, also been cultivated for some types of writing, leading to the creation of an important Muslim local literature.

The earliest record of Muslim poetry in the Pandjab is in the shahih and hymns attributed to Farid in the Sikh Adi Granth (1604). While their traditional ascription to Farid al-Din Gandji Shakar (571/1175-1256 [a.v.]) is exceedingly doubtful, their language does suggest that a composite idiom, based on the Sir. of Multan, long important as the seat of influential Sufi dynasties, and the P. of the political capital of Lahore, which was already well established as a local Muslim literary language by the 16th century. This is confirmed by the more reliably transmitted works of such slightly later writers as Mawlawi 'Abd al-Malik 'Abd al-Halim (d. 1095/1684), author of many versified treatises on Islamic law and dogma.

Only in the 18th century, with the collapse of centralised Mughal authority, does a linguistically distinctive tradition of Sir., as opposed to P., Muslim literature begin to form. The language is nearly in all verse, and most of its genres and themes are naturally very similar to the contemporary local literatures being cultivated both in P. and in Sindhi. The largest single category of writing was probably the versified teaching material produced in the form of short treatises on the tenets of Islam, or rhyming Persian-Sir. vocabularies, of little intrinsic literary interest. Adaptations of popular Persian manzils-themes were also made, the best-known of these poems (locally termed ʿagāya) being the Sayyid al-Matūk by Lutf 'All of Bahawalpur (1129/1718 and the Sayyid Zulaykha by 'Abd al-Hakim of Uz (1128/1816). Local legends were also treated in this form, the best early example being from Sind, in the Sassī Pandūān by Nabi Bahgāsh Lāghāri (1254/1838).

The chief glory of the literature is, however, its Sufī lyrical poetry, whether in the form of ḍhikr, cultivated by 'All Haydar of Multan (d. 1201/1785), or the longer ḍhikr, a sung lyric with a refrain repeated after each verse, first brought to perfection by Saṭṭāl Sarmāst (1152-1243/1739-1827) of Khayyārār in Upper Sind, who wrote with equal fluency and immediacy in Sindhi also. The finest example of the Sir. ḍhikr are to be found in the ḍhikr of Khwāja Qulām Farid (1205-1910), the head of an important Sufi dynasty, who lived at Ĉāfrān in Bahawalpur State. With their subtle blend of a sensitive handling of local desert scenery, and the most profound Islamic learning, these poems mark both the end and the culmination of Muslim writing in the local languages of the Indus valley.

mention should be made of the Sirī elegies (marrōyah [ga.]) produced in great numbers from Multan since the mid-19th century. These represent a fascinating interweaving of the Sufī mystic and the secular: they are the most significant material found in the popular Persian sources, and are notable stylistically as being typically written in alternating sections of verse and prose (taṣqīl), thus directly reflecting the usual style of performance of the professional ḍhakārī at the local maṣājid-i mutāmān.

Traditional genres continue to be cultivated, while in recent years a modern prose literature has begun to be created. The problem of a uniform adaptation of the Perso-Urdu maṣādī script (see khatī) in Sir. to record the many additional phonemes of Sir. has yet to be fully resolved. In Sir. there is no longer a centre for the production of original Sir. literature. Older Sir. texts are published in the Sindhi maṣādī script, with its many additional letters.

There is a much smaller Muslim literature in the northern L. Hindko. Writings produced in the areas of Fāshārār and Shahpuri are hardly to be distinguished from the main stream of Muslim Pandjabī literature (p.C.).

LAHORE [see lahawr].

LAHOT and NĀṢŪT (A.), two terms meaning divinity (or deity) and humanity, and forming a pair which plays an important role in the theology of certain Muslim mystics and in the theosophical conceptions of the extremist Înâkî. 
1. Philological considerations. The termina-
tion -nt of these two words may be traced to an
Arabic origin. It is also present in the words
mal'ah (which in the text of Nasib, p. 52), and
jadaburah which appears in the haddith: "Give
to the One to whom belongs Ruling Power
djaburah and Kingship (malakht)." So malakht was
already Arabised in the time of the Prophet. It is a
direct borrowing from Syriac (malakht), or Ethiop-
ic (malakht), where this word means divinity,
the Semitic root מ (God) being lost and replaced by
the composite noun מ malakht is a difficult question
to settle. Muhammad's known relations with
Abyssinians seems to suppose a Coptic influence.
Whatever may be the case, Ibn Manzur, in L.A.,
states, without posing the problem, that "al-malakht
comes from malk (kingdom), just as malkat (terrify-
ing nature) comes from malka (terror)." As for
djaburah, he says that it is the falsaf form of ġabbār.
Consequently, he seems to give these words in -nt a
right to be cited as Arabic. He is more precise
with regard to šabīh: "Šabīhah thinks that šanh
is the original form (aslı) of the name of God (Allah),
and that šanah follows by supposing a Coptic influence.
Congratulations. Whatever may be the case, Ibn Manzur, in L.A.,
states, without posing the problem, that "al-malakht
comes from malk (kingdom), just as malkat (terrify-
ing nature) comes from malka (terror)." As for
djaburah, he says that it is the falsaf form of ġabbār.
Consequently, he seems to give these words in -nt a
right to be cited as Arabic. He is more precise
with regard to šabīh: "šabīhah thinks that šanh
is the original form (aslı) of the name of God (Allah),
and that šanah follows by supposing a Coptic influence.
In any case, a Syriac text of Aphraatus
is the equivalent of šanah. Thus there
may be the equivalent of šanh, although Syriac preserved the
šanah, in the name of God, šanāh - šanāh, and which forms
part of the root (cf. the discussions of the grammarians
on the formation of the name Allah). Finally,
the last group of words, al-šanah designates
the essence or nature of God (ayn).

The origin of nāsūt, by contrast, is not
information available. Al-Tahānawi in his
Dictionary of technical terms has not devoted any article to it. Ibn Manzur does not cite this word under the root
mās or under the root mās from which come mās and its pl. wds, as well as łašḥ. Here, it is well-
certified, according to Abu 'I-Ḫayyam, that the łašḥ is radical (asfīya); this grammarians
are also ingenious in showing how mās ("men") could have come from mās, by adding the article al-
lašḥ > allašūs > assalūs (al-nās), and, after the dropping of the article, mās. This laborious
process shows that if the form mās raises difficulties, a
fortiori the form nāsūt. But Syriac has a word (lašūs)
(?)nogābāt with an accunting stroke (šušābāna) under the łašḥ, indicating that its letter must not be pronounced. There is the form nogābāt without łašḥ, which means "man". This can be compared, in
Sermon xvi of the Liber graduum (P.S., xiii, 379), with a passage in which human nature
(šušamīn) դ-ծառrwāt "from the hypothesis of the son of man.") So the Syriac origin of the word
nāsūt does not seem to be in doubt; it designates
human nature. Doubtless it was also chosen because
of its assonance with šanah.

2. łašḥ and nāsūt in Christian literature.

Al-Bākhīlānī in the Tawāhid (Cairo 1360/1947) speaks of
the Word of the Christians who claim that the union of the
Word with the nāsūt is a mixture and mingling
(šušābānāt nāsūt) like that of water with wine
(thes Jabcīn) or with milk. He states, on the contrary,
that the Christians mean by it the manifestation of
the Word with humanity (nāsūt) which is the body,
which consists in its taking it as a tempele (haykal)
and dwelling place (mahalla) (56). Further on, al-Bākhīlānī
reports that for the Christians, the name Mesīā has two meanings:
lašḥ, God (šanah) and nāsūt, created man (salān mākūhāt) : the prayers of Christ
come from the man, his miracles come from God and not from the Word. He demands the Muslim
theologian, could the same not be said of Moses?
The production of his miracles comes from the
divinity, to the exclusion of his humanity (mīn al-
lašḥ, dīn nāsūt) (54). For his part, al-Dījavānī,
in his Kislāh al-Šāhīnī fi 浪潮l-dīn (ed. al-Nāṣibr, Alexandria 1969, 582), writes with regard to
the Christian doctrines concerning the union (albašt),
that the Christians mean by it the manifestation of
divinity in humanity (nāsūt) (al-bašt). But in both cases, which they conceive of this
manifestation, they are divided into three groups. Some
say that an object placed in front of a polished
body appears there and can be seen without being
transferred there and without dwelling there (wa-lam yušābā);
It is in this sense that divinity appears
in humanity, thus without lašḥ. Others take
the example of the impression of a seal in wax;
it is the seal itself which appears there, although there is no
part of it which comes to dwell there. The last group
say that the manifestation of divinity in Christ
means the same thing as, for Muslims, God's sitting
on the throne, all of them agreeing that contact is
impossible. Furthermore, they express union with
the image of an act of clothing oneself (nāsūt) as
if they believe that it is possible and true that
the divinity had taken the body of Christ as clothing
(dīr). Reference may be made to what H. Corbin
wrote (En Islam tr. en, iii, 285, n. 102), on al-
Nasīrī (d. 1336): So it may be reasonable to
suppose that the terms lašḥ and nāsūt were
borrowed from the Christians who wrote in Arabic
using Syriac sources and originals, particularly
the Nestorians who had had, as we learn from al-Tawhīd,
numerous relations with Muslim thinkers, especially
in Bādhad. It is conceivable that the problem of the
union of the divinity and humanity in Christ
had been able to interest the mystics of Islam,
who were faced with an analogous problem, mālakat
mulūk. On this subject, the idea of assuming a
garment, indwelling and temple are present in the
writings of St. John and St. Paul, and these images
were applied not only to Christ, but also to the
saints in whom: God, Christ and the Spirit are said
to reside. An echo is to be found in Syriac literature.
Thus one can read in the Liber graduant (Sermon iii,
P.S., ii, 74): "And Christ dwells in them" (w-thar
b-hun Maškii); they are "filled with God" (mādīwān
al-ḥadā). One should note the translation of the
passage (transl.: You are the temple of God"
(1 Cor., iii, 16): Haykal a(an) dīn al-ḥadā. The
Arabic language has the word haykal whose
significance, according to the lexicographers, is that of
an adjective which has the meaning of "corpulent",
"large", "long or high". This qualification is applied
to animals and plants, especially the horse when it is
"high on its hooves" (kasīd). A building is called
haykal, when it is raised like a horse on its hooves
(L.A); Ibn Manzur (ibid.) informs us that the haykal

...
"is stated as being, among the Christians, a temple (haykal) in which there is an idol in the likeness of Mary. This idol is called al-ghalid by the Nestorians, but al-halladi by the al-Halladjites. I am as likely to have come from the Christians, as was formerly believed: "for him, as for the Ghulat, nasiit, nis shaghfahin (resplendent light) and am (command) are synonyms, which is in no way Christian". But the argument does not stand up, for the question is that of the origin of the words and not of the origin of their significance; if, even by the confession of Massigmon, al-Halladj modified the significance of expressions which he took from the Imams, why would he not have accommodated to his own thought some terms which he had taken from the Christians? 'Afidi, in his book al-Tasawwuf: al-thauro al-rakityya fi l'Islam (Alexandria 1563, 82-3), followed by Kamil Mustafa al-Shibli in his Sharh Divan al-Halladj, has upheld the thesis of the Christian origin. But which Christians are concerned? If it is the Nestorians, it seems that, even going beyond words, similarities in ideas may be detected, allowing for the fact that in al-Halladz there is no Christian orichollt. In fact, the Halladjian name could be considered the equivalent of the prosopon of union in which the will of God and the will of man are united, which justifies L. Massigmon's important remark (ibid., iii, 52): "The only aspect through which divine action takes part in transforming man is not nasiit, the creative omnipotence ..., but this essential, intelligible word which is at the basis of every command of the Divine ...". Nasiit, like mark, is actually the place where the will of the one who commands and the one who obeys are united. As in Nestorianism, there is never any confusion between the divine essence, nasiit, or as L. Gardet says (Dien et la destine de l'homme, 442), "the sealed world of the divine essence" and the human substance. To mark this irreducible distinction of the two natures, al-Halladz uses the terms nasiitita and nasrossita: "My observation of what is properly Yours differs from Your observation of what is properly mine: in fact, Your observation of what is properly mine is divinity (nasiitita) and my observation of what is properly Yours is humanity (nasrossita), and even while my humanity (nasrossita) is lost in Your divinity (fi Idhulliyatika) without being confused with it, at the same time Your divinity takes possession of my humanity without having any contact with it." (Ahbab al-Halladj, no. 1, Arabic text, 8). He who supposes that nasiitita mingle with humanity (basharyya), or the basharyya mingle with divinity (nasiitita) is an infidel (ibid., no. 25). The synonymous bashanyyam nasiitita and basharyyam nasossita allow us an accurate understanding of the meaning of the two terms constructed from nasiit and nasossit. Let us note that Ibn al-Fardi (Tha'yya, 455) uses nasiit in the sense of nasiitita and nasossit in the sense of nasiitita: "I am not diverted by nasiit from the condition of the place of my appearance, and I do not forget, through nasiit, the place of my wisdom's appearance." If, as for the Nestorians, there is no mugging of the one by the other, but confusing, when al-Halladj uses the image of clothing, it is to say "my temporality is beneath the clothing of Your eternity" (baddad nasiit na'us hitbidi). (Ahbab, no. 1). "O All of my all and The all of Your all is a clothing worn by my inner significance" (Deshun, 7, v. 5): "na khalda makhra bi-ma'mur'i). The act of wearing this All (ma'mur), that Massigmon explains by "the deformity of the sanctified man" (Passion, iii, 350, n. 7), results in the all of the man containing the all of God with which he is clothed: "I contain in my all the All of Your all, O You, my sanctity. You are invited to me to the point where it is as though You were within me" (Deshun, 44, v. 1). Indeed, in the order of the stations of mystical ascension, tabs comes immediately after hasat. Finally, there is also to be found in al-Halladj the image of the haykal which is the corporeal form: "The haykal remains on earth, putrefied" (Deshun, 63, v. 2). So it is not simply a question of the divine dwelling within him; but must also be transfigured. Al-Halladj asked for "the destruction of the Ka'ba,
then its rebuilding with wisdom." The Ka'ba to be destroyed is the "temple of the human body", the haykal "whose transfiguration is to be hastened" (Passion, i, 1885). As for myself, He does not veil Himself from me for a single moment, until my nafsyya is lost in His lbhittyya and my body disappears in the lights of His essence! (Aghbar, 10, cf. Passion, iii, 523). Nafsyya rust then, in so far as it is purely human, be assumed by the nafs, the aspect of God in which union is realised: "Glory be to Him whose nafs manifested the secret of His dazzling lbhat, in the form of a man who eats and drinks" (Divina, 9, v. 2).

The origin of the idea of nafs conceived by al-Hallāj must be looked for in the word that, in eternity before all creation, God addresses man, the Word which is contained in the uncreated Kur'an. To this idea of a pre-eternal conversation between God and man is linked all the Hallājīan dialectic of Ma', You and Him, which underlies the relations between lbhat and nafs, lbhittyya and nafsyya as in the following example, "The Yourself which is a His has borne witness to Ma'" (nafsyya qab il-habāfi 'I-huwa') i.e. that the dialogue between the divine You and the human me, on the level of the nafs, manifests the essence of God (lbhat) in its identity (an-nafsyya).

The light pair lbhitt-ndsut in the thought of Ibn 'Arabī. For Ibn 'Arabī, the lbhitt is the divine aspect in the prophet and saint, as supposed to the nafs which is the human aspect. In a poem concerning knowledge of Jesus (Futūbat, ed. 'Uthman Yabya, iii, 41, 89-90). one can read: "This lbhat, which was in the world of the Invisible, was his union (with God: yāhir), was a spirit in whose image (rab mūmalhthal) God made the secret appear."

The term yāhir (relationship through wounds) is given in the article. According to 'Uthman Yabya, iv, 41, 68-9), one can read: "His lbhitt, which was in the world of the Invisible, was his union (with God: yāhir), was a spirit in whose image (rab mūmalhthal) God made the secret appear."

The lbhitt is the radiant aspect of the theophanic conception of the Imam. It is the divine image of clothing (cf. H. Corbin, "Lbahāt and Nabsūt — Lbahāt") thought. According to the Imamī conception, different planes of the universe exist (cf. H. Corbin, En Islam iranien, i, 35): lbhitt, giobarī mašallī, nabsūt, [see TAHKI]. Lbahāt is the world of secrets (fīlam al-māšru) and the Ushūd is the realm of the otherworldly relations between lbhitt and nabsūt expresses the different aspects of the theophanic conception of the Imam. Al-Tahānawi, who discusses lbhitt in his article giobarī, refers essentially to Persian texts. It is thus finally in Iranian thought that the two terms lbhitt and nabsūt received the widest reception, following what al-Hallāj and Ibn 'Arabī had written on this subject. It comparisons can be made with the Christological doctrines of Christianity, particularly with regard to the image of clothing (cf. H. Corbin, op. cit., iii, 174-5), it must be stated that these two terms were henceforth perfectly integrated in Shī'ī theosophy.

We shall mention in conclusion a curious etymology given by al-Tahānawi; lbhitt originally derives from the formula: lb hawad iddā haw. It is the custom of the Arabs when they use a complex formula in speaking to add something to it (ūzd riyāda hamad, i.e. the final letter tā', and to cut something off it (hadiyum amand: here iddā haw). The result is that lbhitt is the radiance of the essence (la'dafli 'lddā).

Bibliography: given in the article.

(R. ARNADDEZ)
and used non-traditional metres, which were apparently inspired by Russian literary models. He also composed songs, and wrote the libretto of Kawa-ahanger ("Kawa the Blacksmith"), which was the first original opera to be performed in Tajikistan. His literary endeavours extended to the field of translations, which he rendered from the works of such writers as Shakespeare, Pushkin, Goethe, and Hugo. His diction was simple and uncomplicated, and he used a language which almost verged on ordinary speech.

LA'IB (La'b), the Arabic word for "play" (also used variously in Persian, against Turkish oyun), in the Muslim world as fundamental a concept of vast sociological and psychological implications as in other civilizations. Only a few of its aspects can be briefly discussed here. The "play" culture of many important human activities (dance, theatre, music, etc.) does not come under our purview, nor do ritual games as survivals of pre-Islamic religiously-motivated customs. We find them occasionally mentioned, as, for instance, in references to New Year practices, cf. al-Birunl, 'Ajār, 66; Sachau, 276, who also mentions the enactment of a Persian religious ceremonial played on seesaws; for a modern example from southern Morocco, see M.-R. Khabat, in Chanaug, L'histoire des francophones 14, 1930, 298. The presence here is on children's games, but it is in Islam as elsewhere, no clear dividing line separates the games of children from those of adults; there is no typological distinction, the only difference sometimes encountered being certain material factors. Al-Dhahabi, Rayhulain, Cairo 1323-5, iii, 79, may have been aware of this circumstance when he singled out playing with pigeons as best representing the easy potential transition in games from playfulness to seriousness. The beginning of the love for playing in Islam was cultivated in the Muslim world. The constant use in literature of metaphors built upon combinations with the root "to play" attest to the concept's living strength.

The large role of "play" in Muslim life is all the more remarkable as it ran counter to firm religious objections. These objections have indeed greatly coloured the expressed Muslim attitude toward play. They were no doubt effective in curtailting the factual information on games available to us. The Qur'an refers to play (and lahke "amusement") as a particularly malicious expression of human unconcern with man's true task in this world, which is working toward salvation in the other world. Much ingenuity was spent by Muslim intellectuals on condemning it, as attested in innumerable statements such as, for instance, many verses in the subhiyyat of Abu l-Abbiyya or 'Ali's indignant rejection of being called a hasib or làmra (al-Baladhuri, Ansab ii, ed. M.D. al-Mahmool, Beirut 1390/1974, 741). Not dissimilar to the thought expressed by Anacharsis (Aristotle, Nicomachean Ethics, 1176 b 33), that playing should be tolerated only when it enhances a man's ability for serious occupations, is the idea that all work and no play dulls the sensitivity of even the greatest and most dedicated minds, and light relaxation, therefore, is to be tolerated (e.g. P. Rosenthal, Humor in early Islam, Leiden 1956, 5, and see al-quin wa l-ka'az, but the authors who quote statements to this effect would hardly have found so far as to include simple games in what was meant by relaxation. Worldly wisdom required that rulers be warned against excess in playful activity. As a matter of fact, "play" in Islam came to be considered the exclusive prerogative of children, bracketed at times with women also in this respect. In the Greek tradition as represented by Bryson (ed. M. Flessner, Heidelberg 1928, 201; cf. also al-Qushu, 'abba, riyyd-d al-nafa, Cairo 1352/1934, ii, 63) and used by such influential thinkers as Maqdisi, Ibn Khurdad. Education should be permitted moderate playing as relaxation only to be better able to tolerate the hardships of education, or (according to al-Su'udi wa 'isibd, ed. M. Ninovi, Wiesbaden 1925-5, 360) to acquire serious skills. Sometimes, we find statements to the effect that future greatness is foreshadowed in childhood by a disdain shown for playing. References to children are often routinely associated with play. It was quite natural to have the youth killed in the story in Kur'an, XVIII, 74/75, described as having been found playing with a false (al-Bukhart, Fath al-basti, Cairo 1302/1925, ii, 233) and described as having been mentioned in ancient poetry (Amr b. Kul&Qin, Aula, as having played with two small wooden boards, one twice as long as the other and the one being hit with the other (or with a mikhel), this being in an anecdote intended to show al-'AbbAs's innate decency (Ibn Zafar, 'Abba, d. 54).

The most influential reference to child's play goes back to the biography of 'Abiba, reported in

LAHUTI — LA'IB
many traditions with only slight variations (for instance, Concordance, iv, 198-200; Ibn Sa'd, 40-5; al-Balādhuri, Anṣāb, i, ed. M. Hamidullāh, Cairo 1937, i, 245-6). It happened when the Prophet sūrah playing on a seesaw (urdūq, marḍūq) that she first caught his attention, and he once, or on different occasions, came upon her playing with dolls. "Dolls" (bandāt "girls"); or lūḥa, pl. lūḥāt, the typical "playing") came thus to be discussed intensively in the legal literature. The gist of the Sunnī jurists' discussion and the problems of detail they chose to face can best be captured from Ibn Ḥādīṣ, Fādīb, xxiii, 143 ff. In sum, dolls were usually given very reluctant approval as having educational value for training little girls to become good mothers. The obvious conflict between the prohibition of figurative representations [see El art. 58A] and the permissibility of dolls, although often they were not realistic representations of living beings, proved impossible to solve to everybody's satisfaction. The connection with idol worship was only hesitantly mentioned. The hadīth also informs us that dolls were made of wool ("mot, Concordance, iv, 409a, 16 f.) to save the child who has no time to fast. In order to divert them (as other toys, such as polo sticks, might be promised to children as incentives for studying, see Ibn Ṭabībun, jāhīd al-muṣāfūn, ms. Bodl. or Hunt. 518, 70b). Some of ʿAšṣa's toys had, or were seen by the child's imagination to have, the shape of (winged) horses, with the wings made of rags. In this connection, al-Ghazzālī, Ḥayy[42], ḏāḏ al-zain[43], ii, 245 speaks of the "imperfect forms" (of toys) fashioned by children from clay and rags as something tolerated by Shāhīzād, as he also mentions elsewhere (Ḥayy[44], ḏāḏ al-ka'am, ii, 60) animal toys made of clay given to children on festivals.

Numerous names of games were mentioned as being of philological interest and listed because of their special form or because of literary connections (e.g. al-ʿAskārī, al-Tālqīfi maʿrīẕ asmaʿ al-qalāy̱īn, Damasuscus 1369-90, 918-24, see F. Rosenthal, Gambling in Islam, Lekten 1975, 65). We also find references to such things as ḏaʿīn, ḏukal, ḏaʿīn[45] (a running, and ? catching, game, al-Kall, Amāli, Cairo 1373, i, 315; Līṣīn al-ʿArab, iii, 97), or the putting of ḏi̲j̱ībīn into ṭākīb (al-ʿArab, ii, 41 f.) Games are given at times names in the form of noun combinations or sentences, such as al-muṣālim wa-l-waṭṭir māsīr "master and hired hand." (T. Hyde, De Indis orientibus, ii, Oxford 1864, 234-6; ḏi̲ṭ̱ūrub al-Muḥāsibī "I have come to you, seize me" (Hyde, ii, 240 f.), ḏaʿīn wa-ṣ̱aḥīb for even-and-odd. (Turkish) bālala "catch Laylā" (H. Ritter, Knabenblogs aus Astrakhan, in Jel. xvi [1942], 46-57), etc. Characteristically, the names of games change greatly in the course of time so that those found in Hyde from the 17th century and even more so those from modern times (e.g. K. L. Tallekvist, Arabische Sprichwörter und Spiele, Helsingfors 1897, or Ritter) are nearly all different from those known from the mediaeval literature, quite apart from local differences.

The philologists no doubt had often no personal experience of the games they sought to describe. Descriptions are often non-existent, or they are so brief as to indicate hardly more than the general type of a given game and to be practically useless; this is nothing peculiar to Muslim philologists but something worldwide, since the play instinct required to be satisfied by intricate and volatile rules hard to describe fully. Ambiguities of interpretation are always present. Similarities between modern and mediaeval names, in the rare cases in which they exist, do not necessarily indicate that the games are the same. Thus, the ḏaʿīn al-dūḥāmaya mentioned by Ibn Kūsain (E. García Gómez, Todas Ben Qusma, Madrid 1972, i, 349, 35-6) is hardly the dūḥāmaya described by A. Robert from Algeria, in Revue Africaine, xxii (1942), 59. The ring (ḥātim) game of predistributaries is no doubt the guessing game described by Robert, but hardly represents all the games thus designated (cf. Rosenthal, Gambling, 62; al-Simāwī, ʿuyūn al-ṣāḥiba, ch. 11). The modern game called ʿiblī may be related to ancient ʿulūs as suggested by Ritter, but we have no way of knowing how far this relationship, if it in fact exists, extends to details.

Of the more important types of games, we may mention here (1) guessing games such as ʿāḥāri; (2) board games of the chess [see shatranj] and backgammon [see haneb] types and of the manakha type which were, but not always, played on boards, involving the placing of chips into holes, as, for instance, the game of "fourteen" (ʿaḥāra laqāna), the throwing of dice and, of greater antiquity, a kind of knuckle bones (ṣāḥīb, pl. ṣāḥīḥīn), also in a way the walnut (ḏaʿīn ḏaʿīn[46]), etc. (3) skill and sports games, such as ball playing, the great favourite of children, often mentioned as done in the streets, also played with balls and (polo) sticks, see al-Ghazzālī, Ḥayy[47], ḏād ṣ̱al-nafs, iii, 53, further jumping games, catching games, the seesaw, imitation fighting games, the egg game, also tos (ḏuwuʿa, ḏaʿārīf); dancing with a hobby-horse (ḥarradī) was apparently not practiced as a children's game, cf. M. Gaudufray's Demônymes, in Mé. Wm. Marquis, Paris 1950, 155-60; and (4) "playing" with animals such as small birds, pigeons, dogs (add al-Dżāhī, ʿayṣīvān, ii, 28, to Rosenthal, Gambling, 58 n 2420), or reptiles, either as an innocent pastime or as a gambling, racing, and fighting sport.

Most children's games contain an element of gambling, inasmuch as they entail rewards for the winners and penalties for the losers [see gīmār]. This added to the scruples raised by the play concept in general and the ʿulūs problem of dolls, and cast doubt in the eyes of jurists upon the legality of commercial transactions involving toys. In conjunction with prevailing economic conditions, it probably contributed to keeping toys used by children mostly simple and makeshift.

LAK 1. The most southern group of Kurd tribes in Persia. According to Zayn al-ʿĀhbatī, their name (Lak, often Lāk) is explained by the Persian word lak (100,000), which is said to have been the original number of families of Lak. The group is of importance in that the Zand dynasty arose from it. The Lak now living in northern Luristan [p. 49] are sometimes confused with the Lur (Zayn al-ʿĀhbatī), whose they resemble in the somatic and ethnic point of view. The facts of history, however, show that the Lak have immigrated to their present settlements from lands further north. The Lākā language, according to O. Mann, has the characteristics of Kurdish and not of the Luri dialects [cf. lūr]. Cirkov, Futeoci sharud, St. Petersburg 1875, 227, says that "the Lur and the Lak speak different dialects, and hate one another."

The Lak appear in the Snau-nams, i, 323, along-
side the Zand, among the secondary Raud tribes, and as subjects of Persia. According to Rabino, the Lak were settled in Luristan by order of Shih-Abbas. According to O. Mann, they were settled in this way to create some support for the new vassals of Luristan, Hassan Khan, whom he had chosen from among the relatives of the old Shih-Abbas Attabeg (Tabriz-i Shami-rid, 369). Of these tribes, the SiSla had formerly lived at Muhdasht (to the south-west of Kirmanshah); the Dillan take their name from Abul Dulaf [see at Jasin n. 46], whose feuds in the 13th/14th century led in the north of Luristan [see LAK], or the Bajdan of Zebah as well as Luristan say they come from al-Mawil and are evidently one tribe. The Luristan branch seem to have exchanged its Kurmanji dialect for Laki during its sojourn among the Lak in the time of Shih-Abbas. After Shih-Abbas there were several Lak tribes outside of Luristan. Zayn al-Abidin (opening of the 15th century) mentions among the Lak: the Zand, the Mafi, the Bajdan and the Zand-i-yi kala (7). To the last tribe according to Heottum-Schindler: Bogezand, Hakand and Karimpin from Zand (born in Pariya, the modern Part, about 20 miles from Dastam at the south-east of Kirmanshah). When at Shiraz, Karim Khan sent for the Lak tribe of Barayand. In 1323/1707 the Bayrivanband and the Bajdan actively supported Muhammad Khan Zand in his attempt to seize power from the Moghars (Sir Harford Jones Brydges, A history of Persia, London 1835, 46, 58; R. G. Watson, A history of Persia, London 1866, 116). Under the Kadjars, several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were to be found among the Bajdan of Khaisdu (Kherbi described by Siyeh-nay-yi budid, Russ. tr. 112, 221); there are still a few Zand families in the Doci-Faraman district to the south-east of Kirmanshah (RM, xxviii, 39); a section of the 'Amanla of Paqtal-Kain claims to be descended from the Karim Khan tribe. At the present day, there are Mafi at Waramin, Tehran and Kazvin.

According to a good list compiled by Roussseau at Kirmanshah in 1807 (cf. Fremidency des Orient, Vienna 1813, ill. 85-98), there were considered as the Lak the following tribes: Kalinf, Mafi, Nakanif, Djallia, Parywanand, KaliATH, Safwan, Bahravanand, Karki, Tawall, Zoburanand, Kawkunand, Namiwan, Amiwanand, Bohrani, Zalaya, Harshid and Shajwand. According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: SiSla (9,000 families), Dillan (7,470), TXhian-Amra' (1,582 families), the Bayranband (6,000 families) and Dallwand (1,000 families) forming part of the Bak-Sirvan group, a total of about 15,000 tents. The Bayranband and Dillan live to the east of Khurramabd around the sources of the river which flows through this town; the SiSla and the Dillan occupy the beautiful plains of Alqhatar and Khawa respectively, while the TXhian (perhaps equal to Tabrjan, i.e. "exemption from taxes") live between the left-bank of the Sayyuna and the lower course of its left-bank tributary from Khurramabd. The territory occupied by the Lak, and including northern and north-western Luristan is sometimes called Laki.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the SiSla, Dillan and TXhian were united under the authority of Nazer-i TXhian Khan of the Amri clan. In addition to the bonds of tribe and language, there is that of religion, for all the Dillan and many of the Amra of Tiiran belong to the extremist Shi'ite sect of the Ahi-i Talib [9].

The name given to themselves by the Ghasi-Kumulak, a people living on the eastern Koy-su in central Daghestan (see the next article and varuos), also Eckert, Der Kaukasus und seine Völker, Leipzig 1887, 248-57, and Dirr, Die heutigen Namens der kaukassischen Völker, in Petermanns Mitteil. (1908), 204-12.

On the other hand, the term Lak in Armenian and Lek'i (plural Lek'-eb) in Georgian means the Lezhgi/Legzi of Daghestan, where the e may certainly designate the value of ala: Legzi. This last name seems to have been applied to the highlanders of Kura, living around and among the sources of the Samur, and later to have been extended to all the people of Daghestan, although no people of the Caucasus actually call themselves Lezhgi/Legzi. Marquart, Beiträge zur Geschichts- and Sage von Eran, in ZDMG, xi6 (1865), has attempted to explain the Arabic al-Lake by the addition of the Persian suffix -an to the name Lak or (or Lek), cf. Sag-i, "inhabitant of Sistan". (V. Minorsky)

LAK (self-designation: Lak, Lakuin; Russian variants: Lek'ts, Kazikumukh (ts)); Avaz, Tuma, pl. Tumal; Lezgi: Yakhshulju, Dargin; Valuguni, Vuleunai; other: Kazikumukh [from Arabic Ghazi, warrior for the faith, and Kumukh, the political and cultural centre of the Lak territory, see varuos], a Muslim people of the Caucasus.

The Lak language belongs with Dargiu, Kaytak and Kubachi [920] to the Dargizko-Lak (Lak-Dargwa) group of the Northeast-Caucasian language family. There are five dialects of the Lak language, Aushi Kul, Bakhar, Vitski, Vlkh and Kumukh. The Kumukh dialect forms the base of the Lak literary language, as Kumukh was, and is, the cultural and economic centre of the Lak territory. Lak was originally (since the late 19th century) written in the Arabic script; this was changed to the Latin script in 1926, since 1938 it has been written in the Cyrillic. Prior to the establishment of Lak as a written language, Arabic served as the literary language of the Lak people. Lak is at present one of the nine official literary languages of the Daghestan ASSR, although it is no longer used as a medium of instruction in the schools (Lak served as a medium of education among the Lak until the fifth year, between the late 1920s and the late 1960s; virtually all education since then has been conducted only in Russian).

The Lak are inhabitants of the mountainous central region of the Daghestan ASSR. They live primarily in the basins of the upper Kazikumukh, Tleseraghi, and Kharar Koy-su rivers located in Lak and Kull districts, and in separate settlements in the districts of Tсудайкар, Akugha, Rutul, Kurakhi, Caroch, and Dakhadzau. In 1844 many Lak were resettled in the steppe and foothills north of the Andi Ridge in what is now "Novo Lakolki" ("New Lak") district of the Daghestan ASSR. According
played only a minor role in the Lak economy, and
tainous regions of the Lak territory, agriculture
nomies. Due to the lack of fertile land in the moun¬
activities still play a large role in the village eco¬
weaving, gold and metal smithing, etc.). These

With the death of the last Kazikumukh khan,

Legend has it that the Shah-Baala was the first

Muslim ruler of all DaghstAn and founder of the

Shamghal dynasty, which reigned at Kumiught until

the 17th century. At this time Kumught, which had

been established by AbA Muslim as the seat of the

ruler of DaghstAn, was renamed Kazikumukt.

In the 14th century, the rulers of Kazikumukt adopted the title "Shamghel" (supposed etymology from Shim - Shem, suggesting descent from the former Arab governors). During the 14th and 15th centuries, at the time when the Shamghals ruled a large part of central and coastal DaghstAn, a second capital, which also served as a winter residence, was established at Tarku in the Kumukt territory. In 1640 the Laks broke away from the rule of the Shamghals, replacing it with appointed Makhshuf (from Arabic Khale 'people', and Lak iarai 'su¬preme'). Although appointed administrators, their chief function was that of military leaders, and as such they received land and tribute as payment.

The first written documents of the Lak people appear in the 15th century. A rich religious and didactic literature appears in the 16th and 17th centuries (Umar of Balkar, Ghazi Sadi\'i Husayn, Hajiq\'i Mushi Haij\'i, etc.), lyrical literature in the late 19th century (Yusuf \'Ali Murghunkin), as well as dramatic and didactic literature (Ndspi, Nitsorkinskii).

Ifcabit. etc. (see further, expressing 'aid a'dd'ihim), given to sons which would augur well against their future for the recipient or else at averting harm. It is not difficult to discern why such titles became eagerly sought after; the desire to stand out in the Islamic world—more particularly, in those parts of lying between Egypt and India, though these honorifics were also to a more limited extent in Muslim Spain and North Africa, see below, 3—right up to the 19th and early 20th centuries, when floridity and hyperbole went out of Islamic literature just as they did from literature and other aspects of culture.

It is not difficult to discern why such titles became eagerly sought after; the desire to stand out among the rest of mankind is a universal one. Indeed, al-Kalâmah, in his Šubh ai-a'šâgh, v. 448, following the line of traditional Islamic wasf literature writers, traces what he calls the al-šâb al-madâr wa-l-iṣm al-ašrâf in the name of Kubra al-šâb (q.v.) (Ταξîr ṣa'dat) and must have been white and fragrant, whereas Ṣâbîr was a black eunuch, proverbially noisome and malodorous (see Miskei. i. In the Central Islamic lands). In these connections, there is an interesting passage in Ibn Durayd's K. al-Tâhîb, ed. Wustenfeld, 4:5, in which he quotes al-šîb as having once been asked, "How is it that the Arabs give their names which are considered unpleasant (mustaqâ'ban), yet give their slaves names considered pleasant?" Al-šîb replied that the Arabs gave their sons names with their enemies in mind, whereas they gave their slaves any names they wanted (i.e. without any ulterior motive). Ibn Durayd then goes on to give examples of names given to sons which would anger well against their enemies (kaftârîn 'alâ 'alâkîhîm), expressing violence, harshness, bellicosity and endurance, e.g. Gâllîb, Zâlim, Mâbkîl, Tâbîb, etc. (see further, M. P. Kister, Call yourself by graceful names..., in Lectures in memory of Professor Martin B. Proustier, Jerusalem 1976). We are here perhaps straying into the realm of the ism proper rather than the lakab, although the names given to slaves and slavegirls may be considered as al-šâb replacing those persons' first given names.

The fondness of the Arabs, and of Kusayr in particular, for giving satirical and opprobrious nicknames is condemned in Kur'an, XLIX, 11, where there is a warning against the practice of groups of both men and women mocking at each other, "Do not scoff at each other or give each other derogatory nicknames (wa-lâ talûn wa-lâ tanzûh bi 'l-šâb)". This inner is accounted late Medinan, from a year or two before Muhammad's death, by Nüdeke (Gescl. des Qoru'd, i, 221) and Montgomery Watt (Companion to the Qur'an, London 1882, 237); it may be that the Prophet was feeling particularly aggrieved by nicknames given to him in the past by his opponents and by the Hypocrites, like that of al-Abtar "the childless one", even though the lakab al-šuqul was, according to the commentators, the women's insults to Muhammad's wife Ṣâfîyya bint Ḥuyayy because of her origin from the Jewish tribe in Medina of al-Nâfî (see Salk-Wheery, A compendious commentary on the Qur'an, London 1896, iv, 70-1). Yet whilst retaining for some time to come its derogatory and insulting aspects, the lakab tended to be transmogrified into higher roles within Islamic society. In one direction, it evolved into the non-de-plume of authors and artists, the many of ta'abbata, and for a useful list of such persons of little importance might be given of Lakab al-mašrîf to the al-šâb of prominent literary and political figures, quotes this verse in reference to the philologist al-Mubâraq (g.v.), and makes the curious observation that the people of Baghdâd and Nishâpur were celebrated for their facility in coining appropriate nicknames; he gives numerous examples from each town, some quite grotesque, but unfortunately omitting to explain—i.e. he ever knew—the origins of the names (ed. i. Abyâbi and H. K. al-Sayyaf, Cairo 1960, 49, 534, ed. C. E. Bosworth, The book of curious and entertaining information, Edinburgh 1965, 63, 66-7).

Some nicknames were clearly given as nomina hon augurii, aimed either at attracting a favourable future for the recipient or else at averting harm. Thus arose the practice of giving antiphrastic and apparently unpleasant names and nicknames in order to avoid attracting the evil eye (see Gân) which might otherwise fix itself on something wholesome and perfect; whilst slaves and other persons of little importance might be given euphuistic and euphemistic names, such as those of flowers, jewels, perfumes, etc. This the caliph al-Mu'tahâkî called one of his slave concubines, the mother of al-Mu'taţâz, Ṣâbi'a the "hideous one" because she was famed for her beauty. Euphuism is seen in such names as Yaḥût (lit. "jacinth, ruby") and Ḫijâr (< Arabic Ḫârîr "flower", the slave mother of the caliph al-Muktafl), and a good example of antiphrasis in the name of Kâfûr al-šâb (q.v.) (kâfûr for emphatic, whereas Ṣâbi'a was a black eunuch, proverbially noisome and malodorous (see Miskei. i. In the Central Islamic lands).
the earlier Near Eastern civilisations, the Roman-Byzantine and the Persian ones, to provide an element of continuity with the past.

The early Arabs knew from their contacts with the Byzantines on the Syro-Palestinian borders that a complicated system of honorific titles and modes of address existed for Byzantine civil and military dignitaries. All the Greeks, such as chiefs of the Chassanids [see CHASAN] like al-Harith b. Qubala and his son al-Mundhir, were honoured by having the honorary title of patricius bestowed on them; this term found its way into general Arabic usage as hikma [see ACHEMENID, PERSIA, the characteristic expression of pomp and magnificence [μεγαλοτερα] through grandiloquent titles was familiar to Herodotus (i, 139), who further mentions (vii, 85) that meritorious servants of the state were enrolled in the list of “the king’s benefactors” (βορροογγηγη). Under the Sasanids, the great men of state were likewise honoured by the award of a wide range of honorifics, e.g. the title bursar prinnitar “chief executive” for the emperor’s chief minister and messenger; ḥākim “the greatest [for the ruler’s servants?” Hazāmland “with the strength of 1,000 men” for military commanders; and various compounds including the sovereign’s name, e.g. Zhayyedhān Khusraw “eternal Kh.”, Hormuzd Varāz “wild boar of H.”, and many with takin “strong” like Tahm Sfcpflr or Tallin Yazdigird.

These honours were usually completed by the grant of robes of honour, the later Islamic hikma [see as-bursh-printr] or Tallin Yazdigird.

It is notable that the ‘Abbāsid honorifics up to the 4th/10th century and the period of Bayçid control in Baghdad are formed essentially with participles or adjectives of a passive or reflexive character, thereby emphasising the supremacy of God’s controlling power and the vital securing of His favour for the business of ruling in conformity with the Sharia, the ideal, if not always the practice, of the ‘Abbāsids. A. Abel has noted that the ‘Abbāsids’ great rivals in North Africa and Egypt, the Fatimids, had, in order to press their superior claim, as they saw it, to the caliphate and imamate, to adopt a more aggressive and active form of titulature (Le bkalife, présence sacrée, in Stud. Isl., vii [1952], 36 ff.). This new type of titulature reflected the role assigned in Ismā‘īlī cosmogony to the Iʿlāms in the literarily of intelligences emanating from the godhead, and it actively associated the holders of these titles with God’s controlling power in the world. Thus we have al-Kāfīn bi-‘amr Allāh “he who takes charge of the execution of God’s command” for the Mahdi ‘Ubayd Allāh’s successor Abu ʿī-Kāsim Muhammad; and from the time of al-Muʿāz’s accession onwards (341/953), the honorifics of the Fatimids are all active participles or adjectives emphasizing the ruler’s decisive part in the implementation of God’s will in this world, e.g. al-Ḥākim, al-Amir, al-Zāhir, etc., usually with a complement like... il-din Allāh or... bi-amr Allāh. Not surprisingly, the ‘Abbāsids strove from the latter years of the 4th/10th century onwards to emulate these activist forms of titulature, in order to emphasise their own position as upholders of the Sunna; whence titles like al-Kāfīn bi-‘amr Allāh appear in the middle years of the 5th/11th century and ones like al-Nāṣir il-din Allāh and al-Zāhir bi-‘amr Allāh in the early 7th/13th one. In all these cases, the lakab might be adopted as a new regnal title on the death of the holder, but increasingly, the title ‘l-Sāḥib or heir to the throne was given to a lakab as soon as he was invested formally as heir to the reigning monarch, with his own hikma and/or honorifics thereafter appearing on the coinage side-by-side with those of the actual caliph. This lakab usually remained with the heir once he acceded to the caliphate proper; but occasionally, the lakab adopted by such an heir-apparent was exchanged...
for a different, often more grandiloquent one on his obtaining the throne. Thus al-Mutawakkil's original *labab*, during the period when he was his brother's heir, was al-Muntasir, but this was changed on the second day of his succession to the caliphate (232/847) by the chief *sādi* Abu Dul'ad to al-Mutawakkil (al-Mas'udi, *Murūj al-Dāliba*, vi, 86) — ed. Pellat, § 2849; cf. Yemen, *op. cit.*, 326, 486).

If the caliphs could assume splendid and sonorous honorifics themselves, it lay also within their power to confer titles on their servants and supporters, and to their military commanders. The process dates from the early 3rd/9th century, and at least until the following century it was practised comparatively sparingly by the *Abbāsids*. The Persian secretary al-Fadl b. Sahl (†.), former protegé of the Barmakids and eventually visier to the caliph al-Ma'mūn, exercised the functions both of crown prince and prime minister, and by 234/847-8, he is found with the honorific *Dhu 'l-Riyāḍatayn* "possessor of the two executive functions", i.e. of civil administration and military leadership. Around the same time, the Persian general Tahir b. al-Husayn (†.), founder of the line of Tahirids, was entitled *Dhu 'l-Yaminayn* "possessor of two right hands, the ambidextrous". The phrase is quoted with various explanations: it is interpreted as "liberally, open-handed", e.g. by the great poetess al-Khānāz (†.) when elegising her brother Sahlī; al-Fadl b. Sahl's cousin All b. Abī Sa'dī received that of *Dhu 'l-Kalāmāyin* "possessor of the two pens" (either alluding to the two principal government departments of finance and the army, or else to "the two modes of writing", i.e. Arabic and Persian); whilst later in the century, in 269/885, the visier Sa'd b. Muhallad was granted by al-Mu'wafakah the title *Dhu 'l-Wāridatayn* "possessor of the two visières" (referring either to the two spheres of power, civil and military, or recognising Sa'dī's role as servitor both of al-Mu'wafakah and the titular caliph al-Mu'tamid) (see D. Soudel, *Le titres* *Abbāsid*, i, 201-3, 519-20, ii, 628, 651).

This type of *labab* containing a dual expression was, however, one known before this time, as is attested by the name of Dhu 'l-Nayyār for the caliph Ulūmah and Dhu 'l-Šāhidsītayn, applied to some of the caliphs, e.g. al-Khūzayma b. Ḥādīt al-Anṣārī because the Prophet had promised him double the normal martyr's reward, see Ibn Ḥudayr, *Ihikat al-lajdratayn* "confidant of the two courts", ed. M. Rosen-Ayona, Jerusalem 1977, 61-8. The type was, indeed, to enjoy a long life during the following centuries, especially under the *Abbāsids*, and to their military commanders. It seems that a particular formula like those just mentioned remained with an official or governor throughout his career, unless he was awarded a fresh invocation of higher prestige. Such *ʿadāya* (sing. *ʿadā*?) may accordingly be approximated to *Allah* as expressions of particular honour awarded by the ruler to a faithful servant, and in the manuals of secretaryship from the *Athārīt* and *Mamlak* periods (see below, section IV), the two types of honorific are often treated together.

Characteristic of the 4th/10th century was the appearance and then the growing popularity of compound honorifics including as their second elements the terms *du* "faith" and *yakta* or *yakh* "secular power", or less commonly, compounded with *nuʿma* "religious community" and nuʿma "religion". These titles have been studied in detail by M. van Berchem, *Eine arabische Inschrift aus dem Oxforderlande mit historischen Erklärungen*, in *ZDPV*, xvi (1893), 84-105; Caetani and Gabrieli, *op. cit.*, i, 199 ff. J. H. Kramers, *Les noms nuʿmulmans compoués* *Dhu*, in *JO*, v (1927), 53-67, and A. Dietrich, *Zu den mit adīn zusammengesetzten islamischen Persönennamen*, in *ZDMG*, cx (1960), 43-54. The last three of these compounded lists of these types of *labab*, for they were to enjoy a popularity which ran for almost a millennium, and Dietrich puts the total of *du* titles enumerated by Kramers and himself at 185. The *du* titles were the earliest to appear, but in the first place, were titles of great honour granted only exceptionally by the caliphs. Thus when al-Muktāṣir honoured his vizier al-ʿRūmī b. *ʿAbayd Allāh* the *Būna Wādḥ* (vizier 285-91/992-4) by giving to him one of his daughters in marriage, he also added to him the title *Wālī al-Dawla* "ruler of the state" as a special mark of intimacy (Soudel, *Visirat*, i, 356). In 330/941-2 the ʿHamīdī of Mawsī Abū Muhammad al-Ḥasan received from al-Muqtāṣir, whilst his brother Abu ʿAll the *Huṣn al-Muṣalab* "All of Aleppo" obtained that of Sayf al-Dawla. Shortly afterwards, in 334/945, the Daylāmī Būyids entered Bahgdād and took over the office there of *muṭtār* al-umn̄, and the three Būyid brothers Ḥādī and Ḥasan b. Būyā received the honorifics of Mu'tāz.
al-Dawla, 'Imad al-Dawla and Rukan al-Dawla respectively. All the subsequent Buyids used obtained from the caliph's titles of this type, sometimes with a greater degree of elaboration, e.g. the 'Adud al-Dawla wa-Taqi al-Milla of Fanā'-Khusraw, the Sharaf al-Dawla wa-Zayn al-Milla of Abu 'Abd al-Malik by the caliph in 1796/952, and the Baha' al-Dawla al-Diyā' al-Milla wa-Ghiyād al-Unma of Abu Naṣir Fīrus b. 'Adud al-Dawla seen in 'Abd al-Hamīd wa-Muqadimah, vol. v [1895], 133, L. Klebert-Bernburg, Amir wasil-shahābād: 'Adud al-Dawla's titulature re-examined, in Iran, Jomal. of the RIPS, xviii [1980]; and BAH3 AL-DAWLA in Suppl.

It may be noted, in connection with the mention of Muhammad b. Rāzik [see also anīn], that it is in the first half of this century that we have the formal constitution of the office of amīr al-umārā' [q.v.] as the concomitant of caliphal decadence. In fact, this title, or a similar form like ḥāfiz al-umārā', appears in the later years of the 3rd/9th century in reference to the commander-in-chief of the caliphal armies; but only with the caliphate of al-Raḍī (322-334/934-40) did the holder of the ma'rat al-umārā' achieve a commanding grip on affairs, so that it seemed natural for the Buyids to step into the office a few years later (see 'Ayn, op. cit., 531-41).

Especially interesting, in the light of the significance of the Buyids and the dawat al-Dawla or 'realm of the Daylamids' for an attempted reconstruction, see H. F. Amedro, The assumption of the title Shahanshah by the Buyids and the importance of the Bā'yarids*. seizure of power in western Persia (322-334/934-40), but it seems possible that use of the title goes back to the very beginnings of the Buyids, and the title was introduced publicly into the Buyids' titulature and protocol, and indeed the title became more respect to the "caliphal fiction" by seeking not only the caliphal act of delegation; but after al-Birūnī's title was introduced publicly into the Buyids, the epiphany of the three law schools, the Hanafis, the Hanballs and the approval of the title of Buyids for the first time, a near-riot ensured, Baghdad and the Shafts, had to be sought before this ostensibly independence of any Buyids. As we have seen above in regard to dual titles, the Buyids likewise secured imposing honories for the great vikirs and secretaries who served them. Notable here is the use of the element kalab 'capable of belligerency', and al-Biruni singles out such akabs of Buyid officials as Kāa' al-Kufāt, al-Kāa' al-Awlad and Asad al-Kufāt as "nothing but one great lie" (al-'Aṣbāb al-bayyānī, 134, tr. Schacht, The chronology of ancient nations, 131).

The Šamānids [q.v.] in distant Transoxania and then Kūrāšān were abounding in the use of honories, and al-Birūnī, op. cit., praises them for this, comparing them favourably with the Buyids. The epiphany of the Šamānids and the Bā'yarids*. seizure of power in western Persia and Afghanistan, the Ghaznavids [q.e.], departed, on the other hand, from the path of Šamānidi simplicity, and from the time of the line's founder, Šabdūtšīn, onwards, regularly sought from the caliphs numerous honories. Those of Šabdūtšīn were Mu'in al-Dawla and Naṣir al-Dawla or Naṣir al-Dīn wa-l-Dawla, perhaps commonly abbreviated to Naṣir al-Dīn (cf. S. M. Sera, in Paintings from Islamic lands, ed. R. Pinder-Wilson, Oxford 1969, 14-16: the question of the exact form of the kalāb is of some importance for the first appearance of this type of title. The sultans bore a dazzling array of honorifics, among which the great viziers and secretaries who served them. As we have seen above in regard to dual titles, the Buyids likewise secured imposing honories for the great vikirs and secretaries who served them. Notable here is the use of the element kalab 'capable of belligerency', and al-Biruni singles out such akabs of Buyid officials as Kāa' al-Kufāt, al-Kāa' al-Awlad and Asad al-Kufāt as "nothing but one great lie" (al-'Aṣbāb al-bayyānī, 134, tr. Schacht, The chronology of ancient nations, 131).

The Šamānids in the eastern Persia and Afghanistan, the Ghaznavids [q.e.],departed, on the other hand, from the path of Šamānidi simplicity, and from the time of the line's founder, Šabdūtšīn, onwards, regularly sought from the caliphs numerous honories. Those of Šabdūtšīn were Mu'in al-Dawla and Naṣir al-Dawla or Naṣir al-Dīn wa-l-Dawla, perhaps commonly abbreviated to Naṣir al-Dīn (cf. S. M. Sera, in Paintings from Islamic lands, ed. R. Pinder-Wilson, Oxford 1969, 14-16: the question of the exact form of the kalāb is of some importance for the first appearance of this type of title. The sultans bore a dazzling array of honorifics, among which the great viziers and secretaries who served them. As we have seen above in regard to dual titles, the Buyids likewise secured imposing honories for the great vikirs and secretaries who served them. Notable here is the use of the element kalab 'capable of belligerency', and al-Biruni singles out such akabs of Buyid officials as Kāa' al-Kufāt, al-Kāa' al-Awlad and Asad al-Kufāt as "nothing but one great lie" (al-'Aṣbāb al-bayyānī, 134, tr. Schacht, The chronology of ancient nations, 131).
in which these two strands of human existence were regarded as interdependent and their fortunes intricately interwoven; he also thought that the combination of ideas came "incontestably" from Persia, see Les vues musulmanes composées avec Din, 61.)

In the 5th/6th century, usage of the two types of labab, in dawla and in din, fluctuates, but the lakab, din, of dawla, fluctuates, but the lakab, din, of dawla, 

Khalifat Amir al-Mu'izz, to which were later added al-Nasir li'l-Din, Ghurgh, al-Mustansir, the vizier of the Fatimids' viziers, e.g. Amin al-Milla for Abu Nasr Kenderi [q.v.] and Nusair al-Mulk [q.v.] for Abu 'Ali Tusi; and the 'Abbasids themselves came to imitate the Fatimids in the bestowal of titles, as Kramers suggested—a preference for those in din stemming from the strongly orthodox religious atmosphere of the Sunni reaction against political Shiism. As in the Sunni world, the awarding of honorifics was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption, by the Fatimids. As in the Sunni world, the awarding of honorifics was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption, by the Fatimids.

But in general, Futimid procedure over the grant of honorifics was on similar lines to that of the 'Abbasids, as is attested by the texts of such awards (called technically hadis al-tawilat "documents conferring eulogy") quoted by al-Kalkashandi from the Manasik al-bay'ah of the Futimid author Ali b. 'Abdal (a work which was long believed lost, but which has recently turned up in Istanbul, see A. H. Safa, in Arabic, xx [1973], 192-200, and in Suppl.). Here a stereotyped formula is set forth, in which the grant of titles is accompanied by other favours such as the gift of a standard, a sword and a fine mount (Suhb al-tawilat, viii, 341f. As in the Sunni world, the awarding of honorifics was on similar lines to that of the 'Abbasids, as is attested by the texts of such awards (called technically hadis al-tawilat "documents conferring eulogy") quoted by al-Kalkashandi from the Manasik al-bay'ah of the Futimid author Ali b. 'Abdal (a work which was long believed lost, but which has recently turned up in Istanbul, see A. H. Safa, in Arabic, xx [1973], 192-200, and in Suppl.). Here a stereotyped formula is set forth, in which the grant of titles is accompanied by other favours such as the gift of a standard, a sword and a fine mount (Suhb al-tawilat, viii, 341f.)

After the Fatimid period, sec. the 6th/7th century, the dominance of din titles was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption or else by the general consensus among religious groups, for outstanding spiritual leaders, 'Abbasi shaykhs, etc., e.g. Nusair al-Din Kulla, Muhyi 'l-Din Ibn al-Muqaddam, Zayd al-Din al-Kamil and Muhammad al-Din al-Ghaffar [q.v.]. In any case, by this time all pretence at the caliph's being the sole dispenser of these honours had been abandoned. A consequence of this was that honorifics began to be adopted according to a method of rough conformity with a person's original isma. Al-Kalkashandi has a passage on this custom in Subh al-tawilat, viii, 458-60, under the heading of Fi 'l-hadis al-muqaddam's sayd 'asl-ma'lah, and the practice clearly dates back to early Mamluk times, if not before. Thus among the Turkish mamelukes, 'Amr b. Khalaf went with the name Sangar, Izzuddin al-Din with Ak Kush, Husam ad-Din with Hasun or Husayn, 'Ali ad-Din with 'Ali, Taqi ad-Din with Hrahim, etc. Even eunuchs had their characteristic combinations of labab and isma, e.g. Shagri al-Din with 'Anbar, as had the Coptic officials of the administration in Egypt, e.g. Taqi ad-Din with Wahla (cf. a similar list in al-Suyuti's
Risāla fi ma'rūjat al-khul wa 'l-māgh wa 'l-'aswād wa 'l-'albāb, ed. Ṣalāh al-Dīn al-Muḥādīqī, Une importante Risāla de Suyyūṭī, in MTOB, lviii (1973-4), 332-4, and also Ṣahān al-Ṭabā'ī, op. cit., 120 (1950). This type of usage was carried over into the Ottoman empire, especially amongst the 'iswād and fāhād, e.g. Būḍr al-Dīn with Mābrūẓ, and the already-mentioned couplings with Ṭāṣan and Ṣuṣayn, Ṣall and Ibrāhīm; the alliterative effect often achieved was obviously a factor favoring the adoption of several of these [cf. F. Bābinger, in It., xi (1923), 20 no. 3].

While the 'Abbāsīd caliphate was still a living organism (i.e. till the Mongol sack of Baġdād in 636/1239), the granting of honorific titles remained, at least in theory, a jealously-guarded privilege of the caliphs. Local rulers or provincial governors who maintained the "caglišal fiction" of Sunni constitutional theory, that all executive authority derived ultimately from the caliph, sedulously sought a grant of honorifics at the outset of their reign of governorships, and titles expressing personal closeness or a special relationship to the caliph, such as Kawālī Amīr al-Muluq, were especially sought after (early examples of the designation mawṣūd amīr al-nawwāsīn, say before the beginning of the 3rd/9th century, probably simply expressed a relationship of subordination and dependence, clientship or wādī, between the caliph and its bearer, rather than being the grant of an official title; O. Grabar thinks that the attribution of this phrase to the governor of Egypt Ahmad b. Tīlūn [v. 3] in 265/878-9 still expressed dependence rather than a title of honour, cf. his The sōmawī of the Tāhūmites, ANS Numismatic notes and monographs no. 239, New York 1957, 39-40).

Recognition by the caliph, involving an investiture charter ('abd, mušāfi), plus the other insignia of power such as honorifics, a richly-caparisoned charger and banners, might give a contender for power in a disputed succession the edge over his opponent. In 421/1030 the Ghaznawīd prince Mas'ud b. Bādir hurried eastwards from western Persia to Afghanistan in order to confront his brother Muhammad, who had been proclaimed sultan by the army in Ghazna. At Nalīfīr he received from the caliph al-Kādir an investiture diploma for the Ghaznawī empire plus a strong of honorifics, muṣāfi sulṭānī as Bayhākī calls them, Nayr Dīn Allāh, Hādi 'Tabad (or 'Uṣbād) Allāh, al-Muttahādīn min Aḍā' Allāh and Zahir Khalīfāt Allāh Amīr al-Mu'īnīn. Mas'ud ordered that details of the award should be proclaimed and publicised in the towns of Khorāsān, and it proved to be a valuable propaganda weapon in his successful wresting of the sultanate from Muḥammad later that year (Bayhākī, cited in Bosworth, The tītūlāt of the early Ghaznawīs, 224-5, and idem, The Ghaznawīs, their empire in Afghanistan and eastern Iran 944-1240, Edinburgh 1953, 54).

Not surprisingly, the 'Abbāsīds held on to their privilege of granting these titles in the Sunnī world for as long as possible. The caliph personally was the fount of honorifics, and the precise form in which they were granted had to be rigorously observed; the Muḥāfīl author Iḥāṣ Fadl Allāh al-'Umrānī [see FADL ALLĀH] states, concerning the correct form of address used by kings for governors and lesser rulers, that there was an inflexible rule in ancient times "that no king was ever addressed except by the precise honorific granted to him from the caliphal dādin, with no addition or omissions", bi tann māgh shyā yuṣūd yābī nābī (al-'Tarīf bi 'l-mawṣūb al-ṭarīf, Cairo 1312/1894-5, 86-7). Conversely, the unconditional and unauthorised assumption of alābād by a person was an act of insubordination, a declaration of rebellion against the caliph or sovereign, as happened in Khorāsān during the late 4th/10th century; the ambitious military commander of the Ṣahānīd, Allāh Allāh Sījīrī, in 381/991 rose against his master Nābī b. Māṣūr, appropriated all the revenues of Khorāsān and styled himself (talakādī) Amīr al-'Umrān, al-Mu'āyyan min al-Sanā, "the heavenly-guided supreme commander" (Ṭanāsūṣ al-Sharīf, al-Ta'rif bi al-Yamnī, Cairo 1286/1869, i, 125).

Since the granting of such titles and honours created status and prestige for the recipients, it was natural that the 'Abbāsīds, in the period of penury into which they had fallen by the early 4th/10th century, should expect a return for this service; during the Būyid period in particular, when the caliphs were reduced to subsisting in straitened circumstances as pensioners of the Būyids, this sale of investiture diplomas, barely in return for presents, became all the more vital for them. The grants seem to have become in time regulated by something like a fixed tariff. In Bayhākī's Ta'īrī-ī Mas'ūdī, 293, there is an account of the detailed discussion at Mas'ūdī of (jussma's court in 422/1031 about the presents to be sent to the new caliph al-Kārīm, from whom the sultan expected confirmation of his territories plus a grant of fresh alābād and other insignia of royalty; much of this discussion revolved round what was the usual rate or practice here, with the adding of precedents from the Salāfīd period.

Inevitably, voices were raised against the overlavish granting of honours and titles, with a consequent cheapening in their value. Already the poet and litterateur Ṣabīk Bākūr Muḥammad b. al-'Abbāsīd al-Khīrānī [d. 383/993 or 393/1003 (p. xiv)] had complained in a satire.

What do I care that the 'Abbāsīds have thrown open the gates of alābād and alābād? They have conferred honorifics on a man whose ancestors would not have made doorkeeper of their privy.

This caliph of ours has few dirhams in his hands, so he lavishes honorifics on people.

(al-'Ṭālibī, Yatīnī al-aḥār, Cairo 1375/1956-8, iv, 239; cf. Mez., Die Renaissance des Islam, 72-9, Eng. tr. 86-9). Hīlāl al-Sābī [d. 448/1056] has a long passage in his Kāfīl bāl-Wanābīd, ed. 'Abbād al-Sattār Faraqī, Cairo 1958, 166 ff., lamenting the changes between the time of the viziers Ibn al-Furātī and Allāh b. 'Īsā (the latter of whom had refused to increase the designation of a certain governor above the simple wish "May God exalt him!", although threatened for his obduracy), and even between the time of the viziers of 'Adūd al-Dawla and Sāmān al-Dawla, and the position at the end of his own lifetime. His main gravamen is that social and functional differentiation becomes impossible when titles lose their real meaning, and his conclusion is that "fundamentally, official positions have declined in status where they have been reduced to one level [in tītūlāt], and have become cheapened when they have all been made equal. They no longer possess any glory which one can admire, nor any splendour to be prized. Indeed, I have heard our master the caliph al-Kārīm bi-āmm Allāh—may God prolong his reign!—says that there is no designation
left for a deserving person". Hilal's contemporary al-Dinari likewise morosely observes that when the Muslim rulers of the Maghrib neglected to use these honorifics in addressing them (see Godschich, *Muhammad and 'Umar, and of insisting on the use of matises as "devilish," bid like Shams al-Din and Zayn al-Din, which he stigmatized in the title of his work) of taking honorifics (written in 916/15:0, see Brockelmann, *I*, 152, S II, 215-27) and if he is given less than seven or ten titles", perhaps from that of his co-prypt Muhammad Magribi.

3. The Muslim West. Most of what has been said so far relates primarily to the central and eastern lands of Islam, sc. Egypt and the lands further east. The vogue for honorifics followed a rather different course in the Muslim West. In general, their use was less developed in the more puritanical West, where there was a tendency to regard elaborate and fancy names and titles as "crown of the faith or Muhammad al-Din "succourer of the faith". He places the time when the floodgates were opened in the Saldjuk empire to the indiscriminate granting of honorifics as being the years after Abu Arslan's death (sc. after 465/1072 and the accession of Malik Shah; these strictures on the trends of the latter sultan's reign must be reserved as from a later hand than Nizam al-Mulk's, from that of his copyist Muhammad Magribi).

5. 'Abbasid moral and constitutional position (see above). In matters of titles which attracted the satirical or ironic comment of contemporaries. Thus Ibn Khaldun in *The Book of government or rules for kings*, London 1960, 152-63 that "There has arisen an abundance of titles, and whatever becomes abundant loses value and dignity", and that "in those days, the most official gets sassy and indignant if he is given less than seven or ten titles". In particular, Nizam al-Mulk denounces the confounding of *dawla* titles, formerly reserved for military commanders and the Turks, with the *mulk* and other titles used by viziers, governors and other civilian and religious officials and dignitaries, so that there results the absurdity of a Turkish general, iliterate, tyrannical and totally ignorant of the *Sharif*, being given titles like Tadj al-Din "crown of the faith or Mu' amin al-Din "saviour of the faith". He places the time when the floodgates were opened in the Saldjuk empire to the indiscriminate and incongruous granting of honorifics as being the years after Abu Arslan's death (sc. after 465/1072 and the accession of Malik Shah; these strictures on the trends of the latter sultan's reign must be reserved as from a later hand than Nizam al-Mulk's, from that of his copyist Muhammad Magribi.

Celebrate companion and partisan, Shaykh Abd al-Mu'min, styled al-Muzaffar (380-95/994-1009) onwards, the Almohad imam bi-amr Allah; from the reign of Abu YGusuf Ya'kub al-Ma'mun (r. 365-79/977-981) onwards, the Almohad sultans proudly termed themselves ibn al-Mu'ayyad at-umar al-mutawakkil (see Lévi-Provençal, *HIST. EGF. MUS.,* ii, 194, 213, 215-16, 228-9).

North Africa remained faithful for a longer period to the puritanical ideals of an equilibrating, earlier form of Islam, in its disapproval of pompous titles, once the inferiority of the rise of the 'Isma'ili Fatimids was over and the domination of MalikI orthodoxy was re-established under the Almoravids. The Almoravids originally recognised 'Abbasid authority, but to mark the reality of their own power in North-West Africa adopted—whether of their own accord or with the approval of Baghdad is unclear—the title of Amir al-Muslimin. Thus there was created, from the constitutional point of view, what van Berchem conveniently called a "sub-caliphate", whose rulers recognised an authority higher than their own and did not therefore adopt a titulature proper to an independent and non-recognition of any superior power. The Almohads, however, came to power in the middle years of the 13th century on a wave of messianic enthusiasm and under a charismatic leader, the Mahdi Muhammad b. Tumart [see *ix x.* TUMART), and took up again in some measure the pattern of titulature instituted in the Maghrib two centuries before by the Fatimids. During Ibn Tumart's lifetime, his lieutenant 'Abd al-Mu'min was styled the Mahdi's khalif and Amir al-Mu'min, sc. of the Almohad faithful, and on Ibn Tumart's death, he became the imam of the community, with the title of al-Kadh bi-anu Allah; from the reign of Abu Yusuf Ya'kub al-Mansur (585-95/1190-99) onwards, the Almohad sultans are found with honorifics of the familiar theocratic pattern (see *van Berchem, Titres calificus d'occident,* 283-91; R. Brunschvig, *La Berbere orientale sous les Hafizides des origines à la fin du XVI siècle,* Paris 1940-7, i, 49, ii, 7-17).

The Marinids for long accepted the supremacy of the already-established Hafizids, hence they (and also their neighbours of Tlemcen, the 'Abd al-Wadids or Zayydnids) normally used the lesser title of Amir al-Mu'min rather than the fully caliphal one of Amir al-Mu'min; many of the Marinid sultans also bore theocratic-type al-kalib like the Hafizids. But there were episodes when certain sultans did assume the higher title. For a short period of 9 months in 708/1308-9, Abu 'l-Rab! Sujaynan adopted it on the coins which he issued conjointly with his Nafrid allies Muhammad al-Muwahhidun, Almohad titles par excellence (see *Al-Mu'ayyad at-umar al-mutawakkil* 729-91/1330-99); he seems to have employed the title as a lever to secure the deposition of his father, who had so styled himself in his official documents Amir al-Mu'min and Kadh al-Muwahhidun. Almohad titles par excellence (also Abu Bakr ibn al-Safa'i al-Kairini in allusion to the Berber Marinid's pretensions to an Arab genealogy). The reference to themselves the term al-Muwahhidun "those who proclaim God's unity" (an assumption admitted by the secretaries of the sultans of the Hafizids in Cairo, who used the titles Za'im al-Muwahhidun "chief of those proclaiming God's unity" and Kudwat al-Muwahhidun "exemplar of those...") that the vassals of these domains and officials,...

Yet although the trends of the 'Abbasid filtered through, the Almohads employed the term al-Muwahhidun "those who proclaim God's unity" (an assumption admitted by the secretaries of the sultans of the Hafizids in Cairo, who used the titles Za'im al-Muwahhidun "chief of those proclaiming God's unity" and Kudwat al-Muwahhidun "exemplar of those...") and the greater use of the title Amir al-Mu'minin rather than the fully caliphal one of Amir al-Mu'min; many of the Marinid sultans also bore theocratic-type al-kalib like the Hafizids. But there were episodes when certain sultans did assume the higher title. For a short period of 9 months in 708/1308-9, Abu 'l-Rab! Sujaynan adopted it on the coins which he issued conjointly with his Nafrid allies Muhammad al-Muwahhidun, Almohad titles par excellence (see *Al-Mu'ayyad at-umar al-mutawakkil* 729-91/1330-99); he seems to have employed the title as a lever to secure the deposition of his father, who had so styled himself in his official documents Amir al-Mu'min and Kadh al-Muwahhidun. Almohad titles par excellence (also Abu Bakr ibn al-Safa'i al-Kairini in allusion to the Berber Marinid's pretensions to an Arab genealogy). The references to themselves the term al-Muwahhidun "those who proclaim God's unity" (an assumption admitted by the secretaries of the sultans of the Hafizids in Cairo, who used the titles Za'im al-Muwahhidun "chief of those proclaiming God's unity" and Kudwat al-Muwahhidun "exemplar of those...").
sultans reverted to the lesser title Amir al-Muslihim.

The whole question of this alternation of titles was examined in great detail by van Berchem in his *Titres califiques d'Occident*, 425-335.

With the decline of the Marinids and their kinship the Waqtisids, the Sa'di Sharifs from southern Morocco rose to power in the early decades of the 10th/16th century on a wave of Moroccan enthusiasm for the expulsion of Turkish Algerian influence and of renewed Islamic maraboutic fervour for *dilkhah* against the Portuguese encroachers on the Moroccan coastline in an atmosphere which was thus fed on religious enthusiasm and popular aspirations. In the expectations of a new defender of the Muslims, it is not surprising that the first of these Sharifs of the Sos, Muhammad (d. 924/1517-13) assumed the chivalric titles of al-Malidh and al-Kadhin bi-amr Allah, reminiscent of Fadlul's and then Ahnodh usage. Similarly religiously-motivated honorifics were adopted by several of his successors, e.g. Muhammad al-Mutawakkil, Ahmad al-Mansur, etc. One should also note the central and eastern locus of Islam less used by both al-Sad and used by their *Alawi* successors, those of Mawlay/Mulay "my master" and Sayyidi still "my lord", also as other high dignitaries, princely and religious, in the Maghrib. The form Mawli "our master" had been used by the Naqids during the 8th/14th century, and the Christians of Spain in the 9th/15th century often referred to the ruler of Granada as Mulay (Aré, *L'Espagne musulmannes en temps des Nazrides*, 187), whilst both Mawlay and Sayyidin had been early used by the Naqids in their official documents. The form with the first person singular pronoun affix, mulayiyy > mulayy apparently appeared amongst the Hafsids in the course of the 8th/14th century, but is only first attested in Christian sources, e.g. the "Muley Babes" = Abu 'l-'Abbas Ahmad ibn al-Mustainir of a Latin document of 1291 (cf. Brunschvig, *Hafsides*, II, 13-16).

4. The post-cadilphic period. With the strengthening of the grip of Turkish and Kurdish dynasties over the central and eastern lands of Islam from the 5th/nth century onwards, regal, military and religious-motivated honorifics were adopted by the Fatimid and the establishment by the Mamluks of a puppet line only of 'Abbids in Cairo, the correct ordering and recounting of all the various components of the titles of rulers and dignitaries had always been vital in epistolary and other official usages. The various manuals for secretaries and officials, stretching back to Fadlul times but reaching their full florescence in a great document-producing civilization like that of the Mamluks, devote much space to forms of address and titulature. In the most monumental of these manuals, al-Kalakshandi's *Subh al-dafil*, the first *bab* of the third *makala* (v, 425-506, vi, 1-188, cf. W. Böhrnhen, *Beitragze zur Geschichte der Staatskunde*, 438), is devoted to the topic of names of all kinds, but with special reference to *albah*, which are traced from the origins of Islam to the author's own time, the 9th/15th century. Al-Kalakshandi has several lists of titles, e.g. of which he calls "honorifics of more recent times", *albah mukhtafla*, such as *mab*, *nab*, *muhfr*, *wda*, *nasiid al-din, bandukdar, damukdar, amir al-din*, etc.—this last class of titles being descriptive of offices rather than *albah* in the true sense of honorifics as we have been discussing them.

Of greater interest for our present purpose are al-Kalakshandi's numerous pages on the protocol of correct address, when addressing the caliphs or sultans downwards. Many distinctive and subtle distinctions are stressed here: thus al-muhafs al-*mufr*-saniyy (with *y* instead of *i*), a higher designation than al-muhafs al-*sani* (with single *y*); al-muhafs al-*sani* is higher than al-muhafs al-*sani*; and al-muhafs al-*sani* is higher still (*Sabi* al-*futu* al-*alb*), a pattern—continuing here Saljetn practice—of the still-pagan Turkish and Mongol rulers of Inner Asia. As an example, we might cite the titles used in addressing the Doge of Venice (Dük al-Bundufiyya): "al-Dük al-Jall, al-Mukarram, al-Mubadiyya, al-Muwakkar, al-Batal, al-Hum*m, al-Mu'min, which he calls "honorifics of more recent times", a rtpoque des Mamekmks d'aprls les auteurs arabes, Paris 1923, Introd. LXXIII ff.). Even heathen rulers and notables were not to be denied their honorifics, though these were naturally on a lower level than those accorded to Muslim equivalents; the Mamluk chancery had, of course, a sphere of diplomatic contacts embracing many non-Muslim powers, from the Christian empire of Byzantium and the Latin states of the Western Mediterranean to the still-pagan Turkish and Kurdish dynasties of Inner Asia. As an example, we might cite the titles used in addressing the Doge of Venice (Dük al-Bundufiyya): "al-Dük al-Jall, al-Mukarram, al-Mubadiyya, al-Muwakkar, al-Batal, al-Hum*m, al-Mu'min, Mamlakat wa l-Salatin N.". The whole question of this alternation of titles was examined in great detail by van Berchem in his study, based in the first place on coin legends, *Al-Kund al-bahah 'ud nukud al-Mamlak al-Mawrid, al-Bahiryya wa l-Buriiyya wa l-Shdmi wa l-Shdmin*, (1975), 55-104.

All the Ayyubid sultans, and following them the Mamluk ones, bore honorifics of the al-Dunyul wa l-Din pattern—continuing here Saljetn practice—and these appear in inscriptions and official documents, although for less formal usage a shorter form in al-Din only seems to have been current. Especially characteristic of the Ayyubids was the use of an honorific composed of al-Malik plus a laudatory epithet (e.g. al-Malik al-Kamil, al-Malik al-Mu'aqzam) beginning with Salah al-Din's title of al-Malik al-Nasir bestowed on him by the Fatimid caliph al-'Adid when he appointed Salah al-Din as his vizier in succession to Shirkuh in 354/1166. Titles like these had been known in the Fatimid caliphate for some time, and al-Halid's vizier Ridwan b. Wadifeghi had already in 311/1123 borne the titles of al-Sayyid al-Adjal al-Malik al-A'dal. The inscription on the stele of 'Ali b. al-Malik al-'Adil states that al-'Adil is a descendant of Lake Tiberias by its founder, *Haz al-Din Aybak*, describes him as al-Malik al-Mu'aqzam "connected with al-Malik al-Mu'aqzam", sc. with Sharaf al-Din *Ts b. al-Malik al-Adil Sayf al-Din*, at that time (60/1213-14) governor of Damascus for his father and not yet an autonomous Ayyubid prince; these titles were therefore not confined under the Ayyubids to reigning princes only (van Berchem, *Eine ara-
The characterisic Ayyubid type compounded Mamluk ones. Each of the sultans bore honorifics was particularly complex. Tlic all had honorifics of this type (see al-Basha, 498 ff.).

The titulature of the Mamluk rulers and of their amirs was particularly complex. The title Sultan [q.v.], though certainly known in the Ayyubid period, had not been widely used by the Ayyubid monarchs, but was now extensively adopted by the Mamluk ones. Each of the sultans bore honorifics of the characteristic Ayyubid type compounded with al-Malik, as discussed above, after the titles in al-Din wa l-Kin (see also above). But because of their military slave origin, the Mamluk sultans and amirs usually further bore special nisbas relating to their ethnic or local origins, their early professional training or their affiliation to the households of their masters. Thus sultan Barkuk [q.v.] had the nisba of al-Yalbugha because he had been the manlik of the general Yalbugha al-Umar, and Baybars [q.v.] that of al-Safih from his original master, the Ayyubid al-Malik al-Mutjaddid. In the Ayyubid period the general Husain al-Din Ozdemir was called al-Mujir from the slave dealer who had sold him; and both the sultan Saladin [q.v.] and the amir Shams al-Din Sunkur were called al-Abi because they had been bought for 1,000 (al-) dinars. Although these names are in form technically nisbas, they were not regarded as in any way derogatory, but were, rather, a source of pride to the holders and may in this wise be regarded as honorific titles.

One class of lakab borne by some early Mamluk sultans may be characterised as "quasi-territorial" or "quasi-ethnic", i.e. those titles in which the ruler claims lordship over particular regions and/or peoples. Already at al-Malik al-Safih Nasir al-Din Ayyub had grandiloquently styled himself Shahriyar al-Sham Sultan al-Arab wa l-Adjam Suhayl al-Haramayn al-Shafiyin, Malik al-Barayn wa l-Bahrayn Malik al-Hind wa l-Sind wa l-Yaman Malik Shanafwa-za-Obaid wa-Adan Sayyid Malik al-Arab wa l-Adjam Sultan al-Mahasir wa l-Maghrib (REA, vi, no. 4108), and in certain inscriptions of the Mamluks Baysarks and Kalawun we find headship over al-Arab wa l-Adjam extending to al-Turk and even al-Daylam (= the Mongols here?) (ibid., xiii, no. 487, etc.).

A notable feature of the Mamluk age was the strongly orthodox Sunni atmosphere, now that the very seat of the Ayyubid caliphate had been transferred to Cairo and the Mamluk rulers had become the principal defenders of Islam. This stress on orthodoxy appears naturally in the Mamluks' external and internal policy. At the same time of the Dif al-Islam as the Mongols and the Christian Franks and Armenians, and in their internal policy as repressions of Muslim sectaries like the Nusayris and Isma'ilis. Under the stimulus of an increased religiosity, both in official theological circles and in the sphere of popular religion and mysticism, the duty of ajihad was exalted. Whence the frequency in Mamluk titulature of designations like al-Mujaddid, al-Muhasibir, al-Murabiib, al-Chidri, al-Mughazi, etc., though these had already appeared under the Safiids of Transoxiana and they were in reaction to the landings of the Frankish Crusaders (cf. al-Mujaddid as a title of the Baward Atabeg Tughfitin in a Damascene inscription of 524/1130, RCEA, viii, no. 3034, and also as a title of细化 al-Din Ayyub in the RCEA, vi, no. 102-3). The proximity now of the seat of the caliphate and this atmosphere of religious exaltation and bellicosity probably gave an impetus to the increased popularity and utility of a type of jihab already well-known, that compounded with one of the titles of the caliph or sultan, and expressing close dependence on the supreme ruler, the enjoyment of his favour or support for him and the furtherance of the faith. Thus salji al-Din, at the time of his recognition as ruler by the 'Abbásid caliph, adopted the title of Khátami al-Muráin, and others of this type include Thikat al-Muráin, 'Umaid al-Malik wa l-Salihin, Nasrat al-Islam, 'U'L-Mu'minin, etc. These titles, which included as one of their elements the personal quality of excellence, Amir al-Muráin, were naturally the highest-regarded, and al-Kalkashandi arranges the different forms which this class of title took in a hierarchy of status. Kásim Amir al-Muráin is the highest, and may only be borne by the sultan's sons or used in correspondence with certain neighbouring Muslim princes; 'Ahd al-Muráin al-Muráin is the highest title which can be used for the sultan's provincial governors; Wali Amir al-Muráin can be used by high civil officials and by religious scholars, and ranks above Sai/Salatw Amir al-Muráin; and so forth (sbi at-al-sabt, vi, 108-9).

The type of honorifics classified by al-Basha, op. cit., 83 ff., as "those indicating place and status", al-lakab makumiyin, were used as indications of reverence and humility in addressing or referring to the great. They had already been used in the heyday of the 'Abbásid, for as the vizierate of Ibn al-Furat there had arisen the practice of addressing the caliph indirectly as al-hadda, in effect, "the one to whom service is due", and Husain al-Sabi' states that what had originally been just a formula of kurba, ingratitude, soon became a sunna, compulsory practice (cf. Tyan, Institutions du droit public musulman, i. Le califat, 488). By the time of the later 'Abbásid, we find the caliphs regularly referred to in epithetory style (e.g. in such sources as Abu Sa'id and the Kadi al-Fadhil) by such circumlocutions as al-Dhak al-Shafar, al-Masikhi, al-Sharita, Ma'mar al-Rahma, etc. The Búyid and Saljuk usage of al-Hadra (see above) is clearly a precursor of these expressions, although by the Mamluk period, al-Hadra had declined from being a form of address suitable for caliphs, as in al-Hadra al-Ša'iywa, into being used in addressing civil officials, infidel foreign rulers and the Coptic Patriarch in Egypt, according to al-Kalkashandi, suh at-al-sabt, v, 498. These "honorifics indicating place or status" enjoyed a great expansion in Ayyubid and Mamluk times. That of al-Mujaddid spread under the 'Abbasids, but was also adopted by the sovereign to the great men of state, so that by al-Kalkashandi's time it was regarded as essentially a title for the "men of the sword and the pen", but somewhat below al-Djahan. Hence towards the end of the Ayyubid period, the ruler tended to adopt instead the forms al-Ma'mar al-'Ali or al-Ma'mar al-Aghraf. This usage was followed by the Mamluks, so that Ibn Sibt, for instance, says in
his Ma'dîm al-kitîbî that al-Mukâm and al-Makarr are the highest alâb and are exclusively royal (ibid., 629); so also it is stated that the reference in such titles is to the seat of the ruler's power or his capital.

Van Berchem's opinion was that the study of mediaeval Islamic honorifics was only of value for the study of administrative institutions, and that these titles only had historical significance in so far as they were linked with specific offices—but Ehren- tittel habe so gut wie keinen Wert" (op. cit., 196). As already noted above, Kramers contested this negative view, suggesting that the nature of these honorifics reflected the religious and cultural atmosphere of their time, e.g. that the later predominance of din titles over da‘wa ones coincided with the Sunni reaction against political Shi‘ism and against external Christian pressure. Whether certain din honorifics did owe their popularity in the Iranian world to the fact that they resembled traditional names, e.g. Farîd al-Dîn and Farîdîn Khâchîn, Bâhî al-Dîn and Behîn, and Kîyân al-Dîn and Kâmidîn (Les noms musulmans composes de Din, 63-93), seems impossible to prove or disprove.

5. The period of the great empires. The use of honorifics continued in the great empires of later medieval Islam, e.g. those of the Indo-Muslim sultans, the Safawids and the Ottomans, almost down to modern times.

The title of the first Muslim dynasty to be permanently established in the northern Indian plain, the Slave Kings of Dîhil and their successors, inevitably followed grosso modo the pattern set by their original master, the Afghan Ghurids (v.g.), who had in their turn continued in the ways established by the power which they had overthrown in the later 6th/12th century, the Ghurawids (for Ghurawid literature, see above, 3, and for that of the Ghurids, the information given in the Tabâbât-i Nâsurî of Mînâbî ‘Alî Khudîgâhî (v.g.), who is always careful to detail the titles of his Ghurid forebears, as also those of the Dîhil sultans contemporary with him).

The Slave Kings, essentially the Turkish military commanders of the Ghurîd sultan Shâhî al-Dîn or Mîrâz al-Dîn Muhammad (d. 602/1206 [see 951/1206]), followed their own masters in favouring on the whole alâb in din, whence Kuth al-Dîn Aybâk, Shams al-Dîn Iltutmîsh (v.g.), etc. However, as both Dîjdîâ’s information and the contemporaneous imperial inscriptions show, there were many variants and elaborations. Thus Aybâk appears in an inscription of the Kuwâwet al-Islâm mosque in Dîhil as Kuth al-Lawla wa ‘l-Dîn, Amir al-Umarî, whilst Dîjdîâ gives Iltutmîsh’s lakab in full as Shams al-Dunyâ wa ‘l-Dîn. Basking in the glory of their extensive military conquests, various sovereigns of this period conceived of themselves as following in the footsteps of Alexander the Great.

Already the Ghurîd Mîrâz al-Dîn Muhammad is described on the Kuth Minâr (v.g.) as Iskandar al-Dîn, the title imitated e.g. by Âlî al-Dîn Muhîm-mad Shâh Khâqânî of Dîhil (665-721/1266-1316) on his coins, with such variants as Iskandar al-Zamân ‘the Alexander of the age’. The geographical and ethnic extent of the empire ruled by these Turkish commanders is indicated by Iltutmîsh’s adopting later in his reign (in an inscription of the Hansî mosque) the title Mawilî Mîlîc al-Turk wa ‘l-Ajam, whereas previously he had styled himself (on the Kuth Minâr) by the conventional, but by then obsolete title for an eastern Islamic potentate of Mawilî Mîlîc al-Arâb wa ‘l-Ajam. Like other Turkish ruling dynasties of the East being newcomers into the Islamic society and political scene yet uncertain of their place within this last, the Indo-Muslim rulers sought to validate their rule by expressing their loyalty to the ‘Abbâsid caliphs (who were of course after 659/1261 puppets under the control of the Egyptian Mamlûks). Iltutmîsh, in the last decades of the independent ‘Abbâsid of Baghdad, usually styled himself Nâsur or Nâsur Gâhîr al-Mu’umâd al-Farîdâbî, Amir al-Mu’umâd, the title favoured by the Ghurids to demonstrate their fidelity to Baghdad.

The Turco-Mongol successors of these first Turkish and Afghan Indo-Muslim rulers, the Mughals, brought to India Timurid traditions in using the grant of titles as a mark of respect for the loyalty of their own Turkish commanders and to win over other groups, such as the great Afghan chiefs. Bâdur mentions that, in India, permanent designations (mukarrarî khâchîn) were given to highly-favoured amirs, such as Azâm Humâyûn, Khânâ Qâhânî and Khânâ Kîhânâ (Bâdur-nâmâ, tr. Beveridge, 537). Bâdur’s son Humâyûn followed a careful policy in the award of titles appropriate to services rendered or expected; thus the supreme distinction of Amîr al-’Umârî was bestowed on Bâdur as his commander, who had fought at Panipât (v.g.) in 952/1546 and who was, moreover, allowed the signal honour of sitting with the emperor in formal court sessions. Under Bâdur’s immediate predecessors in India, the Lôdî, the titles of nobility had been (in ascending order) Malik, Amîr and Khân. In the course of the 16th/17th century, the title of Malik fell out of fashion and that of Beg, one of prestige under the first two Mughals, subsequently declined in favour of Khân, so that under Akbar, Beglar Begi was a lower title than that of Khânî-i Khânân. This last was the highest title of all, held e.g. by the young Akbar’s alîkî or guardian Bayram Khân (d. 988/1578 [v.g.]), together with that of Amîr al-’Umârî. Other titles tended to be associated with specific offices or functions; thus that of Aṣâf Khân was mostly conferred on civil officials acting as amir or as wâli of the royal household, hence mainly on Persians; whilst Akbar conferred the Hindu title of edâd not only on the hereditary successors to princely power but also on faithful Indian servants like the master-gunner Sabbâhan. See Radhy Shaym, Honours, marks and titles under the Great Mughals (Bâdur and Humâyûn), in IC, xlii (1972), 101-17, and idem, Honours, ranks and titles under the Great Mughals (Akbar), in ibid., xvii (1973), 335-341.

As the political and military power of the Mughals shrank in the post-Awrangzîb period, the conferring of titles became more and more widespread by the
emperors and by provincial Muslim dynasties, so that today, old titles like Mirza, Khan and Beg have in the modern subcontinent become nothing more than the equivalents of western surnames.

In Safavid Persia, one notes first of all, in connection with the strongly Shi'ite basis of the state and the theocratic nature of the early Shah's authority, a fondness for names and titles expressing devotion to or dependence upon either some venerated figure of Shi'ism, such as Ali or his sons al-Hasan and al-Husayn, or upon the sovereign himself, as the viceroy on earth of God or the Imams. In pre-Safavid times, there had occasionally been used by rulers in Persia names compounded with the Persian word baba 'slave, devotee', e.g. the Mongol H-Ikhkhan Muhammad Khudabanda Ordesti (the Isfahani being assumed when Ordesti became a Muslim; his pre-Shi'i sympathies should perhaps be noted here). Under the Turkmen Safawids, the equivalent Turkish word sák was commonly used, as in 'Ali-kull, Imam-kull, Tahmasp-kull, Sa'd-kull, etc., especially in regard to military command and governors, although the Shah's themselves normally obtained simple regnal names. The usage of the titles in Jut were modified in Muslim India by certain of the South Indian sultans who were Sht in faith and strongly under Safavid cultural influence, e.g. the ruler of the Kutb-Shahi [q.v.] in Golconda, Muhammad-kull b. Ibrahim (988-1020/1580-1612).

Whilst the Shahs themselves remained modest over the use of personal al-šah, these subordinates enjoyed a rich titulature. It is under the early Safawids, apparently toward the end of Shah Tahmasp I's reign ca. 970/1560-68, that the characteristic Safavid title for the statesman, that of Táhmid al-Dawla (q.v.) 'trustoy support of the state' appears; this title is much distorted in the travel accounts of contemporary western visitors to Persia, e.g. the 'Athenaumedok' of Du Mans and the 'Etnowdewit or prince minister' of John Bell. The late Safavid administrative manual Tadhkirat al-mamlık (ca. 1177/1765) gives detailed information on this latter official and on the other important figure of the Kuhur (q.v.) who were given considerable administrative and diplomatic powers, before the establishment of a regular, standing army, virtually the commander-in-chief, with the title of Amr al-Umrāt, here called the Rukn al-Saltana al-Khānūn, and on a host of lesser officials. The top fourteen officials of the administration held the title of šah-šah 'exalted in rank', and there were groups of officials with the title of mukarrab al-shahān 'confidant of the supreme ruler' because of their special closeness to the throne, and with that of mukarrab al-hādr 'confidant of the royal presence'. The first group included the head of the palace eunuchs, the royal physician (bahlīn-baḫī), the court astrologer (muddaffār-baḵš), the controller of essay (mušayyir al-mamlīk), the state secretary, who drew the royal jughrāf (some [q.v.] mawṣūf-l-mamlīk), the keeper of the seal (muhr-dār) and the keeper of the ink-holder (dawrī-dawrī). The second group, somewhat lower in status, included minor hemp attendants, aides-de-camp (yuqash), the heads of various state agencies, the keepers of the storehouses (baydaḵā, including the master of the mint ( darākh-mah), etc. (Tadhkirat al-mulqāh, ii, 88, 122, 300-553, tr. Minorsky, 44, 46, 55-60).

Under the Shahs, the title of Tāhmid al-Dawla for the vizier declined in currency, being replaced by that familiar in Ottoman usage also (see below), Şâde-i Âzām. There was also a great expansion of honories in dawla, mamlaka, saltana, etc. for the numerous princes of the Kādir family and for other great officials, a process which the Amir Kabir [q.v. in Suppl] endeavored in the mid-19th century years to check, but one which continued with little abatement till the end of the Kādiras in 1925. This rich array of titles and honorifics which had been sold for the personal enrichment of the Shah and court officials, even though this act had been an infringement of the monarch's prerogative. On 2 August 1935 there was issued a decree on the abolition of titles and on the terminology of social intercourse. The royal family was to receive new titles, with the Shah himself to be Âlā-yi Hadrat-i Humāyûn Shāhshānkhān; high officials were to be addressed just as ġândī, and the old titles of amīr, beg, Îákhan, mirzâ, etc, were to be abolished. In fact, although these reforms were honoured in the press and in public announcements, the old titles continued very much in common and spoken usage (see P. Avery, Modern Iran, London 1965, 267, 273; D. N. Wilber, Kādī Shāh Pahlâv: the reconstruction of Iran, Hicksville 1975, 167, 171).

When western-type surnames were introduced, some people turned the old šahī which went back to Kādir days into family names, e.g. in the cases of Dr. Muhammad Musaddiq, Prime Minister 1951-2, formerly Mu'addik al-Saltana, and his contemporary Prime Minister, formerly Prime Minister in 1921, Ahmad Kawâm, formerly Kâwûm al-Saltana. A centralised and bureaucratic institution like the Ottoman empire, with from the late 8th/14th century onwards extensive diplomatic contacts, firstly with the Muslim beyliks of Anatolia and the Turkmen powers of the East, and then with the Christian states of the West, increasingly affected by Ottoman expansionism, involved a complex and elaborate chancery procedure in which the careful consideration of the use and context of honorific titles played a vital role. The immense bulk of surviving Ottoman diplomatic and administrative documents would make feasible a highly detailed study of this titulature, a task which remains however to be done. For the moment, it may be noted that Feridun Beg devotes the opening pages of his great collection of correspondence to an exposition of the alâb of the various classes of address, from the sultan at the top down to civil and military officials and members of the religious institution within the empire, and also of the alâb to be used in communicating with dependent rulers such as those of the Trans-Danubian principalities and with foreign potentates like the Dogen of Venice (Muḥammad al-celif, Istanbul 1274/1857, i, 2-13). Also, L. Fekte devoted a section of his Einführung in die Osmanisch-Türkische Diplomatik der Türkischen Botschaft in Ungarn, Budapest 1926, pp. XXXI-XXXVI, to an exposition of honorifics as found in the diplomatic and administrative documents of the 10th/16th and 11th/17th centuries concerning relations between the Porte and local officials in Hungary or between the sultans and the Christian monarchs in adjoining lands. The luxuriance of the titulature of, for instance, Suleyman the Magnificent is seen in a letter of this sultan from 972/1565, where in the initiatias of the document
Suleyman describes himself as Sultan-i Sahlâni-Sherb wa Sharb, Sâhib-Kirân: Mamâlik-i Rûm wa 'Aqîm wa 'Arâb, Kahramân-i Kawn wa Muallâm, Nârîmân-i Mevli'd-i Zanûn wa Zanûn, 'Abd Denîî 
wa Sâhib-i Kâfî wa 'Aqîm-i Mûrîmân. Rûm-i Mu'adda-yi Mu'awwârânîn wa Kûnî-i Sherbîî 
wa Tahtî-i Misr Nâdînâ-yî 'Aryan wa Wilâyêt-yî Yaman wa 'Aadan wa San'âtîî wa Dûr al-Árâb Baghîdâd 
wa Baṣr wa Lâsbânî wa Mâdâ'î andân-în-Rawûlîn wa Dîyân-Dîyanîn wa Ahsâfîyânîn wa Dâhtî 
Kîkâl wa Dîyân-Dîyanîn wa Kirtân wa Lûsîtânîn wa Killûyî. Kûm îlî, wi Amînî wa Kâramân 
wa Affîk wa Bûghîlîn wa Ama'ûrîn menemîkînînîn wa Nûbîtî, wa 'Aqîm-i Sâhib-i Mu'âqîb 
wa ûlûm-i Mu'adda-yî Mu'awwârânîn, 'Aqîm-i Sâhib-i Mu'âqîb wa Sultân Sultânî Suleyman Khan 
b. Sultan Selim Khan (ibid., p. XXII).

The honories of the sultan's subordinates were naturally less florid, but considerable rare was taken to 
differentiate nicipes of rank, so that a bâgi with a stipend of less than 150 akçes was addressed as Kudvat al-Kudwî al-Islâm [sic], Omâdat Wa'lit al-Álam, whereas a bâgi of 150 akçes or more could 
add to the above titles that of Mûnâaârî wa Mu'âqîb, al-Álamân wa al-Árâbên wa al-Misrân, wa 'Aqîm-i 
Harâmân (ibid., p. XXXV). The grand vizier was from the time of Suleyman onwards awarded the 
designation of Sadî' i 'Aザm "most illustrious of the high dignitaries", and this title remained 
use all through the Ottoman sultanate's existence, surviving the reforms in the bureaucracy of the 
Tansümlâ (s.v.), the last Sadî' i 'Aザm being Dâmmâ Pâshâ (s.v.) ( till October 1920) and his 
successor Ahmed Tewfîk Pâshâ (till November 1922) who 
served Mehemmed VI abî-Dîln. The vizier had 
several other epithets of distinction, such as sa'mî, 
dârf, and fiî, and he was entitled to the same form 
of address as the Khedives of Egypt in the 19th 
century, devetelî feknâmî (see further sadî' i 
'azzam).

It was during the Tansümlâ period of the mid-19th 
century that some attempt was first made at rationalis-
ising and restricting the unchecked growth of titula-
ture, as part of the institutionalisation on western 
lines of the old Ottoman bureaucracy. It seems that 
the traditional titles were now bureaucratised. 
Thus Redhouse in his 
[Bibliography: given in the article.](C. E. Bosworth)
LAHMIDS, a pre-Islamic Arab dynasty of "Irak that made al-Hira [g.v.] its capital and ruled it for some three centuries from ca. 399 A.D. to ca. 632 A.D. Strictly speaking, the dynasty should be called the Najds after their eponym, Naṣr, Lakhm [g.v.] being the tribe to which they belonged. As semi-independent kings and as clients of the Sasanids, the Lakhmids were the dominant force in the political, military, and cultural history of the Arabs during these three centuries before the rise of Islam.

1. History. The founder of the dynasty, whose full name was Djudham, had practically absorbed their relatives, the Lakhm of Syria, a peaceful absorption by mutual agreement. In the 1st century A.H. the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakhm", we can hardly be wrong in thinking that he also ruled the Djudham. The name "Lakhim" becomes rare in comparison with "Djudham." In the wars of Islam, during the conquest of Syria, at the Yarmuk, at Siffin, and later in the course of the campaigns under Yazid I against the sacred cities of the Hijaz, the two tribes fought under the same chief and under the same banner. "Lakhim" became practically reduced to little more than a title of honour. Its archaic flavour, the glamour of its history which it recalled of the pharaohs of "Irak, was socially impressive, but the tribe of Lakhim no longer had a separate existence from the Djudham. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djudham, and it is the latter that the chroniclers usually have in mind.

A last echo of the aristocratic connotation of the name "Lakhim" is seen in the claim of the Abbaddids [g.v.] to the "throne of Lakhim" in al-Andalus during the 5th-7th century, to be of Lakhmid stock.

against Queen Zenobia of Palmyra. He appears as the protector of Manichaeism after it was outlawed in Persia. He was succeeded by his son, Imru’ul-Kays, described in the famous al-Namira inscription as “king of all the Arabs.” He, too, was a warrior king who after conquests in Arabia went over to the Romans, died in A.D. 352, and was buried at al-Namira in the province of Arabia. The death of Imru’ul-Kays to the Romans resulted in the first interregnum in the history of the Lakhmid. The sources speak of a certain Aws b. Kallum in the sixties of the 4th century, and he is given various tribal affiliations, but it is almost certain that the interregnum began long before the sixties and that the Ghassinids played an important role in the affairs of al-Hira, now that more light has been shed on their early history. Certainty cannot be predicated of the names and reigns of the Lakhmid kings assigned by the Arabic tradition to this obscure period in their history, sec. the 4th century.

The 5th century is much better documented in the Greek and Syrian sources as well as the Arabic ones, which yield important data on three Lakhmid kings. The first is al-Nu’mān, nicknamed al-A’war (“the one-eyed”) and also al-Sāhib (“the wanderer”); according to the Arabic tradition he earned the latter for his having renounced the world. This is not improbable, since he is known to have visited the Syrian saint, Simeon, between 413 and 420. His name is associated with the building of the famous palace, al-Khawwarīn [q.v.], and with the two divisions in the Lakhmid army known as al-Shahba’ and al-Dawar. He was succeeded by his son al-Mundhir, who is said to have reigned forty-four years, possibly 418-32. He took part in the Byzantine-Persian war of 421-2 and played an even more important role in the internal affairs of Persia by his support of Bahram Gur for the throne. Little is known about the Lakhmid kings that followed him, al-Aswad and al-Mundhir II, but much is known about the warrior-king al-Nu’mān II. He took part in the Byzantine-Persian war of the period. In 498 he was beaten by the Byzantine commander Eugenius at Bithopos; in 509 he advanced against Harrān, where he was first beaten by the Romans and then triumphed over them, but shortly after died of a battle-wound in the vicinity of Ctesiphon. A second short interregnum takes place in this period, ca. 509, associated with a certain Abu Yafir.

Of the three centuries of Lakhmid rule in al-Hira, the last is the best documented and the most important. It is dominated by al-Mundhir III, who reigned for a half-century, 533-54. Firstly, during his reign the Arabian Peninsula witnessed a reassessment of Persian power and al-Mundhir made his presence felt in it, both as an Arab king and as the vassal of the Byzantine emperor Justinian. In 531 he conceived and in part executed the Persian campaign which ended in a great victory against Byzantium at Callinicum on the Euphrates; in 539 he engaged in a dispute with the Ghassinids al-Hārith, which was one of the causes for the outbreak of the Byzantine-Persian war of 539-44; in the forties he continued to war with the Ghassanids, but in 534 he was killed in an engagement with al-Hārith near Ma’man, probably the Yawm al-Biyrā of the Arabic tradition.

He was succeeded by his son Amr (354-69) whose mother was Hind, the Khuldi princess and daughter of the same al-Hārith who ruled al-Hira during the Kinda interregnum in the twenties, and it is by his maternal son, Hind, that Amr, the son of the most famous of all the Lakhmid kings, is known to the Arabic sources. The Lakhmids and their adversaries, the Ghassanids, are mentioned in the treaty of 539 between Persia and Byzantium; according to one of its clauses, both were expressly forbidden from waging wars against each other which would involve the two world powers, and yet Amr continued to make raids against the Byzantine frontier in the sixties as did his brother Kābās, who appears associated with him as his general. In 569 Amr died a violent death, killed by the poet Amr b. Kallum [q.v.] and was succeeded by his brother Kābās, who reigned for some four years (569-73). It was during his reign that the Ghassinids al-Mundhir scored, ca. 570, a victory in Lakhmid territory not far from al-Hira itself, probably the battle of Tāyμ Ubāb, but it was also in the same reign that the Persian occupation of South Arabia took place in 574; this turned the tide against Byzantium, and resolved in favour of Persia what might be termed the struggle for Arabia.

The short period that intervened between the death of Kābās in 573 and the accession of the last Lakhmid king in 580 was punctuated by two interregna; that of the Persian Suhra may be assigned to 573-4, while the other, during which most probably ruled Kābās, an Arab from the tribe of Tāyμ, lasted for a few months in 580, before the accession of al-Nu’mān. Between the two interregna there ruled the unpopular al-Mundhir IV, during whose reign his namesake, the Ghassinid al-Mundhir, scored a decisive victory over the Lakhmid, this time capturing al-Hira itself, ca. 578, and setting it afire.

The last Lakhmid king was al-Nu’mān, the son of al-Mundhir IV, who ruled for some twenty years (580-602). He is the Lakhmid best known to the Islamic Arabs and the post-Islamic Arabic sources through the panegyrics of al-Nasibah al-Dhahabī [q.v.] and through his relations with Amr b. Zayd [q.v.]. Unlike the reign of al-Mundhir III, his is not memorable for its international relations but for those with the Arabs of the Peninsular and with his Sāsānīd overlords. In his Peninsular wars he was unfortunate in a battle (the Yawm Tīkhāra or Takhīra) with Djarbī, a subdivision of Taimīl. His relations with the Sāsānīds varied. Hormuzd gave him a splendid crown, while Khusrav Parviz fell out with him, possibly because he was intolerant of Lakhmid pretensions to independence. After wandering among the Arab tribes seeking refuge, he surrendered himself to Parviz, who had him killed in 602, and with his death the Lakhmid rule over
al-Hira came to an end. In so doing, Parviz destroyed the shield that protected Persia's flank against the Arabs of the peninsula. Some two years after the death of al-Numán, the battle of Dhū Kār [70/6] was fought, in which the Arab troops of Khālid scored a victory over the Persians, a foretaste of more dramatic victories in the thirties by the Muslim Arabs. Dhū Kār foreshadowed al-Kādīsīyya [74/7], both of which were splendid justification of Lakhmīd al-Hira as a bulwark for Persia against the Arabs of the Peninsula.

After the death of al-Numán, al-Hira was ruled by an Arab from Taysīl, 'Iyās b. Kāliba, assisted by a Persian, al-Nahlīraghji, for some nine years, 602-11. After the Persian possession directly ruled by the Persians until it fell to Khalid b. al-Walid in 633. The last Lakhmīd prince known to the sources in this period is al-Numān, nicknamed al-Gharīr ("the deceiver"), who took part in the ridda war in Bahrain and was defeated by al-ʿAlī b. al-Hadramī in 633.

2. Culture. The geographical location of their capital al-Hira and their special relationship to Sasanīd Persia determined for the Lakhmīds the direction of their historical fragment. In spite of a Near East independence which they enjoyed, they were vassals of the Sasanīds, for whom they performed the following important functions: (a) they were their shield against the inroads of the nomads from the Arabian Peninsula; (b) they watched over their sphere of influence in Arabia, especially the Arabian hinterland of the Persian Gulf, including Bahrain and Oman, which they ruled for them; (c) they were their spear against Byzantium and the latter's client-kings, the Ghassānīds; and (d) they protected their trade interests in the Peninsula, especially the caravan-route that connected al-Hira with South Arabia.

Their fruitful association with Persia is reflected in the various forms of their military, political, and social life, and in their material culture: (a) the sources speak of five units in their army—al-ʿAlā, al-Dawwar, al-Waṣīṭ, al-Ṣamāl, and al-Rahāl. In the first of which are said to have consisted of Persian troops; besides, there was the Khādir Shahr, lit. "Shahīr's Ditch," rebuilt by Khusraw Anūširvān, a time of some sort protecting al-Hira and extending down to where al-Baṣra was to be in Islamic times; (b) the crowns of the Lakhmīds have been bestowd on them by the Persian kings and with the crown came the word itself for crown, tāqī, as a loanword from Arabic in Persian; and (c) the various aspects of their material culture must also have been dominated by the Persians in such areas as architecture, dress, food, drink, and music.

Zoroastrian Persia was also the determining factor in the attitude of the Lakhmīds towards Christianity. The Sasanīds understandably frowned on their adoption of a missionary religion with universalist claims, especially after the conversion of their secular enemy, Rome, to that religion. The second Lakhmīd ruler, Imrū' al-Rays, adopted Christianity, which fact must at least partly explain his defection to the Romans. Only the last Lakhmīd king, al-Numān, adopted it openly; but the Nestorian form of it, in opposition to the Chalcedonian one adopted by Byzantium, it was acceptable to the Sasanīds. And yet their capital, al-Hira, became the great centre of Arab Christianity and of its transmission to the Arabs of the Peninsula. The city was adorned with churches and monasteries, was the seat of a bishopric, and the refuge for many a persecuted ecclesiastic.

Important as their role was in the political and military history of the Arabs and of the Near East, it was their development of al-Hira itself as the great Arab urban centre in pre-Islamic times that must be considered the major and enduring contribution of the Lakhmīds. In the 3rd century A.D., the Arab cities of Hatra, Edessa, and Palmyra fell in rapid succession, and the rise of al-Hira as the capital of the Lakhmīds, almost immediately after the fall of Palmyra, ensured a certain continuity in Arab urban life in the Periptle Crescent.

For almost three centuries, al-Hira stood almost alone as a metropolis radiating higher forms of culture to the Arabs of the Peninsula, and of all the elements which were to contribute to the rise of Islam, the most important was undoubtedly the development of the Arabic script and of written Arabic, called for by the demands of an organised and stable urban life in al-Hira [see SABAHYA. A. The Arabic language (iii)]

Bibliography: the main sources for the history of the Lakhmīds is Tabarl's Tahrīr, magisterially translated and commented upon by Th. Nöldeke, Geschichte der Perser und Araber zur Zeit der Sasaniden, Leiden 1870, repr. 1971; (see on this now, I. Shu'ib, in IFJES, viii [1977], 177-22; the standard work on the Lakhmīds is still G. Rothstein, Die Dynastie der Lakhmīden in al-Hira, Berlin 1899. In both these two works the scattered references to the Lakhmīds in the Syriac and classical sources are discussed. Other important Arabic sources are: Mas'ūdī, Muṣūdī, iii 281-284; ibid. 291-297; 'Abd al-ʿAlī, Taʾrīkh, ed. Beirut 1897-1901, i 400-5, 401-11, 414-25, 431-8, 483-91, 540-7. For the monasteries of the Lakhmīds and of al-Hira, see Yaḥya, Muṣ<footer>
themselves being the oldest epigraphic monument of the city. During the Dihlí Sultanate (861-1526) period, Lakhnau figured prominently in connection with the revolt of A’In al-Mulk, son of Māhrū, governor of Awadh, against Sultān Muhammad b. Tughluk. Between 1349 and 1476, Lakhnau became part of the Šāhī kingdom of Dījanpur (870-1488). After changing hands several times between different occupant[s] of the Šāhī dynasty, the city was added to the Mogul dominion after Humāyūn’s defeat during frequent Afghān incursions. The Emperor Akbar, under whom the district of Lakhnau formed part of the sarkar of that name in the zaba of Awadh, had a special fascination for Lakhnau, whose delightful surroundings, pleasant climate, flowers and fruits and different varieties of rice are highly spoken of by his court chronicler, Abu b-Fadl. During Dihlī’s reign, Lakhnau blossomed into a magnus emporium. Awrangzīb’s visit to the place is commemorated by a mosque which he built on the top of the said Lakhnai Tīb, the oldest site of the city.

As the fortunes of the Great Mughal’s dwindled, those of Lakhnau rose, until a new and independent kingdom sprang up as an offshoot from the decaying tree of the Empire. The governors henceforth paid only nominal allegiance to the titular Dihlí king. Safādat Khān, who was appointed šāhādī by the Emperor Muhammad Šāh in 1724-1726, became the founder of the dynasty of the Nawwabs of Awadh, with whose régime most of Lakhnaw’s glorious past is intimately connected. The period of the fourth ruler, Nawwab Šāfī al-Dawla, marks the greatest height of Lakhnaw’s prosperity. The extravagance and munificence of his court passed into a byword, and could be rivalled only by the Imperial court of Dihtí. Along with the Rūūl Darwāza and the adjacent mosque, the great Inamábāra, whose central hall is one of the largest vaulted rooms in the world, forms the apotheosis of his building achievements. Lakhnaw was raised to the rank of a royal city in 1819 when Lord Hastings transformed the seventh the oldest site of the city. 

The first two Nawwabs of the Awadh, against Sultān Muhammad b. Tughluk. Between 1349 and 1476, Lakhnau became part of the Šāhī kingdom of Dījanpur (870-1488). After changing hands several times between different occupant[s] of the Šāhī dynasty, the city was added to the Mogul dominion after Humāyūn’s defeat during frequent Afghān incursions. The Emperor Akbar, under whom the district of Lakhnau formed part of the sarkar of that name in the zaba of Awadh, had a special fascination for Lakhnau, whose delightful surroundings, pleasant climate, flowers and fruits and different varieties of rice are highly spoken of by his court chronicler, Abu b-Fadl. During Dihlī’s reign, Lakhnau blossomed into a magnus emporium. Awrangzīb’s visit to the place is commemorated by a mosque which he built on the top of the said Lakhnai Tīb, the oldest site of the city. 

To the Englishmen, however, Lakhnaw is best known as the city where a regiment of British troops under Sir Henry Lawrence, joined by the local English inhabitants, put up a gallant defence of the city. During the Sepoy Mutiny of 1857, when the territory was annexed to the East India Company territories and Wādíd ‘All Šāhī, the last king, was exiled to Calcutta, where he lived a pensioner’s life under British superintendence, this city was declared a garrison town.

Lakhnaw Residency for twelve weeks against heavy-
2. Monuments. The most noteworthy of the older sites is the tomb of Shaykh Muhammad, known as Khwaja Shams, dated 870/1465-6. The tomb of Shaykh Ibrahim Chisti, near the Aysh-bagh, dated 961/1553, is a square limestone cell surmounted by blind merlons and a hemispherical dome set on an octagonal drum; the plain doorway arch, flanked by two small superimposed niches on each side, resembles Sultunate work at Delhi. Two Mughal mausolea in the same area are close to work at Fatehpur Sikri [pl. vi] in character, but undated. One, the Nadir Mahal, apparently the tomb of Shaykh 'Abd al-Rahim Khan, was built as a twelve-pillared open pavilion, but this was converted to a square cell with qalit lattices, and surrounded with a verandah of twenty pillars whose elaborate brackets, including elephant and birds, support a chajrija pent. The parapets of this verandah, the cell, and the base of the dome carry brilliant tile mosaic ornament in dark blue, turquoise and yellow set in red plaster; a confirmation of detail to be seen on some contemporary book paintings (e.g. Akbar-namah, V & A, IS 2-1896 113). The maqampadma finial base is extended by a petal-like network of tilework lines. The red sandstone Sula Khana preserves the open form, here rectangular, with sixteen columns surrounding a line of five cenotaphs, and supporting a florally carved ceiling above a finely panelled plinth. The details indicate the transition from the Akbari to the Jahangiri style.

The Mosque of Shah Jahan with three frontal arches to its prayer hall, and three domes, is flanked by massive octagonal minarets engaged to the front corners like the larger Dami Masjid at Delhi, and lanterns at the rear; its pishtak however incorporates new Darbaki curvatures at each end marked off by domed octagonal pavilions in two storeys. The arches and domes of the parapet are reiterated in a second range above, set back with two more pavilions on the flat roof. The hall within, ca. 49 m by 16 m by 15 m high has a solid concrete vault carried on successive covings of converging groins, and the founder's tomb lies in the middle. The architect was Sikandar Allah. The third building of the complex, the Rum I Darwaza, possibly so-named after its triple gateway, shares the rapid change of rhythm and the recession in levels, but the river elevation unexpectedly reveals a giant iwan framed within an arch with radiating guldastas, and capped by a chajrija. The Husaynabad Imambara of Muhammad 'Ali Shah again contrasts arches of different sizes with parapet arcades and guldastas, though in a light, lacy manner culminating in a gilded dome. The Hazratganj Imambara of Amir Salal 'Ali Shah (1842-47) is comparatively plain, but its interior, like the other two, was once

Plan of the Bara Imambara, Lakhnaw (after J. Ferguson).
splendid with crystal chandeliers and precious shrines. Besides the amarnāthi burials, the tradition of mausolea continued with those of Sa'dat 'Ali Khan (1796-1814) and his wife Khadrijah, built by his successor Ghazal al-Din (1814-27). Both follow the organisation of Saidar Hajjam's monument with corner turrets capped by chhatris around the main dome, but the pichhak and minā are absent, replaced in the former by a tetrastyle portico on each face (R. Smith, Journal 1832, V & A, lit 15/58-1913, pp. 281-5). Both have domes of a strongly European profile, with prominent finials and salient angles around a tall drum suggesting a derivation from Levant domes (1693-706); the accumulation of lesser domes and haftgūn vaults around the Queen's tomb also recalls Hindu massing. Ghazal al-Din built his own tomb, the Shah Najaf (Najaf ashraf) dominated by a white, stupa-like dome and finial within an arced precinct. The garden at Husaynābād contains two supposed replicas of the Tādī Mahal for a daughter of Muhammad Shah and her husband, which however demonstrate complete lack of its classical core.

The origin of European influences is apparent in domestic buildings. Initially Sa'dat 'Ali Khan had taken over the Fāḥ Mahall built by the Shāhīyāzaddās in the Fort; the buildings were improved on a grand scale by Shudās al-Dawla (1754-75), but by 1775 they still lacked unity (Modave, op. cit. 183). Both palace and fortifications were destroyed in 1857 and after. Ayāf al-Dawla transferred the court to a new Dawaīt Khāna including the Anṣāf Kothi, probably commissioned from Claude Martin, in 1785. Asfāl Khan, who had arrived in Lakhnāw in 1776, rose to become advisor to the Nawwāb; his taste for European influences, creating fine buildings for them and obtaining furniture from Europe. These included Mānā Bīgh (Barovien) (1780-84), a classical house with a bow front to the river, and a landward court sunk for courns, and Dilbīyāpur Kothi, a much plainer building. His own town house, Farhat-bakhsh (1784) shows the same combination of climatic ingenuity, strong defences, and wit; it was built in 1800 by Sa'dat 'Ali Khan, who used it as his residence at the centre of a new palace complex. Constancia (La Martinière 1795-800) though influential was, as Martin's tomb, unsuitable for adoption, and continues in his endowment as a school. Dil-kūgh (no. 1805, built by Sir Gore Osbourne as a reinterpretation of Seaton Delaval back home in Northumberland (1799) became a favourite hunting lodge of Sa'dat 'Ali, and provided the portico model for his tomb. By 1805 the Nawwāb had bought all the English houses but three, and himself constructed a fine new street of such houses, radically different from the Indian model, in Hādhrat-ganj. The building of palaces continued with his domed Motā Mahall and Lāl Bāradari (Kār al-Sūltān), a throne room with spires as fine as the Sultan), a throne room with spires as fine as the

LAKHNAWTI (shortened form of Lakhyanawati, "home of Lakhnāw", which is a derivation from Lakhyanāwād, son of Dapara and half-brother of Rana Candrá, and was, meaning "home" or "habitation", the name of an ancient city which served as the principal seat of government in Bengal under Muslim rule for nearly four centuries. Its ruins are still found spread over a narrow and deserted channel of the River Ganges in lat. 24° 52' N. and long. 88° 10' E., in the distance, 10 miles/16 km. south-west of the modern Malda district in the State of West Bengal, India), from which it is reached by a macadamised road.

Though the date of the foundation of the city is shrouded in obscurity, tradition has it that it was built by one Sangallob of the Cooch Behar area of north Bengal, who had become unchallenged master of Bengal and Bihar after defeating Raja Kesar Brahman of the same region. But the recorded
The greatest of these revolts took place during the August the central imperial authority, the distance in which Bengal was divided for administrative its conquest by the Muslims. Under the Emperor within fifty years of visited Lakhnawtl in 821/1418. The surprised and defeated Lallan Sen, the ruling in a coin of Sul (Ana Ratfiyya dated 634/1236. The subsequent occurred there ever since the inception of the city was known in his time both as Lakhnawyl. Akbar, Lakhnawyl was one of the nineteen sorifirs that the city was known by various names at different times, such as Fathabad, Husaynabad, Nusratabad and Dinanabad, the last name, meaning "paradise", being given to it by the Emperor Humayun when he stayed there for three months in 1536. The earliest numismatic mention of Lakhnawyl as a mint town occurs in the most ancient name of the city was Lakhnawyl was respected even beyond the frontiers of the Muslim rule. The Khilji oligarchical rule, the Lakhnawyl kingdom passed under slave governors, during which it acquired so much influence and status that its governors used to be called Malik al-Sharaf. But soon the palace intrigues and political squabbles of the Dhihl Sultanate embroiled the viceroys of Lakhnawyl to revolt against the central imperial authority, the distance from Dhihl being a greatly-contributing factor here. The greatest of these revolts took place during the reign of the strong-willed Sultan Ghiyath al-Din Balban (see in Suppl.), who personally led a large army to Bengal to crush the rebel governor Sultan Mughal al-Din Tughil, who was mercilessly put to death. The Dhihl Sultanate, became a vassal of Lakhnawyl in 637/1240. Barani, the author of the Tuhfa al-Din Aybak of Dhihl, who was to call Lakhnawyl a city around 1640, describes the castle as "not less than fifteen miles in length, and well-fortified, and containing 1,200,000 inhabitants in its walls, the passage of the time for another century. The few people that survived the epidemic left the deserted city, which never regained its old glory. The city was hurriedly shifted to Tanda, from where it was later changed to Rajeenahal in 1589 by Raja Man Singh, and then to Daicca in 1608 by Islam Khan, and finally to Murshidabad in 1704 by Murshid Kuli Khan. Though Lakhnawyl was finally deserted towards the end of the 18th century, its magnificent buildings withstood the ravages of time for another century, for as late as 1853 when William Hodges, the governor of the East India Company visited the place, the architectural remains of the historic city were fairly intact. But systematic human spoliation caused irreparable damage to the monuments, whose bricks and stones were carried away to adorn the palaces and houses of distant Rajeenahal and Murshidabad. According to Grant (Fifth report), the murshidaba safe of Murshidabad received Rs. 8000/- per annum from the local admirers of Lakhnawyl as fees for the privilege of demolishing the ruins and stripping from them their highly-priced enamelled bricks and basalt stones. Early in the 19th century, many carved stones, found in the ruined city, are said to have become prey of the Calcutta undertakers and others for ornamenting graves in Calcutta. Some of the important relics which are still extant are as follows: The Soora Masjid or Great Golden mosque, massive rectangular mosque, built by Sultan Nasir Shah in 918/1513, is the largest as well as the finest of all the monuments of Lakhnawyl. It is called golden because its domes were actually gilded, and Baridari (meaning "audience hall") because it has a spacious court-yard resembling an audience hall. The Chota Masjid built during the reign of Ala al-Din Husayn Shah (860-915/1454-1510) is situated in that portion of Lakhnawyl which now forms part of the Rajeenahal district of Bangladesh. Of the historic Fort of Lakhnawyl, which lay on the
banks of the Ganges and extended for about a mile from north to south, only the Main Gate, called the Dakhil Durbar, and the Royal Entrance, commonly called Luka Curt, are in existence today. The Fiza or Piroz Shâh Minâr is a sort of a victory tower, 84 ft. high and 62 ft. in circumference, popularly supposed to have been built by Sayîf al-Dîn Firuz Shâh (1488-90). The Radim Rasûl is a single-domed square building, constructed by Sultan Nusrat Shâh in 937/1531 and situated within the enclosure of the Fort. The actual relic, which comprises a small carved pedestal of black marble containing a stone representation of the footprint of the Prophet, is said to be in private residence nearby for reasons of security. Of the remaining important mosques, there are the Tântîpârâ Masjid, erected around 1480, the Lottan Masjid, built in 1475, and the Camkatî Masjid constructed by Sultan Yûsuf Shâh in 896/1490. In a spot known as Bangali Kote there existed the tomb of Sultan Husayn Shâh (d. 928/1520), but it was destroyed in about 1480. The tomb of Shâykh Aghât Shâdî al-Dîn Qâdinân, the famous saint who visited Lakhnawt in the early 8th/14th century, is located in the north-west corner of the Sâgârârâg, the enormous cistern, nearly 7 miles/10 km. south-west of Malda town.

It is a collective duty (*wâ'îjîb*) to pick up an abandoned or exposed child. A person finding such a child may not, having taken it up, repel it in the place where found. If two persons are taken to take up the child, preference is given to the one finding it first; if they have both found the child together, it should go to the one best fitted to rear it, but if both are equally qualified, then lots may be drawn for it. The child's finder must swear in the presence of witnesses that he has found it, so that he may not subsequently claim that it is his own son or slave. The child's paternity must be established by regular means. A slave, even if liberated through *mukâ'amba* or *mukâ'at*, a married woman, may not pick up a child unless with the master's or husband's consent. A person who has picked up a child must be free, a Muslim, sui iuris (*râ'isîd*), and of good character.

The foundling is presumed to be of free status until proved otherwise, and is presumed to be a Muslim if found by a Muslim in a place populated by Muslims. If the local people are, however, all infidels, the child is presumed to be non-Muslim.

Looking after the foundling is the responsibility of the finder; the collective obligation (*fard bi'âya*), is converted for him into a personal obligation (*fard *sayîn*). Nevertheless, certain authorities set the child's upbringing as a charge to the public treasury (the revenue derived from the *fiya*) or to special endowed foundations (*al-râ'îsî, *Hisârî* ii, 171). The finder administers the child's possessions, represents him in civil law and is responsible for the expenses of his upbringing, but he may have a remedy against the child's father for the cost of these expenses if it can be proved that the father voluntarily exposed the child and not through necessity. The child's upkeep is due until the end of puberty if it is a boy and until marriage if a girl. The inheritable estate belongs to the public treasury as representative of the Muslim community, but the *imân* may nevertheless make over the inheritance to the child's finder.

**Bibliography:** Khâtîb b. Isâbî, *Abrege de la loi musulmane selon le rite de l'Imâm Malî*, tr. G.-H. Bousquet, iii, § 270, *Bu-'Emir, Sharî'î: Muhîjîn Khâtîb*, vii, 121; *Sharî'î: Darîr, *Sharî'î: Mas'îd* Khâtîb*, *Mâ'ârir, Al-Abâ'î, ibid.*, i, 371; *D. Santillana, *Istituzioni di diritto musulmano Malichita con riguardo anche al sistema sconferita*, i, 306. (A.-M. Deleambre) **Lâkhî al-‘Âdâyî**, pre-Islamic Arab poet. The name Lâkhî does not necessarily mean that the person bearing it was a foundling; but in the present instance, whilst the genealogists know all the poets' ancestors (see Ibn al-Kalbi-Caskel, *Dabhârâr*, Tab. 174 and Register, ii, 377), the descus of his father's name has given rise to divergent readings; *maˁâm* (Ibn al-Kâli, loc. cit.; al-Dîbârî, Bayân, i, 42, 43, 52; Ibn Durayhîd, Igtîhâdî, 104; ‘Abd ‘Ammâd, *Mu传奇里面*, 175); *maˁâm* (Ibn Kataybâ, *Shâh*, 152-4; *L. A.*, s. v. *l-âd*); and *maˁâm*/*va-mu* (al-Shâhîm, apud al-Mubârâk, Kamîl, 829; Ibn al-Shâdîjî, *Mabâhuṭ bîrâd‘ al-‘Ârâb*, 17; al-Bakrî, *Maˁâm wa siyâqâm*, 71-3; *Alâ‘î, xx, 235; *K. S.*, x, 364-8; Ibn Khayr, *Fahrasa*, 965; Yâ‘kûb, *Bdûlâ*, ii, 127). This last reading seems to be the most correct; it even appears in the mas. of the *Dâhâm* whose recension is attributed to Ibn al-Kâli, for whom, in his *Dabhârâr*, the poet was Maˁâd’s son (see above). Such variation is easily explicable, but one nevertheless wonders whether two distinct persons have not been confused (see Ibn al-Kalbi-Caskel, Register, ii, 377; amongst Khînîn, there was moreover a Lâkhî b. Yâ‘mâr, cited by Ibn al-Kâli, Tab. 56).

Ibn Kataybâ, *loc. cit.*, says that the ‘Âdâyî [q.] established in ‘Irâk had to flee for refuge in al-Djâzîrâ under pressure from the troops of A‘bâd bin Jâ‘far (‘Irâq, 79-80 A.D.). who wanted to put a stop to their depredations. These last continued, and Lâkhî, who happened to be in al-Hira (or, according to Ibn al-Shâdîjî and al-Bakrî, *loc. cit.*), was allegedly secretary for Arab affairs in the Sassanid king's chancellery, placed his fellow tribesmen on guard against an expedition which the Persians were preparing, in a poem in *-âd* but the *-âd* remained deaf to this warning, persisted in their ways, and were scattered; it was then that Lâkhî wrote a long poem in *-âd* exhorting them to take seriously the new threats against them and to choose a valiant chief to oppose their enemies.

*The Abîdârî* (*loc. cit.*) places these events in the same sovereign's reign, after the battle of Dayr al-Damâdîjîn, during which the ‘Âdâyî repelled the Persian cavalry sent against them (see Vâlîdî, *Bulhâd*, ss. v. Dayr al-Damâdîjîn; naturally, this was not the famous battle of 85/702 [g.]), and makes the poem in *-âd* the prelude of the poem in *-âl*. Al-Bakrî (*loc. cit.*) also speaks of Dayr al-Damâdîjîn, whilst for Ibn ‘Abîl Rabbîh, the incidents in question were contemporaneous with Dhu ‘Kâr [g.], hence later, which seems very unlikely.

Al-Masîdî (*Murtûdî*, ii, 176-7 = § 601-2) tells palpably the same story, but places it much further
In the course of the first battle, which took place in (310-79 A.D.), thanks to his two poems, Dharb al-'Adab was only a small number of verses, and set to music, and the passage in which the ideal war commander is described was especially famous (see al-Mubarrad, Kāmil, 479, 1166; Ibn Nubata, Samh al-'Adab, 1231). Lakīt is placed on the same level as Kuss b. Sādīqa [q.v.] in some verses of Zayd b. Dhuabd al-'Adab in praise of his tribe (al-

Not worth the prisoners which, according to this tradition, gave Sādīq the sobriquet of Ibn T-Akātīf.

From all these pieces of information, the personality of Lakīt remains highly confused, and it is hardly possibly exactly to fix the period when he was living, though it was probably during the second half of the 6th century A.D. Thanks to his two poems, the poet passed into posterity in the 6th/7th century indeed, Ibn al-Shadjarā (d. 342/1x48) thought highly enough of the poem in -52 to place it at the beginning of his Mughalard, where it has 53 verses. It was set to music, and the passage in which the ideal war commander is described was especially famous (see al-Mubarrad, Kāmil, 479, 1166; Ibn Nubata, Samh al-'Adab, 1231). Lakīt is placed on the same level as Kuss b. Sādīqa [q.v.] in some verses of Zayd b. Dhuabd al-'Adab in praise of his tribe (al-

and Meyer, 65-71) that he is most often mentioned, although it is generally admitted that Sādīq had forbidden his sons to go beyond that number so as not to incite their enemies to obtain large ransoms. Despite the prisoners' supplications, in which he offered 1,000 camels from his own herds, Lakīt remained unmovable and left Maḥbad to die of hunger and thirst in captivity (Nakābd, 227; al-Mubarrad, Kāmil, 454; Ibn 'Abd Ribbī, Šīd, ed. idem, 1346/1928, iii, 391, etc.). As said above, Lakīt decided to avenge the death of his brother, and assembled a force of warriors from Tamlān (with the exception of the Banū Sād b. Zayd Manāt, according to Ibn Hābīb, Mubābah, 247, who accounts him one of the war leaders worthy of the title dijarā), from Dhubayrā and Asad, as well as a contingent said to have been sent by al-Nūmān b. Mūnīh, against the coalition of the 'Amīr b. Sā'īn and the 'Abs. Exactly a year after the 'day' of Rahbarān, ca. 530 according to Meyer, loc. cit., the 'day' of Shīb Dhubala took place; during the clash, accompanied by the usual exchange of verses, Lakīt, who was mounted, for the first time among the Arabs, on a horse capricious with brocade provided for him by the king of Persia, was killed by the blows of an opponent variously named in the sources (see e.g. al-Mubarrad, Kāmil, 134; Yākāt, Būdān, ii, 24) but who must have been Shurayb b. al-Āwās (Nakābd, 665-6; Yākāt, Būdān, xi, 137-9). He died the next day, not without having uttered once more some verses, and the leadership passed to his brother Hādibh [q.v.]. Since his enemies had yet again struck him after his death, this gratuitous action inspired some verses of his daughter (or his sister, according to Šīd, iii, 390) Dughātana, wife of his cousin 'Amr b. 'Āmir b. 'Udud (Nakābd, 665; Yākāt, Būdān, xi, 137-9; Yākāt, Būdān, ii, 24).

Although al-Dhūbāl, in a rather obscure passage (Bayādūn, ii, 93), seems to consider Lakīt as a tyrant, the sources cite an anecdote in which one has his widow (a daughter of Hābūl b. Khaṣba according to al-Mubarrad, Kāmil, 493), and al-Mu'ayyān, Amtīl, ii, 231-2, or else a certain Mukārlābāfa bint Kays b. Hāfūl according to Yākāt, Būdān, iii, 372-3), who had remarried, eulogising Lakīt and telling her new husband that he was certainly as (sweet as) water, though not however as sweet as that of the famous spring of Sādāth—maḍ āxwā di-Saddāth, an expression which became proverbial.

Al-Dhūbāl (op. cit., iv, 37) considers that all the sons of Sādāth (Ibn al-Kalbī-Caskel, Tab. 60, cit. ten of them) were poets, but their output hardly appears profuse, and only a small number of verses attributed to Lakīt survive; these are brought together by Abūlāyūs in Bayādūn aṭ-ḥudab, 239-9.

[LALE MEHMED PASA: grand vizier under Ahmed I. He was a Bosnian by origin and a relation of Mehmed Soksulal Pasja. The year of his birth is not given. After having had higher education]
in the palace, he was mir-i-khatir, and became in 1009/1595 aga of the Janissaries. In the next year he took part in the Austrian wars as beylerbeği of Rûm-
ili and was commander of Esztergom (Gran, Turkish: Uzungilan) in this town during the Austri-
an army in Mahmut 1004/September 1595.

During the following years, Lala Mehemet was several times serASKER in Hungary and when, in
Salâr 1013/July 1604, the grand vizier Yawûz Ali had died in Belgrade on his way to the Hungarian
theatre of war, the sultan sent the imperial seal of office to Lala Mehmeth. Although peace negotiations
were continually being resumed, the new grand vizier took in that year the offensive against
Venice in Esztergom. During next year's campaign, Esztergom was taken by Lala Mehemet (24 September
1605), and in November he crowned the Hungarian
brockay as king of Hungary (excepting the regions
occupied directly by the Turks) and Transylvania.

In that same year, the Turkish eastern army under
Cihâna Pasha was beaten by the Persians, while the
soldiers went to subdue the revolt in Amol and
were routed at Bolwadin. After his return, it was
decided that the grand vizier should remain next
year in the capital and lead the war on the two fronts
and, if possible, bring to a successful end the long-
drawn peace negotiations with Austria. The young
sultan, however, changed his mind in keeping with
the wishes of the Kapudan Pasha Derbisch who was
intriguing against Lala Mehmeth. Accordingly, the
latter was ordered to take command of the army
against Persia. He had already put up his tent in
Uskudâr, when overcome by sorrow because of the
frustration of his plans, he was seized with an apo-
piey and died three days afterwards (23 May 1606).

He was buried near the Turbe of Sokollu Pasha.

LALE DEVRI. "The Tulip Period", the name
which over three centuries has been applied to the
lands of the Ottoman Empire, corresponding to the
second half of the reign of Ahmed III 1703-30
(1013-40) more precisely to the thirteen years of the
vizierate of Nevçhehirî Ibrahim Pasha (1014-27).
The tulip which gave its name to this era has been ex-
ported from Turkey to Austria by Ogier Chalalsa de
Busbecq, the ambassador of Ferdinando I of Habsburg
(1593-64) at the court of the Sultan, but it was in
Holland that its cultivation was developed, through
the efforts of the botanist Charles de l'Ecluse (C. Clu-
sius) (Arras 1526-Lcidcn 1609), who occupied the
chair of Botany at the University of Leiden. The
promotion for tulips spread rapidly throughout
Europe, but the mania for this plant adopted its
most extravagant forms in Turkey. In fact, imported
back to Turkey from Holland in the 17th century by
the Austrian ambassador Schmilz zum Schwarzen-
burg, the tulip which gave its name to this era had be-
nen known to the West. For the first time in the history of
the Ottoman Empire, attempts were made to benefit
from the political, economic and cultural structures
of Europe. Diplomatic relations were fostered, es-
specially with France: an ambassador, Virmesiâde
Cebelizade Mehmeth Evendi, was accredited to the
court of Louis XV, and was instructed to study those
French institutions which might be adapted to the
requirements of Ottoman lands (1719). Commercial
relations with France were developed: each year, five
hundred trading ships operated between France and
Turkey.

Overtures to the West. The Grand Vizier was
a man of enlightened sympathies, and the years of
his vizierate were marked by a series of approaches
to the West. For the first time in the history of
the Ottoman Empire, attempts were made to benefit
from the political, economic and cultural structures
of Europe. Diplomatic relations were fostered, es-
specially with France: an ambassador, Virmesiâde
Cebelizade Mehmeth Evendi, was accredited to the
court of Louis XV, and was instructed to study those
French institutions which might be adapted to the
requirements of Ottoman lands (1719). Commercial
relations with France were developed: each year, five
hundred trading ships operated between France and
Turkey.

Policies of progress, construction and inno-
vation. In 1724, the first printing-press was in-
stalled in Istanbul, through the good offices of
Birinci Mehmed (1716-26), a Hungarian convert to
Islam, who sent the son of the Sultan's ambassador
to the court of Louis XV, who had accompanied his
father to Paris. A French officer of engineers, de
Rochefort, was invited to prepare plans for reforming
the army on the Western model, while another
French convert to Islam, Khubranadî Ibrahim Pasha
[see AHMED PASHA DHONNAV], organized a
corps of artillery. Yet another French convert to
Islam, Gerecî Davud Ağha, was responsible for the
foundation of the first team of fire-fighters. A lover
of arts and literature, the Grand Vizier surrounded
himself with poets, musicians and artists. He pro-
hibited the export of rare manuscripts and founded
a society for the translation of Arabic and Persian
texts. He established five libraries, in addition to
that of the Sultan, of which the poet Neçim [see]
being the prototype here.

The promoter of this fashion was the Grand
Vizier Ibrahim Pasha of Nevçhehir, son-in-law of the
Sultan. Coming to power at the beginning of 1718,
he showed great diplomatic skill in the negotiations
over the Treaty of Passarowitz (21 July 1716), put-
ning an end to a state of continual war which had
disrupted the economic structure of the Empire and
devastated its rural areas. After Passarowitz, the
Grand Vizier applied himself to pursuing the objec-
tive of peace, and his vizierate was to be marked
by an initial period of absolute peace, followed by
a period of euphoria induced by victorious cam-
paigns in Iran, which was then in a state of anarchy
as a result of the Afghan invasion. Agreeable and
peace-loving by temperament, Ahmed III had a
strong horticultural streak. He was a cultured man,
both a poet and calligrapher, but also a man of exceptional
generosity. He was seen by himself as a patron of
the arts, a characteristic feature of 18th-century
France, to which he was a constant admirer, and
established a society for the translation of Arabic
and Persian texts. He established five libraries, in
addition to that of the Sultan, of which the poet Neçim
was curator. He gave a fresh impetus to the manufacture
of porcelain and earthenware, restoring the work-
shops of İzmid and Küçükyay and founding a new one
in Istanbul, that of Tefkîr Sârî. He founded a
textile-mill.

In the context of municipal engineering, the
projects that he instituted include the construc-
tion of a dam to bring water from the Forest of
Belgrad to the capital and the building of roads and
Encyclopaedia of Islam, V
of harbour installations; he supervised the markets personally, regulating the sale of bread and the importation of coffee. Lady Mary Wortley-Montagu, the wife of the British ambassador to the court of the Sultan, states in her Letters that certain maladies were better treated in Turkey than elsewhere and, in particular, she mentions the existence of a vaccine against small-pox. The Sultan was an enthusiastic promoter of construction projects: fountains, mosques and mausoleums sprang up in every corner of Istanbul; palaces, pavilions (köşki [kivans]) gardens and pleasure gardens were established; the Golden Horn and the Bosphorus. The end of the festivities. The unbridled expenditure by the court, the relaxation of morals, the taxes levied by the Grand Vizier to pay for ever more costly entertainments, caused discontent among the people, in particular the fanatical and reactionary class of the kösemi. The people felt that they had been let down. Although the Grand Vizier had made great efforts in the interests of cultural growth, had done nothing to combat the fanaticism of the kösemi and the ignorance of the masses. The Janissaries, ignorant and fanatical, whose income depended on pillage in time of war, felt themselves threatened by the military reforms advocated by the Grand Vizier. The latter had imposed new taxes on commerce, taxes which caused discontent among the artisans and among the Janissaries, who engaged in smallscale trading during their leisure time. The kösemi took it upon themselves to fan these grievances. However, the revolt was caused by political factors. The foreign policy of Ibrahim Pasha consisted in the avoidance of war; however, the Tulip Period saw a temporary extension of Ottoman sovereignty, on account of the Afghan invasion of Iran. In the
anarchic conditions which prevailed, a new rivalry brought the Turks and the Russians into confrontation in the Caucasian provinces. Thanks to the mediation of the French ambassador, the Marquis de Villeneuve, this tension was resolved in an amicable fashion and a Russo-Turkish treaty, signed 23 June 1724, divided the Iranian spoils between the two powers: the Turks occupied Tiflis, Erivan, Tabriz, and the territories to the west of a line from Ardabil to Hamadan, while the Russians took possession of Erzurum, Derbend, Bakú, and Daghastán. This treaty was the occasion for fresh festivities, with exchanges of gifts between Turks, Russians and French, then control of affairs was delegated into the hands of the wālihs of the frontier regions, and the festivities continued. However, in Iran, the situation was soon reversed: Nādir Shāh succeeded in seizing power having overthrown the Afghān dynasty and, in 1730, he compiled the Turks to restore the Iranian territory that they had occupied. There was news of the capture of Hamadān and the massacre of its Turkish garrison. The Grand Vizier tried to keep the defeat a secret and to settle matters peaceably through diplomacy, but Nādir Shāh refused to negotiate. In order to stifle public unrest, it was necessary to prepare a campaign. On 17 July, the Ottoman army paraded at Ṣūkrūdār, where until 3 August it awaited the arrival of the uncommunicative Sultan. The latter finally joined his troops to conduct a grandiose procession which was nothing more than a show-off, all the more so that it ended in the procession to the end of the parade. But on 12 August, it was heard that the Iranians had taken Tabriz and brutally massacred the Turks who had been stationed there. Again, İbrahim Paşa tried to suppress the news, but Janissaries returning from the frontier regions spread the news of Iranian atrocities through the hamāmātās. Discontent mounted, and the Grand Vizier was held responsible for the setbacks. Janissaries and "event" fanned the fanaticism of the artisans. In his report dated 17 September 1730, the ambassador of the levant, the French ambassador, speaks of hesitation to act on the part of the Sultan's court. This indecision was to prove crucial to the success of the revolt, which broke out on the morning of 28 September. The leading officials of the State were on holiday at the time: the Sultan and the Grand Vizier at Ṣūkrūdār, the governor of Istanbul, Kaymak Mustafā Paşa, son-in-law of İbrahim Paşa, was busy tending his garden beside the Bosphorus, as was the Kapudan Paşa, another son-in-law of the Grand Vizier. The insurgents were able to act with total freedom. Their leader was Patrona Khalil, an Albanian, formerly a levant [i.e.v.] on the Sultan's flag-ship Païroma, of whom we have a portrait painted by the artist of the Tulip Period, the Dutchman Vannou (1656-1738); he was a man between thirty-five and forty years old, already an active veteran of numerous rebellions, a skilled demagogue and inciter of crowds, who made a precarious living, sometimes as an itinerant trader, sometimes as a town-crier or masseur. The crowds assembled at the Hippodrome Square under the direction of the latter. Demand was being raised that the Grand Vizier and his two sons-in-law, the Kehālātās Kaymak Mustafā Paşa and the Kapudan Paşa, be handed over to them. The Sultan tried in vain to rescue his favourite; in the night of 29 September, fearing for his own life, he ordered the strangling of İbrahim Paşa and his two sons-in-law, and at dawn their bodies were surrendered to the rebels, on three ox-drawn hearses. The insurgents, who had pillaged and sacked the palaces of the viziers, now insisted on the abdication of the Sultan. Zülkāl Ḥasan Efendi and lefżisāzde, acting in the name of the rebels, communicated the decision to Ahmed III. In the night of 2 October, having received the guarantee that his own life and those of his sons would be spared, he abdicated in favour of his nephew Maḥmūd who was immediately enthroned. Soon afterwards, Maḥmūd I had the ringleaders of the revolt assassinated.

The age of festivity had come to an end: the tulip gardens, the palaces and the places of remembrance had been destroyed. The tulips had gone: they left behind a sumptuous but tragic memory.

normally from the two corners of the mouth, l bilateral; it can be made from one side only, with
an unarticulated result, l unilateral (M. Grammont, 77 penult. This last was probably the case with
the /a/ (a lateralised consonant [see Din]), called
al-Jahfa, which was made from the right or left side
of the mouth (Sibawayh, ed. Paris, ii, 452, lii 17-18).
J. Caniteneau has placed l amongst those "consonants
outside the classification scheme" (Esquisse, 172, and
Cantineau, ed. Paris, ii, 452, lii 17-18). According to Arabic tradi-
ction, it is banyisa, dhanbasiya, madhjuna, and also
called nunbara "incorrupt" (see Fleisch, op. cit.,
§ 47 q. a, § 48, c. l, § 49, l, and Caniteneau, Cours; 50).
The articulation described above is for the
phone; for the phonological oppositions which define
the phoneme l, see Caniteneau, Esquisse, 172, and for the
incompatibilities, ibid., 206.
Lâm is emphatic 
and in the word Alâk when it is preceded
by the vowels a or u, so that one says in'da
Alâk, but ilâk (see references in Caniteneau, Cours,
51 n. 71 for a study of its articulation, references in
Fleisch, op. cit., 224 n. 1). The treatises on tagrijel
set forth the rules according to which l may be found
in other words (Caniteneau, Cours, 51).
Lâm seems to continue an articulation which was
similar to it in common Semitic (Caniteneau, Esquisse,
172 n. 1): indeed, one may go further and add that
"La liquide latérale se trouve en correspondance
régulière en semitique, berbère et conchilique" (M.
Wiesbaden 1969), see A. Martinet's observations
in BSL, 317 (1953), 77. According to Arabic tradi-
tion, it is banyisa, dhanbasiya, madhjuna, and also
called nunbara "incorrupt" (see Fleisch, op. cit.,
§ 47 q. a, § 48, c. l, § 49, l, and Caniteneau, Cours; 50).
Alternation: (a) Exchange of phonemes: l > n in a fairly numerous groups of doublets. In
several of these, the phenomenon does not seem to be
conditioned, e.g. kuñiia and bunuñi "mountain peak", and
l > r in yad mutabbâfî and mutabbâfî "a piece of split wood" (Fleisch, op. cit., § 49, 8).
(b) Assimilation. The l of the definite article
is assimilated when in contact with the "sun" conso-
nants, c. the dentsals to the prepalatals (except for
gh). For -l when it is final in a word, assimilation of the
initial following consonant is especially notable in the
case of the interrogative particle hal and of hal "nay,
on the contrary" (ibid., § 42 k); for the variations of the
Kurdn readers, see loc. cit. For the position in the
dialects, see Caniteneau, Cours, 53 4, to be completed
for Egypt by the material in N. Tomiche,
Le parler arabe du Caire, Paris 1963, 34.
In some cases, Caniteneau noted that some might add
h > m "well", qadha > qardana "has been for us", and
hâ > anna "for us" (Fleisch, Études, 398), and for Aleppo (A. Barthelemy, Diet.-
arc.-fr., 1953-54, and 1960), assimilation at a
distance, as in lakîbâ (750) and rakûb, rakîb and
also rakîbû and rikhîbû (373) "other" or another).
(c) Dissimilation. For this see Caniteneau,
Cours, 51, and for the dialects, ibid., 53. To the noun
there cited there one might add for Lebanon karâbû
> karbain and karbain "policemen stations" (Fleisch,
Études, 362 and 188 l. 3, and the examples of J.
Grand'Henry in his Le parler arabe de Cherchell,
Algérie, Louvain 1972, 24; see also W. Fischer, Die
Sprache der arabischen Sprachinsel in Usbekistan, in
Is., xxxvi (1961), 238.

or with the will of Dawizâ, who was also a leader of the Banû Rabû. Mâte is then said to have taken control of the land between Shâykh Sa’d and 'Amârâ which had previously belonged to the Banû Rabû, and to have become the founder of the Banû Lâm (S. H. Longrigg, *Four centuries of modern Iraq*, Oxford 1925, 8, and H. Field, *The anthropology of Iraq. The Lower Euphrates-Tigris region*, Chicago 1949, *Anthropological Series of the Field Museum of Natural History*, **XXX** no. 2, 329-30). A putative date for these events would be about the end of the 10th/11th century (von Oppenheim, iii. 460 states that the Banû Lâm were already living on the east bank of the Euphrates in 757).

The Banû Lâm were reluctant to accept Ottoman control, and the Pagha of Baghâdâd, 'Umar (who was in office 1688-91/1697-81) ordered the first of many Turkish campaigns which tried to compel their submission. All Pagha (in office 1707/1695-6) personally led a punitive raid against them, and Hasan Pasha (in office 1128-9/1714-23) also mounted a series of expeditions against them beginning in 1127/1714 (Longrigg, op. cit., 124, 125). The Banû Lâm sometimes cooperated with other tribal groups in rebelling against Ottoman rule; for example, in 1138/1726 they joined with various groups of Lurs to attack Baghâdâd.

The rise to power of Tâhmasp Kûlî Khân (later Nâdîr Shâh [q.v.]) provided further opportunities for insurgency on the part of the Banû Lâm. In 1145/1733 Tâhmasp Kûlî Khân laid siege to Baghâdâd, and the leader of the Banû Lâm, 'Abd âl-Ali, joined forces with the Persians. He apparently agreed to cooperate with the Arab will of Dawizâ in launching an attack on Baghâdâd, but the decision was not implemented (L. Lockhart, *Nâdîr Shâh*, London 1936, 63). After the defeat of the Persian army by Ottoman forces under Topal I'qâmân Pasha [q.v.] in Safar 1146/July 1733, the Banû Lâm helped many of the survivors to return to their native country; for this, a Turkish force led by Ahmad Pasha later inflicted punishment on the tribe.

The destruction and chaos brought about by the Persian invasion and retreat provided conditions in which tribal rebellion could flourish. The rise of the Banû Lâm was not slow to take advantage of them; "Les Moustefîlles et les Banû Lames avoient donnâ plus de peine que les autres aux Paschae" (M. Otter, *Voyage en Turquie et en Perse*, Paris 1748, quoted in Longrigg, *Four centuries of modern Iraq*, 25). The Banû Lâm sometimes co-operated with other tribal groups in rebelling against Ottoman rule; for example, in 1138/1726 they joined with various groups of Lurs to attack Baghâdâd.

conduct the negotiations, but this exchange is effected in Sha'ban 283/September-October 896, in the reigns of al-Wathik and of Khakkan. (caliph named Abu Sulayman; the exchange lasted 7 days and allowed the liberation of 2,842 prisoners of both sexes and 1,155 Muslims of both sexes. The seventh took place in Shawwal 295/July 908, and 2,842 prisoners of both sexes were released; it bears the name fidd al-lamām ("the ransom of completion") because it supplemented the preceding. The ninth (fidd al-Mu'tasim) was negotiated in Rabii II 305/September-October 917 in the reigns of al-Muktafird and of Constantine II; it lasted 8 days, and 3,336 Muslims of both sexes were the beneficiaries of it. The tenth (fidd al-Mu'tikii) was affected under the same sovereigns, in Rajab 312/September-October 925; it lasted 7 days, and nearly 4,000 Muslims of both sexes were freed. The eleventh took place in Dhul 'Hijjah 326/September-October 928, in the reigns of al-Rāfi and the same emperor, was negotiated by Ibn Warka; it lasted 16 days and 6,300 Muslims of both sexes regained their freedom, but 800 prisoners remained in the hands of the Byzantines and were subsequently freed in small groups. The twelfth was effected in Rabii I/October 916, under al-Mu'ta'i and the same emperor, by Nār al-Thamālī, but in the name of Sayf al-Dawla (it also bears the name of fidd Ibn Hamādān); 2,482 Muslims of both sexes were released; it bears the name al-'Asīzī (lith. Cairo 1278/1861-2; printed Bologna 1304/1886) al-Sidjīlmāsī on 4 Muharram 1165/23 November 1156/4 July 1745, who belonged to the Shidljīlīyya order [f.v.]; his fame he had helped spread by devoting a work given to the doyen of the professors. He was buried back to his female relatives, Ahmad b. al-Mubarak, he had numerous pupils, including Abu 'l-Abbās al-Hilīfī [see al-Hilīfī in Suppl.] and his cousin through his female relatives, Ahmad b. al-Mubarak (see below). He died in the odour of sanctity at Sidjīlmās on 4 Muharram 1165/23 November 1171.

2. Abu 'l-Ārā'Īs AHMAD b. AL-MUBARAK b. AL-MU'TAMĪS b. 'Abd al-'Azīz b. al-Dabbagh (1093-1193/1684-1719; see Lévi-Provençal, Chofra, 309), with whom he had been connected and whose name he had helped spread by devoting a work called al-Šuhaâ' al-dīn fi maḥdī al-Shuhaâ' Abī 'l-'Azīz (lli. Cairo 1329/1662-3; printed Bologna 1329/1667, Cairo 1391/1875) to his mandāhī. He was furthermore the author of several treatises, commentaries and glosses of a religious, grammatical, etc. nature (see ms. detailed in Lalhdar), of an 'udīsā containing some of his epistles and of a short work called Dīnaqı llamman bī-bīla-idhīm ḥīfīn: hal yāquf lahan al-chtānī muḥn fiṣfur an la? (ms. Rabat D 1348).

1. AL-MALĀTI, an ethnic designation stemming from Lams, a quarter of the Moroccan town of Sidjīlmāsī, born in particular by two mystics: 1. ABU 'l-HABĪB b. MUHAMMAD AL-GHURMĀNI b. 'Abd al-Sunduk (since he traced his genealogy back to 'Abd al-Rahām b. Abī Bakr) al-Signe, a renegade of the Shidljīlīyya order [f.v.]; his fame he had helped spread by devoting a work given to the doyen of the professors. He was buried back to his female relatives, Ahmad b. al-Mubarak, he had numerous pupils, including Abu 'l-Abbās al-Hilīfī [see al-Hilīfī in Suppl.] and his cousin through his female relatives, Ahmad b. al-Mubarak (see below). He died in the odour of sanctity at Sidjīlmās on 4 Muharram 1165/23 November 1171.

LAMBABIS, a name of unknown origin designating in general a group of tribal peoples, ancient nomads, who were active in western and southern India as salt carriers, cattle herders and porters of general merchandise. They are known by different names in different parts of southern India: Lambani, Brinjari, Boipar, Sugali and Sukali, as well as Lambadi.

The origins of the Lambadis are obscure, but appear to be similar to those of groups like the Koravar and Yerukula. All are ancient nomadic tribal groups, who maintained their freedom of movement by securing a place in the economic structure of pre-modern India as carriers, herdsmen and porters in an age when modern modes of transport and adequate roads were non-existent. Apart from their occupation as carriers, members of such groups were often in the fringes of villages as hunters and distillers of toddy.

Edgar Thurston (see Bibl.) indicates that the Lambadis were mainly Hindus, and clung to their tribal rituals and mixed Hindu-animistic religious practices. However, some Lambadis, in the Telugu coastlands and the Mysore highlands, claimed to be Muslims and aspired to the title of Shaykh. Their numbers were very small, but nevertheless they represented a very basic level of Hindu-Muslim interaction within the Indian subcontinent. At one end of the spectrum were the orthodox Urdu-speaking Muslims of northern India; at the other end odd groups caught in the transition from tribal identity to something more distinctly Muslim. Some groups of Lambadis fell into this category, as did the Ahir cowherds of the Andhra highlands and the Dudekula and Panjuvetti cotton cleaners of coastal Andhra and Tamil Nadu.

Such groups were generally despised by the main body of Muslims, and possessed few overt signs of being followers of Islam. The Muslim Lambadis spoke a dialect of Telugu strongly interlaced with Tamil and Kannarese words, followed no Muslim marriage rites and practiced circumcision. In dress, daily life-style, names and casual worship, however, they retained many tribal and Hindu rituals. Like the more numerous Dudekula, who were also of Telugu origin, the Lambadis were endogamous and rarely mixed with other Muslim groups, who regarded them with scorn.

The only settled groups of Muslim Lambadis found in southern India were located in the Anantapur district of the old Madras Presidency and in the region of Mysore. There are three recorded groups, all Telugu-speaking, with bards or priests known as Tamberian (or Thamburi), who appear to be the equivalent of the Hindu Lambadi priests or bhat. Most of these Lambadi Muslims claimed to have been forcibly converted by the Mysore Muslim prince Tipu Sultan (q.v.) in the late 18th century, who found the nomadic Lambadi ideal espionage agents, who wares against the British in Mysore. However, some in Anantapur also claimed descent from carriers who had accompanied Mogul generals in their invasions of southern India.

By the middle of the 20th century, the Muslim Lambadis appeared to have all but vanished. They were no doubt absorbed into the surrounding body of Muslims, and probably can still be traced amongst the non-Muslims, assimilated and assimilating Muslims in remote areas of Andhra Pradesh in India.

LAMCHANAT. a district of eastern Al-

Like the Lambadis had a distinct function in the economic life of India; but with the evolution of modern modes of transport their status and fortunes declined. The Hindu Lambadis (and Kararvars and Tumkurans) were looked down upon more than their Muslim counterparts, as the fair system made the transition to alternative occupations very difficult. Many in fact took to brigandage and petty crime, and were officially classified as problem groups and habitual criminals. The Muslim Lambadis were far fewer in number, and appear to have made the transition to sedentary occupations, though generally they were ones of low social and economic status.

The Dudekulas, a similar Muslim marginal group, were in a similar position, but were fortunate in that their traditional occupation—cotton cleaning—facilitated their absorption into the economy of modern India. By the early 20th century, they were merging into the mainstream of Islam in the subcontinent, with overtly Muslim practices and names replacing those of their pre-Islamic past.

In official publications and in Thurston's Castes and tribes of Southern India, the Dudekulas and Panjuvettis are far more prominent than the Muslim Lambadis, and references to them can be found in the following District Gazetteers: W. Francis, Anantapura, Madras 1905; idem, South Arcot, Madras 1906; F. R. Hemingway, Godavari, Madras 1907; C. F. Broughenbury, Cuddapah, Madras 1914; Guntur (statistical appendix), Madras 1915; A. F. Cox and H. A. Stuart, North Arcot, Madras 1905; W. Francis, Bellary, Madras 1914; F. R. Hemingway, Trichinopoly, Madras 1907; W. Francis, Vizagapatam, Madras 1907. See also references in Census of India, 1901, xv, 1911, xii, 1921, xil. Brief references occur in T. W. Arnold, The preaching of Islam, repr. Lahore 1901, I. H. Qureshi, The Muslim community in the Indo-Pakistan subcontinent, The Hague 1962, and Murray's handbook of the Madras Presidency, London 1879.
lower Kifiristán valleys, including the easterly one and two anecdotes in Nizami’s Arudi Samarkand (q.v. in Suppl.). Ethnically the region includes Pathans and Tadjiks, and also a considerable proportion of Dardic-speaking Pashás (see DARDIC AND KAFIR LANGUAGES) who are probably descended from the ancient Hindu and Buddhist population of pre-Islamic Kafíds and Nangráhars; the ancient Persian Pará language also lingers on in a few villages of the region (see AFGHANISTAN, ii. Ethnography, and iii. Languages).

The town of Langmán was already a flourishing one in the 10th/16th century. The Huddúd-áld-lám (379/989) describes it as being situated on the middle stretch of the Kabul River (which the anonymous author in fact calls “the river of Langmán” [sic], regarding this, plus “the river of Dundry”, Bâbur’s Adinápur, as constituting the modern Kabul River), and as a residence of merchants and an emporium for the products of India (tr. Minorkey, 75, 92 = § 6, 10, comm. 209, 252). Until the advent of the Turkish adventurer Sebíktigín and the Ghaznawids (q.v.) towards the end of that century, Langmán was still part of the Indian cultural and religious world, and the Huddúd-áld-lám specifically mentions the presence of idol temples there. It lay on the western marches of the extensive kingdom of the Hindusháhs ([9.1*]), which we find the name given as Lamgíhanát, and the area described as containing administratively five districts or “the river of Dunpur”, Babur’s Adínápur, as fact calls “the river of Lamkan” [sic], regarding this, plus “the river of Lampan” (372/982). The ancient Hindu and Buddhist population of pre-Islamic Kafíds and Nangráhars, thus designated in the Islamic sources, had settled in Baghdad during the 6th/12th century, so that the vizier Ahmad b. Hasan Mavnmandl had to remit some of his taxes (ed. Kullnín, 18-19, revised tr. London 1922, 206 ff., 222, 424, 494, 510-11; cf. also G. Scarpa, Ilfí-hámí-yi Dírúrá Muhammad Hâmidí, cronaca di una crociata musulmana contro i Kafírì di Langmán nell’anno 1352, Rome 1965, introd. pp. CXXVIII-CXL). Langmán was doubtless the base for many expeditions of ghíshád against the Kafíds, and as such is frequently mentioned in the Kábúli Persian account of the crusade led by the Mugháil Emperor Akbar’s younger brother Muhammad Hâmidí, governor of Kábúl, in 990/1582, cf. Scarpa, op. cit., index to text, s.v.

The district of Langmán is today an important food-producing area, supplying Kábúl, Djalábalbád and other centres with rice, cereals, fruit, etc., and it further produces textiles (J. Humlum et alii, La géographie de l’Afghanistan, étude d’un pays aride, Copenhagen 1959, 172-3, 327-8). Since the administrative reorganisation of 1964, a province specifically called Langmán has come into being, and this comprises essentially the central part of Núristán, with its centre at Meh Tarlam.

Bibliography: Given in the article.

(C. E. Bosworth)

LáMDH, Abu l-Hasan b. Muhammad b. Isá, Persian court poet, born about 492/1051, died some time after 460/1067, who left a diwán of hadiyáts, some 1,100 bayts of which have survived.

Although LáMDH was a contemporary of, and panegyrist to, such major historical figures as Tughríl Beg, Alp Arslán and Náízám al-Mulk, very little reliable information about his life and work has come to light. From his Diwán we learn only that he was a native of Gurgán and that he went to Baghdad in the train of Tughríl Beg in 447/1055. The tabbíhar of Dáwát-Síyáh, Ardârîbíddín and Rídú Kull Hídáyat states that he was a student of Muhammad al-Gházálí and a disciple of the poet Súzání, but Nádfíí has shown that these statements are fabrications (cf. LáMDH-náma-yi Dídâghúl, s.v.).

Stylistically, LáMDH was an enthusiastic but unexceptional imitator of the great Ghaznávid court poets, Unáíri, Fárúrí and Maúdúlí, particularly the latter, and his poetic career was preoccupied with political innovations that may be seen in the works of his contemporaries Arajíl and Abu l-Farají Rání [q.v. in Suppl.].

Bibliography: LáMDH’s Diwán has been published twice, by Sa’dí Nádifíí in 1395/1941 and by Muhammad Dábír-Síyáqí in 1353/1974, both times in Tehran. The only studies of his life and work are to be found in the introductions to these editions, the substance of which is repeated in the article on LáMDH in the Lughát-náma-yi Dídâghúl already cited. There is a brief chapter on LáMDH’s use of metaphor and simile in Muhammad Rídú-Sháffí-Kadkání’s Suwarí khayli dar gharí Faríy, Tehran 1356/1971. (J. W. Clinton)

LáMDH, Sháykh Múmín b. ‘Oqtaqí b. ‘Alí al-Náríaqí b. Ílyás, a celebrated Ottoman Síjí writer and poet of the first half of the 18th/18th century. He was born in 877/1472-3 at Bursa, where he spent all his life. His grandfather, Nágáqí SÀl̬ Páshá, teacher of Feríq (q.v.) and one of the great painters-carvers (nakbáld) of his time, had in his youth been taken by Timúr to Samarkand, where he perfeceted his art; after his return, he contributed masterly decorations to the Yeğhíl Díjání and the Yeğhíl Turbé in Bursa.

As the son of ‘Oqtaqí Céheli, the defterdar of Sultan Bayázid II’s treasury, LáMDH learnt Arabic and Persian, and received an excellent módarás

LAMI*I

education from the melius Akhawaynand Muhammad
b. H&djdjl Hasan-zAde. He aspired to the career of
a jurist and theologian, but his father's death created
difficulties (preface to Far hid-tulma, see A. S. Levend,
Lamit'nin Frrhad u $irin’i, in TDAY BcllcUn 1964,
Ankara 1965, 87). He seems to have written worldly
poetry and prose, until he became aware of his
preference for the mystic path, larika. and took as his
spiritual guide the Naksjjbandl §hay&b Amir
Ahmad al-Bu]sJiflrf, who exerted a decisive influence
on his life.
L5micfs success as a writer began when two of his
works attracted the attention of Sultan Selim I, who
awarded him a pension of 35 a£&s a day, and be¬
stowed on him the revenues from a village. Sultan
StlleymSn, whose accession he celebrated in a chrono¬
gram, kept up this patronage; to his Grand Vizier
Ibrahim Pasha [9.0.], who showed him the greatest
favour, LAmi*! dedicated several of his mathnaxois as
a mark of gratitude. Already in 9x8/1512 Lami*! was
able to found a wakf of 4.000
Occasional complaints over lack of money did not
go unanswered: IbrAhlm Pasha awarded him a sti¬
pend of 20 akces daily which Lami*l needed for the
education of his children. He had married early and
had three sons and one daughter; among his descen¬
dants, his son Perwlsfa Mebmed Cetebi, known as
Lem*!, a ffudtrris and author of a work on prosody,
and a grandson known as LAmFl-riide, are mentioned.
In his private life, L4mi*I was described as outspoken,
persistent in his opinions, witty and fond of literary
jests. He died in 938/153**2.
vas buried in the
graveyard of the (no longer extant) mosque built by
his grandfather on the Citadel of Bursa.
The fact that LfimicI, who never went to court,
owed his livelihood to Ottoman sultans and one
Grand Vizier, allows us to surmise that he conformed
to the expectations of his patrons. Their declared
aim was to blend the refinement of Persian poetry
with the vigour of the Turkish style cultivated in
Anatolia, while welcoming the best of Eastern
Turkish poetry.
Significantly, L&mPI took as his models two great
near-contemporary poets of TlmOrid Herat, the
Persian £]amT fa.y.] and his Turkish friend, the
minister Mir *AI1 Shir NawA*I [$.&.), both Nak&bandls like himself.
In a literary age which restricted any poet. Turkish
or Persian, to conventional forms {allegory being the
prevailing fashion). LAmi1! was encouraged by his
Ottoman patrons to turn his efforts at originality in
the direction of the themes. Passing by such wellworn stories as Laylfi and MftgUnfln [q.v.] or Yusuf and
Zulayfehi, LSmiT concentrated his talent in intro¬
ducing into Turkish literature fresh themes such as
Shamc u parwana, Salantdn u A bsdl and Haft payhar,
Incidentally preserving two themes that had virtually
sunk into oblivion in Persian literature: IPfs u
Ramin, for which one of the rare GurgSnl
manuscripts could only be found after a long search,
and W6m\k u MdAnP, of which the Persian original
by *Un$ur!
Is now lost.
Lftmi*I developed the muttdf/ira genre and experi¬
mented, as had become customary for poets, with
Caghatay Turkish. It was LflmW’s diversity and
originality, and not only his renderings of works by
DjAmT, which earned him the honorific epithet “the
Djilml of Rum".
L&mi'Ts “reasons for writing", sabab i laylif, and
additions to his translations, are worth a special
study (cf. Babinger, 264'); this would reveal the
independent and lively inte’Ject of this writer, whose

originality was achieved not by breaking out along
new lines but by fusing new themes with the tra¬
ditional conventions. About thirty of his works are
known. He wrote eight matknawis and a great deal
of other poetry, but is better known for his prose
works. Viewed chronologically, his major works are
as follows: (1) The LatdHJ-ndma, a collection of
facetious and partly scandalous stories in prose,
probably written from the time of his youth and
continued over the years; the unfinished book,
which contains valuable information such as that
on the old poet Shavvad Hamza (see S. Bulup in lA,
s.v.), was completed in 988/1580-x by his son Lem1!
(P. N. Boratav in Ph T Futtdamenla, ii, 55); — (2)
Shark-i dibadja-yi Gulistan (according to the Farhadn&tna, Lami*! commented on the whole Gulistan,
A. S. Levend, op. cit.), a commentary on the preface
to Sa'di’s fa.v.] “Rose garden", completed in 910/
'504; — (3) ljuzn u dil, (“Beauty and the heart"),
a translation in prose of Fattabl’s [?.v.] allegorical
work, dedicated to Sultan ScHm I, studied by
R. Dvorak, Husn u dil, persische Allegoric von
Falldhi tin5 NtSApfir, Vienna 1889; — (4) Shawikid
al-nubumva (“Distinctive signs of prophecy"), an
expanded and commented prose translation of the
treatise of Djaml. completed in 915/1509*10, printed
1293/1876 Istanbul, ed. 1958 Muzaffer Ozak;— (5)
Guy u favghan, ("Ball and bat”), LAmiS’s first
mathnaui, for which, inspired by a religious dream,
he made use of cArifi’s (d. 853/1449) allegorical
poem, studied by N. Tezcan, LdmiH'nin Guy u
Ceirgan mtstevisi, in Otntr A am Aksoy arma§am,
Ankara 1978, cox-25; —(6) Farhad tt&tna or Farhad
u Shir In: interestingly enough, LSmi*! used for his
second mathnaui, written in honour of Selim I, the
Eastern Turkish version by Mir 'All Shir Nawa*!,
who had introduced radical changes in the old theme,
especially by replacing Khusraw as hero by Farhad
[see farhad wa-shIrIh]. Larni'i, who undertook the
work on the request of FenSrI fq.v.] ]>iamA) aJ-Dln
Mebmed Shah, who had just acquired a fChamsa by
NawaT, claimed only to have altered the style
(w,'/t&). but he made also alterations in the story
(A. S. Levend, op. cit., 88, nof.), tr. von Hammer,
Stuttgart 1812;—(7) Absdl u Salamdn, his third
mathnawi, dedicated to Selim I, is the first Turkish
treatment of Djaml's allegorical work with consider¬
able additions;—(8) Futuk al-mudfdhidin li-Uirwlk
kulub al-mushahidin (“Conquests of the champions of
Islam giving rest to the hearts of the spectators”!,
better known as Tardiama-yi N of ah At a!-uni ("Trans¬
lation of the Breath of divine intimacy"), a transla¬
tion of DjamVs Sufi biographies with important
additions on more than thirty Anatolian $Qfis, in
prose, begun in 9x7/15x2 and finished in Ra&ab
927/April 152X, on the eve of SiileymSn's Belgrade
campaign; tho book was printed in Istanbul 1270/
1853-4 and 1289/1872; — (9) Shamc u pancina (“The
taper and the moth"), his fourth mathnawi, written
in honour ol Suleyman after the conquest of Rhodes
929/1522. but sent to him later; it seems that L&mi(I
used for this allegorical poem not the accepted
Persian version of Ah!I-yi ShlrAzI, composed in 894/
1488-9, but that of a certain Nfyftzl (*Abd Allah
Shabustari; G. K. Alpay, LdmiH Chelebi and his
Tforbr, [see BiW.], 88 ff), a second-rate author whom
he need not mention in his preface; — (10) Wdmih u
*AdhrP, his fifth mathnarri, translated at the request
of Sultan Siileyman from the no-longer-extant
Persian version of c\JnsurI; parts were very freely
tr. by J. von Hammer, Wamih und Asra, das ist dtr
Glilktnde und die BlUhende, Vienna 1833; — (11)


Mehdi-i Imam Husayn ("Martyrdom of the Imam Husayn"), his sixth mali'mu, for which no specific source is named; Lamiʿ reacted here against the warnings of some whom he also considered to be cannibals, living to the south of the Sudanese zone; other versions are Dahdam, Damdam, Iamiam, Limiyya, Namnam and Temiam.

Al-Masʿudi (before 356/957) places the Dahdam upstream from Gao and says of them "They fight amongst themselves. They eat people. They have a paramount king who has other kings under his authority. In his land there is an important fortress in which there is an image in the shape of a woman which they venerate and to whom they make pilgrimages" (tr. in Cooley, Recueil, 61). This passage is repeated by al-Bakrī (469/1078), who speaks of the Damdam, and by al-Dīrīṣī (548/1154), who speaks of the Lamia who are raided by the slave merchants of Takrīr and Ghana. Ibn Saʿīd (before 685/1286) speaks of, as well as the Lamia of the west, the Damdam to the south of Ethiopia and Nubia, and his information is repeated by Abuʾl-Fida (722/1322). Al-Dīnājī (before 722/1322) mentions the lakes of the Tamīn and the Damdam, a name also borne by a river emptying into the Indian Ocean, and equally speaks of the Lamia to the south of Ghana. According to al-Ūmarī (before 749/1349), the Damdam are a people employing horses and hostile to Mānasīs (Nīzām) 

Bibliography: W. D. Cooley, The Negroland of the Arabs... London 1841, 1847, 1866, 111-116; J. Coqu, Recueil des sources arabes concernant l'Afrique occidentale du VIII° au XIV° siècle, Paris 1975; R. Mauny, LAMT, a word of obscure origin which denotes the oryx of the Sahara [see MAḤR]. Now the word is obsolete and occurs only in a proverbial expression inspired by the speed with which it runs: "the runs Mānasīs a Nīzām?" [K. M. Hadiṣ, Ιάθες, 352]. According to al-Makrīzī (864/1459) repeat the information of Ibn Saʿīd about the Damdam invading Ethiopia and Nubia. Leo Africanus takes over from al-Makrīzī the name of Tamīn in order to make up a kingdom of Temiān, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1578 (lamia).

The 19th century explorers speak of them mainly in the form Verniem or Niamnam (see Cooley, loc. cit., below).

Bibliography: On Lamiʿ's life, Sehi, Husayn, Ibn Saʿīd, Thabit, another Thabit, Ismaʿili, the Ottoman, the material, the language, the connection with the tribe of the Larata to the north of the Lamia. For daries see al-Idrīsī (548/1154), who speaks of the Tamim and the Damdam, a name also borne by the Tamim in order to make up a kingdom of Temiān, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1578 (lamia). For the connection with the tribe of the Larata to the north of the Lamia. For daries see al-Idrīsī (548/1154), who speaks of the Tamim and the Damdam, a name also borne by the Tamim in order to make up a kingdom of Temiān, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1578 (lamia).
records that lamfiyya shields were offered to the kings of the Maghrib and al-Andalus. It is in this last country that E. Lévi-Provençal ([Hist. Esp. mus., iii, 93]) says that "the most desirable shields were those made of tanned leather". The name of the animal was certainly well-known, especially in Portuguese; it was called lant, lan, etc. Another point is made by al-Bakri (Description de l'Afrique septentrionale, ed.-tr. de S.lana, 1965, 177-213), who says that the best (and most expensive) shields were made from the hides of old females. The place where they were made is said by al-Idris (Opus geographicum, Naples-Rome iii, 224, ed. H. Pérès, Algiers 1957, 37) to have been at Nūl (see Vglüf, i.e., a place of the same name in the present Sahara), he says that "the Maghrībīs use them in battle because they are light yet solid". More information is provided by the Egyptian Ibn Zumbul al-Mabālī (20th/16th century), who also describes the lant (Tufaf al-malāt, tr. E. Fagnan, Extraits inédits relatifs au Maghreb, Algiers 1944, 179-80) and says that these shields "are special, because holes made by arrows or spears close up again by themselves and so they never lose their value as defensive weapons". Leo Africanus (Inscriptiones Afrae, ed.-tr. R. Bissnel, Les Touaregs de l'Est, Paris 1951, 73-82; see also 452-5) has a paragraph devoted to the lant, and says that in the summer it is easier to catch the animal because the heat of the sand affects its hooves. As far as the targas (lamfiyya) are concerned, he provides more up-to-date information additional to the earlier accounts and says: "Nothing except bullets from fire-arms can pierce them, but they are very costly."

These defensive arms are probably no longer made except for tourists, but until recently the Touareg (at least, the Touareg nobility who had the sole right to carry them) still used them and they were "escutcheon-like in shape and significance; the decorative motifs have magical qualities associated with them." (H. Lhote, Les Touaregs de Hoggar, Paris 1944, 323-6, with illustrations; see also H. Bissnel, Les Touaregs de l'Ouest, Algiers 1889, 93.) When P. de Foucauld was writing, the targas of Ahaggar had the same name as the animal, the hide of which was used to make them, tarn, pl. shemnān (Dict. ii, 602-5).

**LAMTA**

A large Berber tribe of the Sahara. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Sanhadja, Hashkara and Gazāla; others give them a Himyarite origin, like the Hawwarā and the Lawāṭa (g.w.).

The Lamta were one of the nomadic tribes who wore a veil (mulaththāmān). One section lived on the south of the Misr, between the Hashdā and the Misrī; others gave them a Himyarite origin, like the Hawwarā and the Lawāṭa (g.w.).

The Lamta were one of the nomadic tribes who wore a veil (mulaththāmān). One section lived on the south of the Misr, between the Hashdā and the Misrī; others gave them a Himyarite origin, like the Hawwarā and the Lawāṭa (g.w.).

In the territory of the Lamta of al-Sūs at the mouth of the Wadd Nīl (now Wad Nūn) they lay the commercial town of Nūl or Nīl of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.

The jurist Uggaw b. Zallī of Sigīlimāsa, a pupil of Abū 'Umāmah al-Fasī (d. in Sūnūb), was a member of the tribe of Lamta; one of his pupils was 'Abd Allāh b. Yāsān al-Gazālī, founder of the Almoravid empire (see al-Murābiyyūn).

The country of the Lamta was noted for the shields made of Nūl with the skin of the lamb antelope (g.w.).

(G. S. Coste *)

**LANTUNA (in Leo Africanus: Lamtona or Lamtna, a great Berber tribe belonging to the branch of the Sanhājā who led a nomadic life, and like other tribes of this branch forming part of the Mulaththāmān or "wearers of the veil" (see LAMTA).**

The Lamtna nomadised over the western Sahara, where between the 2nd/8th and 5th/11th centuries they played a considerable political role. According to al-Bakri (459/1067), the region covered by them stretched from the lands of Islam (i.e. the Maghrib) to those of the blacks. This is what this geographer says of the Lamtna's way of life: "They are strangers to any manual work, to agriculture and even to bread. Their riches consist wholly of their herds. They live entirely off meat and milk". According to Ibn Khālidūn (d. 880/1476), the Lamtna already formed a considerable kingdom at the time of the reign of 'Abd al-Rahmān al-Dakhīlī, founder of the amirate of Cordova (1258-77/1853-62). This author plus Ibn Abī Zūr (d. between 720-720/1320-20) give the names of several kings of the Lamtna from that time onwards.

The first of these was a certain Tallākākīn; the period of his power is unknown, but it is very probable that he lived towards the middle of the 3rd/9th century. His successor was Talītān or Taayywa-\ldash takān b. Tikīn b. Tallākākīn, who died aged 80 in 222/935-7. He was a great ruler, and if Ibn Abī Zūr is to be believed, he reigned over all the desert (i.e. all the western Sahara), and the territory under his control stretched for three months' journey in both length and breadth, as far as the borders of the land of the blacks, of whom more than twenty of their kings were subject to him. Talītān's successor was his nephew al-Āthr b. Bātīn (also called Yalātīn) who died aged 65 in 327/935-6, or according to another source, in 287/999. The fourth king of the Lamtna was Tāflūn (or Ramīn) b. al-Āthr who reigned over the tribe until 300912-13; he was killed by the Sanhājā nobles in a rebellion. His death heralded a time of troubles which lasted 120 years, i.e. until ca. 400/1000.

It seems that the state (or rather, the confederation of Berber tribes) created by the Lamtna and which endured down to 3069/18-19, was actually the state or rather confederation called Ablīya by the mediæval Arabic writers. This existed already in the time of the astronomer al-Fāzārī (b. 172/288), who locates it as between the kingdom of Sigīlimāsa (in the western
Magribi) and that of Ghana in the western Sudan. We also owe a few details about the Anbiya to Ibn al-Fakih al-Hamadhanî (ca. 390/993), whose information on Africa goes back to the middle of the 3rd/9th century. He relates that "the land of Anbiya is part of the Sûn al-Ashâ (in the extreme south of present-day Morocco) and extends over seventy nights' march across the plains and deserts". One may further add that the historian and geographer al-Ya'qubi (d. 378/988) says as follows about the people of Anbiya: "It is by setting off from off from Sûn into the south that one arrives in the land of the blacks ... It is reached via empty regions and deserts stretching for about fifty days' march. En route one meets a people called Anbiya, a part of the Sanhâja (who live) in the desert; they have no fixed abodes. They veil their faces, according to one of their customs. They do not wear a tunic, but cover themselves with pieces of cloth. Their food comes from dates, and they have no cereals or corn".

On al-Ya'qubi's evidence, the Anbiya confederation was not, in the 3rd/9th century, the only great Berber power in the western Sahara. Indeed, he mentions al-Ya'qubi himself the existence of this desert and on the fringes of the Massufa (see Al-Murabitûn).

It seems that the king of Awdaghast contributed to the fall of the confederation of the Lamtûna (or of Anbiya), and it may be in reference to him that Ibn Abî Zarî speaks when he mentions the revolt of the Sanhâja notables against the fourth king of the Lamtûna in 306/918-19. Hence the king Thaïzarâ b. Wângshîk b. Ûsar and Baraïn b. Wângshîk b. Ûsar, who ruled, according to Ibn Khaldûn, over the Lamtûna and all the Sahara in the 4th/10th century, in the times of 'Abd al-Rahmân III al-Nâšir (300-50/912-61) and his son al-Hakam II (350-60/961-76), belonged to the dynasty of Awdaghast and not to that of the Lamtûna. This name Baraïn b. Wângshîk b. Ûsar appears merely to be a deformation of that of Ibn Yûsuf b. Wâsiîn b. Nâšir attributed to the king of Awdaghast (who reigned between 340/951 and 350/961) by the geographer al-Bakrî. It is the same person who is mentioned by Ibn Hawkâl (d. ca. 378/988) under the name of Tanbûtân b. Isâfîghâr and who, as his contemporary, says of him: "Tanbûtân b. Isâfîghâr ... was at that time king of all the Sanhâja ... He governed these last forty years ... Power belonged to this man's family in that tribe from time immemorial".

It appears that towards the end of the 4th/10th century, or at the beginning of the next one, the kingdom of Awdaghast was destroyed by the king of Ghana, who incorporated its capital (now the ruins of Tegdaoust) in his own kingdom, whilst leaving the tribe of Lamtûna their freedom. It was at this time, at the end of a period of 120 years during which "power was divided up amongst the Lamtûna", as Ibn Abî Zarî says, that there appeared amongst the Lamtûna a new king called 'Abd Allâh (or Abû 'Ubâydh Allâh) b. Thîfîwî, who brought about a union of all the Lamtûna. According to Ibn Abî Zarî, he was a man of religion and piety who made the pilgrimage. He was killed, at the end of three years' reign, during a raid; al-Bakrî calls him Muhammad Taïrèha and says that he carried on the holy war, in the course of which he was killed at a place called Kankaara (Gangara, the Mandingo) in the land of the blacks. Târesna (or Nareshâ) al-Lairîîûn seems to have reigned between 426 and 450/1034-5, at the head of a confederation of Sanhâjâ tribes whose members included, as well as the Lamtûna, the Djûdâla and perhaps the Massufa too.

At the outset, the Lamtûna were pagans, and according to Ibn Khaldûn, only became Muslim during the 3rd/9th century. But most of the tribe's members were only nominally Muslim, apart from the amirs and probably a section of the notables. Because of this fact, Yahîyâ b. İbrâhîm al-Djûdîlî, the successor of Nâresht (Târesna) as head of the Lamtûna confederation, decided in the course of his pilgrimage to Mecca, to bring from the Magribi into the Sahara a pious and learned Muslim gasyâh called 'Abd Allâh b. Yâsûn, who was to work at the conversion of the Djûdâla and Lamtûna to a genuine form of Islam. 'Abd Allâh b. Yâsûn soon discovered that most of the people he was working amongst lived in ignorance; hence he quickly surrounded himself with true believers and declared holy war against the infidels of the two tribes, which he managed to convert to Islam after several raids. In this way came about the origin of the kingdom of the Murabitûn or Almoravids (see Al-Murabitûn).

After the death of Yahîyâ b. İbrâhîm al-Djûdîlî (ca. 434/1042-3), 'Abd Allâh b. Yâsûn, by now the spiritual head of the new community, appointed as his successor the amir Yahîyâ b. 'Umar b. Tâlîkânî, who reigned until 449/1056-7. Then the latter's brother, Abû Bakr b. 'Umar, also appointed by 'Abd Allâh b. Yâsûn, reigned over the western Sahara. Abû Bakr b. 'Umar was content to rule over the desert and to leave Morocco, whose conquest he undertook, to his nephew Abû Tâshîfîn. However, he kept the title of amir of the Almoravids till his death. Apparently, after Abû Bakr's death (he was killed in 480/1087 during one of his raids against the blacks in the western Sudan) the Lamtûna still retained, for some time, their supremacy over the people of the western Sahara. Towards the middle of the 5th/11th century al-Zuhîîî speaks of a Yahîyâ b. Abû Bakr, amir of the Massufa (*Lamtûna) who lived towards the year 498/1102-3 and who seems to have been the son of the amir Abû Bakr b. 'Umar al-Lamtûnî. During this time there took place the conquest of Ghana by the Lamtûna and the conversion of that city to Islam. Later, the power of the Lamtûna grew less, but nevertheless, we know, thanks to the anonymous author of the.Conquest of Ghana (ca. 588/1192), that the Lamtûna always possessed, at this period, an independent king as well as their own gasyâh. Subsequently, like the Massufa and other Berber tribes of the southwestern Sahara, the Lamtûna were compelled to recognize the supremacy of the Sudanese kings of Mâhîf. If al-Umarî (243-50/342-9) is to be believed, the Lamtûna came under their control in the first half of the 8th/14th century; however, they still had their own gasyâh. The later Arabic sources are silent about this people, whose importance became at that time almost nil.

A word should finally be said about the boundaries of the Lamtûna territories in the period from the 3rd/8th to the 8th/14th centuries. Originally, they extended, according to al-Bakrî, to the south of the mountain of Ayzal (Kedvet Eî Jell or Fort Gouraud on our maps), occupying all the eastern part of what is now Mauritania, as far as the fringes of the Sudan. They were separated from the Atlantic by the lands nomadized over by the Djûdâla, who occupied western Mauritania and the south-western part of
that country (al-Bakr, Ibn Sa'd) to the north of the lower Senegal and as far as the fringes of the Bi' al-al-Lamtna [modern Cap Blanc]. Towards the middle of the 5th/11th century, the Lamtona occupied the Mauritanian Adrar previously inhabited by a non-Muslim Berber tribe. They built there a fortress called Azukki or Azukki (Azougui near Atar on modern maps), which then became their capital and a very important stage along the commercial route connecting Sigilimassa with Ghana. From the Mauritanian Adrar, the lands traversed by the Lamtona stretched as far as the Sudan, more exactly to Tagant. In the second half of the 5th/11th century, the Lamtona occupied the district of Nāl al-'Aṣbā in the south-west of modern Morocco and that of Tāzargāg (Sagheet al Hamra) as far as the Sudan, more exactly to Tagant, connecting Sijsilmassa with Ghana. From the Kamūd, a very important stage along the commercial route called Azukki or Azukšl (Azougui near Atar on the Muslim Berber tribe. They built there a fortress that the powerful movement which culminated in the establishment of the Berber Almoravid dynasty was launched.

In 448/1056 Yahyā b. 'Umar was killed fighting the buldons in the western Sudan, and the imām 'Abd Allah immediately replaced him, as head of the army. With his brother Abū Bakr, who was celebrated for his courage, religious enthusiasm and experience. The new amr had his position legitimised by the people of Sigilimassa and struck coins of his own, and was then charged with the task of conquering, by word and by sword, the region of the Moroccan Atlas. In 449/1057-8 his successful campaign ended in the capture of the town of Aghmāt [q.v.], the Maqsūdā capital. With the support behind him of this urban centre, at the time one enjoying considerable prestige, the imām 'Abd Allah directed his troops against the Bargawwāta [q.v.], the Berber Almoravid Atlantic coast region; but having incautiously rushed into the battle, he was killed in 451/1059. Abū Bakr now became the sole head of the Almoravids; he buried 'Abd Allah b. Yāsīn on the spot, went on to crush the Bargawwāta and returned, laden with booty, to Aghmāt. There he established his centre of power and married the rich widow of the former governor of the town, the Tunisian lady Zaynab bint Ṭālūsh al-Nahshūyti, whose beauty was only equalled by her political astuteness.

Being probably now largely occupied with the administering of his native land and of his conquests, Abū Bakr at this point gave command of the army to his nephew and cousin, Yūsuf b. Tājīhīn [fl.v.J, who was celebrated for his courage, religious enthusiasm and experience. The new amr, prudently installed himself at Aghmāt. He had his position legitimised by the presence of the unpolished conquerors, and these latter, as Saharan nomads, felt little at ease within the walls which they had conquered but which were suffocating them. In the end, Abū Bakr was persuaded to found a new town, one better situated in all regards than the double city of Aghmāt. Following the advice of the rich widow, the new ruler decided to establish the new centre on the actual site of Marrakesh. The process of transfer took place, according to the Moroccan historian Ibn al-'Udhārī in his Bayān, on 23 Rajab 468/1070 and not in 1062 as indicated by Ibn Abī Zarqā [q.v.], the Moroccan historian. As Kašr al-bādār “stone fortress”, where the ruler’s harem, treasury and armoury were deposited in safety over the following three months.

Soon afterwards, on a date which the Bayān fixes within Rabi I 462/January 1071, Abū Bakr received some alarming news from the desert. In order to fly to the aid of his tribe, he left to Yūsuf b. Tāshīfīn the administration of the Almoravid conquests, the town in course of construction, a large part of the army and even his wife, who had herself urged him to divorce her so that she might, at the end of the waiting period required by Muslim law, legally marry Yūsuf and give him the benefit of her great experience of the Moroccan situation. The great role played by women in Almoravid society is of course well-known.

After having restored order within the desert, Abū Bakr did not return to Morocco till 464/1072-3. Well aware of what was happening at Marrakesh, he prudently installed himself at Aghmāt. He had
quickly learnt and realised that Yusuf, strongly backed by Zaynab, would not give back to him the command entrusted to him earlier nor the town of Marrakesh, now expanding rapidly. After a pathetic interview between the two men, seated together on a burnoose in the open countryside, Abu Bakr had the sense to accept the very impressive presents offered to him, and with his face thus saved, returned to the land of his people in order to resume the holy wars. But Yusuf left him no choice (see Yusuf ibn Abd Allah Djamai al-Layl, the word Hespiria-Tamuda, ii (1960); idem, Un fragmento inédito de Ibn 'Abbâs sobre los Almoravidas, in ibid., ii (1961). (G. DEVERDUN))

Lamu, a town, island and archipelago, in lat. 2° S. off the Kenya coast, together with Pate and Manda islands [see Kumr and Pate] and some smaller islands, probably to be identified with the Pyralase Islands mentioned in the Periplus of the Erythraean Sea of ca. A.D. 106 as an established resort of Arab and Egyptian sea traders. Nevertheless, the first archaeological evidence found on Lamu does not antedate the 8th or 9th century A.D., nor on Lamu before the 13th century. The first reliable literary evidence is that of Ibn Taghrîbirdî (later 9th/14th century), but the Swahili traditional history Khabar Lamu, and likewise the Swahili traditional histories of Pate, assert that it was founded in 770/95 by Syrians sent thither by the caliph 'Abd al-Malik b. Marwân, and reinforced by a further contingent sent by Hârîm al-Kašîjî in 770/956. Although not in themselves improbable, there is no contemporary literary or archaeological evidence to sustain these 10th century traditions. Syrian traders are not known to have penetrated farther south than the Ethiopian ports, and such late traditions are to be regarded with the greatest caution, if not scepticism. At the end of the 9th/15th century the island and the adjoining landfall are mentioned briefly by the celebrated pilot, Ahmad b. Maâjî.

Ibn Taghrîbirdî, quoting al-Makrî, makes only the curtest mention. The king is entitled to a burnoose in the open countryside, the land is occupied by a kind of honey made, and various preserves. The town is almost buried under trees, from which a kind of honey is made, and where stone alone is used for this purpose, was not built until 1151-12. The 12th century saw the construction of four mosques, in 1753, 1755, 1760 and 1797. In this interval, from c. 1556 to 1658, the town was under nominal Portuguese control, and the first tribute of 600 mithqâl of gold was paid to Venetian merceniers. In 1585 the town acknowledged Turkish suzerainty in the person of the Amir 'Ali Bey, for which the Portuguese deposed the sultan in 1587, hanging him in Goa on Christmas Day, 1589. Lamu supported the Mombasa rising of 1632, but the town was punished in 1634. Following another rising in 1678, the sultan of Lamu and four other neighbouring sultans lost their heads.

Lamu came under the nominal control of 'Umân after the 'Umân capture of Mombasa in 1698, but this was not effectively exercised until 1824-13, in which year an inscription dates the building of the fort as a residence for the Bu Safîd governor, always a member of the royal family until about 1901 (see Al. n.d.). Under them the town grew considerably because of its expansionist tribal poets and literary Sa'îd of 'Umân and Zanzibar and his successors. Lamu was an important centre for trade in ivory, mangrove wood (used universally at this epoch throughout southern Arabia for roofing) and, for a period, slaves. New mosques were dedicated in 1823, 1824 (two), 1815, 1819, 1865, 1876, 1877 and 1880-1. To the same period we may ascribe the pleasant two- and occasionally three-storied houses with their verandahs (Sw. sandahà), which form the greatest part of the old town, but with a distinctive architecture which may be called "Zanzibari". Particularly attractive are their doors of carved teak. These and the so-called Lamu chests (Sw. sandahà), camphorwood clothes chests, used because that wood is resistant to the omnipresent white ant, were important local manufactures. Elaborate beds and chairs, of ebony inlaid with ivory, give some indication of the luxury of the merchant notables. This is echoed in poetry, and especially during the 19th century Lamu was celebrated for its expansionist tribal poets and literary men (see SWAHILILiterature). These included poetsesses, of whom Mwana Kupena was the most famous. The poetry is written in the local dialect of Swahili, ki-AMU. During the 1960s J. W. T. Allen identified no less than 20,000 pages of Swahili poetry in private hands in Lamu town, all in manuscript. Of these 10,000 pages have been photographed and the record deposited in the University Library, Dar es Salaam. It is estimated that as many pages were found of Arabic manuscripts, but at the present these have neither been photographed nor catalogued: they remain a challenge to the present generation of scholars.

With the growth of Mombasa as a deep-water port, the diminution in importance of the mangrove and ivory trades, and the disappearance of the slave trade, Lamu receded in importance, although recently it has achieved a certain popularity as a tourist centre. But more than anything it has been saved by emerging as the most important Islamic religious centre in eastern Africa. The Bîbî al-Riyyâdî, or Madrasat al-Riyyâd, also commonly called the Mosque College of Lamu, was founded in 1310/1901-2 by Habîb Sâîhî b. Habîb "Atâwî b. Habîb "Atâwî Djamâl al-Layî, the word Habîb being used as an alternative to Sayyid. Of a well-known Hadrami family of sayyids, an ancestor had settled at Sin town on the neighbouring Pate island: from there another ancestor migrated to the Comoro Islands (see KEM AND PARE). There Habîb Sâîhî was
born and brought up as a Swahili speaker; although his was a learned family, Arabic was not spoken in the home. There are few family connections he became involved in the religious sciences and in traditional Arab medicine, although he never left eastern Africa. Migrating from the Comoros to Lamu, he began to teach, and soon acquired a band of followers. Following quarrels with the more conservative Muslims, in the town, and especially because of the use of the tambourine to accompany the reading of the Barzaqi mauslidi to celebrate the birth of the Prophet, Habib Sahib first built a hut for use as a madrasa, and subsequently the present mosque. This became a centre for the dissemination of the 'Alawiyya, which soon attracted students from throughout Kenya and Tanzania, even as far as Mozambique. Apart from the Ribat al-Riyada, attracting visitors from throughout Africa, all Sunni mosques hold numerous small Qur'anic schools. In eastern Africa, Tanzania, and its pupils could be found teaching in the eastern littoral of Kenya and the present influence of the mosque had made itself felt throughout the eastern littoral of Kenya and the present Muslim population of Lamu is that of the Ribat al-Riyada, attracting visitors from throughout Africa.

The Mosque College of Lamu and the influence of the Hadramawt has chiefly percolated into eastern Africa. Migrating from the Comoros to Lamu, he began to teach, and soon acquired a band of students. The mosque is a learned family, Arabic was not spoken in the home. There are few family connections.

LANBASAR (thus in Rasfald al-Dln and Mustawliya). Its still-extensive ruins lie on a site sloping at 30°, whose surface resembles in shape a truncated cone and which measures some 1,200 ft. by 600 ft. 150 m. with easily defensible slopes, in the Rostd district of the upper Shah-Rud, tributary of the Safid-Rud [q.v.] in what was the mediaeval region of Daylam [q.v.], now in the central satin of modern Iran. Its precise location is 32 miles/43 km. north-east of Razvin and 2 miles/3 km. north of the village of Shahreli-Shah-Bal, on the Nashir-Rud valley, in lat. 37°20' N. and long. 54°15' E. The fortress's position guarded the approaches to Alamin from the Shah-Rud valley, and it was accordingly an important unit in the network of Ismai'ili castles in Daylam. In recent times, the site and ruins have been visited and described by Freya Stark (1917), W. Ivanow (1958) and P. E. Willey (1960).

Lambasar was besieged in vain in 514/1121 by the forces of the U-Khan Hulegu overrunning northern Persia, the last Ismai'ili Grand Master Rukn al-Din Khyr-Shah submitted to the Mongols, and some forty Ismai'ili strongholds passed into the invaders' hands. Lambasar, however, held out against Hulegu's general Dayir-Ruka for a year after the beginning of 655/1257, and another fortress, Girdkh, for considerably later; it was presumably after its capture that Lambasar was abandoned as a military centre.

LANGA (see LAS BELA, 2 Ethnography).

LANKORAN (LENKORAN), the chief town of the district of the same name in the region of Bakü. Lankoran is the Persian pronunciation of the name, which was at one time written Lankarán ("anchorages"), or perhaps Langan-kanán ("place which pulls out the anchors"), which is pronounced Lánharán in Persia and Lankovan in Täliš. The ships of the Bakú-Enzetz [q.v.] line used formerly to call at Lankoran, which has an open roadstead, but at 5 miles north-east of the town is the island of Sar, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazandaran (?) fernak, but they were not known at what period the town of Lankoran was founded. Certain statements (cf. Takirbi-i 'Alam-diri under the year 940/1533 in Dorn, Aassims, iv, 223: and Shaikh 'Ali Hazin [about 1725 A.D.], Takirbi-i Ahdal, ed. Balfour, 157) suggest that the capital of Täliş was originally at Astarâ, towards the end of the 18th century, Lankoran be-
came the capital of this khânameh. The whole district was annexed by the Russians under Peter the Great (treaties of 1773 with Tabrîz, 1774 with the Afgãn, 1779 with the Persian, and 1795 with the Ottoman), but returned to Persia by the treaty of 1795. Retaken by Count Zubov in 1796, Lankoran was retaken in 1825 by the Persians who fortified it. On 9 Muharram (Yâghardi) 1288/1 January 1813, Lankoran was taken by storm by General Kotliarovsky after a brave resistance of the Persians. This event initiated the conclusion of the Treaty of Gulistan (1813), by which Persia ceded to Russia part of Tâlib, to the north of the river Astârâ. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the Adharbâyjân S.S.R. in Soviet Transcaucasia.

The population of the town, which was 3,070 in 1865, had reached 12,100 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,300 inhabitants and in 1861 99,085. Later, the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 125,895, of whom 43.5% were Azeri Turks, Iranian Tâlib 46.2%, Russians 6.9% (in the north) and Armenians 0.2%.

The district is composed of three zones: to the north, an eastern continuation of the steppes of Moghân; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; whilst to the west are wooded mountains running from 5,300 to 7,500 feet above sea-level which rise from the Russian frontier, forming the boundary with the Persian province of Ardbâl. The district is rich in forests and had good fishing.

The figures for the 1920 and 1931 censuses showed little change from the above figures, but by 1973 the town alone had a population of 42,200. The town has a number of schools and colleges, libraries and clubs, as well as a museum of local lore. During the 1930s, a newspaper was published in Adtur, and clubs, as well as a museum of local lore. During the 1930s, a newspaper was published in Adtur, and a local college was founded.

At a first glance, Lankoran resembles a typical mountainous town with its narrow streets, houses built on stone, and its fortress. However, upon closer inspection, one can observe the influence of Persian and Iranian culture on the town's architecture. The town is located on a hill, surrounded by mountains, which provide a natural barrier against invaders. The town is situated at an altitude of 2,130 m. above sea-level, with an average temperature of 5.8°C. At the eastern extremity of the valley, at Pulur (see Lârdjân, below), situated at 2,130 m., average temperature over the year is 5.8°C, rainfall is 547.7 mm. (Adle, chart, 569 mm. according to de Planhol, 23, n. 52, after Pégu).

Near the confluence of the Sefîd Ab and the Lâr, a wall of dry rock blocks the entire valley. Situated, close by the so-called caravanserai of Shâh 'Abbâs, at a crossroads of caravan routes between Tehran and the north, in a locality dominated by the ruins of Ka'fa-yi Dukhtar, according to oral tradition this wall separates two villages (Hourcade, 42 and map). Indications of the existence of permanent settlements in the valley of the Lâr are quite numerous; besides the numerous sites observed by certain travellers (Wells, 2; Von Call-Roseburg, 127; Stabl, 10), there is the oral tradition current among the Ghukara villagers of the valley of Irâ (Hourcade, 42, n. 6) and most notably the tradition attested at Lâstân as in the villages close to the valley of the Lâr, according to which, under a king of ancient Iran, the villagers of the Lâr, until 1848 to endure the rigours of the winter, were supposed to have emigrated to Lâr of the Fars (Fasâ', ii, 281 ff.; Rotscha, 51). This popular tradition should not be regarded as “quite fantastic” (de Planhol, 21) since numerous toponyms (Lâr, Lârak, Elburz, Bastak etc.), are current in the north as in the south.
settlers. Since the decade of the 1830s, the encampments of the nomads and semi-nomads of the Lār have been amply described by travellers, diplomats, soldiers etc. These accounts describe to us the stability of these tribes (itineraries of migration, places of summer pasturing, etc.) of which the majority were transferred to the region of Tehran from the 18th century onward, for political reasons (Hourcade, 39). For at least a century, and until quite recently (1976), approximately 200,000 head of small livestock (sheep and goats) belonging to the nomads of the south slope of the Elburz have summered at the Lār. But the terms "tribes" and "nomads" are quite inappropriate to designate populations whose origins
remain obscure. Briefly, one encounters Hedâvand (who speak the Luri language [having arrived in the 18th century]); Kûtû Arabic speakers (originally from Khuzistân?); the 'Arabs, poor and Persian speaking; the Kalmûr or Kûthûr, Gilak speakers, whose chiefs lived in Tehran (descended from the Kalmûr Mongols?); the Persian speaking Pâzûkû ('Turks of Khûrâşân', Kurds?); other small tribes or diverse groups: Turks (Sâyî Sûrûp, 'Ar Manûs, Kûl, âli of the Kûh, Puts, etc.); the Turkish of (Rûmîân, Khûrâshân, Kurds; 'great nomads' ('All Kûlî, Gilak speakers; Hasûndû, Turkish speakers; Sângûsad, who speak an Iranian dialect from the North-West); numerous details on these tribes (number of tents, migrations, summer pasturing etc.) in Hourcade, 40 ff.; de Planhol, 33 ff.; Hourcade and Tual, 23.

The use of Turco-Mongol terminology in nomadism reflects the acceleration of the process of bedouinisation in the region following the Mongol invasion. The term yûrî refers to the tent as well as to encampments (Styî, 195) or pastures and summer settlements (Rabino, 175). The summer pasturing (yâyaşî) of the Lûr was frequented by the Il-Khûjandî, the Timûrid, the Siwash and the Kûdjâr. Under Nâšir al-Dîn Shah (1848-96), the pastures were grazed in summer by horses from the Shah's stables (de Planhol, 21). He often set up his summer camp there, to be followed by all the dignitaries and their families, military men, ambassadors (numerous references to the camp of Lûr in the diplomatic archives, e.g. Lârowd, where it is told by travellers, soldiers, sportsmen, etc.). Under the Pahlavîs (1925-79), the pastures to the west and south of Damâvand remained for the most part the property of the crown or of public services (national education, army, agriculture, etc.), who leased them to the nomads.

While profitting from the decline of sedentary mountain life, nomadism has recently suffered the impact of the expansion of the Tehran conurbation. Semi-nomadic groups adapted with varying degrees of success to the re-organisation of the milk and meat markets, becoming the salaried shepherds of large societies, "city-dwelling" nomads or villagers. But the trend towards sedentary living, utilisation of the motor-car, etc. have modified migratory practices. In some cases, nomadism has been replaced by pastoral migrations of the Alpine type (Hourcade, 44-5). Other factors have contributed to the decline of nomadism. The development of tourism and of sporting activities (mountaineering, trout fishing, etc.) practised by the nomads, sport facilities and sporting activities in neighbouring areas has led to the creation of cottage-industries and of construction projects; inevitable measures for the protection of the environment have brought about the extension of natural reserves to the detriment of the pasture-lands. But it is the construction of the dam of the Lûr, designed to improve the water-resources of Tehran, which has had the profoundest impact on nomadism. With its foundations laid in 1975, this huge dam (105 m. in height; 1,000 m. long; reservoir of 40 million cubic m. of water) was due to become operational in 1980. Ecological constraints—particularly the erosion of the banks and terraces as a result of over-grazing—brought about the expulsion of the nomads from 1976 onwards (ibid., 43 ff.). The abandonment of large industrialisation projects should in principle favour the renewal of the traditional economy and of nomadism which had been tending towards modernisation and self-destruction (ibid., 47 ff.)

Rivalries between the nomads, the villagers and the state over the appropriation of pasture-lands are reflected on the administrative level. Originally belonging to the Ustân-i Markaft (bakhsh of Afshâr, šahâristân of Tûrân; DC, i, 195), the Lûr has seen its southern area attached to the villages of the southern slope (Ustân-i Markaft) and the rest shared between the šahâristân of Nûr and Lûrdjian (Ustân-i Sâmâd, 196), the properties of the crown and the state lying between these two spheres of ownership (de Planhol, 26 ff.; see below). The construction of the dam has led to the creation of cottage-industries and of tourism and of sporting activities (mountaineering, ski-ing activities in neighbouring areas) (ibid., 42 ff.), in places where it crosses inhabited territory, the latter is called Ghârsânây (from the Turkish "river which bores", according to de Planhol, 17, n. 13; perhaps also in memory of the Il-Khûn Ghârsân; see below).

Constituted of volcanic rocks thrown up in the Pliocene and Quaternary periods (clear trachytes and coloured andesites), the cone of Mt. Damâvand (400 km²) offers on its eastern slope—dissected by the Haraz and its tributaries and a multiplicity of deep valleys—conditions more favourable to human settlement than exist on its western slope, which is made up of a compact and inhospitable mass of andesites. The high valley of the Lûr does not fall below a level of 2,500 m., although the more deeply excavated valleys descend towards a level of 1,500 m., the furthest limit of permanent settlement currently being in the region of 2,300-2,400 m. On the eastern periphery, the soil produced by the decomposition of volcanic deposits engenders a stretch of fertile and well-watered ground. These natural conditions explain the human dissymmetry of this volcanic massif, which gives to Lûrdjian its life and its individuality (de Planhol, 27 ff.; on the morphology and physical geography of the Damâvand, see P. Boute, M. Derruau, J. Dresch and Ch. P. Péguy, in Mémoires et documents, viii, CNRS, Paris 1961, 39-51; see also CHI, i, 44 ff., 189, 413).

Socio-economic outline. A remnant of one of the most ancient provincial models of northern Iran, Lûrdjian is characterised by an exceptional density of villages, in contrast to the remarkable void existing upstream of the Lûr towards Pulûr as well as in the down-stream valley, on the Caspian side. Life in the settled areas, in the main valley, is closely linked to that of the high pasturages of the Lûr and of Lûrdjian. The traditional equilibrium is based on a minute system of balance between intensive agricultural exploitation of tiny plots, the pastoral life and complementary resources supplied by the winter emigration (on land use and irrigated and pluvial cultivation—corn, barley, lucerne, vegetables etc.—the agrarian structure and rustic landscape, the pastoral life and exploitation of the mountains—raking of small and large live-stock—see de Planhol, 22-8; also Hourcade and Tual, 34 ff.). The rigours of the climate and the lack of winter resources are the cause of the significant migrations. In winter, only the peasantry and the stock-breeders remain on the mountain. Some farmers possess arable land on the Caspian plains. Traders and artisans (manufacturers of felt) traditionally
emigrated towards the Caspian. Conversely, the people of the plain of Amul used to spend the winter on the Lâr. Some important resources were drawn from the transit of Surchina (183 ft.), from mountain traffic along the traditional highway axes: the Harâz valley route (Tehran-Amul by way of the col of Imam-zâda Hâshân); the route of Nîr and Kudjûr through Aïdjû, via the valley of the Lâr (Hourcade and Tual, 25 f.).

Having witnessed an expansion at the beginning of the century, sedentary rustic life has experienced a constant decline as a result of this migration towards the Caspian and towards Tehran, a new economic focus of the region. In the 19th century, new migratory patterns are seen to emerge; in every increasing numbers, the nomads establish themselves in the high altitude cultivated lands abandoned by the villagers (de Planhol, 32 f.). The improvement of roads, the reorganisation of the production and marketing of dairy and meat products, have transformed the pastoral life and nomadism (see above).

The most important resources were drawn partly from the Lâr region (see Hourcade and Tual, 29 ff.). The uneven settlement of the land and the social contrasts are reflected in the appearance of dwellings (large houses belonging to farmers/stock-breeders; the small houses of the emigrants; more recently, summer resort chalets). Cave-dwelling is an ancient practice; caverns excavated in the calcareous rock are currently used for sheltering live-stock and fodder (de Planhol, 26, nn. 35, 56). Study of the system of ownership reveals a predominance of small properties.

Quite complex contrasts exist between small-holders and exploitative farmers/stock-breeders. Although the standard of living is fairly low, it is possible to regard Lâridjân as a "rural democracy, with a hierarchy, but without glaring inequalities" (de Planhol, 29 f.). Lâridjân is the point of departure for the ascent of Damâwand [p. 95] (Dumâwand/Dumhâwand/Duhâwand, etc.), a mountain which plays a significant role in the myths and legends of Iran [Ibn Isfandîrî, tr. Batrun; indelibly connected with local folklore (Muâhersî, Lâr, in E4)], Nadîr Khusraw (8th/11th century) relates that sulphur extracted from the crater was wrapped in the skins of cattle which were then rolled down the slopes (Sajân-kâna, ed. Dâbîr-Siyâyî, Tehran 1344/1965, 7). Ibn Isfandîrî (writing in 613/1216) describes the Firewaids al-dhibhât—so the ascent could be made in two days, starting from the village of Ask (6, 92-5; tr. 35-6). In the 19th century, two scientific ascents were made within a few days of each other in September 1857 (W. Taylour Thomson and E. d'Arcy Todd); subsequently, it became fashionable for Europeans (travellers, diplomatic agents, explorers, mountaineers, etc.) to make expeditions to Mt. Damâwand (de Planhol, 19 ff.). Ascent by the north face being something of an exercise for experienced climbers, it is more easily accomplished by the south face starting from the village of Rayna/Reine (tr. the south-east, 2,200 m. in altitude) with the aid of multilayered vehicles well equipped with the mountain (see De Planhol, in Iran, Nagel's Guide, Cengene 1973, 125-6). As warriors of repute, the Lâridjâns have had occasion to defend their territory or to support the claims of local chieftains. After having fought against the Kâjârs, they supplied them with appreciable help in the maintenance of order in the north as well as in the south of Iran (see below).
remains uncertain. (Its origin is lost in the myths and legends of ancient Iran which cannot easily be traced with any certainty in any particular source. Indeed, “Lârdijân is the most ancient region of Tabaristan.” Firdûsî (i.e. Thrasea/Frâston) was born in the “village” (dîkâ, which can have a broader sense) of War which is the principal town (kasâbâ) of this region (nâshiyâr) and where the cathedral mosque (dârâmî) and the oratory (muqâllâ) are situated”) (Ibn Isfandiyâr, i, 57). Waraka for War is an incorrect reading by Browne (tr. of Ibn Isfandiyâr, 25), followed by Râhânî, 40; Minorsky, art. “Ask” in Encyclopædia Iranica (who identifies Warakâ/Warâkî/Varama with the village of Wâma in Lârdijân; de Planhol, 20, etc. According to Anâmil (31), the birth-place of Firdûsî is Lârdijân, kasabâ of the region of the same name. According to Marâṣîfî (T, 4), Gurgîn Miâfâ, the “founder” of Gurgân, possessed the region of Ray: “in winter, his hîdâd (âfû) was at Karâfī Rûd, in summer his hîdâd was at Lâr (T, 4; on Lâr Karâfân, see below). More easily identifiable is Dâhîbî/Calâhî/Câlamî, at Dîlîr-durgâk, at the mountain of 95 in the Dunbâwân/Damwân, an area of rich pastures where Firdûsî was brought up, went hunting mounted on a cow and devoted himself to training oxen as saddle-animals, and whence he set out to conquer Ūrâk (Ibn Isfandiyâr, i, 57 ff.; according to de Planhol, 20, n. 34), there is in this myth an echo of the ancient mountain practice of riding oxen. The fact that Lârdijân designates sometimes an urban settlement, sometimes a district, nothing to do with the contemporary sense of the term, seems to indicate that Lârdijân is the mountainous frontier zone where the Harhaz flows (Hûdûd, 77). Probably because of the fairly late Islamisation of the region (by the âhâds), Lârdijân is rarely mentioned by geographers who wrote in Arabic in addition, their works contain ambiguities. Thus Lârî (supposedly the ancient form of Lârdijân), named as a village or a district of Tabaristan (Mar­quart, 127, 351) is not the present day Lârdijân (on Lârî and Marquart’s interpretation, cf. below, 31). According to Yâhût (iv, 140) “Lârdijân is a small town (hûlâyda) between Ray an­d Amûl Tabaristan; it lies at a distance of 25 farâšâns from each of these two towns; it is protected by a fortress often mentioned in the chronicles of the Buyâyids and of Daylamî. Villages, fortified points, places allegedly situated in Lârdijân are mentioned by various sources. The village of Trâ is mentioned under the name of Bârâ/Yârâ [al-îstâkîhî, 210; Ibn Hawkâl, 271, quoted by Schwartz, 789] which refers to Trâ near Ask, or to an ancient permanent village to the south of the valley of the Lâr (see above): Ask (Ibn Isfandiyâr, i, 83; Fulîlî, Fulîmî Lârdijân, Kâfî-yî Fûlî (Marâṣîfî, TT, 116; TG, 284; Kâfî-yî Lavandar (near Raynâ) (Marâṣîfî, TT, 213-24); the šâfâ or the urban settlement of Khorûd/Khûrûd/Kârûd (Amûlî, 135; Ibn Isfandiyâr, i, 78, 99; Marâṣîfî, TT, 54, 213). This or the šâfâ of Lâr, without further definition, are also mentioned (Ibn Isfandiyâr, i, 297-9; Anâmil, 209; Marâṣîfî, TT, 224). In the Sâsânid period, Lârdijân must have belonged to the Pers. Lâr, of which the sovereign was Mâh gunûsp (or Djjâhnaššâh) at the end of the Arsacid period. Subsequently, this region belonged to the Sâsânid Kawâd, then to his son Kâwâs. Later it came under the control of the Sâsânid family of the Kârâkâs (Marquart, 330 ff.; Kârâanî, Kârâan, ii, 632). In a broad sense, Kâhî Kârîn or Dîhîbî Kârîn designated the eastern Elburz. According to Rabînî (1), it included present-day Lârdijân, the Sawâd Kôh and the Hâzdâr-îrnih. But according to the Djjâha-nâmâ, the Dîhîbî Kârîn is also called Djjâhnaššâh and Bulaydâ (Râhânî, 20). Raynâ and the Dunwân/Damwân does not form a part of this mountain (Muhammad b. Nâjidî Hârîn, Djjâha-nâmâ, ed. Tehran 1342/1963, 58). At the time of the Arab invasion, the situation in the region is unclear, especially as regards the Lâr (valley of the Lâr), the southern limit of Lârdijân, where ancient occupation is attested most notably by the presence of remains of sanctuaries dedicated, it is said, to Nihâl/Anâbîthâ (Karâmânî, op. cit., 389, 392). The mountainous region to the north of the Ray was called Kârîn (Kâhârân), and was divided into Kârân-dâkîh (for Kârân-dârân) and Kârân-bûrûn (Karâmânî, op. cit., 3 ff, with reference to al-îstâkîhî, Ibn Hawkâl, al-Mukaddâsî, Zahârî-yî Kâzâwînî, Yûkît, etc.). The Lâr presumably belonged to the Kârân-dâkîh. Lâr-i Kârân is found in various sources (Ibn Isfandiyâr, i, 56; Marâṣîfî, TT, 122, 124; Anâmil, 182 f., etc.). But reference to Lâr â Kârân (Ibn Isfandiyâr, i, 217 f; Ibn al-îstâkîhî, 232) is also found, which gives grounds for supposing that one part of the Lâr belonged to Kârân and the other part to Lârdijân. Furthermore, the mountains to the north-west of the Lâr whose waterways flow towards the north, form part of the Râd-bârâ Kârân (Karâmânî, op. cit., 201). It also appears that the Lâr, endowed with at least one fortress, at times exercised a certain independence between Lârdijân, Lawâsîn and Kârân. It may also be noted that—at least on the geographical level—the mountain range of Kûrân formed a frontier with the mountains of Ray (Ibn al-îstâkîhî, 304, and Ibn Hawkâl, Şrrâd al-arûd, 320, quoted by Karâmânî, op. cit., 18). At the time of the conquest of Ray (which al­Tabârî locates in 24/643), the Masûmûghân (Mas­î-Mûghân, Grand Master of the Magâl) who exercised jurisdiction over Dunwân/Damwân, Khwârî, Lârî and Shîrîz, agreed conditionally to the payment of the giyârâ and īfârâf (Karâmânî, KB, ii, 487, after al-Tabârî and Ibn al-îstâkîhî). According to H. Karâmânî (Karâmânî, KB, ii, 487), the Masûmûghân, a frontier with the mountains of Ray (Ibn al-îstâkîhî, 304, and Ibn Hawkâl, Şrrâd al-arûd, 320, quoted by Karâmânî, op. cit., 18). In the absence of indications in the sources which would permit an appraisal of the economic worth of the region, it may be said that, in medieaval Iran, Lârdijân exercised—as a result of its geographical position—control over a military, commercial and pastoral route, i.e. the Ray-âmûl axis towards the Caspian Sea and the transversal routes towards Kûnîn and Khûrâsân via Frâsû-kât to the east, towards Kâzâwîn and Adhâr-yâxânîdân to the west. A highway also connects Arîm, in the Hâzdâr-îrnih, to Lârdijân (Râbînî, 113). Other transversal routes were added later (see below). This function would pre-suppose the existence of a stable local power. The latter was exercised by governors usually bearing the title of marâšîn (the term Lârdijân seems to have had a patronymic connotation). Ibn Isfandiyâr suggests to us with this list of these marâšîs beginning with Fâji b. al-Marzûbhîn in 235/866 (the list has been partially reconstructed by Rabînî, 147, up to the 7th/15th century). In the final third of the 3rd/9th century, Sahî b. al-Marzûbhîn constructed across Lârdijân the route which, in earlier times, had been impracticable both in winter and in summer, and he took steps to ensure its security (Ibn Isfandiyâr, i, 122).
Like other chieftains of Tabaristan, the governors of Lārījān acceded a warm welcome to the ʿAlīṣ. The chieftains of Lārījān and of Kašān rallied to the support of the brother of Ḫusain b. Zayd, known as al-ʿAlīṣ al-Saghīr (Ibn Isfandiyār, i, 233; Marāṣīḥ, TT, 77, 134). In 741/1339–40, the ʿAlīṣ Muhammad b. Zayd, brother of Ḫasān b. Zayd, attempted to take possession of Ray; on being defeated, he sought refuge in Lārījān (Ibn Isfandiyār, i, 255; Iṣn al-Aʿlā, vi, 59). In the Saddīḫ period, the phase of disorder which followed the deaths of ʿAlīṣ al-Ḥusayn al-ʿAlīṣī (Ibn Isfandiyār, i, 39). In the Salsjūk period, the phase of refuge in Lārisliʿn (ʿIbn Isfandiyār, i, 333; Ibn al-Qalʿa, 662). Ildegiz [see ildegiz] al-Dawla in carrying off “the consternation among the Bihwāndī ispahbāds” (Ibn Isfandiyār, iii, 112). Unquestionably, the power of Lārisliʿn, which had always been a part of “Irāq” (Ibn Isfandiyār, iii, 112). Nevertheless, Lārījān benefited — as did other regions of Iran before the Mongol raids — from the turmoil and anarchy that followed the defeat of the Seljuq state. After a period of conflict with the Ismaʿilis of Ray, ʿAlīṣ Rustam I (534/1140–65) (see Iṣn al-Aʿlā, iii, 77; Amūlī, 126). Mandalūr, marāṣīḥ of Lārījān, turned Kāla Kuhruʿī (in the downstream area, later known by various names, including Kārl/Kārūd) into a place so prosperous that people of all professions, natives of India, of Egypt and of Syria, came and settled there (Ibn Isfandiyār, iii, 77 ff., 99); this kāla was destroyed in 765/1362–2 and later rebuilt (Marāṣīḥ, TT, 83, 77). Other fortified places in the Lārījān region include: the kāla of Lārījān (without further definition) is named in connection with various events (Ibn Isfandiyār, i, 297, 299; Amūlī, 120); Marāṣīḥ mentions the kāla of Fuhīl (TT, 19). Mandalūr allied himself with the other chieftains of Tabaristan, to ʿAlīṣ Ḥusain Rustam Bawānī; his troops formed part of the army which conquered Bistam/Basam and Dschīgān (Ibn Isfandiyār, iii, 94; Marāṣīḥ, TT, 77, 19; Amūlī, 120). At his death in 598/1202, Mandalūr was a violent and irreligious man. He killed his father and his brothers (through trickery), renewed the alliance with Kublai Khan, and, especially after the conclusion of the Treaty of Sarjūk, that this conversion took place at Fīrūz Kāh (approved by the Il-Khans). Argān Khan “had caused a fine palace (kāhlī-ābād) to be built at the summer resort of Lār, at the foot of Mount Damwand; this place is now known by the name of Kāhlī-ābād” (Rāshīd al-Dīn, iii, 229). This was no doubt the place where Ghazī Khan solemnly adopted the Muslim faith in Şīa'ban 694/June 1295 (at least, this is the version given by some authors: d’Ossen, Histoire des Mongols, Amsterdam 1882, iv, 331–2; ʿAbd al-Majid, Tehmār, 255/1927, 256; J. A. Boyle, in CHF, v, 278). But details as to the site, the date, the number of Mongols converted on this occasion, etc., remain poorly defined in the sources. According to the leading chroniclers, it was at Fīrūz Kāh that, following the advice of his māsīr Nawrūz, Ghazī Khan was converted to Islam at the beginning of Şīa'ban 694/mid-June 1295 in the presence of the ghulāt Sādeh al-Dīn Isrāʾīlī (Rāshīd al-Dīn, Dīnī, al-tabawārīh, ed. Alkāde, Dama 1937, iii, 294 ff.; Westph., Taʾrīḫī, Tehran 1338/1959, 316–17, Rū ṣād al-ʿAmūlī, Ḥabīb al-tabawārīh, Tehran 1333/1954, iii, 144; ʿMir Khān, Ṛawżāt al-sawād, Tehran 1339/1960, v, 380). According to local tradition, it was in the valley of the Lār, at Kūshī Kāh-ārgān, that this conversion took place (Paevrier, 259). It may also be noted that on numerous occasions Ghazī Khan frequented the “Yaylíkh Damwand” (see Rāshīd al-Dīn, Taʾrīḫī, Rāshīdī, ed. K. Jahn, GMS, London 1940, index).

The Timurids also thought highly of the pasturages of the Lār. It was in the region of the Lār that the Spanish ambassador Clavijo came, in June–July 1404, to visit the son-in-law of Timūr, Suleyman Mirzā, whom he found in the middle of his encampment of some three thousand tents (cf. Le Strange, London 1928, 169). Some days previously, on his way from Ardabil, Timūr had broken his journey at the wālīyāt-i Lār, in Kūshī Kāh-ārgān, which he

As elsewhere in Iran, and especially in Mazandaran, Lārīdān was affected in the 8th/14th-15th century by the increasing power of socio-religious movements and of the sayyids. In 734/1333-4, Amir Mas'ud Sarbadār forced the ʿīn-Shāh Tūshī Tūrūn, governor of the Kārān-dāvlū, to take refuge in the summer resort of Lārī-ḵᵛān (ʿAnnī, 182-3). In the protectorate of his son, Malik Sūlṭān Sayyid, the power of Lārīdān was weakened. In the years 783-8/1381-2, Sayyid Fakhr al-Dīn, brother of Sayyid Kānūn al-Dīn, took possession of Kālān-ī Nayr; in two years, he took all the ʾāyān from Tāškhūn to Lāwāsān, including the ʾāyān of the Lār and of Lārīdān (Lāwāsān, near Rayyān; Kārūn). Lārīdān was then in the hands of Kiyā Ḵᵛān Ḵᵛānī Rāizontādūn; Naʿmōrūstāk, Dayrūstāk, Tarīta Rūstāk and Kārūn were under the control of Mazandaran (Fābdī, TT, 213-14). In 795, Fakhr al-Dīn put an end to his brother with his brothers and his sons. After his death, Shāḥruḵ allowed them to return to Mazandaran (Ḵᵛānd-Aмир, Ḥusayn al-siyar, iii, 22). In 821/1416, Sayyid Muḥṣīlāt b. ʿAll seized power in Mazandaran. He entrusted Naʿmōrūstāk, Dayrūstāk and Tarīta Rūstāk to his son Malik Kāwūs and gave him authority to wrest Lārīdān from the ʾāyān of Tāškhūn; in 830/1425, Malik ʿAzīz b. Ṣafī al-Kīyā al-Ḵᵛānī Rāizontādūn, lord of Kārūn, returned to Shāhruḵ. By force or by trickery, these internecine struggles of Rustamdar and his children of Malik Bahman who were subsequently delivered to Malik Ḩusayn Lāwāsān; then he entrusted Lārīdān as a ṣiyar to a ʿlāmāh bāḥšūn (AAA, ii, 534-5 tr. 713-14). But the two Ḥāfṣīyāt of Rustamdar, who had capitulated to Shāh ʿAbbas during the summer resort of Lār retained important functions: the Malik of Nayr was appointed governor of Sāwā; the Malik of Kārūn at first retained his possessions as suzerain and became one of the trusted officers of Shāh ʿAbbas. Later, he rebelled as did other maliks of Rustamdar; their conspiracies were foiled and they were put to death. Thus was extinguished the power of the Pādūsbānids (ibid., 335-4, tr. 713 ff.).

The Ḵᵛānd-Aмир and the summer resort (ṣayyāl) of the Lār were favourite haunts of the Safavids. At the time when the ʿAlībābā anṭār enthroned Shaft Tabīʿkāp (931/1524-5), the waḥīd ʿEʿlī Ṣafavī Kīmīšū established his summer quarters at Lār, before marching on Kūbdūn which had been invaded by the Uzbeks (AAA, i, 48, tr. 78). On many occasions, Shaft ʿAbdallāh visited the ʿayyān of Lār (ibid., ii, 399, 425, 543). Although the history of Mazandaran and of Ḵᵛāsīr is relatively well-documented from the time of the Safavids to the present day, points of reference concerning the Lār and Lārīdān do not become plentiful until the Kādīrī period. Tabīʿkāp II lived for two years in Mazandaran (1173-4/1764-5), in particular in Lārīdān where he was joined by Fath ʿAll Ḵᵛān Kūbdūn, who became his sipah-šādīr (Maḥjūrī, 190 ff.; ʿAlīādī al-Salṭāna, Muḥammad b. Ṣadūq-i ilāhī, i, 522). The chief put to death and the potencies of Mazandaran took the side of the ʿAlībābā against Muhammad Ḥasan Ḵᵛān Kīmīšū Kūbdūn. Sābā ʿAll Ḵᵛān, leader of the dignitaries of Lārīdān, prevented him from going to Ḵᵛāmīšū; the misconduct of Wall ʿEʿlī, the envoy of the Kādīrī chief, led to the revolt of “the people of the mountain and of the plain”, under the command of Muḥammad Ḵᵛān Ṣarāwī, Afghan governor of Mazandaran (Maḥjūrī, 123-4). After the death of ʿEʿlī Ṣafavī Kīmīšū (1291-2/1873-4), numerous Lārīdānīs and Mazandaranīs aligned themselves to Muḥammad Kūl Kūl Kīmīšū Kūbdūn, estranged brother of Ḵᵛāṣīr Muhammad Ḵᵛān (ibid., 131). After defeating ʿAll Murād Kūl Ḵᵛān and his coalition of Lārīdānīs, Afghans and men from the Lūr, Ḵᵛāṣīr Muhammad Ḵᵛān controlled the whole of Mazandaran and of Astārābād (end of 1394/1776). But in the conflicts in which he was continually at odds with his brothers, the Lārīdānīs fought on the side of his enemies (Ridū Kūl Ḵᵛān, Mihdī Kūl Ḵᵛān; ibid., 123-4). Captured and then set free by Muḥammad Ḵᵛān, Kūl Kūl Ḵᵛān again rebelled. With his Lārīdānīs at his sides (muskeśū), he captured Ḵᵛāṣīr Muhammad Ḵᵛān, who was set free on the intervention of Muṭṭaqa Kūl Ḵᵛān (ibid., 133, 134, i, 222; according to SīpīḤīr, Muḥammad al-ḵawārījī, i, 20-2, it was ʿAlī Ṣafavī Kūl Ḵᵛān who liberated Ḵᵛāṣīr Muhammad Ḵᵛān). Beaten once more by the army of Astārābād, Ḵᵛāṣīr Kūl Ḵᵛān rallied to the cause of Ḵᵛāṣīr Ḵᵛān. But
in 1265/1849, the Lārī-Djarān was pursued by the Pahlavīs (Karlr

1. Other Lārs.
Besides Lār in Fārs (Lārī-Djarān) and Lārī-Djarān,
toponym Lār and its variants are widely attested
the Iranian lands. Within the present-day fron
time to be noted (after DG):

village
gahristan  DG
Lārī-Djarān  Maḥdīyar  i, 196
Lārī-Djarān  Mahdīyān  i, 197
Lārī Zandjan  ii, 268
Lārī-Muhammad  Husain Khān  ii, 269
Lārī-Sar  Fāmīn  ii, 268
Lārī (Lārīna)  Sārī  iii, 266
Lārī (Lārīn)  Sārī  iii, 267
Lārī-Bihbahān  vii, 325
Lārī  Cāh Bābār  viii, 383
Lārī-Bahā  Sabałošār  ix, 374

Lārāh is alleged to be the name of a locality at
Hazar-Djarāf (Rabīnā, 142).

The gorge (tang-e) of Lārī on the northern s
portion of the Elburz in Mazandarān is known for its depl
iron ore (Lūgχā-ni-mā-i Dīhkhudā; after Kavv,
Dargāh-e-yi išātrī, 259-60). A Lārān ex
Badākhšān (Minorsky, Haddi al-ālam, 116
. n. 1). A gorge called Lār is mentioned in Kasb
26.. (Mīrzā Muhammad Haydar Dughāšt, Ta'rikh
Kāšānī, tr. Elias and Ross, London 1895, repr.
453). According to Minorsky, Lāhī-Djarān/Lārī-
are variants of Lār (Lārī-Djarān, in E1; Hus
407 f.). Lārī-Djarān and its variants are widely
presented in Gilan and elsewhere, in Aḏābar-bā
in Fārs, in Dāgāstān, etc.: Minorsky, ibid.,
also W. Ellers in Ar C, xiii [1954], n. 174).

Variants of Lār have led to some confusions. Ta
although Yāğıt (iv, 280-1) has established a
differentiation between "Lārī" and "Lārān" that
have been made to discern in the latter topon
the arabised form of Lārī-Djarān (Marquart, 127,

According to Minorsky, LāĪ-Djarān is known
for its southern boundary around the Elburz in
Asmā'ul-e Maktūm, on whom Āghā Muhammād Khān
sent by Ā'īl Mūrād Khān to Māzandarān, on
whom Āghā Muhammād Khān inflicted a crushing
defeat at Sabzawār: the cruelty of the Kādjar
Khān towards the Lārī-Djarān has remained proverbial
in the region (Fāsā', i, 233; Mahdīyar, 134). But in
1298/1881, Shaikh Wāls Khān Zand, the son of Ā'īl
Mūrād, asserted his control over the whole of Māzandarān,
and the onset of the Lārī-Djarān, Fārs, Kāshān, Lārī-Djarān and Rustam Dar (i.e.
Nār-i Kūruk), Fāsā', i, 224-3. The following year, Ā'īl Mūrād Khān was obliged to recapture
Māzandarān before proceeding to take possession of Teherān.

Under Muḥammad Shāh (1834-48), the khāna of Lārī-Djarān enjoyed a quasi-independence. This semi-
autonomy was founded upon control of the principal economic thoroughfare between Māzandarān and Teherān "in a fairly subtle equilibrium of forces and
and services rendered with the sovereign who ruled not far from there" (de Planhol, 19, n. 23).

Although the decline of the town of Ask became
with all the officers of Māzandarān (Mahdīyar, 177). The following year,
he had to re-establish order in Fars with his
Lārī-Djarān horsemen; he entrusted the government of Kuhgānūya and of Bihbānū to his Lārī-Djarān actors and acted himself in the role of administrator (Yimīl: Fāsā', i, 306-7). The prosperity of Lārī-Djarān is again indicated in 1860 (Brugsch, i, 295) and
in 1865 (de Philippis, 256-7). At the start of the journey of Naṣr al-Dīn Shāh to Māzandarān, in 1283/1866,
Ā'īl Mūrād Khān presented himself to the ruler with all the officers of Māzandarān (Mahdīyar, 177).
Although the decline of the town of Ask became
a constant process, at the time
Nāsir al-Dīn Shāh to Māzandarān, in 1283/1866,

Bibliography and abbreviations: A*

(3) The Masjid-i Djum'a, for which we have no detailed, historical description. Ibn Bâdi' mentions a devish convent (*zâmiyya, i.e. khânâkhâh*) of the famous Shaykh Abû Dula Muhammad. At the opening of the 17th century, there was situated near the Kaysariyya bazaar "a very great mosque, the only one of the town"; it contained the marble tomb of a saint constructed "in a fine court outside the mosque" (Rebelo, 159). A marble *mshar* of Gudjraft style, allegedly dating from the 8th/9th century denotes an important town of Fars and its surrounding region (Lar and Lâristan), an island and an islet in the Persian Gulf, and various islands and a region of pastures in southern Persia (Lâr and Lârîdjan).

1. The town of Lar (lat. 27°42' N., long. 54°20' E.) is the chef-lieu of a *shâhirâd* (which becomes *farsâdār*, see Lârîdjan, below) of the province of Fars (sûdeh-e Fars). It is situated on one of the roads connecting Lar, viz. the Persian Gulf ports and the Sea of Oman (Daryâ-yi Úmân), 366 km. from Shâh״, 366 km. from Bandar Lâbān (g.v.) and 200 km. from Bandar *Abbâs* (g.v.). Lar is an old station on the caravan route (9th-12th/15th-16th centuries), and lies at a height of 909 m. in a moderately mountainous region (ca. 1,000 to 2,000 m. high). Because of the region's aridity, the town's drinking water comes from wells and from cisterns for collecting rain-water (birkas). For irrigation, a network of *michi* (g.v.) is used. Unlike other towns of Fars, ans with the earthquakes, Lar has retained relatively well its former appearance, e.g. in its wind-towers (*bid-girs* [g.v. in *Suppl.]), its labyrinths of streets, alleys, etc. Only a single new avenue, the *Khvâbân-i Himmat*, crosses the town from north to south. The most interesting monuments comprise:

(1) The stone-built fortress *Aşhadâh* Paykar (*"having a dragon's body") which dominates the town from a rocky spur. According to legend, it was built by an army and treasures belonging to the *Khvâh-e Fârûz* (g.v.) of the Persian Safawid empire, viz. the Persian and below) of the province of Fars. 1861, no. 371; 110: 1. To plan, Pl., of a town or city, 15. 1857, 367-71, 424-7; F. A. Buhse, *Frfreise von tiefsten Sektion der Phasis* (1956), 183-224; Ta'rikh-i *Farhang-i Iran-zamân*, vil. 3[1337/1958], 177). The ancient castle of the kingdom of Lar is said to have been destroyed by an earthquake in 1593 (the ruins are mentioned by 17th century European travellers; see Calmard, 150). The region is full of fortified places, in particular, at Girs, most of them in ruins (on the *Bahrs* of Lar, see the *Magaziner-Mufadal*, ed. Amb, in ibid, 174).

(3) The Masjid-i Djum’a, for which we have no detailed, historical description. Ibn Bâdi’ mentions a devish convent (*zâmiyya, i.e. khânâkhâh*) of the famous Shaykh Abû Dula Muhammad. and coming from Lār, is preserved in the Fārs Museum at Shirāz. This mihrāb poses an historical problem; was it brought to Persia in its present state? And were the inscriptions on it added in Persia? (see R. Howard, *The Lār mihrāb*, in *Art and Archaeology Research Papers*, ix [April 1970], 24-5, with a photograph which does not permit the decipherment of the inscriptions).

Lār is divided into 14 quarters (kuy). Like most modern Persian towns, it now takes in several suburban areas. It has all the organs of civil administration, a military garrison, schools (a dabāsīstān and four dabistāns) and an airport (to the south-east of the town). Although the climate of Lār is relatively more tolerable than that of the Gulf coasts, various illnesses are rife there. In particular trachoma and filariosis, both for long endemic in the region. The demography of the town has followed the evolving of the natural conditions and the historical and economic vicissitudes of the region (see below).

2. Lāristān. Geographical sketch. As a province of southern Persia on the Shirāz—Bandar ‘Abbās axis, Lāristān is generally reckoned as part of the garmsārd or warm regions of Fārs, with which it was integrated at the opening of the 11th/12th century. Since its influence spread over the neighbouring regions (see Map 2), its natural borders have fluctuated. In general, they may be fixed as follows. In the north-east and south, the old regions of Sabā (centred on Furg) and of the Shabankīa (centred on Idj, now Īstahbānī; Lāristān takes in Dājūm, to the north of the Dārāb). In the east, along a line passing half-way between Dājūm and Dājūm and connecting with the Gulf littoral in the region of Gawkānd (embracing the lands of Bid Shahr, Khundī, ‘A‘almarvdagh and Galladār). In the south, the Gulf littoral (ports and islands of the Gulf of ‘Umān, embracing Lāshīrīn, from Cape

* Bīkhā, meaning a steep-sided valley, derived from bīkh, "river-bed", in Lāristān (Iktidari, Farhang).
** Fūmīstān, from fīm, meaning "coca" in vernacular Persian.

Nāband to Bandar 'Abbās. In the east, Kārwistān. In former times, certain adjoining regions (such as Furg, Tārum and Hūrmuz) have been on occasion attached to Fārs, on others to Kirmān; Kārwistān / Kārwistān was taken over by the Shābānḵāra in the 7th/8th century (see below, on history).

As noted by numerous travellers, this region has distinct geographical features. Nevertheless, it has never formed the object of detailed geological studies; as in regard to archaeology (see below), only the peripheral zones have been studied. The region is situated to the south of the main spine of the Zagros (the "Main Zagros thrust line", according to A. Ruttner and J. Stöcklin, in Bull. Amer. Assoc. of Petroleum Geologists 1968), i.e. on the edge of the Arabian formation-level which juts forth a salient into the region of Bandar 'Abbās. In certain marginal zones belonging to the Cretaceous period there are included some Eocene period formations, such as the "Ginaw series" (at Kūh-i Ginaw; see Pilgrim 1924, 59 ff.). The autochthonous, marginal folds which make up the mountainous terrain which is characteristic of Lāristān are clearly marked out. With their east-west orientation, they are made up from a basis of an epicontinental sedimentation; their composition (calcareous rocks, marls and gypsum) suggests the existence of fairly shallow seas. In their immediate vicinity are often found domes of salt, generally considered as being of Cambrian origin. The main concentration of these domes of salt is located in one part and another of a line connecting Lar and Bandar 'Abbās (see J. V. Harri-
son, in Camb. hist. of Iran, i, 179 with map). These marginal folds are closed on the south by the Kûh-i Khâmis (opposite the island of Kîsh [26]), which is made up of calcareous rocks described as "toedid or putrid" (hippuritic limestone) belonging to the structure bearing the special name of the "Khamîs series" (Pilgrim, 1961, 45, 60). The "Hurmân series", conglomerates of sand and rock found on the periphery of most of these salt domes, stretch as far east as Târs and Kirmâna and possibly further to in Lâristân (Pilgrim classes them as Jurassic, ibid., 45, and Harrison as Cambrian, ibid., 113).

The geography of the region is characterised by a relief which is lower than elsewhere in Fârs (especially along the axes Shîrân-Bushâr and Shîrân-Bandar Tâhirî) or further to the east in Makrân. Along the Dihurân-Lâr road, the highest point is 2,100 m., and only along the edges of Lâristân is the 3,500 m. mark passed (Kûh-i Furgûn, 3,280 m.). Elsewhere, heights are more usually between, 1,000 and 2,000 m. Lâristân suffers from frequent earthquakes, some of which have been described or noted by chroniclers and travellers; six have been counted between 1933 and 1960. In 1960, one of them caused much destruction and numerous casualties at Lâr and Gâhâsh (see photographs in the National Geographic Magazine, Jan. 1961, 58-59). The hydrography of Lâristân is very clearly marked by aridity. Except along the margins, snow does not remain long in winter, and the rainfall is feeble (at the most, 200-300 mm. per annum). The water intended for consumption or for irrigation is frequently brackish (see below). The rivers with a regular flow are very rare: rainstorms gouge out ravines across crossing-roads, and floods are often the cause of catastrophes. The most important river is the Zîrân, with local variants, as the Rûd-Sâna-yi Shîr Mihrân runs from west to east, from the dihurân of Fârsâvar to Bandar Khâmis. It is totally useless for agriculture; its flow is very feeble, and it can be forded at all times (ibid., 97). There is a great contrast between the plains of the littoral and the interior (see A. H. Adle, Socio-religious aspects. The story of the population of Lâristân is an extremely complex one. Heterogeneous tribes have been added to an ancient Iranian stratum of agriculturists and pastoralists. Elements described as Mongol were still in course of sedentarisation in the Kurbâl district at the end of the 7th/8th century (Aubin, Lâr médiévale, n, 24). The presence of Turkmen, who intervened in the affairs of Lâr at the beginning of the 14th century, presents an historical problem (ibid., 496, and below). From the 10th/11th century onwards, travellers mention the presence of numerous nomads. Kâshâri groups spent the winter in the Kûndî district (Le Fars, 17, 21). Some Bahârî had become sedentarised and lived in tents on the plains of Yazd-i Khûndî (ibid., 27). Some Bâşîr spent the winter in the districts of Bandar Lâr and some Nafar occasionally passed the winter in Lâristân (ibid., 51-2). Some nomadic or semi-nomadic families (târa) of Turkish origin have been recorded at Dûrs, Sûbicûn, Karmûstar(d), Sâhir-yi Bâgh, Ashtanân, Bid Shahr and Dîyûm and some Arabs and Bâşîr at Dîyûm, Harm, Kûrîyân and Bid Shahr (see the names in Râmîrâ, Fârâhan, vii, 209; ibid., LK, 25). There are sedentary Arab elements along the coasts, at Bandar 'Abâs, at Bandar Lûngâ (Kawânîm [40] known locally as Dîâyâsîn), and in the interior (notably the Dîhâshîyêya/Dîhâshîngdr, cf. the ghâyîhs of Bastak). The Banyans, Hindu merchants also called Mûrthânis (numerous at Bandar 'Abâs and at Bandar Kûng in the Šâfâawî period), used to play an outstanding commercial role, and there are still residual groups of Hindus in Lâristân. There used to exist an important Jewish community at Lâr, Gîlûr, Dihurm and Humruzî, and Lâr was a centre of Hebrew learning. At the beginning of the 13th/14th century, a Jew from Lâr became a convert to Islam, assumed the name of Abu 'I Hasan Lârî and secured from the Šî'î 'Islâmâmî the putting-into-force of discriminatory measures against the Jews. These measures were incorporated in a code to be applied to all the Jews of Persia, who had in special, distinctive clothing (a hat or piece of coloured cloth), and they underwent various persecutions under 'Abbâs I and his successors. In the 13th century, there were massacres, forcible conversions, expulsions, etc., and the Jews of Lâr, Dihurm, Fasâ, etc., emigrated to Shîrân (the main items of bibliography about the Jews of Lâr are to be found in L. Loeb, The Jews of Southwest Iran, a study of cultural persisence, diss. Columbia University 1970, 31 ff., with translations of the "restrictive codes", App. I, and chronological lists of intimidatory measures, App. II; on Abu 'I Hasan, see also Habib Lîwî (Lewis), Talâfîr-i Kânît-i Ìrân Tehran 1313/1935, 219 ff.)

Islam in Lâristân was notable for the preponderant influence of the Sunnîs or dervish orders: the Ismâ'îlîyya/Murshidîyya, the Dâyâlîyya (at Kûndî and Lâr), the Bâni 'Abbâsî (at Bastak), etc. The Twelver Shî'is imposed by the Šâfâawîs only succeeded in implanting itself in Lâristân to a partial extent, and numerous troubles broke out in the post Šâfâawî period, in the 18th and 19th centuries (see Aubin, Les sunnîtas du Lâristân, and below). The dichotomy thus created remains very apparent today, since the greater part of the urban and village communities are in majority Shî'îs. The sedentary Arabs of southern Lâristân are Sunnis. Amongst the tribal groups, it appears that today, only the Turkish tribes are both nomadic and Shî'is (Aubin, op. cit., 157 n. 5). Non-Islamic practices have been noted among the peoples of African origin who settled the coasts and in the islands (see below, on Lârak).

The population structure has been heavily affected by natural factors: earthquakes, floods, droughts, polluted water sources, locust-plagues, etc. These last have been the cause of dearths and illnesses: ophthalmia (from the sand storms), malaria, dysentery,
and above all the filariosis peculiar to Lāristān, caused by a parasite present in particular in the stagnant water of cisterns, the guinea-worm or Filāria medinensis, payawalīyāk in Persian and peye in Lāristān (see Iktīdārī, Farhang, 67). Accidents of history have also been the cause of depopulation (destructions, sackings, massacres, exoduses, deportations, etc.). Despite the relative economic florescence of the region during the 14th-15th centuries, the Lārists have continued to emigrate, along with the other groups of Muslim India, where they have served in the army and in the administration.

Taking into account the lack of preciseness in the evidence, the demography of the region as a whole is difficult to delineate. The only data which are even a little sure concern the town of Lār itself, and these are given below (unless there is an indication to the contrary), these items of information pertain to the town or the urban agglomeration of Lār; one should reckon 6 persons per family or household (see the references in Mattakhī, al-Iṣābā). In 1966, the Lārists occupied 3,431 households in 183,369, 52,465 being urban and 130,904 rural dwellers.

Language and literatures. In addition to Persian, Arabic (spoken on the coasts) and Turkish, Lāristān has its own particular dialect, which has been used by popular poets of the region; their verses have been partly gathered together in written form and studied (see the references in Mattakhī, al-Iṣābā). Some works in Lāristān have been published (Iktīdārī, in PI2, s.v.f.3 [1333/1925], 233-53, as well as vocabularies: K. Kamioka and M. Yamanada, Larestani studies. I. Lari basic vocabulary, Tokyo 1970 (not seen). Some works in Judaco-Persian have been written at Lār, which must have been the centre for a school of scribes, translators, copyists, etc. (see Loeb, op. cit., 41 ff.). The fate of the Jews of Lār has been put into Persian verses (mixed with dialectal terms) by the Jewish poets (see Hâbbī Līwī, op. cit., 270-1), notably by Bâbâ’ Lutf Kâshâni and Bâbâ’ Fârābî Kâshâni (cited at length by Līwī, 224 ff.).

Numerous littérature originally from Lāristān have written in Persian in all the literary genres: poetry, grammar, philosophy, mysticism, fīqā, historiography, etc. (see the lists cited by Râzī, Hâfīj ištān, ms. India Off. Libr., cat. Ethis. I, 397, fol. 1114-15; Fâsâ’ī, ii, 264 ff. Iktīdārī, LK, 135-203). To these one should add Nimdīfârī, a writer of the 19th century, on whom see A. Aubin, in PI2 [1967], 61-62; Karāmatī [ibid., Les sources du Larestân, 155]; Shaykh Ahmad Fâhštī [ibid., 170 n. 1; etc.].

Economic aspects. Though generally considered as one of the poorest regions of Persia, Lāristān is not without natural resources. Sulphur is found in many places, and is fairly easily exploitable: in the coastal regions, at Būstānī (to the west of Bandar Linga) and at Khâmīr (to the east of Bandar Linga); in the interior, at Karāmatī, to the south-east of Lār, etc. In the 19th century, the sulphur mines of Lāristān were quite productive (see Pilgrim [1908], 155 ff., [1917], 343 ff.). Gypsum [gāl] is frequient everywhere, and is easily exploitable along the littoral (Pilgrim [1908], 157-8). The iron ore and the salt of the “Hurnuz series” are more difficult to exploit. There is also some copper, unexploited, at “Karmōossaḥī” — Karāmatī (see Duprē, i, 431). Salt-petre, taken from nitric lands and abundantly in the region of Lār, yields material for gun-powder (at GirAsh, to the east of Lār; Duprē, loc. cit.). On the minerals of Lāristān, see also Fasâ’ī, ii, 338-9. After having been famous for its bows (see below), Lār was also famed for its firearms (Calmaud, i, 137). Various manufactures existed at Evaz (ca. 30 km. north-east of Lār; see Duprē, loc. cit.; Karāmatī, 48-9).

The natural vegetation covering is fairly meagre. However, Lāristān is relatively well-wooded. There are to be found vintages of tamarisk, asenas, cedars, firs, pines, tamarisk, and the cypress tree (kâbi) is also to be found. The gāl wood, which is very hard and solid, is used for cabinet-making and for timber framing. Various spiny shrubs, such as the hâhīr, are enjoyed by camels. The region falls completely within the date-palm zone, which is cultivated in the oases of the interior. The date harvest occupies a seasonal work-force, and as well as dates, cotton, tobacco (of good quality) and muscard are grown and exported (Le Furs, 163). In some places, opium poppies, sausages, etc. are cultivated. On the plains between Lār and Bandar ‘Abbâs, asfodelia, the exudation from the roots of certain varieties of Punica foedus, used in the pharmacopeia as far as in Europe, is gathered (Calmaud, 135-16). Amongst products of an animal origin, the “bezoar” has been noted (see below). One should also note the raising of and trafficking in camels (Duprē, i, 441; Le Furs, 163); a similar trade in horses, exported to India (see below); and one in sheep, whose skins were the subject of an extensive trade throughout all of Lāristān (see Duprē, i, 45; 143).

The basic problem remains that of water-supply. The water from wells and watercourses is most often brackish. Cisterns for rain water (bāraks), in various patterns (hexagonal, circular, etc.), are to be found in all the inhabited spots and at road stages. Except in certain regions of the north, in particular at those of Dīyūm and Khundī, where irrigation by kanān, wells (gālābucks) and springs is found, dry farming is generally done (daymānī, see Razmārā, Farhang, vii, 299). In the date-palm oases of the interior, these are often consumed on the spot. In addition to dates, the food supply comes, according to local possibilities, from cereals, products of market-gardening, citrus fruits, specimens of the goat family, milk products (cows, goats, sheep), poultry, etc. Travellers have noticed the abundance of game (ijxes, moufons, partridges, quails) and the excellent truffles of Lār. On occasion, grasshoppers are also appreciated (Calmaud, 120-1). Along the coasts and elsewhere in Lāristān, fish is fed to livestock (horses, camels, goats, sheep), and as well as to bovines and sheep (ibid., 124). There is a conglomeration, peculiar to the region, made from a fish base and spices (impanähā or mpyālā, called mahās in Lāristān; see Iktīdārī, Farhang, 203-4, and Fasâ’ī, ii, 283, where its making is described).

As well as the making of arms, local products include cotton cloths and carpets (jilīms, kāhi). Except in period of disturbance, the agro-pastoral sedentary and the nomadic economies complement
Each other (i.e. exchange of agricultural products and manufactured goods for the products of stock-raising, carpets, etc.).

The economy of Lär, Lärîstân was relatively prosperous in the 9th/15th to the 12th/18th centuries, but suffered in the post-Safavid disturbances and the interruption and ending of international trade (see below). The profession of caravaneers (coupled with the rearing of camels, mules, asses, etc.) used to occupy an important proportion of both the town and rural population. From this economic activity in the past, the people of Lärîstân have retained an interest in the commercial life; one meets, above all along the coast, numerous peddlers (pilawar). Also, the profession of arms (cf. the famous tasfîf) has continued to attract a good number of Lârs.

Historical evolution. Lärîstân or the land of Lâr does not emerge clearly in Persian history till the 8th/14th and 14th centuries. Until then—apart from a few sparse items of information about the neighbouring regions or about certain small places (Yâldt speaks of "Iqraym Abi Ahmad", i.e. Dîâyûm)—its past belongs almost exclusively to the little-known history of the Fâhîrds, etc. There are doubts concerning the localisation of this last according to mythical or legendary history. Minorsky (El art. Lâr) proposed to equate it with the land of the dragon Hâftân Bâshî (or the Hûftvîd of Firdawâ's Shah-nâmâ) which Ardâqâr Pâpahân killed. This dragon is said to have lived in the village of Lâr in the rustûk of Kûrândân, one of the rustûks bordering on the Gulf of the province of Ardâqâr Khûnra (al-Tabâri, i, 520). The variants Gûlîr (Kûrânâmâx, tr. Nûbîc, 50, Kûrândân ibid.) or Kûrândân (Shâh-nâmâ, ed. Mohî, v, 368) do not help in identifying it. Lâr is the name of an island (see below); Kûrândân, in the bulak of Galladar (Fasât, 1, Fûhrît), borders on Lärîstân (of which it forms part, in the large sense). At the present day, one finds several villages in Lärîstân whose names might well be variants of Gûlîr (Iktîgîrî, LK, 76 n. 2; Gûlîr belongs to the bulak of Dîâyûm, Razmâr, Fârhang, vii, 202). But there is also a Kûrândân in the shahristân of Dâh-e-ghar (ibid., 197), a Kûrândân in the bulak of Kûrândân (ibid.).

Thus the localisation of the land of the dragon Hûftvîd within the imprecise borders of Ardâqâr-Khûnra (also called Tâbâtân) remains problematical. Moreover, a legend which could have some basis of genuineness places the home of HâltvAî on the region of Band (Aubin, Lär médâvîne, n. 3). The place-name Marakî Lârân appears in the Bundakhdâr (D. Monchâzadeh, Topographische-historische Studien zum persischen Neutralreich, Wiesbaden 1973, 141). A village called Lâr exists in the shahrîshân of Câh Bâhâr (in the old udîn of Kûrân wa Makrân), populated by Sunnî Bâlûcîs (pop. 220 in 1950, see Razmâr, Fârhang, viii, 38).

According to a basî attributed to Firdâwî (lacking in the known editions of the Shah-nâmâ, but cited in the Burhân-i bâdî, whence Voles, Lexicon, s.v. Lâr; Fasât, ii, 263, etc.), the town or region of "Lâd" was allegedly "given" to Gurînî Mîlâd by the Kâyâmîd Kây-Khûsuraw when he renounced the world and distributed the Persian lands to his dignitaries. The passage from d r is found in Armenian, in Tâfî (Minorsky, El art. Lâr; J. Durmesteter, Etudes turcques, i, 79) and in various Iranian dialects (see G. Lazard, La langue des plus anciens monuments de la prose persane, Paris 1953, 156).

Previously, Lâd seems to have had another name (AAA, tr. Sâvory, ii, 807).
and these last acknowledged them till the time of the Portuguese domination (Aubin, *Princes d'Ormuz*, 94-5; *Survie de Shildu*, 26). Around 1250 also Kays was occupied by the Ormuzi, and henceforth, the international transit trade via Hormuz and the Kays-Shiraz route was abandoned.

Although Lār is described in the 8th/14th century as a prosperous town (by Ibn Batūṭa, see below), it does not seem to have played any important political role nor to have excited the envy of its neighbours in medieval Persia. The sole exception to this state of affairs, it is said, was the annexation in the 7th/13th century of Lār by the Shabānḵāra, its northern neighbours who controlled eastern Fārs and who had spread into Kirmān. According to Aubin (*Lār médiévale*, 499-500), this was an episode in the fight between the Shābānḵāra and Salghurid Fārs. From the beginning of his reign, the Salghurid Abū Bakr b. Sa‘d (628-38/1238-58) began a policy of dominating the Gulf. In this kind of race to the sea, he clashed with other local powers: Muṣaffar al-Dīn Shabānḵāra and, over control of the island of Kays, the prince of Qumūz. It was probably in 628/1330 that Muṣaffar al-Dīn seized Lār; the territories annexed extended to the Gulf shores (not precisely delimited in the west, but to Kirmān, the frontier with the kingdom of Hormuz, in the east, see Aubin, *op. cit.*, 500). Lār’s orientation towards the Gulf and its prosperity in the 8th/14th century are confirmed by various sources. Mustawfi—who does not use the term Lārīstān but that of wālīyāt-i kinnar daryā "region along the sea-coast"—says that most of its inhabitants are merchants who travel by sea and land, and cotton, dates and cotton goods are grown there (Nuzha, 139, tr. 138). Ibn Batūṭa’s words, who visited Lārīstān (probably in 748/1347), pose certain problems, especially in regard to dating (see J. Hrbek, in *ARO*, xxx [1962], 446 ff., and Aubin’s remarks, *Survie de Shildu*, 23, n. 29, n. 26, n. 68, 37, n. 2). He describes Lār to us as "a large town with springs, considerable streams and gardens." It had large, well-built bazaars. He lodged in a khanākūh (q.v.) whose murjiḏī, who held Shillāw and retained some influence in the Gulf—succeeded in maintaining Fā’il as a petty urban centre, despite the growing pressure of the princes of Lār. The latter in fact drew benefit from the new position of their town—staging post on the Hormuz-Shirāz axis by extending their power towards the coast and the intervening high valleys (*bid.*, 35-6). The inevitable conflict between Lār and Hormuz—which had become economically complementary through their dependence on the Indian trade—broke out in 904/1500-9, when the prince of Lār tried to exploit an outbreak of discontent amongst the Belewis of Dijūlar. The naval expedition against the island of Djarū led by Abū Bakr Lārī was checked by Shībā, a Qānūn of Salghur Shāh (Aubin, *in Mure*, i, 102-2). The intrusion of the Lārīs in the affairs of Hormuz revived
After the death of Salghur Shâh (1505) with a further attack on Djarin. But the new lord of Hurmuz, Khâdja 'Abâ' put an end to this, at the same time removing the young ruler issued from a union between Salghur Shâh and a princess of Lâr (ibid., 104-5). Nevertheless, the princes of Lâr continued to expand towards the shores. Their vassal, the amirs of Lîl, brought pressure to bear on the Lashkân region (the land behind the island of Khwân at Nâiband) one of them seized the district of Lashkân in 1516 (Aubin, in Marè, ii, 143-3; on Lîl, see ibid., n. 367 and Lâr médialhâle, n. 22). Yet despite the decline of Fâl, Lârs and Fâlis followed parallel paths in their relations with Hurmuz even after the advent of the Saintwâds.

At the end of the 9th/15th century, commercial traffic was enough to stimulate Lâr's prosperity. The prince levied no taxes on goods in transit. At the beginning of the next century, at the time when the Portuguese appeared, Lâr merchants and mercenary soldiers took an active part in affairs of the Deccan. The famous silver coin of Lâr, the lârî or larîn [2.5], circulated through all the markets of the Indian Ocean shores (Aubin, in Marè, ii, 124; Steensgaard, 420-1). Like Lâr warriors, the bowmen of Lâr were celebrated, and were exported to Irân and India (Aubin, op. cit., 177-8). After Fâl (Dâr al-Sâfî [abode of purity]) and its twin Khûnj (Dâr al-Awûtâ [abode of saints]), Lâr could boast the lâbân of Dâr al-Mâ'âdâl [abode of equity].

In 914/1508 envoys from Hurmuz and Lâr came to give allegiance to Shâh Jamâil at Shîráz (A.A.A., tr. Savory, 157-8). The princes of Khurâsân and the Dâr merchants became tributary to the Saintwâds with the title of Amîr-i Dînân (ibid., ii, 860). Around the turn of the 16th-17th century, pieces of information on Lâr become more numerous. The travellers who passed through it in the 16th century did not give any details on their itinerary (Amanâzî Nûhitî, Khânâyên iz tri morga, Moscow 1955, 89; Girolamo S. Stefano, see Aubin, Suriye de Shîhât, 33, nm. 106-7). Gil Simbès, secretary of the Portuguese embassy to Shâh Jamâil who, in 1513, returned from Shîráz to Hurmuz via Lâr after fighting furiously with the Portuguese, however, gave more information. The embassy of 1523/4 passed through Lâr. Though sometimes difficult to trace, the itinerary of this embassy is described in detail by Antônio Tenreîro (Itinerário, Lisbon 1571, 16 f.; for a critical study of this text and of the parallel account of Pernâo Lopesde Castanheda, see Aubin, in Arquivos, iii (1971), 238-53, with 245-6 on Lâr itself, Tenreîro gives us some important information about Lâristân, especially on Kawrûtân (Kawaristan), the frontiers between Lâr and Hurmuz (cf. Aubin, in Marè, ii, 104), on the caravanserais and cisterns constructed along the road by pious donors, on the town of Lâr (its protective wall stonewalls. It had a higher part, that with the citadel, and a lower part, and 'outside the town there are other houses which are not walled'. Tenreîro and his retinue lodged in a caravanserai outside the town walls. He noted the numerous cisterns for collecting rain water built by pious Lârs both in the town and at two-league intervals along the Lâr-Hurmuz route. At Lâr, there were even some fountains for the prostitutes. The gold and silver smiths were 'gentiles from Indâ', 'all gathered together in one street'. At Lâr, both Turkish and Persian were spoken. The king, a vassal of the 'Sofî', was called 'Soppdzi' [2], and wore the 'scape' of the Sofî (the external sign of adhesion to Twelver Shi'ism, according to the Kâlibâyi). The shops, piled high with merchandise, hardly needed protection at night against thieves in the cause of the said king of Lâr exercises great justice'.

Soon after Tenreîro's passage through Lâr, the prince [Aznâthawân] b. Abî Saîd b. Sâîb al-Mulûk, called Shâh âdîl, was assassinated (29 Safar 548/24 June 1541; see Aubin, Lâr médialhâle, 493). Under his successor Ibrâhîm Khan, the relations of Lâr with the Saintwâd authority deteriorated. He omitted to go and give allegiance to Shâh 'Ababsâ I when he went to Shîráz, ill-treated the Shi'ite tributes-collectors and levied extraordinary taxes on merchants and travellers. The Shah's anger was aroused, and he sent twice punitive expeditions against Lâr in 1610-11/610-1 under the command of Alih-Verdî Khan, the beglar-begi of Fârs. In the course of the second one, the latter seized Lâr, carried off Ibrâhîm Khan and his entourage back to Shîráz and confiscated their possessions. Ibrâhîm Khan and the 'treasures of Lâr', including the famous crown of Kay Khursâr, were then taken off by Alih-Verdî Khan to Shâh 'Ababsâ's court, then engaged in a war with the Portuguese in Badghis near Harât. In the course of the expedition against Bâlîch, Ibrâhîm Khan died of an epidemic which affected a large number of the troops. The administration of Lâr was entrusted to Kâdî Abû 'l-Kâsim Lârî, a devoted Shîfî (A.A.A., tr. Savory, 805-8; cf. Yazdî, fol. 99a ff.).

During the whole of the 16th/17th century, until the decline of the Saintwâds, the Persian Gulf routes via Lâr were followed by numerous traders, diplomats, travellers, men of religion, etc., who have left us lively first-hand accounts. A few months after Alih-Verdî Khan's seizure of Lâr, the Augustinian friar Antônio de Gouvea passed through the town, where he mentions the recent destructions (on Gouvea's mission as mediator in the conflict between the Portuguese and Shâh 'Ababsâ, see Steen¬gaard, 230-1; on Lâr, 231). In a parallel version to the Itinerário of Gaspar de S. Bernardino, Nicolau da Orta Rebelo gives us a long description of Lâr and Lâristân dated August-September 1566 (on S. Bernardino's narrative, see Aubin, in Arquivos, i (1960), 201-45; on Lâr, ed. Lisbon 1842, 136-47). Rebelo noted the numerous charitable works (cisterns and caravanserais), the security of the roads (the Hurmuz-Lâr road and above all the entry into Lâr was very well policed 'because of the war between the Sofî and the king of Ormûn') and the freedoms and the liberalities which the Persians and the travellers enjoyed (see below). He further noted the
abundance and low price of the bazaar products (fruits, textiles, poultry such as partridges, and sheep) and the rebuilding works undertaken after the Safavid conquest, in particular, the fortress dominating the town and the basar (i.e. the Bazaar Kayaneya, see above) rebuilt at that time by Kambar Ali Beg, who also erected a sumptuous caravanserai on the Lur-Shiraz road (Rebelo, ed. Serro, 107 ff.).

After the fall of Shiraz, the English, and then the Dutch, and then later the French, were authorized by the Safavid government to set up their factories at Gombron, now renamed Bandar 'Abbâsi. In 1630, the Portuguese gained the same permission to use Bandar Kung (8 km. to the east of the modern Bandar Lânsa) which began to fill up with Arabs and Persians (and then with Banyans and Portuguese) and became an important town in the years 1630-40 (Steensgaard, 357-8). The khân of Shiraz, the begler-begi of Fârs Imam Khan Khân, seized the port of Gombron/Gombroon (Portuguese Gomcrô) in December 1614 (ibid., 294 ff.), and in spring 1622 Persian troops commanded by Imam Khan were helped by an English naval force (A.A., tr. 1204-9; Steensgaard, 305 ff.).

The negotiations begun by the second "Spanish" embassy of Sherley (1617-22) and the presence of a Spanish ambassador at the Persian court and a Portuguese one in the Spanish court since 1617 were unable to prevent the Portuguese from losing "the key to the Land of India". Much held back in his mission (cf. Steensgaard, 312 ff.), the Castilian ambassador Figueroa has left behind for us an itinerary (lacking details) of his journey through Lâristân in 1618.

After the fall of Shiraz, the English, and then the Dutch, and then later the French, were authorized by the Safavid government to set up their factories at Gombron, now renamed Bandar 'Abbâsi. In 1630, the Portuguese gained the same permission to use Bandar Kung (8 km. to the east of the modern Bandar Lânsa) which began to fill up with Arabs and Persians (and then with Banyans and Portuguese) and became an important town in the years 1630-40 (Steensgaard, 357-8). Despite the difficulties of the routes into the interior, Dâstück/Dâsak and Bandar Kung became significant rivals of Bandar 'Abbâsi (on the rivalry of Bandar Kung and Bandar 'Abbâsi, see Calmard, 850-9).

From this time onwards, the routes through Lâristân are described in detail by the travellers. We have important items of information from Sir Thomas Herbert about the embassy of Sir Dodmore Cotton to Persia in 1628-9 (tr. Paris 1653, 209 ff.; Calmard, illustration 1), and the parallel account of Robert Stafford (ed. Denison Ross, London 1935: on Shirâz-Lâristân-Gombron, see 75-83). Mandelslo, a Danish traveller who only describe Bandar 'Abbâsi, Bandar Kung, etc., have been included here). As this chronology shows, the dates of movements across Lâristân were a function of the movements of ships, hence of the monsoons, and the climatic conditions in the interior of the country: there were few journeys in midsummer, because of the extreme heat and the "poisonous winds" (bad-i samir), or in winter, because of the snow along the route Lâr-Shiraz (Calmard, 23 ff.). The travellers give us first-hand information on the routes followed (which varied little from the 17th to the 19th centuries, except on the Lâr-Shiraz section), on travelling conditions (state of the roads, bridges and fords; the security provided by the bakhtâns, "road-guards"; tolls, customs-dues; etc.), on the natural habitat and the populations (climate, plants, animals, local inhabitants, habitats, illnesses and urban communities), on the political rivalries in the Gulf and in Persia between the central and local powers (including the topics of pirate activity) and between the different European Companies, etc. (see the Bibliography for the 17th-18th centuries).
help of his brother Hādījī Khān—control over the Bulūkī Sabān (i.e. the region between Lāristān and Kirkūm), and then over Lār. After an abortive expedition against Shīrāz in 1243/1825, in which Ḥādījī Khān died en route, Naṣīr Khān extended his jurisdiction over the Gulf littoral (i.e. over the Arab shaykhā) and his extensive power over the East India Company at Bandar Ablas. Nevertheless, he had difficulties in controlling this latter port, and moreover, fell inevitably into conflict with Karīm Khān Zand. During the years 1754-66, he led three expeditions against the governor of Kirkūm on the one hand, and the penetration of the Zands on the west. He even planned joint attacks against Karīm Khān in Shīrāz in concert with the Kākir chief, Muḥammad Ḥasan Khān (in 1256 and 1758). It was ʿAṣād Khān Zand who, in the end, captured the town of Lār and reduced Naṣīr Khān’s family (till 1845, according to Minorsky, to 1858 according to Perry). This same family adopted towards the Zands and then towards Aḥṣa Muḥammad Khān Kākir an at least rebellious attitude (Fasā’ī, i, 223; Dūpūr, i, 396). Furthermore, Naṣīr Khān Zand and Lār also saw their bakhshis handed over to the government of Lāristān and the ports of the Gulf (ibid., p. 283). It seems that, contrary to what Fasā’ī asserts (followed by Minorsky, F. 1 art, and Perry, 195), the administration of Lāristān did not remain in a more or less autonomous fashion in the hands of Naṣīr Khān’s family (till 1845, according to Minorsky, till 1858 according to Perry). This same family adopted towards the Zands and then towards Aḥṣa Muḥammad Khān Kākir an at least rebellious attitude (Fasā’ī, i, 223; Dūpūr, i, 396). Furthermore, Naṣīr Khān Zand and Lār also saw their bakhshis handed over to the government of Lāristān and the ports of the Gulf (ibid., p. 283). The fighting between Karīm Khān Zand and Naṣīr Khān Lārī for control of the ports and the routes through Lāristān accelerated the economic ruin of the region (Perry, 152 ff.). Already rather little-used in the Safavid period (over and above the Gulf routes via Lār), the Shīrāz-Bandar Rūg route (facing the island of Khārg) was envisaged by the East India Company as an alternative to the Shīrāz-Bandar Ablas one (ibid., 259). The troubles in Lāristān amongst the local powers led to the Companies moving further north up the Gulf: the English to Bushire (Bū-Shahr) and the Dutch to Khārg (ibid., 154 ff.; Stitt, in GJ, xvi [1900], 211-15). Hence Lār retained henceforth only a regional importance.

Lāristān once again suffered from brigandage (the pillaging expedition of the Balfārdī Mihrib Khān, sardār of Rampūr, at the opening of the 19th century, see Pottinger, Travels in Baluchistan, London 1816, 163, Fr. tr. Paris 1818, 825 ff. (on the Balfārdī raids of Gulf, Bandar Lārī, see K. Eth, in GJ, vi [1899], 220-22), see Pottlnger, Ten thousand mils in Persia, of 1810, see Sykes, Eastern Persian Irak, Sljih (Houtum-Schindler, xvi [1900], 211-15). Hence Lār was at that time the main port of Lār (via Bandar Lārī, see Stitt, in GJ, vi [1899], 220-22).

In 1881, Stack found Lār in a fairly wretched condition (ibid., 133-35). But the action of its governor Fath ʿAlī Khān (a person whom he describes at length) and his son allowed the town’s buildings to be restored (see above, on the Kayāyirīn bāzār), noted as being in excellent condition in 1907, Bandar Lārī was at that time the main port of Lār (via Bandar Lārī, see A. T. Wilson, in GJ [February 1908], 132-70). The comparative development of Bandar Lārī under the Kāfkāsī/Fawwāsī Arabs favoured the hinterland, and notably Bandar Lārī. At the end of the Kāfir period (ca. 1900-15), the Gulf ports, including Bandar ʿAbbās and Bandar Lārī, were increasingly controlled by Belgian officials (Lorimer, ii, 34). In 1952-1957, Bandar ʿAbbās was considered to be wholly under British influence (Kababī, 541).

The island of Lār (see Map 2). This Gulf island is generally considered as being that called...
Aba Shu’ayb (Bū Shu’ayb, Shaykh Shu’ayb or Džwrat-al-Shaykh), situated to the south-east of Bandar Naghli and belonging to the Shīb-i Khūi-i Lārkān (at 2 farsākh’s distance from the coast, according to Panābi, ii, 315). Since the identification of this island is not made easy by utilising the classical and early Islamic sources, one finds numerous errors in both old and modern writers, and some of them have mixed up the island and the kingdom of Lār (Iktidār, Lār, 126-9). Neceh must have touched on it in the course of his peripat. It could possibly be the island of pearls (Neus Margaritis of Hormiz, see Tomasek, in 32, 44; Wensnæs, xxxi [1890], 59, and Minorsky, EI iv, 470). The geographers writing in Arabic give it various names: Lāwān ( Ibn Khurṣāsānī, al-‘Istakhri); Lār (Yākūt, Abū ‘l-Fida’); whilst the variants Lār, Lān, Allān (Lārān) are given by Schwatz, 57, Le Strange, 251, and Minorsky, loc. cit. Ibn al-Balāchī (Fars-nama, ed. Le Strange, 241) connects the island with Arzāgār Khūra (Irbīštān). Muhammad b. Naghib Balarkān calls this island Lādū (Dhūlān-numa, ed. Le Strange, 251). The toponymy Lādū (cf. Lādū, the ancient name of the town or the kingdom of Lār) could be applicable to the place called Lāz/Lāza or to Lāz/Lāza/Lāzā, the most important settlement in the eastern part of the island. The Portuguese called it Ilha de Lázaro or Larançar (Lār Shāvār, from the name of the ishāl Shāvār/Shawār/Chāwara at its eastern extremity; see Aubin, in Mare, ii, 97, n. 175).

According to Yākūt (iv, 341), Lār is a large island situated between Sīr Gūn and Bandar Līngā, lacking any settlement or village; there were pearl-fishers, i.e. divers; its circumference was said to be 12 farsākh’s round. Because of the insecurity from Gulf piracy, the island was thinly populated. According to Duarte Barbosa, it formed part of the dependencies of Hurmūz (Aubin, in ibid.). It is situated, in relationship to the coast, which makes an outward salient at Ra’k Khūnā, 14 to 15 miles from the coast; from east to west it is about 15 miles long, and about 3 miles wide. It is 130 feet high at the centre, and low plains to west it is about 15 miles long, and about 3 miles wide. It is surrounded by deep water except at the western side. The interior is a mass of sharp, sandstone hills mixed with salt domes and dunes of red iron oxide (a typical formation of the Hurmūz series), see Pilgrim [1908], 141, [1942], 16). Except for a few date-palms, it is almost bare of vegetation. The highest point reaches 910 feet. Except for the well of Salmī (in the west), water comes from cisterns (Lorimer, iiB, 1086; see also Panābi, ii, 317). There are many mice and rabbits, the latter living off a spiny plant called hītāw which stays green in winter as well as summer (Kabābī, 98, who states that the island is 13 miles in circumference, 18 miles from Bandar ‘Abbās, 28 miles from Khūn-i Musandam, 8 miles from Shahr-i ‘Iṣām, and 16 to 17 miles from Hurmūz).

The sparsity and the vagueness of the older sources has given rise to many hypotheses. Lārāk, literally ‘little Lār’, has been take—for Kabābī, 292—for the ancient island of Hurmūz (wrongly, because the depths do not allow settlement); the former, when not occupied, made useful and cultivated by a fairly important (to judge by the remains of buildings and irrigation works) non-Muslim population (according to the orientation of numerous tombs, see Lorimer, iiB, 1087, and Kabābī, 98). Amongst the ruins, the latter author mentions those of a rectangular fortress like the one of the island of ‘Iṣām. Lorimer records two ancient forts: a ruinous one at the place called Khāshākhūnā, in the interior of the island (i.e. Lārāk-i khūnā), and the other, in a better condition, at Labtīyāb on the northern coast. According to this same authority, the fort is said to be Portuguese, but according to Curzon, ii, 413, Dutch. According to Iktidārī, the ‘Iṣām of Lārāk and Khūnā are Portuguese, whilst that of Kh ūmnī is possibly Dutch. The Lārāk šārā is made from dressed stone covered with mortar, with three floors, four towers and a look-out walkway (Aḥdem, 740 ff., with photographs). Only the foundations remain of the East India Company’s telegraph house. Among the remains of the cemetery have been found lamps for the dead from baked earth (ibid., with photograph at 74). The anchorage of Lārāk was much appreciated by sailors, especially the Portuguese, who called it Larka/Laraca. They sheltered there in February 1625 when making an attempt to recover Hurmūz (see Steensgaard, 352). The ambassador Pereira Fidalgo stopped there in 1966 (ed. Aubin, 29). In 1717, Lārāk was captured by the Imam of Maskā, aided by the Rāwānī and Arabs from Kārār (Perry, 158).

According to the Maḥjūzar-i Mafsid (17th century), Lārāk was inhabited by Arab fishermen. The boat from Bandar Rig called there sometimes (ed. Aubin, in Fīrāzī, vi, 2-3 [1337/1958], 175). At the beginning of the 20th century, the population of ca. 200 was made up of Dhūlānīyān linked by marriage with the Banū Shātāy Shībū of Kumzār (the region of the Ru’b’s al-Džūlībī in Ḩumān who spoke kumzāri (Lorimer, iiB, 1086). In addition to the Kumzānī, Kabābī mentions the records of families, five of them from Bulūnāy-ye ‘Abbas, and he states that the soil of the island is good for agriculture. The people live by extracting salt (exported to the Ḩumānī and Khūmī), fishing and a little bit of stock-rearing (sheep and goats). In summer, most of them migrate to the oasis-palm-groves of Mināb (Kabābī, 98). Formerly, the island depended administratively on
the kalntar of Kigraph. Persian authority was only established after 1905-6 with the building of a customs-post (Lorimer, iiB, 1687; Kabîbî, 97). One of the interesting peculiarities of Lârak is that it possesses—in company with other places of the coasts and islands of Lârak—Är [q.v.] adepts and practitioners. Called locally the ahâl-i kandar "people of the wind", they have as the officiating persons men (the bâhns), women (the namûms) and some ashâs, most of them of African origin (see Ghulâm Husayn Sâ'dî, Ahâl-kandar, Tehran 1345/1966, index s.v. Lârak).

LARÂCHE [see al-ÁRÂS] 953.

LÄRANDA, Lârendê or Karmân in modern Turkish usage, earlier Turkish Karaman or Dârande, a provincial town in Anatolia, is the seat of one of the thirteen districts of Konya [q.v.]. The district of Karmân is the largest (4,647 km²) in Turkey. The town lies outside the earthquake zone at lat. 35° N, long. 33° 28' E, at an elevation of 1,938 ft., on the plateau at the northern end of the pass leading through the Taurus Mts. to the Goksu (ancient Kalykados, or Saleph) river valley. The main road from Konya (at 110 km.) to Silifke (at 186 km.) passes through the district. The town has a station on the railway line from Konya to Ereğli, a stretch of the former Istanbul-Baghdad railway. The population grew from 4,232 in 1927 to 28,183 in 1965 and 1971 in 1980, when the town counted 25,468 inhabitants.

1. History

Excavations at prehistoric sites in the Konya-Lâranda area, especially at Çatal Hüyük and Çan Hasan, have revealed an advanced Neolithic culture and substantial towns dating from ca. 7000 B.C. (See J. Mellink et alii, in Cambridge ancient history; idem and D. French, in Anatolian Studies, x (1960); U. H. Alami, in Asiatnila i (1968); D. Magie, Roman rulers W. Ramsay, Hist. geogr., 45; F. Tachschier, Wegenetc).

The Byzantine Laranda (74 Apostolos, cf. Pauly-Wissowa, xii, col. 793) fell to the Seljûqs after the battle of Manzikert (1071), and Islamisation must have taken place early. After having been under Dânishmandi [q.v.] rule, it was retaken around 560/1165 by the Seljûk sultan Kilid Arslân II [q.v.]. Taken briefly in 586/1190 by emperor Frederick Barbarossa, and in 1210 by Leo II of the Armenian kingdom in Cilicia, it was retaken by the Seljûqs in 1216 and used as a frontier fortress against the Armenian kingdom. In 633/1236 the area was organised as the avlûcay-î Arman (Historie des Croisades, Doc. Arm., i, 360; Cambridge history of Islam, i, Cambridge 1970, 234 f.). Around 650/1258, the family of Mawlawî Djalâl al-Dîn Rûmî [q.v.] settled in the town. Djalâl al-Dîn was married there and extols its delights in his poetry (A. Göl-
LARANDA

It is claimed locally that the great folk poet Yunus Emre [g.o.] is also buried there (seeem, Yunus Emre, hayatı, Istanbul 1963; M. C. S. Tekindag, in Bulletin xxx (1966), 117, 59-90; Proc. of the 1971 Istanbul Symposium on Yunus Emre). Laranda also claims as its native son the chronicler Negri[i] [g.o.], the Grand Vizier Karaman Mehmed Pasha [g.o.], the medievist Gezgin, the 19th-century Dervish, and a number of others (Gibb, Ottoman poetry, index; Babinger, Geschichtsschreiber, index; V. L. Monage, Negri[i]'s History of the Ottomans, London 1964; A. A. Adivar, Osmanlı Türklerinde İlim, Istanbul 1949). In 626/1228 the Türkmen dynasty of the Karaman oglu-qullu [g.o.] emerged in the Ermenek-Laranda region, and in 628/1231 the town was given as a temporary ıfriki by Kılıçlar Sani, a ıv. Karaköy chief. In 654/1256 Laranda became the capital of the Karamanids under Karaman oglu Gümüş Beg and was able to maintain itself against the combined forces of the Saltuks and their supporters, the Il-Khanid Mongols. In 687/1288 Laranda was burned by the Il-Khânids, and lost temporarily again to them in 697/1292, but heavy destruction and loss of population did not stop the Karamanids from rising to great political power. The town grew in importance and was enriched with many buildings. (See section 2, below). After 1300, the name Laranda was replaced by the new name Karaman. Even when the Karamanids princes expanded their dominions and were able to make the prestigious new royal city of Konya their capital in 720/1321, the old residence remained important as a seat of lesser members of the dynasty. The town remained somewhat distant from the battle front during the Karamanids' struggle with the competing powers in Anatolia, including the Mongols and later the Ottomans, the heirs of the Saltuks. According to F. Sümer (in, Karaman oglu-qullu, Vol. IV, 692), Ibn Battuta's account of his visit to Konya and Laranda, and of his meeting of the Karamanids, began on hearsay. In 799/1395 the Ottoman sultan Bayazid I visited Laranda and conquered nearly all the dominions of the Karaman oglu amir Ali Beg, who was himself killed. The amir's widow, the Ottoman princess Nezza (Melek Khatun), and her two sons Mehmed Beg and Ali Beg, were deported to Bursa in 800/1408. It was the end of the principality. Timur, however, restored the Karamanids to power after the battle of Ankara (864/1402), and they maintained themselves in the face of the Ottoman restoration in 877/1474 and 878/1475. Next to Konya, Laranda remained the main centre of the Karamanid state and flourished greatly. At this time, however, the Mamılıks invaded the country and occupied Laranda in 828/1421-2 for a short time, the region becoming tributary to them. The town's lords then changed several times because of civil warfare. In 826/1425, Mehmed Beg was killed at the siege of Antalya and buried in Laranda. The town saw its last decades of glory as a capital under Karaman oglu İbrahim Beg (827-94/1424-64). When De la Rochefoucauld traversed the lands of the Grand Karaman in 856/1452, he attended an audience with sultan İbrahim in his court at Konya after having visited Laranda. He remarked on the great extent of the Karamanids' dominions, the dignity and wealth of the court and flourishing trade of both towns. Another conflict brought the Mamılık army to Laranda again, and it was set on fire (861/1456-7). After Konya was lost to the Ottomans, the Grand Vizier Mahmut Paşa took Laranda in 873/1468, the last Karamanid chiefs continuing their resistance against the forces of Sultan Mehmed the Conqueror. Part of the inhabitants, especially the craftsmen, were deported in 1471 to be settled in Istanbul in the so-called Büyük Karaman quarter (the present Çarşamba). In Laranda a number of monumental buildings, sacred and profane, were destroyed or suffered damage. Devastation followed the foundation of the small town by Gedik Ahmed Paşa [g.o.]. The castle was repaired with the architectural debris. In 881/1476 the first Ottoman registration of land, property and pious foundations took place, and the town's title tax (boyır) was made into a waqf for the benefit of al-Madina. By this time, the rule of the Karaman oglu-qullu in Laranda had virtually come to an end (Tekindingag, 1953, 51; Konya, 100-2, 405). The town became the first Ottoman vakıf [prince's] saûdâq, governed from Konya under princes Mustafa and Dînî [g.o.]. In 888/1483 Bayazid II had the Karamanid territory organised as a regular Ottoman province as the eyâlet of Karaman, with Konya as capital and seat of the beglerbeği.

From now onwards, Laranda was of only secondary importance. With its castle, it must have played a role in the Ottoman campaigns to suppress revolts fomented by Karamanid chiefs and Safavid agents till ca. 1501. The rebel Kulf Shah seized the town briefly in 916/1509, while in 917/1510 the area was taken by prince Ahmed in his fruitless effort to succeed Bayazid II. Timur's invasion in 923-5/1526-8 by the Kalânlar [g.o.]. Until 923/1526, the town was part of the fortified frontier with the Mamlûk dominions, and it became a hadîf in the saûdâq of Konya. During a short period in the ı1/17th century, it probably held the rank of saûdâq itself. The name of Karaman came now more and more in use. The importance of the trade route passing through Laranda was probably reduced by the extension of the Ottoman empire to the east. The tax registers dated ca. 929/1523 show that the population of Laranda counted 664 bâhânes = 576 nefs or tax payers (Konya), or 366 bâhânes = 677 nefs (Jennings), or 576 bâhânes = 676 nefs (Faroqi). The registers of 933/1528 and 935/1527 show 2,027 nîfâs (Konya), 2,028 nefs (Jennings), and 1,423 bâhânes = 2,005 nefs plus 625 müddferredâs (Faroqi). The number of mahâlales had increased in 1587 from 34 (Konya) to 39. Thirteen of those quarters still exist at the present. The growth of the population seems to point to secure living conditions. From other sources it is known, however, that Laranda was one of the centres of the well-known saûf or student revolts against the central government's financial policy in the years 985-1008/1577-94. In 1596 the Geldâlî [see Geldâlî in Suppl.] revolts ravaged the province of Karaman. Laranda's population seems to have remained loyal to the government during the following years, at least till 1011/1603. The presence of the Janissary garrison must have had an influence here (cf. M. Akgâh, Edûlî iâyânaları (1359-1603), Ankara 1965, index sv. Karaman (Laranda)). Kera Yâzîlî [g.o.], one of the leaders of the Geldâlîs, was bought off by the office of müddfer of Konya.

From the taxation data of the roth/16th century, Laranda appears as a flourishing interregional market town in an important agricultural region. The building activity during the same century seems to bear this out. The town contained, around 929/1523, 1 sâmkâr, 4 dîvâns, 25 meşâhid, 7 medreses, 1 dîr el-hadîf, 10 tekkes, 7 hammâms, 366 dîbâhâns.
and 65 standils ("trading booths"). The castle was manned by a garrison of 39 men under a commander (dëddar) and a kâkâ. Its armament must have included some pieces of artillery (Konyali, 276, 1758).

Tenth/seventeenth century Liranda is described by Ewliya Celebi (Seydikâ-âme, §, 373-12) and Kâtib Celebi (Djâhân-nûmâ, 1145/1731, 614 L.). In 1867, Liranda/Karaman was incorporated in the new vilâyêt of İkonya as a kâfî in the central sanjak.

Traditional economy, based mainly on dry farming, live-stock, textiles and the production of the well-known Karamân-bulgur (wheat), has been diversified and enlarged. Lead, zinc and chrome are well-known. Karamân-bulgur is of all recognition, was a flat-roofed aisled construction, though the unusually diverse nomenclature of the town. Its armament must have been supplied by a garrison of 39 men under a commander ("trading booths"). The castle was manned by a garrison of 39 men under a commander (dëddar) and a kâkâ. tion with wooden columns and stalactite capitals (Konyayh, op. cit., 359-63). No Great Mosque is mentioned in the wafl register of Muhamayr 881/January 1477, which thus indirectly corroborates Shikhârî’s assertion that it was destroyed in or after the Ottoman capture of Karaman. The only evidence, moreover, for the existence of a Great Mosque in the 17th century is the foundation inscription of a maâhid associated with it dated 940/1533-4. The façade of the Hacibeyler Camii (Konyayh, 294-8), a rectangular Mosque built under Thaumâr (d. 733) with a double polyhedral capitals. The foundation inscription of the heavily restored Arapzade or Arabolgu Mosque dated 899/1493-4). However, a block built into the wall to the left of the porch bears the foundation inscription of a mosque dated 757/1356. This is evidently a re-use, and it is unclear whether the present building occupies the site of an earlier mosque.

The Dikbasan Mosque in the bazar (Meinecke, ii, 275-7), identified by Konyayh, 198-3 with the Fatih Camii of the wafl register of the reigns of Bâyazid II (905/1499-1501) and Suleymân I (929/1523-4), is a flat-roofed, four-sided construction with a carved stone mihrâb in the central bay. The brick minaret is rebuilt. The interior contains a two-line chemonogram, read variously as 899/1493-4 (Konyayh, loc. cit.) and 950/1544-5 (K. Dîne, O. Aslanapa and Muhamayr 1971, 419). The building now forms a small arcade or reused marble columns, and an axial mihrâb flanked by domed chambers, one a mausoleum. The entrances to these have high relief-carved limestone frames (Fig. 5). The projecting entrance niche has been heavily restored several times: the entrance is recessed in an elaborately-carved and profiiled bi-coloured marble frame, continuing a tradition of Saljuq porch decoration— the Çifte minare Madresas, Erzurum (ca. 1242), the Çok Medrese, Sivas (870/1467-8) and the Erfuğullari Camii, Beyşehir (699/1300)— and although on a smaller scale than these, is particularly close in conception and execution to the Çok Medrese at Sivas (cf. S. Çigîl, Bir Selçuk gostelligi (sic) grubu ve Karaman’îlî Hatuniye Medresesi portalı, in İhsâîy-ı Fakûliyesi Dergisi, Yêu bar Arastırmalar Dergisi 1957 (Ankara 1958), 73-9 and Figs. 6). It bears a craftsman’s signature, Khâsadî Abmad b. Nu’man b. Ahmad (Meinecke, op. cit., ii, 166, correcting the “Muhammad” in Mayer, Aschritic, 112), which also continues the Saljuq tradition of signed façades. The remarkably exact copying on a smaller scale of both profiles and decoration suggests strongly that forms of projection were known to the builders of 14th century Anatolia, though there are no literary attestations for the popularity of the prototype, and the other cases of parallelism have not been established beyond the Saljuq period (cf. K. Erdmann, Das Anatolische Karawanseray des 13. Jahrhunderts, ii-iii, Berlin 1976, 448). The marble revetment of the façade, like the columns inside, is entirely re-used.

There is no trace of any tile mosaic mihrâb, but Meinecke, loc. cit., has established that the minârâ and the mausoleum both had daces of dark turquiose-green hexagonal tiles. The cunstapka have disappeared but these also may well have been tiled. The Hatuniye has also yielded a re-used Sâljuq tile inscription, evidently from a pious foundation, in white relief mihrâb on a cobalt ground, in the name of Abu-Fath Kaykhuwar ... b. al-Sâdî Kithîl Arslân (= RCEA, 4817), now in the Islamic Museum in East Berlin (No. 1, 303). The inscription is defective and the ruler, therefore, indeterminate, but Meinecke, loc. cit., has argued for Kaykhuwar I (second reign 681-712/1283-84) or for Kaykhuwar II (665/1266-67) (p. 49). Kaykhuwar III (665-81/1266-84) (p. 49) may be eliminated, since from 1268 the amir of Karaman was independent, and the titularature of a Sâljuq Sultan would not have appeared unmodified in foundations at Karaman of the later 14th century. The foundress has been identified with Malak Khâtun, whose nefi’îyya, applauding herself as
The tomb, on the southern corner, is also fully-oriented, a domed square surrounded by an eight-sided pyramidal canopy and an octagonal drum (Fig. 11). Inside there are two floors: a crypt or burial chamber just below ground level and an upper chamber with a carved porch reached by a double staircase. The porch has a shallow stuccoed canopy and carved frame with marble jambs, and a lintel and voussoirs set as a flattened broken arch of marble. The main entrance is framed by moldings of Ottoman Saliqû origin, but without concern for their canonical disposition, and their carved decoration, particularly the marked-chiseled foliate and geometric elements in the squinches of the porch, is more indebted to the decorative renaissance of the 1420s at Bursa than the Salciû tradition. The Bursa style is also apparent in the carved marble hood of an exterior window, a single carved block with an arabesque-palmette design, deriving from the marble hoods of the Great Mosque at Bursa.

The tomb was evidently colonised by a late Mevlevî dervish, Mevlîvî bek, and the Mevlevî order must, therefore, be based on a late colonisation of the tekke by Mevlevî dervishes.

Though the details of its organisation are obscure, the so-called Simâret of Ibrahim Beg (Konyalû, 405-321; Aslanapa-Diez-Koman, 57-64; Heinecke, ii, 170-80), and the tekke formerly among the tekkes of Karaman. It was a multiple foundation, enclosed by a wall of which there is now no trace, consisting of the Simâret, a mausoleum attached and a fountain opposite (Fig. 10). The Simâret has a domed, central courtyard surrounded on three sides by two storeys of rooms, with a bibû-oriented axial iavlân flanked by domed chambers. The minaret salient and traces of the springing of arches on the façade show that originally the building was intended to have an arced entrance. The Simâret plan has several remarkable features, including the fan-pendentives below the dome which derive from the brick architecture of 13th century Konya, though with the exception of re-used marble blocks for the iavlân and consoles of the main entrances and the tynpana of the outside windows the building is entirely of local stone. The upper storey consists of long galleries, evidently store-rooms or places of assembly. The central area is poorly lit and barely decorated in a style resembling the internal stone carving of the Cîfe Minare Medrese at Erzurum (ca. 1242) and the Hospital at Divrî (670/1272 onwards), and the decoration is concentrated on the exterior-grilled windows and their tynpana, soft ijlât, door frames and a cylindrical minaret shaft divided by projecting mouldings into registers sparsely decorated with bit-coloured stone (ââkât). The main entrance is framed by moldings of Ottoman Saliqû origin, but without concern for their canonical disposition, and their carved decoration, particularly the marked-

The interior of the Simâret still contains traces of hexagonal turquoise tiles set directly on the rubble walls. The most important decorative feature, however, was a monumental tile mihrât, now in the Cîfe Köşk in Istanbul, and the number of which in the name of the Simâret may be based on a late colonisation of the tekke by Mevlevî dervishes. 

The tomb was evidently colonised by a late Mevlevî dervish, Mevlîvî bek, and the Mevlevî order must, therefore, be based on a late colonisation of the tekke by Mevlevî dervishes.
lying, with black or red contours of earth colours to prevent the glasses from running. Though not identical to the tile-work of the Green Mosque and Tomb at Bursa (821/1419-20) or the 16th-century Edirne (ca. 1433), it is markedly similar. Measured, loc. cit., considers the mihrab to have been a special order, while assigning comparable fragments in Konya, Berlin and the Victoria and Albert Museum to a refection of the tomb of Djakli al-Din Râmi at Konya in 783/1382-3. Also from the ftyere, doubtless from the main entrance, is a wooden door, now in the Türk ve İslam Eserleri Museum, İstanbul (Chibli Kelâb, elder member 13; see No. 238 and 239). The marble foun¬
dation, "Umar b. İlyâs al-Karamânî [Mayer, Woodcarvers, 60], combining high-relief foliate motifs and silhouette carved lions and griffins, in a style much closer to stone carving than was Anatolian woodwork of the Selçuk period.

The Fandere and mausoleum are rich in inscriptions. That over the main entrance is dated Muhammad 836/August-September 1432. Over the entrances to the domed chambers flanking the axial fûrûj are two dated foundation texts, 845/1439-40 and 870/1463-6 (fasimme and commentary by Ismail Hakki Uzunçarşılı, Karamânîlileri devri vesikalardin İbrahim Bevîn Karamân imaret rakfiyasi, in Belleten, i [1937], 63-156). The richest foundation of Karamânî, was it endowed as maful al-fil according to the Hanafi madkhah, with a staff of twelve Kûrân readers, from among whom the of¬
ficers of the foundation were to be appointed with the appropriate supplements to their basic stipends of 255 silver dirhams, and servants to work in the kitchens to provide three days' free food and lodging for reputable visitors. Its designation is slightly ambiguous. Uzunçarşılı describes the foundation as dar birûh, madkhah, and maful fid. However, the foundation inscription and the first of the extracts from the mafulyas inscribed inside describe it as fûrûj, and maful al-fil. From the second extract (from description "foundation"); while the mafulyas also mentions a dar al-huffa. None of this is sufficient to characterise the foundation as a mosque in institutional organisation. The mutawalli was to be İbrahim Beg during his lifetime, and thereafter his descendants. Nothing is said of the disbursement of surplus revenues; but the express conditions that one-quarter of the income should go to the upkeep of the foundation and that maful property be kept in good repair look forward to the terms of Ottoman mafulyas.

Mausolea. The distinction between attached and unattached mausolea is probably artifical, since the cemeteries have suffered considerably from recent urban expansion. Photographs, for example, taken prior to the restoration of the "Aîb" al-Din Tûrbe (Fig. 13), close to the no longer existent madrasa of Mûsâ Beg (see above) show the springing of the arches of an adjoining building on its south-east side; while a tomb, probably early 15th century, possibly a family tomb with the Zaynûl-"Allî, and fakîh, Shams al-Dîn Mehmed Fënî, who was actually buried at Bursa (see Şenâîd-Zâda) (d. 834/1430-1), was also attached to a madrasa or maful fid. Of the tombs in the cemeteries, only three are now of architectural importance. The "Aîb" al-Din Tûrbe (designated as such in the wafl survey of Mubârrâm 881/January 1477) is an undated octagonal con¬
struction of the 14th century with a fluted pyramidal roof following a brick prototype (cf. the mausoleum * of Sayyid Mubârîrî Kâhereînî at Alâshîr [621/ 1224-5], ROEA, 3900) with a recessed entrance and diminutive stalactic canopy (Fig. 14). A ruined octagonal tomb with a set-back octagonal transitional zone and a recessed entrance in a shallow, broken-arch niche, known (Konyaî, 499-502) as the Demûrgûmlek Tûrbe and identified on the basis of the 881/1477 wafl survey as the mausoleum of a late Karmânî official, Arân al-Dîn, appears to be a development of a tomb type characterised by the Hûdavend Tûrbe at Nûçhe (721/1323-722/1324). Also from the quarter, is a small, unadorned structure of cut stone with bi-chrome (âkla) designs on alternate facets and a recessed entrance set in an arched canopy. The evidence (despite Konyaî, 364-77) that the tomb of Yûnuş Ennez—fervently believed by the local population to have died at Karmânî—is in the Kirüîî Baba Mosque is inconclusive.

Baths and fountains. Most of the baths of Karmânî were seriously damaged in an earthquake of 1299/1881-2. None is dated, but the plan of a bath given by Aslanapa-Diez-Koman, 49, which, they suggest, might have been founded by the Karmânî Sûleyman Beg, is of recognisably traditional type. There are no recorded double baths, so the buildings must have been used alternately by men and women. Many must occupy the sites of baths mentioned in 16th century Ottoman waflyas and may well be older, since Sauvaget has remarked that waterworks, for obvious reasons, tend to persist even though the superstructure is rebuilt. However, there is some confusion between the construction of new baths in the outlying quarters of the town, and the building of fountains in the 18th-19th centuries.

The numerous fountains of the quarters of Kara¬
mân (Konyâî, 625-33) are of uniform type, with the outflow inset in an arched, normally undecorated, recess, with small mafuls as seats at the sides. Those in the centre of Karmânî have, like the above, been the subject of recent conservation, repairs and restorations, often re-using stone from other constructions. Thus the foundation inscription of a dar al-huffa, dated Rabî 855/May 1451 built into the Hoca Mahmûd fountain (Konyaî, 632-6) is no evidence that the fountain was associated with any dar al-huffa founded by Khâbâja Mahmûd. Likewise with the marble foundation plaque of a "imra of the Karmânî "Aîb" al-Dîn Beg's Super¬
visor of Waterworks (mir-i abîl), dated Rabî 877/October 1775, built into the so-called Sabûrî Çeşmesi (Konyaî, 391). The earliest standing fountain is thus that opposite the main entrance of the Fandere of İbrahim Beg (836/1432), set in a well-decorated, carved frame. The fountains of the Ottoman period, except for the Kandıbecak and Kılıç Çeşmesi (both 938/1531), are mostly associated with mosque foundations. To judge from the surviving inscriptions, few were built in the 17th century. However, the large number of construction or restoration inscriptions covering the period 1790-1830 on the fountains of the peripheral quarters is evidence for a considerable urban expansion in the late Ottoman period.

Conclusion. Despite the disappearance of important monuments over the past hundred years, the surviving monuments (of which only the most important have been considered) seem a typical sample of the original constructions of the Karmânîd
and Ottoman period. To judge from the earliest Ottoman wa'fī registers, many buildings were already khâṣbī and their wa'fīs appropriated by other foundations. Calculation of the revenues of the major Kâramânî constructions is difficult, since the scale of the endowments is not recorded. However only the largest foundations, the madrasa of Mîhâr Beg (ca. 1340, no longer extant) the Hatunîye Medresa (783/1381-2: and the İmârât of İbrahimî Beg (835/1432), have whole villages specified among their awḏû. Even allowing, therefore, for the decay of Sâljuq foundations and their endowments through the 14th century and for their tacit absorption after Kâramânî foundations, the wa’fī registers tend to show that even at the height of the Kâramânî’s power, building was no more extensive at Kâramân than at other centres of the amirate—Nîjîr, Ermenak, Eregli and Aksaray—and considerably less than at Konya, Aksêhîr, Beysêhir and Aksaray under the Sâljuqûs.

**LÂRI [see LâRIN].**

**LÂRÎ [see LÊRÊN].**

**LÂRÎ, MOHAMMAD b. ŞâRÎ b. Djalâîl b. Kamîl. İbâd al-awlî (or al-nâkrî), known as Mûlisî al-Dîn al-Lârî, Persian scholar and historian, was born ca. 1316 in Lârî, to the south of Şirâz. Following his family’s tradition, he entered upon a scholarly career and studied under Mullâ Sâdrî’s son Mîr Ghiyâth b. Şârî al-Dîn Şirâzî and Mîr Kamîl al-Dîn Hüsâyîn, a pupil of Djalâîl al-Dîn [see AL-DARAWISH]. It is transmitted that Lârî’s father proceeded openly against the Shî‘î heretics (nda‘îfîî). During his later journeys, Lârî was at first received honourably by the Mughal emperor Humâyûn (1530-56), who granted him the title wa‘dîl and became his pupil. Because of the unrest after Humâyûn’s death, he left the country to go first on a pilgrimage to Mecca. According to the Persian source quoted below, four hundred of his books were lost at a shipwreck. After the pilgrimage, from 964/1556-7 (rather 1557) onwards, he stayed for a while in Aleppo, where he apparently tried to establish himself as a merchant. His tradition stood out in discussions with learned men, among whom was Ahmad Kâzîmlî, who did not dare to answer Lârî’s objections against his recently composed ʿHâbdî al-wâgîdî. It is not known how long Lârî stayed in Aleppo: he probably lacked there means of subsistence. His next station was Istanbul, where he obtained admittance to the Muftî Abu ‘l-Sûfî [see ABU ‘L-SÛFÎ]. But he declined the offer of a professorship, endowed with 50 abce daily; he might have thought that such a position was rather unimportant in comparison with his previous situation at the Mughal court. In this connection, the Ottoman historian Alî speaks of breach of faith of the Muftî 164-4-72 Lârî (H. Schrâweîde in Tâh, xvi [1970], 286). Disappointed, he left Istanbul and found his final home in Âmid (now Diyarbakr), where İskender Pâsâ, the Ottoman governor, appointed him professor at the Khewrew Pâsâ’s madrasa and teacher of his children. After being accepted among the mendâlî-yi Rûm, he then also met with recognition by the Porte. He died over 60 years of age in Istanbul on 12 May 1577.

Lârî was originally a follower of Kâramânî, becoming later a Şî‘î; also, he had a certain inclination towards mysticism. He wrote numerous Annotations and Commentaries of well-known works on philosophy, astronomy, tasîrî and hadîthîs. His few experiments as a poet met with no approval, but his Mirât al-adwÎr wa-mîrât al-ājdâr, a universal history in Persian, dedicated to the Ottoman sultan Selîm I (1574-82) and considerably less than at Konya, Akehir, Beysêhir and Aksaray under the Sâljuqûs.

of attack. Situated on the main strategic route of the Upper March, Lárida was an obligatory transit point of armies and a site of utmost importance in the defensive system of the Marches. Conquered by the Muslims at some time after the capture of Saragossa and Tarragona (whose inhabitants capitulated without resistance, if al-Rázi is to be believed), the territory of Lárida underwent pillage and destruction, in the 2nd/8th century, at the hands of Franks—the armies of Louis—and of Cis-Byzantine Christians and renegades. Governed by adilis granted military prerogatives on account of its strategic location, its region was linked to that of the Arab family of Banú 'Atsrus, and the Banú Shabrić or Banú Tawiš, on the other, as well as the Banú Muhājir or Tadjība, dominated the entire history of Lárida and its region in the 3rd-4th/9-10 centuries.

LÁRIDA — LARIN (r., lárīn, a silver coin current in the Persian Gulf and Indian Ocean in the 16th and 17th centuries. It takes its name from the town of Lár [q.v.], the capital of Láristan at which it was first struck; cf. Pedro Teixeira (Travels, Amsterdam 1735. iii, 128), after its conquest by Shah * Abb As the Great of Persia that the two ends meet at the juste halfe part and the Ottoman Sultans at Basra. In India, they

were struck in the 17th century by the Akil Shahi dynasty of Bhopur and other rulers, and the frequent finds of larins in Western India show how extensive was their circulation there. In the Maldives Islands in the early 17th century, the king struck his own larins. He knew the "fish-hook" money of Persia (Hakluyt Soc., 1887, i, 232-3). In Ceylon they were also struck, not only by the nates but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the 18th century. A degenerate descendant of the larin existed till recently (H. St. J. Philipby, The heart of Arabia, London 1921, ii, 319) on the Arabian side of the Persian Gulf, in Hasa, where it is known as a "jauli", i.e. the "kous" [coin]. It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Pagavre (Narrative of a year's journey through Central and Eastern Arabia, London 1865, ii, 279) who adds that there is a proverb "like a Hasa jauli", applied to any one who, like the local currency, is of no use for want of a change.

2. Ethnography. The main Las tribes claim descent from the Sainri and Samnai former rulers of Sind, and seen from their names (cf. the frequent element patna) to be of Indian Rajput origin, Las Bala's north-western part of Makran and then Persia. Negroid features, clearly descend from an imported slave population, and another low-caste group is constituted by the Langes, mainly employed as domestic servants. The overwhelming majority of the population is Sunni Muslim in faith, with some Khudja Isma'ili traders in the towns. The worship of local saints is widespread, with especially important shrines, formerly visited by Hindus from quite distant parts of the subcontinent as well as by Muslims, at Hingalch, Shah Bialwal and Lath-T Laman. The desert population depends on subsistence farming, with rice, pulses, fruits, and vegetables grown in small plots, and on cattle and camels raised in the desert. The heart of the desert, London 1949, still registers in his Glossary, 643, the jauli as a copper bar coin current in Hasa.

J. Allan

LARISSA [see VENETIEM]

LAS BELA, a former native state of the British Indian empire. It lies in the south-east of Baluchistan, along the coast to the west of Karachi, between lat. 24° 54' and 26° 39' N. and longs. 64° 7' and 67° 29' E. It is bounded on the west by the desert, London 1810 and found that town enjoying considerable prosperity under the benevolent rule of Jauhar Mir Khilji: the chieftainship henceforth remained with this family, who were known by the Rajput title, formerly used in Sind, of Djoon but who came to claim a spurious descent from the Arab tribe of the Quraysh. Las Bala thus became a dependency of Kalat, whose Jauhar at first drew half the revenues of Bala as his share and later required on occasion a troop contingent in lieu; also, Las Bala's northern frontier adjoining Jhalawan remained for long undefined. Henry Pottinger passed through Bala in 1816 and found that town enjoying considerable prosperity under the benevolent rule of Djoon Mir Khilji I (1770-1818); a colony of 250-300 Hinde merchant families carried on trade there (Travels in Baluchistan and Sind; accompanied by a geographical and historical account of those countries, London 1816, 14-26). It was during this Djoon's reign that conflict arose over the Makran port of Gwadar [see Suppl.], which had been transferred to the sultans of Umay in 1784 by Mir Nasir Khilji of Kalat, but captured at one point by Mir Khan I. In the middle decades of the 19th century, Djoon Mir Khan II (1830-60), who was beginning his reign as a child when Charles Masson was in Bala in the 1830s (Narrative of various journeys in Baluchistan, Afghanistan and the Panjab, London 1842, ii, 17-25, 25-30), came to covet the territories of Makran and Makran beyne; and captured on various occasions from 1835 onwards with the Khan of Khurana [p.64] in north-western Baluchistan and the Brahui sardars or chiefs of Jhalawan. After 1846 he lost the chieftainship of Las Bala, however, and was an exile in British India; his son and ultimate successor as Djoon Ali Khan III in 1870 recognised the suzerainty of Kalat coast as far as Zanzibar, Bombay and the Malabar coast.

3. History. Las Bala has virtually no separate history before the 18th century: for the history of the region before then, see in general MAKRAN.

The Arab of any one who, like the local currency, is of no use for want of a change, who adds that Las Bala was known in classical times as one in-
in the general settlement at Mastung arranged by Sir Robert Sandeman (T. H. Thornton, Col, Sir Robert Sandeman, his life and work on our Indian frontier, London 1895, 46). Irreconcilable disputes within Las Bela broke out between father and son, with Djam Mir Khan II died in 1888, Sir Robert Sandeman, then Agent to the Governor-General in Baluchistan, in 1889 installed Djam Ali Khan III in Bela (ibid., 199-263). After this latter ruler's death in 1896, there were disputes among his sons, but Djam Mir Kamal Khan assumed the chieftainship, and in the ensuing decades, events in Las Bela were less eventful.

After British India was partitioned, Las Bela, like Kalat and Khär, adhered to Pakistan (1948), and after 1952 became part of the Baluchistan States Union, with the Djam no longer an independent ruler but receiving a privy purse from the central government. In 1935 all the provinces of West Pakistan were merged into one unit, with Las Bela as a District of Kall Kalat Division under a Deputy Commissioner; but after Las Bela District was transferred to Karachi Division. According to the 1961 census, Las Bela District had a population of 90,826, excluding non-Pakistanis, and the town of Bela one of 3,139 (Population census of Pakistan 1961, District census report, Las Bela, Karachi n.d.).

LASHKAR, the Persian equivalent of the Arabic 'askar, 'jaund [q.v.], or 'jauny [q.v.], and the term normally used by the Indian Muslim rulers for army. Though armies were generally organised according to the Peric-Turkish military traditions of the Ghaznavids and the Seldjükids, Mongol traditions were also assimilated later into the subsequent plans for the reorganisation of the lashkar.

Composition and organisation. The lashkar of the Dilh Sultans, that of the 9th/10th century provincial dynasties, and that of the Mughals was divided into the cavalry, infantry and the elephant corps, the cavalry forming its backbone. Following the Ghaznavid, Ghurid and Seldjükids traditions, both the Sultans and the Mughal emperors maintained a multi-racial professional cavalry, not neglecting to include even the leaders of the Hindu racial and ethnic groups.

In the 7th/8th century, the Dhill cavalry, or the standing army at the capital, was variously known as the haqam-i kahli, afwdf-i kalb, kalb-i sultani, or simply haqam. Some Sultans also recruited a slave corps personally loyal to themselves, but they invariably proved disastrous to their successors. The dhlh (king's body-guards) performed both military and police duties and were counted as members of the military force. Apart from the haqam, the dhlh (q.v.)-holders also recruited cavalry from the regions in which they were posted, or from the garrisons under their command. The army of the dhlh-holders was known as the haqam-i aṭarf, or later, as the haqam-i bid-i munawil. A separate army was kept at strategic points, both in old and newly-built forts along the River Indus in order to stop the Mongol incursions. Sultan Balban [q.v. in Suppl.] built strong forts even at Dhill, Patiyah, and in other predominantly Hindu areas east and north of Dhill, in order to open up roads and communication with Outli or Awadh [q.v.]. He manned these forts with Afghans, who were given fertile land to farm. The commanders of the forts remained as dhlh-holders, but the soldiers were encouraged to develop a personal interest in the land as landowners.

Bughra Khan, a son of Balban, is said to have informed his own son Kayukhalif, who succeeded his grandfather Balban as the Sultan of Dhill, that a sar-ḥqayl should be in control of ten horsemen; a suhpi-salih should command ten sar-ḥqayl; an amir should be a commander of ten suhpi-salih; a mašik should have authority over ten amirs; and a khan's forces should control contingents of ten mašiks (cf. Dīya', al-Dīn Barani, Tārīkh-i Fīrūz Shāhī, Bibl. Ind., Calcutta 1860-2, 143). This is not to say, however, that the armies were organised according to a decimal system, but it was an ideal which the Sultans wished to implement, because of their growing awareness of the decimal chain into which the Mongol army was divided. Sultan 'Alā' al-Dīn Khālid, however, did reorganise his army on that basis, and the Tughluks are known to have continued the decimal system, for we are told by Al-Mu'izz al-Maṣlīḥ as-Sāhib fi mansūlah al-ansāl that, in Muhammad b. Tughluk's reign, the khan commanded 20,000 horsemen, the mašik 1,000, the amir 100, and the suhpi-salih less than 100.

The head of the military administration was known as the 'ārīd-i mašālīk, or the sīh θ i d i d i s θ wad i s θ w (see Sarbānād, 'Āṣ). As a minister, he was second only to the mansūr or the Prime Minister. In the reign of Balban, the 'ārīd-i mašālīk was known by the title rūḍa'r-i sar, the first word being of Hind origin. Mir Khusraw's maternal grandfather, Imām al-Mulk (piller of the state), was Balban's rūḍa'r-i sar, and had a very keen sense of his responsibility. Later, in Fīrūz Shāh's reign, the 'ārīd-i mašālīk was given the title Imām al-Mulk.

The 'ārīd-i mašālīk was the principal recruiting officer for the Sultan's standing army (haqam-i khāb); he inspected the armaments and horses of the cavalry at least once a year, kept their descriptive rolls (hrīyāt), and recommended promotions or punishments accordingly. The 'ārīd-i mašālīk was also responsible for the internal organisation and the discipline of the haqam-i khāb and the commissariat. The leading dhlh-holders appointed their own personal 'ārīds.

Fahliri-Mudabhir [q.v. in Suppl.] tells us how the 'ārīds' assistants were required to note down the names and bīyat of both the troopers and the foot-soldiers. As an inspection of the army was invariably held before its march to a campaign, the 'ārīd on such occasions was not expected to be too harsh, for disheartened troopers, according to Fahlī-Mudabhir, were not very dependable (Fahliri-Mudabhir, Aḏḏ b al-karb wa 'r-ṣamālān, ed. A.S. Khānsād, Tehran 1346/1966, 275-8).

It would seem that the system of dāḏ (branding of horses) which was known in the reign of the Ghaznavids had been abandoned by Ilhūmān, but it was reintroduced by Sultan 'Alī b. al-Dīn Khālid, but Sultan Fīrūz Tughluk abolished the system as well as that of recording bīyat. The latter was reintroduced once again by Shīr Shāh, while Shīr Shāh also made dāḏ compulsory (see Dāḏ u Tasmānā in Suppl.).

A remarkable change took place in the military organisation when Akbar introduced his monolithic military and civil service organisation, known as māẓādarī. Although the system became more complex in
the reign of Shāh Jahan, the basic framework of the mansabdari system as instituted by Akbar endured. According to the Ain-i-Akbari of Abu'l Fazl, the Emperor would need to muster only 30,000 troopers from the darbār (commander of ten) to darbār khānār (10,000), reserving commands of 5,000 and above for his own sons. He intended to limit the mansāb to sixty-six, representing the value of letters in the name of Allāh, but in fact there were only ever thirty-three grades. Akbar himself relaxed the rule about higher ranks, promoting Prince Sūlīm to a mansāb of 12,000 and two nobles to the ranks of 7,000. All mansābdars were required to maintain horsemen, horses, elephants, camels and carts, as fixed by their respective ranks. Troopers were divided into ḍabī and swādī and the institutions of yah-aspah, di-aspah and sih-aspah were also introduced. Mansābārīs of the rank of 500 were called amirs and those holding higher ranks were given other appropriate titles. Later in Shāh Jahan’s reign, only those who held the rank of 1,000 were known as amirs (rendered as Omrah by Bernier and other foreign authors).

The personal rank of mansābdars called ḍabī was important for calculating one’s salary according to the sanctioned pay scale, and the swādī rank indicated the number of troopers and horses the mansābārī was ordered to maintain; for example, a mansābārī with a swādī rank of 5,000 was ordinarily required to produce 7,000 horsemen at muster. Troopers who were required to provide one horse were called yah-aspah, while those who undertook to provide two horses were called di-aspah. Those obliged to provide three were known as sih-aspah. The mansābdars’ and swādī’s contingents contained all three types of troopers proportionate to the salaries they drew. Salaries were not allowed for the full twelve months; some drew them for much shorter periods. For example, a mansābārī with a swādī rank of 5,000 drawing his salary for twelve months was required to muster a contingent of 7,000 troopers, of whom 300 were yah-aspah, 600 di-aspah and 1,100 yah-aspah, i.e. a contingent containing 2,000 horses. If, on the other hand, he were to draw his salary for only five months in a year, he would need to muster only 1,100 yah-aspah.

The contingents of the mansābdars were multi-racial, the number of recruits of different martial races being determined. Only the Rakhpūts and Mughals were allowed to recruit troopers exclusively from their own racial groups and tribes. Troopers wishing to enter the army had first to find a patron who generally belonged to the same race as himself, but as the empire expanded, the racial exclusiveness in the mansābdar’s contingents broke down. The candidates had to furnish their own horses of a standard breed, as well as armaments, but the patron, mansābdar also gave them horses for which deductions were made from the troopers’ salary. The mansābdar’s troopers were known as jābdinān ("followers").

The appointments of the mansābdar from the lowest to the highest rank were approved by the emperor, and all of them were technically speaking directly subordinate to him. The head of the military administration was called the mir-bakkshi, the Mughal name given to the firād-i-mansabī. The mir-bakkshi also held the status of a minister, and in that capacity was next to the prime minister. However, even the ministers’ contingents were examined by the mir-bakkshi’s department and, the fact that their salary depended on the maintenance of those contingents meant that even the prime minister’s salary was dependent on the mir-bakkshi’s approval. The bakhshi’s department also recorded the descriptive roll (ōlāra) of the mansābdars, their troopers and horses. The breeds and the quality of their horses were examined and tested, and those that were approved were given different marks (āḍēk). A muster of troopers and horses was held periodically for physical checking and verification (tālqishā). Those who failed to muster their troops forfeited their pay or were heavily fined. The mir-bakhshi was assisted by two other bakhshīs who helped to check the evasion of rules, and to prevent fraud. The Mughal government, which depended mainly on the troopers of the mansābdar for their conquests and for the suppression of rebellions, required the man-sābdar to maintain an efficient force. As the man-sābdar’s families became more powerful, they naturally drifted away from the Mughal administration and, the fact that their salary was next to the prime minister. However, even the incompotent Mughal emperors who succeeded Akbar, the government began to disintegrate.

There was a second group of troopers, superior to the jābdinān, who were known as ahādīs (from ahad, “one”). An ahādī was commissioned especially to introduce suitable candidates for the ahādī-shīd, and a separate bakhshi was assigned to examine their horses, brand them, and compile their descriptive rolls. The amount of money was somewhat higher than the jābdinān’s, and their horses and arms were thus of a superior kind. During Akbar’s reign, the ahādīs acted as his immediate servants. They were also assigned to non-military duties. The ahādī was known as the “emperor’s slaves” by Manucci, worked as bodyguards or defenders of the imperial person, and were also picked from amongst the ahādīs. Another category of horsemen were known as ḍabī-ahādīs. They neither owned horses nor were enrolled as jābdinān. However, as they were fit for cavalry service, in times of emergency they were provided with horses and went into action. They were not, however, part of the regular cavalry.

Abu'l Fazl also makes mention of a large army consisting of 38,558 cavalrymen maintained by the sāmīndārs (subordinates). Some sāmīndārs made their contingents available to the emperors for suppressing rebellions; they also kept their localities free from robbers, and performed corporeal duties in the villages, but in no way did this big army form a part of the Mughal regular fighting forces. The foot-soldiers who were maintained within their infantry contingents by the Dihlī Sultāns were known as psāys, and were mostly Hindus. They were good archers and were generally arrayed in front of the lines of horses, or around the elephants in order to prevent them from fleeing. As bodyguards and palace-guards of the emperors and princes, the psāys were deeply loyal to their masters and are known to have rendered singular services to Sultan 'Ali Al-Din Khālidī and Kith al-Din Mubārak Shāh. Shīr Shāh presented them with matchlocks, and Akbar’s infantry contained 12,000 matchlockbearers [see Nakōn, vi. India]. They were divided into four grades with different salaries. Akbar also recruited into the infantry a caste of Hindi high-way robbers called nāthas, and named them bhādāntīyās (servants men). Their officer was called the Rīdūntī Ray. The bhādāntīyās were required to guard the palace and to control highway robbers. Members of many other hill and mountains peoples were also induced to join the Mughal infantry. The matchlockmen and the archers formed a formidable corps of the Mughal army. For administrative purposes, Akbar used to assign contingents of foot-soldiers, paid by the imperial treasury, to some high mansābdarīs. They were
known as pydâb-i daghûl and were classified as kisse-nawârdûn (half-troopers) in the descriptive rolls. One-fourth of the daghûl foot-soldiers, used matchlocks, and the rest were archers.

Auxiliary tradesmen such as carpenters, blacksmiths, cotton-carders, stoolmakers, leather workers, firework-makers, turners, diggers, miners, axemen, larriers, and radârs (bearers of different kinds of litters) were also classed as infantry. Indispensable as they were for constructing defensive works, pontoon bridges and helping in siege operations, they were often included in the infantry and trained in swordsmanship in order to defend themselves in times of need.

Elephants imported from India formed a formidable corps of the Ghaznavid army [see IV. As beasts of war, and [HAB. v. Persia]]. The Dihli Sultans were also highly impressed with the utility of elephants in war. Balban considered each elephant as equal to 300 horsemen, and the Dihli Sultans lost no opportunity in obtaining more elephants for their adârgháns (elephant stables). They also strove to keep those areas that supplied the best elephants, such as Bengal and Deccan, as their possession. One hundred and twenty war-elephants arrayed against Timur's army by the able Tughluq Sulân are known to have struck panic even into that world-conqueror's army [see also HAB. vi. India].

Elephants were an asset to the army in battering the gates of strongholds. The warriors shot arrows or matchlocks from their positions on the elephants' back; the commanders who were seated on the elephants could be seen from a distance by the rest of the army and were able to instil confidence into their soldiers. However, when panic-stricken, or severely wounded, the elephants became uncontrollable and would often trample their own army underfoot.

The Muslim rulers in India did not neglect the artillery [see [HAB. v. India]]. The Deccan Sultâns of India, who had close contact with the Ottoman Turks, were pioneers in establishing firearm factories. The Gudjurât Sultâns followed their example, and Sultan Muhammad and Shâhâd Shâh made good use of the Turkish gunners in their service. Babur, the founder of the Mughal empire in India, secured a decisive victory over Ibrâhîm Lâlî, mainly due to the efficiency of his artillery. In India, he took a keen interest in having heavy guns cast by those gunners trained under the Ottoman Turks who were now in the service. Akbar also took a personal interest in casting guns, and recruited even Portuguese to develop his artillery. Many new types of guns were invented by the Persian Fath-A爷爷 Shâhâd in Akbar's reign. From the middle of the 16th/17th century, European adventurers drawing exceptionally high salaries began to hold superior positions in the artillery of the Mughals and other rulers. In the 18th/19th century, the British and French gunners made radical improvements in the casting of cannon and heavy guns, but the Britishartillery remained Indians.

All the heavy guns were given pompous names, and some of them were so heavy that it took as many as 250 oxen to pull and several elephants to push them. Naturally, they could not cross the bridge-built and were only with great difficulty transported along the rugged routes. The light artillery consisted of several types of guns, variously known as gafrâl or hârâlân (guns transported on elephants), shâfiyâl, zambârâk and 'abârs (swivel-gun or wall-piece). A special type of light artillery known as the "artillery of the stirrup", which François Bernier mentions, consisted of "fifty or sixty small field-pieces, all of brass; each piece mounted on a well-made and hand somely painted carriage, containing two ammunition chests, one behind and one in front, and ornamented with a variety of small red streamers" (Travels in the Mogul empire, ed. A. Constable, Oxford 1841, 217-18).

The Dârâsgâh-i lâ'în, or mîr disâr ("head of the artillery department"), performed duties similar to those of the hâlârâgh, insofar as the recruitment of artillerymen and the supervision of guns were concerned. With the growing importance of artillery, the mîr disâr in the 17th/18th century became one of the most influential officers of the empire.

The Indo-Muslim rulers did not, however, take any interest in developing their navy. Mubârâq of Ghâzna is known to have fought against the Ilâhs in 418/1027 by launching a flotilla of 1,100 boats on the River Indus. The Dihli Sultans used boats provided by Hindu chieftains only for transporting goods and men. The Gudjurât Sultâns fought naval battles against the Portuguese. Babur had numerous boats constructed and Akbar also constructed an extensive flotilla of huge boats some being shaped in the forms of different animals. Bengal, Kâshmir, Thatta, Lahore and Aâlâbâd were the main boatbuilding centres. Akbar also employed seamen, had pilgrim ships built, but was unable to establish a genuine navy. Early in Aârângzâb's reign, Mir Jamul [q.v.] fought successful river battles against the races of Kâh Bâhâr and Asânâ, who had complete mastery over their rivers. The only navy that the Muslims possessed belonged to the Ilâhs who ruled the rocky island of Shâhâdâr [q.v. in Syriâ], 95 miles south of Bombay. They were most daring seamen, and until 1730 were victorious both against the English and the Marâths [see further hâsâh].

Numbers. The strength of the army of the Dihli Sultâns can only be roughly estimated and many of the figures in the sources seem to be exaggerated. We are told by Mirâhâd-i Sârîâh-i [Hôdâhî] [q.v.], that in 635/1238, Sulân Nâsir al-Dîn Mubârâq had collected 50,000 troopers and 200,000 foot-soldiers from multân and its vicinity to demonstrate his strength before Hâlâghâ's ambassadors. Balban recruited a considerable number of trained soldiers into the corps of the samârdân-i kâb and made him standing army very strong. Troopers in Aâlâ al-Dîn Khalâlâl's army numbered 475,000. Muhammad b. Tughluq's cavalry is said to have consisted of 900,000 troopers, some being stationed in the capital and the others in the provinces. In 730/1329-30 he is known to have recruited 350,000 troopers for his Khorasan expedition. The army he sent against Kanârgî consisted of 100,000 troopers and a large infantry. On his first Bengal expedition in 754/1353/54, Hârâl Tughluq commanded 90,000 troopers. Again, Firdâs Shâh marched against Bengal with 80,000 troopers, 470 elephants and an exceedingly large number of foot-soldiers.

According to Bâbûr, Ibrâhîm Lâlî had resources enough to have brought into the field 500,000 men, but actually took only 100,000 men and 1000 elephants with him. Bâbûr's army, on the other hand, consisted of 46,000 men. Humâyûn fought the battle of Kanârgî against Shîr Shâh with 100,000 troops, while Shîr Shâh commanded only half that number.

The total strength of the army of Shîr Shâh consisted of nearly 300,000 horsemen and 100,000 infantry, comprising matchlockmen and archers. Of this army, 150,000 troopers, 25,000 horsemen and 5,000 elephants were commanded by the king himself, the
rest serving at cantonments and in strategic places. The contingents of 

The Persian sources do not help us in calculating the number of Akbar's horse-holders and his number at the Emperor's death, given by De Laet as 29,000, seems approximately correct. According to Father Moussarat, there were "forty-five thousand cavalry, five thousand elephants and many thousand infantry, paid directly from the royal treasury" (J.S. Hoyland and S. N. Banerji (trs.), The commentary of Father Moussarat, S.T., Oxford 1912, 80). 

Bernier says that the total number of cavalry in India was incredible, but he considered that the effective cavalry commonly about Aurangzib's men, was approximately correct. 

Akbar and his immediate successors paid their army in cash, but in the 7th/13th century, the Mughals, they are seen wearing clothes of different colours, but in the 12th/18th century, some kings included matchlockmen and others who discharged heavy and light artillery, 10,000 were always with the Emperor. 

Training and physical exercises, and uniforms. Before their admission into service, both the troopers and foot-soldiers had to pass a severe test of their competence. Fakhri Mudabbir gives the rules for training horses and for horsemanship in considerable detail, and works on archery as well as swordsmanship have also survived. This same author further discusses the advantages of different kinds of sports, such as wrestling, boxing, weight-lifting, disc-throwing and fencing for military training, and gives a detailed account of the advantages which the manoeuvring of stick, ball and horse in polo offered to the troopers. 

After entering into service, the soldiers had to maintain rather than improve their military skills through regular physical exercises, horse-racing (see FURQAYNA) and polo (see CAWGA). Balban took with him 1,000 horsemen and 1,000 foot-soldiers, expert in archery, during his regular hunting expeditions. These expeditions and polo were an indispensable part of the life of the Mughal soldiers, officers, princes and emperors. The military parades and proper battle array were not possible without some training in combined movements, but regular drills of the soldiers do not seem to have been common. 

The troopers are not known to have worn any uniforms. In the miniatures depicting the reign of the Mughals, they are seen wearing clothes of different colours, but in the 13th/18th century, some nobles seem to have introduced uniforms. The contingents were generally identified by the special marks with which their horses were branded. 

Pay. Mahmud of Ghazna and his immediate successors paid their army in cash, but in the 7th/13th century the Dhill Suljans assigned 1/64's (assignments of revenue of different regions) to their commanders for their personal maintenance and for that of the troopers (baghe-i baghd) under them. Sultan Shams al-Din Itutmish assigned the revenue of the villages around the capital and in the Dehli to the bagh-i bagh, and the latter were also called baghd-holders. By the time of Balban, the surviving 

The Khuldibs and the Tughluks reorganised their revenue system and determined the salary of the commanders and their troopers in cash. They then assigned its equivalent in the form of the revenue of different regions to the troopers. As a result of the talk of the 13th/19th century, the Syrian and Egyptian 1/64 system differed from that of India in the mode of making payment to the troopers. In Egypt and Syria, commanders assigned land directly to their troops instead of salaries, while in India the troopers were paid in cash. 'Ala al-Din Khuldib resumed all the smaller 1/64's into the khudai and paid cash to his large army, recruited to meet the Mongol threat to his kingdom and to ensure further conquests. Two hundred and thirty-four thousand 1/64's were paid annually by the Sultan to a well-trained and equipped troop with one horse, 75 lankas extra being granted to troopers with two horses. To ensure that the troopers lived satisfactorily on their low salaries, he fixed the prices of all commodities, from horses to articles of daily use, making sure that supplies were not withheld. 

Sultan Ghiyas al-Din Tughluq also paid his large standing army in cash, and issued strict orders to the baghd-holders to refrain from reducing the salaries of troopers fixed by him. Sultan Muhammad b. Tughluq made his commanders further dependent upon the local treasuries for their salaries, sometimes by appointing his own officers, and sometimes revenue farmers to collect the revenue from the 1/64's. Firuz Tughluq made all civil and military posts hereditary and paid them by assigning 1/64's, the revenue from which was known as waqf. 

The Afghan sources give Firuz's policy highly compatible with their own tribal system, and assigned hereditary 1/64's to their commanders, who in turn sub-assigned smaller areas to their subordinates, who then paid the troopers by making similar sub-assignments. However, the monthly salary of ordinary troopers was fixed and the 1/64's were granted to the commanders on the basis of the total number of troopers and their monthly salary. Sih Shahr, who in his youth had managed his own father's sub-assignment, was fully conversant with the abuses of the system. He reverted to the system of 1/64's al-Din and paid his standing army in cash, personally supervising the recruitment and the fixation of the soldiers' salaries, which were paid in cash. Fraudulent practices were eradicated by making payment only to those whose horses were branded. The big 1/64's corresponding to provinces were managed by the Afghan tribal chiefs, but they were also ordered strictly to enforce the central government regulations in their respective administrative charges, including monthly cash payments to the troopers and the branding of horses. 

Akbar and his successors paid their mansubdars mostly by assigning them revenue from territories, called by the Mughals bagerg (q.v.), although the term 1/64 was also used. Some mansubdars were paid in cash, others partly in cash and partly in bagerg. The salary schedules of mansubdars were carefully prepared on the basis of their bagerg and waqf ranks.
Mughals were paid by the state, they were not entitled to receive the four-fifths of the ghanima (booty) sanctioned by the Sharī'a. Firuz Tughluk is known to have distributed this portion of the ghanima taken at Diāngāagar and Akbar took only one fifth into the imperial treasury, requesting the officers of faujādārs [five] to distribute the rest equitably amongst the army. However, as the booty gained by the faujādārs in local wars was never very great, the amount received by the troops was minimal.

Horses and elephants. The Indian Muslim rulers maintained the superiority of their cavalry, not only by acquiring superior breeds of horses through sea and land routes, but also by devoting their full attention to improving Indian horse breeds. From the Persian Gulf, Bāhrām and the ports of the coast of southern Arabia were imported 'Irākī, Persian, Syrian and Arab horses. Overland trade brought in Tāṭār or Central Asian horses from the territories lying between the steppelands of southern Russia and the Óxus. The horses from Ghāzna to Peshāwār compared favourably with these animals. The territories between the eastern Paigūbā and north-western India, and from north-eastern India to upper Burma, contained the best horse-breeding grounds, although horses from these areas were considered inferior to those imported from foreign lands, and were sold at a lower price. Ibn Baṭṭūta says “The people of India do not buy them [horses] for [their qualities in] running or racing, because they themselves wear coats of mail in battle and they cover their horses with armour; and what they prize in these horses is strength and length of pace. The horses that they want for racing are brought to them from the regions of Vāman, Vrānā and Fārs, and each of these horses is sold at from one to four thousand [silver] dinārs (Rūbāi, ii, 374, tr. Gibb, ii, 475). This same author states here that the price of the cheapest Tāṭār horse in Muhammad b. Tughluk's reign was 100 silver dinārs, while the exceptional ones were sold for 500. Racehorses were therefore very dear.

Akbar reorganised the purchase of horses of foreign breeds by providing improved living conditions for the merchant and his horse. Horses from 'Irāq, Arabia, Persia, Turkey, Turkīstān, Hadaljābān, Shīrāz, the lands of the Kirghiz, Tibet and Kashmir were acquired for the imperial stables. Soon, Indian breeding techniques were so greatly improved that the Indian horses could hardly be distinguished from 'Irākī or Persian breeds. Among the new horse-breeding regions, Kacch began to produce horses which exceeded the Arab imports. Horses from the region between the Indus and the Jhelam were similar to those from 'Irāq. The horses in Akbar's stables numbered about 12,000; the imperial stables were classified into several categories and the quantity of the beasts' fodder, the quality of their outfits, and the salaries of officers and servants appointed to look after them were fixed.

Under the Dilh Sultān, the superintendent of the royal horses was known as the ḍākhārā, there being one for each wing of the army. Under the Mughals, this officer was known as the āḥādī or āḥābāgh. Akbar appointed a noble of Abūl Ḥasan Khānān's [q.f.] status as the āḥādī. Manṣābārs from the rank of 5,000 down to the senior āḥādīs were appointed as the āḥāghās (superintendents) of different stables. A big staff, which included senior officers on the list of āḥādīs, was appointed to carry out miscellaneous duties related
to the maintenance and improvement of the stables [see further, *Ist'1al, v. Indus*].

The Ghurid conquest of India was achieved by the exploits of the cavalry. The elephants in the *phikhana* (elephant stables) were acquired mainly as booty. However, it was after the Deccan conquests that the *phikhana* of Sultan *Ali* al-Din Khajji came to consist of ca. 1,000 war-elephants. The numbers increased during the reign of Muhammad b. Tughluq, and the elephants seem to have been bought even from Ceylon. Firus also added to the number of elephants in his stables, but under his successors they were rapidly lost, to the extent that the last Tughluq Sultan had to hire elephants. In Akbar's reign, elephants were hunted under the control of superintendents known as *bārdar*. In the forests of Agra and Allahabad provinces, besides being acquired from Bengal and Orissa. The best elephants were to be found in the forests of Panna, near Bāndāl in Rājasthān. DJhangir seized 69 elephants from Gudjarit, but they could be bought from all over India; in Shāhjahān's reign, the first white elephant was bought from Peug. Akbar introduced the breeding of elephants, abandoning the ancient superstitions belief that to do so was unlucky and his successors continued to follow his lead. He also classified elephants into seven categories, and framed rules for their feeding and general improvement.

Under the Dilli Sultāns, the *ghaswa-yi fil* was the supreme head of the *phikhana*. Again, there was one for each army wing, and the *ghaswān* were each assisted by a large staff. From the reign of Akbar, the elephants were classified into *hāllas* "circles" or "rings") of tens, twenties and thirties, and placed under the control of supernumeraries known as *faujādār*. They were also orderly to train them to stand firm at the sight of fire and in the noise of artillery. Several *hāllas* of elephants were placed in the care of some important nobles, and 101 chosen elephants known as *khilāsa* elephants were placed in the care of one such person, with the expenses being met from the imperial treasury.

**LASHKAR-I BĀZĀR**, the name given to a complex of military encampments, settlements and royal palaces in southern Afghanistan which apparently flourished in the 5th/9th and 6th/12th centuries. The site (lat. 31° 28' N. and long 64° 20' E.) of *Isbāli* (named after the mediaeval complex of buildings) is an extensive one, stretching along the left bank of the Helmand River [see HELMAND] near its confluence with the Arghandab with the mediaeval Islamic town of Bust [q.v.], modern ruins of Ka'fa-yi Bist, at its southern end, and the modern, new town (named after the mediaeval complex of buildings) of Lashkar-gāū at its northern one. The western edge of the complex is thus bordered by the river and also protected by a cliff running down to the water.

*History.* The existence of ruins on this site was vaguely known to H.W. Belloc in the mid-19th century, probably from hearsay when he was travelling in the region; but its existence was only made known to the academic world through the discovery in 1948 and the subsequent five seasons of excavations in 1949-54 by the Délegation Archéologique Française in Afghanistan.

The complex is not unmentioned in medieval geographical and historical sources. Al-Mukaddasi, 304-5, says that *hall-a-shurafā* (from Būzurg, in the direction of Gharm, there is something like a town, called al-Āskar, where the ruler (al-sulūm) resides). Since al-Mukaddasi completed his *Aṣaṣn al-āsālīm* in 375/985, although later additions may have been made to it, it seems that Lashkar-i Bāzār was an early creation of Sebūktūn, built to secure his newly-
acquired province of Zamin-Dawar and Bust—the founder of the Ghaznavid line had seized this from the Turkish ghulam ruler there, Baytun, in 367/977-8 (see Bosworth), The Ghaznavids, their empire in Afghanistan and eastern Iran 999-1186, Edinburgh 1977, 391, 393— but it is not excluded that Baytun himself had buildings on this site, and a coin of his dated 359/969-70 has been found there, see Cordin, Lashkari Bazar, ii, 170-1. Whether Muṣaddad’s al-‘Āṣhar is responsible for the small district between Bust and Zamin-Dawar”, as suggested by Minorsky, comm. 345, is uncertain. However, one site must be that mentioned by the Ghaznavid historian Bayhakī, Tarikh al-Mustawfi, ed. Ghani and Fayyād, Teheran 1324/1945, 149, Russian tr. Aruṇs, Moscow 1969, 222, when he speaks of the building operations of sultan Mansūd b. Māhmu’d (421/1031-41): ‘At Bust, by the palace of the military encampment (lāshkār-gūl) of his father the wālin, he had several additional constructions made; some of these are still visible today” (sc. in ca. 431/1040).

The main, or southern palace, shows signs of two successive burnings; after the first conflagration of these, there was considerable restoration, but after the second, the whole palace was definitely abandoned. It seems reasonable to assume, with Schlumberger, that the first conflagration was the work of the vandalistic Ghūrid sultan ‘Alī al-Din Ḥusayn b. ʿAlī al-Din Ḥusayn, called Dihrān-sūz, in ca. 545/1150, when he sacked Ghazna, temporarily expelled the Ghaznavid sultan Bahārīn Shāh to India, and then marched back to Ghur via Zamin-Dawar and Bust; Dīhrānī states that he devastated the palaces and public buildings of the Ghaznavids at Bust (see Bosworth), The later Ghaznavids: splendour and decay: the dynasty in Afghanistan and northern India 1090-1185, Edinburgh 1977, 118-19). When, soon after these events, the last Ghaznavid sultans abandoned their Afghan possessions and retreated to the Pānḍjāb, the ʿAbbāsid or their governors doubtless restored the buildings at Lashkari Bazar and installed themselves there in the Ghaznavids’ stead. Schlumberger dates certain alterations even to the post-Ghūrid period, of the Lashkar-Shah, the second and final burning thus probably dates from the ravages of the Mongols in southern Afghanistan in spring 617-8/1211-2; Nasawī, Širāt al-Sultan Ḥusayn al-Din, ed. Houdas, 64-5, tr. 106-8, speaks of a siege by the Mongols of Kandahār at this time (doubtless, however, by Tarhūz, Turkestanien dann zu den Mongol invasionen, 438). Yet undeniably, life no longer continued on any discernible scale at Lashkari Bazar.

The buildings. Lashkari Bazar includes three palace buildings along the cliffs of the Helmand, the most impressive of which is the southernmost one, constructed of unbaked brick on foundations of fired brick and with wooden bonding; fired brick was also used in the reception hall and for doorways. The palace is built round a vast central rectangular courtyard with four inās. After the first burning of the palace, modifications and repairs were made to the palace and the fire-blackened remains of the original main entrance were masked by a new entrance with a frieze of geometric panels and epigraphic bands, on one of which are the resonant dates of a date, 552/1155-64, probably indicating a reconstruction by the penultimate Ghaznavid sultan, Khusrāw Shāh, the last of his family to reign in Afghanistan, or by his Ghūrid successors.

At the north of the palace, backing on to the Helmand, is the very interesting reception hall of the palace, the most monumental of the rooms in style and the most richly decorated, including with panels of brick ribbon work with stucco insets. But especially important from the viewpoint of cultural and artistic history is the fact that the friezes running round the inner faces of the brick piers in the hall contain mural paintings (these have now been removed, for safety, to the Kabul Museum). The remains of 44 figures are visible, and with those probably to be found on the missing north side, must have numbered some 60 all told. They depict frontal views of the bodies of what must have been the royal guards, the corps d’élite of Turkish military slaves of sultans Bahārīn Shāh and Mansūd (see mamluk, d. Persia). These warriors wear rich tunics and boots, and bear the shafts on their left shoulders of what may well have been maces, the mace (zāra) being a favourite weapon of Mansūd himself, according to Bayhakī, and a weapon of heroes in the Shāh-nāmā. The faces are unfortunately badly damaged, but a painted fragment found elsewhere in the palace shows a beardless, smooth-faced youth with what are generally regarded as ‘Mongolian’ (here, of course, ‘Turkish’) features. The appearance of these figures accords remarkably well with the literary descriptions in e.g. Bayhakī of the rich uniforms, jewelled weapons, etc. of the royal ghulams when paraded on ceremonial occasions such as the reception of envoys and ambassadors.

Leading to the southern palace was the street of the army bazaar, 500 yds./half-a-kilometer long and lined with shops; judging from the absence of post-Māhmu’d coin found there, this bazaar may well have been abandoned after that sultan’s death. Also to the south of the palace was the great mosque (the southern palace itself contains a small, richly-decorated mosque, obviously for the private use of the sultans and their entourage), constructed originally from good-quality fired brick, but rebuilt, like the southern palace, after the first burning in a less careful manner. Schlumberger places the original mosque within the early Ghaznavid period, and it is of obvious interest as one of the very few pre-Mongol period mosques in Afghanistan.

The placing of all these buildings of the Lashkari Bazar complex in their proper architectural and art historical contexts raises many problems, and a full evaluation can only begin to be made now that we have the long-awaited volume in the DAFA Mémoires series on the architecture of Lashkari Bazar (see Bibl. below). Schlumberger was reminded of the plans of Ṣamarqān palaces ("l’architecture de Lashkari Bazar apparaît, à plus d’un égard, comme un représentant provincial et tardif de celle de Ṣamarrādehyde"), but noted eastern Iranian features, such as courtyards with four inās and the ornamental use of brick (Syria, xxix [1952], 268-9). J. M. Rogers has noted the early appearance in the southern palace (the early Ghaznavid construction) of the angular, interlacing strapwork in stucco characteristic somewhat of Suldāfīk decoration (The 12th century—a turning point in the architecture of the Mamluks, in D. S. Richards, ed., Islamic civilization 930-1175, Oxford 1973, 221-3). The mural paintings reminded Schlumberger again of Achaemenid representations, but he also observed that the heritage of the Buddhist art of Candahār and northern India, much nearer in place and time to 5th/6th century Zamin-Dawar, should clearly be taken into account. Finally, it should be noted that the pottery finds at Lashkari Bazar give a valuable conspectus of
local artistic trends in this field for the period ca. 1000-1220.

(C. E. Bosworth)

AL-LÂT, name of one of the three most venerated deities of the pre-Islamic pantheon, the two others being Manât and al-Uzza [q.v.].

The deep attachment felt by the Thâfî towards al-Lât, the Aws and the Khazraaj towards Manât and the Kuraysh towards al-Uzza, constituted the greatest obstacle in the path of the peaceful implantation of Islam in Arabia, as the Christian missionaries had found difficulties to overcome that the Prophet seems, for a brief period, to have consented to the continuation of the cult of these three deities, called al-gharanîya al-'ulâ (see T. Fahd, Pantheon, p. 88, but cf. al-Kurnâbî, B, in jâmî).

The cult of al-Lât, the deity of the Thâfî, descendants of the Thamûd (Aghâqîf, iv, 74; al-Tabârî, i, 437), is attested over a vast area of the pre-Islamic Near East. She was at the same time the goddess of shepherds, from the Eljâzâ to Sâfî, and that of caravan-travellers, from Mecca to Petra and to Palmyra. Her name is recorded in the most remote antiquity, and it is to be found, in various forms, in the works of Herodotus (cf. E.P. s.v. Allat), also in Akkadian texts (Al-Ist-sam: Tâlliqu, Gitter-epitaeca, 259; J. Bottéro, In l'antique divinité semi-âtique, 56). Safaitic texts (R. Dussaud, Pâtrîcarion, 56 ff.), Palmyran texts (D. Schumberger, La Palmyrène du Nord-Ouest, 63, 71, 73), Nabataean texts (M. de Vogüé, Palms, 119, W. R. Smith, Kinship, iv, 39; J. Wehbe-Kasim, Reste de Kinjics textes [Pugnon, in MEOB, v (1917), 78). The Arabic form of her name dates back, at least, to the time of the Khwarî Amr b. Luhayy, the reformer of the idolatrous cult in Mecca at the beginning of the 3rd century A.D., a period for which there is evidence of the cult of al-Lât in Nabataea, in Sâfî and in Palmyra. Now it is known that this reformer spent some time in the land of Moab, whence he would have brought back statues of various deities, including that of Hubâl [p.c.]

The precise meaning of the name of al-Lât remains unclear. Two interpretations deserve consideration.

The first derives it from the root l-t-l. Arab lexicographers are unanimous in considering that al-Lât is derived from the verb lâdâ, "to mix, or knead, barley-meal (mâlî)." It has been shown, in Pantheon (112 ff.), that this interpretation emerges from a revealing association with the "idol of jealousy" erected in the temple of Jerusalem (Ezekiel, v, 15), which can be none other than Astarte [cf. H. Kings, xx, 7; xxlii, 6, 7-13; 114; cf. Dussaud, in Syria, xxvi (1940), 355-60; Ch. Viroleaud, in J.A., exxci (1943-5), 418-19]. The "obliteration of jealousy", offered by the husband who suspected his wife of infidelity, was made with barley-meal. Now Ibn al-Kalbî, K. al-A'mân, 10, speaks of a lât aslîfî, "kneader of barley-meal", who was a Jew and after whom was named the square rock of Ta'fî, symbol of al-Lât. From this it may be deduced that a ritual similar to the Hebraic ritual of the "obliteration of jealousy" was practiced in the vicinity of the sacred stone, symbolizing al-Lât, and that the latter was regarded as one of the multiple incarnations of the Semitic Ba'âl of which Astarte was the most eminent. This is further evidence of the Semitic tradition of the anonymity of gods, to whom epithets were given, reflecting the sites or the forms of worship dedicated to them.

The second, treating al-Lât as consort of Allâh or of his son Ibrâhîm or El, simplifies the problem, calling al-Lât to be a feminine form of Allah or Allâh, unname god of the pre-Islamic Arab pantheon (Pantheon, 41-4).

Either of these etymologies is possible: the first responds best to Arab traditions, the second is more in line with Semitic tradition in general (cf. details in Pantheon, 111-20).

Al-Lât is seen at Ta'fî displaying the most primitive attributes of the Semitic Ba'âl. Originally, she was represented by a white stone, in contrast to the black stone of Mecca; subsequently, she was associated with a sacred tree; then a sanctuary was erected for her, and this became a place of pilgrimage. But the rivalry between Ta'fî and Mecca and the commercial and economic predominance of the latter prevented the goddess of the Thâfî from making Ta'fî a centre of assembly for all the Arabs. The Mecca of Kušây, the reformer of the pilgrimage and architect of the Kuraysh confederation, rapidly eclipsed the other metropolises of the Arabian Peninsula. Thus al-Lât was unable to preserve anything of her former prestige other than the epithets raiba "mother of the gods", in her role as goddess of fertility, after the manner of Ba'âl, of whom she is an incarnation, and fâqîhâ, "pre-eminent goddess", an epithet still reflecting the important cultic role that she had played among the Arabs of the Nabataean, Sâfîtî and Palmyran regions, as goddess of war (see refs. in Pantheon, 111, n. 2).

In order to consolidate the economic power of Mecca and to reinforce its role as holy city of the Arabs, Kušây brought together in the Ka'ba all the divinities of Arabia. The triad which emerged, namely Manât, goddess of the northern Arabs, al-Lât, goddess of the Arabs of the Najđî, and al-Uzza, goddess of the Kuraysh confederation, represent the three political forces which coexisted in central and northern Arabia, from the period of Kušây [7th century A.D.] to the advent of Islam. These three deities correspond to the theoanthes of Venus, morning star and evening star, very often confused with the Semitic Ba'âl and worshipped by the Arabs since time immemorial.

Although al-Uzza was the last-born of the triad, she soon became the most important, in her role as tutelary goddess of the sanctuary of Mecca (see details in Pantheon, 118 f.). In a parallel development, the three sacred trees (aswâr) which stood before the sanctuary of al-Uzza at Nahâla, on the road leading towards 'Irak and Syria, were assimilated to the three divinities (Pantheon, 164).

The predominance of al-Uzza over Manât and al-Lât is expressed by the dual al-Uza'zâni, "the two 'Uzâs", which designated them (Hamâsa, 190, i. 15; Pantheon, 118, n. 3). This predominance is also apparently in the Nabataean region, where al-Lât had been a favourite goddess, as a result of the
expansion of Meccan commerce inside Nabataea, the birthplace of Kusayy.

Ryckmans, Les religions arabes primitivement, Louvain 1953 (Bibliothèque du Muséon, xxvi1952); H. Lummens, La cité de Taif à la veille de l'égire, in: MéMO, vii (1924); T. Fahd, Le cité de Taif au temps des dynasties califales (f. 133a), and a letter written to Masul-Râzû, who survived the disaster. Laflfi says in his Risâla-yi asâfîr Istanbul (f. 60b) that he was 35 years old when he finished this book, i.e. this was in 931/1524-5; hence his birth date must have been 896/1490-1, making him 94 lunar years old when he died.

All through his life Laflfi complained that he had never been appreciated properly. He did not have a comfortable life, for he had never been pushing and sycophantic; but he expected that others would have realised his literary ability.

Although Laflfi mentions in his Tadhkira that he composed twelve books, treatises and literary compositions, only the following seem to be extant: (1) the Tadhkira al-šurhâr; his most important work, generally considered as the second best biographical work (after 'Ashık Celebi's) in Ottoman literature. He states that both of his own time and his forefather, Hamdi Celebi, where taken this idea from 'Ashık Celebi, but applied it in his time, but none of them received attention and fame or were widely read (Tadhkira, 392). Probably they were all incomplete, pioneering attempts in this field. The Tadhkira consists of an introduction, three chapters and a conclusion. In the first chapter, he mentions poet IHkhrûs of Anatolia who were brought up in or emigrated to Anatolia. In the second, he speaks about Ottoman sultans who engaged in poetry. In the third, the main part of the work, Laflfi mentions, in alphabetical order, the names of 300 poets (Tadhkira, 372) who lived from the reign of Murad II (934-952/1524-51) until 950/1543. The book is arranged alphabetically (mud'djam), a method which Laflfi initiated in Turkish biographical works, whereas Schöll's and Nawâ' had been arranged by tabâhât or generations, so that Laflfi's Tadhkira became the bridge between the two types. Laflfi took this idea from 'Ashık Celebi, but applied it in his book before him. Some criticisms were, however, made about his work. One was that Laflfi did not include poets of his own time; another that he did not include the early copies of the work (e.g. Kayseri, Râşîd Esnâf Libr. 1760, copied before 957/1550, and another one which stems from the above, Ist. Universitesi, Ty. 2564, copied in 968/1561), it can be deduced that two redactions of the work were in existence and that the early copies did not have Laflfi's autobiography. The author later included it, as well as notices of some other poets not previously included. By doing so, he improved the text and also replied to the criticisms of those whom he calls ikhtedâ-n hikd u hasad, "the hateful and the jealous ones". 'Ashık Celebi relates that Laflfi's work also became nicknamed the Kastamonu-nâmas (f. 133a), for the author found ways to connect some poets to Kastamonu, whether or not they had been born in the city; but he adds that Laflfi's Tadhkira is most valuable and quite different from Schöll's one. Hasan Celebi regarded the style as rather dull (Hasan Celebi, Tadhkira, f. 265b); hence 'All took it upon himself to answer all unfair criticisms (op. cit., 415b). The work is undoubtedly important, not only because of its form, but also because of the fact that, with this work, for the first time literary criticism and assumptions were dealt with in this Ottoman poetic biographical genre. It accordingly soon became a very popular reference book, considered to be reliable. It was edited by Ahmed Djezdet under
the title of Tadhkira-yi Latifi (Afghân-i aslif series, no. 9, Istanbul 1341/1896); H. Theodore Chabert summarised it in German (Latifi oder biographische Nachrichten von vorzüglichen Türkischen Dichtern nebst einer Blumenliste aus ihren Werken, Zürich 1850); a second translation into German was done by O. Rescher (Latifi Tadhkira, Tübingen 1950); this last translator referred to 9 old ms. of the work, together with the edited text. (2) Riāl-yi asālī-yi Istanbul. As the title indicates, the work is a brief description of the natural beauties, the historical buildings and monuments, etc. of Istanbul, in short, a physical description of the city and its spiritual life in the 10th/16th century, written in an artistic style. The work is quite valuable in that Latifi's observations reflect the thoughts and the feelings of his youth. As he says in the bāhtīma or conclusion, he was then spiritually in confusion; at times acting like a vagabond and at others behaving piously. The text is adorned with poetry, and Latifi claimed that he had invented a new style in prose writing; Istanbul was the most proper topic for such a purpose, in order to display a successful sample of his creative style (Tadhkira, 300-1). He later revised the work, and with a new introduction, presented it to Murid III. (3) Fuyūt-i asār (Mumtaz-i hadżhārd or ?), an artistic description of the specialities of the four seasons, written in a mixture of prose and poetry. It was first published in the Ādīs newspaper in instruments and then as a book under the title Mumtāz-yi Latifi (Istanbul 1287/1870). (4) Subḥat al-bāsīrīk, a Turkish translation of 100 hartūfīs, composed in verse. (5) A Turkish translation of 40 ḥādhīts, also in verse, having much subject-matter in common with the previous one (ms. in Şehid Ali Paşa Library, 797a-798b-953a, 1257-1258). (6) Nasn al-ājīdushūr (lafl/ī manūf ʿa-l-ajīdushūr-i manūfūm), a versified Turkish translation of 207 speeches of Allāh. (7) Mundūsra-yī lāfī/i (Istanbul 1287/1870)-ūyubhat. From the contents of his works, Latin was apparently not a first-class poet, but a very good critic!如前 mentioned, the first translator referred to 9 old mss. of the work, summarised it in German (Geschichte der osmanischen Dichtkunst, Budapest 1837, ii, 28-30; Smirnov. Češk istorii tvyrskovskoy literatury, St. Petersburg 1841, 456; Fâhā-Rejāh, Tadhkira-yi Latifi, Istanbul 1341/1896-7, 357-81; E. J. W. Gibb, HOP; M. Thürényi, Siddīq-i ʿOthmānī, Istanbul 1316/1898-9, iv, 92; F. Bäglinger, Geschichte der schiitischer, 110 fl.; Mehmēn ʿAlādī, Latifi ye tadbirkhāri, in Dājjīn mwaqṭa-yī, Istanbul 1927, xvii, 61; Istanbul kudādīhān, in Dictionary of literary yeznidars (faorex teknikler), Istanbul 1924, 397 fl. (Nimā M. Češīm)

LATITUDE AND LONGITUDE [see DIWANHA-
FYA, KURBAT AL-ARD]

LATĪFĪ—LAWĀṬA, an important Berber ethnic group belonging to the family of Butiʿ and whose eponymous ancestor was Lawā the Young, son of Lawār the Old. They are distant descendants of the Libu (Lebou) of the Egyptian documents of the 15th century B.C., of the Libiun or Lebibil in the Bible, the Libu (Libuyns) of the ancient Greeks, of the Laguantan of Corippus and the Lebucius of Procopius (6th century A.D.). It is probable that the Libu (Lebou) of the Egyptians lived on the Mediterranean coast of Africa, between Egypt and the Gulf of Syrte. As for the Libi̇un, they were for Pindar (518-458 B.C.) natives of Cyrene, but later their name is known among the ancients a name for all the indigenous peoples who lived in the littoral zone of North Africa, from Egypt as far as the Atlantic coast inclusive. However, it appears that the real Libu (Lebou) survived in the tribe of the Liburkhae who lived, according to Ptolemy (2nd century A.D.), in the north of Marmarica, immediately to the east of Cyrene. Another section of the Libi̇un properly so-called, apparently Egyptianised, were the Libu (Libou) who Ptolemy places in Maret^nis, i.e. in the region of Lake Maraitn, named the Liburae and Libius (Maryout) on our maps. It should further be added that some Greek and Latin authors, such as Polybius, Diodorus, Strabo, Pliny and Ptolemy mention still another branch of the Libi̇un, the Libu (Libuyns) who were probably Liburus or Libu people mixed with the Punch people, and who lived most probably, if one is to believe Pliny, in the province of Byzaemen in present day Tunisia. Later on in the 6th century A.D., the Libu (Libou) of the Egyptians become the name of Laguantan (Lawata), one of the Libu (Libou) of the Egyptians lived in the littoral zone of North Africa and was not mentioned in the Arabo-Berber traditions, the Lawata first established themselves after their arrival from Palestine in the Magrib, in the period of Biblical David (XII), in the territory of Barqa (Cyrene). This was the land which made known the time of the invasion of the Arabs (in 21/642-3), at the time when the Islamisation of the Magrib began. The Arabic sources tell us of the peace treaty that 'Amr b. al-Āṣ concluded in this year with the Lawata of Barqa. However, it is certain that some sections of this people, distant descendants of the ancient Liburkhae and Libu, also lived in
this period in Egypt, and it is very probable that other Lawatān sections, who were descended from these Laguantān or Corippus and the Leuaches of Byzacena and were established in the 6th century A.D.; in Byzacena, continued to live, in the 7th century, in the southern part of Tunisia. Later on, from the 6th century A.D., branches of the Lawata expanded into some regions of Algeria and Morocco.

If we set aside the powerful peoples of Mazāta and Sadrāta, to whom some Berber genealogists attribute a Lawata origin, but who already constituted, in the 4th century A.D., separate ethnic groups, the Lawata properly so-called were subdivided in the Middle Ages into several branches of which some are named by the Arab geographers as the works of al-Ya'kūbī and Ibn Khālid. They are as follows: 1. Māsila or Māsāla (al-Bakrī writes this name by error Māsila) 2. Khattāfa, 3. Māghtāba, 4. Wāhilā, 5. Mārawā (this name might be identifiable with that of the Libyan tribe of the Mareotae living in the south of Lake Mariut in Egypt). 6. Maghūna (to be corrected as Māgūna): Ibn Hawkāl, Maghūna, 7. Zānāra (8. Kuwait Zakūda (Ibn Hawkāl: Zakūda) 9. Mākara (al-Ya'kūbī, Māratā): ‘Ā‘īruz, and 11. Dīji‘ānā (this tribe was a branch of the Lawatān group of Kātra or Qaṭṭāta). It is also highly likely that the following Berber tribes of Barka belonged to the Lawata: 12. Wādi Makhṣīla (Ibn Hawkāl, al-Bakrī writes this name by error Mākra), 13. Siwa (al-Makrīzī, Siwa) and 14. Māsūsā. This comparison suggests the evidence concerning the collection of Lawatān groups and their geographical situation, going from east to west, evidence which the medieval Arab authors, of the 2nd to the 8th/9th centuries, have bequeathed to us.

Egypt. The numerous Lawatān groups dwelt in a nomadic fashion near to Alexandria and Cairo, to the west of these cities. Among these groups who paid the jāshīfī to the Egyptian government, Ibn Hawkāl mentions, in the 4th/5th century, a branch of the Lawatān group of Māsila (Māsila). It was apparently these Lawatān whom al-‘Idrīsī mentions as a tribe who ravaged the western banks of the Nile to the north of al-Bahshās. Later on, in the 8th/9th century, the plains extending from Alexandria to Cairo which constituted the province of al-Bubayra were inhabited by another branch of the Lawata, the Zanāra, a people who were nomadic, but who stopped in al-Bubayra to sow their seeds at the approach of winter, as they passed through the environs of Barka. The Zanāra themselves paid a tax to the Egyptian government; Ibn Khālid says that, in a slightly later period (probably towards the end of the 8th/9th century), the chief of the Zanāra of al-Bubayra called Bā’r al-Badr (or more likely Bār Yedder) b. Sālām revolted against the Egyptian government, but after having been beaten by the Māmlūkī, he took refuge in Barka. According to Ibn Khālid, some remnants of the tribe of Lawata were also to be found, in his own time, i.e., towards the second half of the 8th/9th century, in Upper Egypt, where they pastured their flocks and cultivated the land. One should also note that the present locality of Maghūna situated on the road leading from Cairo to Asyūt, 80 km. south of Cairo, probably owes its name to the Lawatī tribe of Maghūna. A numerous Lawatī population occupied, in the 4th/5th century, the oases of Egypt, where the Lawata created a state. According to al-Mas‘ūdī, the Lawatī master of the oases in 332/943-4 was called ‘Abd al-Malik b. Marwān; he had under his command several thousand riders on horses and camels. According to Ibn Hawkāl, who wrote at a slightly later period than that of al-Mas‘ūdī, the kings of the oases who belonged to the tribe of Lawata, mistress of this region, traced their origin to the dynasty of ‘Abd al-Malik. Al-Bakrī also speaks of the Lawatī tribes established in the Egyptian oases. It appears that these Lawatī tribes of al-Bubayra and the oases were distant descendants of the Libuaga of the ancients. It is perhaps due to this Lawatī branch that Ibn Ħarm attributes the name to the Lawata a Coptic origin. Moreover, to the west of Alexandria, in Marmārīa, al-Bakrī mentions the existence of about a thousand tents belonging to the Māqīra or Māsīla (al-Bakrī: ‘A‘īruz) and the Khattāfī near the oasis of Fatīhā al-Bihāra, probably to the group of Lawata. A section of the tribe of Siwa or Siwa who probably belonged to the group of Lawata lived, in the 9th/10th century, in the oasis of Siwa, the oasis of Ammon of the ancients and Sanātunyya of al-‘Idrīsī. The oasis of Siwa owes its name to this people.

Barka. This land was inhabited, in the 13th/14th centuries, almost exclusively by Lawatī groups. One of these groups is the tribe of ‘A‘īruz b. Sālahā (Māsāla) placed by al-Ya‘kūbī in the eastern part of Barka; they lived, in the 4th/5th century, alongside other peoples, probably Berbers. They were also to be found in the coastal region, mixed with other Lawatī groups, such as Zanāra, Maghūna, Marwā and Fatīhā (Fatīhā), in the north of Wādi Makhṣīla, which resembled a town and which may be identified with al-Mechḥī on our maps. The dwellings of the Maghūna and other groups of the Lawata, such as Marwā, Mākara and Zakūda, were also to be found near the road which linked Wādi Makhṣīla to the town of Barka, al-Merđīj on our maps. The tribe of Marwā left its name to present-day Marau, a locality situated about 50 km. to the east of al-Merđīj. Further to the south-west, in the Dījāl al-Gharbī (probably Dahar al-‘Ammar and Dahar al-‘Abīyad on our maps), al-Ya‘kūbī also places Berber groups of the tribe of Lawata. In the second of these chains of mountains lived, according to this geographic division, the Lawatī tribes of Zanāra, Marwā and Zanāra. It is also in this region that there lived a section of the tribe of Kāṭāfa which gave its name to Kasr Kefet, a locality mentioned by H. Barth (Wanderungen, 356). Further to the west, in the environs of Bərán (ancient Berenike, Benghuzi on our maps) lived three Lawatī tribes, namely Maghūna, Wāhilā and Dīji‘ānā, as well as the tribes of Siwa and Masūsā, who themselves traced their origin from Lawata. The territory of the tribe of Masūsā extended from Benghuzi towards the south and south-east. Indeed, the name of this tribe is to be connected with the Wāddi Masūs mentioned by Kudāma b. Dījāfīr (d. 337/948-9) and by al-Bakrī who wrote a century later. According to the latter, there are in this valley “several ruined vaults and cisterns, to the number, it is said, of three hundred and sixty.” In our opinion, it is to be identified with Muṣūn (Muṣūs) on our maps, a centre of encampments situated near an homonymous oasis, about 80 km. east of Solūk. A section of the Muṣūn also lived in the town of Adjdābīya (Adjdada in our maps), alongside Lawatī groups of Zanāra, Wāhilā, Siwa and Dīji‘ānā. The latter constituted the majority of the inhabitants of this town.

Tripolitania. The inhabitants of Adjdābīya constituted in the second half of the 4th/5th century, if one can believe al-Ya‘kūbī, the westernmost group
of the Lawata of Barks. However, it appears that the ethnic situation of this part of Libya was a little different a century earlier, under the domination of the Íbāḍī Imam Abu l-Khaṭṭāb 'Abd al-A‘lā b. al-Rustam. According to the Íbāḍī general Musta‘īs b. al-Azīz, who succeeded in retiring to this massif after the extermination of the Berber tribes of this latter region by the Aghlabid general 'Abd al-Rahmān b. Rayyān al-Azīz, the Lawata of Barks were simply the remnants of the Lawata of southern Tunisia who succeeded in retiring to this massif after the extermination of the Berber tribes of this latter region by the Aghlabid general ‘Abd al-Rahmān b. Rayyān al-Azīz, which took place, as mentioned above, between Tozeur and Galsa in 234/848-9.

Another important group of Lawata occupied, according to al-Bakri, the surroundings of the town of Madījkān (Meditane of the ancients) which was situated near Wādī Mallāk (Mellégue, south of the ancient town of Ma‘turtas (Montebronch on our maps), on the road which led from Kayrawān to Baghāyā. The history of this group is unknown to us; however, it is not impossible that we are concerned here with descendants of these Lenatah who beset the town of Larq (Lorgouts) in 534 A.D.

Ibn Jā‘far mentions a branch of the Lawata settled in the plain of Trarza, in the environs of Buggia. This branch cultivated the land and pastured its flocks. In the 8th/14th century, it was subject to the government of Buggia.

There was no lack in the 4th/10th-12th centuries, if one can believe al-Shāmikhī, of small groups of Lawata in the oasis of Sūf (Suf) and in that of Righ. According to this author, a Lawata settled in this latter oasis had come from Barks. However, it appears that the majority of these Lawata were the inhabitants of the oasis of Sufā and the Wādī al-Diārid in southern Tunisia.

An important group of Lawata who accompanied, according to Ibn Khaldūn, the Íbāḍī governor of Kayrawān ‘Abd al-Rahmān b. Rustam in his flight from Hīrijā to the west in 144/761-2, settled to the south of Tāḥert, capital of the Íbāḍī state founded by this emigrant. If Ibn Sabīr is to be believed, the Lawata already lived there towards the end of the 6th/12th century and at the beginning of the 7th/13th century. In the 7th/13th century, the former evidently settled on the road which linked this latter town with the town of al-Masla. Ibn Khaldūn supplies us with several details on this section of the Lawata. According to this historian, they frequented the valley of Minas. At the beginning of the 11th/17th century, the chief of this Lawata section was the ruler of the Íbāḍī emirate of Māfīd. According to Ibn Khaldūn, this branch of the Lawata was, in the 6th/17th century, liable for tax.

Morocco. According to the early Arabic sources, there were also some Lawata in Morocco. It is possible that they may have come from eastern
Babery towards the middle of the 2nd/8th century, probably with the Idrîsî and Sufi chiefs who took refuge in the west of the Maghrib before the Abbasid armies. In any case, when Idrîs I b. 'Abd Allah founded the state of the Idrïsids in the Maghrib al-Ahsan, among the Berbers of the north of Morocco who rallied to his cause (in 724/838) there was also a section of the Lawata. This people probably lived to the south and west of Fas. Ibn Sa'dî al-Gharnât notes there, in fact, the territories occupied by this people. These are probably the Lawata settled on the Sebou River who owned the fortress called al-Lawnta Madin, this fortress was situated on the road which linked the town of Sidi-Mansur to Fass. Another group of Lawata lived in the north-west of Morocco, south of the town of Aglia (Arraila), the territory of which also belonged formerly to this people. In the province of Tâdla, south of the Oued Unin al-Rabi', there lived, among the Arabs of the tribe of the Banû Pikûr, the Lawatî tribe of Zanûrûn.

Mauritania. A certain number of people belonging to the tribe of Lawatî, probably merchants, lived in the middle of the 1st/nth century in the region of Adhâwûr which was an ancient centre of commerce. It is possible that they may have come from Tâhût, or more likely from southern Tunisia.

Guy. According to Amari, the Berbers of the tribe of Lawata appear in the Middle Ages in the diplomas of Palermo as amongst the inhabitants of Sicily. This people probably lived in an island in the province of Barani Hamâmât and that he had visited two places not very far from the Oued Righ, sc. Waggâna (modern Ourâna) in the north, on the road from the Oued Righ to Biskra, and Wardîgka (Guarqala) in the south of the Oued Righ. Amari also noted that his family had connections with the town of Sadrata (the modern ruins of Sadrata) in the Ouargla oasis. Indeed, his maternal uncle, the learned shaykh Abu Muhammad 'Abd Allah Muhammad al-Sadrâtî was probably a native of that town.

Ibâdî tradition rightly accords al-Lawâtî a place of honour. He was not only an eminent historian and traditionist, but also a remarkable poet. He wrote a work on the history of the North African Ibiîjîyya which was used by the anonymous author of the Siyar al-muqaddimah, who used al-Lawâtî's autograph. He also taught Ibâdî history and siyar to numerous pupils. One should mention three of these, who are accounted amongst the most celebrated historians and biographers of the 9th/15th century: 'Abd Allâh al-Châfî, Abu 'l-Râ'î, Sulaybî, Abu 'l-Salâm al-Wasîyânî and Abu Nûh, all of whom took from al-Lawâtî many narratives, to be used in their own works or else to be transmitted to the traditionists of the following generation. Amongst other works, whose authors used al-Lawâtî's traditions and stories, may be mentioned, in addition to the Siyar al-muqaddimah, the K. Tabâbî, the K. Thaâbih, the K. al-Siyar, and the K. Bâb al-Shamâshil.]

(T. Lawicke)

LAWH (a.), board, plank; tablet, table. Both ranges of meaning are found in other Semitic languages such as Aramaic, Hebrew, Syriac, and Ethopian, and Jeffrey thought that, whilst the sense "board, plank" might be an original Aramaism, the second sense was almost certainly from the Judaeo-Christian cultural and religious milieu (see The foreign vocabulary of the Qur'an, Baroda 1938, 253-4).

The word occurs five times in the Qur'an. The first meaning is found in sura LIV, 13, where Noah's ark is called shab al-a'affā. The second meaning is that of lawh as writing material, e.g. the tablets of the lawh 'sura VII, 142, 143, 155, where the plural al-lawh is used; see LA, iii, 421. Al-lawh is also translated as 'planck' (Bekkäri, Tafsir al-Kur'an, sura IV, bāb 18) correspond to our "paper and ink". The expression mā bāyyn al-lawhānayn "what lies between the two boards" is found in hadith, to describe the whole Qur'an (Bukhārī, Tafsir, sura IX, bāb 4, Libilit, bāb 54); cf. mā bāyyn al-nassātayn (Buṣūrī, Fad'il al-Kur'an, bāb 18). In modern Arabic, al-lawh also means a schoolboy's slate and a blackboard.

The decisions of the divine will are also written on the lawh with the pen, tawmā (q.v.), and the particulars contained as a whole in God's consciousness are transmitted by this last, so that on the lawh are inscribed the archetypes of all things, past, present and future. The popular mind represented the lawh as the created from the Creator and imprints its form on the soul (R. A. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 111-12). The word occurs five times in the Qur'an. The first meaning is found in sura LXXVII, 1, the tablet is again mentioned: "We sent it down (sc. the Qur'an) safely preserved", i.e. "Verily it is a Qur'an, famous, preserved on a tablet" (see the commentaries); "safely preserved", i.e. "... and only later given objective individualisation by the pen or divine intelligence, which distinguishes the created from the Creator and imprints its form on the soul (R. A. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 111-12). Esoteric works identified various forms of the tablet with the primal intelligence (as above), the lawh al-anwāf with the expressive, universal soul (al-nasūf al-nashīfa al-huliyya) - the preserved tablet; with the particularising soul; and with the lawh al-kayyūla or material tablet, which receives the forms of the supersensory world (cf. al-Djurdjīn, Ṭarīqah, ed. Flügel, Leipzig 1845, 24). Mystically-inspired persons, it was held, might have glimpses of the entirety of God's decrees inscribed on the tablet and normally hidden from human comprehension, either by dreams or by a sudden flash of divine revelation (shāmā, removing the veil (see D. B. Macdonald, The religious attitude to life in Islam, Chicago 1909, 252-4, 254-5). Finally, it may be noted that the 10th century Persian religious leader Bahā' Allāh [q.v.] promulgated, at different points in his career, various "tablets" containing homiletic counsels and prophetic instructions for his followers, such as the lawh al-surūf "tablet of command" issued in 1280/1863 and ostensible from the beginning of his mission (a document which contributed to the schism with his rival Mīrā' Yāhūbī ʿAbd al-Ansāf al-A✿zāzī; the lawh-i bābhārī "tablet of good tidings"; etc. (see E. G. Browne, Materials for the study of the Bābī religion, Cambridge 1918, 17, 21-2, 29-31, 187).

AL-LAWH AL-MAHFIZ [see AL-LAWH]

LAWN (a.), "colour". One of the distinctive features of the Arabic language is the great richness of its chromatic vocabulary. It is as if the smallest detail, the most minute nuance, was deemed to require a nomenclature sui generis.

In the first part of this article, we shall undertake a morphological and semantic analysis of the names of colours. Subsequently we shall see how Muslim thinkers, theologians and philosophers, have analysed perceptions of colour. The final part will be devoted to the symbolic dimension of colours.

From these passages, it is evident that in the pseudo-epigraphic literature also, the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of lawh in Muslim literature.

For other passages, cf. the index to Charles, The apocrypha and pseudoapocrypha of the Old Testament, s.v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In Şâfī mysticism and in esoteric philosophy and cosmology, the lawh has an important place. The pantheistic mystical writer ʿAbd al-Karīm al-Dīnī [q.v.] (d. in the first half of the 9th/15th century) explains in his al-Tāfīn al-tāfīn how God's creation is first given shape occultly in the divine knowledge, and only later given objective individualisation by the pen or divine intelligence, which distinguishes the created from the Creator and imprints its form on the soul (R. A. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 111-12). Esoteric works identified various forms of the tablet with the primal intelligence (as above), the lawh al-anwāf with the expressive, universal soul (al-nasūf al-nashīfa al-huliyya) - the preserved tablet; with the particularising soul; and with the lawh al-kayyūla or material tablet, which receives the forms of the supersensory world (cf. al-Dīnī, Tāfīt, ed. Flügel, Leipzig 1845, 24). Mystically-inspired persons, it was held, might have glimpses of the entirety of God's decrees inscribed on the tablet and normally hidden from human comprehension, either by dreams or by a sudden flash of divine revelation (shāmā, removing the veil (see D. B. Macdonald, The religious attitude to life in Islam, Chicago 1909, 252-4, 254-5). Finally, it may be noted that the 10th century Persian religious leader Bahā' Allāh [q.v.] promulgated, at different points in his career, various "tablets" containing homiletic counsels and prophetic instructions for his followers, such as the lawh al-surūf "tablet of command" issued in 1280/1863 and ostensible from the beginning of his mission (a document which contributed to the schism with his rival Mīrā' Yāhūbī ʿAbd al-Ansāf al-A✿zāzī; the lawh-i bābhārī "tablet of good tidings"; etc. (see E. G. Browne, Materials for the study of the Bābī religion, Cambridge 1918, 17, 21-2, 29-31, 187).
For a proper understanding of the subject, some clarifications and definitions are required, however: the colour of an object is observed, on the purely perceptual level, with its three sensory variants of tonality ("colour" in the strict sense), luminosity (the "quality", the extent to which the object reflects or transmits light) and saturation ("vivacity", "intensity" of the colour). White is an achromatic colour, as is black. Just as, in physics, a white body diffuses equally all the visible radiations that it receives, so a perfectly black body, for its part, absorbs all radiations totally and transmits none. The achromatic colours have a zero saturation. The primary or fundamental colours are those which an artist distinguishes from each other and which when combined produce white: indigo/yellow, blue/orange, violet/orange-green, red/blue-green. Finally, of the seven colours of the spectrum, only three, blue, yellow and red, are fundamen-tal: they serve to elaborate the other colours.

Morphological study. The morphology of adjectives of colour is characterised by the fact that they are, in the majority of cases, formed on the diploite paradigm al-bal in the masculine, fajal in the feminine. The adjective form is a theme of intensity, which also supplies the adjective; this common formulation of the intensive and of the adjective of colour is apparently not coincidental, and it is asserted that, semantically, the latter may have been regarded, at a certain stage in the evolution of the language, as an intensive, that which we translate as "red" may, originally, have signified "more red than ...". The evolution of the language would have led to the ellipse of the second term of the comparison. In this context see LA., ed. Beirut, ii, 122. As M. Guillaumont has commented (Problèmes de la couleur, 343), "it is a fact that in Semitic, there is a particularly narrow line separating names of colours and intensive themes. In Aramaic, names of colours are specifically formed on the pattern al-bal. In Hebrew there also exists a series of names of colours formed on an intensive pattern characterised by the doubling of the last two radicals (al-bal) ..."

Alongside this al-bal construction, which is not only found in the majority of adjectives of colour, but also that of all the fundamental colours, other forms are encountered, admittedly rare, to which we nevertheless, draw attention, while not forgetting that some of them are doubtfull forms of the al-bal, or combine to form doubles of their own. We may mention the following themes: fajal (hānūṣ), mutafal (māfārā), al-bal (al-balān), fajal (fājān), fajal (fājān), fajal or bal (gakhk, tāhik) and mutafal (muḥāf). Less common are adjectives of the patterns fajal, wajal, jālīs, jālīs, jālīs, jālīs, jālīs, jālīs, jālīs, jālīs, and fajal. There exists an undoubted link between certain of these themes and a certain chromatic nuance: fajal and saturation, mutafal and mixture, al-bal and blending. Others of these themes are in fact relative adjectives terminating in i, an indirect manner of denoting colour to which Arabic frequently has recourse. Some adjectives of colour (often borrowed words) are defined by relation to an object which represents this colour and which serves as a support. Thus wajal derives from wajal "rose", hānafājī from hānafī "violet", lūlūlī from lūlūlī "carnation". It is most probable that there exists a connection between the form of the adjective and its meaning. Thus, from the one root fajal, the following are derived: fajal "of a simple yellow", fujal "very red" (of human complexion), fahal "red or white", and al-bal "very white"—so many bright nuances.

Nouns of colour are mādara which generally have the form fajal. This is the only abstract element in chromatic terminology. By āwāma or inflection, one also expresses (the state of being red", "the state of being yellow". As with the adjectives of colour, but within a less varied spectrum, the nouns of colour, although being mādara, are capable of borrowing the following themes: fajal, fujal, sajula (the last applying, apparently exclusively, to white and black, of which the roots are "hollow"); jūlub, jūlub, jīla. For nouns of colour of the theme fajal, and for these alone, it seems that these mādara cannot be called "verbal substantives", since, as we shall see, the verbs of the same class which correspond to these mādara are denominative in origin.

Of the derived forms of the Arabic verb there are two—those of the paradigm fajal and fajal—which have a particular quality: they express states (colour or deformity); they do not derive from the "bare form" fajal, but are denominative in origin, formed from adjectives of the paradigm al-bal expressing the states cited above; and they denote an intensive aspect which is illustrated by the doubling of the final radical of the IXth and Xlth forms of the theme (Ifal), less common than the IXth (Ifalala) seems to be a doublet of it, still more intensive. Thus we have, besides āwāma and maddīda, meaning respectively "to become white", "to become black", āwāma and maddīda, for "to become pure white", "to become black as ebony". All verbs of the IXth and Xlth forms are verbs of colour or of deformity. It does not, however, follow that all verbs expressing a notion of colour belong to one of these two forms. Besides the latter, which could be described as "essential verbs of colour", we encounter others which borrow all the verbal forms, "bare" or derived, and which in general express colour through derivation of sense.

Finally, attention should be drawn to mono-trilateral forms and loan-words. The following paradigms are encountered: fujal, fujal, fujal, fujal and fujal among the former. As for loan-words, the most used are: ākāzā" (purple), sīyāb (yellow), zard (red and gilt), jīla (violet), sīnayshā (sky-blue) and maddī (indigo); these are terms derived from Persian or Greek.

Semantic study. To express the concept of "colour", Arabic uses the general term laum which, besides this precise sense, also denotes "shade", "aspect", "type", "dish (of food)", etc. In addition to this general term, we also have the following words: bīs (stressing a notion of brightness, of clear colour), ṣabb (liquid colour or tincture, also applied to the object to which it colours) subās (applied to the colour of the complexion), laum, nāṣif (applied to a dirty colour, a mixture of two blended colours). bikāri, bikāri and nāṣif (all three referring to a mixture, a combination of two colours sometimes regarded as opposites).

It would seem useful, as preliminary to a semantic survey, to discover how the Arabs perceived the colours of the rainbow [see GAWK KAN], and how they subsequently transcribed their perceptions. Since this atmospheric phenomenon displays a very wide spectrum of colours, it is of the utmost interest to determine, for each people, the way that they have given to what they have seen. We know that the Greeks and Romans attributed three colours to the rainbow. In his Meteoron (II, 4, 173) Aristotle lists red-brown (albogor), green (prassenon) and purple (phaimon) in which he sees a progressive weakening of the light. Plato shows, in the Timaeus, that it is possible to reconstitute all shades with
700

LAWN

lour fundamental colours: black, blue, red, and
the colour oi light. Comparative study of languages
belonging to very diverse cultural areas show that the
divisions of the spectrum arc far from always coin¬
ciding. They are arbitrary, and differ according to
situations and the existing resources of the language.

snakes. The terminology of this colour is relatively
limited, and this could be connected with the symbolic nature of blue, which we shall examine in due
course. We may cite samdwi, kali, askhal, ‘axvhah and
amjeah (three terms of a pejorative nature), and
amlah.
Green is synonymous with nature. It is the basis
ol life. The usual term is akhdar, an adjective also
associated with the notion of darkness, since it some¬
times denotes black, dark, grey. We also find al•
kjuulrH* as a reference to the sky: a further illustration
of the link between blue and green, often confused
in antiquity. The Greeks, the Chinese, the Melane¬
sians, the New Caledonians, the Romans, among
others, used the same term to denote these two
colours. Without having the extreme richness of
those of black and of white, the terminology of
green is fairly extensive. We shall confine ourselves
to mentioning hani*, ahwd, akhtfab, ahkfab, adlas,
rahik, eashrak and agkyan.

The great dictionaries and encyclopaedias of classical
Arabic present, under the heading kaws kuiah, almost
unanimously, the following formula: "the rainbow
consists ol strips in a circular arc, coloured yellow,
red and green '. Here too—green replacing blue
with which it is often confused—we again find the
three fundamental colours.
The primary term used to denote the colour white
is the adjective abyaj. The same root supplies the
word for "egg", bayfa. A\-abya4 also denotes saliva,
a sword, money, and, paradoxically, in Africa, coal.
In the
the terms abvaJ and intend appear con¬
secutively, expressing the contrast between light and
dark, rather than that between white and black. Many
examples could be quoted where abyiui refers to a
tonality rather than a colour. There exists a host of
other terms to denote white: Sdam, (hdgkim, £atra
(which denotes white as well as a dork tonality),
a$hyab, $iklab, zalm, a&harr, fall1 (u bright white
as well as a bright red), ahmar, kithdbi, haddi, ahamm
(which displays the same peculiarities as Hawn),
kawdri, khulis, azhar, lahak, amrah, mlsi* (brightness
of white, yellow, red), yakak. etc.
The principal term used to denote black is aiwad,
of which the root implies the notion of power, of
might. The antonym of abya4, sc. asu'ad, has the
same characteristics: very often it applies to a dim
or dark tonality, rather than to the colour black Itself
(cf. Kur’in, II, 187, III, 106, XVI, 58, XXXIX, 60,
XL1II, 17). The substantive al-a$*>ad can refer to
such diverse objects and creatures as the snake, the
scorpion, dates, etc. The masdar "uitcad", referred,
quite uniquely, to a region of *Irak especially rich in
palm-trees and orchards.
The range of terms used in reference to black is
also extremely wide. Worthy of mention are baghs,
mutabbam, djaun, ahtam, hunbub, hindas, fiulba,
hdlik, ahamm (white, black, or dark red), ahwaz, ahwd
(a perfect example of the concept of darkness: black,
red, green; cf. RurMn, LXXXVII, 5) adbas (dark),
addiuu, ad'adj, adkan.adlam, adkam (dark: cf. Rur’an
LV. 64). asham, oifa*. muflim. gkvddf, ghitbib (the
association between the crow and the colour black is
very wide-spread; we may recall that the roo: c-r-b
serves to denote black in Hebrew and in Aramaic),
a]ham, kdlim. kdlin, kdhint, akhal, etc.
C.rey, a fusion of black and white, does not have
a precise colour. It does not hav© a primary term in
Arabic. We may mention the designations gdhtb and
ashhab, aghtham, akhab, adsam, arbad, armnd, armak,
aghbath, awrak, afhal, h aid, aklas, anwas, amlah,
amhak, etc.
The Arabs rarely mention violet. The principal
term, borrowed from Persian, is banaj$*4i*- Also en¬
countered are }$hubldz\, samdnghiiwf./ir/fri, evidently
non-Arabic words, and all of them adjectives of rela¬
tion. The same applies to indigo, of which the colour¬
ing material, a plant, is called khifr, sadQs, mu^hayfir,
Hflim, wu’tJr, nil, ttila or nllaii and wasma. On the
rare occasions when the colour Indigo is mentioned,
it is through paraphrases, as the colour of the
indigo, or through adjectives of relation ending in i.
Blue, on the other hand, is one of the essential
colours of nature. The usual word denoting it is nsrak,
a term which also has the sense of livid, haggard
(cf. Ku^an, XX, 102). The plural, sardkim, designates

j
j
I

Yellow is denoted, most often, by asfar, a word
whose relationship with the name of the saffron plant
(borrowed from Persian) is striking. Arab historians
applied the designation Bant* 'l-Affar [y.u., lit. "the
Yellow Ones") to the Greeks and the Byzantines,
while they called themselves "the Blacks" (or "the
Masters"?) and applied the designation "the Red
ones" to all non-Arabs. The terminology of yellow
is extensive. The principal terms are hibr, 4hiryab,
wbrak, zabra^i. zirydb, lahr, asham. a/ka( (see
for bright white and red), kuladi, anila^i, nd$ic
(the same remark as for afkac) and twfris.
Orange, like violet and indigo, is indicated by
means of the adjective of relation applying to the
object which represents the colour: burtukdl "orange",
supplies the adjective burtukdli.
Red evokes the notions of blood, flesh, fruits,
life. The two "opposed" and complementary colours,
green and red, arc also the colours of all vegetable
and animal life. Red has always occupied a position
of particular significance, in almost every sector of
humanity. It has always enjoyed a privileged status
in vocabulary. All its shades are represented, in vir¬
tually all languages. Block, red and white form the
trilogy of colours that are the best recognised and
the richest in terminology and symbolism. The usual
word, in Arabic, is ah mar, deriving from a root with
the sense of ardour, violence, intensity. Red is the
colour for which Arabic terminology is the richest.
We shall confine ourselves to citing Siam (already
encountered as a word for white, and perhaps the
term for red in ancient Semitic), badhagh, abkam,
fh&klb. Hawn (already encountered as a word for
white), ahlas, huml, adbas, madmilm, adhas, adhan,
arbad, rddini, zabnik, zdhtr, azhd, oslakh, aslagh,
ashraft, suhdhi, a$lror, jay'ari. ?ikldb, (already men¬
tioned for white), $am*ari. a?kab, adradj, *&nik,
'anami, gkasik, ghadb, tnaghluk, fadm, Jadn, /irds,
firfad, a/dah, faki« (already mentioned for yellow),
hurra?, a^rof, ktrmiti ("crimson"), ka$har,
(especially denoting saturation), aktka*, karik, half,
kamil, mdii1, atn'ar, mantkur, tiaka*, ward (cf.
Kur’an, LV, 57) and ydni€.
Brown and pink have a limited vocabulary. It is
logical, on the other hand that russet-fawn should be
precisely observed and distinguished by a people
whose origins lie in the desert. We may mention
bahran1. ahsab, hxddr, a&kah, (tihfear, ashar, a$hab,
a'yas, aklaf, kumayt and irard (already mentioned
for red). Purple is denoted, in the principal Semitic
languages, by terms deriving from one single quadriliteral root r-g-u*-»». Arab lexicographers claim


that the Arabic argawas is a loan-word from Persian. Firdāš and biyāfš obviously derive from the same etymology as the Greek purpura and the Latin purpurā. For lessened colours other than brown, the terminology often relies on variants of terms designating dust, ashes and earth.

The vocabulary of mixtures and blendings of colours is very extensive. One is struck by the frequency of the consonant ġh in the formation of terms designating mixed, mottled, strained, spotted, colourations. In addition—which is scarcely surprising—the hides of horses and camels are differentiated, down to the slightest nuance, by dozens and dozens of term (see the articles by Hess and Shihibī, cited in the Bibli.). The striking fact, in this context, is the large number of terms (adhas, adjan, adkham, adra, adas, adhatb, adham, adlam, adhas, adham, etc.) with ġ as the first radical.

We close this brief survey of the semantics of colour with the remark that doubles and loan-words are not, and hardly indicate that this colour has attained its highest degree of luminosity or of intensity. While the substantives, al-sharkh, al-tarzahr, al-tashbik and al-ghabrī, specifically denote saturation; and while, on the other hand, brightness has the names al-bašir, al-bashīf and al-brī:j; it is nonetheless true that the intensives fāsi, nāsi, ibrīs, nibrīs and 'ibīk, previously encountered in this survey, and all of them active participles: (a) imply, when they govern the notion of colour, the notions of saturation and luminosity, indicating that the colour is intense and striking; and (b) are capable of being applied—as originally at least—to any colour whatsoever. Apparently it was at a later stage that Arab grammarians assigned to each of these intensives a specific adjective of colour to qualify.

Colour in the works of Aristotle and his Arab translators. The Arab philosophers, in their analysis of the problem of colour and of its perception, were, to differing degrees, influenced by Aristotelian theory on this subject. It is important therefore to identify the major themes of the theses expounded by Aristotle, especially in his De anima (ii, 418a-419a) and his De sensu et sensib. 437b-440b.

The Greek philosophers were struck by the indissoluble link between light and colour on the one hand, and transparency on the other. The eyes, the most transparent part of the human body, are the meeting point of light or of external colour, and of their interior equivalent, a fact which favoured the theory of emanations. What is visible, says Aristotle, is colour; and colour is that which is on the surface of what is visible by itself. The basis of all the phenomena of colour is the transparent. The latter, represented especially by air and water, carries and determines colour, and colour is not visible without the aid of light, since it is only in the light that the colour of any object may be perceived. Where transparency is only potential, there is darkness. Light is like the colour of what is transparent, and this transparency is realised in entelechy. The receptacle of colour must be what is colourless. The quiddity of colour is the ability to move the transparent in fact; and the transparent has the property of transmitting, instantaneously, the colour of the visual object to the eye, independently of any notion of time or space. One sees it; it is a qualitative and not a quantitative transmission. Aristotle rejects categorically the theory of emanations, developed by Empedocles, revised by Plato in his Timaeus (458 f.), according to which we see by means of "rays of the nature of fire", which issue from the eye and meet the luminous emanation from the object perceived. Aristotle and all those who followed him, including the falsāda (q.v.), insisted on the aqueous and non-luminous nature of the eye. All the same, the Master rejected the idea, propounded by Democritus, Leucippus and Epicurus, that vision is only the reflection of an object, as in a mirror. Every object, even opaque, contains, in varying proportions, air and water; and to the extent to which bodies contain transparency, they are susceptible to being coloured. The colour of a solid body is the limit, the surface, not of the body itself, but of the transparency that is within it. The nature of transparency extends, in addition, throughout the whole of the body. Colours are the defined transparencies which reside in bodies and which approximate, more or less, to white or to black, according to whether they contain more or less fire (luminosity and active transparency), or earth (the opaque in the absolute), or ether (the obscure element). The essence of colour is the act of determining a qualitative change in the light, which is, itself, active transparency. The intermediate colours—that is, those other than black and white—exist neither through juxtaposition of a white and black particle, nor by superimposition of one colour perceived over another. They result from a total, effective blending, of bodies entailing the blending of their colours. Such is the determinant cause for the existence of the transparency of colour. The latter is number is limited, since it is confined within the two extremes of white and black. Finally, Aristotle distinguishes between darkness and blackness. Darkness is the absence of actualisation of the transparent. It has no existence per se.

Some eminent Arab authors and translators, like ʿAlī b. Rabban al-Tabāṣ (d. 240/853) and Hunayn b. Ishāk (d. 260/873) were influenced by Greek theories of colour, as they became known to them through the medium of the commentators of the early Middle Ages. According to al-Tabāṣ, white, the evidence of the predominance of the dry element over the humid within bodies; the exact converse applies to black. For him, red results from the synthesis of heat with dryness and humidity. Such are the three fundamental colours from which the others derive. Yellow is the intermediary between red and black, green the intermediary between red and white. In the former, humidity is greater than in the latter. Other chromatic nuances are determined by varying quantities of dryness, humidity and heat. Hunayn,
for his part, is complimentary towards Aristotelian theories regarding the perception of colours. He insists on the fact that light is neither a form of fire nor a rarified body, as some of Aristotle's predecessors had maintained, but a transparency borne by a body. Colour is the perfection (entelechy) of limpid and diaphanous bodies—namely, water, air and all other similar substances—which receive the real colour of the objects surrounding them. The transparent body has no colour per se; but it absorbs the colour of the object which it envelops: it thus has potential colour. Colours transform the transparent: from being potentially coloured, it becomes actually coloured. Light, by its presence in the air, renders it possible for objects to have another colour.

Colour according to the Mu'tazilis. In its defence of the articles of faith by means of rational argumentation, the theo-logico-political school of the Mu'tazilis was led to take an interest in the problem of physical bodies and of their perception; but they took divergent views on the problem of colour. While Naṣṣān (d. ca. 239/853), starting with the postulate that accidents cannot be visible, classified colours among the substances, the corruptible bodies. Rimh b. al-Mu'tamir (d. ca. 220/835), his contemporary Muṣʾammar and the majority of the disciples of the school, considered colours as accidents due to the action of men alone, or produced by the very nature of the things that they affect. Thus they are not subject to divine creation, but God remains the determinant cause of the accidental determination of substances. God created substances (bodies, atoms), capable of producing, by their own nature, well-determined accidents, and colour is one of these. Directly following this reasoning, Hījākīn al-Fuwāšث (beginning of the 3rd/9th century) declared that colour does not constitute proof of the existence of God, but is a simple form of physical bodies. Muṣʾammar, the theoretician of maʿnā ('entity', 'nature'), according to which "God creates a thing by virtue of a cause which, itself, derives from another cause, which is the fruit of another cause ...", postulated that it is through the effect of a maʿnā that blackness differs from whiteness, and through another maʿnā that a certain body is black and another white. In fact, according to him, every "accident" (movement, colour, taste), requires the existence of an infinite chain of determinants.

Colour according to the Malakī. In its argumentation, the theologico-political school of the Malakīs was led to take an interest in the problem of physical bodies and of their perception; but they took divergent views on the problem of colour. While Naṣṣān (d. ca. 239/853), starting with the postulate that accidents cannot be visible, classified colours among the substances, the corruptible bodies. Rimh b. al-Mu'tamir (d. ca. 220/835), his contemporary Muṣʾammar and the majority of the disciples of the school, considered colours as accidents due to the action of men alone, or produced by the very nature of the things that they affect. Thus they are not subject to divine creation, but God remains the determinant cause of the accidental determination of substances. In fact, according to him, every "accident" (movement, colour, taste), requires the existence of an infinite chain of determinants.
Repeating an Aristotelian formula, al-Farabi defines colour as "the surface of the diaphanous body, in the measure of its transparency". White is not the negation of black, nor black that of white; these opposed terms annihilate each other.

The Ikhwan al-Safa* [f.v.] (2nd half of the 4th/10th century) authors of a collective encyclopaedia clearly influenced by Neo-Platonic emanationism, considered colour one of the complementary attributes of the body. It is a "spiritual accident", a "form which the soul puts into the body". Light is bound up with the souls and spirits that circulate within it. While traversing diaphanous bodies ("the purest bodies are diaphanous") in the same way in which the soul circulates in the human body, light carries colours up to the pupil, preserving their purity intact. At the level of the pupil, the visual faculty perceives the colours, then transmits them to the imaginative faculty. Light and darkness are "spiritual colours". On contacts with bodies, they transform themselves, respectively, into white and black, which are "corporal colours". Colours, defined as "the brightness of bodies" are categorised into five only on the surface of the latter. There exist seven simple colours: white, black, red, yellow, green, blue and "the dull colour" (al-kadra, violet?). Black derives from an earthy humidity which prevents light from reaching vision. Black is the absence of light. It causes convergence of the visual cluster. At the opposite extreme, white is the manifestation of light in its full purity. For its part, it entails a divergence of the visual cluster. The other colours are intermediaries between these two extremes; each one being characterised by the respective part played by the quantity of white and of black which it contains. An object appears yellow when an obstacle prevents light from appearing pure. Red can derive from "putrefactive causes" (through excess of humidity) or from "liquefactive causes" (through excess of heat). Green draws near to black, in the sense that, here too, an earthy humidity is dominant, constraining the passage of light and of the visual rays. Blue belongs to the chromatic family of green. God made the air blue and the plant green to accommodate the souls and spirits that circulate within it. In fact, these two colours possess the virtue of being salutary for the vision. The colours of the rainbow are four in number: red, yellow, green and blue; each of these colours corresponds to one of the four primary qualities, namely, heat, dryness, humidity and cold; and to one of the four elements, namely, fire, air, earth and water. Finally, these authors reject the theory of emanations. Such a thesis, they declare, could only be supported by people having no "experience of the things of the spirit and of nature".

Ibn Sīnā (d. 428/1037), like Aristotle, classed the psychology of the sensory apparatus among the physical sciences. He devoted an entire chapter of his Maqāla to the problems of vision and of colour. Light is a quality affecting diaphanous bodies: and colour, opaque bodies. The latter are coloured potentially. Colour can exist without being visible; but actual colour occurs only by virtue of its clarity. Colours do not exist, in fact, in bodies. A black or dark body, is potentially coloured. An object that is coloured when it is lit up, will be colourless in the dark: it is deprived of actualised colour. The actively transparent (air, water, the celestial sphere) is a diaphanous medium, and at the same time a vehicle. The illuminating body approaches the coloured body, without any change, any alteration, affecting the diaphanous medium. The existence of light makes the potential transparent an actualised transparent. As light increases, so the manifestation of colour increases also. Ibn Sīnā followed the views of Aristotle in regarding as absurd the theory of emanations in rejecting the theory that assimilated vision to a reflection similar to that transmitted by a mirror, and in distinguishing between darkness and blackness. He rejected the theory according to which only whiteness is a colour, and blackness is darkness, since, he tells us, black is illuminated, and it gives light to things other than itself. Consequently, colour is not whiteness alone. Absolute, generic colour, is not light; but the latter is the cause for the appearance of light, and for the transmission of its transmission. Light is thus a constituent part of the visible entity which we call 'colour'. Effective colour results from the encounter of light with potential colour. The intermediary colours result from the blending of black and white. White can turn into black in three different ways: (a) through grey of increasing darkness; (b) through red tending increasingly towards brown; and (c) through green and indigo. These diverse processes are the reflection of the diversity of composition of the intermediary colours.

Ibn al-Jayyam (d. 439/1040), in his Optics, took issue with those scholars who denied the real existence of colour, and declared that it was only an apparition situated between the eye and the source of light. According to him, if it is true that the appearance of colour is affected by the quality of the light which carries it, and that the same colour can be transformed according to the degree of light which it is given, it nonetheless remains a fact that colour has an existence of its own. His commentator Kamil al-Din al-Farisi (d. 720/1320) explored the fundamental connection between light and colour. In darkness, colours are presented, potentially, in coloured bodies. They are transformed into actual colours when light affects these bodies.

Ibn al-Fazam (d. 459/1064) devoted a paragraph of his Falsā to colour. Here we read that the air is invisible, because it has no colour; whereas water is visible, because it is white. Similarly, fire also is colourless in its sphere: the colour that we see in burning wood, in the wick of a lamp or in any other body that is consumed by fire, derives from the measure of humidity contained in these bodies. In burning, the latter is transformed into igneous air; and the colour which each of these burning bodies adopts is determined by the materials of which it is composed. It is also particles of humidity which give rise to the rainbow. The scholar of Cordova subsequently sets out to refute the theses of the "Ancients", according to whom white results from a divergence of the visual cluster, and black from a convergence of this cluster. According to him, black is invisible, because perception exists only through an extension of vision. Since the eye sees only that which is coloured, black is not a colour. It is, in fact, only darkness, the non-being, privation of colour and eye sight. When we believe that we "see" black, we are subject to an optical illusion. It is purely a matter of convention and metaphor when we describe a person, a crow or a garment, as black. In fact, each of these bodies has its own colour, which is not black. As for the difference between a matt black and a shiny, bright black body, this derives not from the black itself, but from the lustre, the brightness and the scintillation, which are distinct and constitute a colour in its own right, which affects all the chromatic nuances. We may recall that Plato counted
“the colour of light” among the four fundamental colours. One could, says Ibn Hazm, just as well say that the dull is a specific colour, since the vision perceives it. Such is also the case with brightness, with luminosity. It is evident that the Zahirī master was particularly aware of the sensory variants of colour. He goes on to establish a hierarchy in the vividness of perception of colours, whose order is as follows: white, yellow, red and green. It is to be noted that he shows a great deal of circumspection in the declaration of his statements, since he is careful to follow them, invariably, with the formula “God alone knows!”

Ibn Bāḍīja (d. 533/1139) elaborated a whole doctrine of colour in his Tercis on the soul. The influence of Aristotle, in particular of his De sensu et sensib., is evident; a fact which the author makes no attempt to conceal, as he quotes from the latter work on more than one occasion. The postulate is that the primary sensory element of vision is colour. The seeing soul (al-ma‘afs al-bâhîra) is the faculty which exists in the eye and which enables it to perceive colour. It is located in the vitreous humour, which the Arab philosophers called the glacial humour (al-naftha al-qafidyya). Colour is, in substance, a form. It is perceptible only through the intermediary of the air; and when a coloured object is placed directly before the eye, the latter is incapable of perceiving it. The air only discharges its function as a vehicle for colour when it is lit by a luminous source. Two hypotheses could thus be formulated: (a) colours, in darkness, are potential only, and have no effective existence; (b) the air absorbs colours only through the influence of the optical image in which these colours reside. For Ibn Bāḍīja, the potential existence of colour in darkness is in no doubt. Proof of this existence lies in the different tonalities of the same colour, depending on the quality of the surrounding light, which includes penumbra. He adds that this was demonstrated well by Aristotle (see De sensu et sensib., lliii, 4404, 7-13). As for the phosphorescence and the show of certain objects and animals, these are determined not by colour but by the air, as does the vision of the eye. The property of colour, endowed by the fact that it derives from the blending of the lighted with the coloured body, is that of being, itself, a disperser of light, and of moving the air. Colour therefore contains light. It promotes a movement in the lighted body, in that it is lighted; for this body is, itself, a vehicle for colour. In addition, colour puts the diaphanous into effect, by reason of the fact that the latter only accepts colour because it is lighted. Democritus was mistaken in declaring that vision in a vacuum would be pure rather than through the diaphanous. Just as colour cannot be perceived in the absence of light, so the latter is only perceptible when associated with colour.

The eminent commentator on Aristotle, Ibn Rushd (d. 595/1198), also undertook to expound a theory of light and of colour, as far as possible consistent with the spirit of the Peripatetic science, as transmitted through the intermediary of Alexander of Aphrodisias, Thomasius and Jean Philonius. He sets out his theory in his Great Commentary on De anima and his Epitome on Parvus naturae. Colour exists on the surface of a certain body. It is the entelechy (actualisation) of a limited transparency, in that it is a limited transparency, while light is the entelechy of an unlimited transparency. Resulting from a blending of fire with diaphanous body, colours find in the light, not the cause of their transmission of the visual organ, but a genuine essence and existence. We have seen that Ibn Bâḍīja supported the theory according to which colours exist, in potential, in bodies, whether the latter are lighted or not. Unlike his compatriot from Saragossa, the master of Cordova claims that they can exist effectively, even when they are not perceived. They only become visible under the effect of light. “It is evident that light is necessary for colours to be visible; whether because it gives to colours the form and the manner of being (malath benishitu) by which they impinge upon the transparent; or because it gives the transparent the form by which it receives the action of the colour, so that both can be achieved” (apud L. Gauthier, Ibn Rochd, 153).

For his part, Averroës maintains the following connection: light gives to the transparent the manner of being which enables it to be influenced by colour. Light and colour coexist in the diaphanous milieu. They derive, the former from a body which is luminous in itself; the latter from a body which is coloured in itself. Light brings about the actualisation of potential colour, in such a way that it is capable of moving with the diaphanous. In common with Aristotle, his Arab commentator believes that the blending of colours consists, not in a juxtaposition or a superimposition, but in a total union of constituent elements, in the event, of fire and diaphanous bodies. It is evident that, while the Arab theologians and philosophers did not neglect the subject of colour, they were concerned essentially with the manipulation of theories inherited from the Greeks and translated, since the 5th/11th century, by men like Yahyâ b. al-Bitriq, Husnay b. Ishâk, Išâk b. Husnay  or Bishr b. Mātī. There was, strictly speaking, no Arab-Muslim doctrine of colour, and, as far as we know, no monograph devoted to this question. A mystical vision of colour. It is hardly necessary to stress the universal nature of the spiritual experience of colour. In this sense, the works of H. Corbin enable us to appreciate the interest which certain Muslim mystics, like Naḏm al-Dīn Kubrā (d. 618/1226) and al-Sînmāni (d. 737/1336) took in the phenomenon of colours, and in the synchronism between them and the interior vision. Taking up the theory of “physiological colours” dear to Goethe, which the German master espoused in his Farbenlehre (1808), to refute the hitherto un-
of embracing two diametrically opposite meanings. This phenomenon is particularly to be noted in the case of white and black, which have common adjectives. To signify sin, the Arabs used a number of euphemisms, of the type "the fair drink", "the golden one", etc. It seems to have been the same reasoning that led them, superstitiously, to avoid the use of certain terms, and to evoke them either by sufficiently eloquent imagery, or by antiphrasis, in cases where the context rendered the sense unequivocal. Even today, in certain parts of the Orient and the Maghrib, in order to avoid presenting the word "black" (the accused colour, the colour of Hell), opposites are used. In Morocco, al-abyad sometimes denotes tar or coal. It has been observed, in addition, that some adjectives occasionally qualify two colours which, while being different, nonetheless present certain affinities. In the collective unconscious where humanity's roots are laid, it does not seem that our ancestors felt the need to establish a tight partition between colours which may be regarded as being close, as they offer similar attributes and functions of luminosity and of chromaticity, and as they can be distinguished, in the former instance, yellow and red in the latter. The same conclusion holds good for the Arabs. For them, the symbolic value of white, does not seem to have been much different from that which it was for the majority of peoples, for certain latent associations are universal. The colour of brightness, of loyalty, of royalty, sc. white, most often symbolises purity, joy, chastity and virginity in popular psychology. White, the confusion of all the colours, is unity, the very image of divinity. The body of the archangel Gabriel is snow-white. The white bird is the emissary sent from Heaven to tell good news. The white cock is held to be the incarnation of an angel. It was a white cock that Allah sent to indicate to Adam the times of prayer (Kasas, 15, 55-7, 125, 200). By reference to the white hand of Moses, when he accomplished the miracles recounted in the Qur'an, the expression jad baydd symbolises potency, power, authority. In the colloquial speech of Syria, "a white heart" designates a person of good compassion, of noble nature; "a white standard", a good reputation; "white tidings", a joyful message. In Egypt, a fine day is compared to milk or to a white flower. But, as in the Far East, and as in Europe for a long time, white can also be the colour of grief and of mourning. Death is vivid and white in contrast to the redness of life. The shroud is white. White hair is the forerunner of death. In Spain, in Morocco, in eastern Persia, white was also the colour of mourning (cf. Péris, Poésie andaleôsique, 298-9). The popular subconscious has, furthermore, also been aware of this affinity between white and death, and the end of life is characterised by rhetorical figures such as "white death", sudden and natural death, death in which human knowledge is powerless towards the unknowable.

Ashmud and sayyid present an etymological relationship that is loaded with meaning. The Arabs sensed that black was a dominant colour, exercising over them a fascination that was mingled with fear. Black, darkness, the night, mystery—all of these demand respect. The Black Stone of the Ka'ba is a pillar of spiritual influence. Black is the coat of "the unknown journey", of mourning and of all sadness. It is also the joint symbol of vengeance and revolt (cf. the black flag of the 'Abbassids). In the history of superstition in the lands of Islam, black occupies a privileged position. By a kind of homeopathic magic, it is used as a charm against "the evil eye". The black
cat is endowed with enormous magic power: it is a creation of Satan, and anyone who eats its flesh is immunised against illness: its spleen, when applied to a woman, stops menstruation. For the Muslims, as for so many other peoples, the black crow exercises a harmful influence; meeting the bird is an unfavourable omen, since the bird is the herald of separation; is it not assumed that the Prophet said that the crow must be killed, since it is wicked and perverse? The chains of Hell are black. A black cloud is a sign of divine wrath. Cain killed Abel with a black rock (Kiṣaṣ, 8, 108, 122, 157-67, 193-4, 298).  

Al-sawdā is the black bile, source of sorrow and fear. "Black liver" is a term applied to a sworn enemy. "The evil eye" is a form of vengeance and vileness for personal or political personality; "black news" denotes a calamity; "black life" is unfortunate; a "black face" belongs to a disreputable person; "black death" is reserved for that caused by strangulation.

Blue, at the opposite extreme from red, is a cold, fleeting, profound, immaterial colour. The sky and the sea are blue: anyone who plunges into them is lost to infinity, since their depth is immeasurable. Metaphysical fear is a "blue fear". The Arabs consider blue to be the colour of the body of Allah and the spirit of the dead. Blue eyes are a source of bad luck; and miscreants are depicted with them in the Kiṣaṣ al-ansābiyya (117, 121, 122). In Egypt, as a defence against the "evil eye", blue-coloured grains of alum (qabba) are hung at the neck of children and adults. Blue stone possesses a share of the sacred force, and is widespread in human psychology. For the Andalusi poet, the yellow of the nardesius is the symbol of the soul; for the Sufi, it is the symbol of the heart; for the Al-farabi, it is the gold of the heart; for the Arab, it is a symbol of the heart.
We see that the problem of colours, of their transmission and their perception, is quite complex. There has been a definite evolution in chromatic perception since the origins of humanity. In early antiquity, man was, apparently, above all sensitive to the light, and very little to colour as strictly defined. Gradually, psychism—and, consequently, semantics—learned to distinguish the nuances and to designate them. The infinite richness of the colours emerged slowly in the course of evolution of the species. The counterpart of this took place in the milieu surrounding each individual. Language and perception have interfered, without ever totally covering all aspects of the question. Symbolism has entered into the element of subjectivity and ambivalence inherent in every perception, how to nuance it.

**LAWSHA**, Spanish Loja, a small town of al-Andalus, 35 miles to the south-west of Granada, on the left bank of the Guadal, at the foot of an imposing limestone mountains, the Pugeques. It has now rather less than 30,000 inhabitants, but was probably more important during the Arab period. It was the birthplace of the famous Ibn al-Din ibn al-Badr (g.a.), who wrote an enthusiastic description of it. The walls of the kasr which commanded the town during the Arab period can still be seen. It was repopulated in 1280/893 during the reign of the amir Abd Allah b. Muhammad. This “key of Granada” was besieged in 1286 by the Catholic kings, who captured it on 25 Djamád 1 891/29 May 1286.

**Bibliography:** Yáhúb, Baddán, iv, 370; F. Simonet, Description du roïne de Granada, Granada 1572, 95-6; R. Áure, L’Espagne musulmane au temps des Náyirs, Paris 1973, index,

**LAYL and NAHAR** (Ar.), two antibellic terms which respectively designate night and day, but do not have exactly the same status and are not parallel.

Layl is treated as a collective noun without dual (except in poetry where the use of this incorrect form is justified by the requirements of metre, or plural; it possesses, as would be expected, a noun of unity, laylāna “one night”, of which the plural laylaits and the seldom used diminutive laylait, are something of an oxymoron, the Arabic idiom can still be seen. It was repopulated in 1280/893 during the reign of the amir Abd Allah b. Muhammad. This “key of Granada” was besieged in 1286 by the Catholic kings, who captured it on 25 Djamád 1 891/29 May 1286.

**LAWSHA**, Spanish Loja, a small town of al-Andalus, 35 miles to the south-west of Granada, on the left bank of the Guadal, at the foot of an imposing limestone mountains, the Pugeques. It has now rather less than 30,000 inhabitants, but was probably more important during the Arab period. It was the birthplace of the famous Ibn al-Din ibn al-Badr (g.a.), who wrote an enthusiastic description of it. The walls of the kasr which commanded the town during the Arab period can still be seen. It was repopulated in 1280/893 during the reign of the amir Abd Allah b. Muhammad. This “key of Granada” was besieged in 1286 by the Catholic kings, who captured it on 25 Djamád 1 891/29 May 1286.

fifty days later is always called al-layāli al-sādūd "the black nights", while the forty "mottled" days which, in two series of twenty, immediately precede and follow it and during which the cold is less severe, are sometimes called al-a'yām al-balt (e.g. in the Calendrier de Cordoue, sometimes al-layāli al-balt (especially in al-Layt) and al-maghari (Śuḥi, ii. 354).

Similarly, in the "distance which we experience in days' journey" are measured by the Arabs in stages (marhala, pl. marhāl) translated either as "days' (a'yām) or as "nights" (layālī, even in reference to a country where day-time travel is practicable). While the day of the month can be expressed by means of a'yām followed by an ordinal number up to 19, an ordinal and a cardinal from 20 upwards (al-ayyam "a'yām al-balt") and occasionally minor "safār = 23 Sā'ar") a calculation based on nights is used in preference, most often with elision of the word layālī or a'yām, but with the feminine form of the numerical noun (whereas a'yām or a'yām would demand the masculine, for example: li-ahra'sa bā'adi al-bahlākhulamīna min Muharram = "fourteen (nights) having elapsed of Muharram = the 14th of the month (not the 15th, since the official day begins at sunset), or: li-ahra'sa bā'adi bāthān min Muharram = "ten (nights) remaining of Muharram = the 20th of the month") in a context, in calculating correspondence with the Julian or Gregorian calendars, it is important to know if an event dated on a certain day happened before midnight, in which case the corresponding date indicated by the tables should be put back one unit.

Being accustomed to look to the sky for guidance while travelling at night, and to use the stars [see a'Wād] and the phases of the moon [see a'mak] for the measurement of time, the ancient Arabs divided the month into ten periods of three nights bearing names chosen for the most part as references to the different shapes of the moon or to the degree of its brightness: 1-3: ghurar (or ghar, burh); 4-6: mājāl (or dūjar, ḍubhi); 7-9: tawt (or zuhr, buhr); 10-12: 'yūsuf; 13-15: bid; 16-18: dāru (or dūr); 19-21: zulam; 22-24: ḍīdās (or ṣaḥa, ṣuḥa); 25-27: dā'ādī (or ṣuḥam); 28-30: māsīlubāh. These three last nights were qualified with, respectively, dā'ādī, ḍīdās and dā'ādī but the 30th also bore the names saḥār, nihāra, dā'ādī, fāla. The first and the last days of the month, in historical works and correspondence, are also designated by terms connected with the moon: ghara for the first and munsīlaḥ or sarār for the last. There also exists a different nomenclature in which nights from the 13th to the 21st bear the same names as those detailed in the scheme above, but the others are: 1-3: hidd; 4-5: bānūr; 7-12: mājāl; 22-27: ṣaḥās; 28-29: dā'āda'ī; 30: māsīlubāh (for all these names, see Ibn Kūtayba, ad-dus, v. 220, al-Ma'sūdī, Murūji, iii, 426-31 = §§ 1326-28; Calendrier de Cordoue, i, 16; al-Bīrūnī, Chronologie, 394; Ibn Sīdūh, Muḥammad, i, 30-1; Ibn al-Adjīdāš, al-Azimma wa-l-umūr, 85-7; M. Rodinson, Le lune chez les Arabes et dans l'Islam en Sources orientales, Le lune, mythes et rites, Paris 1962 103-4).

The ancient Arabs possessed a host of epithets to describe a dark night but it is scarcely possible to establish a gradation between them. The majority of these terms, some of which are quite expressive (e.g. mu'akhdh, mu'akkadhama), have fallen into disuse; we shall mention only the following: layāli zajuva māsimma, mu'hakhdhama, dayyûr, "very dark"; maw'arqhis, bakhim, "where one can see nothing"; ṣabayyya, ṣadisyā, "everest and meekless"; sadaf, ṣuffah

"penumbrale"; layālī mu'akkadh or mu'akkadh, "long night" (see Ibn Sīdūh, op. cit., ix, 37-41).

From the whole of this rich vocabulary, attested in ancient poetry or compiled by ruwāt and reproduced scrupulously, though without much enthusiasm, by lexicographers, only the most current elements (in particular those derived from the root ṣ-a-y) have been retained. It is only of this night light that are items of considerable importance; we may in fact count a total of 57 occurrences of nakhār, 79 of layl, 7 of ṣayl and 4 of laydālī (as compared with 36 of a'yām, 27 of a'yām and 69 of yawsā'a/sa'd) The day and the night, naturally created by God and put at the disposal of mankind (XIV, 37/39) are signs (XVII, 132, XLI, 32) of divine power; they are mutually concurrent (XXI, 28/29, XXXIX, 7/5, LVII, 6), and God brings forth the day from the night (XXXVII 37; see also VII, 52/54); complimentary (VI, 13, 60, XXXV, 49/47, XVII, 88/86, XXX, 22/23, XXXIV, 38/33, XXXVI, 40, XL, 63/61), they succeed one another regularly, with emphasis placed on this succession (šaydālī al-laylī wa-l-nakhār, LVII, 13, 154/152, 187/190, X, 5, XXXII, 92/80, XLV, 4/5). When it is divided into two creations, one "instantly fatal poison". The concept of the hour was, however, introduced into Arab literature at an early stage, for it was indispensable to astronomers, who distinguished between equal or average hours (ṣu'āt mawādīdī) and unequal or true hours (samāniyāt or mu'wa'd) and Islamical civilization was at quite an early stage familiar with various types of clock [see niyal, in Suppl] which were evidently not at the disposal of the majority of peoples. However, references in historical texts to events which took place "three days and a night", or the names of solar, lunar, sidereal, and diurnal, lead one to suspect that this notion was more widespread than is generally thought; it is thus possible that in a period which cannot be precisely identified, the day and the night were divided into twelve hours, the relative proximity of the equator making fluctuations in their duration according to the seasons a matter of small account. This method of reckoning is still in use in Arabia, where, now that the possession of watches is widespread, it causes a certain amount of confusion. The night begins immediately after sunset, which marks the start of the official day; this is why, when one talks of the previous night, the Arabic expression is al-layāla "this night", if the time is before midnight (but al-bīrūhā "the night that has passed") if the time is after midnight). The divisions of the night were not precisely defined, in spite of the rich vocabulary which is to be found, for example, in the Mupāyāt (i, 4-9) of Ibn Sīdūh who mentions, following Kutrub (ix, 37) five parts (a'gāf) which are, respectively: 1. yu'adda, mu'hita, ṣa'āha, ṣa'āha, and yu'addar; these expressions do not seem to have been in widespread use and, in any case, they are not defined in a satisfactory manner. However, the need to fix the hours of the three canonical prayers which take place during the night obliged the Muslims to interpret precisely...
the meanings of certain ancient terms and to establish with accuracy the times to which they apply. Among the many words denoting the beginning of the night, shafāṣ has been sanctioned by usage; in the Kurān (LXXXIV, 16), Allah speaks by the shafāṣ, interpreting it as meaning either "twilight" or "day", as opposed to the night which figures in the oath contained in the following verse, but it is agreed that this term designated "the evening twilight", the time at which the maghrib prayer should be performed [see μήκτηρ]. Some authors distinguish two twilights, of which the first is characterised by the redness of the sky and the second by its pallor (e.g. I. al-Aqqābī, in the gurā (LXXXIV, 16), the thādab which this distinction is secondary. The astronomical twilight lasts for as long as it takes the sun to descend 18° below the horizon (or 1 hour, 12 minutes, since 1° = 1 hour), and Muslim scholars adopt the average figure of 17°; it is however quite certain that the real duration of the shafāṣ varies according to latitude, season and meteorological conditions; this is why the calendars indicate it regularly to enable the faithful to perform the prayer within the required time; one might naturally ask on what observations are based the figures supplied for example by the Calendrier de Cordoue, where this duration (and that of the morning twilight, the fajr, which is reckoned to be identical) varies from 1 hour 17 on the 1st of January to 1 hour 8 on the 21st of June. As regards the maghrib prayer, it is said in the Kurān (XVII, 87): 6. dohima 6. l-douâhâ 6. l-dhamaa 6. l-dhambâ 6. l-halâyî, and the end of the shafâs effectively marks the start of the ghârâk (which was also known by other names: salâm, even if the moon was shining, shūrûm al-layâl, etc.). The beginning of the latter period is the time for the prayer of 6fâb, which some call incorrectly al-ṣikââ al-ghârîhâ, as opposed to a 6-fikââ ulâ = salât al-maghrib, and which the Bedouins were reproached for calling salât al-ṭawāmûs, after the first third of the night during which they customarily performed the milking (isti'mâr) of their camels. Although we know of a considerable number of terms designating any part of the night (see Muṣâbabs, i, 45), only a few words seem to be as all pervasive in spite of differences in interpretation; thus, 6dâa, lâwâ, 6. hażî and variants are 1/4 of the night; 6. bûbâ and variants = 1/3; 6. dhubâ and variants = 1/3 or 1/2; 6. bâdâ, basâdâ, masâdâ, matsbâh and variants = 1/3 approximately. The middle of the night was called 6aâma, 6. taâsamâ, 6. dhubâ, but astronomers rendered "midnight" simply by mizâ al-layâl (in the same way they called "midday" nisf al-nahâr) and the modern language uses the expression 6bûlâs al-layâl. The 6aâma precedes the third third, the sabâr or sabâr, which matches the ghârâk and is immediately followed by the morning twilight, the fajr; for the Muslim astronomers, this twilight begins at the moment that the sun is 19° below the horizon, but the real duration of it is indicated, as has been seen above, in the calendars. It is during this final part of the night that the morning prayer (fajr or subh) is performed. Since their territory did not extend as far as latitude 48°, the Arabs did not know that at the summer solstice there is no complete night (the layl alayl of the astronomers) at this latitude. Night travellers experienced a certain relief when they observed the first lights of dawn, and they tended to include the fajr in the nahâr; a reflection of this conception is also found in the works of lexicographers who normally place the subh (or sabâhâ or sabâh) at the end of the night and are furthermore inclined to make it the beginning of the day, calling

สาหัส or บูรษ the time which elapses between the fajr prayer and the sunrise (see Muhājjar, ix, 45-52). Although the prayers which punctuate the Muslim's life obliged the subhâ in order to fix with a degree of exactitude the times of the sukâr and of the 6âkâ (let alone the 6ulâ), the divisions of the day lack precision. The nahâr begins at the moment that the upper edge of the sun appears on the horizon, just as the night and the official day begin when the opposite edge, now uppermost, disappears. The first part of the day, up to the moment when the sun has traversed a quarter of the diurnal arc, is called 6ukâ; the period corresponding to the sun's progression over the specified quarter of the arc is called 6âkâ; it comes to an end at midday (sukâl), which is marked, for the astronomers, by the sun crossing the meridian and, for the simple faithful, by the displacement of the shade which moves from the west (where it is called the 6ifl) to the east (where it takes the name fajr). It is at this moment that there begins the period, varying according to the judicial schools (see μήκτηρ), during which the midday prayer (ṣuhr) must be performed. A number of terms referring to the heat which then reigns are employed (ṣuhr, isdâja, isdâr, isdâra, isdâjm), but this word tends to be employed, at a precise lapse of time. Some calendars indicate, at the beginning and the end of each month of the solar year, the altitude (istiff) in degrees of the sun at midday (e.g. the Calendrier de Cordoue), or, to enable the faithful to calculate for themselves the hour of the ṣuhr, the length of the shadow either in feet, as in the Risâla of Ibn al-Bânnî, or in height (kâma), once again as in the Calendrier de Cordoue, where the shade varies from a quarter of the height of an object on the 1st of June and the 1st of July, to one and five-sixths on the 16th of December. The period which follows that of the ṣuhr and also extends between limits determined by the length of the shadow, but variable according to the sukâl, is that of the 6âkâ (see I. Goldziher, in Archiv für Religionswissenschaft, ix 293 ff.; transl. in Arabica vii/1 [1960], 26 ff.); this term is thus precisely defined in Islam, although diverse and much less definite interpretations are retained. Aslî was used in reference to the time which elapses between the 6âkâ and sunset, but this word tends to be employed in the contemporary language, for the evening twilight: mokâl, which had the same meaning, is today applied to the evening, as opposed to 6alâhî, "morning", and also comes to designate the period which begins at noon and encroaches upon the night; the word 6aţriendly (and variants) is also taken in the sense of "evening", although it used to be as much as mokâl and aslî, designated the end of the nahâr and was the opposite of 6ukâ (e.g. Kurān, LXXIX, 46; 6lâ 6aţhrîyâm wa-sukâl-ulâ). The calendars to which reference has been made often attach importance to the length of the day and of the night, which some of them indicate twice a month, either in degrees of the sun's arc, or in hours. Since the authors who supply these figures are not usually astronomers, they give the impression of borrowing these numerical data from their predecessors, without perhaps taking account of differences in latitude, especially in view of the fact that, when addressing themselves to their fellow-citizens, they do not take the trouble to establish the name, and the position relative to the Equator, of the place concerned. It would nevertheless be possible to calculate the latitude of this place if one could rely on the accuracy of the data relating to the length of the longest and shortest days and nights of the year, but in this
respect great uncertainty remains. It is furthermore to be noted that the geographers, hts to the Ptolemaic tradition, divide the zone reckoned to be inhabited in the northern hemisphere, as far as approximately latitude 50°, into seven climates [see 18A.2], of which the lower and upper limits are constituted by parallels separated one from the other by a distance corresponding to a difference in half-an-hour in the length of the day of the year.

[C. W. E. PELLET]

LAYLA AL-ABHYALIYYA, Arab poetess of the xti/7th century of the tribe of the U'layl [A'mir b. Salih's] group whose nsba came to her from an ancestor, Abhíyál, or from Abraham, Al-bbíyál. Literary tradition attributes to her an elegy on the murder of Ummán and speaks of her as having been familiar, late in life, with the caliphs Mutawwiyá and 'Abd al-Malik, and the redoubtable governor al-Hajjádi; it follows that the pinnacle of her career should be placed at around 650-660 A.D. She is well-known for her romantic saga, of Udishde type, concerning her relationship with the bandit-warrior Tawba b. Hamuyyr, also of the U'layl tribe. He loved her, and although he was prevented from marrying her, he always maintained a chivalrous devotion to her. When he was killed in the course of one of his raids, Layla mourned him in a number of touching elegies, fragments of which are available to us from literary sources (as far as is known, they were never collected in a díndn) which show Layla resembling a Muslim al-Khafrá [q.v.]. In fact, these funeral elegies, like those of the most famous poetesses of the Dkhiliyya, are still imbued with a purely pagan spirit, lauding the warlike and beneficent virtues of their heroes (for al-Khafrá, her two brothers; for Layla, her sweetheart Tawba), without any hint of faith or Muslim piety. The genre of the ríthá [see MAQDIYYA], was henceforth perpetuated in an established form in the new milieu of Islam.

As with the poetess of Sulaym, the sincerity of Layla's experiences in the harem. This is a unique first-hand account of the life of a lady's maidservant which had entered the Ottoman Palace in the mid-1800s. She is the composer of two books, the successful one first published in Crete, Sérif Efendi (later Pasha, 1844-95), who served as governor in various parts of the empire. Layla Khamim, who accompanied him, included interesting travel notes in her famous memoirs (see below). She died in Istanbul on 6 December 1836. As a composer, she followed the classical Turkish tradition, although the influence of Western music was noticeable in her works. She is the composer of over 200 works to which she wrote the words, including some famous and very popular şkar and marâfá compositions. Her early works, published in the Khustayii-yi yasrakh in the 1880s, are in the diwán tradition. Later, she wrote in the manner of the Tanzimat modernists, particularly of 'Abd al-Jalíl Hamdi. She occasionally used syllabic metre and a simple language for her love poems, not particularly original. Only a small portion of her compositions and poems have been preserved, and not particularly the fire which destroyed her villa in Bottaní near Istanbul (see Mustafa Rona, Yirmiyci yusuf Tarik musihisti, Istanbul 1970, 25-31, where 45 of her compositions are given). Her scattered poems were collected and edited by her son Yüsuf Râdi in 1928 as Solmân Tâckîr ("Faded flowers"). They seldom rise above the average. Layla Khanim's most important contribution is her invaluable memoirs, which mainly cover her experiences in the harem, a unique first-hand report of Palace life from the inside. The memoirs describe in great detail everyday life in the Palace, its décor and furnishings, and particularly the harem, its customs, fashions, ceremonies, special occasions, training and life of princes, princesses and slave girls, etc., all mixed with character studies and sketches of interesting types. She began to write her memoirs in 1879 and completed them in 1920 at the age of 70; and she published the first part, on the harem, in the daily Yâhi (beginning 20 January 1921) and the second part, on women's life, in the 7ti century, in the daily İleri (from 25 April 1921). As Istanbul
was under Allied occupation at the time and the press under strict control, some passages were omitted by the censor. The memoirs were translated by her son and published under a pseudonym, that of Mme. Adriana Piazzi (Delcambre), and in 1932 Songs and Verses of the XIXth Siecle Cowteens, adapted by a Frenchman by the words of Yousef Razi, Preface by Claude Farrère, Paris 1925. Both parts of the memoirs have now been edited in one volume by Sadi Borak as Leyla Saz, Harem's iyyini, Istanbul 1974.

**Bibliography:** given in the text, but see also Ibnulfem M. K. Inal, Son sur Turk garle, VI, Istanbul 1936, 88-90.

Liv. ORIENT, cerning the works which have been written before the which they thought to have discovered in the first; whereas others speaking of the other words, just before the fall of the Barmakids of al-Khalil, according to some sources after the embellished by anecdotes, and we furthermore learn this view, especially in regard to the bulk of the actual author—and recent investigations confirm that he revised and completed the KUSb al-'Ayn of al-Layth, according to some sources after the latter's death. Al-Layth may have finished this work at the beginning of the eighties of the 2nd century afterward. Al-Layth was, throughout his life, a much-courted and honored man (no doubt because of his fortune). He was credited with an annual income of twenty years, he was never seen lunching or dining in a grand scale and knew how to enjoy his wealth. If such a life-style allowed him a certain amount of leisure for participation in public life, or for daily takdil. Al-Layth should be accorded the title of Imam, taking into account not only his piety and his virtues, but his measured on the scale of the umma (Ta'rikh Baghdad, see). Only fragmentary information is available concerning the career of al-Layth (cf. the article devoted to him in Ta'rīkh Baghdaḍ, xliii, 3-14). His training in the discipline of badḥīḍ was both Mecan (with Ibn Shihāb, Nālī and Ṭabāḥ b. Rabāh among others) and Medinan (Mālik). He travelled to Baghdaḍ in Shawwal 161/July 778, where his teaching of badḥīḍ was an outstanding success and earned him the patronage of Harun al-Rashid. His humility is said to have prevented him from soliciting honours and appointments of state. On returning to Egypt, he devoted himself to teaching and also to the management of what seems to have been a considerable fortune. He was credited with an annual income of the order of 25,000 dinārs, which he utilised with such generosity that he was left with practically nothing which could justify the payment of zaḥād. Al-Layth was, throughout his life, a much-courted and honored man (no doubt because of his fortune). He was credited with an annual income of twenty years, he was never seen lunching or dining in a grand scale and knew how to enjoy his wealth. Al-Layth should be accorded the title of Imam, taking into account not only his piety and his virtues, but his measured on the scale of the umma (Ta'rikh Baghdaḍ, see).
The verdict of posterity is negative on this point; all that need be quoted here by way of a tribute is the opinion recorded by al-Khathth al-Baghdadī (d. 465/1071): "If Malik had not existed, the supremacy of al-Layth would have been universally recognised" (Ta'žīh Baghdadī, xi/ii, 2). Having been a pupil of Malik, al-Layth was in a position to assert his independence with regard to his eminent contemporary, while maintaining a relationship with him marked by courtesy and a willingness for intellectual co-operation (cf. his Risālah ilā Malik b. Anas, in Ibn Kayyim al-Jawziyyah, I İslam-ı ma'navi, xii, 94-100). If in the sphere of religious law (fiqh), the influence of al-Layth was in a way slightly greater, his name is only remembered by reason of his work which is concerned with the discipline of hadith, where the classical authorities unanimously attribute him to a well-proven competence and integrity.

LaZ, a people of South Caucasian stock (here, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea, in the region called in Ottoman times Lazistan.

I. History and geography. The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnic nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the coast of Colchis only stretching for a day's march to the south. The latest Greek writers do not mention the Laz.

The earliest Greek writers do not mention the Laz. The name Laz, Lazlo is only found after the Christian era (Piny, Nat. hist., iv, 4; Periplus of Arrian, x, 2; Ptolemy, v, 9, 5). The oldest known settlement of the Lazoi is the town of Lazoi or "ol. Lazik" which Arrian put 680 stadia (about 50 miles) south of the Sacred Port (Novorossiisk) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Tuapse. Residing near the Laz in the south of the Black Sea, the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethno-crisis point of view, the "Roman Pontics" could not have been different from the Laz.

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnic nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the coastal region of the Black Sea, the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethno-crisis point of view, the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz. In 1209 with the aid of troops sent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is closely connected with that of the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous Periplus, Fragmenta historiae, v, 180). According to Constantinine Porphyrogenitus, De administrando imperio, ch. 53, in the time of Diodostrat (284-301), the king of the Bosphorus, Saxumani, invaded the land of the Lazoi and reached Halys (N. Marr explained this last name by the Laz word meaning "river"). The people subject to the Laz were the people subject to the Laz. Procopius (Bell. Got., iv, 2, 3) mentions the Abasgai and the people of Swania and Skymnia (= Lockhaim). It is probable that the name Lazica referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the 7th century. "In the desert of Jerusalem" Justinian (527-65) restored a Laz temple (Procopius, De aedificiis, v, 9), which must have been in existence for some time before this. The Laz and Georgians were united against the Persians (Procopius, Bell. Got., iv, 2). In Colchis the Laz were under the suzerainty of the Roman emperors, who gave investiture to their kings, and the latter had to guard the western passes of the Caucasus against invasion by the nomads from the north. On the other hand, the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 458 King Gobazes sought the help of the Sassanid Yazdagird II against the Romans. The king of the Bosporus, Sauromates, who owned the suzerainty of Rome, had seized the "lands of Colchis and of the Lazes". In 485 Constantine Porphyrogenitus, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis, but their towns (Archanspolis, Sebastopolis, Pitius, Kanda, Sarapanis, Rhodopolis, Mocheris) all lay to the north of the river, while on the left bank, which was desert land, the lands of the Laz only stretched for a day's march to the south.
(Ewliyâ and the version of the Eshihîn-nûmî in Fällmerayer, Original-Fragmente, in Abh. d. Bayer. Akad. [1846]. Hâdîddi Khâlîfa and Ewliyâ Čebebi, deceived by the similarity in sound of two names (as also was Vivien de St. Martin), proposed a theory of the ideality of the name Lazgî and Laz. Ewliyâ calls Trebizond the ‘former Lazgî wilâyât’. Hâdîddi Khâlîfa, after enumerating the peoples of the district of Lazgî as Mingrelians (Mogrîl), Georgians, Abâzîs (Abaza), Čehez and Laz, adds that the latter are those who live nearest to Trebizond. In the south-east of the Black Sea, but in reality the Laz cannot be more than half the total population. Hâdîddi Khâlîfa and Ewliyâ do not agree on the number of the tribes of Trebizond; Ewliyâ only says that the value of the eysab has depreciated within the unruliness of many of its 41 vilâyât (Eshihîn-nûmî, 425; Ewliyâ, ii, 51, 83-5).

The first serious blow to the feudal independence of the Lewski of Lazgî was only struck at the beginning of the 19th century by the Ottoman Pasha of Trebizond; but Koch, who visited the country after his expedition, still found most of the hereditary derokeys in power, although shorn of some of their liberties. He counted fifteen of them: Atina (two), Buley, Artashîn, Wîse, Kazîpe, Arkahe, Kisse, Khopa, Maktîa (Makriâlî), Gomn, Batum, Maradît (Maradîlî?), Perleman and Cat. The lands of the three latter lay, however, on the Čorokh behind the mountains separating this valley from the river of Lazgî, in the strict sense. On the other hand, among the derokeys of Lazgî the lord of Hamshin, i.e. of the upper valleys of Kalopatomos and of Fortuna, inhabited by Muslim Armenians. According to the Armenian historian Levond, tr. Chahbazar, Paris 1826, 162, the latter with their Sannoi/Tzannoi, and it survives in the district in the time of Constantine VI (780-97) (the old Tumbar was given the name Hamshin = Hamsaoun, ‘built by Haman’). It is evidently this region the Lazgî called (1105-6), ed. Szczesniarczyk, St. Petersburg 1881. He calls khâsim in the latter, as slow-witted rustics; a Turkish proverb stated that ‘a Muslim does not eat Laz jelly’, Lazian termnâmus Musliman venes oss (termnâ < Greek ὁμώμα). In fact, despite a long-established reputation for brigandage and for famine goods across the Turco-Soviet frontier, the modern Laz are highly intelligent. They are skilled tillers of the soil, and were, in the past often to be found in the towns of eastern Turkey as gardeners. Today they are to be found in towns all over Turkey in their traditional calling of bakers and pastrycooks; before the First World War many Laz went to Russia to work as bakers, and often returned with Russian wives who became converts to Islam. They are shrewd and enterprising businessmen, and have secured a large portion of the real estate market in Istanbul. When modern, educational opportunities are available to them, they readily respond to this stimulus. They are also excellent sailors, and form a large proportion of the crews of many Turkish vessels.

2. Language. The Laz language is closely connected with Mingrelian (which is a sister language of Georgian), but N. Y. Marr found in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Laz-Mingrelian group he believed that he could find resemblances to five more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Cîhula). Laz is very full of Turkish words. It has no written literature, but there are local poets (Rashid Hilmî, Pehlîwa-öglî, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pinsarev in Zapiski VOIKAO [1901], xiii, 173-201, in which the harmony of the vowels is much neglected (cf. a specimen in Stir, Tezis i: râzîkswagi, St. Petersburg, vii, 59).

The Georgians call the Laz Csan, but the Laz do not know this name. Csan is evidently the original of the Greek name Samoi/Tezenoi, and it survives in the official name of the sanjak of Samson (Djânalîk). From the historical point of view, the separation of the Laz and Csan seems to have taken place, in spite
of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller, in Geogr. græci minoris, ad Arriavi Perip., 8), he places the river of the frontier between the Colchians (Lazii) and the Sannoi (?). Koch mentions the interesting fact that the people of Of speak "a language of their own", and according to Marr, the people of Khoshkhilin (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Tranoni" on the area adjoining the mountains separating Corokh from the sea (the Pararodites, name, the range of which survives in the modern Pahlor/Bahkhor). Marr's researches showed that the Corokh (Sannoi) had at first occupied a larger area, including the basin of the Corokh and its tributaries on the right bank, which they were temporarily displaced by the Armenians and finally by the Georgians (Kārt'ī). The chronicles of Trebizond continue to distinguish the Laz from the Tranoids (Ciovçoq). The latter in alliance with the Muslims attacked the possessions of Trebizond in 1348, and in 1377 were punished by the application of the name C'an to the Laz may be explained by the confusion of the two tribes one of whom from its origins to the fifth century (Laiica, N. M. Ledbetter, of the word Lēbaran, the name generally used in Indo-Persian for the 'Id al-Fitr [7.1.], originally means "end" or "close", in this case specifically the end of the month of fasting is also celebrated in Indo-Persia for the 'Id al-Fitr; Muslims who are not amongst those restored to life by Jesus. Al-Ma'mūn relates, closely following St. John's Gospel: "Al-Tūri'= azīr died, his sister sent to inform Jesus, Jesus came three (in the Gospel, four) days after his death, went with his sister to the tomb in the rock and caused al-"Azīz to arise; children were born to him". In Ibn al-Athir we read (V. Mi, 29; 30): "[The dead man whom Jesus raises to life (John, xi). The Rūr'i'īn mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (III, 4349). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Al-Tabari in his Tahāmī talks of these miracles in general. According to him, 'Ismā'il b. Nāḥḥ is revived by Jesus (ii, 1571). Students of El'azar's name have multiplied their analyses, amongst those restored to life by Jesus. Al-Ma'mūn relates, closely following St. John's Gospel: al-"Azīz died, his sister sent to inform Jesus, Jesus came three (in the Gospel, four) days after his death, went with his sister to the tomb in the rock and caused al-"Azīz to arise; children were born to him". In Ibn al-Athir the resurrected man is called "Azīz", the father of Abraham in the Kurān, whose name Fraenkel derives from Eliezer. In Ibn al-Athir we find Muslim legend evidencing to increase the miracle; Jesus raises not only 'Azīz (Lazarus) but also his wife (children are born to him), and Sām (son of Nāḥḥ), the prophet 'Uzayr and Vahyā b. Zakariyyā (John the Baptist).
The term or the notion acquires its importance, however, from its prominence in the literature on the social and political organisation of the Berbers, notably in the work of R. Montagne, who extended it to the totality of North African, and eventually also to Middle Eastern societies, including even urban and minority ones; thus he later claimed to find similar institutions amongst urban Jewish communities in Morocco, and also in Arabia.

In the hands of those who made use of it, the notion of LEFF, an Arabic term used in the Berber-speaking regions of central and southern Morocco (a different term is used in a similar way in Berberophone regions of northern Morocco, and the term LEFF appears to be its equivalent in Kabylia) to denote a kind of political alliance or party.

The theory, which is based on the assumption that the political alliances in the Berber regions are essentially hereditary, and that they are based on shared religious beliefs and practices, was developed by R. Montagne and has been influential in the study of Berber societies. Montagne's work, which is heavily centred on the notion of LEFF, was published in 1931 and has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), or have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam); or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory fails to be of any importance). There is also reason to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montagne, LEFFs were more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of LEFF, remains one of the high points of the political sociology of North Africa.

The theory of the LEFFs has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), or have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam); or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory fails to be of any importance). There is also reason to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montagne, LEFFs were more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of LEFF, remains one of the high points of the political sociology of North Africa.

Bibliography: Besides the passages on LEFF in the books by Juyboll and Snouck Huregoen mentioned in the bibliography to LEFF, mention must be made of two monographs on the festivals in Yogyakarta, namely J. Groeman, De garegge's in Nogorgowarkd, The Hague 1895, and R. Scoedjono Tirtokoenoemo, De Carneges in het Sultanant Jogjakarta, Jogjakarta 1931.

LEFF, an Arabic term used in the Berber-speaking regions of central and southern Morocco (a different term is used in a similar way in Berberophone regions of northern Morocco, and the term LEFF appears to be its equivalent in Kabylia) to denote a kind of political alliance or party.

The theory, which is based on the assumption that the political alliances in the Berber regions are essentially hereditary, and that they are based on shared religious beliefs and practices, was developed by R. Montagne and has been influential in the study of Berber societies. Montagne's work, which is heavily centred on the notion of LEFF, was published in 1931 and has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), or have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam); or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory fails to be of any importance). There is also reason to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montagne, LEFFs were more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of LEFF, remains one of the high points of the political sociology of North Africa.

Bibliography: Besides the passages on LEFF in the books by Juyboll and Snouck Huregoen mentioned in the bibliography to LEFF, mention must be made of two monographs on the festivals in Yogyakarta, namely J. Groeman, De garegge's in Nogorgowarkd, The Hague 1895, and R. Scoedjono Tirtokoenoemo, De Carneges in het Sultanant Jogjakarta, Jogjakarta 1931.

(E. J. Boland)
LEFKOSHA, Grk. leukosia, the town of Nicosia in Cyprus [see above].

The town was under joint Arab-Byzantine rule from 608 A.D. to 915 when Neseburos Phocas seized it (R. J. H. Jenkins, Cyprus between Byzantium and Islam, A.D. 688-956, in Studies presented to D. M. Robinson...; St. Louis 1953, ii, 1100-6). The Venetians occupied it in 1489, the Ottomans in 1571, the British in 1878, annexing it in 1914. The town was sacked by Mamluk forces of Sultan Baybars in 1426. The Ottomans captured the town after a fifty-day siege in 1799, after much suffering on both sides and thousands of casualties. There is a good account of this conquest in Türk salâhi hurreârî terbiyi. iii, 234 ff. (1922), and the senses described in the memoir of the French noble who ... in the state of slaves... The town was levelled.

Western visitors to Lefkosia during the Ottoman period report the town as being severely underpopulated and devoid of evidence of its former wealth and luxury. They attributed that plight to the tyranny and extortion of Ottoman officials whom the Porte would not or could not control, to plague, varunt fever, and to the depredations of Muslim and eastern Christians. Few knew that the town had reached the peak of its wealth and population late in the Lusignan period. Never under the Venetians or the Ottomans did it regain that fame and splendour, though both made sporadic efforts to revitalize and repopulate it. By 1211 the Lusignan capital had become a first-class town. W. von Oldenburg said "It has inhabitants without number, all very rich, whose houses in their interior adornment and paintings closely resemble the houses of Antioch" (C. D. Cobham, Excerpta Cyproia, 14). By the end of the 13th century the town had fallen behind Maghôsha [59] or Famagusta in wealth and trade, although the simple Westphalian priest Ludolf (1350) saw Lefkosia as "another great city... in a fine open plain with an excellent climate", where lived the king, bishops and prelates, princes and nobles, barons and knights who in Cyprus "are the richest in the world" (Cobham, 17, De Lusitana, 1513; Cobham, Remen de l'orient latin, i [1895], 175 ff.). The pilgrim Martoni (1394) judged the town larger than Avesa, with many gardens and orchards, some six acres in size (Cobham, 25; ROL, iii [1895], 634).

In 1435 the astute Pero Tafur attested that Lefkosia again surpassed Maghôsha: This is the greatest and most healthy city of the kingdom where the kings and all the lords of the realm always live" (Cobham, 31; Andanças à Índia...; Pt. 7, 67, in Colección de libros españoles sobre el oriente, viii, Madrid 1874). Lefkosia had become the trading emporium of the eastern Mediterranean; the Dominican monk Felix Faber (1483) admired the "... great city... surrounded by fertile and pleasant hills... Here are merchants from every part of the world, Christians and infidels. There are stores, great and precious, for the aromatic herbs of the East are brought here raw, and are prepared by the performer's art" (Cobham, 417; Evangelistas in Terrae Sanctae, ed. C. D. Hassler, in Bibliothek des Literarischen Vereins in Stuttgart, iv [1845], 230).

The Venetian patrician Fra Francesco Surrani (1834) saw the town, "twice as large as Perugia", with palaces, houses, and churches, destroyed by a disastrous earthquake of 1489 (Cobham, 48; Il Trattato di Terra Santa, ed. P. G. Goloubowich, Milan 1900, 219 n.), but by then it had passed its economic and demographic peak; to Peter Măsencu (1590) only a quarter of the town appeared occupied (C. Enlart, L'arti gothique, ii, 539).

Savorgnan (1562) found empty tracts and dusty deserted streets with no good houses (Six George Hill, A history of Cyprus, iii, 813, 844 ff., 851 ff.). However, the nobles had not given up their prurigatives, as the pilgrim Fureti (1566) perceived: in that town, "of some size and beauty", lived the French nobles who "... keep their vessels, who are called furici, in the state of slaves... The nobles are greatly given to amusements, especially hunting and hawking... with solemn games and banquets with great cost and splendour" (Cobham, 76-9; C. Furici, Haimendorf, in Cobham, 78-9; Reise-Beschreibung, Nürnberg 1861, 300).

The Lusignans had fortified their capital expertly. Early in the 13th century, walls 4, 7 or 9 miles in circuit were built high to resist attacks in the style of Crusader warfare. In 1507, to resist the heavy pounding of Ottoman cannon, the Venetians had large sections of the walls dismantled and rebuilt them thicker and lower, with a circumference of only three miles, yet apparently still large enough to accommodate the existing population. A deep moat was excavated around the circular walls; all structures outside the new walls were methodically levelled, the rubble being used as fill for the new walls. Writing in 1572 just after the Turkish conquest, the priest Étienne de Lusignan celebrated a town he remembered with 250 to 300 churches, 80 of which had been destroyed completely when two-thirds of the town was levelled. "In this city lived all the nobility of Cyprus, Barons, Knights and Feudatories, nearly all of whom died in this affair [i.e. the fall], with townswfolk to the number of twenty thousand; all men devoted to the service of God most High, and of their sovereign. The remnant of the souls... were all made slaves." (Cobham, 1207; Description, 22, 252).

Local agriculture and commerce, as well as local and international trade, boosted the economy of the town. In good times it produced a marketable surplus of cotton, wood and hides, which were sold raw or processed or manufactured into a variety of cloths. As long as Cyprus remained close to the terminals of the silk and spice trades as the easternmost outpost of the western Christian world in the Mediterranean, Lefkosia would remain a centre of trade. Nevertheless, the town could not escape the changes in the international socio-economic order which saw the Mediterranean world gradually lose its commercial and cultural pre-eminence to northwestern Europe. Forcachchi (1776) reported that great quantities of camlet and cotton cloth were made in that "very pleasantly and beautifully situated" town "healthfully and pleasantly" supplied with running water. The camlets were good and the "cotton wools" the "best of the Orient", according to Sandys (1610) (Cobham, 104-5; L'isole...; Venice 1572, 22 f.; Fabrica 1620. Cobham, 208; A relation of a journey, London 1645, 230).

Pococke (1736), a careful observer of Cyprus, found the trade of Lefkosia still substantial: "There is a great manufacture of cotton stuffs, particularly of very fine damasks, and also half sattins of a very coarse sort: they have here the best water in Cyprus...". Cottons were sold to Holland, England, Venice and Livorno and "a great quantity of yellow, red, and black Turkey leather" to Istanbul (Cobham, 260, 268-9; Pinkerton, ed., A general collection of... voyages, London 1811, x, 582-3). According to
Marit, the covered market (bedesten), the former church of St. George next to Aya Sofya, was the gathering place of the chief Turkish, Greek and Armenian merchant guilds, of whom the last two were the richest. At large bazaars and bâhins local villagers as well as townspeople sold the cotton that they had spun; dyëling skins and stamping cloth were other major industries (Travels in the Island of Cyprus, tr. C. D. Cobham, 42-5). W. M. Leake (1809) was completely negative: "The flat roofs, trellised windows, and light balconies of the better order of houses, situated as they are in the midst of gardens of oranges and lemon trees, give together with the fortifications, a respectable and picturesque appearance... at a little distance, but, upon entering it, the narrow dirty streets, and miserable habitats of the lower classes, make a very different impression upon the traveller; and the sickly countenances of the inhabitants sufficiently show the unhealthiness of the climate"; but W. Turner (1875) reported that every house had a well-cultivated garden with fig, olive, mulberry, orange, lemon and pomegranate trees; all the houses were of mud and the streets, though clean, were unpaved (ibid. 356-7).

Since the Lusignan period, Aya Sofya, as cathedral and mosque, had been the centre of the city, with the main bazaars adjacent. In the 19th century the entire road from Tahia Kale and Baj gate to Baghis gate was lined with merchants` booths; the Friday bazaar of women has existed at least since then. In the 1870s there were 25 quarters inside the walls, 14 Muslim, 7 Greek Orthodox, 1 Armenian, 1 Latin and 2 mixed (Bazar and Phaneromene) (Jeffery, Cyprus monuments, 32-3, with maps).

Lefkosa, located near the centre of the island, lies on the Pediyas, the longest and largest seasonal river in Cyprus, only 12 miles from the perennial springs of Değirmencik, the largest on the island, from where water is easily brought by aqueduct. The immediate hinterland is fertile grauland; its villages produced grain adequate for the town's needs except when drought or, more frequently, hordes of locusts appeared. The Lusignan rulers built summer palaces in the northern mountains for relief from the intense summer heat; many Latin nobles took palaces in the northern mountains for relief from the intense summer heat; many Latin nobles took

Most estimates of the town's population between 1510 and 1560 range between 15,000 and 20,000 people (Hill, iii, 875). Visitors to Lefkosa during the Ottoman period have particularly commented on the population of the town. According to A. M. Graziani, 20,000 people were put to death in eight days of plundering when the town fell to the Ottomans; Porezachi reported that all the people were "cut to pieces" and Sandys wrote of "an incredible slaughter" (Cobham, 170, 207). Dandini, who visited there in summer 1596 and spring 1597, estimated that the large, well-built town had at least 30,000 inhabitants, of whom only 4,000 or 5,000 were Turks (Cobham, 182). J. Cotovius (1597-8) reported the town full of ruins; Sandys (1601) "defaced by the Turks"; for the latter, the town, once equal in beauty to the chief towns of Italy, is now half-destroyed (Cobham, 195, 207).

In 1683 de Bruyn observed that the population was almost half-Greek (Cobham, 239; Reisen van Cornelis de Bruyn, Delft 1698, 371). Cyprianos gives a fairly official estimate of 755 Christian families for 1777 (Cobham, 396). In 1868 Ail Bey estimated the town's population at less than 1,000 Turkish and 1,000 Greek families, although Lefkossa could easily hold 20,000 people (Cobham, 396). According to an official estimate of 1875 the population was 3,700 Greek Orthodox families, 2,000 Muslim families, 1,000 Greek Orthodox families, 40 Armenian, and 12 Maronite (Cobham, 417; Journey, London 1818, 190 ff.). An estimate of 21,000, including 6,000 Turks, 3,700 Greek Orthodox and 50 Armenians was attributed to the governor.
are discussed with illustrations by C. Enlsrt, 67-187,
1889-90, Cyprus Blue Book, smiths, and 5 distilleries (and silk stuffs. In 1889 the town also had a tannery, year 1889-90). Cotton anil silk remained the Book, imported by mosque funds and grants from the See also Statute laws of Cyprus, 1878-1

tvakfiyyes of recent Ottoman public health; extensive official English translations of economic systems, except in a few specific areas of serve the existing Ottoman political, social and economic systems, except in a few specific areas of public health; extensive official English translations of recent Ottoman tax registers and cadastral records were prepared. In 1893, £662 of the £1,130 in municipal revenues from Lefkosa were from slaughter house fees, £351 from market tolls and rents, and £246 from weighing and measuring taxes. The municipality established in 1884 even had a "censor of markets". Asafê still provided the water supply: 300 measures from the Arab Ahmet and 170 measures from the Siliktar aqueduct were sold annually, while another 100 measures were donated to mosques, churches and schools (Cyprus Blue Book, 2, 4 January 1893. See also Stadische laws of Cyprus, 1898-1923, 633-41, "Nicosia water supply"). Eleven Muslim schools, supported by Asafê, mosque funds and grants from the Porte, had 574 students in 1889-90 and 633 students in 1890-91, about 21% of these girls (Cyprus Blue Book, year 1889-90). Cotton and silk remained the major industries. Nearly every village in the district had cotton looms, and many houses in the larger villages had hand looms for manufacturing cotton and silk stuffs. In 1889 the town also had a tannery, 3 tobacco factories, 3 steam-powered flour and cotton mills, calico printers, copper, silver, and goldsmiths, and 5 distilleries (Cyprus Blue Book, 1886-90, 1892-3). The proposed railway between Lefkosa and Larnaca was never attempted, but in 1906 a railway connected Lefkosa and the new harbour of Maghîsha.

In 1946, 10,330 of the 34,485 inhabitants were Muslims, including 9,374 of 24,967 within the walls and 1,016 of 9,518 outside them. Besides 20,768 Greek Orthodox, there were 2,252 Armenians, 166 Maronites and 30 Jews; each of the 24 quarters was mixed.

Monuments. The Venetians levelled much of the Lusignian town in rebuilding the walls. Although the town walls are essentially the creation of the Venetians, the Ottomans repaired them extensively in the 1570s. Virtually all the monumental buildings date from the brilliant Lusignan period; neither the Venetians nor the Ottomans added religious or other public buildings, for many already stood empty after the population began to decline (these are discussed with illustrations by C. Enlert, 67-187, and pls. 1-121. Cf. G. Jeffery, Description, 18-109, and Cyprus monuments. No. 7, Historial and architectural buildings. The mosques of Nicosia, Nicosia 1935: F. Çuhadarofçu and F. Ofiu. Turkish historic monuments in Cyprus, in Kölen ve Rusumoyun Dergisi, iii (1975), 1-76; Oktay Aslanapa, Kibristan türk dervi eserleri, Lefkoşa 1965. The finest Ottoman constructions are the Mawlawi tekke inside Girne gate (pre-1800), the Büyük Han (pre-1600), and the small Arab Ahmed Pasha mosque. Many aspects of the Ottoman town are preserved within the walls of the Turkish quarter: narrow streets, overhanging balconies, stone-walled houses and gardens, and bazaars. The mosque, the citadel, and the main administrative edifices, survive from the Venetian period, as do several fine houses from the Ottoman period. Sadly, there is little appreciation of this cultural heritage, and they are gradually being eliminated.

Until this century, the town has been confined within the walls. The main buildings of the Ottoman period, like the Büyük Han and the so-called Kumbanli Kapı, date from early in the Ottoman occupation. Occupance of the town has been a conservative one, with few changes in the main centres and a preservation of old quarter names and locations from earliest times.

LEFKOSHA — LEH

LEH (đr or چ, the ancient Ottoman Turkish term for the Poles and Poland from Lech, Polish tribal name later extended to comprise all the nation, with the original nasal گ by as in Byr Azor, "the Poles" and *Ayez a Polei*). In Turkish, as also in Arabic, the Poles were also called *Leh miladi* (memelii), the Poles *Lahaj and the Polish language *Lahifje. From the 12th/13th century, the Turks also called the country *Lakistan* (Pers. *Lakistana* from which is derived Pers. *al-lukh* *Lahij and *Lahaj - *the Polish language*). In the hitherto unpublished Crimean Tatar documents from the late 12th/13th century, the word for Poland is *Leh* (the Ukrainian-Russian form of the Polish Lech) or *i-Lah(* from the 12th/13th century reconciled the two countries once again. The danger presented by the Tsarist empire to Poland and the Crimea in the 12th/18th centuries was practicable. The plans of King John III Sobieski for a Polish-Russian war against the Crimea and for a joint division of the khanate proved impossible. The Treaty of 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Mehmed Girey III was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1655 (J. Matuz, *Krimtatarische Urkunden im Reichsarchiv zu Kopenhagen*, 1976). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Mehmed Girey III was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1655 (see K. Pulaski, *Zaporozhian History*, vol. 1, Warsaw 1971). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Mehmed Girey III was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1655 (J. Matuz, *Krimtatarische Urkunden im Reichsarchiv zu Kopenhagen*, 1976). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With (ca. 1352-1430), Archduke of Lithuania, who played a prominent part in the domestic struggle which was going on within the Horde, then undergoing a process of disintegration, on his return in 1397 from an expedition to the banks of the Don brought a large number of Tartar families and settled them in his land. This gave rise to a strong Tatar colonisation in Lithuania, since 1385 united with Poland, and on Polish territory as well [see LIFK].

The diplomatic ties between Poland and the Ottoman Empire extend back to 1410. When King Ladislas Jagello died in 1419 (I. of Poland) and even though the warnings of his Polish advisers, the tragedy of the Battle of Varna (1444) ensued; it was to be a terrible event for Poland to remember, and to point to her future association with the Turks. By this time, she was no longer disposed to engage in elaborate plans for a papal-imperial attack on Islam; she was at peace with the Turks and had a good defence against the territorial ambitions of the hostile Hapsburgs. After the Turkish attack on Kaffa [see above] and again against Genoa (1475) and the Turkish-Tatar conquest of the Black Sea ports of Kilis and Akkerman (1484), which were so vital to Poland, a ceasefire was arranged between King Casimir IV Jagello and Sultan Bayezid II (22 March 1489). The Moldavian campaign of King John Albert (1497) and the subsequent Turk-Tatar attacks on Poland (1498) had shown that there was a military equilibrium between the two powers, and peace was again restored between them in 1499. Following the armistice of 1495 and that of 1528, Süleyman the Magnificent made in January 1523 a life-long peace treaty and alliance with King Sigismund I and his son Sigismund Augustus who, in 1529, was crowned as his father's successor. This treaty, which Sigismund Augustus had renewed in 1553 with the old sultan, in 1561 with Sultan Selim as the heir to the throne, and in 1565 had renewed with the Pâdişah Selim II, was the basis of relations between Poland and Turkey in the 16th/17th century. During this period, these relations were on the whole favourable and not without difficulties (C. Buclovic, La difficile coexistence pacifique entre Polonais et Turcs au XVIIIe siècle, in Milieux d'islamologie dédiés à la mémoire de A. Abel, ii, Brussels 1973, 123-51). Poland did not concur with the insinuations made by Süleyman and his Ruthenic wife Khurum Sultan [q.v.] against the Hapsburgs, and in 1559 Sigismund Augustus also rejected the Turkish plan for a Polish-Turkish alliance against Moscow. During the first two elections of kings after the death of the last Jagellon king, the Porte intervened vigorously to prevent the choice of a Hapsburg. Moreover, Süleyman already appeared to be favourably disposed to Poland when he heard to the false news of the death of both Polish kings in 1533 (Z. Abramowicz, Katalog dokumentów tureckich, Warsaw 1959, no. 39; K. Boydill, Die politischen Königswahlen und Interregnum von 1573 und 1576 im Lichte osmanischen Archivalien, Munich 1973). The Polish-Turkish War of 1620 (Poland was defeated at Cecora) and 1621 (the victory for Poland at Chocim [see above]) was used by Poland's attempt to force the Ottomans out of Moldavia but also by the strife stirred up by the excesses of the Tartars and Zaporozhians (R. Majewski, Cecora. Rok 1620, Warsaw 1970). It ended with the peace of 1623. The self-willed assault on Kamieniec undertaken in 1623 by Abaza Mehmed Pasha [see ANAS] did not lead to a deterioration of mutual relations. However, the borderland skirmishes steadily grew in number. This even led King Ladislas IV to construe, beginning from 1625, plans for joint Polish and Venetian attack against Turkey, with the support of the Zaporozyhans (W. Czermak, Plany wojny tureckiej Władysława IV, Cracow 1895). These plans did not come to be fulfilled, as Ladislas IV died in 1628, and the war of the Cossacks and Tartars against Poland broke out the same year. The Porte very much valued Poland's role in maintaining the balance of power in their struggle against the Hapsburgs, and in 1628, when Poland was defeated at Lutsk, there was no longer any hope of supporting the Zaporozyhans, it intervened on Poland's side, thus provoking the anger of the Tartars (Abramowicz, Katalog ... no. 339-41; Senak, op. cit., fol. 25-26). In view of her agreements with Poland, the Porte was also rather reluctant to adopt the plan suggested by B. Chmielnicki of placing the Ukraine under the sultan's patronage, even though this plan seemed to promise the liberation of Turkish lands from the threat of Cossack attacks. The theory of an alliance of the Porte with Poland, the Hapsburgs, and the Venetians against the Ottomans [see P. Przbylski, Die erste türkisch-ukrainische Bündnis (1645), in Oriens, ii (1953)] cannot be supported, considering the carefully-guarded attitude of the Turks towards him in 1611 (I. Ryk'a, Weitere Beiträge zur Korrespondenz der Hohen Pforte mit Bohdan Chmelnyzkyj), in ATO, ii, and Abramowicz, Katalog ... no. 344). Even when in 1655/1656 Sultan Mehmed IV had taken the Cossacks formally under his patronage, he hastened to declare to King John Casimir that he nevertheless wished to maintain his good relations with Poland (A. N. Kurat and K. V. Zetterstöm, Türkische Urkunden, Leipzig 1928, no. 1). In the years that followed, the period of the "Flood", Turkey lent Poland also considerable support against the threat to her by Carl X Gustavus of Sweden (1656) and George II Rakoczi (1657).

The balance of power was first destroyed by the Grand Vizier Körprüszádó Fádil Ahmed Pascha [see KPH 61.11] when, in 1669, he granted the Cossack Hetman F. Doroszenko, who since 1666 was in revolt against Poland, the supreme authority of the Pâdişah; as a result, the Grand Vizier directly attacked Poland in 1672. The splendour of his success included the capture of Podolia, compelling Poland to pay tribute, etc. But this faded quickly after the defeat of the Turks at Chocim in 1673 (J. Sobieski was still only Royal Chief Hetman) and then again at Zarnovo in 1676 (Sobieski was then King; the attack was repelled, the tribute imposed in 1672 was repealed and it was never paid by Poland).

The Porte was now involved in a difficult war with Russia over the Ukraine. The successor of the Grand Vizier, Merzifönda Karas Mustaфа Pascha [q.v.], adopted an inflexible attitude to his next treaty with Poland (1678), and an additional threat to Poland came from the south in consequence of his 1682 alliance with E. Thököly. He had occasion to deplore his rash step when, at the battle for the relief of Vienna on 12 September 1683 and in the subsequent war in Hungary, the Polish king "was the first one to drive his horse against the Muslims and then to draw his sword" and "caused so much harm that it was he who gave the greatest help and support [for the Emperor Leopold I] and had many Muslims taken prisoner" (Debegi Hasan Esiri, and eyewitness of the events of 1683, in TOEM, iii, 1916; in general, see Z. Wójcik, King John III of Poland and the Turkish aspect of his foreign policy, in Belleten, 28/b, no. 170 [1960]). The fruits of the victory of John
Sometimes for the purpose of trade. Serious plans for an anti-Turkish alliance with Persia were cherished - an anti-Turkish coalition in 1474 and of Ottoman society and the army. K. Borzceki, *Mużaffa Dżelil al-Ámin Pascha*, the first to raise a spirit of national identity within the Ottomans (B. Lewis, *The emergence of modern Turkey*, Oxford 1967, 28, 339). S. Ciebiesowski, court painter to Sultan Abd al-Áziz, painted a series of scenes from Ottoman history for the new Dolmabahçe Palace (A. Lewak, *Dzieje emigracji polskiej w Turcji* 1831-1878, Warsaw 1932). In 1832, Polish specialists and advisers even penetrated the intimate society of Kamal Pascha Ataturk. This resulted in friendly relations between the new Poland and the Turkish republic from its inception. In spite of its complicated political situation, Turkey gave Poland vital help during the Second World War. After the war, both countries developed their co-operation in economic and cultural fields. An active link between the two was Polonokcyj, founded in 1835 by Prince Adam J. Czartoryski, and thereafter called Adana in Polish. It is a colony of Polish immigrants on the Asiatic side of the Bosphorus near Istanbul, who still maintain their national character.

Venetian-Persian attempts to win over Poland to the idea of an anti-Turkish coalition in 1474 and 1475 faced under the careful direction of King Casimir IV (J. Długosz, *Historiae Poloniae libri XII*, v, Cracow 1885, 601, 602, 626). Sigismund III Vasa (1566-1632) also remained dead to similar suggestions from Shah Abbas I; the dispute with Sweden and later with Muscovy was more important to him. The first delegation, from the Shah led by Sir Anthony Sherley had not been, incidentally, allowed by the Porte in 1699.

influence on Polish national costume, domestic furniture, the conduct of war, and arms and equipment. These artifacts spread beyond Poland to other countries (e.g. Persian carpets were known in the West as "tapis polonais"), and they were later imitated in Poland (T. Mańkowski, Sztuka islamu w Polsce w XVII i XVIII wieku, Cracow 1935; idem, Le iapis paris est chevronien-parisien de la cathédrale de Cracovie, in RO, ahi [1953]). This attracted a number of Oriental words and terms into Polish (A. Zajączkowski, Studia orientalizacyjne z dziejów sztukistwa polskiego, Wrocław 1953). Polish museums contain authentic art treasures from Islamic countries, especially weapons, Ottoman standards, and Persian carpets, which were later seen as the "royal" Polish eagle which S. Murawski brought from Kăshăn for the Royal Castle in Warsaw in 1602 and which are now in the Residenzmuseum, Munich. The activities of the art-loving Stanisław Augustus, the last Polish king (1763-95), of many Polish migrants in the 18th century as well as various Polish emigrants to the East in the 19th century, led to the formation of rich collections of Islamic art in Poland.

Moreover, Poland was not averse to the intellectual exchanges with the "Oriental" world. The most important work in this connection is the translation by Samuil Gwiazdowski of the Gulisti by Sa'di in the mid-17th century (following an Ottoman version; it appeared in print only in 1879). The 18th and 19th centuries, the Romantic Period, brought new oriental influences to bear on Polish literature. These traditions are maintained by modern Polish orientalists of the post-war period, who translate into Polish the literature and historiography of the Islamic world.

The travel descriptions by many a Pole journeying to the Islamic East of the 17th-18th century have contributed much to the knowledge of that world in Europe (A. Broniowski, J. Laski, Michalo Litwanus, A. Tarasowski, M. Radziwill). Similarly, the career of Fr. Mesgnien-Meninski as an Ottoman scholar in part stemmed from his stay in Poland where, for some years, he was engaged as court-interpreter.

LEMINOS [see LIMNOIS]

LEO AFRICANUS, the name by which the author of the Descriptione dell' Africa is generally known, who was in fact originally called al-Hassan b. Muhammad al-Wazzan al-Zayyatu (or al-Fas). He was born in Granada between 894/95 and 901/902 and was taken to the East, whence he returned home by sea. In 921/1515 he sailed al-IJasan b. Muhammad al-Vazzan al-Zayyat al-IJasanb. Muhammad al-AlfItsI. He was born in Granada between 894/95 and 901/902 and 901/902 and 1495 into a family which had to emigrate to Morocco after that city's fall [see Yubanna al-Asad al-GhamSU; the editor of the Descriptione delle Africa, called him Giovanni Leone Africano, and current usage generally refers to him by the second of these Christian names).

Apart from the autobiographical details which can be gleaned from the Descriptione, we know little of his life; all that is known is that, before 1550, he went to Tunis, and probably spent the last years of his life in his ancestral faith.

During his stay in Italy, he learnt Italian, taught Arabic at Bologna and, in addition to his Descriptione dell'Africa, conceived the further plan of describing similarly the part of Asia which he claimed to have visited, and also Europe (see below, pp. 337-9). He certainly put together in 1524, for the French king, a Jacob ben Simon, an Arabic-Hebrew-Latin vocabulary, of which the Arabic part is preserved in the Esorial (no. 598; see H. Deroz, Cat. des manuscrits arabes de l'Esorial, Paris 1854, i, 410). He also left behind a treatise on proverbs (see A. Codazzi, Il trattato dell'arte matrica di Giovanni Leone Africano, in Studi orientalistie in onore di Giorgio Levi Della Vida, Rome 1956, i, 380-98), and the other, in 1527, which contains nine sections; (1) generali*-ties about Africa; (2) south-western Morocco (in particular, Marrakesh, with errors—see G. Deverdus, Marrakesh, Rabat 1959, p. xiv and index); (3) the kingdom of Fas (a very extended treatment, one more accurate and confident); (4) the kingdom of Tlemcen; (5) Bougie and Tunis; (6) southern Morocco, and the southern parts of Algeria and Tunisia, followed by Libya; (7) the land of the blacks; (8) Egypt; and (9) the rivers, animals, plants and minerals of Africa. This work remained for centuries a major source on the Islamic world, and is still cited by historians and geographers of Africa. Although it is not free from errors—certainly excusable if one takes into account the conditions in which it was put together—it provides first-hand items of information on the situation at the beginning of the 10th/11th century in the lands visited, on the ethnog-
were waiting in the river, the inhabitants of Lesh set with wives, children and property to the ships that an event described in detail by the chronicler Marin

empire, after the mid-of the river Drin not far from its estuary, and is an administrative centre in northern Albania, a minor port, military stronghold and administrative centre in northern Albania, 30 km. to the south of Shkoder/Scutari, which was part of the Ottoman empire between 1478 and 1912.

Lejh, the classical Lissus, is one of the oldest urban centres of the country. It is built on the banks of the river Drin not far from its estuary, and is overlooked by two isolated hills, each carrying the ruins of ancient fortifications. This setting largely determined the historical development of Lesh; it was a military strongpoint in periods of danger and a harbour in more peaceful times. During antiquity, both hilltops and the lower town on the river were surrounded by an enormous wall, parts of which still survive. This large city was destroyed during the invasions of the Barbarians (592 A.D.), and never recovered again. Anna Comnena mentions Lissus in her Alexiade as a strong Byzantine fortress and as fairly well-inhabited. In the 12th century, Lesh was included in the Serbian state, together with Shkodër.

In or around 1580, the old cathedral of St. Nicolas was destroyed, together with 50 shops, which were part of the self property of Kukli Beg’s foundations in Prizren and its surroundings. The Mufašal defter T.K. 63 mentions that a part of the inhabitants of Lesh were “outside the old register”, which means that they had moved in from elsewhere. They gained their living as workers in the harbour and had the Filuri status as concerned taxes and paid only a lump sum of 32 akce yearly. The register mentions 141 Christian households of them and six of Muslims, all living in the newly-founded suburb of “Vlakula” (Ishulli Lesh) which was formerly a meza’.

In 1648 the famous rebel against the Ottomans and national hero of the Albanians, George Kastrioti Skanderbeg, died in Lesh and was buried in the Gothic cathedral of St. Nicolas in the lower town, an event described in detail by the chronicler Marin Barletius. Ten years later, during Sultan Mohammed Fatih’s campaign against Shkodër (known to the Ottomans as Iskenderiyye), Lesh was captured and incorporated in the Ottoman realm. Before they tied with wolves, children and property to the ships that were waiting in the river, the inhabitants of Lesh set fire to the city. The conquest is related by Tursun Beg in his Ta’rij-i Abu ‘l-Fadh and by Sahd al-Din in his Ta’dal al-ta’rijik.

It was long before the ruined town recovered. At first, Lesh seems to have been included in the sanjâd of Elbasan, but later (after 1453 and perhaps after the Venetian interlude) it was added to that of Iskenderiyye. In 1501, during Bayazid II’s short war with Venice, Lesh was taken by Venetian forces, who kept it for a short period. When they retreated, they had the town walls destroyed. The Ottomans recaptured a totally wrecked town. They decided to rebuild the citadel on the hill, a site which offered better chances for defence than the place along the river. The work was finished in 1513, and is described in a Venetian inscription—now preserved in the Lesh Historical Museum—which mentions the name of Sultan Süleyman, the date in numbers and in the form of a chronogram, and the name of the architect as Derwisch Mehmed, the son of Skura. The latter must have been a member of the well-known Albanian noble family of that name.

The inner half of the 16th century, Lesh remained a small place. The Ilmâlâ defter no. 507 of 1530-3, preserved in the Haskabauk Arbivi in Istanbul, mentions it as a village in the liwa’ of Iskenderiyye, having 144 households. The Mufašal defter T.K. 63 of the liwa’ of Dukagin, preserved in the Tapu ve Kadastro Gen. Mül. in Ankara (fols. 53-6b), from 1595-1599-1 (dated by internal evidence), mentions Lesh as an urban settlement (nârâq) in the sanjâd of Dukagin. The latter was set up in the thirties or forties of the 16th century and had Pî (Ipek) as its châf-keu, although the sanjâd-beg resided sometimes in Lesh. Western sources mention in 1533 a figure of 80 houses of Turks in the castle on the hill (which is called “Castel Nova”). The lower town (il-Borgo) is described as a predominantly Christian place. The latter developed slowly into a centre of trade.

In the thirties of the 16th century, a strong impetus to this function of the town was given by the Ottoman governor of Shkodër (later also in Thessaloniki and Prizren), Kukli Mehmed Beg of Prizren. In his lifetime, the caravan road through the mountains from Lesh to Prizren in the interior was safeguarded by a chain of caravanserais. Two of them were built in Lesh itself, together with 50 shops, which were part of the self property of Kukli Beg’s foundations in Prizren and its surroundings.
thirties or forties of the century, and left in ruins for more than a hundred years.

In the last decades of the 18th century, Sultân Selim III concerned himself for the reconstruction of the building. At that time, it received the form it still had in our time (1978). The Armenian geographer Inciciyan describes Lesh in the last decades of the 18th century as a place with a thousand houses.

During the administrative reforms of the 19th century (1862), the old sanjāg of Dukagën was dissolved and added to the new sanjāq of Shkoder. The Kâdî of the sanjāg of Zumë, v. 1914, describes it towards the end of the last century as a kädît with 5,300 inhabitants, 80 shops and four mosques. The Izgëodra wilâyet xulmëniet of 1810/1892 mentions Lesfa as being the chef-lieu of Ishkdrdra wilayet and four mosques. The town still had in our time (*1978). The Armenian geographer Inciciyan describes Lesh in the last decades of the 18th century (1862), the old cathedral of St. Nicholas—Mosque of Sultan Suleyman has not been published adequately.

In the seventies of the 20th century, Lesh was a minor town. Its centre was modernised, it received the form of a huge, concrete-built memorial to Skanderbeg. The tomb of the legendary Skanderbeg was discovered in the old cathedral of St. Nicolas—Mosque of Sultan Suleyman, of which 1,500 were Muslims and 4,000 (Roman Catholic) Christians. The district contained 91 churches, and eight mosques but had only three schools, two for Muslims and one for Christians.

In the last decades of the 20th century (1978), mentions Lesh as being the chef-lieu of a sanjāq with 5,300 inhabitants, 80 shops and four mosques. At that time, it received the form it still had in our time (1978). The Armenian geographer Inciciyan describes Lesh in the last decades of the 18th century as a place with a thousand houses.

The history of the town and the island are inseparably connected with each other. In Ottoman times, the town of Levkas (Aya Mavra) was the largest urban settlement in the sanjāq of Kairi-i-Il. In the second half of the 16th and most of the 17th century it was an Islamic centre of some importance, and possessed two of the largest works of Ottoman civil and military architecture in the Western Balkans, viz. the aqueduct of Sultan Suleyman and the castle, rebuilt by Sultan Selim III in 1571 under Selim II. The history of the town of Levkas goes back to the 8th century B.C., when it was founded as a colony of Corinth. In 1400, John I Orsini built a small castle on a small sandy island in the mud bay between the island of Levkada and the mainland of Acarnania in order to protect the settlement there, until that time an open one. In 1462 island and town were included in the possessions of the Italian ducal house of Tocco. Duke Carlo Tocco (1581-1403) made the town the capital of his dominions (which since around 1400 also included a part of the mainland). Carlo greatly enlarged the walled town. Open settlements are reported to have existed on both sides of the walled town. The open town of Levkas was an offshoot of the Italian origin. In 1571 the Ottomans placed most of Epirus under their direct rule. In 1449 they drove away the Tocces from the large city of Arta, only 50 km. from Levkas. The last Tocco, Leonardo, was maintained as a vassal of the Sultan and was connected...
to him by family ties because of his marriage with Milica Branković, a niece of the much-respected stepmother of Mehmed II, Carica Mara (widow of Murad II). Milica died in 1464. In 1477 Leonardo remarried, this time with Francesca Marrano, a princess of the Aragonese house of Southern Italy, the bitter opponents of the Ottomans. Two years later an Ottoman fleet under Gedik Ahmed Pasha, then Bey of Aykonya (Valona), occupied the islands of Zakynthos (Zante), Cephalonia and Levkas (Cephalonia and Zante were lost to Venice in 1481; in 1485 the Ottomans re-acquired Cephalonia by treaty, but lost it definitively to Venice in 1500). Leonardo and Francesca, bitterly hated by their Greek subjects because of their ruthless exploitation, fled to Italy, where King Ferrante of Aragon gave them their new possessions. Gedik Ahmed is said to have deported the population of the islands, or at least a part of them, to Istanbul as part of Sultan Mehmed II's policy of repopulating his capital Istanbul. Very likely there were also strategic grounds.

During the Ottoman-Venetian war over the last bases of the Signoria on the Greek shores [see KORON, MOTON, AYNAVISE], the Venetians under Bernardo Pesaro captured Levkas in August 1502. It was returned to the Ottomans as a result of the treaty with Venice, in which the Sultan recognised the Venetian occupation of Cephalonia. Levkas was to remain Ottoman for almost two centuries.

Ottoman Levkas (i.e. the town) became the seat of one of the two kadı’s into which the sandjak of Kärliull was divided during the greater part of the 16th century. The town was the largest of the sandjak, and possessed by far the most important castle, containing an aristocratic garrison. The kadı’s of Aya Mavra was relatively thin populated. Aya Mavra once was a register (Tepu defter 367 in the BBA) from the years between 1523-36 shows that the town of Levkas/Aya Mavra numbered 193 households, 28 bachelors and 20 widows, perhaps giving a total civil population of a thousand souls. The kadı’s had at that time two towns (the second town was Venitsa, with 90 households, 27 bachelors and 15 widows), and comprised 43 villages, five monasteries and a total population of 2,244 households, 302 bachelors and 223 widows (or a total population of about 12,000 souls). These notes from the census register make clear that the kadı’s of Aya Mavra not only comprised the island of Levkas but also a considerable part of the mainland of Arcadia. The bulk of the population of the sandjak of Kärliull lived in the kadı’s of Engili-kärli (= Angelokastro, Ottoman between 1486 and 1639), further inland. Engili-kärli itself, which was officially the seat of the sandjak beg, numbered according to the same register 244 households, but the kadı’s contained no less than 253 villages with 9,609 households, 290 bachelors and 934 widows (perhaps 46,000-47,000 souls). The register mentions that the garrison of Levkas town contained 111 soldiers and nine gunners. The castle of Engili-kärli, safely inland, had only 25 soldiers (merdani-i kadı’s). Venitsa, more exposed than Engili-kärli but less dangerously situated than Levkas town, had 25 soldiers and two gunners. Not a single Muslim household or individual is listed in the entire sandjak of Kärliull. There were only three mosques in this province, those in the three castles, serving the needs of the garrisons. The register of 1523-36 mentions in the entire sandjak only three imâms, two kadı’s and two mukaddisi. Thus Islam in Levkas was in the first half-century of Ottoman rule only represented by the military and administrative machinery. This was to change notably in the subsequent years.

Because of the constant lack of fresh water in the fortified town, due to its setting on saltings surrounded on all sides by the waters of the lagoon, the Ottomans were forced to carry out important hydraulic works. Good drinking water was brought from the mainland by means of an aqueduct of 3 kms. long, which was carried over the lagoon for almost a mile on an aqueduct with several hundreds of arches [Evlîya Celebi, viii, 556, gives 368 arches, Coronelli, MÉMOIRES, etc. de la Merve, Amsterdam 1686, 148, has 360 arches; Henry Holland (in 1822), Travels in the Ionian Islands, London 1825, 61, has 366 arches]. Over the aqueduct ran a narrow path offering a much shorter way to the island than that over the saltings. A note in Mihâime defter no. 6 in the BBA in Istanbul contains the extract of an order of the kadı’s of Engili-kärli and Aya Mavra that the aqueduct currently under construction in Aya Mavra had to bring the water firstly to the walled town and then to the open town on the island, and not to the walled town alone, as had previously been ordered. The inhabitants of the town had pointed out to the Forte that the open town (mareh) did not contain 200 houses, as was thought in Istanbul, but 700 to 800 houses. Hence the need for more water. The order states that the aqueduct was built by "His Majesty". It is dated 17 Rebi’ al-‘Evvel 972/24 October 1564, thus in the reign of Suleyman the Magnificent. Mihâime defter no. 5, containing a part of the orders of the year 973 (sic), has an imperial order from 6 Rebi’ to the Bog of Kärliull and the kadı’s of Aya Mavra requesting the repair of the fortress walls and ordering the subject people from the nearby villages to assist the garrison in the work. An order of some months later (12 Ramadan 973) urges the kadı to begin the work and to finish it as soon as possible.

During the crisis of Lepanto (1571), the fortress of Aya Mavra was besieged but held out. After the siege the Ottoman government ordered the total reconstruction of the old fortress works. This work was carried out under supervision of Kapudan İBBE Âli Paşa between the years 980-1/1577-8. The Mu¬hâime defter of 966/1559 contains an order demanding carpenters and masons from Tir¬hala, Ayunabatüllâ and Yavrû to go to Aya Mavra, and Yûrûks and Tatars from Sêtînîk and Tirhala and timariots from Yskub (Shopje) to assist with the work. This new fortress has the form of an irregular hexagon which is at its longest 220 m and 150 m wide. It is strengthened by nine round bastions of various sizes, all equipped with domed and vaulted casemates for guns and an open artillery platform on top. The medieval castle of the Orsinis was maintained at the northeastern corner, as a kind of île folle.

The works of the Ottoman geographers contain little information about this outpost of Islam in the far west of the Balkans. Piri Reisi in his BÂHVÎ Yücey describes in a few lines the setting of the fortified town, as being situated on an island in a shallow lagoon and accessible only by two draw¬bridges that are opened to let ships through. Hadîji Khalîfâ (Remmel and Bosma geographisch beschryven, Vienna 1812, 128) merely copies this information. Muhâime âshîkî in his Menâmî al-xalîlîm does not discuss this section of the Balkans. A wealth of information, on the other hand, is found in the Seyyid-nâmé of Evliyâ Celebi (vii, 631-7). Evliyâ visited Levkas in 1058/1648-1, at a time when Islam
In the summer of 1684, the Venetian fleet under Morosini captured the town after a bombardment of 16 days. The garrison and the Muslim civilian population got a safe conduct to the Ottoman mainland. Morosini turned the walled town, denuded of its inhabitants, into a citadel and removed its houses. He also excavated and demolished the two suburbs just outside the castle and turned them into a glacis for the fortress. The deported inhabitants were building new houses on the island. Since that time the town was solely confined to the former Varosh (= Amaxiki) on the island itself. All the Muslim buildings except the fortress works and the aqueduct were removed by the Venetians.

The Treaty of Karlowitz (Karlovo [26]) assigned the town and the island definitely to Venice, which in the first years of the 18th century modernised the Ottoman castle. On that occasion, the locality of 1000 disappeared and the east front of the castle, facing the mainland that had remained Ottoman, the ramparts and bulwarks, were replaced by modern works, including two bastions, a ravelin and a coavra-face in the wet moat and an envelope all around. Two separate works came to cover the flanks. Some Latin inscriptions mention the name of the commander under whom the work was carried out and the date of completion, viz. Augustino Sagredo, 1773.

During the Corfu campaign of the Ottomans against Venice (1716), the modernised fortress was strongly defended. It was captured by the Ottoman army but was to return to the Venetians a year later. The Venetian rule lasted until 1797 (Treaty of Campo Formio) and was only interrupted by a revolt of the Greeks in 1796, after which date the fortress was again repaired (long Latin inscription). In 1797 the island was occupied by the French, who kept it till 1800, when after a brief action of the combined Ottoman-Russian forces the island became part of the so-called Republic of the Seven Islands. The French returned in 1807, but were driven away from these islands by the British in 1809-10. In the first decade of the 19th century, the mainland of Aca¬maria was controlled by Tepedelenli Ali Pasha, the able but treacherous Vizier of Yanya (Vanya), who in 1807 invested Levasis unsuccessfully. On a rocky foreland commanding the only road from the mainland to the island he erected in the year a strong fortress. This was the site of the Kehaliiye tekke of Dzadir Hasans, extensively described by Ewliya in 1670. Hence the name of that new work, Kastro i Tekkes. Six km. further south, on a cape commanding the southern entrance to the lagoon of Levkas, Ali Pasha constructed another, large, castle, now called "Castle of St. George." Both forts still exist today.

The mainland of Aca¬maria was included in the new Greek kingdom in 1832. In 1864 the British ceded Levkas and the other Ionian islands to Greece, till 1800, when after a brief action of the combined Ottoman-Russian forces the island became part of the so-called Republic of the Seven Islands. The British in 1863, 24,000; in 1961, 26,000). The Greek islands were occupied by the French, who kept it till 1800, when after a brief action of the combined Ottoman-Russian forces the island became part of the so-called Republic of the Seven Islands. The British in 1863, 24,000; in 1961, 26,000). The great Ottoman aqueduct was wrecked during an earthquake in 1825, together with most of the town (Ansted, Ionian Islands, 144). It was not rebuilt, but served further as road until in this century it disappeared completely under the modern causeway. The town was rebuilt with wooden houses to minimise the damage of the very frequent earthquakes (list

The whole urban settlement of Levkas thus had 1,250 houses, or about 6,250 inhabitants. Six years after Ewliya, Jacob Spen and George Wheler (Itali¬enische, Dalmatische, Griechische and Orientalische Reise Beschreibungen, iv (1731), 135 [aitr. in English and French] noted that in the citadel and the suburbs together lived 5,000 or 6,000 inhabitants, mostly Greeks and Turks.

The strength of the garrison of Aya Mavra as given by Ewliya (633), is perhaps exaggerated. He mentions 1,085 haftle ussariten, but an official Ot¬toman budget of the same year as his visit (published by Ö. L. Barican in İhtisam Hakikat Mecmuası, xvii (1955-6), 278) has only 875 i present ve ruksa ve laskin ve suâyriyân-i haft-ye-i Avasma ("gunners, captains, soldiers and cavalry of the castle of A.") on the pay list.

The halcyon days of Muslim Levkas ended during the war of 1693-99 against the Christian coalition.
of dates in M. E. Enkykl., xvi, art. "Leukas"). The new decayed and deserted three Ottoman castles remain the only visible link with the Islamic past.

Bibliography: The Ottoman sources mentioned in the article are unpublished. A comprehensive history of Ottoman Levkas, based on Ottoman and Western sources, is still a task for the future. Fragment of information can be pieced together from inter alia, E. Kirsten and W. Krcrot, Griechenlandkunde. Ein Fiihrer zu Klassischen Griechenland, Budapest 1962, W. Miller, The Latin in the Orient, London 1968 (repr. 1954); idem, Essays on the Latin Orient, London 1921; idem, The Ionian Islands under Venice, in EHR, xlii (1928); F. Babinger, Mecmed der Eroberer, Munich 1933, 491-5; idem, Beiträge zur Geschichte des Karly-ehli vornehmlich aus osmanischen Quellen (most accessible in Ausfiihrliche Abhandlungen, Munich 1962, 370-7); D. N. Nicol, The Despotate of Epius, Oxford 1937. For the confused accounts in the Ottoman chronicles, see karl już above. It should be added that the chronicler Orij Brg (German tr. R. F. Krcote, Der fremde Bayrd, Graz 1978, 512), has little-known details on the Ottoman capture of 1302. A Western travel account noncontemporary with Ewliya Celebi (1675-85) is J. Spon-G. Wheler, Griechische und Orientalische Reise-Beschreibung, Amsterdam, 1686); cf. also H. Holland, Travels in the Ionian Islands, Albania, Thessaly and Macedonia, London 1825 (repr. New York 1971), 55-64; W. M. Leake, Travels in Northern Greece, London 1835, i, 10 ff.; Leake has also accounts of the actions of Ali Pasha on the mainland, and his endeavour to capture Levkas fortress (with a good topographical sketch-map of the various parts of town, the forts and the aqueduct); D. T. Ansted, The Ionian Islands in the year 1863, London 1865 (Santa Maria on 125-226, with much on history, economy, topography, etc.). See also K. G. Machairas, I Levchs epis Ephrshchos (1845-1879), Athens 1942, and idem, Levchs, 1700-1844, Athens 1971; W. M. Leach, Essays on Byzantium, Istoria isi wiss Lefkadios, i, Athens 1960.

The first detailed plan of the Ottoman castle of Selim II and Kiliê All is given in the work of Vincenzo Coronelli. For an old drawing of the aqueduct, see A. Grasset St. Sauveur, Voyages dans les îles et possessions ci-jacent vénitiennes du Levant, Paris 1800, 337 ff. For details on the fortress, see Machairas, To en Levchos xorion ton Aigias Moraon, Athens 1935 (100 pages, but nothing serious on the Ottoman actions. Very good plans of the walled town before and after the Venetian reconstruction and large-size map of the area. For the Ottoman aspects of the castle, see for the time being, M. Kiel, Levkas/Santa Maria, een Turkse-Venetiaanse grenswacht, in Festschrift Stichting Menno van Coehoorn, 1976, 58-64 (with photographs and plan of the castle). For a modern survey of the history of the entire Ionian archipelago, see M. Pratt, Britian's Greek empire, London 1978. (M. Kiel)

LEWEND, the name given to two kinds of Ottoman daily-wage irregular militia, one sea-going (deniz), the other land-based (karlı), both existing from early times.

The word may derive in its maritime sense from the Italian levante (5th, 8th, Amorëz-i Türk), used originally by Venetians for soldiers recruited from their Levantine possessions, and then passing into Ottoman Turkish as a term for mercenaries recruited from the Mediterranean regions, especially the eastern lands and islands of Greece, Dalmatia and western Anatolia. Some claim its more common use as "a rough-and-ready cavalryman" came from Persia [cf. Redhouse, Turkish and English lexicon, a.s., and Uzunpalli, 46]. By 966/1558 the Ottoman government clearly distinguished mounted lewends from corsairs (muhîme defterî, iii, 65; and Silhâdar levendlî, i, 152).

1. Karlı lewend. In the hey-day of Ottoman maritime expansion, demands for unskilled labour could be met by hiring Muslim or Christian (Rûm) lewends for a period of the campaign, paid in early times by booty, in later times a daily wage through the admiralty. These lewends acted as rowers, guardsmen, marines for shore invasion, but above all as seagoing musketeers. Muslim deniz lewend wore distinctive blue baggy trousers with a yellow sash; Rûm lewend a cloak with cowl, a blue-and-white sash, and white baggy trousers. For those whose labour the Admiralty needed during the winter in the Bosphorus arsenal, special quarters (lises) were built on the Rûmeii side in the early 12th/16th century, known to this day as lewend ciftliği. By the mid-16th/18th century, Muslim lewend took over many of the specialised naval duties previously pursued by Rûm lewend (who no longer enjoyed absolute trust), to serve permanently as kalyonlî or galleon sailors. Their apparently excelling life as semi-official pirates, corsairs, and adventurers on the sea lived on into the modern Turkish language, in which lewend still means a bold, good-looking, dashing young man.

2. Karlı lewend. Trained musketeers, discharged from Ottoman armies or the fleet, acting in concert with other jobless and homeless personel (such as sonhkân, sâlah and saza [sâva], created mischief in Ottoman lands. Those who acted as cavalry were called karlı lewend. Any man with a horse might join one of the many official or outlaw bands which swarmed in Anatolia, particularly after the roth/16th century. Karlı lewend fell into three categories: (a) kaplî lewend: irregular cavalry attached and paid for by a sultan or provincial sultan, who, for special services in peace or war, such as guarding fortresses, civil police duty, and honour guards. Kaplî lewend generally followed Ottoman military rank-order, led by a bûlbûbash, and included Anatolians, sc. Arabs, Kurds (Rafeq, 37) and Turks, together with Rumclaus, sc. Albanians (Turan, 168), Hungarians (Orhonlu, 100) and probably many others. Kaplî lewend were colourful but not particularly uniform apparel, their respective employers supplying clothing suitable to their particular affection (Cecar, 194-9); (b) kaplî lewend (sometimes bolsîyî, "independent"); any lewend discharged from the service of his beylerbe or a provincial sultan, who, after returning to civilian pursuits, Anatolian social and economic conditions being in serious dislocation after the roth/fourteenth century, most kaplî lewend moved quickly into wandering groups of brutal marauders, many of whom took part in the Djalâl revolts [q.v. in Suppl.]; and (c) nîrî lewend; those hired by the government as musketeers or cavalry for a specific campaign and paid for by the central treasury.

To the end of the 12th/16th century, lewend found employment in Anatolia and Rûmeii, often terrorising rather than protecting those officially in their charge. In Dubrovnik in 1900/1552 they were "brigands" (chi-i fesad ve levendî); in Cairo in 1608/1559 a visitor called them "anunceruous scum"
employment with Ojazzar Abmad Pasha of Sidon, of the century. Others fled to Syria, where they found deserted Yegen Mebmed Pasha in his enrolment by eastern frontier governors until 1136/1137. A massive rebellion, crushed by Koprulu Mehmed and Maljmud II.

Modernised armies of the empire or had been absorbed into the kard Intends (Cohen, 282). By the beginning of the 8th/9th century, among the local Kurdish Muhammad Pasha al-'Azm of Damascus, acceptance absorbed into acceptable military units by the turn ordered the to be abolished; most were hard let re ruts

Volunteers in the 7th and 8th centuries. The final conditions of Anatolia (990-1020/1582-1607). The Lezghs inhabit for the most part the southeastern portion of Daghistan (Akhthi, Dobukpara, Kusemikent, Kurakh, Magaramkent and Rutul rayons) and contiguous northeastern Daghistan (Kuba, Nuhka and Shemakhya rayons). The 1970 Soviet census listed 325,829 Lezghs residing in the USSR. Of them, 50.2% lived in the Daghistan ASSR and 44.4% in the Daghastan SSR. Of the Lezghs, 93.9% considered Lezgh their native language, while 4.7% considered it to be Russian and 2.4% other languages (mainly Azeri). According to legend, the Islamic religion was originally introduced among the Lezghs by Arab conquerors in the 7th and 8th centuries. The final conversion of the Lezghs to Islam came in the middle of the 15th century with the conquest of the Lezgh territory by the Shah of Shirvan-Khali Ullid.
Although the bulk of Lezgfs are Sunni Muslims of the Sha'фи school, there is a sizable minority of Shi'fs in Aşhabbāydiyya.

As a result of the long influence of the Turkish Khānātes of Aşhabbāydiyya on the Lezgfs, a Lezg feudal polity (the "national poet of Dagestan"), Sulayman and the "Kārin"-wāns were formed in 1775 with its centre in Kurakh. This Khānāte, however, included only a relatively small part of the Lezg territory and exerted only a minor influence on the Lezgfs. The majority of Lezgfs continued to live in free societies, while others lived at different times under the Khānātes of Kuba, Derbend and Kazikumukh. In 1812 the Kārin Khānāte became a Russian protectorate, and in 1864, with its abolition, the Lezg territory became an integral part of the Russian Empire. In the mid-19th century, under the leadership of Samoil and his Murids, the Lezgfs took part in the Caucasian wars against the Russians.

Although a weak feudal structure had developed in the region of Kurakh, the majority of the Lezgfs lived in free societies made up of patriarchal clans and extended families. These free societies were ruled by the village 'ādat. Within the clan or extended family there was mutual help in work and family affairs as well as group responsibility in vendetta, which were under the jurisdiction of the 'ādat. The Lezgfs maintained a strict clan endogamic marriage system.

The traditional economy of the Lezgfs was based primarily on home industries (weaving, rug making, leather working, pottery, smithing, etc.) and transhumance sheep and goat raising. These activities still play a major role in the village economy. In the foothills and lowland areas, corncrops, gardening and horticulture are important. Winter pastures of the Lezgfs were found primarily in Aşhabbāydiyya, and there was a long tradition of seasonal (winter) migratory labour among the Lezg men to the cities of Baku, Shemakha and Kuba (all in Aşhabbāydiyya). As a result of this migration, as well as the long cultural and political ties with Aşhabbāydiyya, the Lezg culture and language have been profoundly influenced by the Aşhabbāydiyya; but this strong assimilative force exerted on them has been sharply weakened during the Soviet period.

The Lezgfs have a relatively long literary tradition, though little pre-Revolutionary literature was written in the Lezg language, since the dominant tongues here were Arabic or Azeri or Persian. Among the more renowned writers of Lezg origin are the theologians Sayfuliah Cobonzide, Emir Arslan and Nidalur of Kurg, the mystical poet Etim Kadzhul, commentator on al-Bukhari, Talhah, 25, at the beginning; al-Zurkān, commentary on the Munawrat, Bāb mā di'dā fi l-Īfān, at the beginning.

The following Kurānic passage is the basis for the regulations regarding the l-īfān (XXIV, 6-10):

"As to those who accuse their wives [of adultery] without having other witnesses than themselves, the man concerned shall swear four times by Allāh that he is speaking the truth, and the wife and her sib, the freight from her and the man concerned shall swear four times by Allāh that he is lying and the fifth time that the wrath of Allāh may fall upon her if he is speaking the truth. If Allāh were not gracious and merciful towards you and wise and turning lovingly towards you...".

These verses belong to a part of the Kurān, apparently composed at one time, containing various regulations about adultery and consisting of XXIV, 1-10, 21-6; verses 1-5, which certainly belong to the year 5, were inserted later, so that our verses must therefore be older (cf. Nīdūke-Schwally, Geschichte des Qorōb, i, 210-11; H. Grimmer, Muhammed, ii, 27, puts the sūra between the battles of Badr (2 A.H.) and Uhud (3 A.H.).)

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kurān XXIV, 4 (cf. also verses 23-5) for saddah and are therefore in the same way, first the time that the regulations regarding the l-īfān have no affinities in Arab paganism, in which an institution like the l-īfān had no place at all (contrary to D. Santillana, Istituzioni di diritto musulmano, i, 221 below). The word l-īfān, which comes from the Kurān, is unknown to pre-Islamic poetry.

The hadīth concerning l-īfān are almost entirely (the oldest probably exclusively) exegetical, and proceed to give the occasion of the revelation of the Kurānic verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurkān, commentary on the Munawrat, Bāb mā di'dā fi l-Īfān), systematised and unreliable (cf. Nīdūke-Schwally, etc., where further references are given, to which may now be added those in A. J. Wensinck, Handbook of early Muhammadan tradition, 5-7 [to 56 ult. may be added, Tir. 44, sūra 24]). Four types may be distinguished among them: (1) the husband (announced) laments his sad case to the Prophet in covert language, whereupon the verses are revealed (oldest form); (2) the Prophet asks in the same way, first the time that the middle of the interlocutory of a friend and then directly of the Prophet (a development of the first type); (3) Hārith b. Umayya accuses his wife of adultery and is to be punished with saddah for this, when Allāh saves him at some point by the revelation of the verses (this type, probably a development of the first, in which Sa'ūd b. 'Uzāda also
is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and original appearance; and (4) someone marries a young woman and finds her not a virgin, while she disputes his assertion; the Prophet therefore orders i'sān (not exegetic). There are of course other transitional and mixed forms. In so far as the hadith yields nothing new about i'sān, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Kur'ānic institution.

The first subject of the earliest legal speculation was the question, not touched upon the Kur'ān, whether i'sān makes separation between the husband and wife necessary. In many hadiths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the i'sān. The statement that al-Murāb b. al-Zubayr is said to have held this view (Muslim, Nasa'ī) is, however, based only on an inadmissible interpretation of another hadith. It held the third point entirely. On the other hand, that Uṣāman al-Battī held it may be considered sufficiently proved (al-Zurkānī on the Muscellāh). Among the oldest representatives of the other view, which later became predominant, that a continuance of the marriage was impossible after i'sān, may be included with some probability 'Abd Allāh b. 'Umar and with certainty al-Zuhīrī, in whose time it was already sunna, and Ibrahim al-Nahāghī (Kitāb al-At'ār), the tracing of this opinion back to 'Abd Allāh b. 'Abbās, which is found in the hadiths, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of i'sān is to be carried through, whether by a triple tahlīl, which the husband has to pronounce against his wife, or by the decision of the judge before whom the i'sān is taken, or by the i'sān itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in the sense of the second view (cf. the hadiths of al-Zubayr in al-Taba'īr, Tāfīr and al-Buhārī, Tāfīr, Sahih 59 and Ḥudād, Sahih 43); the tradition in Ahmad b. Hanbal, v. 330-1, forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tayālīsī, no. 2667). The second opinion survives in the later legal abṣūlātī; apart from the amply testify to it in hadiths, its oldest representatives known with probability or certainty are 'Abd Allāh b. 'Umar; al-Zuhīrī, in whose time it appears as sunna; and Ibrahim al-Nahāghī (Kitāb al-At'ār); its ascription to 'Abd Allāh b. 'Abbās is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the madhāhib. We seem therefore to have a tendency to develop in a particular direction.

Other prescriptions about i'sān in tradition going beyond what is laid down in the Kur'ān, are of less importance. Thus when the question is raised at all, it is unanimously laid down that the husband can marry the wife again at a later date, that a i'sān may take place during pregnancy (legal tahlīlī is in later attached to their interpretation of this hadith), that the child has only relationship with its mother as regards kinship or inheritance, i.e. is considered illegitimate. Other hadiths say that the i'sān must be taken in a mosque and attribute the formula to be spoken there by the hadīt to the Prophet. We are also brought into contact with questions of detail, which play a part in the latter kiflīlī by a tradition; according to which the Prophet did not allow i'sān unless the husband and wife were on equal terms in this Islam and freedom; a series of older authorities who held the contrary view is quoted in the Muscellāh.

Details of the further teaching of Ḥalīlī al-Nakhrī on i'sān is given in the Kitāb al-A'zār. Two more general pronouncements in Mālik and al-Shāfī'ī bring us to the period of the rise of the madhāhib. Mālik states definitely that it was the sunna of 'Abd Allāh b. Mas'ūd, about which there is no doubt and no kiflīlī, that the husband and wife after the i'sān has taken place could marry each other; but al-Shāfī'ī says that with i'sān, divorce of the pair and denial of the paternity of the child was sunna of the Prophet.

3. The teachings of the separate madhāhib develop the views of their earliest representatives, not entirely on the same lines (e.g. from the Mālikīyah: it is to be assumed with probability that Mālik followed the second view regarding the element in i'sān which annulled the marriage (cf. above), while his school later held this view). The most important regulations of i'sān regarding i'sān that go beyond what has been so far discussed are as follows: if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally-prescribed fashion and she denies his charge, recourse is had to the process of i'dān. If the husband refuses to pronounce the formula prescribed to him, he is punished with the hadīt for i'dān; according to Abu Hanīfī, however, he is imprisoned until he pronounces the formula, whereby he is set free or is declared to have lied, whereas he is liable to hadīt. If the wife refuses to pronounce the corresponding formula, she is punished with the hadīt for adultery; but according to Abu Hanīfī and the better tradition of Ahmad b. Hanbal, however, she is imprisoned until she pronounces the formula, whereas she is set free or confesses her transgression and is then liable to hadīt. On the question whether i'sān is possible if one partner is or both are not free, or not free but not i'dān, there is no kiflīlī, while i'sān by a tradition of Ahmad b. Hanbal, v. 330-1, forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tayālīsī, no. 2667). The second opinion survives in the later legal abṣūlātī; apart from the ample testimony to it in hadiths, its oldest representatives known with probability or certainty are 'Abd Allāh b. 'Umar; al-Zuhīrī, in whose time it appears as sunna; and Ibrahim al-Nahāghī (Kitāb al-At'ār); its ascription to 'Abd Allāh b. 'Abbās is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the madhāhib. We seem therefore to have a tendency to develop in a particular direction. Other prescriptions about i'sān in tradition going beyond what is laid down in the Kur'ān, are of less importance. Thus when the question is raised at all, it is unanimously laid down that the husband can marry the wife again at a later date, that a i'sān may take place during pregnancy (legal tahlīlī is in later attached to their interpretation of this hadith), that the child has only relationship with its mother as regards kinship or inheritance, i.e. is considered illegitimate. Other hadiths say that the i'sān must be taken in a mosque and attribute the formula to be spoken there by the hadīt to the Prophet. We are also
confirmation), which was also held by al-Awazzâ and Sufyân al-Î-Thawrî. Finally, it is a disputed question whether the îsân can only be performed orally or (in the case of a dumb person) by gestures; al-Buhbûrî devotes ch. 25 of his Kîdîb al-Talabî to the discussion of this question and the reasons for his attitude. 4. It is easy to understand that the resort was only had to the îsân in extreme cases. Thus we find a scholar of Cordova in the 4th/10th century pronouncing the îsân against his wife simply in order to revive this sunna of the Prophet, which had fallen into oblivion (1. Goldziher, Muhammedanische Studien, ii, 21, Eng. tr. ii, 33). But it has only begun to fall into disuse with the introduction of modern legal codes into the Islamic countries and the creation of legal mechanisms for the adjudication of disputes over paternity. Thus the natural substitute for it, proof of non-access at the time of the child’s conception, was introduced into Egypt in 1929 by the device of restricting the competence of the Sharî’î courts in questions of maintenance and paternity; hence the courts were forbidden to entertain disputed paternity suits where either non-consummation of the marriage, or the birth of the child more than one year after the last physical access between wife and husband, could be established. In some countries, e.g. Tunisia or Morocco, procedures have been introduced whereby a husband can repudiate a wife who claims to have been falsely accused of infidelity by her husband can go to court and claim dissolution of the marriage.

J. Schacht}

LIBÄS (a., pl. lubus, abbas) like its cognate counterpart in most Semitic languages (cf. Akk. lubbas; Heb. and Aram. IUBS: Syc. loobs), is the general Arabic term for clothing or apparel. The dictionaries define it as “that which conceals or covers the pudenda”, for which the Koranic verse is cited, “O Children of Adam! We have revealed to you garments of clothing and finery, but the garment of piety, that is best” (VIII, 29). In addition, “it is for self-beautification and adornment and for protection against heat and cold” (Kîdîs TA, s.v.). In addition to the form lubas, one finds labas, matbas, matbas, labas and labasa also signifying clothing.

A detailed history of Islamic costume has yet to be written. There have been of late ever-increasing studies of modern and late pre-modern attire for various Islamic countries (cf. Bibliography), but with the exception of R. Dozy, Dictionnaire d'archéologie chrétienne et de liturgie, it has been solely on literary references which were mostly in manuscript at that time. His literary references were somewhat supplemented by R. Levy, Notes on costumes from Arabic sources, in JRAS (1935), 378-38. R. B. Serjeant’s monograph Islamic textiles, material for a history up to the Mongol conquest (Beirut 1979), although not dealing specifically with costumes, has brought forth a great deal of important ancillary material. Recent attempts to coordinate literary, sources with representations of costume in Islamic art and with actual relics of garments preserved for specific periods are those of L. A. Mayer, Mamluk costumes, Genoa 1932, and Y. K. Stillman, Female attire of medieval Egypt, according to the troussan lists and cognate material from the Cairo Geniza, unpbl. diss., University of Pennsylvania, Philadelphia, 1951.

We shall limit ourselves here to a general survey of costume history in the Arab world during the classical period, with some brief notes on pre-Islamic and modern times.

1. — In the Central and Eastern Arab Lands

1. Clothing of the pre-Islamic Arabs

Despite numerous references to the Arabs in classical geographical and historical literature, there is only scattered and somewhat fragmentary information concerning their attire. Herodotus mentions that the Arabs wore the Îsân, a sort of long flowing garment caught in with a belt (Hist. vii, 66). This most certainly is the ûsar also found in the forms asr, mîsar, and in Middle Arabic texts and vernaculars ûsar), a large sheet-like wrap worn both as a mantle and a long loin cloth or waist cloth (comp. late bibl. Heb. ûSer). This is corroborated by Strabo, who says that the Arab Nabataeans that “they go without tunics, with nothing but a belt and their loincloth” (Hist., vi, 195). This is amply supported by the Muroch’s theorizing that the Arab women in this period wore nothing but a belt and a veil covering their head, and with slippers on their feet” (Geog. vii, 1, 50). The mode of wearing the ûsar by the Muslim pilgrim in a state of ihram (q.v.) reflects this ancient fashion.

The earliest evidence for the clothing worn in ancient Arabia is the room-paintings of a prehistoric Arab (second and first millennia B.C.). These show men wearing relatively little clothing aside from a cloak and a variety of headdresses (see E. Anati, Rock-art in Central Arabia, i, Louvain 1968, 155, 163, and passim). Already at this very early time some women are depicted in enveloping wraps (ibid., 193). Some sort of slippers or sandals were also worn by both sexes (ibid.).

Those Arabs who lived within the cultural sphere of one or another of the great empires could not help but be influenced by the fashions of the higher civilizations, clothing being a manifestation of culture, no less than art, architecture, literature, etc. Thus the fashion of the Arab rulers of Hatra in Mesopotamia which depicts them wearing Parthian-style dress. Some wear a sleeved mantle and chiton, and others Persian trousers and military festoons (see F. Altheim-R. Stiehl, Die Araber in der alten Welt ii, Berlin 1965, 227). Those Arabs who inhabited the oasis towns of the Syrian desert apparently dressed in the fashion of the eastern Hellenistic world (see
Because of their conservative existence beyond the pale of sedentary civilization, the Bedouin have maintained a fairly constant style of dress from pre-Islamic times down to the present. Throughout the Muslim world loose wraps have always been an extremely common feature of dress for both men and women. Ibn Khaldun noted that wraps, as opposed to tailored or fitted clothing, were the mark of non-urban dwellers (Muqaddima, repr. Beirut 1900, 421). Ibn Khaldun’s observation, of course, needs some modification. City-dwellers wore wraps also. To be sure, these were of finer quality, often ornate, and were worn over fitted clothing. The Bedouin have always shown a preference for dark garments. The Babylonian Talmud cites the dark garments of an Arab as an example of a blue-black colour it is trying to define with precision (Niddah, 20a). Clothing is frequently mentioned in Dhibi poetry, especially the many kinds of outer mantles such as bard, idr, rid, and shamla (apparently similar to the bibil. livid). Turtulian mentions that Arabian women appeared in public totally enveloped in their mantle in such a way that only one eye is left free (De vrg. vid., 17). This fashion continues in places as far apart as Iran and southern Algeria and Morocco.

The use of footwear in Arabia goes back to prehistoric times and was certainly necessitated by the harsh landscape. Many of the figures in the ancient rock engravings wear some sort of distinctive shoe or sandal (Anati, Kuch-art, passion). The Talmud specifically mentions that the sandals worn by the Arabs are “close-fitting” (Yevamot, 102a) and that they “are knotted tightly by the shoemakers” (Shabbat, 112a).

The time of the Prophet and early Islam. The fashion of dress of the earliest Muslim community was on the whole an extension of the preceding period, with certain modifications for the new moral sensibilities. It is interesting to observe that many of the garments worn by the Prophet and his contemporaries continued through the centuries as the basic clothing of villagers and Bedouin, being simple, functional, and suitable to the ecology. The urban dweller, though perhaps far more conscious of suuna (q.v.) than his rural or nomadic cousins, has since Umayyad times been constantly modifying his wardrobe. Nevertheless, the basic outlines of the Islamic vestimentary system have remained remarkably constant even in the city.

The basic articles of clothing at the time of the Prophet for both sexes consisted of an undergarment, a body shirt, a long dress, gown, or tunic, and an overgarment such as a mantle coat, or wrap, footgear consisting of shoes or sandals, and a head covering. A person might wear many garments or only one depending upon a variety of factors including weather, occasion, economic means, etc. Many of the items of clothing worn by men and women were identical. In fact, many of the articles were simply large pieces of fabric in which the wearer wrapped himself. What must have set off male from female fashion in many instances was the manner of draping the accessories (jewelry, head-, and footgear, and veils), as well as colours, fabrics and decoration.

The principal form of armour was the coat of mail known as disarm or dirās which Noldeke thought to be of Ethioipic origin (Neue Beiträge zur sem. Sprachwissenschaft, Strasbourg 1910, 53), but as Bosworth has shown, was borrowed from Persia (cf. Iran and the Arabs, in Cambr. Hist. of Iran, iii, ed. E. Yarshater, 1923, 511). The term was first used by the Muslim poet Abū 'Abd al-Rahmān ibn al-Ḥafidh (d. 1022). It was a form of leather cuirass with the breast and back pieces fastened together by a wooden bar or by small nails. It was often worn over a shirt or tunic and was considered to be a sign of prestige and military prowess.

The custom of wearing several layers of tunics and robes continued through the Middle Ages and still persists in traditional areas today. In Morocco, for example, one frequently sees a man wearing two and even three jilbāb (hooded outer robe) over two or more tunics. The principal form of armour was the coat of mail known as disarm or dirās which Noldeke thought to be of Ethioipic origin (Neue Beiträge zur sem. Sprachwissenschaft, Strasbourg 1910, 53), but as Bosworth has shown, was borrowed from Persia (cf. Iran and the Arabs, in Cambr. Hist. of Iran, iii, ed. E. Yarshater,

sort of high cap or bonnet. Already at this early time the buruma must have also designated by extension a cloak with hood, despite Björkman's view to the contrary (act. "Turban", EI, iv, 890) since 'Umar's assassin was prevented from escaping by a Muslim who threw a buruma over him (Bukhārī, Šahīd, ii, 8). The word kalansūra apparently also could designate a hood or cowl, since it is mentioned along with the Ša'ma as one of the garments the Prophet revealed the ground was too hot (ibid., viii, 25). The high cap known as tafsira or turfar, though not mentioned in the early traditional literature, appears already in a 7th-century papyrus (J. von Karabots, Abrahānische Künstler im Konstantinopel, in Denkschr. d. Kais. Akad. d. Wiss., Bd. ixi, Abb. i, Vienna 1918, 67). The 10th-century traveller Belo suggested a connection between this cap and the ancient Egyptian head covering called by the Latin writers turbanum capitis orumnumonit turbinum coronam (cited in Leibnitz, T. van der Aa, Breve et Smyrni, Venice 1703, 140). It is still worn by married women today amongst the Sinai Bedouin. 'A'isha wore neither of these veils when she was a youth (ibid., 8). The word mai as-ṣīrī is still used to indicate one who was wearing the face veil known as mutāfranni, ridd, etc.) in such items from the High Middle Ages to modern times. This does not necessarily imply that he was wearing a hood or cowl, since it is mentioned with the Ša'ma as one of the garments the Prophet revealed when appearing in public. In addition, they were attached to the sides of the headband (īshāb) to cover the face. The lower corners of the buruma were attached to the sides of the headband by a string creating a mask-like effect. The buruma is still worn by married women amongst the Sinai Bedouin. Āfīna wore neither of these veils when she was a maid (lā talat šahamu wa-l tabahsu). Another veil worn by women at this time was the ṣāhib. Oddly enough, there is no mention of any sort of hats or head-dresses for women at this early period, despite a veritable plethora of such items from the High Middle Ages to modern times.

Men did veil occasion, normally by wearing the outer mantle (tīrī, ridā', bird, yunafak, etc.) in such a way as to cover both head and face. The Prophet is described on more than one occasion as being mutāfrānni. This does not necessarily imply that he was wearing the face veil known as āndā or mithna (cf. for example, Bukhārī, Šahīd, lxvii, 16). Very handsome young men sometimes veiled their faces, particularly at feasts and fairs, in order to protect themselves from the evil eye (A. Č. vI, vi, 33; xi, 28; xii, 137; xv, 157; also J. Wellhausen, Reste arabischer Handschriften, repr. Berlin 1961, 196). The free end of the turban cloth frequently served as a face veil to protect the wearer against dust while riding. It was used in this fashion that al-Hadīdī (q.v.) entered into the mosque at Kāfūn, mounted the pulpit, and dramatically barred his face as he began his famous sermon with the words: 'I am the son of a great man, the sceler of the high places. When I take off my turban you know who I am'.

Footwear for both sexes fell into one of two categories—the sandal or sandal which could be of palm fibre, smooth leather, or leather with animal hair, and the ādīf, a sort of shoe or boot made of leather. The various kinds of slippers which are popular throughout the modern Islamic world under a variety of names (dīghā, liuAs, surmaqta, burku, etc.) came into vogue after the conquests.

2. Early Islamic laws and customs regarding clothing. The austere nature of the early Medinian umma did not encourage luxury of any kind. The Kurān promises the righteous garments of silk (see gāzāh in Paradise, but the Prophet felt that such clothes were inappropriate in this life for men, although apparently not for women. According to a frequently-repeated hadīth, Mu‘āmmad forbade seven things: silver vessels, gold rings, garments of harrī, dibdūd (brocade), ṣa‘īsa (a striped fabric from Egypt containing silk), takliāb (Latin), and nādirīs (frowned upon). There are many more fabrics mentioned in the traditional literature which he supposedly proscribed. It would seem that he did make exceptions in the case of individuals suffering from some pruritic skin condition or lice. With the development of the empire and the rise of a leisured class, there came into being a wealth of counter-traditions expressing the permissibility of wearing clothes of silk and other luxury fabrics.

Many of the earliest and most reliable traditions regarding clothing deal with āndā and questions of ritual impurity caused by menstrual flow or the ejaculation of semen. Each of the Prophet's wives had a special menstrual garment. Garments defined by menstrual flow need only to be washed to be worn for prayer (e.g., Abū Dāwūd, Sunan, i, 130), and if not stained, a menstrual garment may be worn for prayer without washing. For these and related laws, see gāzās, gāzāh, ṣāhib, and ṣāhibah. It is not certain whether or not women in the early umma had special clothes for mourning. During the Dāhilīyya, a woman wore her worst clothes when in mourning (wa-lhubaa gharra ḍhīṣīdī—Bukhārī, Šahīd, lxvii, 46, 47). The Prophet forbade women in mourning to wear dyed clothing except for garments of āndā, a Yemenite fabric with threads dyed prior to wearing (ibid., 45, 49). The technical term for "mourning garment" (abdāh al-ḥida) only appears in Ibn Hānbal (Musnad vi, 438) and seems to be a later development. The name implies a garment dyed to a dark iron black.

As already noted, many of the garments worn in early Islamic times were the same for both men and women, especially tunics and wraps. There were, nonetheless, distinct stylistic differences. Islam, like Judaism and Christianity, strictly condemns transvestitum (Bukhārī, Šahīd, lxvii, 61). However, in Islam this prohibition clearly refers to overall conduct as much as dress.

Clothes have always been considered objects of significant material value in the Middle East. They
are mentioned as valuable gifts, a medium of payment, and items of booty. A man who had worked in the Prophet's baggage train supposedly went to Hell for having worn a black cloak (jubba) (a sleeveless robe) from the al-Barm of the Prophet (Buldari, Sahih, iv, 90). Garments could also be used for the payment of the zakah (ibid., xxiv, 33). As had been the custom of oriental rulers since ancient times, Muhammad bestowed valuable garments upon members of his entourage as a mark of favour (cf. e.g. Genesis, xxxvii, 3 and xii, 42).

Many customs were associated with clothes. Then as now, pious wishes and felicitations were appropriate for someone with a new garment. Muhammad wished Umm Khalid abd u-nas-ab:abi ("wear it out and exchange it!") when he presented her with a small black abranja (Buldari, Sahih, ixxvii, 22, 1). In more recent times, the wishes have become less eloquent, and one simply says wdbala ("congratulations!") or sawlimun ("how nice!"). In accordance with an ancient custom going back to pagan times, the Prophet reversed his riba when he went out to make the prayer for rain. He did not reverse his sandal because it might be confused with the sandal of Jesus. He would put on Friday (Ibid., vx, 11). The act of reversing the garment was apparently symbolic of the change in weather sought. It was still practiced in Tunis at the end of the 19th century (Wellhausen, Reste, 197). The custom of barring the head in extreme humidity during the ishtad ritual also probably goes back to this period, though it is not mentioned in the literary sources until the later Middle Ages (see I. Goldziher, Einlassung des Haupts, in Isf. vi [1916], 391-76, esp. 394).

Many customs regarding clothes which most certainly have their roots in ancient Near Eastern superstition and are found also in the Talmud are ascribed to Muhammad in the Muslim traditions. Thus the believer should always put the right shoe on first. He should not go out with only one shoe on—either both or barefoot (cf. the ill omen for Pelias of the myth of Jason). Furthermore, shoes should never be left with the soles facing heavenward.

The Umayyads and 'Abbāsids and the jird system. Judging by the rather scattered and scanty literary evidence, most of the Arabian garments of early Islamic times continue into the Umayyad period, although some items become more and more restricted to Bedouin use (e.g. the mir). The most significant change that came with the rise of an Islamic empire is the use of clothing made of luxury fabrics by the Umayyad caliphs and their courtiers. Abd al-Malk is reported by al-Majdul to have worn embroidered garments (e.g. E. Blochet in Revue de l'Orient Latin, vii [1900-1], 175). Sulayman and his retinue were only garments of waghi or variegated silk, including the dubb, riq, sara:ul, 'imama, and kalansua (Masudi, Mushid, v, 400).

There is one report specifically mentioning the so-called "caliphal garments" (ijiwad al-khāflim) being worn by al-Walid I (Aghdnl I, 73). Later under the 'Abbāsids, the caliph wore special robes of office with embroidered borders and which were called by this name. It is only stated of the Abbasid caliph al-Ma'mun that they were white. The 'Abbāsids' robes of state were normally black. Their custom of wearing black garments on official occasions was established by al-Mansur and was only abandoned for a brief period in favour of 'Ali's green under al-Ma'mun (Tabari, iii, 1022 f.).

Two of the most significant phenomena of Islamic costume history originate in the Umayyad period—the sumptuary laws requiring distinguishing clothing for the non-Muslim subject population, and the production of regal embroidered fabrics for clothing.

The laws of differentiation or qiyār (q. u.) most probably do not go back to the time of 'Umar b. al-Khattab, since at that early period the abd al-dhimmā (q. c.) and the Arabs did not dress alike anyway. Although these laws were to be minutely detailed only in later centuries, they go back in general outline as well as in spirit, at least, to the caliphate of 'Umar b. 'Abd al-Aziz. Dhimmās were forbidden to wear Arab-style headgear, including the 'abila, 'abbasa, and 'ayyasa, Arab military dress, and certain robes, as for example, the 'kafa. They also had to wear a distinguishing belt called misbat and more frequently samur (cf. G. Constantin). This ordinance may have applied at first only to Christians. By the reign of Hārūn al-Rashid, these rules governing dhimmās' dress were well-refined and were ascribed back to 'Umar I (Abū Yūsuf, K. al-Kharajī, Cairo 1382, x37 f.). For a detailed discussion of the restrictions on dhimmīş dress and the cases in which they were relaxed, see A. S. Tritton, The caliphs and their non-Muslim subjects, repr. London 1970, 115-26.

The production of special embroidered fabrics in palace textile factories also began in Umayyad times and became a standard feature of mediaeval Islamic material culture. The fabrics were known as jirds (q. f.), which in its narrowest sense meant "embroidery", especially embroidered bands with writing in them, and in a wider sense, indicated an elaborately embroidered robe, such as might be worn by a ruler of his entourage. Jirds' garments were bestowed as tokens of royal favour and were among the standard gifts brought by diplomatic embassies to other rulers as part of foreign policy. In the view of many scholars, the Umayyads most likely took over Byzantine state factory establishments and adapted them to their special needs and tastes (e.g. E. Kühnel and L. Bellinger, Catalogue of dated tiras fabrics, Washing¬ton, The Textile Museum, 1938, 34. Part of foreign policy. In the view of many scholars, the Umayyads most likely took over Byzantine state factory establishments and adapted them to their special needs and tastes (e.g. E. Kühnel and L. Bellinger, Catalogue of dated tiras fabrics, Washing¬ton, The Textile Museum, 1938, 34). In any event, it is clear that by late Umayyad times the jird system extended across the caliphate, and continued to flourish under the 'Abbāsids, Būyids and Sādiks. The production of such luxurious fabrics was a highly profitable business, and there was considerable government control. The state was also responsible for the prices in Ashur's view (E. Ashur, "Umayyad textile industry at Basra", Revue de l'Orient Latin, viii, 197). However, most mediaeval Arab historians believed the production of jirds garments to be derived from a Persian institution, and there is some evidence that garments with royal insignia were worn in Sassanian times (see S. D. Goitein, Petitions to Fatimid caliphs from the Cairo Geniza, in JQR, NS, xlv [1954-5], 34 f., where Talmudic evidence is cited). The truth as to the origins of the jird system would seem to combine both views.

The first Umayyad caliph who is specifically mentioned in the Arabic sources as having had jirds'factories was Hāshim b. 'Abd al-Malk (al-Djahslji, Cairo 1938, 50). In any event, it appears that late by Umayyad times the jird system extended across the caliphate, and continued to flourish under the 'Abbāsids, Būyids and Sādiks. The production of such luxurious fabrics was a highly profitable business, and there was considerable government control. The state was also responsible for the prices in Ashur's view (E. Ashur, "Umayyad textile industry at Basra", Revue de l'Orient Latin, viii, 197). However, most mediaeval Arab historians believed the production of jirds garments to be derived from a Persian institution, and there is some evidence that garments with royal insignia were worn in Sassanian times (see S. D. Goitein, Petitions to Fatimid caliphs from the Cairo Geniza, in JQR, NS, xlv [1954-5], 34 f., where Talmudic evidence is cited). The truth as to the origins of the jird system would seem to combine both views.
formed an important element of the state's assets. Thousands of garments are listed among the annual treasury receipts under Hārūn al-Rashīd (al-Dhahabī, K. al-Wasāsī, 179-182). In addition to their socio-economic importance, garments of ûrds fabrics were of great sociopolitical significance. The 'Abbasid caliphs and, at a later date, other Muslim rulers, were wont to bestow robes of honour (khiša), sing. khiš'a [q.v.] upon those of their subjects—Muslim and non-Muslim, male and female—whom they wished to reward or for some reason mark for distinction. The khiš'a was often not a single robe, but an entire outfit. This suit consisting of two or more garments was known as a lāli (The word lātil today means a "western suit of clothes"). The vīza' Hābd b. al-'Abbas (d. 512/1223), for example, received two such outfits each consisting of a lined coat (mubātāna), a sleeved robe (dharrā'a), a body shirt (kamī), drawers (kandalū), and turbān (lūmāna) (Hūlī al-Sibī, Tarīkh al-wasāsī, ed. Amedroz, Beirut 1904, 176).

With the rise of the bourgeois period during the 'Abbasid period and the dissemination of the polemic educational ideal of adād [q.v.], the number of many new garments and fabrics came into use, and people became ever more fashion-minded. The early aversion from silks and satins was forgotten or ignored by all but a few few, and only the most ascetic and the poor wore the rough woolen robe known as the khiša [q.v.]. (The latter use of this word to designate "rag" or "dishcloth" is instructive.) Another wool garment worn only by the very poor was the sleeved tunic known as nīdira. Cultured gentlemen and ladies, on the other hand, were very much concerned with their appearance. The adj-d al-Wasāsī (q.v.) (d. 325/936) devoted several chapters of his book On elegance and elegant people (K. al-Muwaṣṣaṣ aw al-qarij wa l-murāj, ed. Brunnow, Leiden 1866; ed. cited here is that of Cairo 1362/1953) to describing the types of clothing worn by his contemporaries, as well as the acceptable campus of taste. The fashionable man, according to al-Wasāsī, outfitted himself in several layers of clothing; beginning with a fine undershirt (khilīla), over which was worn the heavier, lined imajāla, and both (variant of this word to designate a cuirass). The caliph al-Muktadir, in a portrait bearing his name, supposed to have worn such a hat inscribed on one side with the word bālī and on the other with ḥūš in the duties which he undertook on alternating years of leading the pilgrimage and the war against Byzantium (Tabari, iii, 709). Another Persian garment which was introduced at this and which became extremely popular throughout the Arab world is the ḡūšdān, a robe with sleeves that butted down to the fingers, the term which designated a cuirass. The caliph al-Mu'ūtadī wore a ḡūšdān of Tustari silk brocaded with silver when he set out on his fatal march against the rebel Mu'min in 320/932 (Dozy, Vêtements, 162 f.; Levy, JRAIS 1935, 331-2, and the sources cited by both). Since the later Middle Ages, the form ḡūšdān (variant bagfand) has been used exclusively throughout the Arabic-speaking world, due to the influence of Turkish.

Fine garments were brought to Baghdad from all over the Muslim world, as well as being imported from abroad. From India came the fifa, a long piece of sarī-like cloth which served a variety of functions: as a hinkloth, apron, and a variety of headgear (Stillman, Female attire, 214 ff.). From China during this period there came oilcloth raincoats (minjarā) (Tha'alibī, Lusi al-muṣawwīr, Cairo 1960, 227; Eng. tr. Bosworth, Edinburgh 1968, 141: Mez, Renaissance, Eng. tr. 190). Fine garments for men in 3rd/9th century and 6th/12th century Iran were priced from 1-3 dinars to 15 dinars each for the same garment (cf. e.g. Bibl. Nat, Paris, ms. arabc 3929, f. 59). Hārūn al-Rashīd is supposed to have worn such a hat described on one side with the word ḡūš in and on the other with ḡūš in the duties which he undertook on alternating years of leading the pilgrimage and the war against Byzantium (Tabari, iii, 709). Another Persian garment which was introduced at this and which became extremely popular throughout the Arab world is the ḡūšdān, a robe with sleeves that butted down to the fingers, the term which designated a cuirass. The caliph al-Mu'ūtadī wore a ḡūšdān of Tustari silk brocaded with silver when he set out on his fatal march against the rebel Mu'min in 320/932 (Dozy, Vêtements, 162 f.; Levy, JRAIS 1935, 331-2, and the sources cited by both). Since the later Middle Ages, the form ḡūšdān (variant bagfand) has been used exclusively throughout the Arabic-speaking world, due to the influence of Turkish.

the Middle Ages clothing was very costly in comparison with the other necessities of life.

5. The Fatimid and the Ayyubid Empires. The Cairo Geniza documents reveal that in the Cairo Geniza era (969-1076) there was a definite concern for clothes-conscious than that of the Fatimids. Fatimid pomp and ceremony exceeded anything known in Baghdis, and clothing played a major part in creating the splendid effect.

The first Fatimid caliph in Egypt, al-Mu'tizz (d. 365/975), founded a special government costume supply house known as the al壮观 of Khlis al-masri and the нетуи al-masri with an outlay of 500,000 dinars. An official bureau (khuṣān) oversaw the production, storage, and distribution of costumes. Every official and functionary from the caliph down to government clerks was supplied with a ceremonial costume (badia mabābīyya) for public occasions. According to al-Maqrizi, who is the almost exclusive source of information for Fatimid ceremonial costumes, each person was provided with an entire wardrobe "from the turban to the underdrawers" (Khilaf i, 409). The kisama provided different weight cloths for summer and winter. A complete costume (badia munaša) could consist of as many as a dozen articles of clothing, of which have been mentioned in the preceding sections.

Naturally, these ceremonial costumes were made of the most costly fabrics. The most popular were karir (fine silk), šīsī, ṣubkī, šarīḥ, dīmūṣī (all linens), ṣabūrsanādī (kingly brocade), and sīlaštān (siglaton). Most of the ceremonial costumes were white and embroidered with gold and silver threads in accordance with the official Fatimid imagery of luminous splendour and divine light. The selection of the caliphal costume was itself a ritualised event before every holiday.

Each rank and office was distinguished by its costume. The most outstanding item of the caliph's attire was his enormous turban which consisted of a cap (thāšāthu) around which was wound a caliphal turban was called "the winding of majesty" (šiš atyūn). This special manner of winding the turban was unique for the ruler in the shape of a "noble crown" (al-tūf al-ṣagīr).

The rest of the imperial retinue wore a variety of less splendid headaddresses. The chief emirs of "the court who were the anwar of the palace, all wore turbans which were ecstatically wound under the chin — the so-called tašāth al-tamās or simply al-tamās. Thus, they were known as al-ṭalāṣhīn al-muḥamman-ān. The caliph al-ʿAzīz became the first ruler to appear with the banāk (Khitaf ii, 285) and eventually so did the vizier and the anwar (ibid., i, 449, 449). This fashion was introduced into the east by the Fatimids from the Maghrib, where it still may be seen, especially in southern Algeria and Morocco.

Another head covering which is first mentioned during this period is the kalasa or kalīta (cf. Lat. calasita, Fr. calotte, Pers. gālīta) which was a kind of cap (Khitaf i, 431). It became to be a standard item in Ayyubid and Mamlūk times (see e.g. al-Kalâshandi, al-Īdārī, i, 20, 25-2; al-Maqrizi, Khita i, 108).

The various modern studies dealing with Fatimid ceremonies draw mainly upon al-Maqrizi and to a lesser extent, on al-Kalâshandi and on Ibn Taḥfīz-Birdi, all three of whom depended upon the lost work of Ibn al-Tawārī. See K. A. Ineustratev, Torosovcvit vizečy Fatimidšták kňažiat ("The solemn entry of the Fatimid caliphs"), in Zapiski Pust. Otech. Imp. Russ. Arheol. Obschestva, xvii (St. Petersburg 1904); M. B. Zaki, Kunse al-Fatimī, Cairo, 1937. M. Canard, La cérémonie fāsimite et le ceremonial byzantin: essai deComparison, in Byzantion,.xxii/2 (1951), 355-420; idem, La procession du nouvel an est le chasr Fatimid, in AIEO, x (1955), 364-98; ʿA. M. Mājid, Ṣuṣur al-Fatimīyyin wa-rasūlmūkum fi Miṣr, ii, Cairo 1955.

6. The Geniza as a source for mediaeval Islamic attire. The Cairo Geniza manuscripts are an important and till recently, untapped source for the dress and ceremonies of the Fātimids, Ayyubids, and — to a lesser extent — Mamluks. In particular, the some 750 trouseau lists from the Geniza, in combination with ancillary Geniza records, offer a wealth of information on the attire of Jewish women in mediaeval Egypt, and by extension, the attire of Muslim women as well. Information for male costume comes from commercial documents, but is by no means as extensive or as detailed.

One fact stands out clearly—that Jewish and Muslim women dressed alike during the Fatimid and Ayyubid periods. The Geniza trouseau lists give every indication that the restrictive laws of qayār were not enforced. The same garments are mentioned as in the Islamic sources. There is no limitation in the Geniza as to colour and textile, rather there is the greatest variety of hues and diversity of fabrics. Jewish women, like their Muslim counterparts (and most likely Copts as well) went veiled.

The Geniza documents show that the bourgeoisie consciously or unconsciously tried to imitate the modes and mores of the ruling class. Merchants, for example, bestowed khītā and firās garments upon relatives and friends. People of means wore all the precious fabrics known to us from the descriptions of the Fātimid ceremonies. Over sixty fabrics are mentioned in the Geniza. Of these, forty-six are known from the literary sources collected by Serjeant. Under the Fātimids and Ayyubids, the mercantile class indulged itself in many types of garments. The Geniza trouseau mention almost seventy items of women's clothing.

The Geniza has revealed the names and considerable data for more than two dozen garments which were hitherto unknown or only mentioned in isolated literary sources without any explanation or description. Among these are the ḥākānīyya and maḥādīma, both fine dresses; the ṣuṣur, a dress which first appears in late Ayyubid trouseaue and became popular in Mamlūk times, after which it seems to have disappeared; the ṭabāba, ṭari, muḥalaf, and ruba, all head scarves or shawls; and the waṣṣūn and ḥaṣī bi both belts or cummerbunds.

In addition to new names of garments and textiles, the Geniza has provided an entirely new vocabulary of patterns and adornments. Many of these designs can be correlated with those in manuscript illustrations (see Stillman, The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire, in IFMES viii (1976), 578-85).

There is also considerable new information on garments already known. For example, the saḥfī and the barakkān, both mantles, which have been in attested use in the Maghrib from medieval to modern times (al-Īdārī, Nushāt al-mugādī, ed. Dory and de Goeje, Leiden 1886, 59; al-ʿUmari, Maḥādīth al-nbhr, tr. Cadocrey-Demobynes, Paris 1927, 123) are shown to have been worn in Fātimid and Ayyubīd Egypt as well. No doubt they were brought
into the east after the Fatimid conquest in 969. The baday, a short, sleeveless tunic, worn by both sexes and usually associated with the Arabian Peninsula (Dossy, *Fétehanc"s* 36-8), is shown to have been a fairly common article of feminine attire in medieval Egypt.

For the information provided by the Geniza on costumes, see W. K. Stilman, *Female attire of Medieval Egypt*; idem, The wardrobe of a Jewish bride in medieval Egypt, in *Studies in Marriages Customs*, ed. Ben-Ami and Noy, Folklore Research Center Studies, iv (Jerusalem 1974), 297-304; idem, The importance of the Cairo Geniza manuscripts for the history of medieval female attire; idem, Ketubot ha-Gedolah ha-Makor ha-Levush ha-binat ha-Britayin, in *Histot Gedolah Kiihish*, ed. M. Friedman, Tel Aviv 1980, 149-60.

7. The early Turkish dynasties: Sabi'daks, Ayuybids, Mamluks. The Turkish military dynasties that controlled one part or another of the Middle East from the late 5th/11th to the early 10th/16th centuries brought with them many Central Asian styles, particularly in military and ceremonial attire. These, however, were the distinguishing costumes of the military elites. The fashion of dress of the native Arab population was little affected by these, tho these were the distinguishing costumes of the military elites. The fashion of dress of the native Arab population was little affected by these, tho these were the distinguishing costumes of the military elites.

Throughout much of this period, the typical outer garment for a member of the ruling class was any one of a variety of coats (shar'biyya). These were worn over the usual layers of under-shirts, the most common of which was the kandil'i. The undershirt was normally hidden by the outer garments, except in southern Iraq where it was cut long to extend below the coat above it.

The Sabi'daks and Ayuybids preferred the so-called Turkish coats (al-ab'biya al-turkiyya), the hem of which crossed the chest in a diagonal from right to left. The Mamluk amirs wore the Turan coats (al-ab'biya al-turkiyya) with the hem crossing the opposite way. Over the coat was worn a belt of metal plaquettes (huyasa) or a sash (hidual). Al-Mas'udzi (*Khamar ii*, 99) identifies the huyasa with the ancient minfaka, and states that there was a special market in Cairo (sak al-huwasa 'yu) devoted to the sale and manufacture of these belts. (For a finely preserved specimen of the huyasa, see Mayer, *Mamluk costume*, pl. IX.)

For members of the upper classes, the sleeves of their coat were frequently indicative of rank and social status. The longer and more ample the sleeves, the higher the standing of the wearer.

The illustrations from Makmun, K. al-4-ladCD, and K. al-Diryak manuscripts from this period attest a wide variety of caps and turban styles. The normal headgear of the military class was a stiff cap with a triangular front. It was sometimes trimmed with fur (shar'biyy), and sometimes had a small kerchief bound around it to form a sort of turban (tafshziyya). The other most common cap was the kalawwi which was usually yellow under the Ayuybids, and red under the early Mamluks, and later red only (Mayer, *Mamluk costume*, 29).

The kalawwi and the shar'biyy were so much the distinctive mark of a Muslim knight that even a Crusader was prepared to wear them as a gesture of friendship to Salih al Din (Ibn al-Ashir, xl, 51-2).

Under the Mamluks, two other popular short sleeved coats were the hughalash (also huchalash) and the salardiyiya. These were made of a variety of fabrics and frequently were lined with fur. Such a coat was sometimes worn under an ample outer robe (faradjiyya).

Eventually, some of the garments which were at first the mark of the military aristocracy were imitated by the middle classes. The hughalash, for example, appears in several Geniza documents.

The only comprehensive study of the attire of any of the dynasties of this period is L. A. Mayer, *Mamluk costume*, where there is an extensive bibliography.

Shorter, general studies include: Mayer, *Al-Asyut fi l-huyasa al-asar*a, in *Al-Kulliyya* (1932), 438-69; idem, *Saracen arms and armor*, in *Ar. X* (1943), 1-12; M. V. Gorelik, *op. cit.* (men's dress only). A. M. Madijd, *Nusma dawdul sabti' al-Mamlah wa-nusma dawdul Confroi*, i, Cairo 1967, 64-87, has a chapter on Mamluk attire which, however, adds little to Mayer's work.

8. The Ottoman period (to early modern times). As far as the costume history of the region is concerned, the Ottoman conquest of the Arab East in the early 10th/16th century marked a continuation of the preceding period, rather than an abrupt change. Ceremonial and military dress remained Turkish (see below, section iv). Some Ottoman fashions were adopted by members of the urban elite, as for example, the Turkish-style khatun for men and the long, tightly-fitted coat known as the yelek for women. Turkish synonyms came into common use for certain items of clothing alongside, but not necessarily replacing, the native Arabic equivalents (e.g. eshkab for sinawd and yashmak for faradj). But on the whole, Arab styles and Arabic terminology prevailed. The vestimentary system remained essentially the same.

Outside of the principal, metropolitan swaths of administration, distinct regional styles predominated. These regional distinctions were—and this remains true today—in those places where traditional costumes are still worn—most striking in female attire. Men's clothing was more or less uniform throughout much of the Middle East during the Ottoman period. This was due in part to the fact that men were physically and socially more mobile than women and came to have a more pan-Middle Eastern style of dress. Thus when a plate from E. W. Lane's *Manners and customs of the modern Egyptians* (London 1836) appeared in a book on Syria with the added caption "A Syrian gentleman with pipe and inkwell, ca. 1860", the inaccuracy was only minor.

9. The last one hundred years: the impact of the West on traditional Middle Eastern
dress. The ever-increasing Western economic, political, and cultural penetration into the Middle East in the second half of the 19th and the first half of the 20th century had a marked impact on the costume in the preceding centuries (see K. A. Stillman, *The costume of the Jewish woman in Morocco*, *in Aspects of Jewish folklore*, ed. D. Noy, Cambridge, Mass. 1979).

By the end of the 19th century, the "to veil or not to veil" question had become one of the burning issues for modernist reformers such as Khin Am in (his *Tabbiris-murāt*, Cairo 1901). It also became a burning issue for the small but growing Egyptian feminist movement. Huda Sha'rawi, the famous Egyptian feminist, is supposed to have solemnly cast her veil into the Mediterranean as she returned home in 1923 from a woman's congress in Rome (see H. A. Hourani, *The vanishing veil: a challenge to the old order*, in UNESCO Courier [January 1956], 37). Her symbolic action was soon followed by many upper and upper-middle class women, but not by women of the lower-middle class, which remained the last stronghold of tradition (see Y. K. Stillman, *Attitudes toward women in traditional Near Eastern societies*, in *S. D. Goitein Festschrift*, ed. S. Morag, I. Ben-Ami and N. A. Stillman, English-language volume, Jerusalem 1981, 345-60).

Muslim men abandoned traditional attire more rapidly than Muslim women. This is due to the male's greater physical and social mobility, as noted above. The first Muslim men to adopt the European costume were members of the bureaucracy and the upper class who were in direct contact with westerners and who, in many cases, had visited Europe. Such individuals were referred to as "westernizers" (Ar. mutafarif) and "westernised gentry" (Tur. alfarzga Erlebiyer). Throughout the 19th century they remained a small minority. However, after the First World War the change became rapid (see e.g. R. Tresse, *La révolution du costume des clôitres en Syrie depuis le XIXe siècle*, in *La Geographie*, lx [1938], 1-16, 76-82; Idem, *L'évolution du costume des citadins syrobalans depuis un siècle*, in *La Geographie*, lxx-1xxi [1939], 259-81, 259-84).

One aspect of the male wardrobe that has resisted change even where the transition to Western attire has been more or less complete is the headgear. It is still common to see men dressed in a Western suit, wearing a fez zeyt, a torbaj, or a kššyya. This is due to the traditional importance of covering the head and to the fact that the headcovering (originally the turban) was considered a badge of Islam. The kššyya, which was in the last century most commonly worn by Bedouin and peasants in many parts of the Middle East, has in recent years taken on a nationalistic connotation comparable to that of the fez in Ottoman Turkey under the Young Turks. The chequered kššyya is today the badge of the Palestinian commandoes (see Y. K. Stillman, *Palestinian costume and jewelry*, Albuquerque 1979, 16). The traditional *üzama* is now worn almost exclusively by members of the *idāma* in the Middle East (although in the Maghrib, and in particular in Morocco, it is still commonly worn even by men who have adopted Western dress. See below, section ii). However, after the First World War the change was never as strict as it was among Muslims, nor was the non-Muslims' style of veiling quite as total even in the preceding centuries (see e.g. R. Tresse, *La révolution du costume des clôitres en Syrie depuis le XIXe siècle*, in *La Geographie*, lx [1938], 1-16, 76-82; Idem, *L'évolution du costume des citadins syrobalans depuis un siècle*, in *La Geographie*, lxx-1xxi [1939], 259-81, 259-84).

Most Christian and Jewish women abandoned the veil a full generation or more before their Muslim counterparts. One factor which facilitated their abandoning the veil so much earlier was that the segregation of women in the non-Muslim communities was never as strict as it was among Muslims, nor was the non-Muslims' style of veiling quite as total even in the preceding centuries (see e.g. R. Tresse, *La révolution du costume des clôitres en Syrie depuis le XIXe siècle*, in *La Geographie*, lx [1938], 1-16, 76-82; Idem, *L'évolution du costume des citadins syrobalans depuis un siècle*, in *La Geographie*, lxx-1xxi [1939], 259-81, 259-84).

Outside the major cities, traditional costumes are still commonly worn, but they are losing ground rapidly in many places. Even among some Bedouin, European garments are gradually displacing traditional clothing (see L. Stein, *Beduinen*, in *Mitteilungen aus dem Museum für Völkerkunde zu Leipzig* (1952), 41-2). The one area which has successfully maintained its traditional style of dress in all levels of society is the Arabian Peninsula. Any sort of country-by-country survey of the traditional garments still worn—or worn until recently—in the Arab East would be outside the scope of this article. Western travellers to the Middle East over the past two-and-a-half centuries have provided lengthy and detailed descriptions of native costumes. In addition to these, there have appeared in recent years a number of scholarly monographs on various aspects of Middle Eastern costume (see Bibl.). What follows is the alphabetical glossary of some of the more common articles of clothing still worn in the Arab East in the 20th century:

**GLOSSARY**

*šāhā*: coat, shoulder mantle, worn by both sexes (Arabia Peninsular, Egypt, 'Irāk, Syria-Palestine)

*šāhā*: ringed cord or rope to go over the head scarf, worn by men (Ar. Pen., Ir., Syr.-Pal.)

*šāfā*: a lined vest ranging from short to knee length, worn by women (Eg., Syr.-Pal.)

*barkaz*: a narrow, diaphanous sort of veil, often embroidered, worn by both sexes by itself or under the head-dress (Ar. Pen., Eg., Syr.-Pal.); called *šarādham* in 'Irāk

*bāq*: folded scarf worn by women (Eg., Syr.-Pal.)

*bābū*: Oriental slippers of soft leather (Ar. Pen., Eg., Ir., Syr.-Pal.)

*bādan*: cotton or silk man's gown (Ar. Pen.)

*bāgh*: a wide-sleeved man's coat (Ar. Pen., Ir., Syr.-Pal.)

*bāgh*: mantle, jacket, worn by both sexes (Syr.-Pal.)

*bāb*: ringed cord or rope to go over the head scarf, syn. with *šāhā* (Syr.-Pal.); banding for loin cloth, syn. with *hāne* (Ar. Pen.)

*būرد*: heavy, woolen hooded cloak worn by men, imported from the Maghrib (Eg.)

*būrā*: woman's face veil (Ar. Pen., Eg., Syr.-Pal.)

*būrg*: variety of *šāfā* made in N. Syria (Syr.-Pal.)

*būl*: black face veil worn by women (Ir.)

*bāshā*: Turkish-style pantaloons, underdrawers, worn by both sexes (Eg., Syr.-Pal.)

*dāmir*: a woman's jacket with short sleeves, syn. with *tahrira* (Syr.-Pal.)

*dīfya*: a heavy winter cloak for men (Eg.)

*dīla*: the patched garment of *Ś̱ stamina* (Syr.), also worn by clowns (Eg., Ir., Syr.-Pal.)

*diffiya*: a heavy winter cloak for men (Eg.)
Alālīyya: the loose body shirt still commonly worn by men in Egypt.

Alālīyya: embroidered Alūbba, a wedding costume may be a dress or a coat depending upon the region, worn by women (Syr.-Pal.); a man’s narrow kāﬁūn (Yemen)

Alūbba: a coat-like outer garment worn by both sexes (Ar. Pen., Eg., Syr.-Pal.)

Alūzā, Alūžā: a wide-sleeved coat worn by men (Syr.-Pal.)

Arūra: a woman’s outer coat, open in front, sometimes syn. with Alūbba (Syr.-Pal.)

Arūlānīyya: a long-sleeved man’s robe (Eg.)

Arūlīyya: a woman’s dress (Syr.-Pal.)

Alīdānīyya: a small embroidered bonnet trimmed with jewels, worn on top of a woman’s headress (Eg., Syr.-Pal.)

Alḵa: veil, head scarf, worn by women (Syr.-Pal.) also syn. with dilm of Śīna.

Aluﬀ: short boots or leather outer socks (Ar. Pen., Eg., Syr.-Pal.)

Alowr: a man’s belt (Ir.)

Alīr: a variety of Šaﬀ (Syr.-Pal.)

Alāmūn: a jacket with long, wide sleeves, worn by both sexes (Syr.-Pal.)

Alūnūb: overgarment, gown, made of striped silk, worn by both sexes (Syr.-Pal.)

Alūr, Alūrā: a metallic cap or crown, often studded with jewels, worn on top of a woman’s headdress (Eg., Syr.-Pal.)

Alūfja: man’s turban cloth (Ir., Syr.-Pal.)

Alūfī: long bands of cloth attached to a hat and in which woman’s hair is wrapped (Syr.-Pal.)

Lūā: a woman’s head scarf of white silk or cotton net into which flat metal strips have been decoratively hammered (Syr.-Pal.)

Liūb: pants, underpants, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

Liūbba, Liūbba: a belt cap worn by men (Eg., Syr.-Pal.)

Mātul: a variety of Šawb worn by Jordanian women (Syr.-Pal.)

Marīnā: head scarf worn by Bedouin women (Ar. Pen.)

Mandil: a woman’s head scarf, veil (Syr.-Pal.); an embroidered kerchief hung from the waist sash by men (Ir.)

Mawās: syn. with Šarrāhiyya (Ar. Pen.)

Morāhīb: pointed man’s shoes of thick red Morocco (Eg.)

Māhīla: a variety of Šabā‘ made in Baghdad (Ir.)

Māst: long stocking of soft, yellow leather, inner shoe worn by both sexes (Eg., Syr.-Pal.)

Muṣ‘ūm: a fine Šabā‘ of white wool for men, produced in Baghdad (Ir.)

Mīṣūm: a general word for shoe used throughout the Middle East.

Zabīla: a loose gown worn by women, synonymous with Šarīb (Eg.)

Saffa: a small embroidered bonnet trimmed with coins, worn by women (Syr.-Pal.)

Sabhā: a woollen or velvet coat for women (Syr.-Pal.)

Salfa: a jacket worn by both sexes (Syr.-Pal.)

Kāfiṭaṭṭa: a variety of Šabā‘ made in Hasbaya (Eg., Syr.-Pal.)

Kabūḍa: a man’s leather belt (Syr.-Pal.)

Kabīr: a man’s shawl, usually of wool (Ar. Pen., Eg., Ir., Syr.-Pal.)

Kabīna: synonymous with sīrādī (Ir.)

Kambar: a large veil common to the Hebron area and southern Palestine

Kasīriyya: a black face veil of goat’s wool or horse hair, worn by women (Ir., Syr.-Pal.)

Kabīth: the winding cloth of a turban (Syr.-Pal.)

Kasīriyya: a variety of Ḍalīb (Eg.); a skull cap worn beneath the Ḍalīb (Syr.-Pal.)

Kawwā: Bethlehem married woman’s hat

Kawwār, Kawwār: a black, enveloping outer wrap for women (Ar. Pen., Ir.)

Kāntīyān: woman’s pants or pantaloons (Eg., Syr.-Pal.)

Khafūf: a head scarf of Bedouin women (Ar. Pen., Syr.-Pal.)

Khuṣṣa, Khuṣṣa: woman’s hat, usually woven of goat’s hair, quite ornate, worn mainly in Southern Palestine

Khuṣṣa: sleeveless vest worn by both sexes (Ir., Syr.-Pal.)

Kāmādū: a variety of Šawb made by men (Eg., Syr.-Pal.)

Kuﬀa: a short, sleeveless vest, worn by men (Eg.)

Kibīyya: the common skull cap worn by both sexes alone or under the head dress (Ar. Pen., Eg., Ir., Syr.-Pal.)
The Muslim West, which in the Middle Ages included Spain and Sicily as well as North Africa, became generally the Arabo-Mediterranean vestimentary system, whose common unifying factors are rectangular tunics and loose outer wraps. Within this system, however, there has always been a great deal of regional, ethnic, and socioeconomic variation. The Maghrib has been noted since the time of the Arab conquest in the second half of the 7th century for its own particular styles in dress, as in other aspects of material culture. The reasons for this can be conveniently summarised as follows: (1) the physical distance of the Maghrib from the Muslim-Arab heartlands; (2) the indigenous Berber element, which always remained strong; (3) in the case of Spain, the large native Iberian population and the propriety of Christian territory; (4) the absence of the Persian 'Abbāb class; and (5) the very late arrival of the Turks in Tunisia and Algeria (and their total absence from Morocco).

Since much of the information concerning medieval Arab costume—nomenclature, style, customs and institutions—applies to the Maghribi centres of urban culture in the Middle Ages, this article will deal only briefly with this period, concentrating on the uniquely Maghribi aspects of its costume history. Most of the article will deal with the period extending from the last Middle Ages to modern times, or approximately the last 700 years, which, it should be pointed out, has been the subject of more study than that devoted to Middle Eastern costume history for all periods combined. A glossary and an extensive bibliography by country follow at the end.

1. Pre-Islamic foundations of Maghribi costume. When the Arab conquests reached North Africa, Punic and Byzantine influences were still alive in the cities and towns. The countryside may also have had some Punic elements, but was overwhelmingly—if not exclusively—Berber. Even in Classical times, North Africa was noted for its distinctive style of dress. Greek and Roman authors considered the natives to be barbarians because they wore only an animal skin draped over the left shoulder covering the front and back. Garments of soft leather reminiscent of the soft leather from goatskin (which in European languages is called morocco, maroquin, etc.) were also mentioned as being worn, and indeed, some archaeological remnants have been found (see S. Geigel, Histoire ancienne de l'Afrique du Nord, Paris 1927, 22-35, where numerous sources are cited). Both this simple style of draping and the use of leather garments continued among the Berbers well into modern times.

The most striking feature of North African clothing in Roman times was the flowing, unbelted tunic. Roman and Byzantine sources mention the uncincted tunic frequently and in the same attributional way that they note the trousers of the European and Asiatic barbarians. Thus, for example, Virgil speaks of his nomadum genus et disiectas Miletii Aegypti (Aeneid, viii, 724), and Corippus, the 6th-century poet of the Byzantine reconquest, says even more explicitly: Nauca tunicae manuere ornant sua brachia Mauri! Invita non ullos stringuntur cingula bullifer Distinctaque . . . (Johannides, ii, 130-1). The basic Maghribi tunics such as the Tunisian kandah, the Algerian 'adhya, and the Moroccan gandora all fit this type. Though ample and uncincted, the tunics of the pre-Islamic period seemed to have been short, not falling below the thigh. Similar short, simple garments were common in Berber areas such as the Moroccan Rif and the Algerian Mzab into the early 20th century.

Another distinctive feature of North African attire which continued to be a hallmark of Maghribi style in the Islamic period is the hooded cloak, called burnus (bordes) in Libya, Tunisia, Algeria, and anfal and abhif and less commonly burnus in Morocco. Geigel (op. cit., p. vi, 24-6) sees the origin of the burnus in the zugen, the simple wool cloak worn by the
Roman legionaire, E. F. Gauthier (Le passé de l'Afrique du Nord: les siècles obscurs, repr. Paris 1952, p. 1) pointed to an even more similar garment, the *barani*, a travelling cloak to which a hood (excusul) was generally attached. Philologically, the word *burnus* is probably derived from Greek and Latin *burnus* (S. Faenel, Die arabischen Kleiderformschriften im Coptic Museum in Cairo, H. Helb, 1962, 50 f., where an interesting connection is made with *sawm* on p. 51, n. 2). The term *burnus* existed in early Islamic Arabia, where it usually designated a bonnet (see Libās, 1). The North African *burnus*-cloak was palpably different. When the Arabs invaded the Maghrib, they distinguished between two great Berber groups, whom they called the Barbiris and the Butûn (Ibn Khaldûn, *Ibar*, vi, 89 f.). W. Marpáis (Articles et conférences, Paris 1961, 74) has suggested very plausibly—albeit with caution—that these names might reflect not genealogical or ethnic groups, but rather physical appearance; i.e., those Berbers who wore hooded garments (*barânis*), and those who wore short garments (*butûs*), most likely without hoods. The ubiquity of *burnus* in the Maghrib may originally have been due to the fact that the Barbiris in Antiquity and for the first few centuries under Islam wore no caps or headcloths (e.g. Ibn Khaldûn, *Ibar*, vi, 89; see Marpáis, *Ibar*, vi, 89-90, 92 f. *et passim*). Furthermore, some Berbers shaved all or part of the head (Gsell, *op. cit.*, 16-18, for classical sources; cf. also Ibn Khaldûn, *Ibar*, vi, 89). *BarUtility, yata'khadhinâ bi l-bali*.

One last distinctive feature that may be traced back to pre-Islamic times is the large wrapping cloth used as an outer garment by both men and women (albeit in quite different ways) from Libya to Morocco. This wrap which is known by various names, the *milbâfâl*, *kisda*, *zhudâk*, and *ribkâm*, is probably derived from Greek and Latin *cucullus* (see W. R. Waddell, Ithaca, 1967, 241-71). The 4th/10th-century geographer Al-Makfarî observed that Maghribis dressed in the Egyptian fashion (ma-ši 'I-Maghrib rusumunum mi'mirîya—*that which here refers to custom in the fashion of the place*). The many references to clothing in *Ifrîkiya* collected by H. R. Idrîs for the 4th-5th/10th-11th centuries correlate fairly well with what is known of Middle Eastern attire during that period (Idris, *La Berbérie Orientale sous les Zirides*, Paris 1962, ii, 394-600).

The only items that were distinctly Maghribi were the *kisda*, the *kurîziya* (from *erb, takîzat*; see Dozy, *Véténements*, 338-20) which was a simple winding cloth for the head, and the *hâbî* (sing. *hâbî*), native cork-soled sandals (Dozy, *Véténements*, 352 f.; I. S., *Suppl.*, ii, 334; Idris, *op. cit.*, 597; cf. Sp. *alcorque*). According to al-Muqaddasî (*op. cit.*, 239), even the traditional Arab *ribâl* was worn draped like a *kisda* or *burnus*.

The early Umayyad *amîr* in Spain tried as best they could to maintain the material culture of Syria, and it may be safely assumed that the dress of the small Arab elite and their epigones (musta'ribûn) remained generally faithful to the styles of the Damauscs capulhats. The newer Islamic styles with their oriental influences became the fashion of the upper classes when the Idrîd singer Ziryûb [cf. *zir*] arrived at the court of Cordova in 970/1082, where he established himself as the Andalusian Petronius. He was not only the arbiter elegantiarum in regard to the cut, colour, and fabric of clothes, but established the proper season for each outfit (al-Makkarî, *Anecdotes*, ii, 68, citing Ibn Hayyân). It was he who established the *ghûbâ* as the standard robe for both sexes. One eastern fashion which only took limited root in Spain was the wearing of the turban (*jâmidâ*), which was reserved mainly for the *fukâhê*. Bare heads or heads crowned with a red or green wool cap (*ghâdira*) were commonplace for much of the Spanish population of all classes. Most of the figures that appear in the genre scenes on carved ivory pyxes from Umayyad Spain appear to be bareheaded (see E. Kühnel, *Islamic art and architecture*, Ithaca, N.Y. 1966, Pl. 22; W. M. Watt and P. Cauhan, *The history of Islamic Spain*, Edinburgh 1955, Pls. 1-7) and the *fukâhê* and the *jâmidâ* were also in vogue after the arrival of Ziryûb (for details on both, see Libās, section 1). The last *Amrâd* *hâdîb* 'Abd al-Rahmân. Sanchesco increased his already great unpopularity in 997/1099 by ordering courtiers to wear turbans in the style worn by the Berber military (Ibn *Ibarri*, iii, 48). The style was soon abandoned when two months later his rule came to its violent end.

There was with the passage of time considerable intermingling of styles between the Christian North and the Muslim South. The Spanish peasant's frock, *s⁄or* in *Ar. shuraba* (from *Lat. sagum*) was commonly worn in the countryside (*Lêvi-Provencal, Hist. Esp. mus.,* iii, 425; Dozy, *Véténements*, 212 f.). Soldiers were a scarlet cape (*hâbî*) similar to that worn in Christian territory (*Lêvi-Provencal, op. cit.*, iii, 429; Dozy, *op. cit.*, 360; obviously derived from Sp. *capa or capas* and not from Pers. *hâbî*, concerning which see L. S. and V. D. sections 1 and 7 of the Oriental fashion). It progressively gave way—perhaps as a partial corollary to the Reconquista—to a uniquely Andalusian style or cut (*lafs*). By the 7th/11th century, an Easterner in the turban and robes of the Levant was regarded as a curiosity (*Lêvi-Provencal, op. cit.*, iii, 492).

It is interesting to note that although Muslim
women in Spain wore the various veils used in the Middle East, such as the biyaa, burha, mizaa, and i'ad (see e.g. H. Perès, *La poésie andalusoise, en Arabe classique au XIIe siècle*, Paris 1953, 129, 180, 237), they were not always too strict about it. They knew that Al-Muhtasib, a popular gathering place for women in Cordova, and fell in love with her at first sight. Although she was unveiled, he did not know whether she was slave or free (Ibn Hazm, *Ta'li al-banama*, ed. H.K. al-Sayyafi, Cairo n.d., 224). The rogueish Ibn Khuzaima [q.v.] tells of a married Berber woman he met and with whom he had an affair. She is described as wearing only a garland on her head (J. T. Monroe, *Hispano-Arabic poetry*, Berkeley and Los Angeles 1974, 256). Jurists complained of the heretical innovation among the common people whereby a man allows his wife or fiancée to unveil in front of someone other than an immediate male relative (Ibn Abd al-Rahman, *Risala fi idds al-bisha wa al-mi'athis*, tr. R. Atiyeh, in *Hesp.*/Tunisia, 103; op. cit., para 56; also Ibn 'Abdun, *Risala fi al-bayhaq wa al-bisha*, tr. Lévi-Provençal, *Scènes musulmanes au début du XIIe siècle*, Paris 1947, 59, para. 53).

3. The Berber Empires and their successor states. Middle Eastern influences in Maghribi dress—as in other aspects of material culture—declined greatly from the late 5th/6th century onward. Indigenous Berber and Spanish influences became stronger than ever. The major factors in the increasing instability, and the overall decline of Muslim sea power, Lastly, the urban centres of high culture in Ifrikiya which had set the fashion for much of North Africa were in ruins after the invasion of the Banū Hild Bedouin. Further west, Morocco was a centre of power and Spain a centre of culture. Once united, they would become the focal point of style for the rest of the Maghrib.

The rise of the Almoravids paralleled in a sense a contemporary phenomenon in the East. They wore a non-Arab ruling elite who wore their own distinguishing uniform. They dressed in Saharan Berber fashion, and are described as being unrecognized by Mediterranean civilization (al-Bakrî, K. al-Maghrib al-'ilmi bi'dil Ifrikiya wa al-Maghrib, ed. de Sane, Algiers 1857, 164 f.; also Ibn Khaldūn, *Ibar*, vi, 181). The main feature setting the Almoravids apart from their subjects was their face veil (biyaa [q.v.], which masked the lower half of their face, hence their nickname of al-mu'mināt huma. Ibn Khaldūn, *Ibar*, vi, 197 f.) notes that many Saharan people were mutilated even in his own day. The style was essentially the same as that of the modern Tuaregs. Almoravid dress was not for the subject population. In fact, Ibn 'Abdun (op. cit., 61 f., para. 56) warns against permitting even the other Berbers in the service of the Almoravids to wear the biyaa in the streets of Seville because of the fear it struck in the population. The Almoravids also wore the sa'īda and harīrī. There were some Andalusians who donned these items in order to ingratiate themselves with their new masters, even though their own compatriots laughed at them (Ibn Abdur-Rahman al-Sayyafi, in *Doxy*, Recherches, i, p. 105).

The Andalusians found little to copy from the Almoravids. However, the latter found a great deal worthy of emulation in Spanish civilisation. Under Almoravid rule, Andalusian culture spread into Morocco together with, certainly, Andalusian fashions. This movement of styles across the Straits of Gibraltar mostly from north to south would continue under the Almoravids and in varying degrees under their successors.

The rise of the Almohads had a more direct and lasting influence in Maghribi costume history. The Mahdi Ibn Tûrât's [q.v.] purification extended to matters of dress. His biographer al-Baydak relates that on his return home from the East, the Mahdi upbraided the people of Ifrikiya for wearing sandals with gilded laces (al-abrawr al-sarrariyya) and turbans not in the Muslim fashion (manki'm al-'alihliyya) and for men wearing fudhliyya, which was apparently a tunic normally for women (al-Abbâr al-Ma'mūriyya, ed. in Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, 52, Ar. text). The prudish Mahdi had to cover his face when passing among and unveiled female lūbun vendors in the streets of Tucen (ibid., 61). His full wrath was heaped upon the Almohad rulers themselves. In the Friday mosque of Marrakesh, he called the veiled amir and his retinue "veiled slavegirls" (ibid., 68; qari'm al-mahashabha). When he encountered the princess al-Suhr unveiled as customary among Almoravid women, he reproached her so severely that she went crying to her brother the amir (Ibn Khaldûn, *Ibar*, vi, 227).

Like all Berbers, the Almohads wore the burrias (also burjâ'a) and the kisî' (al-Baydak, *Op. cit., 72 f.). They normally wore the form of turban known as kuziyya (ibid., 81). Under the Hafidhs, the descendants of the great Almohad families were the bayâqun with the ends criss-crossed in front like the Arab letters ka'f and fâd watching the Almoravids. *La Berbérie* (R. Brunschvig, ed. in Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1927, ii, 278). It was not long before the early Almohad simplicity in dress gave way to the luxuries of al-Andalus. They bestowed magnificent robes of honour (châila samiyya) upon their favourites (al-Marrakushi, K. al-Ma'ullâj fi talka'a akhbar al-Magrib, ed. Dozy, *Lettres 1851, 175, 184, 230*).

From the Almohad period onwards, veiling for women was more strictly observed throughout North Africa and Muslim Spain. The Almohads also instituted one of the most unusual applications of the laws of *ṣiyyah* [q.v.]. Suspecting the sincerity of the large number of Jews who had converted to Islam under duress, the caliph Abû Yusuf ordered that all these neophytes should wear distinguishing clothing consisting of blue-black garments (ṣiyāh kuhliyya) with exaggeratedly wide sleeves (akmdtn mufrifat al-safâ) which reached to the ground, and ludicrous caps (ka'lbâiti 'all adhama 'ghirra) that resembled peak saddles and were worn among Almohads by even the ears (al-Marrakushi, op. cit., 223). His son and successor Abû 'Abd Allâh changed the uniform to yellow garments and yellow turbans (ibid.). It may be considered part of the Almoravid heritage that in Morocco throughout the later Middle Ages and until modern times, the dress code for Jews was one of the most strictly applied in the Muslim world (see N.A.

There were no great changes in Maghribi fashion with the passing of the Almohads. The Hašids in Tunisia, the Zayyáns in Algeria, and the Marinids in Morocco were all in a sense successors rather than suppliants of the Almohads. The information on Tunisian dress culled by Brunschvig (Dafâ'sides, ii, 376-82) correlates well with what is known from the preceding period. Local names for special varieties of garments appear more frequently now, as for example, bâarâkân, the heavy wrap for men and the safâr, the light wrap for women. Both are mentioned as being commonly worn in Tunisia (ibid., 276, 280), and both are known from earlier centuries as well (see Y. K. Stillman, Female attire of medieval Egypt, 42 f., 62 f.). Leo Africanus's [q.v.] description of clothing worn in Marinid Fez also shows considerable continuity in the general outlines (Description de l'Afrique, tr. A. Epaudard, Paris 1936, i, 207 f.). He does note that the learned doctors and gentlemen wore jackets with large sleeves like upper-class Venetians. He also mentions that women's trousers for outdoor covered the entire leg. Furthermore, he notes that the latter are always veiled with a large wrap covering the head and the entire body (bêtâk) as well as with a face veil (lîkànû) covering all but the eyes (ibid., 208).

Clothes are mentioned by the Marinid historian Ibn al-Nadim (Rawdat al-âlâm fi dunâd Bani Martin, Rabat 1382/1962, 25) in connection with the popular Moroccan belief in barâk, the blessedness of a charismatic individual. The Amir 'Abd al-Hâjs b. Mahdâw was considered by the Žâdâtta to be a possessor of barâk and a muhaddih al-dâ'î (one whose prayers are answered). His kalâmsûwa and sârêti would be sent to women in difficult labour to ease the birth.

With the passing of the Almohads, the Muslims of Spain abandoned the turbans they had briefly worn (al-Umâri, Masâlik al-âlâm fi masâlik al-umâm, tr. Gauldroy-Demonvalls, Paris 1929, 234). Multicoloured garments were popular. The wealthy wore garments of the fine gilded silk (al-mâzâk al-mâhâfiz) produced in Almeria, Murcia, and Malaga or special silk cloths (al-âlibîs al-umâharrû) called mulâshâd mulâshâtan ("felted, checked") made in Granada and Basta (al-Mâkârî, Analectes, i, 123). R. Arie has noted that fashion of the neighbouring Christian kingdoms also influenced the mode of Andalusian dress in the early days of the Nasrids (L'Espace musulman au temps des Nasrides, 382).

The sâbî (Ar. âshâ) mentioned above was worn not only by peasants, but even by the Nasrid monarch when out riding (ibid.). The marloû (Ar. mahâlû) a sleeved outer garment whose precise details are vague, and the capellûs (Ar. kâhilû), a hooded cloak shorter than the bârâns, were among the new fashions (ibid., 356).

4. From the end of the Middle Ages to modern times. The basic outlines of Maghribi costume remained quite constant from the end of the Middle Ages up to and well into the period of colonial domination. Certain new fashion elements were brought into the region by the Turks in Tunisia and Algeria and by the Moriscos and Jewish refugees from Spain in these countries and Morocco as well. Most of the clothing innovations which they introduced remained particular to their own ethnic group. Thus, for example, the dîjâlûs (Sp. pirâdetas), a whirling skirt, was worn in Morocco only by Jewish and Andalusian women (see Y. K. Stillman, The costume of the Jewish woman in Morocco, in Studies in Jewish Folklore, ed. Talmaige, Cambridge, Mass. 1980, 350, 355, i, 30). The high, brimless hats known as jâfârû and jâfârûta in Algeria were part of the uniform of the Turkish military elite (Marçais, Costume d'Algérie, 35â), and as late as the 18th century, the Turkish-style dâilûs was not permitted to native North Africans (ibid., 53). Nevertheless, Ottoman modes of dress did make themselves felt in the urban centres of Algeria and Tunisia. The jâlûko (Turk. jaleko) was very popular in Algeria, and the high, split cone, metal head piece, known as the şärma, became a general fashion for women in Algeria and Tunisia (ibid., 116-119, and Pls. xxix, xxxii, xxxvi, xxxvii). Likewise, the gâbûdû, or dâshûfû, a short coat brought by Jews and Andalucians became widespread in the cities of Morocco and Algeria, and in Morocco was manufactured exclusively by Jewish tailors (see Brunot, Noms de vêtements masculins à Rabat, in Mélanges René Basset, i, 97 f.).

Most remarkable is the conservative nature of draping patterns in men's clothing, which as we have seen goes back to the world of Antiquity. Also interesting to note is the widespread use of fibulas to fasten garments. The Maghribi fibula, called lîsâmûna, nhâllû, bâjîfûya, and in Berber bâsûmnû, lîzâsû, and later, has been shown to go back to Antique prototypes (H. Camps-Fabrica, L'origine des fibules berbéres d'Afrique du Nord, in Mélanges Le Tourneau = ROMM, nos. 13-14 [1973], 217-30).

However, traditional attire is—as in the case of the Middle East—losing ground rapidly to Western dress, particularly in the major cities and towns where more than half the population now resides.

GLOSSARY

al-âhân: large outer wrap for Berber men (Mor.)

alâbû: a sleeveless, long overblouse for men; a sleeveless, flowing dress for women (Alg.)
al-âbrâ: bandana for women (S. Mor.)

al-âkhûsir, kâsîf: Berber cape, hooded for men, unhooded for women (S. Mor.)
al-âlîsûya: skull-cap for men (Mor., Alg., Tun.)
al-âlûdû: flat slippers for both sexes (entire Maghr.)
al-âlûwûdû: embroidered head shawl for women (Tun.)
al-ârâhân: large enveloping outer wrap for both sexes (Lib.)
al-âlûîya: sleeveless vest for men (entire Maghr.); a sleeveless kâtûfûn for women (Mor.)
al-âlûsîa: flat slippers, usually pointed at the toe, but sometimes rounded, worn by both sexes (entire Maghr.)
al-ârâsû: large hooded cape for men (entire Maghr.)
al-âbûkû: woman's hat (entire Maghr., but different in each country)
al-âbûsû: body shirt for both sexes (Mor.)
al-âdûsû: jacket for men (Alg.)
al-âdîsû: a vest (Lib., Tun.); an old threadbare garment (Mor.)
al-âdîja: a pair of men's leather leggings (Tun.)
al-âdîkûs, al-âdîshûsû, al-âdîbûsû: Hooded outer robe with long sleeves; originally worn by men only; now by both sexes (mainly Mor., also W. Alg.)
al-âdîsûsû: full-length, sack-like chemise without sleeves (Tun.)
al-âbûkû: a long, woollen outer robe without sleeves or collar which is closed by a single button at the neck; worn by men (Mor., Alg., Tun.)
al-âbûkû: a pointed bonnet for women (Tun.)
**Veil**: a light gauze with a deep slit at the breast which may or may not have sleeves and is worn under the *hijab* or garment by both sexes (Mor.). It also comes in a half-length version called *niqab*.

**Hijab**: a garment similar to the *farajiyaa* for men only (Alg., Tun.).

**Furka**: vest for elderly men (Alg.).

**Hijab**: a white cloth wound about the head leaving the crown uncovered (Mor.).

**Kabīda**: a simple, wide tunic consisting of a hole over other clothing (Mor.).

**Kabīda**: a sleeveless outer robe for women (Mor., Alg.).

**Belt**: a man's waistcoat with long, straight sleeves (Mor., Alg., Tun.).

**Niqab**: face veil for married women, often synonymous with *hijab* (Mor., Alg.).

**Ribiyaa**: flat leather slippers worn by both sexes (Mor., Alg., Tun.).

**Rasa**: a small, rather flat turban (Mor.).

**Safrani**: large outer wrap for women (Tun., Lib.).

**Ayesa**: a skirt (N. Mor.); a dress (S. Mor.)

**Sibniyya**: a berber scarf for both sexes (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Sibniyya** (= *sadrīyya*): a man's waistcoat (entire Maghr.).

**Sibniyya**: a Berber turban consisting of a white cloth (Mor.).

**Djarība**: a jacket for both sexes (entire Maghr.).

**Djarība**: a simple, sleeveless, square-cut men's tunic (Alg.).

**Fajil**: a man's waistcoat with long sleeves (Mor.).

**Biet**: a Berber turban consisting of a white cloth (Mor.).

**Kasiba**: a man's jacket with long sleeves (Mor.).

**Kasiba**: a simple, sleeveless, square-cut man's tunic (Alg.).

**Sibniyya**: a Berber sandal (Mor.).

**Kasiba**: a man's waistcoat (entire Maghr.).

**Kasiba**: a simple, sleeveless, square-cut man's tunic (Alg.).

**Kasiba**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Kasiba**: a Berber turban consisting of a white cloth (Mor.).

**Kabīda**: a simple, wide tunic consisting of a hole over other clothing (Mor.).

**Kabīda**: a sleeveless outer robe for women (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Belt**: a man's waistcoat with long, straight sleeves (Mor., Alg., Tun.).

**Niqab**: face veil for married women, often synonymous with *hijab* (Mor., Alg.).

**Ribiyaa**: flat leather slippers worn by both sexes (Mor., Alg., Tun.).

**Rasa**: a small, rather flat turban (Mor.).

**Safrani**: large outer wrap for women (Tun., Lib.).

**Ayesa**: a skirt (N. Mor.); a dress (S. Mor.)

**Sibniyya**: a berber scarf for both sexes (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Sibniyya** (= *sadrīyya*): a man's waistcoat (entire Maghr.).

**Sibniyya**: a Berber turban consisting of a white cloth (Mor.).

**Djarība**: a jacket for both sexes (entire Maghr.).

**Djarība**: a simple, sleeveless, square-cut men's tunic (Alg.).

**Sibniyya**: a Berber sandal (Mor.).

**Kasiba**: a man's waistcoat (entire Maghr.).

**Kasiba**: a simple, sleeveless, square-cut man's tunic (Alg.).

**Kasiba**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Kasiba**: a Berber turban consisting of a white cloth (Mor.).

**Kabīda**: a simple, wide tunic consisting of a hole over other clothing (Mor.).

**Kabīda**: a sleeveless outer robe for women (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Belt**: a man's waistcoat with long, straight sleeves (Mor., Alg., Tun.).

**Niqab**: face veil for married women, often synonymous with *hijab* (Mor., Alg.).

**Ribiyaa**: flat leather slippers worn by both sexes (Mor., Alg., Tun.).

**Rasa**: a small, rather flat turban (Mor.).

**Safrani**: large outer wrap for women (Tun., Lib.).

**Ayesa**: a skirt (N. Mor.); a dress (S. Mor.)

**Sibniyya**: a berber scarf for both sexes (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Sibniyya** (= *sadrīyya*): a man's waistcoat (entire Maghr.).

**Sibniyya**: a Berber turban consisting of a white cloth (Mor.).

**Djarība**: a jacket for both sexes (entire Maghr.).

**Djarība**: a simple, sleeveless, square-cut men's tunic (Alg.).

**Sibniyya**: a Berber sandal (Mor.).

**Kasiba**: a man's waistcoat (entire Maghr.).

**Kasiba**: a simple, sleeveless, square-cut man's tunic (Alg.).

**Kasiba**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Kasiba**: a Berber turban consisting of a white cloth (Mor.).

**Kabīda**: a simple, wide tunic consisting of a hole over other clothing (Mor.).

**Kabīda**: a sleeveless outer robe for women (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Belt**: a man's waistcoat with long, straight sleeves (Mor., Alg., Tun.).

**Niqab**: face veil for married women, often synonymous with *hijab* (Mor., Alg.).

**Ribiyaa**: flat leather slippers worn by both sexes (Mor., Alg., Tun.).

**Rasa**: a small, rather flat turban (Mor.).

**Safrani**: large outer wrap for women (Tun., Lib.).

**Ayesa**: a skirt (N. Mor.); a dress (S. Mor.)

**Sibniyya**: a berber scarf for both sexes (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Sibniyya** (= *sadrīyya*): a man's waistcoat (entire Maghr.).

**Sibniyya**: a Berber turban consisting of a white cloth (Mor.).

**Djarība**: a jacket for both sexes (entire Maghr.).

**Djarība**: a simple, sleeveless, square-cut men's tunic (Alg.).

**Sibniyya**: a Berber sandal (Mor.).

**Kasiba**: a man's waistcoat (entire Maghr.).

**Kasiba**: a simple, sleeveless, square-cut man's tunic (Alg.).

**Kasiba**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Kasiba**: a Berber turban consisting of a white cloth (Mor.).

**Kabīda**: a simple, wide tunic consisting of a hole over other clothing (Mor.).

**Kabīda**: a sleeveless outer robe for women (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Belt**: a man's waistcoat with long, straight sleeves (Mor., Alg., Tun.).

**Niqab**: face veil for married women, often synonymous with *hijab* (Mor., Alg.).

**Ribiyaa**: flat leather slippers worn by both sexes (Mor., Alg., Tun.).

**Rasa**: a small, rather flat turban (Mor.).

**Safrani**: large outer wrap for women (Tun., Lib.).

**Ayesa**: a skirt (N. Mor.); a dress (S. Mor.)

**Sibniyya**: a berber scarf for both sexes (Mor., Alg.).

**Kabīda**: a man's jacket with long sleeves (Mor.).

**Sibniyya**: a man's headscarf (Mor., Alg.).

**Sibniyya** (= *sadrīyya*): a man's waistcoat (entire Maghr.).
most salient features have shown remarkable con-
estivy system than does Arab costume. The

AU Andalus, *Quercus* Hist. lxxv (1934), 43.

II. - IRAQ

Iranian costume belongs to a completely different vestimentary system than does Arab costume. The most salient features have shown remarkable con-
sistency from pre-Achaemenid to modern times. Whereas Arab costume (see i. above) is marked by rectangular tunics and loose wraps, Iranian clothing has traditionally featured tailored garments that include a sleeveless coat of varying length and ample-
ness (khâl), long, straight trousers (zhafar) or leggings (pây-dabâ or râm), close-fitting boots (mûsâ, khaʹlî, ṣâfâ, or ça:bâ), and a high or medium high soft cap (khâlî or ṣafânid, the latter perhaps a descendant of the ancient kyrbahis). This type of attire is typical of other equestrian peoples from the steppes of Inner Asia, such as the Scythians, and also of the Phrygians, and is consistent both with the harsh arid climate of the ancient Parthian and their pastoral way of life. It also shows strong affinities with the clothing of other Indo-Aryan peoples who moved further west, such as the Germans. This sort of clothing was also convenient to the calvary warfare practised by these peoples. Floving robes were also worn, but mainly as royal or priestly dress for ceremo-
nial occasions. Women, like men, wore coats or jackets (haḵûb or nîn tan) and trousers or a skirt (dêmân), with however, a chemise (pirhân) or tunic (dêmân), a word which like Ar. tâqit also designates an underskirt or jacket without a close fit. (See also ii.)

1. The Umayyad and Abâbids periods.

During the Umayyad period (747), which had for centuries been part of the Persian cultural sphere, became arabised. Traditional Persian modes of dress remained in the Iranian heartlands and in Trans-
oxania. Despite the fact that Umayyad rulers adopted elements of Iranian costume for themselves and their court (see e.g. R. Fittinghausen, *From Byzantium to Sassanian Iran and the Islamic world*, Laden 1972, 21, 30-3), they did not permit the Arab fighting men on duty in the Persian territories to don Iranian clothing.

Soldiers who put on the Persian-style cuirass (tëshâb) and leggings (mûsâ) were punished (B. Spuler, *Iran in frühislamischer Zeit*, Wiesbaden 1952, 351). However, by late Umayyad times the Arabs settled in Khurasân were becoming increasingly assimilated into the local culture, and it may be assumed, had adopted many elements of native attire.

The rise of the ‘Abbâbids, the founding of Baghdad, and the increasing importance of Persian modæ in the civil service, made Irãk a zone of assimilation where Iranian and Arabo-Hellenistic styles fused, with Iranian elements passing westward and Arab styles and terminology eastward. There is a frequent over-
lap in the New Persian vestimentary vocabulary of Arabic and Iranian terms (e.g. Ar. ūdâ becomes a common synonym for Pers. pâshâ). Nevertheless, native Iranian styles remained distinctive well into the ‘Abbâbids period, as noted by the Arab geographers (e.g. al-Mukaddasî, 356-7). For other sources, see P. Schwartz, *Iran in Middle Ages*, repr. Hildesheim 1969, 140-2, 404-5, 424-6, and 834-5. Among the more particular Iranian fashions in Arab eyes were the wearing of boots (khârûf) in summer as well as in winter (al-Mukaddasî, 357), the unique cold weather clothing (ibid., 325), and the extensive use of the jayâlsân, or headshawl worn over the turban, by religious scholars and notables in the northern and eastern parts of Iran and even by the common folk in Fârs (ibid., 337, 440).
Throughout the Abbāsid period—as in earlier and later times as well—Iran was noted for its fine textiles. For a thorough survey of Persian textile production in this period, see R. B. Serjeant, Islamic textiles, Beirut 1970, passim. Iran was also noted for the special garments worn there. Amal and Kātār Khān were famous for their wool towṣalāt (pamela, K. al-Tabāsbur bi 'l-tīdāra, ed. J. X. H. Abūl-Wahhāb, Cairo 1953, 31), Gurgān and Rayy for their excellent variety of soft wool cloaks known as nanma (from Pers. narm "soft", ibid., 29-30), and Bam for its fine kerchiefs and turbans (datār-i bānī, ibid., Huddūd al-Salām, rev. ed. V. Minorsky and C. E. Bosworth, London 1970, 125).

Adharbayjān, Armenia, and Arrān produced the best quality trowser cords (gafrāt barād, Huddūd al-Salām, 142-3). Bāth, the capital of Ḵᵛārazm, was noted for its quilted jackets (bashqārāst, Huddūd al-Salām, 21). Artistic representations from the 5th-7th/11th-13th centuries invariably show both men and women in a full-length sleeved coat (kāhād) with arm bands (bizā band) either with or without jirād inscriptions. In a 6th/12th century stucco relief from Rayy, each of the women in the courtly scene is depicted in a brocaded coat (kāhād-yi dārya) with a bordered edge (bāhā-yi dār). Each woman wears a fillet (pāyān band) in the centre of which is an agrette (dīvāh). Most of the women wear a necklace (gardān band) and earrings (gūrūsārāhāth) (the relief is included in Pope, Survey, v. Pl. 517 and Dīyā' Pūr, Pārlīk-i zanān-i Īrān, 1906, 106 and 107. For a survey of Persian jewelry during this period, see Bj. Piyi' minorsky and C. E. Bosworth, London 1970, 125).

The Saldjuk period did not mark for Iran the introduction of totally new styles of dress as it did in the Arab East (see section i, above, 8) since the Saldjūk were themselves under the influence of Persian culture. There were, however, some new fashions that were introduced at this time, particularly in head coverings. At least three distinctive caps were introduced at this time, all of Inner Asian, particularly in head coverings. At least three distinctive caps were introduced at this time, particularly in head coverings. At least three distinctive caps were introduced at this time, particularly in head coverings. At least three distinctive caps were introduced at this time, particularly in head coverings.

The illustrations of the "World History" of Rashīd al-Dīn, Edinburgh 1976, 21, Fig. 100-b). Military attire was also of the Far Eastern variety, consisting of long coats of link mail arranged in horizontal folds (dāwiwār, dāwiwār, sīra of mail (Diuwār, Taqābīh al-Dābīghā?ed, Kaswān, v. 188, 176. For examples of the Mongol long mail coat, see Ricc, Illustrations: of Rashīd al-Dīn, P. 38, 44, 48, 49, 53. For the mail cuirass, see Pope, Survey, v. Pls. 834E, 839, and 842A). The latter could be worn under a robe (sīra dar str-i dīgāna, Rashīd al-Dīn, Histoire des Mongols de la Perse, ed. tr. E. Quatremère, repr. Amsterdam, 1968, 122).

Also typical of Mongol armour were their close-fitting helmets with ear-flaps and a small spike at the top (for examples, see Ricc, Illustrations ... of Rashīd al-Dīn, P. 22, 38, 39, 40, 43).

During the Ilāhīān period, women's clothing seems to have undergone any major change, except with respect to the head gear. The head-scarf (sar band) was worn for the most part as a wimple (see e.g. Pope, Survey, v. Pl. 836B) by non-Mongol women. The Mongol princesses, however, wore a special bonnet consisting of a long white cloak covered with silk and from the top of which protrudes a long feather (see Goets, Persian costume, in Pope, Survey, iii, 224, Fig. 74a-b). This bonnet is frequently mentioned by Rashīd al-Dīn (Histoire des Mongols, ed. Quatremère, 202, 106, 107), and is called bugdāhā. The bugdāhā could be ornamented with gold and precious stones and sometimes had a long train (dāwiwār bugdāhā) which hung down behind. According to Ibn Bīshār, the girls who attended the Mongol ladies wore "a kuldh that looked like an arīfāf (fez) with a gold band encrusted with jewels around the upper part, topped with peacock feathers" (Ibn Battūs, ii, tr. H. A. R. Gibb, Cambridge 1958, 485).

Despite Timūr Lang's partiality to Mongol ways, there is a noticeable decrease in Mongol influence as far as Persian costume is concerned under the Timūrids. The bulky mandarin robes gave way to close-fitting garments which follow the body's own lines. The outer kāhād was often left entirely open or was left partially-open at the neck and below the waist revealing another coat below, beneath which a long body shirt (bānd or Ḵᵛāari) was worn. The kīnār band which, except for a military belt over the armour, had all but gone out of style in the Ilāhīān period, became once again a regular part of male attire, worn on either the inner or the outer coat. The distinctive caps and hats of the Saldjūk and Mongol periods were gradually replaced during the Timūrid period by turbans, which at first were small, but became progressively larger throughout the 9th/15th century (for examples of the caps and turbans of the period, see Pope, Survey, v. Pls. 851, 860, 864, 878, 880, 882). The reason for the gradual disappearance of the Mongol caps is that they came to be considered as symbols of paganism, in contradiction to the Ḟarār which was symbolic of Islam (e.g. Muhammad Haydr, A history of the Maghāz of Central Asia, tr. E. D. Ross, repr. New York 1970, 58). One new head-covering that appears at this period is the kalpād, a fur-trimmed cap of Turkoman origin. As in earlier periods, both men and women wore fur cloaks (ḵāstīn, Ḥāfīz-i Ābrū, Dīyā'ī Kūthā-i Zafr-i-nāmeh, Tehran n.d., 25) and fur-trimmed robes (Ḵāstīn, Sa'dī, Įalī, in Kulliyāt-i Sa'dī, 119) and idem, Ḥāfīz-i, in Kulliyāt-i Sa'dī,
Female attire during the Timurid period also consisted of several layers of long, close-fitting robes. The *pirakan* covered the entire body down to the feet and was long-sleeved. A wide variety of outer coats were worn by women at this time. Although some had long, narrow sleeves, most were short-sleeved (*dastani-küdah*), and some were sleeveless. The woman's *babai* depicted in Timurid paintings all but long and three-quarter length versions (for the Timurid *babai* in all its variety, see Dīyāʾ Pūr, *op. cit.*, pp. 143-153). The short coat is perhaps the *babai* mentioned in earlier literary sources (e.g. al-Kāthīr al-Ārdājamānī, *Samā'ī šayārī*, Tehran n.d., i, 50), but does not appear in artistic representation until this time.

Most of the women's head-dresses depicted in Timurid paintings are white, consisting in the main of a white *sarband* worn in the simple fashion of the preceding periods or allowed to flow down behind. Some women are depicted wearing a close-fitting bonnet-like cap which is usually dark in colour. The bonnet has wide flaps that come down in front of the ears, and is held in place with a chin strap. On the top of the bonnet is a small flat plaque to which the face veil is attached (see Dīyāʾ Pūr, *op. cit.*, pp. 119-20; also J. M. Scarce, *The development of women's veils in Persia and Afghanistan*, in *Costume*, v (1973), 6, Pt. 1, where, however, this headdress is interpreted somewhat differently).

European travellers report that women appeared in public at this time in an all-enveloping white wrap (*cadder-i safās*), their faces hidden behind a black net of woven horsehair (*piša*) (e.g. Ruy Gonzales de Clavijo, *Narrative of the Embassies to the court of Timour*, London 1859, 8g). Another sort of face veil worn at this period was a small, white mask covering only the mouth and chin (*dahāni band*, Dīyāʾ Pūr, *op. cit.*, i, 153, 212).

3. The Safavid period. The establishment of the Safavid dynasty marks not only a watershed in Iranian political and religious history, but a turning point in its costume history as well. During this period, Far Eastern influence in Persian costume ceased to be important, and there is a reassertion of native Iranian styles.

The most immediate change came in the man's turban (*dul band*), which was wrapped around a cap with a high, spiked protrusion that extended straight up through the middle of the headdress (see e.g. Pope, *Survey*, v, Pls. 893A, 895, 896, 898, 900, 901A). The cap which forms the centre of the turban was known as the *tādī Safavi*. It was normally red, although occasionally blue. Because of the red caps which distinguished the Shi'i Safavids and their followers, they were referred to by the Sunni as *kašāb-i sūrī*, or "red caps" (see Abu l-Fazl Bahādur Khān, *Histori des Mongols et des Tatarses*, ed. and tr. F. L. Desmoulin, repr. Amsterdam 1970, 209, n. 1), which was the Persian equivalent of Tk. *kērīl hād* [*qari*]. The symbolic importance of the Safavi *tādī* was such that it even appeared in painting showing scenes from the religions of the world, the *Sīyās*, as well as Muhammad, "Alla, al-Hasan, and al-Husayn are all depicted wearing it (the illustration is in the Houghton *Shāh-nāma*, Metropolitan Museum of Art, New York and is reproduced in B. Lewis (ed.), *The World of Islam*, London 1976, 250).

Safavid costume became extremely sumptuous with the reign of Shah Tahmāsp (1508-87/1524-70). Clothes were more closely-fitted than ever before. The *babai* for both sexes became somewhat shorter. It was now fastened in front by a row of shiny buttons or golden frogs. The *wāstā* was cinched with a narrow belt decorated with large bejewelled gold discs spaced at equal intervals (for surviving examples of such belts, see Dīyāʾ Pūr, *Ziwarāt-i ša'bāni Iran*, 365, Pl. 274, and Pope, *Survey*, vi, Pls. 1894B-C; for detailed depictions in miniatures, see *ibid.*, v, Pl. 901). The most outstanding feature of the Persian wardrobe for the next century-and-a-half is the great richness of the fabrics in both colour and pattern (see Pope, *Survey*, v, Pls. 826, 858-900, for illustrations; *ibid.*, vi, Pls. 1015, 1028, 1034, 1041, 1042, 1046, for actual textiles and garments).

Safavid costume reached its most distinctive development in the 17th/18th century. The *babai* remained close-fitted about the trunk, but was now often flared below the waist. Over the *babai* was worn an overcoat (*bālāf-pāh*), which could be short and sleeveless (*bānī*) or long and with sleeves (*küdah*). The turban (*sandīl* or *dāl band*) was perhaps longer than before, but no longer had the long stick protruding from the top. A large scarf or sash replaced the belt with roundels. It was usually tied with a large knot in front (for surviving examples of such silk sashes, see Pope, *Survey*, vi, Pl. 1074A-E). Safavid clothing has been described in detail by the European travellers Herbert for the first half of the 17th century (T. Herbert, *Travels in Persia*, 1627-1629, London 1928, 79-80, 230-3) and Chardin for the second half (Sir J. Chardin, *Travels in Persia*, London 1727, 212-15, and the engravings between 212 and 213).

Female attire during this period was very sensuous. The dress (*kabān*) was buttoned or tied below the neck, but slit open down to the navel to expose the bare flesh (Pope, *Survey of Persian Art*, v, Pl. 918A). The items of underwear (tūbbān) were straighter than male drawers and were often decorated with flower motifs. Over these were worn embroidered leggings (mangār) that went from several inches above the ankle to slightly above the knees (see Pope, *Survey*, v, Pl. 928A, where a reclining female is shown with her dress rolled up to expose her underwear). A loose shawl (*dārād*) which was held on the head by a tiara, an embroidered band, or a pointed *hulā* fell down on to the back and shoulders (see e.g. J. M. Upton, *Notes on Persian costumes of the sixteenth and seventeenth centuries*, in Metropolitan Museum Studies, ii (1929-30), 206, Fig. 2; 214, Fig. 13; and 219, Fig. 21). As in the previous period, the favoured *cādūr* for outdoor was white. One new innovation that came into use at this time was the *ru band*, a rectangular white veil that was fastened over the *cādūr* and fell down over the face. The *ru band* had a small slit covered with netting over the eyes to permit vision (Scarce, *Women's veils*, in *Costume*, V, 7, Pt. 7).

Two major trends can be detected in Persian costume during the 17th century. One is a bohemianism that appears in the increasingly casual and suggestive style of dressing, at least in the court circles (for surviving paintings see Pope, *Survey*, v, Pls. 927A, 928A, 929B, 930A-B; and Upton, *Notes on Persian costumes*, 217, Fig. 16). The other is a noticeable, albeit still minor, Western influence in clothing styles. At first this influence was more Georgian than truly European (Chardin, *Travels*, 212), but later the influence of the clothing of European traders and diplomats become stronger (Upton, *Notes on Persian costume*, 217).
The Kāḏār period. There was little discernible change or development in Iranian costume during the half-century of instability between the end of the Constitutional era and the establishment of the Kāḏār dynasty, except for a decrease in the elegance of upper-class attire and an increase in words of Turkic origin in the vestimentary vocabulary.

The second ruler of the Kāḏār House, Fatḥ ʿAlī Shāh (1822-34), attempted to recreate the glories of the Iranian past with a revival of ancient artistic traditions and styles, including in court dress. He adopted for himself a modified version of one of the Sāsānids winged crowns (see Lewis, Coinage of Islam, 270, Pl. 27, and 272, Pl. 35). Wide shoulder capes and diadems in imitation of Timurid prototypes were also revived for a short while (Goetz, Persian costume, in Pope, Survey, iii, 2254). However, under his successors this artificial renaissance came to an end.

There was growing European influence in Persia already during the reign of Fatḥ ʿAlī Shāh. During the 19th century these influences became increasingly dominant in court and military dress. Popular costume, however, was influenced more slowly. The many European travellers, missionaries, and diplomats who visited Persia in the 19th and early 20th centuries have left detailed descriptions of clothing of the period. Male costume was composed of loose drawers (šār ḍīrma or ṣaḥālūr) of white, blue, or red cotton, a collarless tunic (ḵānār or kāmār), a turban (ḵaṃrārīn), a vest (ḵusūja or ḏūrā), one of a variety of outer coats (bāšāpār, bīrānma, ḏūb, ḍīnba)—the latter favoured by government secretaries—or jackets (mīn ḵaṃra). The principal hat for all classes was the high ḍūlāh of felt (namād) or lambskin (pištī) which was draped on one side. Footwear consisted of boots (ṣāṣmōsa) of Russian leather (būlgār) for the upper classes, and leather sandals (tāhār) or cotton shoes (gūn) for the common people. The belt for all classes was most commonly a large shawl tied round the waist (ḵāl kamar). The maulās commonly wore the ṣaḥī (see section i, above), and anyāyīs the green ʿannāma (among the numerous descriptions of male attire, see J. F. Goetz, A Winter's Journey. Costumes and costumes of the 1860's; J. B. Fraser, In the land of the Lion and the Sun, or modern Persia (1866 to 1871), London 1893, 127-22).

Female attire for the upper and middle classes consisted of a transparent pīšāman of gauze and pantaloons (tājārā). Over these were worn a short frocked coat or jacket and a pleated skirt (šūla). The head was normally covered with an embroidered scarf of cotton, silk, or cashmere (tārā). Upper-class women are depicted in contemporary paintings wearing a jewelled tiara (ānim ḵūd). Out of doors, women wore a white or black šādūr and one of a variety of face veils (ri ṣan bā, šīla, ṭūq). (see Fraser, 322-5; E. C. Sykes, Persia and its people, London 1910, 269-203).

Recent years. Urban dress is overwhelmingly that of the modern West. Recently, however, there has been a return to the šādūr even among educated women for political as well as religious reasons. Outside the major cities, and especially in tribal regions, traditional costumes are still worn (for a comprehensive survey, see Dj. diyā ʿPūr, Fāḥshūr tāhā, Duroṣūpūn meydānī vārāmanī di ṣuṣānūkh-i Shāh-nūr-ah-yi Muhammad Ṣāḥih-i Pahlavān, Tehran 1346/1967).

(Y. K. Stilman and N. A. Stilman)
experts; the descriptions left by European ambassadors; as well as the documents of Turkish archives speaking of the organisation of corporations of tailors, of sewing workshops and of registers of costumes.

The classification of costumes can be established according to the use for which they were destined. We may distinguish: (1) the civilian costumes, (2) the military ones, and (3) the religious ones (of "duanites" and dervishes). The civilian costumes are divided into (i) costumes of the court (costumes of ceremony, state, household) and (ii) costumes of the bourgeoisie, each having its masculine and feminine variants.

A complete costume is composed of some basic elements (whose number varies in accordance with needs and whose importance is not always the same): (a) head-gear, (b) outer garments, (c) inner garments, (d) belt, (e) shoes and (f) accessories.

In Ottoman Turkey, there were registers of laws which also contained the precepts of etiquette. These laws regulated notably dress, i.e. head-gear, clothing, the kind and colour of the material, the shoes, all in accordance with the rank occupied in the social and administrative hierarchy, of the religion or race of the person in question. The most important regulations of this kind date back to the period of Sultan Selim I (1520-66), Ahmed III (1703-30) and 'Abdulhamid III (1774-7). The classification of costumes can be established in accordance with the kind and colour of the material, the shoes, all in accordance with the rank occupied in the social and administrative hierarchy, of the religion or race of the person in question. The most important regulations of this kind date back to the period of Sultan Selim I (1520-66), Ahmed III (1703-30) and 'Abdulhamid III (1774-7).

Head-gear. It was the head-gear, masculine as well as feminine, which, in Turkish costume, was characterised by the greatest diversity and mobility of forms.

a) Masculine turbans. The Turkish kavuk, of cylindrical shape, was a head-dress of felt or woollen cloth of different thickness around which was wrapped a turban (a long band of material) called in Turkish sarlk or sofiewn (current pronunciation sifien). It is from the form of the kavuk and the way in which the turban was tied that there derive different types and names of head-gear known in Europe as turbans. The kavuk, whose height varied, normally had the form of a contracted or enlarged cylinder, flat or bulging; but there were also those which resembled a truncated cone or a cupula. The highest kavuk (45 to 50 cm.) were kept rigid by means of a construction of metal bars or a kind of basket. They had a smooth or quilted (terki) surface and were trimmed with cotton to give the effect of relief or a dome shape with the quilting (sfina). To make the turban, lengths of material (sarlik) were used which were folded or made into rolls (burma). Fine materials such as cotton, gauze, muslin, fine wool, silk or brocade were chosen for this. Under the kavuk was placed a skull-cap (lakhe) which could also be worn alone. Sometimes small braids (nastroj) or pendants (paskall) were attached to the kavuk, allowing the end of the sarlik to fall on the back or the shoulders (aygalas). To give protection from the rain, a kind of small umbrella or covering (yagmurus) was carried.

Kamer included: Kordas, of cylindrical shape, growing broader at the top, worn with a white turban rolled slantwise on two sides; selimi—of cylindrical shape, introduced by Selim I (1512-26/1521-30), sometimes high, flat on top, worn with a white turban rolled around and bulging at the sides; kubeki —also called pashali kavuk, is the most widespread type of turban, worn from the 18th century by functionaries and civilians. It is a kavuk of cylindrical shape, quilted, worn with a white turban not too long, rolled at the base and tied in front; midegemanate

— a head-dress reserved for the Sultan and the highest dignitaries, a kavuk of cylindrical shape, growing slightly broader towards the top, about 45 cm. high, flat on top, worn with a white turban rolled around; the end of the turban was fastened with a small turban (mu'adad) rolled around; the kubeki, a head-dress reserved for dignitaries with the rank of pasha, which, from the 18th century, became official head-gear, a kavuk with the body of a cone, worn with a white turban rolled around, draped and bulging in four places, decorated with a gold band; batnik, worn from the 18th century by the religious classes, a large, dome-shaped kavuk, worn with a white turban rolled around and which, draped, formed harmonious folds; kili, kili (kubeki kili), worn from the 17th century by the functionaries of the Deffer, a dome-shaped kavuk, worn with a long turban forming folds fastened towards the base with a fine thread or pin; and kharitaki—worn from the 17th century, a high, pointed kavuk, worn with a turban rolled around whose end was often left free.

Another quite widespread head-dress was the turban worn on a small skull-cap (lakhe), often folded in large rolls (burma) or particularly the kavuk worn with a small turban (mu'adad) rolled around; the kavuk without a turban was called del kavuk or del kubeki.

b) Kullak (cap, hat). Kullaks were a very widespread masculine and feminine head-gear, worn by soldiers, dervishes, functionaries and civilians. This head-gear, of which several dozen variants existed, could be made from felt or woolen cloth combined with other materials such as cotton cloth, fur, small turbans, scarves and trimmings. As to their shape, the most common were a round or square head-dress of a dome, cone, cylinder broadening towards the top, tube, helmet, brimmed hats with flaps and straps. Among the kullaks most frequently worn by servants of the court and soldiers there were: the zarina tas, worn by the pages; a high, cylindrical kullak trimmed with brocade and decorated with sulqaf; the bork, which was the most widespread head-gear, in a cone or helmet shape, raised in front, decorated at the base with gold braid; officers wore it decorated in addition with a plume; the akhef (hediç kullak) of the Janissaries, a high kullak whose rear part fell in the form of a covering (yavurma) on the back, a ribbon ornamenting it at the base where a metal case for the officer's spoon or plume was also fixed; and the harata of the palace domestics, a kullak of woolen cloth in the shape of a sleeve whose rear part fell on the back.

The kullak worn by the dervishes most frequently had the form of a cone, a helmet or a cylinder widening towards the top and they were normally quilted (each order or tarxia had the right to: a defined number of tarxia). There were also kullaks bordered with fur (mihizqarni). Only shaykhs had the right to put a turban on the kullak. The kullak worn by dervishes also had other names: sikke, tadj and nifii tadj.

In the 19th century, the jec became a current head-dress, as did the gubara in the army.

c) Safa (busby), a kind of bonnet of lamb's fleece or cloth, was worn with decorated with lamb's fleece, worn by men and women.

d) Feminine head-gear: kullaks of various shapes, scarves with a flap or a peak (pisær); a veil (lakhe); a scarf called a yagmuras; and the khibot, the most popular head-gear, in the form of a conical kullak or hood decorated with a fine scarf or shawl.
and trimmed with feathers, precious stones and ribbons.

Outer garments. The most characteristic and widespread outer garment in Turkey (known since antiquity in Central Asia and the Near East) was the khatib (caftan), a long, full robe with sleeves. Its cut varied according to the period and area. The Turkish caftan had several variants which were distinguished from one another by the length and width of the skirts and sleeves, the buttoning, the use of slit or supplementary sleeves of a decorative character. It was these elements and the cut which decided the type of caftan. The bihál, for example, was a ceremonial caftan, made with sumptuous materials, quite full, with skirts side by side or crossed over. Caftans had skirts descending as far as the ankle, covering the knee and fastened at the front; the setre, a military garment; the short caftan with sleeves; the hayderl, a kind of short garment, without sleeves; the entari, a short caftan without sleeves, stopping at the waist; and the entari, a long robe without sleeves, stopping at the waist; and the entari, a long, full robe, with rather wide, short sleeves, sometimes edged with sable, sometimes with a collar; the jebbe, a kind of full caftan; the kerde, trimmed waistcoat without sleeves; thedjiba, a full, short caftan with sleeves; the fâbi (really the name of a thick material), a garment of thick woolen cloth, stopping at the knee; the setre, a military garment, covering the knee and fastened at the front; the gelben (or etek), a short caftan with sleeves, buckled and bordered; the safa, a kind of etek worn by the working classes; the yelik, a waistcoat without sleeves formally worn by men in the nobility; the gækmeddæn, a short, trimmed waistcoat without sleeves; the minik, a short caftan without sleeves, stopping at the waist; the bisich, a kind of very full caftan with wide sleeves, worn most frequently as a travelling or riding garment. Dervishes' garments: the tafrun, a long robe without sleeves; the kâderli, a kind of short garment, without sleeves, stopping at the waist; the hahba, a short caftan with flared sleeves; the etuk, a skirt; and the minik.

To go out, particularly in the rain, the kind of cape was put on, called a karsmfenk, the barsi, the kâpedi or sugnmsiok. Furs were an important element in the costume worn at court. Fox, squirel, ermine, sable, lynx and marten furs were covered with the most varied materials (brocade, wool, velvet, silk, cotton satin and satin). They were characterised by a great diversity of styles, but the caftan was also dominant there. The most sumptuous fur was the karsmfenk of the sultan, with a large fur collar, narrow or short sleeves, decorated with fur below the shoulders, with no supplementary sleeves, laced with frogs and loops in front; the kâpedi was a fur of white sable covered with green cotton satin; and the kâpedi, a fur (or caftan) with straight sleeves, with a collar. Full furs edged with fur in front and in general with a collar were worn during ceremic receptions, etc. These were the ust kürk, the divanim kürk, or the dort boks kürk (when they had supplementary sleeves), or further the bol yelik kürk (when it was a fur with wide sleeves).

The outer garments most often worn by women were: the ferdjâje, the entari, the yelik and cloaks (harnâmsiyej); the ferdjâje, a kind of full cloak with sleeves and a collar, sometimes with cuffs; the entari, a long robe whose most varied, normally with a low neckline, fitting at the waist and flaring from the hips, buttoned in front as far as the waist, trimmed, laced with frogs and loops, with narrow sleeves, sometimes long or turned up. Women also wore short caftans or short entâris stopping at the hips with wide skirts. Their furs had long sleeves or short ones or were without sleeves. They put a long robe under the entari or over baggy trousers.

Inner garments. Among these are counted shirts (gümik, pörtük); a long robe worn under the entari or caftan, доллama or silik; baggy trousers (kayesindir) of varying fullness, Fuller and in finer materials for women; men's trousers (çakbihir), reaching down to the ankle or below the knee: the potur, full trousers as far as the knee and straight from the knee to the ankle: the teizik, breeches worn by men as an outer garment; pants (ton). All the parts of the trousers were held with a special belt called anciur.

Belts were an indispensable element of old Turkish costume. They were of two kinds: material belts (kâğıld), supple, knotted, with the ends hidden under the trousers; and leather belts (kemri) fastened with a buckle, often decorated, gilded, in hammered leather, embellished and encrusted with precious stones.

Shoes were divided into indoor shoes with a supple sole and outdoor shoes with a thicker sole, the most widespread shoes for several centuries, with a high leg reaching up as far as the knee and a supple sole; women's boots bore the name pașh-mush: the ên (an older form of ên), with a low leg, most often made in yellow Moroccan leather, with a supple sole; the mest, a kind of ên; the tespàh, a niple without heels with the ends slightly raised and a supple sole; the teizik, the most popular shoes, worn by men and women, without heels or quarters; the potur, slightly raised at the end, in leather or material, often decorated; shoes for women had a low heel.

To go out in the town the pabuc was slipped on over the supple shoes (ên, mest). Sandals with a compensatory sole called nali were also worn. The shoes of the sultan, dignitaries and women were often richly decorated, in accordance with various techniques, with plant motifs (appliqués, embroidered, hammered leather).

Accessories decorating the head-gear: the kirmik, the çitâr, the sorgu, the sugîrê, the câltênk, feathers, ornaments, scarves, shawls, ribbons, tassels, small braids and plumes. Accessories decorating outer garments: shawls, trimmings, buckles, small buckles and metal badges. Jewels and side arms completed the costume.

2. The modern period. In the 19th century, in the period of the army reforms, a new military uniform was introduced, combining modified forms of old Turkish costume with some elements of the European uniform. This new uniform became common during the second half of the 19th century. Later on, modern European uniform was introduced.

Regional costume is not made the object of this study: there only exist a few studies in depth on this subject (see Hanly Pey and Marie de Launay,
Les costumes populaires de la Turquie en 1873. Constantinople (1873).

LIBERIA, an African republic in which, according to the sources, Muslims account for no more than 15 to 20% of the population. They are concentrated mainly between Monrovia and Robertsport on the frontier of Sierra Leone as well as on the frontier of Guinea. Their number is estimated at 300,000, but because the censuses take no account of religious allegiance, there exists no precise figure for a Muslim population whose Islamic culture was until recently extremely primitive.

Islam was a late manifestation in Liberia. Certain groups related to the Mandingo peoples and arriving in the 17th century, from the region of Kankan were probably the first Muslims to penetrate what was to become Liberia. After the Vai, other Mandingo groups like the predominantly merchant tribe of the Gbande were totally Islamised, while the Loma (or Brou) the Kpelle, the Mano and the Sumba were only partially converted. These peoples, impelled by military and commercial forces, included in their ranks Islamised elements. But the expansion of Islam could only begin to take shape from the 19th century onwards when the Afro-American explorers had crossed the forest zone.

Since Liberia was governed until the coup d’etat of 12 April 1980 by Liberians of Negro American origin, mostly of the Protestant faith, Muslims enjoyed no political representation. Moreover, the Liberian constitution of 1847 had a significant preamb. “Our People recognizes with pious gratitude the goodness of God who has accorded us the blessings of the Christian religion and granted us political and religious liberties...”; but the first clause declared that all religions would be tolerated and that no religious conditions would be attached to the holding of public office.

In 1951, President Tubman enacted a law pledging to the Muslims of Liberia full recognition of their rights. In 1965, the same president attended the inaugural ceremony of the Muslim League of Ramadân and delivered in the address. It was his government which, after consultation, gave to the leading Imam the title of Muslim Bishop.

Since 1974, the National Muslim Council of Liberia has united the principal groups. It comprises the following organisations: The Council of the Muslim Community, founded in 1949 by Alhaji Varraunych Sharif who, in 1953, built the capital’s first mosque inaugurated by President Tubman; The Muslim Congress of Liberia, founded in 1953 for cultural and scholastic objectives; The Muslim League of Safetya; and The Liberia Muslim Union, established in the north, in the province of Nimba, and providing bursaries for academic students to be educated abroad.

The majority of the Muslims are orthodox Sunnis of the Mâlîkît rite. Since 1937, the “Caliph” Mirzâ Nâşir Ahmad, who came in 1970 from Pakistan, has united the principal groups. It comprises the following organisations: The Council of the Muslim Community, founded in 1949 by Alhaji Varraunych Sharif who, in 1953, built the capital’s first mosque inaugurated by President Tubman; The Muslim Congress of Liberia, founded in 1953 for cultural and scholastic objectives; The Muslim League of Safetya; and The Liberia Muslim Union, established in the north, in the province of Nimba, and providing bursaries for academic students to be educated abroad.

In a land where the level of literacy is low (15 to 20%), the contribution made by the Muslim schools is feeble. The National Muslim Council sponsors one primary school in Monrovia and three high schools of which one, at Kakata, comprises 300 pupils. There is one elementary school at Robertsport (province of Grand Mont) and a secondary school in the province of Bong (40 pupils). Instruction is given partly in Arabic, partly in English.

Some rare Arabic books feature in the libraries of the capital, including some that have no religious content. There are certain Lebanese newspapers, of no interest other than to nationals of that country. The Ahmadiyya broadcasts a five-minute television programme every Friday.

Each year, between 100 and 200 Liberian pilgrims make the journey to Mecca. Only al-fâd al-habir at the end of Ramadan is celebrated with any kind of vigour. Despite these modest activities, the role of the Muslims seems to be steadily growing.

LIBYÂ, an Arab state located on the Italian Libia, which in turn derives from the ancient Greek Ἀφρική/蕊βική.

r. The name. The name first appears in ancient Egyptian writings in the form RBW or LBW, perhaps representing Lebu or Libu. It was also known to the ancient Israelis and occurs several times in the later books of the Old Testament in the form Lubin.
PLATE XXXVIII

3. Egypt, 1007–21. Tīrās silk fragment inscribed with the name of the Fatimid caliph al-Hakim and decorated with birds (mufayyar). (Courtesy of the Museum of Islamic Art, Cairo).

4. Egypt. Fatimid period. Dancing girl in what appears to be a Sirwāl. She holds a mandil kumm in each hand. (Courtesy of the Museum of Islamic Art, Cairo).

6. Syria (?), ca. 1300. Group scene: The seated figure on the right is wearing a faylasūn or farha over his turban. The fourth figure is wearing a printed robe (makhfūmah), the woman standing below him is veiled by an 'īsār, and the man on the left wears a turban wrapped around a balansoula. From the Madhāmī of al-Haritī. (Brit. Mus. Add. 22,114, fol. 15).
7. ʿIrāk, ca. 1218-19. Ruler wearing a ẓalā al-turāb with żirdž bands. On his head is a sharbīq. His attendants also wear Turkish costs. Most wear the cap known as kalayt. From the frontispiece of the K. al-Aḥbābī (Feyzullah Efendi 1566, fol. 16, Millet Kütüphanesi, Istanbul).
8. Syria. Two women of Lattakia: The standing figure is veiled with a burka and šahrta, the reclining figure with a yawmāţ and malat'a. From Lortet, *La Syrie d'aujourd'hui*, Paris 1884, plate facing p. 48.

9. Tripolitanian merchant. From Hamdy Bey and Lanos, *Les costumes populaires de la Turquie en 1873*, Constantinople 1875, Fig. XLII.

11. Transjordanian villager wearing a thawb, kibr, and 'abā'ī. On his head a kāfiyya and a 'abhil. From Musil, *Arabia Petraea*, Vienna 1908, fig. 29.

14. Syria, early 20th century. Lebés or sirwāl for a woman. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

PLATE XLV

LIBÁS

(Courtesy: Moroccan Ministry of Tourism).

[From E. Doutté, Marrakesh, Paris 1905, 254].

19. Algerian mufti wearing long Andalusian *sarawī* and a *kafīdān* over which is a *kabā'ī* and a white *sīlādīm*. On his head is a Turkish-style turban called *šāmāra* *mbarīdā* over which is the scarf known as a *mūḥānnakā*, similar to the ancient *ayyāli*. (From G. Marçais, *Le costume musulman d’Alger*, Paris 1930, Pl. XIII-Bibl. Nat. Estampes O 1 2 a)

20. Tunisia. Woman’s wedding dress known as *bendīlijā habīra* from Naheul. (From S. Sethom, *La tunique de mariage en Tunisie*, in *Cahiers des Arts et Traditions populaires*, no. 3 [Tunis 1969], fig. 9).

23. Iran. Scene from the Khamsa of Nişârî depicting Alexander meeting the Khalifâ of China. All are dressed in Safawid attire and wear the distinctive turban with the protruding spike known as the ʿAbbâsī safavouri (from a ms. in the Metropolitan Museum of Art, painted in Tabriz, 932/1524-5).

27. — Turkey. *Cevâb hashì* (chief of the Janissaries). (Library of the University of Warsaw).

The Lehmin of Genesis, x, 13 may possibly represent the same name. The term passed into later and modern usage through the Greeks and subsequently the Romans. In Greek geographical writings, it was most commonly used—along with Africa, which later replaced it in this sense—as the name of one of the three continents or, occasionally, as the name of the region in North Africa west of Egypt. Transmitted by the Greeks to the Romans in both senses, it was first made the name of a specific political entity by the Emperor Diocletian, who established the adjoining provinces of upper and lower Libya west of Egypt. The authenticity of a hadith quoted by al-Bakrî (Description de l'Afrique septentrionale), ed.—French tr. M. G. de Slane, Paris 1965; Ar. 8, tr. 23 according to which the Prophet is supposed to have said "He whose sins are numerous must place Libya (Lūbiya) behind him", i.e. go to fight the infidels in Urikiya, is doubtful; moreover, the same author (Ar. 21, tr. 49) states that Urikiya is really called Libya, from the name of the founder of Memphis, who reigned over the land.

The term passed, along with much other Greek geographical knowledge and terminology to the Arabs, who normally wrote it in the form Lūbiya (Lūbiyā or (Lūbiyya). The earliest Arabic geographical writers name Lūbiya as one of the four quadrants into which the world is divided, the others being Europe, Ethiopia and Scythia (al-Ballāṭ, Opus astronomicum, ed. C. A. Nallino, text iii, Rome 1899, 27, tr. 10; ibn Khurradākhīb, 135, ed. ibn al-Fakīḥ, 67, 1971: Asqum of Manṣūkhī, K. al-Uṣūn, ed. A. Vasiliev in Fvatrologia Orientalis, v, Paris 1910 12, 612; al-Ḥaṣād, Sifāt Djarār al-Arāb, ed. D. H. Müller, i, Leipzig 1884, 52; Yāḥḳūt, s.v., citing al-Bīrūnī who ascribes this classification explicitly to the Greeks). Lūbiya consisted of "Egypt, Kūsim, Ḥabash, the lands of the Berbers and adjoining countries, and the southern seas." In addition to this vague use as the name of a quarter, Lūbiya also occurs, more specifically, as a place-name in northern Africa. Ibn 'Abd al-Hakam (Fatḥ al-Mīr, ed. and partial French tr. A. Gateau, Congue de l'Afrique du Nord et de l'Espagne, Algiers 1947, 35, 77), probably copied by ibn Khurradākhīb (ed. and partial French tr. M. Haïl-Sadok, Description du Maghreb et de l'Afrique au sixième siècle, Algiers 1949, 13 and n. 172) makes Lūbiya a province of western Egypt. Al-Maṣūḍī (Manṣūkī, iii, 424 = § 1106), copying in his turn ibn Khurradākhīb, speaks of a place (beṣ'at) named Lūbiya which was Marākisīya (Maramida) and cites in the Tunb (20) the region (nabiya) of al-Iškandariyya, Lūbiya and Mūnṣūkī. Ibn al-Fakīḥ (Buddān, 74, French tr. Massé, 90) makes Libya a locality of Egypt. Al-Yaḥḳūt (Buddān, 339, 342, tr. Wiet, 197, 201) speaks of Lūbiya as one of the districts (ḥira or cemal) dependent on Alexandria, while Yāḥḳūt (iv, 368) places Lūbiya between Alexandria and Bārka. Most of the mediaeval Arab geographers see North African Libya as administratively part of Egypt (al-Maṣūḍī, Khiṣāf, ed. Wiet, i, 56, 309, 311; ibn Dukkak, ed. al-Kalkashandī, Subh, iii, 348-50, 390-1, citing the Rawd al-musdar and al-Ḥudūf; see further J. Maspéro and G. Wiet, Mèmèra pour servir à la géographie de l'Égypte, Mém. IFAO, xxxvi, Cairo 1919, 169; A. Grohni, Studien zur historischen Geographie und Verwaltung der frühmittelalterlichen Ägypten, Vienna 1939, 8-9). The name also occurs as that of a mountain vaguely situated west of the Nile Valley. The passage in al-Bīrūnī, (K. al-Djamālī fī maṣ'īfa al-ḥadīth, Hyderabad 1335, 100 naming Lūbiya as a source of precious stones south of Egypt, is certainly a misreading for Nubia. The form Lūbiya is used, exceptionally, by al-Maṣūḍī (Khiṣāf, ed. Wiet, i, 52), citing the Arabic version of Orosius, and therefore following the Latin form of the name. Sometimes, the name Lūbiya seems to have passed out of use in Arabic. It reappears in the 19th century when it is clearly derived from European sources. A late Ottoman work of reference, the historical and geographical dictionary of Ahmed Rifāt (Lugāt-i ta'māniyye ve δiğniyye, vi, Istanbul 1300, 1313 lists Libya in the form Lūbiya, obviously transcribed from the French, and defines it as "the Greek name of Africa". The entry goes on to explain the different senses in which the word was subsequently used by noting that, in the writer's own day, the term was confined to the regions "beyond Tripoli, Tunisia and Egypt and northeast of the Great Sahara Desert." "Ahl Muḥāfrāk (Khiṣāf, xv, 41), no doubt following European practice, also uses the form Lūbiya for the region west of Egypt.

The name Libya continued in occasional use in Europe, mainly in the context of ancient history. It was given greater precision and popularity by the Italian geographer F. Minutulli, whose Bibliografia della Libia was published in Turin in 1903, and who applies the term specifically to the two Turkish sandžaks of Cyrenaica (Barka [q.v.]) and Tripolitania (Tarabulus al-Ǧārb [q.v.]), the only parts of the North Africa littoral that had not yet fallen under European control. Libya remained a geographical expression until the Italian invasion and the Italian decree of 5 November 1911, proclaiming Italian sovereignty over the two Turkish sandžaks. It was made the official name of a country—for the first time since Diocletian—by the Italian royal decree of 1 January 1934, which created a new colony, formed by the union of Cyrenaica and Tripolitania, and called Libya (Arabic Liḥbiya). This form was retained by the independent state established after the ending of Italian rule.

Bibliography: For the earlier history, the reader is referred to the articles BARBA, FASAN and TARABA, LANGUAGES: On the Arabic spoken in Libya, see SAKARĪYĀ, iii, 3. The Western dialects. On Berber, see BERBERS, v, as well as A. Basset, La langue berbère, in Handbook of African Languages, i, London-New York-Toronto 1954, 69-70. (Ed.)

2. Liḥbiya-Berber inscriptions. The Maghrib and the Sahara possess a large number of inscriptions using a script peculiar to the North-West of Africa, which was given the name Numidian and later Libyan. The first name, which has fallen out of use, was, however, to be preserved to designate one of the forms of this script, known as Eastern, which is widespread in Tunisia and Eastern Algeria. The Libyan inscriptions published up to now and regarded as ancient, let us say pre-Islamic, can be estimated at some 1,200, but the Sahara possesses thousands of more recent graffiti and inscriptions carved on weathered rocks in the same script, still used by the Touareg, who call it Tefsarūk (See BERBERS.).

Those inscriptions, whether the monumental texts of Dougga from the 2nd century B.C. or the simple Touareg graffiti, use only signs of a strictly geometrical form, based for preference on the straight line. Also, the alphabet of Dougga which contains 24 or 25 signs only uses the circle for two letters: 0.
The Libyan inscriptions, the ancient Libyo-Berber or Tifinyagh and the modern Tifinyagh inscriptions, occupy a vast area which seems to correspond to the ancient domain of the Berber language. Roughly, the signs of this script are to be found in use from the Mediterranean as far south as the Niger and from the Canary Islands to Libya. It is towards the east that the limit of this script's use is best known.

In Libya it was in common use in the Fezzan and Tripolitania. Recently, at the time of his excavation of Bu Njgu, R. Rebuffat noted that the Libyan inscriptions and graffiti there were influenced by Latin writings. Beyond there the evidence is less certain; nevertheless, graffiti inscription found at Khor Kilobsera in Nubia was published recently. The signs of this inscription are sufficiently close to ancient Tifinyagh for Alvarez Belgade to suggest a transcription and translation. Another author, Zawadowsky, even considered recognizing in it a contamination of Merotic script by Libyan, but this hypothesis was rejected by the majority of specialists.

In this vast area, the density of inscriptions is highly variable and they are, furthermore, of different periods. The zone with the highest concentration of Libyan inscriptions, their locus classicus, is undoubtedly North-West Tunisia and the part of Algeria adjacent to it; of the 1,124 published by J.-H. Chabot in his Recueil des inscriptions libyques, 1,073 come from this region. It is in fact the land of the Numides-Massyles, cradle of the Numidian kingdom, where the Libyan language and script remained alive for a long time. In the district a large number of inscriptions are, moreover, from the Roman period. The rest of Algeria, as well as Northern Morocco, contains a lower density of inscriptions. Despite the discoveries made since the Recueil of J.-H. Chabot appeared in 1940-1, the number of these inscriptions has only risen to 27 in Northern Morocco (L. Gainful), and those in Algeria to the west of Seif can be estimated at around fifty, of which about ten are in Kabylia alone.

Things are less clear on approaching the Saharan regions. Exploration is incomplete and above all very unevenly conducted. Furthermore, geological and topographical conditions are very influential factors in distribution. It is quite understandable that the flat regions, such as the Hamada or the basins occupied by dunes like the Western Great Erg, the Edèyen of Marzouk, contain very few inscriptions, while the rocky regions are infinitely richer. In the present state of our knowledge, which does not necessarily reflect the reality, the richest Saharan regions are the Hoggar and Tassili n’Ajjer, as well as its Libyan extension formed by the Azacus, the Air, the Touaregs, who are the heirs of the Therian tribes in the torso of the Atlas chain, particularly the south of the High Atlas, the Anti-Atlas and the Rio de Oro.

Inscriptions whose signs are close to the Saharan alphabet are not exceptional in the Canary Islands. Periodically, "Libyan" inscriptions are mentioned outside the Berber domain, such as those of the Grotto Regina at Palermo, which, if their relationship to Libyan is confirmed, can be explained by the presence of Numidian mercenaries in the Punic contingents of Sicily. Others have been shown to be bad readings of Latin inscriptions (au inscription of La Garde Freinet, Var, attributed to the "Sacaens") or the most fantastic interpretations, such as inscriptions found in Mexico or even Chile.

Traditionally, there are several distinguishable "alphabets" in the Libyan script. Some are contemporaneous with each other, such as the so-called Eastern and Western alphabets. The Libyo-Berber scripts of the Northern Sahara and the ancient Tifinyagh preceded the Tifinyagh used at the present day by the Touaregs, who are unable to read the ancient Tifinyagh. Modern Tifinyagh can undergo regional variations which are still little known.

The Eastern alphabet covers the north of Tripolitania, Tunisia, and Eastern Algeria; the western limit of its use is to the east of Sielf, although two western-type inscriptions may be seen at Xumida, and some eastern-type inscriptions may exceptionally be found in Kabylia such as the case of the decorated stele featuring a person standing found at Lakhdaria (ex-Palestrina), which bears on its main face, on either side of the person, an inscription with eastern signs. This inscription mentions offices and titles similar to those in use in Douiga in the 2nd century B.C. This detail allows us to put forward the hypothesis that it may well be an official inscription of the Numidian Mæsæylian kingdom and somewhat "foreign" in a land that was in ancient times Mæsæylian and the later Mætænania. This hypothesis may be strengthened by the existence on the reverse of the stele of graffiti using the Western script, which is that of the other inscriptions of the region. In the present state of our knowledge, the stele of Lakhdaria is the westernmost evidence of the Numidian or Eastern alphabet which seems to us to be more precisely Mæsæylian.

The Western Libyan alphabet covers the lands peopled by the Mæsæylians and Moors. It contains a greater number of signs than the Eastern, but also presents more variations; some signs known in Algeria are unknown in Morocco, and vice-versa. This script thus occupies a vast region, for all the Libyo-Berber inscriptions of the Northern Sahara and the Atlas belong to it to a greater or lesser extent. A great many of the Canary Islands inscriptions have the same signs, whose value is unfortunately not known with any certainty; besides, it is hardly likely that the Western script and that of
the Libyco-Berber inscriptions can be transcribed in the same way everywhere. This does not prevent there being signs $JFV$ (read from right to left) being found throughout the western area, from Greece to the Atlantic, and is evidence of a certain unity.

Modern Tifinagh signs, current or sub-current, whose use goes back at least to the 5th century A.D. (tomb of Tni Hinna in Hoggar), are known throughout the Touneg world and go beyond it on the north-west, to Touat and Gourara, where they were even in use among the Judaised Berbers.

In some regions such as the Anti-Atlas, particularly in the Tinsouline, the signs of the Eastern script are found alongside with small animal figures (horse, dog, oryx) which appear to act as pictograms; they are so closely linked that it makes it hard to believe that they do not have the same semantic content. The presence of dromedary figures in the same scenes prevents these inscriptions from being regarded as very ancient. These pictograms, if they really play this role, cannot serve to support the hypothesis of the Libyan alphabet coming into being through the combination of marks of ownership and other traditional drawings, such as those which still figures in tattoos.

However, it should be noted that Tifinagh has two signs: $\text{J}$, a sign which has the value $\text{D}$, and $\text{X}$, which has the value $\text{Z}$, the two of which seem to be derived from signs of a figurative, more or less anthropomorphic, character. More frequently, Libyan Tifinagh is written in horizontal lines, but the meaning of the reading is highly variable; sometimes it is from right to left, sometimes from left to right, from top to bottom and in boustrophedon.

K. Prasse noted that the use of a movable support, such as a sheet of paper, actually favoured this tendency. There are even some inscriptions known which describe almost closed curves.

Only the current form of Tifinagh and the Eastern Libyan alphabet can be transcribed, the former because the script and language are still in use among the Touneg, the latter because we have at our disposal several Libyco-Punic inscriptions, in particular that of Dougga, where the Libyan text corresponds quite closely to the Punic text. This last has also transcribed, without translation, some Libyan titles or municipal offices, such as LOGMI, or GZB, which, it seems, had no equivalent in the Punic towns.

Unfortunately, while the value of the signs is basically known and only requires some verification or points of detail, the language of the Libyan inscriptions is still unknown to us: The little that is known of Libyan, some elements of vocabulary and some presumed grammatical functions, show clearly that this language belongs to Berber; an ancient Berber, certainly, and imperfectly transcribed by a strictly consonantal alphabet, but which cannot be fundamentally different from the numerous current Berber dialects.

However, since the composition of the famous Rennell of Chabot, the very few specialists in this field have in general refused to suggest any translation of the texts, which are indeed very short, of the majority of the Libyan inscriptions; some even go so far as to pose the question of whether Libyan belongs to Berber. This carefunesse contrasts with the adventurous attempts of G. Marcy, who, relying on Berber, particularly Moroccan Tamasghit and Touneg Tamahak, suggested a translation for most of the Libyan inscriptions known in his time. This attempt was followed by M. Alvarez Delgado, who extends it to some Canary Islands inscriptions. Between the possibly exaggerated carelessness of the former, and the certainly dangerous enthusiasm of the latter, there has to be a middle position which accepts at the same time both the most serious checking and control and the minimum of hypothesis indispensable for the progress of all knowledge.

The Western alphabet contains some supplementary signs which are absent in the Eastern and whose originality has been demonstrated by L. Galian in his Inscriptions antiques du Maroc. The use of these two ancient alphabets was certainly contemporaneous. If it would be a mistake to believe, following a historical logic, that the Eastern alphabet is the older because the script came from the East. Personally, adopting a hypothesis of J. Février, the author of the present article would carry it so far as to think that the Eastern form of the Libyan script (Numidicum or Massyllican alphabet) is a recast and simplified form of the original script due to contact with Punic, whereas outside the Massyllic territory the old forms continued to be employed and to evolve until they became modern Tifinagh, which itself affords variations. His only disagreement with the hypothesis presented by J. Février is over the age of this adaptation, which Février placed in the 3rd century or the beginning of the 2nd century B.C., whereas it seems to be much earlier.

Among others, the hypothesis has for long been prevalent that the Libyan alphabet derived directly from the Punic alphabet, as the name Tifinagh given to the present form of this script implies. But it is widely recognised that an origin derived from etymology can be fallacious. Nevertheless, the Libyan alphabet has several signs in common with the Punic script where they have the same value ($\text{G}$, $\text{T}$, $\text{SH}$). S. Gsell, however, raised considerable objections to this opinion. The writing of the Punic characters, as they are transmitted by numerous steles from Carthage, Utica, Hadrumetum and Cirta, is radically different from those of all the Libyan alphabets. Not only do nearly all the Punic signs have a cursive form, while the Libyan signs are angular and geometrical, but even the meaning of the script differs. All the Punic inscriptions, like every Semitic text, are written in horizontal lines from right to left, while the Libyan inscriptions are generally written from bottom to top in vertical columns, particularly those which we have every reason to believe the most ancient. It is only at Dougga for several decades, during the reigns of Massinissa and Micipsa, that some inscriptions of an official character were written in horizontal lines. Those inscriptions number eleven, which represent a hundredth of the texts gathered by J.-B. Chabot. This proportion would be even smaller if we were to take account of the inscriptions discovered since the case. The text of the inscriptions recorded at Dougga is thus highly original and denotes a very powerful Punic influence, but this appears to be only a factor of modernisation and not as an especially determining original element.

If we are to look, as is most likely, among the Near Eastern scripts for the forms from which the Libyan alphabet derives, it is not to the Phoenician of Africa as it is known at Carthage, but to a more archaic script that we should turn, which would explain the similarities remarked with the South Arabian scripts (Himyarite, Sabaeant), but also with the Turdetan alphabet of Southern Spain.
The script did not necessarily penetrate Africa by sea, and it is actually more likely that it crossed the continent and that the Numidian Massiliya form (the most recent of the ancient Libyan alphabets) may have arisen out of a transformation of the archaic forms in contact with the Punics.

As far as this alphabet itself is concerned, two old hypotheses may definitely be rejected. The first is that of Meltzer, according to whom the Eastern alphabet was wholly invented by Massinissa, for we know today that some Libyan inscriptions are earlier than this king and, further, that the Numidian royal administration employed Punic exclusively in its official inscriptions, as it did in the legends on its coins. The other hypothesis, that of Lacharzi, who wanted to link Libyan with Neo-Punic, is even more improbable, for it is based on a totally outdated chronology of the Neo-Punic script.

If the origin of the Libyan alphabet poses some insoluble problems, it is even more difficult to date its invention or introduction.

Contrary to the views of several authors (J. Blanchet, S. Gsell), the Libyan inscriptions or signs which are found on some rock carvings as at Set Mektouba, Chibla Nafna and Khamouet el Hadjar, cannot be contemporaneous with these later. It is now known that these carvings are for the most part Neolithic and thus very much earlier than every script. Careful examination reveals in every case that the inscriptions are superimposed on the carvings.

However, this is not the case with the inscription from the Aziz n’Tikis (High Atlas, Morocco). This inscription occupies a vertical cartouche delimited in an anthropomorphic figure of which it forms an indisputable part. It is certain that this inscription, which contains fifteen or sixteen signs not belonging to the Saharan alphabet, is contemporaneous with the carving. The technique of the lines, the patina, style and details such as the representation of the sex and the lateral fringes, which accompany the figure, are identical with other carvings which are usually attributed to the Old Berber civilization in Spain. Even assigning it as late as possible within the archaeological context, this inscription seems to us clearly earlier than the 6th-5th century B.C.

In Morocco, we also have the inscription of Sidi Slimane of the Libyans which refers to the tumulus that it adjoins and with which it is consequently contemporaneous; the funerary furniture of this monument belongs to the 4th-5th century B.C. In Eastern Algeria the baula (Punic-dry-stone burial chamber) at Tiddis contains pottery, a piece of which has these Libyan letters painted on its belly. The bones contained in the pottery of this tomb have been dated from 2200 ± 100 years to 250 ± 100 B.C. So this inscription is quite likely to be older than the bilingual dedication of the Temple of Massinissa at Dougga, dating from the tenth year of the reign of Micipsa, i.e. 138 B.C. This inscription was for a long time the only Libyan text reliably dated and there was also an unconscious tendency to regard it as the oldest.

A study by J. G. Févier of the inscriptions of Dougga, mentioning municipal offices, allows us to reconstruct the genealogy of an important person, Setot, who was twice (during one year?) prince of the city. Taking account of this genealogy, it is possible to date back two other inscriptions (RH, 16, 23) to a generation preceding the dedications of 139; these inscriptions would date from the decade 170-160 B.C.

In the Sahara, the datable documents are rarer, but a preliminary investigation has shown that Tifinagh is very much older than the historians, who believed that the Berbers only conquered the Sahara in the 3rd century of our era following the pressure exerted by Rome on the land routes of the north, formerly thought. In Fazzan, some Tifinagh scripts are carved on amphora found at Germa which date from the 1st century of our era. Among these graffiti figures sign 22, which exists only in the Saharan alphabet, proves that in the 1st century of our era, Tifinagh was in use in the heart of the Sahara.

In the massif of the Hoggar, the site of Asserkou, whose inscriptions and carvings appear very ancient (H. Carpent-Fabre), is worth citing, and especially the carved blocks of the funerary monument of Tin Hinar at Abelesse. These blocks which bear Tifinagh script have been cut so as to form part of the construction of the monument, of which they constitute the lower courses. The cutting has mutilated or interrupted some carved texts. This Tifinagh, which belongs, however, to the modern alphabet, is thus at least contemporaneous with the monument and probably older; the funerary furniture and the isotopic date calculated from the wood of the bed or stretcher on which Tin Hinar reposed, date the construction of the monument back to the 5th century of our era.

Such are the chronological pointers which allow us to assert the great antiquity of the Libyan script in the Maghreb, where it is clearly earlier than the reign of Massinissa, i.e. at the emergence of the Numidians and Moors into history. As for the Sahara, the use of Tifinagh goes back to at least the beginning of our era and probably much earlier.

Cyrenaica. The onset of World War II impeded further Italian development plans. After severe fighting in the coastal strip due to stiff resistance by combined forces, Libyan resistance did not subside. During World War II the Italians were virtually besieged in their coastal strongholds. In Cyrenaica, Fazzan and the Sirtica, resistance was led by Ahmad al-Sharif (1873-1933), head of the Sanusi order, with support from Turkey and Germany. It was under their influence that he decided to attack British Forces in Western Egypt in November 1915. Defeated, he was put before the General Assembly of the United Nations, though briefly joining the Arab oil emirate under the Sanusi flag had participated in the liberation of Cyrenaica.

After World War II the future fate of Libya was put before the General Assembly of the United Nations. On 21 November 1949 it was decided that Libya should become an independent state before 1 January 1951. A UN Commissioner, the Dutchman Adriaan Pelt, was appointed to supervise the powers transfer from British and French military governors and publicly hanged on 29 September 1931. Full-scale war in Libya was resumed after Mussolini's take-over in Rome in 1922. Due to its internal divisions, resistance in Tripolitania was soon crushed, but in Cyrenaica the charismatic leadership of the Sanusi representative Umar al-Mukhtar inspired Bedouin resistance for almost ten years until at last he was injured in battle, imprisoned and publicly hanged on 10 September 1931. Pacification of Libya being completed, territorial adjustments started, extensive agricultural colonisation schemes in the fertile coastal plains. In 1935 they completed the strategic coastal road connecting Tripolitania and Cyrenaica. The onset of World War II impeded further Italian development plans. After severe fighting between Germany and the Allied Forces, in January 1943 all of Libya was occupied by British and Free French Forces. Idris al-Sanusi had assisted the British war effort from Cairo, and an army of Libyan exiles under the Sanusi flag had participated in the liberation of Cyrenaica.

On 1 September 1951, Idris was deposed. In spite of an initial wave of popular enthusiasm, the revolution remained entirely an army affair. It had been planned and implemented by a movement of "Free Officers" modelling itself on the Nasserist revolution. A Revolutionary Command Council (RCC) took control of affairs. It consisted of twelve officers and technicians; petroleum and dock workers started to organise in trade unions. The new social groupings were denied political expression. Subsequent tensions were heightened by foreign politics. During the Suez crisis (1956) and again in 1967 there were violent outbursts of Arab nationalist feelings. But Libya, a member of the Arab League since 1953, was tied to the West in its foreign policy by the presence of British and US military bases. The government, though briefly joining the Arab oil embargo of 1967, had no means adequately to meet widespread popular support for a Nasserist policy. This undermined the King's authority.

On 29 September 1911, Italy declared war on Turkey and started its long-planned invasion of the Libyan littoral. Italian troops did not succeed in penetrating beyond the coastal strip due to stiff resistance by combined Turkish-Libyan Forces. Negotiations between Italy and Turkey resulted in the Peace Treaty of Ouchy (17 October 1912). On the battlefield, however, Libyan resistance did not subside. During World War I the Italians were virtually besieged in their coastal strongholds. In Cyrenaica, Fazzan and the Sirtica, resistance was led by Ahmad al-Sharif (1873-1933), head of the Sanusi order, with support from Turkey and Germany. It was under their influence that he decided to attack British Forces in Western Egypt in November 1915. Defeated, he was put before the General Assembly of the United Nations, though briefly joining the Arab oil emirate under the Sanusi flag had participated in the liberation of Cyrenaica.

After World War II the future fate of Libya was put before the General Assembly of the United Nations. On 21 November 1949 it was decided that Libya should become an independent state before 1 January 1952. A UN Commissioner, the Dutchman Adriaan Pelt, was appointed to supervise the powers transfer from British and French military governors and publicly hanged on 29 September 1931. Full-scale war in Libya was resumed after Mussolini's take-over in Rome in 1922. Due to its internal divisions, resistance in Tripolitania was soon crushed, but in Cyrenaica the charismatic leadership of the Sanusi representative Umar al-Mukhtar inspired Bedouin resistance for almost ten years until at last he was injured in battle, imprisoned and publicly hanged on 10 September 1931. Libya

4. Ethnography and demography. Since the early 1800s, when Libya began to export oil on an international scale, the social and economic structure of its population has been undergoing a continuous process of accelerated and extensive change. Nonetheless, studies of Libyan culture and society and its institutionalised forms—the family, kinship systems, political organisation, legal procedures, religious beliefs and practices, etc.—must still take into account geographical and historical diversities within the country and among its inhabitants. The three regions of Tripolitania, Cyrenaica (Barqa), and the Fezzan have had different economies, varying external connections, and experienced specific historical and cultural influences; and internally, each of these regions has been diversified in particular ways.

Along the Mediterranean coastline of 1,200 miles lies a fertile coastal strip nowhere broader than 50 miles. The barren Gulf of Sirte, an arc of some 300 miles where the desert comes right down to the sea, separates the settled coastal areas of Tripolitania from those of Cyrenaica. These areas are well-watered, enjoy a Mediterranean climate and contain the principal cities, towns and villages inhabited by the overwhelming majority of the country's population. The western coastal zone includes the capital city of Tripoli; the inland hills of Djabal Nafusa, with sufficient rainfall for habitation, and ancient olive groves surrounding small Berber-speaking towns and troglodytic settlements formerly inhabited by Libyan Jews; and, between the fertile coast and the hills, the arid plains, forming the country's second largest city, Benghazi, and the Djabal Akhdar mountain range which runs in an arc parallel to the coast from Deren to south of Benghazi and whose uplands, rising to 2,000 feet, receive plentiful rainfall.

To the south of this strip lies a second zone which in the past has been too arid for permanent settlement, but which is sufficiently watered to provide grazing and cops of barley for nomadic herdsmen. Although rains were uncertain and the hot wind from the south (gobi) could "chivel plants like a flame", this was the country's main barley-producing area.

Beyond this zone was an absolute desert with the exception of four oasis groups in Cyrenaica—Djaghbub [q.v.], Djalal, Marada and Kufra [q.v.], and the spare half-dozen oases of the Fezzan [q.v.]. Only about one-twentieth of the country's total population lived in this area of extreme desert climate.

The divisive geographical features of Libya were mitigated by trade, religion, and, finally, by the political unity created by Italian colonisation, militated by trade, religion and, finally, by the political unity created by Italian colonisation, 1911 and furthered by the Second World War. Before the opening of West African ports in the 19th century, a good proportion of the wealth of tropical Africa had reached Europe by way of Libya. From the Cyrenaica and Cyrenaica, gold, ivory, ebony, ostrich feathers and slaves transported to the emporia of Tripoli and Benghazi had sustained oasis-dwellers, camel-herders and merchant townsmen. The Fezzan had been a wealthy community of slave-owning merchants, Berber-speaking Tuaregs with trading networks as far as Timbuctu, in parts of the Sahara and into the Western Sudan; while Cyrenaica and the Fezzan had controlled the caravan route through Kufra to Wadai. When this commerce ceased, the Tuareg moved further west while the former Tebu-speaking waves remained in the oases, subsisting as crop-sharing peasants until the oil boom of the 1960s. Most of these areas, as well as the Djabal Akhdar and the tribes in the plaiu of Djalal, were more or less autonomous and maintained their own locally based social structures.

Until the 1950s, at least four-fifths of the population of Tripolitania lived from agriculture and animal-rearing. In the Djalal, a number of tribes, integrated in a complex social and economic pattern that included sedentary peasants, transhumants, and oasis cultivators, were linked by sufi [q.v.] relations of alliance which transcended other loyalties.
In Cyrenaica, as well, the combination of nomadism, pastoralism, and some cultivation, along with the significant seasonal variations in climate, assumed a characteristic form of social organization, viz., the segmentary tribal system. Throughout Libya (and elsewhere in North Africa and the East), the disposition of non-urban groups reflected the distribution and exploitation of natural resources, and the usage of common concepts, especially that of the segmentary tribal system, was widespread and of central importance. Nonetheless, these shared concepts often glossed over diverse adaptations to different types of ecologies. Thus, for example, in Cyrenaica the virtually sedentary cow and goat herders of the Djabal Ahadjar and the camel and sheep pastoralists of the semi-desert area differed significantly in the pattern of their social relationships. The idea of "tribe" also nominally existed in the cities of the coastal area, but the urban elites with their cosmopolitan values and social structure had more resemblances and affinities with their urban counterparts in the Arab and Muslim world than they did with the tribesmen of their hinterlands.

Libya, like the rest of predominantly Berber North Africa, had been invaded in the 5th/6th century by the Banu Hilal [q.v.] and Banu Sulaym [q.v.], some of the former settling in Tripolitania, and the latter in Cyrenaica. These tribal movements from the east accelerated the process of Arabisation and the spread of Islam and produced a fusion of cultures and races. Only small pockets of Berber-speakers have resisted. In Tripolitania there are communities of sedentary agriculturists along the northern fringes of Djabal Nafissa between Yefren and Nalut, and on the coast at Zueara; these Berber-speakers, who are further distinguished by their adherence to the Ibadîyya [q.v.] sect, constitute an estimated 4% of the population of Tripolitania; in addition, there are in the oases of Ghadamis and Ghat Berber-speaking Tuareg. To complete the linguistic description, mention should again be made of the Tebu of Fazzan and southern Cyrenaica who speak their own language, a Sudaic dialect. Finally, amongst the Arabic-speaking population, the Libyan Jews, who are distinguished both ethnically and by their adherence to the Sephardic faith and the Ashkenazi school of law. Yet neither their beliefs, nor the history of the country, may be understood without taking into account the revivalist movement of the Sanusiyya [q.v.], a neo-Sufi order established by Muhammad 'Ali al-Sanusi (1787-1859). The order, founded on a network of lodges, spread along the desert oases from Tripolitania to the Sudan. With his headquarters in the interior at Dajâghib, a strategic centre for consolidating power and spreading the creed among tribes along the caravan routes, the head of the order created a political-religious organisation that was to lead the opposition to Italian penetration and eventually become transformed into the Libyan Kingdom under the rule of a descendant of the founder, King Idris. The Sanusi order, as an Islamic revivalist movement, gave the population of the country a religious zeal and, aroused by Italy's attack, a sense of unity that developed into Libyan nationalism.

During the period of Italy's colonisation of Libya, a large number of agricultural estates belonging to Italian individuals and development companies were established; a programme of state and land-grant colonisation in the 1920s was followed by large-scale agricultural settlement by Italian peasant families from the Po Valley and the Veneto. The colonial occupation disrupted and influenced the economic and social life of the indigenous population in a myriad of ways: e.g. there was an increase in sedentarisation among nomads, the breakdown of corporate groups, the spread of education, and a massive exodus of poor rural pastoralists and agriculturalists to take up wage labour in the cities and towns of the coastal region, especially after the Second World War.

Since independence in 1951, the government has created a new group of Libyan farmers by transferring to them former Italian lands (and eventually nationalising those lands in 1971) and establishing a National Agricultural Settlement Agency. Moreover, it has instituted policies for land use, irrigation, rural settlement (and, since the revolution of 1969, a state policy for rural development with projects planned for the Djalâra plain, Djabal Alhadjar, Kutra, Serir and Fazzân), and has generally sought to raise the contribution of agriculture to the national economy. But because of the phenomenal development of oil and the growth of industry and services, agriculture has declined significantly since the pre-1967 period when it involved 70% of the labour force.

In 1964 oil in Libya began to flow on an international level. Since then it has transformed the country from a poor agricultural and desert backland to a land of influence and one of the biggest oil exporters in the world. With an estimated annual average income of $ 8 billion per year (1978) and a per capita Gross National Product of $ 6,310, Libya has become the richest country in Africa and the fourteenth richest country in the world (1977 World Bank Report). The national economy now depends on the oil sector, which accounted for about 62% of Gross Domestic Product in 1980. The government (reigned since 1971 by the Socialist People's Libyan Arab Jamahiriya, to replace the Libyan Arab Republic established in 1969 and followed by the country's transformation into the Republic al-Kaddhafi (Gaddafi) in 1969) has concentrated in its latest Development Plan (1975-80) on the needs of electricity, water supplies, sewage and housing, and the creation of three major industrial complexes. It is the urban sector, where one-third of the labour force are foreigners and less than 3% women, which now receives governmental priorities.

Libya is on the way to becoming a highly-urbanised society. About half of its population in 1978 of 2,074,100 (of whom 2,397,000 are Libyans) live in towns of 30,000 or larger. Its accelerated urban growth results from migration, natural increase and immigration of foreign labour. Between 1966 and 1973, towns of 25,000 or more population grew by 20% annually, one of the highest rates in the world. (Natural increase for the same period was 4.2%.) The urban regions of Tripoli and Benghazi (20% of the country's total area) contain 92% of the total population, include fourteen of the fifteen towns with a population of at least 10,000, and are responsible for 80% of Libya's agricultural production.

The city of Tripoli has grown from a population of some 30,000 at the beginning of the century, to 110,000 (1931), to 240,000 (1954) and to an estimated 820,000 in 1980; while Benghazi, according to the 1980 estimate, has some 400,000 inhabitants. By the end of this century, it is expected that of Libya's
population of 5.5 to 7 million, 67% to 74% will live in cities of 20,000 or more, i.e., that the number of city-dwellers will triple or quadruple. The study of social and cultural changes consequent to these processes greatly increases the challenges to Libyan ethnography.

**LIBYA-YI SHERIF, the hairs of the Prophet.** In imitation of the Prophet's practice shaving of the hair and beard later became a custom. According to al-Butani, during his penitence and last pilgrimages, Muhammad permitted people who wanted to get his hair when he was being shaved (Ahmet Zehidi Zeynadin, Sahih Butani musahari tercesi, Istanbul 1971), and the Moroccan, S. Z. Iskit, in: Turk Etnografya Dergisi, xiv (Ankara 1974), 97-113. The hairs of his head and beard, thus obtained, were preserved and later circulated in all Islamic countries. People kept this hair in a bottle, wrapped in layers of green cloth, in mosques, palaces, etc., opening this on public festivals such as during the days of Ramadan, Bayram, and in the second half of Ramadan. In the houses of the rich, the Libya-yi Sherif was regarded with respect and placed in an honoured, elevated position. In the mosques it stood on a high stool on the landing above the last stair of the pulpit (Osman Eryilmaz, Turkiye novar tarifi, Istanbul 1930-41, i, 175; Mehmet Zeki Pakaln, Osmanh tasvirden degerlendirii ve terimleri sabildd, Istanbul 1971, ii, 266). Although it means properly a hair from the head of the Prophet, it is called Sahil Sherif incorrectly. The term is also used in fnal countries, meaning the Prophet's beard only.

The Libya-yi Sherif is today kept in a silver box at the Toykapal Palace, together with the other relics of Islam, in the Imperial Chamber (Khâish Oda), in the Pavilion of the Holy Mantle (Kahreba-Salâdâ Dîvinesi) (Nesam Qâd, Relics of Islam, Istanbul 1966, 67). Two other examples which belong to the Yildiz Palace, now transferred with other objects to Istanbul University Library, are however in boxes entrusted with special priests, a medal from the time of the Kur'an, and the other, the so-called "napskin", specially made (Nesam H. Baykal, Endorun melke tarhi, Istanbul 1953, 148) for the visits to the Holy Mantle organised by the Sultan-Caliph on 15 Ramadan and then distributed to the courtiers and other people invited to the ceremony (see also GURY-YI SPRINTER).

The ceremony of visiting the Holy Mantle is explained at length in many Ottoman writers. Although the Libya-yi Sherif is kept with the other relics there, it is never mentioned, and the Mantle of the Prophet occupied the most important place in these ceremonies (H. Z. Usâkigil, Saray ve iki, Istanbul 1966, 233; Leyla Soz, Haemin sattulii, Istanbul 1974, 135). It is interesting to note that in histories such as those of SilahlDar or SolahnDar, we find much information about the Holy Standard and the Holy Mantle's being removed from their places and sent away in times of crisis, and about help being expected from them when the sultans or the Ottoman army were in trouble; but one of these authors writes anything about the Libya-yi Sherif (H. H. Unatponsili, Osmanh devletinin saray tesbillari, Ankara 1943, 250-60).

**LIBYAN, people and States of early Arabia.** 1. Libyan and Libyanite in epigraphy. Inscriptions discovered in the north of the Hijaz and speedily identified as "Libyanite" have preserved the names of at least six kings of Libya, a kingdom which must have existed for several centuries in pre-Islamic times. The great majority of the Libyan inscriptions are found in the south of the kingdom of al-Ula and its immediate surroundings, especially in the neighbourhood of al-Khurayba, the site of ancient Dedan, not far to the south of the great Nabataean centre of al-Hijr (q.v.), i.e. modern Madâ'in Sâlih. Not only Libyanite, but also other inscriptions are found in more or less considerable numbers in the same area: Dédânti, Minean, Thamidic,
probably ornamented on the inside with large statues; parts of several of these statues were found lying in the débris. In the central court of the temple, there was a stone basin, circular in form and more than four metres in diameter.
